- 7864** 1861 Clark, Gruber \$2 1/2 Copper Die Trial MS62 NGC. K-9a. Designated by NGC as K-9, but that is a broadstruck variety. The K-9a subvariety was struck with a reeded edge collar die. The edge of the present die trial is concealed by the NGC holder, but it has a raised rim and does not exhibit the spreading toward the rim consistent with a broadstrike. A well struck chocolate-brown example with sea-green and rose-red undertones. A loupe reveals a thin mark on the left obverse field near star 4. A die crack between the LAR in CLARK indicates that the piece was struck after at least a portion of the gold issue (K-5). PCGS# 10150

---

1849 Massachusetts & California  
Dies Trial in Copper, AU50, Kagin-5c, Unique

- 7865** 1849 Massachusetts & California Half Eagle Dies Trial in Copper AU50 NGC. Kagin-5c, Unique. Unlisted in Kagin. This reverse dies trial striking has the reverse impression of Kagin-5b. The other side has DOLLARS spelled out with the S punched in backward. We are unclear what the intention was for striking this piece, but its trial nature seems obvious. The planchet is slightly porous and the piece is uniformly brown. An area of light corrosion can be seen in the field below CALIFORNIA. A few light marks are seen on each side, but none are worthy of individual mention. PCGS# 10230

**Unique 1849 Massachusetts & California  
Dies Trial in Copper, MS63 Brown  
Kagin-5b Over 5c**

**7866** 1849 Massachusetts & California Half Eagle Dies Trial in Copper MS63 Brown NGC. Kagin-5b Over 5c, Unique. This copper dies trial was created as a partial hub trial. The central devices are exactly the same as those on the four known gold pieces. As a partial hub trial, the peripheral stars were punched in later into the working die, which explains the variation in the positioning of the stars relative to the central device. The undertype for the reverse is unlisted in Kagin, but has since been identified as Kagin-5c, an S is faintly visible in the center of the reverse. Both sides of this piece show an understrike of the word DOLLARS (with reversed S). The S is easiest to see on the obverse to the left of the stag's knee. LLAR is faintly seen on the reverse within the lower wreath and in line with 1849 CO.

Another interesting aspect of this piece is the multiple strikings on the reverse. It appears there are at least four strikes on that side, apparently the die rotated slightly between successive strikings. The obverse was struck twice. The surfaces are glossy brown and the devices well-struck throughout. There are no distinguishing marks on either side. This unique copper dies trial striking is a direct pattern predecessor to one of the rarest and most storied of all California pioneer gold coins. PCGS# 10230

**S.S.C.A. RELIC GOLD MEDAL**

**'1855 Kellogg Fifty Dollar' 2001 Relic Medal  
Made from S.S.C.A. Gold Ingots**

**7867** 1855 SSCA Relic Gold Medal "1855 Kellogg & Co. Fifty" Gem Proof PCGS. The reverse is counterstamped "STRUCK AUGUST / 31 / 2001 - C.H.S." The proof mintage for that date is 483 pieces. This 1309 grain, 887 Fine relic medal contains gold derived from unsold melted-down ingots recovered from the wreck of the S.S. *Central America*. No box or other marketing material accompanies the lot. A pristine example with a full strike and unimprovable cameo contrast. PCGS# 10358

**CALIFORNIA FRACTIONAL GOLD**

**1853 Octagonal Half Dollar, MS63  
BG-302, The Popular 'Peacock' Reverse**

**7868** 1853 "Peacock" Reverse 50 Cents, BG-302, R.4, MS63 PCGS. Ex: Jack Totheroh Collection. A scarce and intriguing octagonal half dollar by Frontier, Deviercy, & Company. This is one of two varieties known with this "peacock" reverse, exhibiting the initials E.D. on the obverse behind the neck. The reverse actually portrays an eagle, though the sun rays in the field behind it give the first-glance impression of a peacock, and thus the adoption of the moniker. This piece is immensely attractive, showing original green-gold patina with hints of coppery-gold and violet in the recesses. The strike is sharp, with a touch of semiprooflike mirroring in the fields. Population: 28 in 63 (1 in 63+), 14 finer (11/14). PCGS# 10422

**1853 Liberty Octagonal Dollar, MS62  
Rare BG-525, Among Best Known**

**7869** 1853 Liberty Octagonal Dollar, BG-525, High R.6, MS62 PCGS. A rare Type One octagonal dollar variety. As of (12/14), No examples of BG-525 appear in the NGC Census, and only five Mint State pieces are in the PCGS Population Report. The present fully struck representative is free from detractors. The reverse and right obverse are sun-gold, while the portrait and left obverse display plum-red toning. Population: 3 in 62, 1 finer (12/14). PCGS# 10502

**1856 Octagonal Quarter Dollar, MS65  
Rare BG-703A Variety, Only Two or Three Known**

- 7870 1856 Liberty Octagonal Quarter, BG-703A, R.8, MS63 PCGS.** An extremely rare Period Two octagonal quarter dollar variety made by Frontier, Deviercy, & Company in 1859, but dated 1856. This piece is in a late die state, with much of the reverse lettering blurred. Semiprooflike fields complement rich honey-gold coloration, and the surfaces are devoid of major abrasions. Only two or three examples are believed extant, making the current offering of the utmost importance to the advanced fractional gold collector. This die pairing was discovered in 1984 by Richard A. Bagg and Stuart Levine in a group fractional gold pieces that had been purchased by them. The obverse shows just five tiny stars, widely spaced around the central bust, while the reverse exhibits a circle of beads, rather than the usual wreath. A rare and important opportunity. PCGS# 10960

**1868 Octagonal Liberty Quarter, MS67  
Rare BG-710, One of Two Finest Graded**

- 7871 1868 Liberty Octagonal 25 Cents, BG-710, R.6, MS67 NGC.** As of (11/14), NGC has certified just six examples of BG-710, and the present coin is tied with one other as finest graded. It is an apricot-gold Superb Gem that has an even strike and immaculate fields. Pristine aside from a unobtrusive slender vertical graze on the neck. PCGS# 10537

**1871 Octagonal Liberty Quarter, BG-716  
MS67, Among Finest Certified**

- 7872 1871 Liberty Octagonal 25 Cents, BG-716, High R.6, MS67 PCGS.** The LA in DOLLAR overlap, and the base of the R is repunched. An evenly struck and pristine Superb Gem of this challenging Frontier & Co. variety. The apricot-gold fields display circular lathe lines, characteristic of the variety, but are free from any apparent marks. Population: 2 in 67, 0 finer (12/14). PCGS# 10543

**1871 Octagonal Quarter Dollar, MS67  
Superb BG-717 Representative**

- 7873 1871 Liberty Octagonal 25 Cents, BG-717, R.3, MS67 NGC.** A pristine canary-gold Superb Gem that boasts a sharp strike and outstanding eye appeal. The fields are not quite as reflective as is usually seen, but instead display satiny luster that reveals the swirling die polishing lines that are common on fractional gold pieces from this period. Frontier, Deviercy & Co. were the makers for this run of Liberty heads (BG-701 through BG-720). Census: 5 in 67 (1 in 67 ★), 0 finer (11/14). PCGS# 10544

**1871 BG-717 Octagonal Liberty Quarter  
MS67 ★, Reflective Fields**

**7874** 1871 Liberty Octagonal 25 Cents, BG-717, R.3, MS67 ★ NGC. A beautiful butter-gold Superb Gem whose crisp strike, outstanding preservation, and flashy fields ensure exceptional eye appeal. The obverse is prooflike and the reverse is semiprooflike. The dies are lapped, removing the bridge of the nose and nearly separating the eye from the bust. Census: 5 in 67 (1 in 67 ★), 5 in 67 Prooflike, 0 finer (11/14). PCGS# 10544

**7875** 1866 Liberty Octagonal 25 Cents, BG-737, R.5, MS64 NGC. Peach-gold and aquamarine toning adorns this satiny, unabraded, and typically struck example. The G beneath the bust is the initial of Robert B. Gray, a San Francisco jeweler that continued the operations of Antoine Louis Nouzillet. PCGS# 10564

**7876** 1872 Indian Octagonal 25 Cents, BG-791, R.3, MS66 Deep Prooflike NGC. An exquisite orange-gold octagonal quarter with undisturbed mirrored fields. The strike is full except on the denominator. The (11/14) NGC Census for BG-791 shows exactly 100 pieces, but only the present coin has been certified as Deep Prooflike. PCGS# 910618

**1875 Octagonal Indian Quarter  
MS67 Prooflike, BG-796  
Single Finest Certified**

**7877** 1875 Indian Octagonal 25 Cents, BG-796, R.5, MS67 Prooflike NGC. The single finest certified by NGC, as of (11/14). The two highest graded at PCGS are at the MS66 level. This nicely struck and blatantly mirrored Superb Gem is devoid of contact. The reverse field displays delicate vertical die polish lines, as made. Some of the stars were entered with a tiny punch but others were hand-engraved on the die, perhaps to bring the count up to 13. PCGS# 710623

**7878** 1852 Indian Octagonal 25 Cents, BG-799V, High R.7, MS65 NGC. As of (11/14), NGC has certified only four examples of the rare BG-799V. PCGS has seen a total of eight pieces, although between the two services there are likely several resubmissions over the years. The present well struck butter-gold and lime-green Gem has smooth, reflective fields and excellent eye appeal. PCGS# 10648

**1868 Round Liberty Quarter, MS67  
BG-806, Among Finest Certified**

**7879** 1868 Liberty Round 25 Cents, BG-806, R.3, MS67 NGC. A magnificent sun-gold Superb Gem. The coruscating fields and evenly impressed motifs and legends are free from detractors. The broad-necked Liberty head design is characteristic of Frontier, Deviercy & Co., a prolific maker of California gold coins during the first half of Period Two. Census: 7 in 67, none finer (11/14). PCGS# 10667

**7880** 1870 Liberty Round 25 Cents, BG-808, R.3, MS67 NGC. A pristine sun-gold Superb Gem with flashy fields and excellent eye appeal. Concentric die lines emerge beneath a loupe, as coined. The centers display minor incompleteness of strike due to the basined reverse die. Census: 7 in 67, 2 finer as 67 Prooflike (11/14). PCGS# 10669

**7881** 1870 Liberty Round 25 Cents, BG-835, R.3, MS64 Deep Prooflike NGC. Breen-Gillio Die State II. A prominently mirrored butter-gold near-Gem. The eye appeal exceeds the numerical grade. The G beneath the bust signifies the issuer, Robert B. Gray & Co. A later, lapped die state with a partial maker's initial and a network of delicate die cracks on the reverse. Census: 1 in 64 Deep Prooflike, 1 finer (12/14). PCGS# 910696 Base PCGS# 10696

**1876 Round Liberty Quarter, MS66  
BG-854, 'Baby Head' Motif  
Single Finest Certified**

**7882** 1876 Liberty Round 25 Cents, BG-854, Low R.5, MS66 NGC. As of (11/14), the single finest certified example of this scarce "Baby Head" variety. Liberty has a large eye and an open mouth. The stars have hollow centers, a further idiosyncrasy. The apricot-gold fields are flashy, although the coin lacks a Prooflike designation. The usual die state with several delicate die cracks through the reverse legends. PCGS# 10715

**1873 Indian Round Quarter  
MS66 Deep Prooflike  
Single Finest Certified BG-872**

- 7883** 1873 Indian Round 25 Cents, BG-872, R.5, MS66 Deep Prooflike NGC. Dazzling field reflectivity and a bold, even strike ensure the eye appeal of the present Premium Gem. The fields near the profile and wreath display faint "ghosts," as made. As of (12/16), none are certified above the MS65 grade at PCGS, and among NGC examples, only the present piece attains the MS66 level with none finer. PCGS# 910733 Base PCGS# 10733

**1876 Indian Round Quarter  
Finest Certified BG-879  
MS67 Prooflike**

- 7884** 1876 Indian Round 25 Cents, BG-879, R.4, MS67 Prooflike NGC. As of (11/14) at NGC, the present coin is the finest certified example of BG-879, by a margin of two grades. At PCGS, two are graded MS66 with none finer. An unlisted and important die state with a small cud at the left wreath stem. A flashy yellow-gold Superb Gem with exemplary preservation and only minor incompleteness of strike. PCGS# 710740

**1881 Indian Round 25 Cents, BG-887  
MS67 Deep Prooflike  
Tied for Finest Certified**

- 7885** 1881 Indian Round 25 Cents, BG-887, R.3, MS67 Deep Prooflike NGC. A pristine Superb Gem with glassy caramel-gold fields. The strike is generally crisp although a few letters in LIBERTY are incompletely brought up. The reverse field displays myriad delicate die polish lines, and a pair of minute strike-throughs are present above the 88 in the date, all as made. Census: 3 in 67 Deep Prooflike, none finer (12/14). PCGS# 910748 Base PCGS# 10748

**1868 Round Indian Quarter, BG-890  
MS65 Prooflike**

- 7886** 1868 Indian Round 25 Cents, BG-890, High R.5, MS65 Prooflike NGC. A beautiful canary-gold Gem with mirrored fields and luminous motifs. Horizontal die polish lines on the reverse field are as coined. Christopher Ferdinand Mohrig, a San Francisco jeweler, was the maker. As of (11/14), NGC has certified a total of only five examples, with just one finer as MS66. PCGS# 710751

**1872 Octagonal Liberty Half, MS67  
Finest Certified BG-914**

- 7887** 1872 Liberty Octagonal 50 Cents, BG-914, R.4, MS67 NGC. The single finest certified example of BG-914, as of (11/14). The closest competitors are two NGC coins as MS66 Prooflike and a solitary MS66 at PCGS. The second edition of Breen-Gillio states that Liberty's delicate and indistinct profile was caused by a polished obverse die, although only the bridge of the nose was impacted by lapping. A reflective canary-gold Superb Gem with pleasing surfaces and a few incompletely brought up letters in the reverse legend. PCGS# 10772

- 7888** 1875 Indian Octagonal 50 Cents, BG-933, R.5, MS66 Prooflike NGC. A splendid example of this scarce maverick Period Two variety. The wheat-gold fields are reflective and all design elements are well struck. Tied for finest seen at NGC; the PCGS Population Report is topped by a single MS65 example. Census: 3 in 66 Prooflike, none finer (12/14). PCGS# 710791

**1875 Octagonal Indian Half Dollar  
MS66 Deep Prooflike, BG-946  
Tied for Finest Certified**

- 7889** 1875 Indian Octagonal 50 Cents, BG-946, R.4, MS66 Deep Prooflike NGC. Sun-gold centers are framed by rose-red borders. A well struck and prominently mirrored example, tied for the finest certified. The dies are rotated precisely 90 degrees, and lapping has attenuated the base of the wreath and the bottom of the date. Census: 3 in 66 Deep Prooflike, none finer (11/14). PCGS# 910804 Base PCGS# 10804

- 7890** 1871 Liberty Round 50 Cents, BG-1025, R.5, MS63 Deep Prooflike NGC. A brightly mirrored yellow-gold round half dollar with moderate inexactness of strike at the centers. A few tiny flan flakes are noted on the field near the shoulder tip. As of (12/14), NGC has certified a total of eight examples of BG-1025, but only the present coin has attained a Deep Prooflike designation from that service. PCGS# 910854 Base PCGS# 10854

**1876 BG-1060 Indian Round Half  
MS66 Prooflike**

- 7891** 1876 Indian Round 50 Cents, BG-1060, High R.5, MS66 Prooflike NGC. A caramel-gold example with flashy fields and impressive eye appeal. Sharply struck except for minor blending on the high points of the Indian. As of (12/14), NGC and PCGS combined have certified just two coins in grades above MS65, the present piece and another as NGC MS66 Deep Prooflike. PCGS# 710889 Base PCGS# 10889

- 7892** 1874 Indian Round 50 Cents, BG-1071, R.7, AU55 PCGS. A very rare Breen-Gillio variety, interesting for its unevenly spaced stars and date. This lustrous and lightly buckled olive-green example has a trace of high-point wear, and displays the incomplete strike on DOLLAR characteristic of BG-1071. The reverse field has a few wispy marks. Population: 1 in 55, 3 finer (11/14). From *The Millford Collection, Part II*. PCGS# 10900

**1868 Round Indian Half, MS66  
Single Finest Certified BG-1074**

- 7893** 1868 Indian Round 50 Cents, BG-1074, R.6, MS66 PCGS. The rare BG-1074 is notorious for soft strikes, but the present coin has a bold date and stars. The wreath is sharp aside from the area near the ribbon loop. The centers are soft, but nonetheless much more detailed than the example owned by Jay Roe, the most thorough specialist of the series. The portrait is frosty and the sun-gold fields are flashy. Population: 1 in 66, none finer (12/14). PCGS# 10903

**1860 Octagonal Liberty Dollar  
BG-1102, MS64 Prooflike**

- 7894** 1860 Liberty Octagonal 1 Dollar, BG-1102, R.4, MS64 Prooflike NGC. A well struck and luminous Choice octagonal dollar with unmarked and reflective rose-red and sun-gold surfaces. Clashed near the profile, and minor retained laminations (as coined) are noted near the stars. Period Two dollars are much scarcer as a type than their fractional counterparts. Census: 4 in 64 Prooflike, 4 finer as 65, 2 finer as 65 Prooflike (11/14). PCGS# 710913

- 7895** 1872 Indian Octagonal Dollar, BG-1119, High R.5, MS63 PCGS. The Breen-Gillio second edition notes a cud over the L in GOLD and rather vaguely comments "earlier and later die states may exist." The present coin additionally has a dramatic wedge-shaped cud over the L in CALIFORNIA. A well struck olive-gold octagonal dollar. Smooth save for a horizontal retained lamination near the chin. Population: 4 in 63, 8 finer (12/14). PCGS# 10930

- 7896** 1874 Indian Octagonal 1 Dollar, BG-1124, High R.4, MS64 PCGS. A handsome, prooflike honey-gold example of this Period Two octagonal gold dollar. First published in 1884 by David Proskey, according to the Breen-Gillio reference. Population: 9 in 64, 2 finer (12/14). PCGS# 10935

**1872 Indian Round Dollar, BG-1208  
MS63 Prooflike**

- 7897** 1872 Indian Round Dollar, BG-1208, Low R.6, MS63 Prooflike NGC. BG-1208 is famous as the sole Breen-Gillio variety with TOKEN in the legend, a futile attempt to deflect any Secret Service interest. Period Two effectively ended with the August 10, 1876 arrest of maker Christopher Ferdinand Mohrig. This is a flashy and boldly struck straw-gold example with moderate field hairlines and a few hair-thin marks. Census: 1 in 63 Prooflike, 1 finer (12/14). PCGS# 710953 Base PCGS# 10953

*End of Session Seven*

# Terms and Conditions of Auction

## Auctioneer and Auction:

1. This Auction is presented by Heritage Auctions, a d/b/a/ of Heritage Auctioneers & Galleries, Inc., or Heritage Auctions, Inc., or Heritage Numismatic Auctions, Inc., or Heritage Vintage Sports Auctions, Inc., or Currency Auctions of America, Inc., as identified with the applicable licensing information on the title page of the catalog or on the HA.com Internet site (the "Auctioneer"). The Auction is conducted under these Terms and Conditions of Auction and applicable state and local law. Announcements and corrections from the podium and those made through the Terms and Conditions of Auctions appearing on the Internet at HA.com supersede those in the printed catalog.

## Buyer's Premium:

2. All bids are subject to a Buyer's Premium which is in addition to the placed successful bid:
- Fifteen percent (15%) on Domain Names & Intellectual Property Auction lots;
- Seventeen and one-half percent (17.5%) on Currency, US Coin, and World & Ancient Coin Auction lots, except for Gallery Auction lots as noted below;
- Nineteen and one-half percent (19.5%) on Comic, Movie Poster, Sports Collectibles, and Gallery Auction (sealed bid auctions of mostly bulk numismatic material) lots;
- Twenty-two percent (22%) on Wine Auction lots;
- For lots in all other categories not listed above, the Buyer's Premium per lot is twenty-five percent (25%) on the first \$100,000 (minimum \$14), plus twenty percent (20%) of any amount between \$100,000 and \$1,000,000, plus twelve percent (12%) of any amount over \$1,000,000.

## Auction Venues:

3. The following Auctions are conducted solely on the Internet: Heritage Weekly Internet Auctions (Coin, Currency, Comics, Rare Books, Jewelry & Watches, Guitars & Musical Instruments, and Vintage Movie Posters); Heritage Monthly Internet Auctions (Sports, World Coins and Rare Wine). Signature® Auctions and Grand Format Auctions accept bids from the Internet, telephone, fax, or mail first, followed by a floor bidding session; HeritageLive! and real-time telephone bidding are available to registered clients during these auctions.

## Bidders:

4. Any person participating or registering for the Auction agrees to be bound by and accepts these Terms and Conditions of Auction ("Bidder(s)").
5. All Bidders must meet Auctioneer's qualifications to bid. Any Bidder who is not a client in good standing of the Auctioneer may be disqualified at Auctioneer's sole option and will not be awarded lots. Such determination may be made by Auctioneer in its sole and unlimited discretion, at any time prior to, during, or even after the close of the Auction. Auctioneer reserves the right to exclude any person from the auction.
6. If an entity places a bid, then the person executing the bid on behalf of the entity agrees to personally guarantee payment for any successful bid.

## Credit:

7. In order to place bids, Bidders who have not established credit with the Auctioneer must either furnish satisfactory credit information (including two collectibles-related business references) or supply valid credit card information along with a social security number, well in advance of the Auction. Bids placed through our Interactive Internet program will only be accepted from pre-registered Bidders. Bidders who are not members of HA.com or affiliates should preregister at least 48 hours before the start of the first session (exclusive of holidays or weekends) to allow adequate time to contact references. Credit will be granted at the discretion of Auctioneer. Additionally Bidders who have not previously established credit or who wish to bid in excess of their established credit history may be required to provide their social security number or the last four digits thereof so a credit check may be performed prior to Auctioneer's acceptance of a bid. Check writing privileges and immediate delivery of merchandise may also be determined by pre-approval of credit based on a combination of criteria: HA.com history, related industry references, bank verification, a credit bureau report and/or a personal guarantee for a corporate or partnership entity in advance of the auction venue.

## Bidding Options:

8. Bids in Signature, Auctions or Grand Format Auctions may be placed as set forth in the printed catalog section entitled "Choose your bidding method." For auctions held solely on the Internet, see the alternatives on HA.com. Review at <http://www.ha.com/c/ref/web-tips.zx#biddingTutorial>.
9. Presentment of Bids: Non-Internet bids (including but not limited to podium, fax, phone and mail bids) are treated similar to floor bids in that they must be on-increment or at a half increment (called a cut bid). Any podium, fax, phone, or mail bids that do not conform to a full or half increment will be rounded up or down to the nearest full or half increment and this revised amount will be considered your high bid.
10. Auctioneer's Execution of Certain Bids. Auctioneer cannot be responsible for your errors in bidding, so carefully check that every bid is entered correctly. When identical mail or FAX bids are submitted, preference is given to the first received. To ensure the greatest accuracy, your written bids should be entered on the standard printed bid sheet and be received at Auctioneer's place of business at least two business days before the Auction start. Auctioneer is not responsible for executing mail bids or FAX bids received on or after the day the first lot is sold, nor Internet bids submitted after the published closing time; nor is Auctioneer responsible for proper execution of bids submitted by telephone, mail, FAX, e-mail, Internet, or in person once the Auction begins. Bids placed electronically via the internet may not be withdrawn until your written request is received and acknowledged by Auctioneer (FAX: 214-409-1425); such requests must state the reason, and may constitute grounds for withdrawal of bidding privileges. Lots won by mail Bidders will not be delivered at the Auction unless prearranged.
11. Caveat as to Bid Increments. Bid increments (over the current bid level) determine the lowest amount you may bid on a particular lot. Bids greater than one increment over the current bid can be any whole dollar amount. It is possible under several circumstances for winning bids to be between increments, sometimes only \$1 above the previous increment. Please see: "How can I lose by less than an increment?" on our website. Bids will be accepted in whole dollar amounts only. No "buy" or "unlimited" bids will be accepted.

The following chart governs current bidding increments (see [HA.com/c/ref/web-tips.zx#guidelines-increments](http://HA.com/c/ref/web-tips.zx#guidelines-increments)).

Current Bid .....	Bid Increment
< \$10 .....	\$1
\$10 - \$49 .....	\$2
\$50 - \$99 .....	\$5
\$100 - \$199 .....	\$10
\$200 - \$499 .....	\$20
\$500 - \$999 .....	\$50
\$1,000 - \$1,999 .....	\$100
\$2,000 - \$4,999 .....	\$200
\$5,000 - \$9,999 .....	\$500

Current Bid .....	Bid Increment
\$10,000 - \$19,999 .....	\$1,000
\$20,000 - \$49,999 .....	\$2,000
\$50,000 - \$99,999 .....	\$5,000
\$100,000 - \$199,999 .....	\$10,000
\$200,000 - \$499,999 .....	\$20,000
\$500,000 - \$999,999 .....	\$50,000
\$1,000,000 - \$4,999,999 ....	\$100,000
\$5,000,000 - \$9,999,999 ....	\$250,000
>= \$10,000,000 .....	\$500,000

12. If Auctioneer calls for a full increment, a bidder may request Auctioneer to accept a bid at half of the increment ("Cut Bid") only once per lot. After offering a Cut Bid, bidders may continue to participate only at full increments. Off-increment bids may be accepted by the Auctioneer at Signature® Auctions and Grand Format Auctions. If the Auctioneer solicits bids other than the expected increment, these bids will not be considered Cut Bids.

## Conducting the Auction:

13. Notice of the consignor's liberty to place bids on his lots in the Auction is hereby made in accordance with Article 2 of the Texas Business and Commercial Code. A "Minimum Bid" is an amount below which the lot will not sell. THE CONSIGNOR OF PROPERTY MAY PLACE

WRITTEN "Minimum Bids" ON HIS LOTS IN ADVANCE OF THE AUCTION; ON SUCH LOTS, IF THE HAMMER PRICE DOES NOT MEET THE "Minimum Bid", THE CONSIGNOR MAY PAY A REDUCED COMMISSION ON THOSE LOTS. "Minimum Bids" are generally posted online several days prior to the Auction closing. For any successful bid placed by a consignor on his Property on the Auction floor, or by any means during the live session, or after the "Minimum Bid" for an Auction have been posted, we will require the consignor to pay full Buyer's Premium and Seller's Commissions on such lot.

14. The highest qualified Bidder recognized by the Auctioneer shall be the Buyer. In the event of a tie bid, the earliest bid received or recognized wins. In the event of any dispute between any Bidders at an Auction, Auctioneer may at his sole discretion reoffer the lot. Auctioneer's decision and declaration of the winning Bidder shall be final and binding upon all Bidders. Bids properly offered, whether by floor Bidder or other means of bidding, may on occasion be missed or go unrecognized; in such cases, the Auctioneer may declare the recognized bid accepted as the winning bid, regardless of whether a competing bid may have been higher. Auctioneer reserves the right after the hammer fall to accept bids and reopen bidding for bids placed through the Internet or otherwise.
15. Auctioneer reserves the right to refuse to honor any bid or to limit the amount of any bid, in its sole discretion. A bid is considered not made in "Good Faith" when made by an insolvent or irresponsible person, a person under the age of eighteen, or is not supported by satisfactory credit, collectibles references, or otherwise. Regardless of the disclosure of his identity, any bid by a consignor or his agent on a lot consigned by him is deemed to be made in "Good Faith." Any person apparently appearing on the OFAC list is not eligible to bid.
16. Nominal Bids. The Auctioneer in its sole discretion may reject nominal bids, small opening bids, or very nominal advances. If a lot bearing estimates fails to open for 40-60% of the low estimate, the Auctioneer may pass the item or may place a protective bid on behalf of the consignor.
17. Lots bearing bidding estimates shall open at Auctioneer's discretion (approximately 50%-60% of the low estimate). In the event that no bid meets or exceeds that opening amount, the lot shall pass as unsold.
18. All items are to be purchased per lot as numerically indicated and no lots will be broken. Auctioneer reserves the right to withdraw, prior to the close, any lots from the Auction.
19. Auctioneer reserves the right to rescind the sale in the event of nonpayment, breach of a warranty, disputed ownership, auctioneer's clerical error or omission in exercising bids and reserves, or for any other reason and in Auctioneer's sole discretion. In cases of nonpayment, Auctioneer's election to void a sale does not relieve the Bidder from their obligation to pay Auctioneer its fees (seller's and buyer's premium) and any other damages or expenses pertaining to the lot.
20. Auctioneer occasionally experiences Internet and/or Server service outages, and Auctioneer periodically schedules system downtime for maintenance and other purposes, during which Bidders cannot participate or place bids. If such outages occur, we may at our discretion extend bidding for the Auction. Bidders unable to place their Bids through the Internet are directed to contact Client Services at 877-HERITAGE (437-4824).
21. The Auctioneer, its affiliates, or their employees consign items to be sold in the Auction, and may bid on those lots or any other lots. Auctioneer or affiliates expressly reserve the right to modify any such bids at any time prior to the hammer based upon data made known to the Auctioneer or its affiliates. The Auctioneer may extend advances, guarantees, or loans to certain consignors.
22. The Auctioneer has the right to sell certain unsold items after the close of the Auction. Such lots shall be considered sold during the Auction and all these Terms and Conditions shall apply to such sales including but not limited to the Buyer's Premium, return rights, and disclaimers.

## Payment:

23. All sales are strictly for cash in United States dollars (including U.S. currency, bank wire, cashier checks, travelers checks, eChecks, and bank money orders, and are subject to all reporting requirements). All deliveries are subject to good funds; funds being received in Auctioneer's account before delivery of the Purchases; and all payments are subject to a clearing period. Auctioneer reserves the right to determine if a check constitutes "good funds": checks drawn on a U.S. bank are subject to a ten business day hold, and thirty days when drawn on an international bank. Clients with pre-arranged credit status may receive immediate credit for payments via eCheck, personal, or corporate checks. All others will be subject to a hold of 5 days, or more, for the funds to clear prior to releasing merchandise. (Ref. T&C item 7 Credit for additional information.) Payments can be made 24-48 hours post auction from the My Orders page of the HA.com website.
24. Payment is due upon closing of the Auction session, or upon presentment of an invoice. Auctioneer reserves the right to void an invoice if payment in full is not received within 7 days after the close of the Auction. In cases of nonpayment, Auctioneer's election to void a sale does not relieve the Bidder from their obligation to pay Auctioneer its fees (seller's and buyer's premium) on the lot and any other damages pertaining to the lot or Auctioneer, at its option, may charge a twenty (20%) restock fee on the amount of the purchase and offset the restock fee against any monies paid to the Auctioneer or against any of the purchaser's properties held by the Auctioneer.
25. Lots delivered to you, or your representative in the States of Texas, California, New York, or other states where the Auction may be held, are subject to all applicable state and local taxes, unless appropriate permits are on file with Auctioneer. (Note: Coins are only subject to sales tax in California on invoices under \$1,500, and there is no sales tax on coins in Texas.) Bidder agrees to pay Auctioneer the actual amount of tax due in the event that sales tax is not properly collected due to: 1) an expired, inaccurate, or inappropriate tax certificate or declaration, 2) an incorrect interpretation of the applicable statute, 3) or any other reason. The appropriate form or certificate must be on file at and verified by Auctioneer five days prior to Auction, or tax must be paid; only if such form or certificate is received by Auctioneer within 4 days after the Auction can a refund of tax paid be made. Lots from different Auctions may not be aggregated for sales tax purposes.
26. In the event that a Bidder's payment is dishonored upon presentment(s), Bidder shall pay the maximum statutory processing fee set by applicable state law. If you attempt to pay via eCheck and your financial institution denies this transfer from your bank account, or the payment cannot be completed using the selected funding source, you agree to complete payment using your credit card on file.
27. If any Auction invoice submitted by Auctioneer is not paid in full when due, the unpaid balance will bear interest at the highest rate permitted by law from the date of invoice until paid. Any invoice not paid when due will bear a three percent (3%) late fee on the invoice amount. If the Auctioneer refers any invoice to an attorney for collection, the buyer agrees to pay attorney's fees, court costs, and other collection costs incurred by Auctioneer. If Auctioneer assigns collection to its in-house legal staff, such attorney's time expended on the matter shall be compensated at a rate comparable to the hourly rate of independent attorneys.
28. In the event a successful Bidder fails to pay any amounts due, Auctioneer reserves the right to sell the lot(s) securing the invoice to any underbidders in the Auction that the lot(s) appeared, or at subsequent private or public sale, or relist the lot(s) in a future auction conducted by Auctioneer. A defaulting Bidder agrees to pay for the reasonable costs of resale (including a 15% seller's commission, if assigned to an auction conducted by Auctioneer). The defaulting Bidder is liable to pay any difference between his total original invoice for the lot(s), plus any applicable interest, and the net proceeds for the lot(s) if sold at private sale or the subsequent hammer price of the lot(s) less the 15% seller's commissions, if sold at an Auctioneer's auction.
29. Auctioneer reserves the right to require payment in full in good funds before delivery of the merchandise.

# Terms and Conditions of Auction

30. Auctioneer shall have a lien against the merchandise purchased by the buyer to secure payment of the Auction invoice. Auctioneer is further granted a lien and the right to retain possession of any other property of the buyer then held by the Auctioneer or its affiliates to secure payment of any Auction invoice or any other amounts due the Auctioneer or affiliates from the buyer. With respect to these lien rights, Auctioneer shall have all the rights of a secured creditor under Article 9 of the Texas Uniform Commercial Code, including but not limited to the right of sale (including a 15% seller's commission, if consigned to an auction conducted by Auctioneer). In addition, with respect to payment of the Auction invoice(s), the buyer waives any and all rights of offset he might otherwise have against the Auctioneer and the consignor of the merchandise included on the invoice. If a Bidder owes Auctioneer or its affiliates on any account, Auctioneer and its affiliates shall have the right to offset such unpaid account by any credit balance due Bidder, and it may secure by possessory lien any unpaid amount by any of the Bidder's property in their possession..

31. Title shall not pass to the successful Bidder until all invoices are paid in full. It is the responsibility of the buyer to provide adequate insurance coverage for the items once they have been delivered to a common carrier or third-party shipper.

## **Delivery; Shipping; and Handling Charges:**

32. Buyer is liable for shipping, handling, registration, and renewal fees, if any. Please refer to Auctioneer's website HA.com/c/shipping.zx for the latest charges or call Auctioneer. Auctioneer is unable to combine purchases from other auctions or affiliates into one package for shipping purposes. Lots won will be shipped in a commercially reasonable time after payment in good funds for the merchandise and the shipping fees is received or credit extended, except when third-party shipment occurs. Buyer agrees that Service and Handling charges related to shipping items which are not pre-paid may be charged to the credit card on file with Auctioneer.

33. Successful international Bidders shall provide written shipping instructions, including specified customs declarations, to the Auctioneer for any lots to be delivered outside of the United States. NOTE: Declaration value shall be the item(s) hammer price together with its buyer's premium and Auctioneer shall use the correct harmonized code for the lot. Domestic Buyers on lots designated for third-party shipment must designate the common carrier, accept risk of loss, and prepay shipping costs.

34. All shipping charges will be borne by the successful Bidder. On all domestic shipments, any risk of loss during shipment will be borne by Heritage until the shipping carrier's confirmation of delivery to the address of record in Auctioneer's file (carrier's confirmation is conclusive to prove delivery to Bidder; if the client has a Signature release on file with the carrier, the package is considered delivered without Signature) or delivery by Heritage to Bidder's selected third-party shipper. On all foreign shipments, any risk of loss during shipment will be borne by the Bidder following Auctioneer's delivery to the Bidder's designated common carrier or third-party shipper.

35. Due to the nature of some items sold, it shall be the responsibility for the successful Bidder to arrange pick-up and shipping through third-parties; as to such items Auctioneer shall have no liability. Failure to pick-up or arrange shipping in a timely fashion (within ten days) shall subject Lots to storage and moving charges, including a \$100 administration fee plus \$10 daily storage for larger items and \$5.00 daily for smaller items (storage fee per item) after 35 days. In the event the Lot is not removed within ninety days, the Lot may be offered for sale to recover any past due storage or moving fees, including a 10% Seller's Commission.

36A. The laws of various countries regulate the import or export of certain plant and animal properties, including (but not limited to) items made of (or including) ivory, whalebone, turtle shell, coral, crocodile, or other wildlife. Transport of such lots may require special licenses for export, import, or both. Bidder is responsible for: 1) obtaining all information on such restricted items for both export and import; 2) obtaining all such licenses and/or permits. Delay or failure to obtain any such license or permit does not relieve the buyer of timely compliance with standard payment terms. For further information, please contact Ron Brackemyre at 800- 872-6467 ext. 1312.

36B. California State law prohibits the importation of any product containing Python skin into the State of California, thus no lot containing Python skin will be shipped to or invoiced to a person or company in California.

36C. Auctioneer shall not be liable for any loss caused by or resulting from:

- a. Seizure or destruction under quarantine or Customs regulation, or confiscation by order of any Government or public authority, or risks of contraband or illegal transportation of trade, or
- b. Breakage of statuary, marble, glassware, bric-a-brac, porcelains, jewelry, and similar fragile articles

37. Any request for shipping verification for undelivered packages must be made within 30 days of shipment by Auctioneer.

## **Cataloging, Warranties and Disclaimers:**

38. NO WARRANTY, WHETHER EXPRESSED OR IMPLIED, IS MADE WITH RESPECT TO ANY DESCRIPTION CONTAINED IN THIS AUCTION OR ANY SECOND OPINE. Any description of the items or second opine contained in this Auction is for the sole purpose of identifying the items for those Bidders who do not have the opportunity to view the lots prior to bidding, and no description of items has been made part of the basis of the bargain or has created any express warranty that the goods would conform to any description made by Auctioneer. Color variations can be expected in any electronic or printed imaging, and are not grounds for the return of any lot. NOTE: Auctioneer, in specified auction venues, for example, Fine Art, may have express written warranties and you are referred to those specific terms and conditions. .

39. Auctioneer is selling only such right or title to the items being sold as Auctioneer may have by virtue of consignment agreements on the date of auction and disclaims any warranty of title to the Property. Auctioneer disclaims any warranty of merchantability or fitness for any particular purposes. All images, descriptions, sales data, and archival records are the exclusive property of Auctioneer, and may be used by Auctioneer for advertising, promotion, archival records, and any other uses deemed appropriate.

40. Translations of foreign language documents may be provided as a convenience to interested parties. Auctioneer makes no representation as to the accuracy of those translations and will not be held responsible for errors in bidding arising from inaccuracies in translation.

41. Auctioneer disclaims all liability for damages, consequential or otherwise, arising out of or in connection with the sale of any Property by Auctioneer to Bidder. No third party may rely on any benefit of these Terms and Conditions and any rights, if any, established hereunder are personal to the Bidder and may not be assigned. Any statement made by the Auctioneer is an opinion and does not constitute a warranty or representation. No employee of Auctioneer may alter these Terms and Conditions, and, unless signed by a principal of Auctioneer, any such alteration is null and void.

42. Auctioneer shall not be liable for breakage of glass or damage to frames (patent or latent); such defects, in any event, shall not be a basis for any claim for return or reduction in purchase price.

## **Release:**

43. In consideration of participation in the Auction and the placing of a bid, Bidder expressly releases Auctioneer, its officers, directors and employees, its affiliates, and its outside experts that provide second opinions, from any and all claims, cause of action, those of action, whether at law or equity or any arbitration or mediation rights existing under the rules of any professional society or affiliation based upon the assigned description, or a derivative theory, breach of warranty express or implied, representation or other matter set forth within these Terms and Conditions of Auction or otherwise. In the event of a claim, Bidder agrees that such rights and privileges conferred therein are strictly construed as specifically declared herein; e.g., authenticity, typographical error, etc. and are the exclusive remedy. Bidder, by non-compliance to these express terms of a granted remedy, shall waive any claim against Auctioneer.

44. Notice: Some Property sold by Auctioneer are inherently dangerous e.g. firearms, cannons, and small items that may be swallowed or ingested or may have latent defects all of which may cause harm to a person. Purchaser accepts all risk of loss or damage from its purchase of these items and Auctioneer disclaims any liability whether under contract or tort for damages and losses, direct or inconsequential, and expressly disclaims any warranty as to safety or usage of any lot sold.

## **Dispute Resolution and Arbitration Provision:**

45. By placing a bid or otherwise participating in the auction, Bidder accepts these Terms and Conditions of Auction, and specifically agrees to the dispute resolution provided herein. Consumer disputes shall be resolved through court litigation which has an exclusive Dallas, Texas venue clause and jury waiver. Non-consumer dispute shall be determined in binding arbitration which arbitration replaces the right to go to court, including the right to a jury trial.

46. Auctioneer in no event shall be responsible for consequential damages, incidental damages, compensatory damages, or any other damages arising or claimed to be arising from the auction of any lot. In the event that Auctioneer cannot deliver the lot or subsequently it is established that the lot lacks title, or other transfer or condition issue is claimed, in such cases the sole remedy shall be limited to rescission of sale and refund of the amount paid by Bidder; in no case shall Auctioneer's maximum liability exceed the high bid on that lot, which bid shall be deemed for all purposes the value of the lot. After one year has elapsed, Auctioneer's maximum liability shall be limited to any commissions and fees Auctioneer earned on that lot.

47. In the event of an attribution error, Auctioneer may at its sole discretion, correct the error on the Internet, or, if discovered at a later date, to refund the buyer's purchase price without further obligation.

48. Exclusive Dispute Resolution Process: All claims, disputes, or controversies in connection with, relating to and/or arising out of your Participation in the Auction or purchase of any lot, any interpretation of the Terms and Conditions of Sale or any amendments thereto, any description of any lot or condition report, any damage to any lot, any alleged verbal modification of any term of sale or condition report or description and/or any purported settlement whether asserted in contract, tort, under Federal or State statute or regulation or any claim made by you of a lot or your Participation in the auction involving the auction or a specific lot involving a warranty or representation of a consignor or other person or entity including Auctioneer { which claim you consent to be made a party} (collectively, "Claim") shall be exclusively heard by, and the claimant (or respondent as the case may be) and Heritage each consent to the Claim being presented in a confidential binding arbitration before a single arbitrator administrated by and conducted under the rules of, the American Arbitration Association. The locale for all such arbitrations shall be Dallas, Texas. The arbitrator's award may be enforced in any court of competent jurisdiction. If a Claim involves a consumer, exclusive subject matter jurisdiction for the Claim is in the State District Courts of Dallas County, Texas and the consumer consents to subject matter and in personam jurisdiction; further CONSUMER EXPRESSLY WAIVES ANY RIGHT TO TRIAL BY JURY. A consumer may elect arbitration as specified above. Any claim involving the purchase or sale of numismatic or related items may be submitted through binding PNG arbitration. Any Claim must be brought within two (2) years of the alleged breach, default or misrepresentation or the Claim is waived. Exemplary or punitive damages are not permitted and are waived. A Claim is not subject to class certification. Nothing herein shall be construed to extend the time of return or conditions and restrictions for return. This Agreement and any Claim shall be determined and construed under Texas law. The prevailing party (a party that is awarded substantial and material relief on its damage claim based on damages sought vs. awarded or the successful defense of a Claim based on damages sought vs. awarded) may be awarded its reasonable attorneys' fees and costs.

49. No claims of any kind can be considered after the settlements have been made with the consignors. Any dispute after the settlement date is strictly between the Bidder and consignor without involvement or responsibility of the Auctioneer.

50. In consideration of their participation in or application for the Auction, a person or entity (whether the successful Bidder, a Bidder, a purchaser and/or other Auction participant or registrant) agrees that all disputes in any way relating to, arising under, connected with, or incidental to these Terms and Conditions and purchases, or default in payment thereof, shall be arbitrated pursuant to the arbitration provision. In the event that any matter including actions to compel arbitration, construe the agreement, actions in aid or arbitration or otherwise needs to be litigated, such litigation shall be exclusively in the Courts of the State of Texas, in Dallas County, Texas, and if necessary the corresponding appellate courts. For such actions, the successful Bidder, purchaser, or Auction participant also expressly submits himself to the personal jurisdiction of the State of Texas.

51. These Terms & Conditions provide specific remedies for occurrences in the auction and delivery process. Where such remedies are afforded, they shall be interpreted strictly. Bidder agrees that any claim shall utilize such remedies; Bidder making a claim in excess of those remedies provided in these Terms and Conditions agrees that in no case whatsoever shall Auctioneer's maximum liability exceed the high bid on that lot, which bid shall be deemed for all purposes the value of the lot.

## **Miscellaneous:**

52. Agreements between Bidders and consignors to effectuate a non-sale of an item at Auction, inhibit bidding on a consigned item to enter into a private sale agreement for said item, or to utilize the Auctioneer's Auction to obtain sales for non-selling consigned items subsequent to the Auction, are strictly prohibited. If a subsequent sale of a previously consigned item occurs in violation of this provision, Auctioneer reserves the right to charge Bidder the applicable Buyer's Premium and consignor a Seller's Commission as determined for each auction venue and by the terms of the seller's agreement.

53. Acceptance of these Terms and Conditions qualifies Bidder as a client who has consented to be contacted by Heritage in the future. In conformity with "do-not-call" regulations promulgated by the Federal or State regulatory agencies, participation by the Bidder is affirmative consent to being contacted at the phone number shown in his application and this consent shall remain in effect until it is revoked in writing. Heritage may from time to time contact Bidder concerning sale, purchase, and auction opportunities available through Heritage and its affiliates and subsidiaries.

54. Rules of Construction: Auctioneer presents properties in a number of collectible fields, and as such, specific venues have promulgated supplemental Terms and Conditions. Nothing herein shall be construed to waive the general Terms and Conditions of Auction by these additional rules and shall be construed to give force and effect to the rules in their entirety.

## **State Notices:**

Notice as to an Auction in California. Auctioneer has in compliance with Title 2.95 of the California Civil Code as amended October 11, 1993 Sec. 1812.600, posted with the California Secretary of State its bonds for it and its employees, and the auction is being conducted in compliance with Sec. 2338 of the Commercial Code and Sec. 535 of the Penal Code.

Notice as to an Auction in New York City. These Terms and Conditions of Sale are designed to conform to the applicable sections of the New York City Department of Consumer Affairs Rules and Regulations as Amended. This sale is a Public Auction Sale conducted by Heritage Auctioneers & Galleries, Inc. # 41513036. The New York City licensed auctioneers are: Sam Foose, #095260; Kathleen Guzman, #0762165; Nicholas Dawes, #1304724; Ed Beardsley, #1183220; Scott Peterson, #1306933; Andrea Voss, #1320558, who will conduct the Sale on behalf of itself and Heritage Numismatic Auctions, Inc. (for Coins) and Currency Auctions of America, Inc. (for currency). All lots are subject to: the consignor's rights to bid thereon in accord with these Terms and Conditions of Sale, consignor's option to receive advances on their consignments, and Auctioneer, in its sole discretion, may offer limited extended financing to registered bidders, in accord with Auctioneer's internal credit standards. A registered bidder may inquire whether a lot is subject to an advance or a reserve. Auctioneer has made advances to various consignors in this sale. On lots bearing an estimate, the term refers to a value range placed on an item by the Auctioneer in its sole opinion but the final price is determined by the bidders.

Notice as to an Auction in Texas. In compliance with TDLR rule 67.100(c)(1), notice is hereby provided that this auction is covered by a Recovery Fund administered by the Texas Department of Licensing and Regulation, P.O. Box 12157, Austin, Texas 78711 (512) 463-6599. Any complaints may be directed to the same address.

Notice as to an Auction in Ohio: Auction firm and Auctioneer are licensed by the Dept. of Agriculture, and either the licensee is bonded in favor of the state or an aggrieved person may initiate a claim against the auction recovery fund created in Section 4707.25 of the Revised Code as a result of the licensee's actions, whichever is applicable.

# Terms and Conditions of Auction

## Additional Terms & Conditions:

### COINS & CURRENCY

COINS and CURRENCY TERM A: Signature. Auctions are not on approval. No certified material may be returned because of possible differences of opinion with respect to the grade offered by any third-party organization, dealer, or service. No guarantee of grade is offered for uncertified Property sold and subsequently submitted to a third-party grading service. There are absolutely no exceptions to this policy. Under extremely limited circumstances, (e.g. gross cataloging error) a purchaser, who did not bid from the floor, may request Auctioneer to evaluate voiding a sale: such request must be made in writing detailing the alleged gross error; submission of the lot to the Auctioneer must be pre-approved by the Auctioneer; and bidder must notify Ron Brackemyre (1-800-872-6467 Ext. 1312) in writing of such request within three (3) days of the non-floor bidder's receipt of the lot. Any lot that is to be evaluated must be in our offices within 30 days after Auction. Grading or method of manufacture do not qualify for this evaluation process nor do such complaints constitute a basis to challenge the authenticity of a lot. AFTER THAT 30-DAY PERIOD, NO LOTS MAY BE RETURNED FOR REASONS OTHER THAN AUTHENTICITY. Lots returned must be housed intact in their original holder. No lots purchased by floor Bidders may be returned (including those Bidders acting as agents for others) except for authenticity. Late remittance for purchases may be considered just cause to revoke all return privileges.

COINS and CURRENCY TERM B: Auctions conducted solely on the Internet THREE (3) DAY RETURN POLICY: Certified Coin and Uncertified and Certified Currency lots paid for within seven days of the Auction closing are sold with a three (3) day return privilege unless otherwise noted in the description as "Sold As Is, No Return Lot". You may return lots under the following conditions: Within three days of receipt of the lot, you must first notify Auctioneer by contacting Client Service by phone (877-HERITAGE (437-4824)) or e-mail (Bid@HA.com), and immediately ship the lot(s) fully insured to the attention of Returns, Heritage, 3500 Maple Avenue, 17th Floor, Dallas TX 75219-3941. Lots must be housed intact in their original holder and condition. You are responsible for the insured, safe delivery of any lots. A non-negotiable return fee of 5% of the purchase price (\$10 per lot minimum) will be deducted from the refund for each returned lot or billed directly. Postage and handling fees are not refunded. After the three-day period (from receipt), no items may be returned for any reason. Late remittance for purchases revokes these Return privileges.

COINS and CURRENCY TERM C: Bidders who have inspected the lots prior to any Auction, or attended the Auction, or bid through an Agent, will not be granted any return privileges, except for reasons of authenticity.

COINS and CURRENCY TERM D: Coins sold referencing a third-party grading service are sold "as is" without any express or implied warranty, except for a guarantee by Auctioneer that they are genuine. Certain warranties may be available from the grading services and the Bidder is referred to them for further details: Numismatic Guaranty Corporation (NGC), P.O. Box 4776, Sarasota, FL 34230, <http://www.ngccoin.com/services/writtenguarantee.asp>; Professional Coin Grading Service (PCGS), PO Box 9458, Newport Beach, CA 92658, <http://www.pcg.com/guarantee.html>; ANACS, 6555 S. Kenton St. Ste. 303, Englewood, CO 80111; and Independent Coin Grading Co. (ICG), 7901 East Bellevue Ave., Suite 50, Englewood, CO 80111.

COINS and CURRENCY TERM E: Notes sold referencing a third-party grading service are sold "as is" without any express or implied warranty, except for guarantee by Auctioneer that they are genuine. Grading, condition or other attributes of any lot may have a material effect on its value, and the opinion of others, including third-party grading services such as PCGS Currency, PMG, and CGA may differ with that of Auctioneer. Auctioneer shall not be bound by any prior or subsequent opinion, determination, or certification by any grading service. Bidder specifically waives any claim to right of return of any item because of the opinion, determination, or certification, or lack thereof, by any grading service. Certain warranties may be available from the grading services and the Bidder is referred to them for further details: Paper Money Guaranty (PMG), PO Box 4711, Sarasota FL 34230; PCGS Currency, PO Box 9458, Newport Beach, CA 92658; Currency Grading & Authentication (CGA), PO Box 418, Three Bridges, NJ 08887. Third party graded notes are not returnable for any reason whatsoever.

COINS and CURRENCY TERM F: Since we cannot examine encapsulated coins or notes, they are sold "as is" without our grading opinion, and may not be returned for any reason. Auctioneer shall not be

liable for any patent or latent defect or controversy pertaining to or arising from any encapsulated collectible. In any such instance, purchaser's remedy, if any, shall be solely against the service certifying the collectible.

COINS and CURRENCY TERM G: Due to changing grading standards over time, differing interpretations, and to possible mishandling of items by subsequent owners, Auctioneer reserves the right to grade items differently than shown on certificates from any grading service that accompany the items. Auctioneer also reserves the right to grade items differently than the grades shown in the prior catalog should such items be reconsigned to any future auction.

COINS and CURRENCY TERM H: Although consensus grading is employed by most grading services, it should be noted as aforesaid that grading is not an exact science. In fact, it is entirely possible that if a lot is broken out of a plastic holder and resubmitted to another grading service or even to the same service, the lot could come back with a different grade assigned.

COINS and CURRENCY TERM I: Certification does not guarantee protection against the normal risks associated with potentially volatile markets. The degree of liquidity for certified coins and collectibles will vary according to general market conditions and the particular lot involved. For some lots there may be no active market at all at certain points in time.

COINS and CURRENCY TERM J: All non-certified coins and currency are guaranteed genuine, but are not guaranteed as to grade, since grading is a matter of opinion, an art and not a science, and therefore the opinion rendered by the Auctioneer or any third party grading service may not agree with the opinion of others (including trained experts), and the same expert may not grade the same item with the same grade at two different times. Auctioneer has graded the non-certified numismatic items, in the Auctioneer's opinion, to their current interpretation of the American Numismatic Association's standards as of the date the catalog was prepared. There is no guarantee or warranty implied or expressed that the grading standards utilized by the Auctioneer will meet the standards of any grading service at any time in the future.

COINS and CURRENCY TERM K: Storage of purchased coins and currency: Purchasers are advised that certain types of plastic may react with a coin's metal or transfer plasticizer to notes and may cause damage. Caution should be used to avoid storage in materials that are not inert.

COINS and CURRENCY TERM L: NOTE: Purchasers of rare coins or currency through Heritage have available the option of arbitration by the Professional Numismatists Guild (PNG); if an election is not made within ten (10) days of an unresolved dispute, Auctioneer may elect either PNG or A.A.A. Arbitration.

COINS and CURRENCY TERM M: For more information regarding Canadian lots attributed to the Charlton reference guides, please contact: Charlton International, PO Box 820, Station Willowdale B, North York, Ontario M2K 2R1 Canada.

COINS and CURRENCY TERM N: Some of the lots offered herein have been assigned to 1031 Services, Inc. for the purpose of consignor's tax deferred exchange.

COINS and CURRENCY TERM O: Financing. Auctioneer offers various extended payment options to qualified pre-approved persons and companies. The options include Extended Payment Programs (EPP) Flexible Payment Program (FPP) and Dealer Terms. Each program has its specific terms and conditions and such terms and conditions are strictly enforced. Each program has to be executed by the purchaser. Auctioneer reserves the right to alter or deny credit and in such case these auction terms shall control.

For wiring instructions call the Credit department at 877-HERITAGE (437-4824) or e-mail: CreditDept@HA.com

## New York State Auctions Only

Notice as to an Auction in New York City. These Terms and Conditions of Sale are designed to conform to the applicable sections of the New York City Department of Consumer Affairs Rules and Regulations as Amended. This sale is a Public Auction Sale conducted by Heritage Auctioneers & Galleries, Inc. #1364738. The New York City licensed auctioneers are: Samuel Foosse 0952360; Robert Korver 1096338; Kathleen Guzman 0762165; Michael J. Sadler 1304630; Scott Peterson 1306933; Andrea Voss 1320558; Nicholas Dawes 1304724; Ed Beardsley 1183220; Bob Merrill 1473403; Paul Minshull 2001161; Fiona Elias 2001163; Brian Nalley 2001162; Jennifer Marsh 2009623; Alissa Ford 2009565, who will conduct the Sale on behalf of itself and Heritage Auctioneers & Galleries, Inc. All lots are subject to: the consignor's rights to bid thereon in accord with these Terms and Conditions of Sale, consignor's option to receive advances on their consignments, and Auctioneer, in its sole discretion, may offer limited extended financing to registered bidders, in accord with Auctioneer's internal credit standards. A registered bidder may inquire whether a lot is subject to an advance or a reserve. Auctioneer has made advances to various consignors in this sale. On lots bearing an estimate, the term refers to a value range placed on an item by the Auctioneer in its sole opinion but the final price is determined by the bidders. Rev 10-6-2014

U.S. COIN AUCTION

JANUARY 7-9 & 11-12, 2015 | FUN | ORLANDO

## PLATINUM NIGHT

Front Cover Lots: 4412

Inside Front Cover Lots: 4011

Inside Back Cover Lots: 4506, 4510

Back Cover Lots: 4005, 4011, 4051, 4075, 4082, 4097, 4173, 4266, 4271, 4291, 4292, 4313, 4406, 4434, 4482, 4505

# Platinum Night

January 7, 2015 | Orlando

Featuring: The Rawlin "Mac" McInelly Collection • The Free Tilly Collection • The A. James Evans Collection, Part II  
The Empire Collection • The Ally Collection • The Millford Collection, Part II • The Liberty USA Collection  
The Sweet Bloomfield Collection

## Signature® Floor Sessions 1-7

(Floor, Telephone, HERITAGE Live!®, Internet, Fax, and Mail)

Orange County Convention Center  
West Concourse • Rooms 221 A, B  
9800 International Drive • Orlando, FL 32819

Session 1 (see separate catalog)

Wednesday, January 7 • 12:00 PM ET • Lots 3001–3930

### Session 2 - PLATINUM NIGHT

Wednesday, January 7 • 6:00 PM ET • Lots 4001-4512

Session 3 (see separate catalog)

Thursday, January 8 • 12:00 PM ET • Lots 4513-5427

Session 4 - PARTRICK COLLECTION (see separate catalog)

Thursday, January 8 • 6:00 PM ET • Lots 5501-5855

Session 5 (see separate catalog)

Friday, January 9 • 11:00 AM ET • Lots 5856-6684

Session 6 (see separate catalog)

Friday, January 9 • 4:30 PM ET

Session 7 (see separate catalog)

Friday, January 9 • 7:00 PM ET

## Signature® Internet Sessions 8-9

(HERITAGE Live!®, Internet, Fax, & Mail only Session)

Session 8 (see separate catalog)

Sunday, January 11 • 1:00 PM CT • Lots 9001-10672

Session 9 (see separate catalog)

Monday, January 12 • 12:00 PM CT • Lots 10673-12644

## LOT SETTLEMENT AND PICK-UP

Thursday, January 8 • 10:00 AM - 1:00 PM ET

Friday, January 9 • 10:00 AM - 1:00 PM ET

Saturday, January 10 • 9:00 AM – 12:00 PM ET

Extended Payment Terms available. Email: [Credit@HA.com](mailto:Credit@HA.com)

Lots are sold at an approximate rate of 100 lots per hour, but it is not uncommon to sell 75 lots or 125 lots in any given hour. .

**This auction is subject to a 17.5% Buyer's Premium.**

Dear Bidder:

Platinum Night at FUN always helps set the numismatic tone for the year, and it will be true once again at FUN 2015 in Orlando, when nearly every series is represented and many extreme rarities will change hands. As usual, Platinum Night serves up the crème de la crème of numismatics, and if there is a cherry on top of the current sale it is the fantastic 1907 Ultra High Relief twenty dollar gold piece graded PR68 by both NGC and PCGS Secure. One of the ultimate prizes for the most advanced rare coin collector/investor, this is the first time the coin has been offered at public auction – Ex: the Augustus Saint-Gaudens estate – and one of the few Ultra High Relief proofs that exist with Inverted Edge Letters, as well as **the only** example with the intriguing and enigmatic inscription “ASG” on the rim.

Of course, it is just one coin out of an outstanding selection of rarities offered in this sale. It seems unfair to highlight a single coin (or even a certain group of coins). Rather, please take time to look through Platinum Night catalog page-by-page and judge for yourself which of the incredible offerings are worthy of a second, third, or fourth look. Many amazing coins come from the following list of notable Featured Collections, as well as from our valued individual consignors. We greatly appreciate their contributions to the success of the auction:

The Rawlin “Mac” McInelly Collection

The Free Tilly Collection

The A. James Evans Collection, Part II

The Empire Collection

The Ally Collection

The Millford Collection, Part II

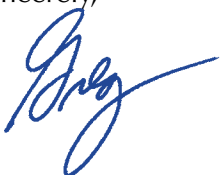

The Liberty USA Collection

The Sweet Bloomfield Collection

As a reminder, the *Donald Groves Partrick Collection of Extraordinary United States Colonials* is featured in its own evening auction with a separate catalog (Session 4 of the sale).

We accept bids through HA.com, e-mail, U.S. mail, and fax. Real-time options for remote bidding include telephone bidding and online bids with HERITAGE Live!® — our proprietary, award-winning online platform. Of course, if you are attending FUN in person we encourage you to stop by our booth on the Bourse, view the Platinum Night lots on-site, and bid from the auction floor. Good luck! We look forward to a truly exceptional auction.

Sincerely,

Greg Rohan  
President

Todd Imhof  
Executive Vice-President

## COLONIALS

**(1615-16) Sommer Islands Sixpence, XF45  
W-11440, Small Portholes**

**4001** (1615-16) Sommer Islands Sixpence, Small Portholes XF45 NGC. W-11440, British Monetary Authority Type II, High R.6. Sommer Islands coinage was introduced to the local island economy in about 1616 under the somewhat despotic authority of Daniel Tucker (Tucker), who served under the auspices of the Bermuda Company. Brass pieces were introduced in denominations of twopence, threepence, sixpence, and shilling, with the numerals II, III, IV, and XII representing the values. Thin brass planchets were struck, then silvered, and used on the islands for exchange value without any real intrinsic worth. Tobacco continued to be the main medium of exchange for larger monetary transactions.

This exceptional example of the Sommer Islands sixpence retains some of its original silver wash and much of the design motifs. It is the Small Portholes variant, with substantial detail remaining on the sailing ship motif on the reverse. Three of the four portholes are visible. The obverse "hogge" is sharply visible, as are the SOMMER ILANDS legend and denomination. As expected, areas of corrosion and moderate green oxidation are seen on both sides. Seldom available any finer, this XF example is Choice for the type and rare. Listed on page 36 of the 2015 *Guide Book*. PCGS# 4

**Sommer Islands Sixpence, VF Details  
Large Portholes, W-11445  
Rare Hogge Money Denomination**

**4002** (1615-16) Sommer Islands Sixpence, Large Portholes — Damaged — NGC Details. VF. Breen-3, W-11445, R.6. Like all Sommer Islands "hogge money," the sixpence is very rare. Our online auction archives, which date to 1993, show only two prior auction appearances of the denomination at Heritage. All examples were recovered from soil at Bermuda and typically have dark, granular surfaces. The present piece is sharply defined and displays a clear hog, ship, and denomination. All four large portholes are readily evident. Abrasions are minimal and the "damage" designated on the NGC holder is strictly from environmental exposure. Listed on page 36 of the 2015 *Guide Book*.

**Sommer Islands Shilling, Fine 12**  
**Small Sail, W-11460**  
**Rare Early American Type**

**4003 (1615-16) Sommer Islands Shilling, Small Sail Fine 12 NGC. Breen-2, W-11460, R.5.** Circa-1616 Sommer Islands “hogge money” is rare regardless of variety or denomination. The hog is an usual central obverse motif for that or any other era, but is featured on the early coinage for Bermuda since it helped saved the lives of Sir George Somers’ shipwrecked party. The island was populated by hogs from a prior ephemeral settlement, and fed the crew until the expedition to Virginia could resume. The present example is a dug piece, as are all known, and exhibits scattered specks of aqua verdigris across granular walnut-brown surfaces. When evaluated beneath a loupe, substantial design definition emerges. The lot is accompanied by an unrelated 85 mm x 90 mm x 35 mm black presentation case in AU condition. Listed on page 36 of the 2015 *Guide Book*. PCGS# 6

## 1776 Continental Dollar, VF Details Newman 1-A, Dotted Rings Unique and Unlisted in Pewter

**4004 1776 Continental Dollar, CURRENCY, Dotted Rings, Pewter — Edge or Rim Damage — PCGS Genuine. Newman 1-A, W-Unlisted, Unique.** The Dotted Rings variety (Newman 1-A) was the first produced Continental dollar. Previously, the variety was only known by three examples in brass, offered respectively as lot 955 in the Brand Estate June 1984 Bowers & Merena auction and reappearing in the present sale within the Partrick Collection offering, lot 2450 in the March 1988 Bowers & Merena auction of the Norweb Collection, and lot 3036 in our recent November 2014 Eric P. Newman Signature auction. Newman 1-A has never been as much as rumored to exist in pewter or tin format prior to the consignment of the present piece.

The distinctive feature of Newman 1-A is that the 13 reverse rings, one for each of the former colonies, are comprised of many tiny beads. Entering those beads was undoubtedly a laborious task for the die engraver, and the reverse die was altered by the maker (Newman 1-B) to turn the beaded rings into circular lines. On high grade examples, such as lot 3037 from our November 2014 Newman Signature, remnants of the beads remain evident when viewed beneath magnification. The two subsequent reverse dies, Newman's C and D, exhibit circular lines without beads.

On the present pewter example of Newman 1-A, all 13 rings are beaded with no hint of the later die modifications to the rings. The dies are rotated approximately 45 degrees counter-clockwise from medal turn. The diameter is slightly wider than the Newman lot 3036 example of Newman 1-A, which has the upper obverse letters, and the Massachusetts and New Hampshire rings, closer to the edge. The other two known brass Newman 1-A examples have diameters similar to the Newman specimen, with incomplete rims. The raised rim is complete on the present piece, which indicates that it was better centered when struck than the three brass examples.

In our opinion, this unique pewter Newman 1-A specimen has VF details. Slight to minor rim dings are noted on the obverse near 1, 3, 9, and 10 o'clock, and correspond to the strictly assessed PCGS designation. A loupe reveals a few unobtrusive marks on the deep gunmetal-gray surfaces, such as near the R and second C in CURRENCY, and on the reverse within the Virginia ring. Light pinscratches are on the obverse field above the sun. The obverse sharpness is consistent while the Massachusetts and New Hampshire rings are softly brought up, similar to the regional weakness of strike on the ex-Norweb Whitman *Encyclopedia* plate coin for Newman 1-A.

With the present discovery coin, it is now theoretically possible to collect all seven die varieties of Continental dollars in pewter. But the present lot is the stopper, and its opportunity is fleeting for the specialist bidder.

**1776 Continental CURRENCY Dollar, MS65**  
**Prooflike Pewter Example**  
**Newman 2-C, W-8455**

**4005 1776 Continental Dollar, CURRENCY, Pewter MS65 NGC. Newman 2-C, W-8455, R.3.** The early American republic formed itself in three successive governing bodies. The Continental Congress first met in 1774 and held sway during the Revolution. In 1781, following the British surrender, the United States reorganized around the Articles of Confederation and the national government formally met as the Confederation Congress. Finally, following ratification of the Constitution in 1788, the Constitutional Congress was seated in 1789. It continues today in the same form, with the present body officially known as the One Hundred Fourteenth United States Congress. All three of the Congressional bodies dealt with coinage, and today their earliest emissions draw intense interest from numismatists, as they combine scarcity and desirability with the ideals of the young nation.

Each of these three governments is associated with an iconic coin. The Constitutional Congress began working on coinage legislation in 1791, and in 1792 produced the half disme, George Washington's "small beginning in coinage." The half disme was not an artistic triumph, but it demonstrated American sovereignty and the capability to coin precious metal, even if in a rudimentary fashion. The Confederation Congress was responsible for the Nova Constellatio patterns. Today known only to the extent of seven distinct specimens (one sold by Heritage in May 2014 in Selections from the Eric P. Newman Collection, Part IV, lot 30424), the Nova Constellatio's All-Seeing Eye was a reminder that divine providence oversaw the birth of the country. The Nova Constellatio patterns were the first decimalized coinage in the world, and even if the design was crude they still represented an extraordinary simplification of accounting and arithmetic. Lastly, the Continental dollar is the coin best associated with the Continental Congress.

While the half disme and Nova Constellatio patterns have documented legislative histories, the papers of the Continental Congress are silent on the subject of the Continental dollar. Eric P. Newman and others have stepped into the gap to present a more complete picture. Newman, and Maureen Levine, writing in the July 2014 *Numismatist*, cited the research of Robert D. Leonard, who discovered a 1779 reference to the Continental dollar published in the *Royal Gazette*. Authored by the Loyalist poet Jonathon Odell (1737-1818), the satiric verse ridiculed the base metal coins, suggested they were intended to circulate as fiat money, and pointed the finger straight at the Continental Congress for making them. While Odell did nothing to mask his editorial bias, the historical information he conveyed remains the first mention in print of the Continental dollar. Newman and Levine additionally detailed engravings and a description of the dollar that appeared in German publications in 1783 and 1784. These sources do not demonstrate a clear connection with the Continental Congress, but do show the coin was widely known at the time.

Newman's article "The 1776 Continental Currency Coinage," published in the *Coin Collector's Journal* in July 1952 outlined the circumstantial case connecting the dollar with the Continental Congress. A gap in the authorized denominations of paper money was the most telling evidence. The one-dollar denomination is oddly omitted in the currency issues of July 1776 through September 1778. Newman felt the intention to issue a coined dollar was "obviously the reason." Newman further searched the congressional journals and found entries in 1776 and 1777 advocating the establishment of a mint. The Continental Congress was certainly aware of the need for American coinage, and the Continental dollar is today the best symbol of that aspiration.

The Continental dollars were struck in silver (four known), brass (about 20 known), and pewter. Pewter examples are scarce, with several hundred examples extant. The design is among the most popular and replicated in American numismatics. Indeed, the coin has been so copied that some of the copies themselves are collectible. The appeal is obvious. This is the arguably the first coin issued by the United States, and it is a dollar, the most iconic of American coinage denominations. It bears the all important 1776 date, and like America, it is physically large. The Royalist poet Jonathon Odell, discussed earlier, meant to deride the size of the coin, "what both hands can hold," but this almost reads as a backhanded compliment. The heft of a silver dollar impresses collectors and non-collectors alike and befits the ambitions of a youthful republic.

The present example is an outstanding example of the issue. It is the highest graded by NGC for the Newman 2-C variety, and for all varieties of Continental Currency dollars, NGC has graded only four pieces higher. The "stubby numbers" (as described by Eric P. Newman) that comprise the 1776 date quickly identify the variety, as on other varieties it is clear the engraver struggled to fit the italicized date into the available space. There are no marks of note save for some obverse chatter among the letters of ENCY. The obverse and reverse both exhibit bright, silver-gray prooflike fields. Listed on page 85 of the 2015 *Guide Book*. Population: 1 in 65, none finer (11/2014). PCGS# 794

**1776 Continental CURRENCY Dollar, MS65  
High-Quality Pewter Example  
Newman 3-D, W-8460, EG FECIT**

**4006** 1776 Continental Dollar, CURRENCY, Pewter, EG FECIT MS65 PCGS Secure. Newman 3-D, W-8460, R.4. The 1776 Continental dollar is one of the most enigmatic issues in the early federal coinage series. Although no documentary evidence has been found authorizing the issuance of these coins, researchers believe they were struck as a substitute for paper dollars in late 1776. Earlier paper money issues of the Continental Congress (February and May, 1776) included various denominations ranging from 1/6 dollar through eight dollars, and the one-dollar denomination was included on both occasions. Later issues (July 22 and November 2, 1776) omitted the one-dollar denomination. The 1776 Continental dollars were apparently intended to take the place of the paper notes in these emissions.

Most 1776 Continental dollars were struck in pewter, and these seem to have circulated to some extent, as they are seen in all grades today. A few examples are known in silver and brass compositions, but these are extremely rare. The silver coins are of full weight and value, and may have been intended to circulate as precious-metal issues, but the Continental Congress did not have an adequate supply of silver to support a large scale mintage of silver coins, and such a plan must have been abandoned quickly. The brass specimens may have served as patterns. Eleven varieties have been identified, mostly by Eric P. Newman in his 1952 work *The 1776 Continental Currency Coinage*. Varieties include specimens struck in varying compositions from five different obverse dies and four different reverse dies. The design differences arise from different spellings of the word currency, different treatment of the rings on the reverse, and the addition of the inscription EG FECIT on some varieties. The present coin represents the Newman 3-D variety, struck in pewter, with the correct spelling of CURRENCY, and the engraver's initials EG FECIT (E.G. made it) on the obverse. Newman identified Elisha Gallaudet as the engraver of this die.

Responding to a question in the Numismatic Bibliomania Society's online forum, the *E-Sylum*, Robert D. Leonard identified what may be the first mention in print of the 1776 Continental dollars. The reference to "pewter dollars, what both hands can hold, a thimble-full of plate, a mite of gold" was made in a sarcastic poem titled "The Congratulation" written by Loyalist poet Jonathan Odell and published in the November 6, 1779 edition of New York's *Royal Gazette*. The bias of the poet is obvious in the poem, but his characterization of the 1776 Continental dollar as an unpopular and often repudiated medium of exchange is accurate.

New research by Eric P. Newman and Maureen Levine, published in the July 2014 edition of *The Numismatist*, reveals that the first image of a 1776 Continental dollar was Daniel Berger's engraving of a specimen in Matthias Christian Sprengel's book *Historisch-genealogischer Calender*, published in Berlin in 1783. Berger's drawing translated the legends on the coin from English and Latin to German, and was reprinted in numismatic publications on several occasions, including a reproduction in Sprengel's 1784 *Allgemeines historisches Taschenbuch*, which was previously thought to be the earliest illustration of the Continental dollar. Sprengel's account of the dollar also predates Richard Watson's famous 1786 analysis of the piece in his *Chemical Essays* by more than two years.

The 1776 Continental CURRENCY dollar is an elusive issue, but pewter specimens are regularly available in circulated grades. Examples in Gem condition are very rare, and finer pieces are virtually unobtainable. The present coin is a spectacular Gem, with sharply detailed design elements and semiprooflike, mostly brilliant surfaces that show a few hints of golden-tan and amber toning. No mentionable distractions are evident and eye appeal is outstanding. It may be years before a comparable offering of this historic issue occurs. Listed on page 85 of the 2015 *Guide Book*. Population: 4 in 65, 1 finer (11/14).

*From The Sweet Bloomfield Collection. PCGS# 795*

### 1783 Short Worm Chalmers Shilling, AU53 Lightly Circulated and Quite Rare as Such

**4007** 1783 Chalmers Shilling, Short Worm AU53 PCGS. Breen-1011, W-1785, High R.4. Annapolis, Maryland, silver- and goldsmith John Chalmers is credited with the 1783-dated shillings (and rare threepence and sixpence) that bear his name. A German native visiting America, Dr. Johann David Schoepf, wrote of his visit to Annapolis in *Travels in the Confederation 1783-1784*, cited in Sylvester Crosby's 1875 classic on Colonial coinage. Schoepf noted that the Chalmers coinage was intended to remove the fraudulent "pieces of eight" that were really "pieces of nine" or "pieces of ten" being passed off; Chalmers' motives were not entirely altruistic, however, as he made a tidy profit by redeeming the lightweight older coins from circulation.

This is an attractive example of the Short Worm variety, showing a bold strike and good centering on surfaces that are light pinkish-gray. There is a tiny planchet indent just inside the inner beaded circle on the obverse, but otherwise there are no singular marks. This is a top-notch coin, *far finer* than the typical grade seen of Very Fine or so. The issue is listed on page 51 of the 2015 *Guide Book*. PCGS# 596

## HALF CENTS

### 1793 C-3, B-3 Half Cent, XF45 Sharply Struck and Attractive

**4008** 1793 C-3, B-3, R.3, XF45 PCGS. This is the second most available variety for the year of the four die pairings known, although there is not much rarity differential between the C-2, B-2 and C-3, B-3. The Cohen-3, Breen-3 marriage is generally available in higher grades, however, as this Choice XF example amply demonstrates. The medium olive-brown obverse tends to a bit darker shade on the reverse. A glancing mark runs through Liberty's forehead and hair, with scattered other marks in the fields and one underlining HALF on the reverse. The usual bit of die rust appears on the reverse under TES. A nice coin for the grade, showing good sharpness throughout and minimal distractions. Our EAC grade VF25. PCGS# 35009 Base PCGS# 1000

## PROOF BRAIDED HAIR HALF CENT

**1796 C-2, B-2 Half Cent, Good 6  
With Pole Obverse**

**4009** 1796 With Pole, C-2, B-2, High R.4, Good 6 PCGS. The key date to the half cent series, two varieties of 1796 half cents are known, either having or lacking the pole along Liberty's bust line. The With Pole variety is more often encountered, with a surviving population estimated at 100 coins. The No Pole rarity has a population of no more than 20 examples. The olive, tan, and mahogany surfaces exhibit microscopic granularity that is a frequent visitor to surviving examples. The surface quality is such that a collector might obtain a reasonably detailed representative at an affordable price. Our EAC grade AG3. PCGS# 35098 Base PCGS# 1027

**1842 B-1 Half Cent Original, PR64 Brown**

**4010** 1842 Original PR64 Brown PCGS. B-1, R.6. The Original variety with large berries in the wreath, likely struck in the year displayed. This example exhibits pleasing chocolate-brown surfaces with traces of blue and tan toning. The fields are mostly mirrored, although subdued at the upper reverse where some green residue is noted. Careful conservation might successfully remove that matter. A single diagonal scrape runs downward from just below the N in CENT to near the leaves below. PCGS reports two in PR64 Brown with one each in PR65, PR65+, and PR66 Brown finer (12/14). Our EAC grade PR55. NGC ID# 2627, PCGS# 1260

## LARGE CENTS

---

**1793 S-4 Chain, Periods Cent, MS66 Brown PCGS  
Second Finest PCGS-Certified Chain Cent, Finest With CAC Approval  
The Legendary Parmelee-Brand-Naftzger Specimen  
First Public Auction Appearance Since 1890**

**4011 1793 Chain, AMERICA, Periods, S-4, B-5, R.3, MS66 Brown PCGS Secure. CAC.** Ex: Parmelee-Brand-Naftzger. Just a handful of United States coins are important and desirable enough to capture the attention and bidding activity of people who do not even consider themselves coin collectors. This Chain cent is just such a coin — the second finest PCGS-certified example of the very first coinage design struck in the United States Mint. As such, it is arguably the most historically important regular issue United States coin.

#### Unsurpassed Historical Importance

After Congress authorized the Mint in April 1792, plans for the establishment soon began, and all was ready late that year. Although 1792 half dismes were minted before the Mint opened, and a few patterns were struck in the new facility late in 1792, the Chain cents were the first actual United States coins minted at the Philadelphia Mint in March 1793. These coins are the *very first federal type coins*, minted before the 1793 half cents, or the other large cent designs. Mint records identify a total mintage of 36,103 Chain cents were delivered March 1 through March 12, 1793.

#### Extraordinary Quality

A magnificent Gem in all respects. An extremely bold strike exhibits intricate hair details, and there is a complete, raised rim around the obverse, while the chain on the reverse appears in bold relief. The obverse exhibits faint bluish-steel toning and satiny cartwheel luster. The reverse features frosty luster over remarkably pristine olive-brown surfaces.

#### Certification Data

The combined population figures for PCGS and NGC show 28 Mint State Chain cents of all varieties. This is the second finest PCGS-graded Chain cent and the only example graded MS66. PCGS has graded the Mickley-Crosby example SP67 (Known as “The Coin!”). NGC has graded one example MS66 Brown and one example MS66 Red and Brown. This is the finest graded Chain cent authenticated and graded by PCGS and NGC to receive CAC approval.

#### A Distinctive Variety

The obverse of the S-4 Chain Periods cent is unlike earlier Chain cent varieties. The hair shows a different treatment, and the periods that follow the date and LIBERTY are unprecedented among all 1793 cents. Walter Breen made the reasonable suggestion that a different engraver prepared this obverse. The periods are similar to Joseph Wright’s 1792 pattern quarters, and led Breen to suggest that Wright engraved this die. Harry Salyards suggested that the engraver of this die continued to prepare the Wreath cent obverse dies. The identification of engravers of the 1793 cents and half cents remains a perplexing numismatic mystery.

#### Ranked First in the Noyes Census

There are three exceptional 1793 S-4 Chain Periods cents that rank at the top of the Bland and Noyes Condition Censuses, although their exact rank is subject to differing opinions. Noyes rates this piece as the finest known, even ahead of the Mickley-Crosby coin that some have dubbed “The Coin!” He ranks both of these examples ahead of the third-place Eliasberg coin. Noyes has personally examined this piece and the Mickley-Crosby coin, and illustrates both in his 2006 photo book, *United States Large Cents 1793-1794*.

Del Bland also ranks the present offering and the Mickley-Crosby coin ahead of the Eliasberg coin, although he places the Mickley-Crosby coin first, and this example second in his Condition Census. However, Bland had not seen either coin at the time his list was published in *Walter Breen’s Encyclopedia of Early United States Cents 1793-1814*, in 2000. His grades and rankings were apparently based on second-hand information.

#### Relative Prices Realized

The relative prices realized for the present offering, The Mickley-Crosby example, and the Eliasberg coin make for an interesting comparison of their relative qualities. The present coin first appeared at public auction in January 1879 where the coin realized \$76. This was 50% more than the Mickley-Crosby example brought just 3 years earlier.

In 1944, the present coin was sold to T. James Clarke for \$850. The Mickley-Crosby coin was sold privately in 1945 for \$600, according to William Sheldon’s *Early American Cents*. And in 1946, B. Max Mehl sold the Eliasberg coin at public auction for \$330.

When the Mickley-Crosby coin was last offered for sale by private treaty in 1993, its price tag was \$1.5 million. Some people today believe it may be the most valuable regular issue United States coin. The Eliasberg example was last sold by Heritage Auctions in January 2012 for \$1.38 million, a record price for any United States cent at public auction.

### Legendary Provenance

The provenance of the present offering is among the finest of any United States large cent. In 1869, this coin was chosen to appear on the famous Cosby-Levick plate, the first published photograph of coins in the United States. A decade later, in January 1879, this coin was purchased at public auction by Lorin Parmelee, the Boston bean baker who assembled what is generally considered the finest U.S. coin collection of all time - finer than Garrett, Eliasberg, Norweb or any other due to the collection's vast breadth of rarities and overall spectacular condition. When the Parmelee Collection was sold in 1890, it would be the last appearance of this coin at public auction. It graced the personal collection of Philadelphia coin dealer Harlan P Smith, then spent more than three decades in the legendary collection of the enormously wealthy Chicago brewer, Virgil Brand. When Brand's estate was parceled out before World War II, it passed through the hands of two coin dealers before being sold to New York City numismatist Oscar J. Pearl, whose collection of 1793 large cents was called "undoubtedly one of the finest in existence." T. James Clarke purchased this coin from the fixed price list of Pearl's collection in 1944 and owned it for a decade before selling it to R.E. "Ted" Naftzger, the most famous large cent collector of all time. Naftzger held this coin for nearly 40 years, until he sold his collection in 1992. This coin was sold to the present owner soon thereafter and has remained off the market ever since.

### A Truly Special Opportunity

The staff at Heritage Auctions has been privileged to view and catalog this legendary coin - the second finest PCGS graded example of the very first coinage design issued by The United States Mint. **This is also the finest graded Chain Cent from either PCGS or NGC to receive CAC approval.** This coin possesses an unbeatable combination of high technical grade, conditional rarity, exemplary eye appeal, legendary provenance and most importantly, unsurpassed historical importance. For all of these reasons, this is one of the most desirable and sought after regular issue United States coins. **This is the first opportunity to acquire this coin at public auction since 1890.** The winning bidder will add a legendary rarity to their collection and will also add their name to numismatic history.

*Ex: George W. Merritt; Édouard Frossard (1/1879), lot 79; Édouard Frossard; Lorin G. Parmelee (New York Coin & Stamp Co., 6/1890), lot 668; Harlan P. Smith; Virgil M. Brand; Brand Estate (2/7/1941); B.G. Johnson (St. Louis Stamp & Coin Co., 2/18/1943); Abe Kosoff; Oscar J. Pearl; Numismatic Gallery (1944 FPL), lot 3; T. James Clarke (10/1954); R.E. Naftzger, Jr. (2/23/1992); Eric Streiner; Jay Parrino (The Mint). PCGS# 35444 Base PCGS# 91341*

**1795 Cent, MS63 Brown  
S-75, B-3, Lettered Edge**

**4012** 1795 Lettered Edge, S-75, B-3, R.3, MS63 Brown PCGS. S-75 is a moderately plentiful variety overall, but is seldom found in this high of grade. Breen estimated about 24,000 examples were struck, this comprising the space of about three working days at the Mint. This is the only use of this reverse die, though this obverse was previously employed for the S-74 marriage. The 5 in the date is imbedded in the bust, and there are two leaves on the end of the right wreath branch. This example is evenly struck and well-centered, with bold, complete denticles around each side. Some minute granularity is seen in portions of the peripheral recesses, an often seen characteristic of this variety attributed to poor planchet quality. Tinges of coppery-red color resides amid deeper reddish-brown patina, giving this well-preserved large cent pleasing appeal. Our EAC grade AU55. PCGS# 35717 Base PCGS# 1377

**1808 S-278 Large Cent, MS66 Brown  
Lustrous Light-Tan Surfaces**

**4013** 1808 S-278, B-2, R.3, MS66 Brown NGC. Breen Die State III, An early intermediate die state with misaligned dies, showing heavy flowlines on both sides. Typical of the die pair, this example has bold central detail with considerable peripheral weakness. Highly lustrous surfaces are light golden-tan overall with apple-green and light brown on both sides. The left obverse border shows dentilation with a bold outer rim, and the right obverse falls off to the edge. The reverse is similar. Scattered dark toning freckles are evident on both sides of this lovely cent, the first issue of John Reich's new Turban Head or Classic Head design. NGC has certified only a single MS67 Brown example finer than this piece, one of two in this grade at NGC (12/14). Our EAC grade MS62. PCGS# 36460 Base PCGS# 1543

### 1848 Cent, N-9, MS65 Red Among the Finest Certified

**4014** 1848 N-9, R.1, MS65 Red PCGS. Die State b, with a crack from the rim over AME in AMERICA. This reverse die develops several rim cud marks over STATES in later stages of this marriage, but the early die states are normal for the variety. As a date, the 1848 is fairly plentiful in Mint State, but its availability declines significantly in the Red and Brown color category, and full Red examples are extremely rare. PCGS has encapsulated only six full Red examples in all grades, with four in MS65 and none finer (11/14). This piece is equal to the Nafziger coin that Grellman grades MS67 and records as finest known, and it is clearly finer than the fourth finest Daniel Holmes coin graded MS64. Frosty coppery-pink luster illuminates carefully preserved surfaces, with a few faint hints of deeper color observed upon close examination. The central devices are sharply impressed, though several stars are weak, as is typical of this type in general. Our EAC grade MS66. PCGS# 1885

## FLYING EAGLE CENT

### 1858 Flying Eagle Cent, MS66 Large Letters Variant

**4015** 1858 Large Letters MS66 PCGS. Eagle Eye Photo Seal, card included. High Leaves Reverse. This Type 1 is the Style of 1857 with the leaves placed higher than the Type 2 variation (Style of 1858). The surfaces are intensely lustrous with moderately glowing fields and gorgeous champagne-apricot iridescence. There is not a single outwardly distracting abrasion, and every feature rises powerfully above the surfaces with razor sharp striking detail. Population: 28 in 66, 1 finer (11/14).

*From the Marvin Elkin Collection (the Jon/Lor PCGS Registry Set) / Long Beach Signature (Heritage, 6/2002), lot 5058. NGC ID# 2277, PCGS# 2019*

## PROOF FLYING EAGLE CENTS

**1856 Flying Eagle Cent, PR64  
Sharp Snow-9 Representative**

**4016 1856 Snow-9 PR64 PCGS.** Snow-9 is the most plentiful 1856 Flying Eagle cent variety, likely struck during the period from late 1857 to 1860, per the research of Rick Snow. A thin die line in the forward portion of the eagle's left wing and a small die gouge near the end of the left ribbon end identify the die pair. This piece is boldly struck, with only a few tiny ticks in unobtrusive places. Tinges of coppery-red luster shine through in the protected regions, though the majority of each side is toned in deeper shades of auburn and bronze-brown, which partially subdues the mirroring in the fields. An impressive, Choice example of this legendary key issue. Housed in an old green label holder. PCGS# 147890 Base PCGS# 2037

**1856 Flying Eagle Cent, Snow-9, PR64  
High-End Example With CAC Approval**

**4017 1856 Snow-9 PR64 PCGS. CAC.** The tiny die lines from atop I(TED) to the rim and on the lower-left bow ribbon on the reverse identify the Snow-9 die pair, that most frequently seen among high-grade proof 1856 Flying Eagles. It has been precisely two years since we offered a PR64 1856 Flying Eagle with the CAC certification and graded by PCGS. The last was the ex: Teich coin in our FUN Signature (Heritage, 1/2013), lot 3020, which brought \$24,675. The Snow-3 coins were distributed to members of Congress, while the Snow-9 cents are believed to have been specially struck for collectors in the late 1850s, and their quality is generally higher as a result. This is a premium coin for the grade, with evenly matched surfaces that show no carbon or extensive graying or deep browning — unlike many other examples in this same grade. The proof strike is razor-sharp throughout. A small, inverted V-shaped lint mark above 1 in the date is as struck at the Mint, and a couple of other small ticks are trivial within the context of the near-Gem grade level. Although PCGS has certified more than 200 submissions of this rare issue in PR64, only 34 of those bear the green CAC approval sticker, with 14 finer — 13 in PR65 and one in PR67 (11/14). This high-end example offers an excellent opportunity to obtain the rarest issue in the entire small cent series. PCGS# 147890 Base PCGS# 2037

## INDIAN CENT

---

### **1877 Indian Cent, Colorful MS66 Red and Brown Sharp and Delightful Example**

**4018** 1877 MS66 Red and Brown NGC. Snow-2. Eagle Eye Photo Seal, card included. This is a fantastic-looking example of this hands-down key date in the Indian cent series. The surfaces are beautifully matched, showing concentric old-style album toning on each side that runs from reddish-orange near the rims to magenta, violet, and deep steel-blue in the centers. This piece boasts an extremely sharp strike, even on the feather tips, and there are simply no mentionable abrasions. The diagonal clash mark above O(NE) is bold, and an interesting wispy-but-long die crack runs through the last 7 in the date, with another much-shorter crack running left from the bottom-left serif of the 1 in the date. This piece would certainly form the capstone of many a nice Indian Head cent collection. Census: 7 in 66 Red and Brown, 0 finer (12/14). NGC ID# 2284, PCGS# 2128

## PROOF INDIAN CENTS

### 1864 L On Ribbon Cent, PR65 Red and Brown A Rare and Coveted Issue Snow-PR2

**4019 1864 L On Ribbon PR65 Red and Brown PCGS. CAC. Snow-PR2.** A long, raised upper-right to lower-left die line on the Indian's upper neck just below the neck line under the ear and the date to the right of the bust point attribute this variety. The new With L design is found on all Indian Head cents from this issue onwards. Mint Engraver James B. Longacre added his initial L on the lower ribbon between the last feather and the hair curl. The bust point is also narrow. Richard Snow writes in his 2009 *Guide Book of Flying Eagle and Indian Head Cents*:

"It is unknown when the design was put into production. It is likely that the new dies were made in time for the changeover to bronze in May and used side by side with the previously made No L dies."

It is estimated that a mere 20 1864 No L proofs were struck. This issue has been popular with collectors since early on. For example, Snow writes:

"Two examples were in the estate of ... Longacre, which was sold by M. Thomas and Sons on January 21, 1870 (lot 247). The auctioneer described these as 'thin die' (the No L style was conversely described as 'thick die'). The pair brought \$17."

The days with prices such as those are long gone!

The mirrored fields of the current Gem offering highlight the motifs on both sides when the coin is tilted slightly beneath a light source. The design elements are razor-sharp, including the feather tips, all four diamonds, the neck beads, the shield lines, and the features of the wreath. The copper-gold surfaces are impeccably well preserved. These attributes add up to great overall eye appeal, aptly recognized by CAC. Population: 5 in 65 Red and Brown, 1 finer (12/14). NGC ID# 229G, PCGS# 2280

### 1897 Cent, PR67 Red Cameo Extraordinary Type Coin

**4020** 1897 PR67 Red Cameo PCGS. Ex: Palm Beach Collection. The 1897 Indian Head cent boasts a small proof mintage of 1,795 pieces. In spite of the low mintage, some extraordinary specimens of the date are still extant. In *A Guide Book of Flying Eagle and Indian Head Cents*, Q. David Bowers relates, "Some of the prettiest gem cameo coins are found for this date." Bowers could have had the present coin in mind when he made the preceding statement. Vibrant orange and lemon hues endow this well-struck and exceptionally preserved Superb Gem with exceptional eye appeal. The portrait has splendid cameo contrast with the reflective field. PCGS has certified only two other coins in PR67 Red Cameo, with one finer, and NGC has yet to grade any coin this high within the Red Cameo designation (11/14).

Ex: *Central States Signature* (Heritage, 4-5/2009), lot 2103. PCGS# 82380

## LINCOLN CENTS

### 1909-S VDB Cent, Sharply Struck MS66 Red A Popular Key Date

**4021** 1909-S VDB MS66 Red PCGS. CAC. The 1909-S VDB is one of the most desired coins in United States numismatics. Not only is it a "must have" issue among Lincoln cent specialists, but many collectors in general seek this issue for their collection. Consequently, demand for this key date is incredible.

Both sides of this Premium Gem are awash with orange-gold luster and each displays impeccable preservation. Additionally, the design elements are sharply struck, including the date, mintmark, VDB initials, and the grains and lines of the wheat stalks. Interestingly though, the I in LIBERTY is not struck up. Nicely preserved, though a handful of tiny flecks are visible in the right obverse field adjacent to Lincoln's portrait. Nevertheless, a great looking specimen deserving of the CAC endorsement. PCGS has certified only 11 Red coins numerically finer and NGC one higher (11/14). NGC ID# 22B2, PCGS# 2428

**1912-S Lincoln Cent, MS66 Red  
Sole Finest Certified at PCGS**

**4022** 1912-S MS66 Red PCGS. The 1912-S Lincoln cent is an issue that is difficult to find in pleasing Mint State condition, and even scarcer with full Red luster. Most examples seem to have circulated extensively and the majority of surviving Mint State pieces are somewhat dull from poor handling and storage over the years. In Premium Gem condition, the 1912-S is a major rarity, regardless of color designation. PCGS has encapsulated only five pieces at this numeric level, including one Brown coin, three Red and Brown pieces, and this single Red coin, with none finer; NGC has similarly seen only four MS66 examples, with three Red and Brown pieces and one Red coin, also with none finer (11/14). The coin here offered is deeply satiny with dusky coppery-orange luster. The strike is razor-sharp, though a few small flecks are observed upon close examination. NGC ID# 22BC, PCGS# 2458

**1917 Lincoln Cent, MS65 Red  
Doubled Die Obverse**

**4023** 1917 Doubled Die Obverse, FS-101, MS65 Red PCGS. The die doubling is plain on GOD WE TRUST and the date. The Lincoln cent series has several major doubled die varieties, including the famous 1955, the rare 1969-S, and the slightly more recent 1972. But the 1917 doubled die cent is arguably the most significant Lincoln cent variety from the early part of the series, and is actively sought in all grades, even low circulated levels. Full Red examples are rare in all grades, making the piece here offered incredibly important for the advanced specialist or Registry Set collector. Radiant original mint bloom engulfs each side in coppery-gold brilliance, with sharply struck devices and delicately preserved surfaces. A couple tiny specks are seen upon close study, though the eye appeal is uninhibited. Population: 2 in 65 Red, 6 finer (11/14). PCGS# 37675 Base PCGS# 92497

### 1922 No D Cent, Strong Reverse Lustrous MS62 Red and Brown

**4024** 1922 No D, Strong Reverse, FS-401, MS62 Red and Brown NGC. Die Pair 2. By the time the 1922-D No D Lincoln cents were produced — there were no Lincoln cents struck in Philadelphia in 1922, despite the complete absence of a mintmark on this variety; blame the 1922 Peace dollars for low/no mintages of other denominations — the mintmark had totally worn off the obverse die. The obverse die should have been updated but in fact the reverse die was, leading to the Strong Reverse Die Pair 2 variety of the present piece. The L of LIBERTY is mushy and against the rim, and the first 2 is weaker than the second 2, diagnostic of this die pair. Considerable luster remains on this piece, with scattered accents of mint orange a bit more prominent on the reverse but seen on both sides. Certified in an NGC “no line fatty” holder. PCGS# 37677 Base PCGS# 3286

### 1969-S Lincoln Cent, AU55 Doubled Die Obverse Premier 20th Century Rarity

**4025** 1969-S Doubled Die Obverse, FS-101, AU55 PCGS. The 1969-S doubled die Lincoln cent is one of the most dramatic and arguably the rarest variety in the entire series. Ranking all the way up at number one in Scott Schechter and Jeff Garrett's *100 Greatest U.S. Modern Coins*, the variety was first discovered in mid-1970 and was at first erroneously thought by the U.S. Secret Service to be counterfeit. After the confusion was resolved, and collectors were free to pursue these coins, the discovery rate proved to be anything but eventful. Finds were few and far between, and it is believed that no more than about 30 pieces are known today in all grades. The certified population reports count 54 pieces in all grades, this figure undoubtedly including a number of resubmissions.

The present Choice AU coin displays original auburn-brown patina, with tinges of coppery-red in the protected regions. The strike is sharp, and just a brush of wear is evident over the high points of the design. Overall, this is a highly appealing example of this intriguing 20th century rarity. Population: 7 in 55, 20 finer (11/14). PCGS# 2921

## PROOF TWO CENT PIECE

**1864 Two Cent Piece, PR66 Red**  
**Popular *Guide Book* Small Motto Variety**  
**20-30 Examples Extant**

**4026 1864 Small Motto PR66 Red PCGS.** The *Cherrypickers' Guide* lists the business-strike Small Motto 1864 two cent piece as FS-401, but lists no separate variety number for proofs. As an indication of the popularity of the 1864 Small Motto proofs, Jeff Garrett and Ron Guth place the issue at number 77 on the list of *100 Greatest U.S. Coins*. They write, "Today, the 1864 Proof 'Small Motto' Two Cent piece is represented by a mere handful of pieces and ranks as one of the rarest major varieties in all of American numismatics." They rank the coins "Extremely Rare."

The Professional Edition of the *Guide Book*, fifth edition, states there are only 20-30 known surviving examples. Comparatively few of the survivors retain red surfaces, as evidenced by the data from the two major grading services. PCGS shows only this single example in PR66 Red, and none are finer. PCGS has certified a total of three Small Motto proofs in Red, in PR64, PR65+, and this PR66 piece. NGC has graded only one proof Red example, a PR64 coin. NGC shows a single PR66 as numerically finest in their Census, a Red and Brown coin (11/14).

The present coin is the single-finest Small Motto proof certified with the Red designation. Housed in a green label holder, this specimen exhibits rich golden-red color throughout. The strike is exacting, producing a strong degree of design definition, with the shield in particular displaying outstanding details. The well-preserved surfaces are brightly reflective, further adding to the visual appeal. This coin should find a home in the finest collection or Registry Set.

*Ex: Pre-Long Beach Sale (Superior Galleries, 10/2000), lot 4165.*  
 NGC ID# 274S, PCGS# 3626

## PROOF THREE CENT SILVER

### 1854 Type Two Three Cent Silver, PR65 Extremely Rare as Such The Clapp-Eliasberg Coin

**4027 1854 PR65 PCGS. CAC.** Ex: Eliasberg. This piece was described in the Eliasberg catalog as: "A magnificent specimen with pale blue and magenta toning. A sharply struck example. An incredibly rare coin, probably high Rarity-6 as a Proof and even higher when a gem as here offered. We have never seen a finer example."

This Gem proof comes from the initial year of the Type Two three cent silver design, showing two outlines around the obverse star. Two proof dies are known, including one with a repunched date also used to make business strikes. The Mint's early (pre-1858) proof strikes are largely unrecorded and undocumented productions, usually struck for the well-connected as delicacies, often used as trade bait to enhance the Mint Cabinet. It would be sheer speculation to estimate the number originally struck. Breen's *Proof Encyclopedia* estimates that fewer than 20 survive, including some "impaired by drastic cleaning or brief circulation." More recent estimates are in the range of 25 to 30 pieces, but in any case, Gem proofs or anything finer are extremely rare. Population: 1 in 65, 2 finer (11/14).

Ex: Wilson Collection (1906); J.M. Clapp; Clapp Estate; Louis E. Eliasberg, Sr.; Eliasberg Collection (Bowers and Merena (5/1996), lot 863. NGC ID# 27BZ, PCGS# 3701

### 1856 Three Cent Silver, Elusive PR65 Seldom-Seen Type Two Proof

**4028 1856 PR65 PCGS.** Scattered glints of copper-orange appear on both sides with the obverse adding pale bluish-gray and amber-gold patina to beautiful effect. Generous luster percolates up through the moderate toning. This lovely Gem is among the short-lived Type Two coins — those showing two outlines to the central star — struck only from 1854 through 1858. There are few marks for the grade visible on this coin, with a small, curving lintmark in the upper-right obverse, below O(F), the most reliable pedigree identifier. PCGS reports only six submissions in this grade with two finer, both PR66 (12/14). NGC ID# 27C3, PCGS# 3703

## THREE CENT NICKEL

### 1883 Three Cent Nickel, MS67 None Certified Numerically Finer

**4029** 1883 MS67 PCGS. CAC. This late-series issue had a paltry mintage of only 4,000 pieces, and is more often seen in proof format than as a business strike. Mint State examples are the most elusive, and only a select few are known in Superb Gem condition. This example is well-struck and showcases beautifully preserved, shimmering luster. Faint hints of champagne and ice-blue color intermingle across each side. The obverse is uncracked, though the reverse exhibits four equally spaced cracks from the denticles into the margins. A beautiful example of this seldom seen, low-mintage issue. Population: 4 in 67, 0 finer (11/14). NGC ID# 275E, PCGS# 3751

## SHIELD NICKELS

### 1866/1866 Rays Nickel, FS-301, MS65 Blatantly Repunched Date, Late-State Dies

**4030** 1866/1866 Rays, Repunched Date, FS-301, MS65 PCGS. Fletcher-08. The easiest way to differentiate this blatant *Cherry-pickers'* variety from some other, similar 1866 varieties is the complete bottom of a bold 1 lying between and higher than the subsequent 18. The final 1866 date shows the bottoms of a complete, higher 1866 in between. A bold die crack runs from the dentil below the left serif of the (final) 1 in the date, diagonally left and upward through the arrowhead, the tip of the fletchings, to the lowest-left olive leaf. Branching die cracks appear at the opposite lowest leaf, fletchings, and arrow. The reverse shows further bold die cracks, clearly dies that were about to self-destruct on both sides. The nickel-gray surfaces are well-preserved and nicely struck. PCGS# 38314 Base PCGS# 3790

**1873 Large/Small Date Nickel, MS64**  
**Sole Finest at PCGS**  
**The Elusive *Guide Book* Variety**

**4031** 1873 Open 3, Large Over Small 3, FS-1301, MS64 PCGS. CAC. Although there is no close-up image in the *Guide Book*, this is the variety listed but unpriced therein as "Lg Over Sm 3." This elusive variety is the sole finest of nine examples that PCGS has certified. The variety is included in the "Shield Nickels Complete Variety Set" in the PCGS Set Registry, and in our opinion should be included as part of the "Shield Nickels with Major Varieties" set. We have only offered one example of this variety in a previous auction. That piece was graded AU58 and realized \$13,800 in 2011. We expect spirited bidding when this example crosses the auction block. The dove-gray surfaces show good eye appeal and a decent strike on this interesting coin, one that series specialists will flock to. Population: 1 in 64, 0 finer (11/14). PCGS# 38394 Base PCGS# 3802

## 1880 Shield Nickel, MS66 Extremely Rare as a Business Strike Diagnostically Correct in All Respects

**4032 1880 MS66 PCGS Secure.** The value and general unavailability of the 1880 Shield nickel will surprise many collectors who do not specialize in this series. The 1880 is well known as a low-mintage rarity with only 16,000 business strikes produced. However, what confuses almost everyone, including the grading services, are the differences between business strikes and proofs. Two sets of dies were used to strike proofs, and some business strikes and proofs were struck from each die pair. So, how does one tell if the coin in question is a genuine business strike or just a dull proof?

The Bowers reference on the Shield and Liberty nickel series has an extensive quote from a die study done by John Dannreuther, Douglas Kurz, Howard Spindel, and Q. David Bowers on this very question. The diagnostics this group agreed on were:

The upper left outside of the first S in STATES is repunched.

There is a tiny raised "island" in the field below the T of STATES.

A tiny die line or thorn projects upward from a dentil below the space between T and S in CENTS.

No mirroring on the edge.

Perhaps the easiest to see of these diagnostics is the raised "island" of metal in the field below T. Bowers calls it tiny, but on this coin at least it is substantial, closer to the size of the head of a pin. Also, the edge is telling. This coin is encased in a newer holder that allows viewing of the edge, and it is abundantly clear that the edge is not polished.

The surfaces of this piece should be convincing, but it is always good to match any 1880 business strike nickel against the known diagnostics. Each side is bright and softly frosted. No actual reflectivity is present in the fields, just brightness that one would expect from a coin struck from dies that struck proofs as well as business strikes. The strike details are strong throughout, but again not squared off as one would expect on a proof, but more beveled toward the field. There are no singularly distinctive abrasions that can be used as pedigree identifiers. PCGS shows another MS66 coin has been graded, but we have to wonder if that second coin might be a resubmission of this piece in hopes of attaining an even higher grade. NGC ID# 276E, PCGS# 3810

## PROOF SHIELD NICKELS

### 1867 Rays Nickel, PR63 Dannreuther-3 Obverse, Reverse State e

**4033** 1867 Rays PR63 PCGS. CAC. Dannreuther-3. Reverse Die State e. In this later die state, the center ray below the second T of STATES is weaker still than in states c or d, and the right ray is just beginning to show lost detail at the extreme bottom. The reverse dentils from 3 to 5 o'clock are quite attenuated, but all are still visible (in Dannreuther's Die State f, some dentils are "completely missing"). The lump on the right side of the ball ornament on the obverse, along with extensive die polishing in the lower shield stripes, identifies the obverse. This pinkish-gold piece with much field-device contrast appears conservatively graded, despite some charcoal flecks on the lower reverse at 7 o'clock. Population for all three varieties: 4 in 63, 29 finer (11/14). NGC ID# 276H, PCGS# 3818

## 1867 Rays Shield Nickel, PR66 Cameo Dannreuther-3 Obverse, Reverse State d

**4034 1867 Rays PR66 Cameo PCGS. Dannreuther-3.** Reverse Die State d. This piece is in the exact same grade and service, same die state, and same die variety as lot 5158 in our FUN Signature (Heritage, 1/2014) which realized \$76,375, a coin with an overall similar appearance to this piece. They are, however, different coins.

Researcher extraordinaire John Dannreuther published his conclusions on the 1867 With Rays proof Shield nickels in the now-defunct PCGS publication *Rare Coin Market Report* from June 2007, in an article titled "Third Obverse Die Identified for Proof 1867 Rays Nickel." The obverse of this coin, in what Dannreuther calls State 3a, shows the following characteristics:

- The left base of 1 is over the right part of a dentil;
- Heavy die polish appears in the lower part of the shield;
- The area above and below the right (facing) arrow shaft is full of die polish;
- "Rough" die polish appears just outside the cross shape at top of shield; and
- A large lump appears on the left side of the ball ornament at the shield bottom.

Only a single reverse die was used to strike the 1867 Rays proofs from the three known obverse dies, so the die states are readily identifiable, according to Dannreuther. He writes:

"Even in 1996, it was easy to line up the emission sequence, as the reverse used on all Proof 1867 With Rays nickels is a Proof-only die that was lapped nearly every time it was used. That these coins were struck up on numerous occasions became obvious, as some of them looked 'more Proof' than others — in fact, the reason for the examination of the group of coins in 1996 was to determine if the coins were actual Proofs! It is well-documented that the Mint under Director Dr. Henry Linderman (1867-1869 and 1873-1879) had certain 'friends' who obtained favors on occasion. Numerous Restrikes of many coins appeared during this era and some of these nickel Proofs are undoubtedly among them."

The reverse of this piece is identified as state d, showing essentially a full complement of the three lines under the first S of STATES, line that the next die lapping (die state e) would efface much of.

This Premium Gem Cameo proof shows just the barest hint of golden color, but the field-device contrast is stunning, particularly on the obverse. The best identifier for this piece is a tiny V-shaped lintmark, as made, in the obverse field near the rim at 4:30. A fantastic example of this interesting (and still quite rare) proof issue. PCGS# 83818

## LIBERTY NICKELS

### 1885 Nickel, Sharp MS66+ Beautifully Toned Philadelphia Rarity

**4035 1885 MS66+ PCGS Secure.** By 1885 the Mint was becoming more accustomed to working with the nickel alloy, and progress in metallurgy and the minting process had lessened many of the difficulties of coining the metal. Striking sharpness problems, however, continued to affect the nickels of 1885, and many of the Mint State survivors exhibit weakness on one or more stars, as well as the usual weak point on the lower-left wreath leaves. A sharply struck Gem or finer example is a significant prize for the knowledgeable specialist.

The present coin is a remarkable piece in regards to strike, with bold sharpness on all of the stars and above-average definition on the lower-left portion of the wreath. The satiny surfaces display primarily ice-blue and pale lavender toning, with vivid areas of rainbow color also seen in the margins. An important example of this favorite key issue. Population: 24 in 66 (2 in 66+), 3 finer (11/14).

*From The Ally Collection.* NGC ID# 2773, PCGS# 3846

### 1885 Liberty Nickel, MS66 Delicately Toned Over Radiant Luster

**4036 1885 MS66 PCGS Secure. CAC.** A limited mintage of fewer than 1.5 million nickels was accomplished in 1885, as a lull in the economy reduced the need for new coinage of the five cent denomination. Those that were struck, entered circulation and largely stayed there until they were well-worn, as most date collectors of the period just bought proofs and paid little or no attention to the disappearing supply of high-grade business strikes. The end product was the most famous key date in the entire Liberty nickel series, especially in Mint State grades. This Premium Gem example exhibits a bold strike and vibrant cartwheel luster. Traces of mint-green and gold accent primarily sky-blue toning on each side, and the surfaces are free of any noticeable abrasions. A few light die cracks are seen on each side, diagnostic of a late die state. Population: 24 in 66 (2 in 66+), 3 finer (11/14).

*From The Ally Collection.* NGC ID# 2773, PCGS# 3846

## 1886 Liberty Nickel, MS66 Among the Finest Certified

**4037 1886 MS66 PCGS Secure.** Behind the 1885, the 1886 is the other major key date in the Liberty nickel series. While not valued quite as high as its earlier counterpart, the 1886 is actually the rarer coin in Gem and finer grades, and by a noticeable margin. For the 1885, PCGS shows a population of 24 coins in MS66 (2 in 66+) with three finer, while for the 1886, the same service reports only eight MS66 coins (1 in 66+), with none finer (11/14). This in spite of the 1886 having the higher mintage — more than 3.3 million coins versus fewer than 1.5 million.

The present piece is carefully preserved, with satiny luster underlying delicate golden-gray and ice-blue toning. Stars 6 and 7 are not fully defined, and the lower-left portion of the wreath is weakly impressed, though this is characteristic of many examples of this issue, and the remainder of the design elements are sharp.

*From The Ally Collection.* NGC ID# 22PK, PCGS# 3847

## 1891 Nickel, Radiant Superb Gem Paramount Condition Rarity

**4038 1891 MS67 PCGS.** With nearly 17 million pieces struck, the 1891 Liberty nickel is generally considered a common date, but its availability is primarily restricted to grades of MS64 and lower. Gems and Premium Gems are only infrequently encountered, and finer pieces are nothing shy of major rarities within the series. PCGS and NGC combined have encapsulated only three coins in MS67 (two at PCGS and one at NGC), with none numerically finer (11/14). The present coin shows vibrant cartwheel luster beneath a blanket of medium gold toning, while the surfaces are remarkably devoid of contact. The corn ear to the left of the wreath bow is softly struck, as usual, though the design elements are otherwise sharp. An impressive Registry Set contender.

*From The Ally Collection.* NGC ID# 2776, PCGS# 3852

### 1901 Nickel, MS67 Coruscating Mint Luster

**4039 1901 MS67 PCGS Secure.** A remarkable Superb Gem Liberty nickel from a year that is of obvious importance to 20th century type collectors. Truly exceptional luster cartwheels around each side in thickly frosted silvery-gold radiance. The strike is sharp and the eye appeal is seemingly unparalleled. The rarity of the 1901 Liberty nickel in this lofty grade is simply profound, with PCGS having so-graded only three coins, with none finer (11/14), making this offering an incredibly important opportunity for the advanced date or type collector. This piece is not only tied for the finest certified of this date, but is also among the finest certified of the entire series. A must-have, Registry-quality blazer.

*From The Ally Collection.* NGC ID# 277C, PCGS# 3862

### 1912-S Nickel, Vibrant MS66

**4040 1912-S MS66 PCGS.** The 1912-S is one of the more popular issues in the Liberty Head nickel series due to its small mintage of 238,000 pieces and its status as the only San Francisco Mint coin of this design. When they appear in the marketplace, examples are usually either well worn or Mint State.

The current Premium Gem is one of the 19 finest graded by PCGS and NGC. Its radiantly lustrous surfaces display just a nearly imperceptible whisper of gold peripheral color, and all design elements are well-impressed. Both sides are impeccably preserved. We mention a faint diagonal mark midway between star 3 and Liberty's nose solely for identification purposes. Population: 19 in 66, 0 finer (11/14). NGC ID# 277R, PCGS# 3875

**1912-S Nickel, MS66  
Richly Toned Key Coin**

**4041 1912-S MS66 PCGS.** Though a number of half dime issues were struck at branch mints, the first five cent nickels produced outside Philadelphia were the fraternal-twin 1912-D and 1912-S issues, struck in the last official year of the Liberty nickel. This Premium Gem representative of the 1912-S key date has rich peach and gold toning over prominent cartwheel luster and remarkably sharp devices. The vast majority of the stars show clear centrils and even the left ear of corn on the reverse shows a certain level of detail, though not to the point of kernel-counting. Population: 18 in 66, 0 finer (11/14).

*From The Ally Collection.* NGC ID# 277R, PCGS# 3875

**1912-S Nickel, Softly Patinated MS66**

**4042 1912-S MS66 PCGS.** Pale gold, mint, and ice-blue patina complements the glowing luster and excellent preservation that characterize this Premium Gem 1912-S nickel, the last great key in this widely collected series. PCGS shows only 18 such submitted in this top grade and has never seen either an MS66+ or an MS67 finer (11/14). The surfaces show the usually glossy appearance and are well-struck on the obverse stars and most of the hair, although the left ear of corn is weak as usual, showing minimal kernels. The mint-mark is well struck up, as is the right kernel of corn. NGC ID# 277R, PCGS# 3875

### 1912-S Nickel, MS66 Among the Finest Certified

**4043 1912-S MS66 PCGS.** The 1912-S Liberty nickel is well-known as having the lowest mintage of the series, but not being as elusive in Mint State as are the 1885 and 1886 issues. This comparison holds true through the MS65 grade level, but in Premium Gem condition, the 1912-S emerges as equally rare. PCGS has certified just 19 examples in this grade, with none finer; NGC has seen only nine submissions in this grade (1 in 66+, 1 in 66 ★), also with none finer (12/14). This example displays the often-seen satiny luster, with slight striking weakness on the lower-left wreath and the upper curls of Liberty's hair. Iridescent golden-gray and lavender-blue hues melt into the delicately preserved surfaces, giving this coin much better eye appeal than is typically seen on this date. NGC ID# 277R, PCGS# 3875

## BUFFALO NICKELS

### 1918-S Nickel, MS65+ Only One Numerically Finer at PCGS

**4044 1918-S MS65+ PCGS.** The 1918-S Buffalo nickel is one of the most challenging dates in the series to find well-struck. The San Francisco Mint apparently spaced the dies slightly further apart than usual to extend their working life. This, coupled with dies being consistently used well-beyond their normal wear limits, pretty much destined this date to be rare with pleasing definition. The present coin shows above-average sharpness for the issue, including a full horn, though the hair above the Indian's braid and the bison's shoulder lack the finer details. The obverse die appears quite fresh, though some minor die fatigue is noticed in the reverse recesses — the undated reverse dies were frequently used longer than the obverses. Blended hues of lavender-blue and pale violet blanket much of each side, with a crescent of mint-gold is also seen along the lower-left obverse border. Overall, this is an appealing example of this conditionally rare San Francisco issue. Population: 35 in 65 (3 in 65+), 1 finer (11/14). NGC ID# 22RK, PCGS# 3940

## 1920 Buffalo Nickel MS65 Red and Brown Struck on a Cent Planchet

**4045 1920 Buffalo Nickel — Struck on a Cent Planchet — MS65 Red and Brown NGC.** This off metal mint error was struck aligned with the collar at 10:30. Virtually all of the date is present, as is the mintmark area. The Indian's profile and bison's head are also complete. The bison's tail and much of UNITED STATES OF AMERICA is off the flan. Rose-gold toning is consistent throughout the lustrous and unmarked surfaces. As nice an example of this type and planchet combination as can be found.

## 1925-S Nickel, Well-Struck MS65 Only One Numerically Finer at PCGS

**4046 1925-S MS65 PCGS. CAC.** The 1925-S nickel is available through MS64, but at the Gem level, where striking quality begins to factor into the grade assessment, the certified population plummets. The branch mints in the 1920s took little concern with the striking quality of their coins, and the Buffalo nickel, already difficult to strike properly due to the hardness of the alloy, arguably suffered the most as a result. This Gem representative is deeply satiny, with blended rainbow peripheral hues surrounding lighter lavender-gold and pale blue centers. The obverse die is fairly fresh, while the reverse die shows fatigue in the border recesses, an often seen characteristic, as the undated reverse dies were frequently used well into the next year if they had not already completely failed. Some of the highest details on the reverse are soft, as a result, though the horn is complete and the obverse is well-defined. Population: 27 in 65, 1 finer (11/14). NGC ID# 22S4, PCGS# 3956

### 1926-D Nickel, MS66 3 1/2-Legged Variety

**4047** 1926-D 3 1/2 Leg, FS-901, MS66 PCGS. Heavy die polishing has partially effaced the bison's right front leg on this elusive variety. PCGS has attributed just 59 examples in all grades, with the current piece being the finest of only two Mint State examples by two full grade points (11/14). As a date, the 1926-D Buffalo nickel is rare in MS66, and finer pieces are nearly nonexistent. This piece displays delicately preserved, frosty mint luster beneath iridescent shades of ice-blue and pastel-rainbow hues. Some of the usual die fatigue is noticed in the obverse recesses, though the reverse is pleasantly smooth. The hair above the Indian's braid and the bison's shoulder are slightly soft, as is typical of this Denver issue, but the horn is full and the peripheral legends are clear. PCGS# 506609

### 1926-S Buffalo Nickel, MS64+ Delicately Toned and Satiny

**4048** 1926-S MS64+ PCGS. The 1926-S had a low mintage of only 970,000 coins, the lowest production total of the series. The issue is widely sought as a semikey date in all grades, but it is most elusive at the Mint State level, as most examples were allowed to circulate extensively before collector interest in this date was ignited in the 1930s. This Plus-designated Choice example exhibits satiny luster beneath iridescent golden-gray toning. The centers are rather softly struck, a normal characteristic of this issue due to inadequate spacing of the dies; it is doubtful if any fully struck examples exist. Remarkably, however, the recesses are devoid of the die fatigue that usually affects examples from this period. Only 14 coins are numerically finer at PCGS (11/14). NGC ID# 22S7, PCGS# 3959

## JEFFERSON NICKEL

**1942-D Nickel, MS64 Full Steps  
FS-501, D Over Horizontal D  
Rare in All Mint State Grades**

**4049** 1942-D D Over Horizontal D, FS-501, MS64 Full Steps PCGS. This *Guide Book* variety is known as the rarest major variety in the Jefferson nickel series in Mint State, and is especially challenging with Full Steps detail. The variety was created when the mintmark was entered into the die at a 90 degree rotation and then corrected; the errant mintmark is evident to the left of and within the loop of the primary. This Choice example is remarkably sharp, with satiny golden-gray luster and just a few light, grade-consistent marks on the obverse. PCGS has encapsulated only 16 examples of this variety in Full Steps grades, with seven in MS64 and three numerically finer (12/14). The importance of this offering to the Jefferson nickel variety specialist or Registry Set collector is immense. PCGS# 38496 Base PCGS# 84015

## EARLY HALF DIMES

**1792 Half Disme, AU58**  
**First U.S. Coinage Issue, Judd-7**  
**Historically Important and Aesthetically Pleasing**

**4050 1792 Half Disme, Judd-7, Pollock-7 AU58 PCGS Secure.** The Mint Act of 1792 established the United States Mint and authorized the coinage of various denominations, including the half disme, or five-cent piece. The half disme was the first denomination struck by the newly established mint, probably because it was the smallest silver coin authorized by the Mint Act. There was a crippling shortage of small change in the national economy at that time, and the supply of silver bullion for coinage was quite limited. Producing half dismes would result in a greater number of coins than any other denomination, so it was logical to strike those coins first.

The coins were actually struck in the cellar of Philadelphia sawmaker John Harper, located at the corner of Sixth and Cherry Streets, before the mint building was ready for operations. An entry in Thomas Jefferson's account book on July 13, 1792 records that 1,500 half dismes were delivered that day. President George Washington mentioned the half dismes in his fourth annual address on November 6, 1792, noting that "there has been a small beginning in the coinage of half dismes, the want of small coins in circulation calling the first attention to them."

The 1792 half disme has always enjoyed great popularity with collectors of all disciplines. Traditionally collected with the pattern series, most numismatists agree that it is more properly considered a regular-issue today. Henry Chapman described an early auction appearance of the 1792 half disme in lot 5568 of the John Story Jenks Collection (Chapman, 12/1921):

"Half disme 1792. A.W. 4. LIB . PAR . OF SCIENCE & INDUSTRY (Liberty, parent of Science and Industry). Undraped bust of Martha Washington as Liberty facing left, 1792 beneath. R. UNI : STATES OF AMERICA. Eagle flying to left, beneath HALF DISME \*. Edge milled. Uncirculated. Obverse evenly struck, the reverse slightly low, so the milling is off on the lower edge. Sharp, beautiful example. Extremely rare. Note. - *This was the first coin struck after the establishment of the U.S. Mint*, and was made from silver plate supplied by President George Washington for the special purpose. Plate. Crosby, plate x, 19, fig. 106, p. 365. From the Cleneay sale."

The lot realized \$92.50, a respectable sum at the time. Recent auction appearances have seen the two finest 1792 half dismes sell for more than \$1 million on four occasions. Present day numismatists believe the obverse portrait was just a generic representation of Liberty, not modeled after Martha Washington, and if Washington did provide the bullion for the half disme coinage, it was probably from Spanish-American silver coins he had acquired, not his silverware.

The coin offered here is a spectacular near-Mint example that shows just the slightest trace of actual wear on the strongly impressed design elements. The coin is well-centered, with strong dentilation all around. The silver-gray surfaces retain traces of original mint luster and are remarkably free of distracting surface marks. The overall eye appeal of this specimen is extraordinary. Population: 9 in 58, 16 finer (11/14). PCGS# 11020

## 1792 Half Disme, MS63 One of the Finest Examples Known

**4051 1792 Half Disme, Judd-7, Pollock-7, R.4, MS63 NGC.** For the past 150 years, these coins have intrigued collectors as well as Mint officials. Much has been written about the origins of the half dimes, some of it embellishment, some outright fabrication. The real breakthrough in research seems to have come in the past ten years, the results of which were published in the ANS' *American Journal of Numismatics* 15" for 2003. In that article, the authors, Joel Orosz and Carl Herkowitz, explore all aspects of the production of these first official United States coins. The article, "The Fabled 1792 Half Dimes," is well worth the effort for anyone interested in early U.S. coinage. The authors discovered an obscure reference to a tipped-in note that was discovered in a European coin book in 1943 and the contents of the note were subsequently published in *The Numismatist*. A subsequent misinterpretation of the author of the note by Charles McSorley, Jr. led to one of the major pieces of misinformation regarding the 1792 half dimes. McSorley misidentified the author of the note as officer and refiner in the Mint, Jonas R. McClintock. The signature was faded and only read J—Mc—. Orosz and Herkowitz identified the actual author of the note as John McAllister, Jr., a fascinating individual who was a close friend of Adam Eckfeldt, who was present at the striking of the 1792 half dimes. The actual content of the tipped in note reads, "In conversation with Mr. Adam Eckfeldt (Apr 9, 1844) at the Mint, he informed me that the Half Dimes above described, were struck, expressly for Gen. Washington, to the extent of One Hundred Dollars, which sum he deposited in Bullion or Coin, for the purpose. Mr. E. thinks that Gen. W. distributed them as presents. Some were sent to Europe, but the greater number, he believes, were given to friends of Gen. W. in Virginia. No more of them were ever coined. They were never designed as Currency. The Mint was not, at the time, fully ready for being put into operation. The Coining Machinery was in the cellar of Mr. Harper, saw maker, at the corner of Cherry and 6th Sts, at which place these pieces were struck."

While the facts in the note above may have been well known to a small group in the mid-1840s, later retellings of the story stretched and greatly enhanced the basic facts until the present day, when it is still believed by many that Martha Washington was the model for the figure of Liberty, the coins were struck from Washington's Sheffield silver plate, only \$75 worth of coins were struck, and that George and Martha were in attendance when the coins were presented. Skipping to the end of this masterful article, Orosz and Herkowitz conclusions are:

The half dimes were not struck from sterling silver or silver-plated tableware but rather, as Eckfeldt states, from bullion or coin.

The half dimes survive today at an unusually high rate, consistent with early presentation to at least some degree.

The amount struck (1500 pieces or \$75) is consistent with an initial deposit of \$100, with the loss due to preparation.

After the planchets were prepared, they were deposited with the cabinet officer in charge of the Mint. Jefferson personally delivered the blanks to the Mint to be struck, and the struck coins were returned to his care.

Jefferson recorded all transactions regarding the 1792 half dimes as private records, not public records.

As noted above, numerous half dimes were handed out as favors by George Washington, while others were shipped to Europe. This particular piece must have been highly prized by its owner, as it is in essentially the same condition as when it left John Harper's saw shop 113 years ago. The only difference is the addition of multiple layers of gray, blue, and golden toning over each side. Magnification shows a few light abrasions, but none that are worthy of individual mention. The striking details on the obverse are stronger than on the reverse. Also worthy of note is the absence of the planchet flakes that are usually seen on half dimes. This is one of the finest pieces known of this historic issue. NGC has only graded one other piece MS63 with 29 finer (many obvious resubmissions are included in this number), while PCGS has certified four with 12 finer (11/14).

*Ex: Bowers and Ruddy (Rare Coin Review #23, Summer 1975), offered at \$9,950; Bowers and Ruddy (Rare Coin Review #25, Spring 1976), offered at \$9,500; Bowers and Ruddy (Rare Coin Review #27, Winter 1976-1977), offered at \$8,950; Bowers and Ruddy (Rare Coin Review #28, Spring 1977), offered at \$8,500; Aubrey and Adeline Bebee Auction (Bowers and Merena, 8/1987), lot 1498, realized \$14,300; Long Beach Signature (Heritage, 6/2005), lot 5684, not sold; Bergstrom & Husky Collections (Stack's, 6/2008), lot 2007, realized \$402,500. PCGS# 11020*

### 1795 Flowing Hair Half Dime, MS64 Beautifully Toned V-4, LM-10 Example

### 1796 V-1, LM-1 Half Dime, MS61 So-Called 'LIKERTY' Variety

**4052** 1795 V-4, LM-10, R.4, MS64 PCGS. A late die state example with a rim cud over the tops of the TY in LIBERTY and star 9. The 1795 is by far the more plentiful of the two Flowing Hair half dime issues, ideal for type representation. This date is thought to have comprised 78,660 of 86,416 half dimes coined in 1795, with the remaining 7,756 pieces, delivered in March likely dated 1794 and accounting for the greater scarcity of that date. V-4 is one of the more frequently seen varieties of this issue, and is often the one represented when a Mint State 1795 half dime is located. This Choice example is immensely appealing, with strong, satiny luster underlying sun-gold and amber toning that yields to deep aquamarine around the peripheries. The strike is even and well-centered, with just a touch of weakness observed in the extreme center of the obverse portrait and on the eagle's breast. Population, all varieties included: 24 in 64, 22 finer (11/14). PCGS# 38594 Base PCGS# 4251

**4053** 1796 LIKERTY, V-1, LM-1, R.3, MS61 NGC. Not a lick of "LIKERTY" is used to describe the LM-1 variety in the Logan-McCloskey reference, although the well-known label has stuck with the variety over the years. In fact, the late die state showing a broken B in LIBERTY does not resemble a K all that much, and remnants of the closed B are usually visible on most examples. This well-struck example shows a narrow bridge spanning both the upper and lower loops of the B.

A more reliable characteristic of the LM-1 variety is the closeness of LI at the base, which is easily distinct from the scarce second die pair for the date (LM-2), which displays a more normally spaced LIBERTY. A single outer berry beneath the D of UNITED is also diagnostic of LM-1, whereas LM-2 has a second outer berry between NI. Both varieties are rare in any Mint State condition.

This example shows glimpses of pleasing mint luster beneath original patination, with golden accents over the medium-gray surfaces. Bold detail is evident on Liberty's hair strands and the eagle's breast feathers. The only significant marks are from heavy die clash, which is readily apparent on both sides of the coin. Census (LM-1 variety): 2 in 61, 12 finer (12/14). PCGS# 38596 Base PCGS# 94254

## SEATED HALF DIMES

### 1796 Draped Bust Half Dime, MS62 Popular 'LIKERTY', V-1, LM-1 Variety

**4054** 1796 LIKERTY, V-1, LM-1, R.3, MS62 NGC. The 1796 Draped Bust half dime claims a mintage of 10,230 pieces, with just two die varieties known for the date. The letters LI in LIBERTY are positioned close together on this specimen, and the outer berry is below D in UNITED on the reverse, identifying the scarce V-1, LM-1 variety. The B in LIBERTY is broken at top and bottom, giving this variety its long established "LIKERTY" nickname. The 1796 is always in demand as a representative of the two-year Draped Bust/Small Eagle design type.

This impressive MS62 example offers well-detailed design elements and lightly marked surfaces, under attractive shades of silver-gray, golden-tan, and cerulean-blue toning. Census: 5 in 62, 7 finer (11/14). PCGS# 38596 Base PCGS# 94254

### 1853-O No Arrows Half Dime, Lustrous MS65 Extremely Rare in Mint Condition One of the Two Finest Known

**4055** 1853-O No Arrows MS65 PCGS. CAC. V-1. The lustrous surfaces of this Gem display soft golden-tan and violet patina that assumes slightly deeper hues on the reverse. The design elements are sharply struck, including Liberty's head and foot, the shield, the star radials, and the wreath. The date digits 18 are soft, but even these elements are better-defined than typically seen on this issue. A few minute marks on the left (facing) shoulder are within the parameters of the grade and serve to identify the coin.

As with the 1853 No Arrows half dime, most of the 1853-O was melted. This date is very scarce in circulated grades and extremely rare in Mint State. In his Consignor Commentary, Eugene Gardner stated: "To quote Al Blythe the date is 'extremely tough, rare in high grades.' R.7 in Mint State, and the pops bear this out. This coin is naturally toned and beautiful. The most interesting feature is how the obverse can be so strongly struck in the figure and stars, yet the 18 in the date is somewhat weak."

PCGS and NGC have certified 90 examples in all grades, only nine of which are in Mint State. The present coin and another PCGS Gem are the finest known.

*Purchased by Eugene Gardner from Jason Carter (2/2003); Gardner Collection, Part II (Heritage, 10/2014), lot 98194. NGC ID# 233N, PCGS# 4352*

## PROOF SEATED HALF DIME

### 1842 Half Dime, Brilliant PR67 Deep Cameo The Finest Known of Only Six Confirmed Proofs

**4056 1842 PR67 Deep Cameo PCGS. CAC.** This is the Phil Kaufman proof 1842 half dime, a coin that stands head and shoulders above the remaining six examples certified by NGC and PCGS. This is one of only five Seated Liberty rarities that Mr. Kaufman considered one of his favorites. To quote his friend and former-ANA president Barry Stuppler, who helped build his collections, "it knocks your socks off." This marvelous coin ranks as the sole Deep Cameo representative of this rare proof issue, and is also the only proof Seated half dime of any date through 1858 that has received the Deep Cameo designation from PCGS. PCGS has also graded two PR64 representatives, while NGC shows a PR66, a PR65, a PR64 non-Cameo, and a single PR64 Cameo (11/14) — these likely include one or more resubmissions.

In his Seated Liberty half dime reference, Al Blythe estimates that six to eight proof 1842 half dimes are known. Walter Breen, in his 1977 *Proof Encyclopedia* cites seven pieces, at least one of which is unverified, and says in his 1988 *Complete Encyclopedia* "Possibly 8 proofs." We have been able to confirm the existence of just six examples, one of which is permanently housed in the American Numismatic Society Collection:

#### Roster of Proof 1842 Half Dimes

- 1. PR67 Deep Cameo PCGS (previously PR68 ★ Ultra Cameo NGC).** Numismatic Gallery (privately, 4/1948); John Jay Pittman (David Akers, 10/1997), lot 467; Phil Kaufman Collection/Central States Signature (Heritage, 4/2008), lot 2378. **The present coin.**
- 2. PR66 NGC.** Richmond Collection, Part III (David Lawrence, 3/2005), lot 1083.
- 3. PR65 NGC.** Phil Kaufman; Rarities Sale (Bowers and Merena, 8/1998), lot 95.
- 4. PR64 PCGS.** FUN Signature (Heritage, 1/2007), lot 853; FUN Signature (Heritage, 1/2010), lot 2471; Philadelphia Signature (Heritage, 8/2012), lot 5075; FUN Signature (Heritage, 1/2013), lot 5572; Chicago ANA (Stack's Bowers, 8/2013), lot 4048.
- 5. PR63.** Norweb Collection (Bowers and Merena, 10/1987), lot 333.
- 6. Proof.** American Numismatic Society Collection.

#### Additional Appearances

- Howard R. Newcomb (J.C. Morgenthau, 2/1945).
- E.M. Wharton Collection (Stack's, 10/1945), lot 1072. Unplated (described as a "purple proof").
- David Bullowa (5/1952).
- Lester Merkin (4/1966), lot 75.
- Bowers and Ruddy (5/1972), lot 711. Not plated in the catalog.

Thickly frosted relief elements and deep mirrored fields yield a pronounced white-on-black contrast over both sides of this Superb Gem, and a sharply impressed strike yields uniformly crisp definition on the devices. Completely untuned surfaces are devoid of any mentionable contact marks or hairlines. Faint die polish lines are visible on each side, as well as some tiny lint marks. The most prominent lint mark runs a squiggly path from the U of UNITED to the lower left branch, and might be useful in helping to identify this particular example for pedigree purposes. An amazing coin in all respects, and one of the most outstanding from the legendary Kaufman Collection. PCGS# 94418

## EARLY DIMES

### 1796 JR-1 Dime, MS64 Prooflike Intriguing Late Die State Example

**4057 1796 JR-1, R.3, MS64 Prooflike NGC.** JR-1 is the most often seen 1796 variety, likely comprising about a third of the known coins of this issue, ideal for the casual date collector. The present piece is in a late die state; the obverse exhibits a crack across Liberty's shoulder, into the neck, and a large cud partially covers star 1. This cud becomes more advanced in later stages, eventually obscuring the entire star. The reverse shows several thin die cracks, the most prominent nearly bisecting the coin from the second E in STATES down toward the final A in AMERICA. A later die state shows further cracks. The fields are deeply prooflike from heavy die polishing imparted in an attempt to efface heavy clash marks, the remnants of which are still plainly visible on both sides. The strike is well-centered and even, with pleasing central definition. The obverse shows extensive adjustment marks, as well as the faint remnants of mint-made roller marks, not fully eradicated by the die pressure. An impressively well-preserved example of this popular first-year issue, displaying many interesting and diagnostic striking anomalies with which the early Mint struggled. Census: 20 in 64, 19 finer (11/14). PCGS# 38742 Base PCGS# 4461

### 1796 JR-6 Dime, MS63 High-Grade Early Type Coin

**4058 1796 JR-6, R.3, MS63 PCGS.** 1796 was the first year of dime (or disme, per nomenclature of the era) production at the First Philadelphia Mint. The Draped Bust and Small Eagle motifs originated on 1795 silver dollars and were adapted for the dime. According to often repeated numismatic legend, the Draped Bust model was Philadelphia socialite Ann Willing Bingham.

Technically, the 1796 15 Stars is a single-year design subtype, since the 1797 issue has either 16 (JR-1) or 13 (JR-2) stars. This is a satiny, stone-gray representative displays a small dab of dark color right of the D in UNITED, and the obverse shows several parallel, slender, and toned alloy streaks. The strike is sharp for the Draped Bust type.

A spectacular assemblage of die cracks is seen with a horizontal break through the 17 in the date, a slender crack through star 8 to the center of Liberty's neck that splits into two cracks descending to the rim at 5:30 and 6 o'clock. Also, a crack from 10:30 proceeds through the eagle to the M in AMERICA, a vertical crack from the ribbon to the eagle's breast, a crack through the bases of OF AMER, a crack from the rim to the M, and a delicate crack from the center of the R in AMERICA. Population combined for all 1796 varieties: 13 in 63, 23 finer (11/14). PCGS# 38747 Base PCGS# 4461

### 1797 Draped Bust Dime, AU58 JR-2, 13 Stars, Knobbed 9

**4059** 1797 13 Stars, JR-2, R.4, AU58 PCGS. A glimpse of golden-rose highlights in the fields adds life to this silver-gray early dime, with subtle mint luster still visible at the margins. Only three Uncirculated examples are known to exist with the 13 Stars obverse, assuring this near-Mint coin ranks in the top six examples known of the JR-2 variety.

Some granularity on Liberty's portrait is not unusual for the date. Otherwise, the obverse strike is bold and the surfaces are smooth with no significant marks. The reverse strike on the eagle's breast is typically soft, with even the best specimens showing weak feathers and flatness of strike on the eagle. This is an attractive, high-grade example of the Knobbed 9 type and a challenging, high grade for an advanced collection. Population: 1 in 58, 2 finer (12/14). PCGS# 38749 Base PCGS# 4463

### 1800 Dime, Underrated JR-1, MS62 An Appealing Example for the Grade

**4060** 1800 JR-1, R.4, MS62 PCGS. The dimes dated 1800 are underrated and seldom appear in high grades, although the very scarce JR-1 is found a bit more often than the rare JR-2, the only known die marriages. Both share the same obverse, with LI and RT closely spaced. The reverse of the JR-1 shows small, narrow A's. This piece exhibits deep gray-gold patina over each side with a faint red undertone. Satiny luster complements surfaces that are well but not completely struck. A diagonal mark angling upward from Liberty's neck helps account for the grade, but much eye appeal is present. For both varieties, Population: 2 in MS62, three finer (11/14). PCGS# 38754 Base PCGS# 4470

**1800 JR-2 Dime, MS61**  
**Excellent Appeal**

**4061** 1800 JR-2, R.5, MS61 NGC. CAC. Ex: "Col." E.H.R. Green; Eric P. Newman Collection. Only two die varieties of 1800 dimes are known, and JR-2 is slightly rarer than JR-1. There are only five or six Mint State 1800 JR-2 dimes known, including two examples from the Ed Price Collection, and this piece from the Eric P. Newman Collection. Both sides show a few faint hairlines and other trivial marks on the brilliant ivory surfaces with delicate peripheral iridescence. Census (both varieties): 1 in 61, 4 finer (12/14).

Ex: "Colonel" E.H.R. Green; Green Estate; Partnership of Eric P. Newman / B.G. Johnson d.b.a. St. Louis Stamp & Coin Co.; Eric P. Newman @ \$50.00; Eric P. Newman Numismatic Education Society. PCGS# 38755 Base PCGS# 4470

**1804 13 Stars Reverse Dime, JR-1, VF35**  
**Splendid Mid-Grade Example**

**4062** 1804 13 Stars Reverse, JR-1, R.5, VF35 PCGS. Only 8,625 dimes were reportedly struck in 1804, but there is a good likelihood that some percentage of the 120,780 dimes struck in 1805 were actually dated 1804. In any case, only two die pairings are known for 1804, sharing the same obverse with the 13 Stars and 14 Stars reverses. Both are *Guide Book* varieties and both are rare, but the 13 Stars dimes are seen about twice as often as the 14 Stars coins.

This Choice Very Fine example shows the weakness on the reverse that frequently appears on the variety, so that field stars 4-6 and 10 are missing; on other specimens they appear but faintly. The lower beak pierces star 12, easily identifying this variety. The grayish-tan surfaces show wear commensurate with the grade, but the only mentionable contact is a thin scrape running upward from the forward bust into the right obverse field below stars 11-13. Housed in a green label holder. Population: 1 in 35, 7 finer (11/14). PCGS# 38766 Base PCGS# 4474

## SEATED DIMES

### 1837 Small Date Dime, MS66+ The Sole Finest Certified at PCGS

**4063** 1837 No Stars, Small Date MS66+ PCGS. CAC. Fortin-103, R.5. Collectors of Seated Liberty dimes have few options when it comes to acquiring an example of the original No Stars type. This variety was struck only in 1837 at the Philadelphia Mint, and briefly at the New Orleans Mint in 1838. The New Orleans issue is an elusive date in all grades, hardly ideal for the type collector. The Philadelphia issue is more available, and exists in two distinct varieties: Large Date and Small Date. The Large Date variant is notably the more plentiful, but for the ambitious specialist, a select few Small Date coins survive in the higher Mint State grades. This remarkably well-preserved Premium Gem is one of just four coins certified at this numeric level at PCGS, and the only one of those four to receive the Plus designation, with none finer (12/14).

Both sides display frosty, delicate luster beneath warm golden toning that features deeper amber and blue overtones in the margins. The strike is bold, and a lack of surface disruptions only furthers the immense visual appeal. An important opportunity for the Seated dime type or date specialist. NGC ID# 237R, PCGS# 4562

### 1846 Dime, AU58 One of the Finest Known

**4064** 1846 AU58 NGC. Fortin-101. This is an exceptionally rare date in any grade above VG, although a small number of proof examples are also known. It seems that the middle and higher range of circulated coins are seldom seen, and Mint State examples are extremely rare. The combined population of both PCGS and NGC, for example, include 203 coins with an average grade of "VF24.6." Keep in mind that the grading service population data is always biased toward the higher grades, and one can gain a better appreciation for the importance of this offering. This example is bettered by only one example certified by NGC for this date, while two submissions at PCGS have received a higher Mint State grade, and probably represent a single coin. This is a pleasing example of the date with light silver surfaces and reflective fields. The obverse has peripheral gold toning and the reverse has splashes of gold and sky blue color. Census: 1 in 58, 1 finer (11/14).

Ex: Dallas Signature (Heritage, 7/2006), lot 609. NGC ID# 238D, PCGS# 4588

## 1861-S Seated Liberty Dime, MS66 Rarely Seen in Mint State Tied for Finest Certified

**4065 1861-S MS66 PCGS. CAC. Fortin-102, High R.4.** The 1861-S Seated Liberty dime was struck on the eve of the Civil War, with a small reported mintage of 172,500 pieces. While the Eastern states suffered from a shortage of coinage (due to hoarding) that led to the issuance of paper money on a large scale, the hostilities of the North versus South were thousands of miles away from the West Coast, which continued its hard-money tradition from decades previous. Most examples of this issue were released into circulation, and the typical example seen grades no better than VF35 to XF40. The 1861-S is prohibitively rare in Premium Gem condition (High R.7) with only five coins graded higher than MS63 in total at both services. This coin is tied with one other at PCGS and one at NGC for finest-certified honors (11/14). The 1861-S has experienced a quantum leap in prices realized at auction over the past year, with the MS64 PCGS example in lot 4408 of the Long Beach Signature (Heritage, 6/2014) realizing a record \$41,125, only to be topped a few weeks later by Eugene Gardner's MS66 NGC example that realized \$49,937.50.

Brilliant mint luster complements delicate shades of pink and pale gold patina on each side of this delightful Premium Gem. From the comments in the literature, this coin exhibits a stronger strike than would be expected, both on Liberty's head and the denticles throughout. Some interesting die clashes are evident in the left obverse field and again on the reverse on the inside of the left wreath. Quite an appealing coin, at a minimum tied for finest graded of the issue.

*Ex: Elite Coin Auction (Superior, 1/2003), lot 441. NGC ID# 239G, PCGS# 4634*

## PROOF SEATED DIMES

---

**1884 Dime, Frosted MS68  
Tied for Finest at PCGS  
Sole CAC Example**

**4066** 1884 MS68 PCGS. CAC. This piece is tied for the finest 1884 dime at PCGS with one other deeply toned piece depicted on the PCGS CoinFacts website. The population stands at two in MS68 and none are finer (12/14), although this piece currently stands as the sole MS68 with the CAC green approval sticker. Unlike quarters and half dollars, which went to nominal mintages with the onset of the Morgan dollar and stayed that way through the vast majority of the 1880s, the dime saw a rebound in 1882, and multimillion-coin mintages were the norm at Philadelphia from then to the end of the Seated series. The coin is subtly frosted, largely untuned save for hints of gold more prominent on the obverse. NGC ID# 23AX, PCGS# 4692

**1837 No Stars Dime, PR65  
Well-Contrasted, Lightly Toned Surfaces**

**4067** 1837 No Stars PR65 PCGS. CAC. Fortin-101. Large Date (Flat Top 3). The bottom of the 7 is repunched, but easier pickup points show on the reverse, a small tine of metal at the rim above the first T in STATES and an angling die scratch at ES O. These dies were used on both proofs and business strikes. This is a beautiful Gem proof with considerable claims to a Cameo designation. Sunset-orange, lilac, and pale moss-green compete for territory on surfaces that are well-mirrored in the fields and nicely frosted on the devices. Sharply struck devices complete the broad appeal. Population: 3 in 65, 1 finer (12/14). One of two at CAC with the green approval sticker. NGC ID# 23BN, PCGS# 4718

## 1840 No Drapery Dime, PR65 Cameo The Phil Kaufman Example Tied for Finest Graded

**4068 1840 No Drapery PR65 Cameo NGC.** Ex: P. Kaufman. Brilliant centers are graced by light champagne color and framed by pale lilac and vivid blue. NGC has assigned a Cameo designation to memorialize the remarkable contrast between the fields and devices. Like the 1840 proof half dime, the interior space of the 4 crowds the thin, flat top of this digit. Star 2 is minutely repunched, although there is no apparent recutting on any other star. A faint horizontal die line pierces the top of Liberty's head. The reverse has a few short, diagonal spines from the border over OF, and both sides have faint die polish lines. The Eliasberg specimen shows these identical characteristics, and the others probably do as well. David Akers points out that the reverse spines over OF are diagnostic for proofs of this issue.

The original mintage of the proof 1840 No Drapery dimes is unknown, although certainly quite small. Only five or six pieces are known today, including the Kaufman-Gardner Gem Cameo proof, a piece that is tied for the finest example known to us. Many important collections offered in recent years have lacked this date in proof, including the Garrett, Norweb, and Lovejoy collections. Five of the known examples are listed in our roster of survivors:

1. **PR65 Cameo NGC. The present coin.** Ex: Kaufman Collection. See pedigree below. This piece does not appear to match any below.
2. **PR65 Cameo NGC.** Greensboro Collection, Part I / Dallas Signature (Heritage, 10/2012), lot 3939.
3. **PR65 NGC.** Allenburger Collection (B. Max Mehl, 3/1948), lot 985; John Jay Pittman (David Akers, 10/1997), lot 586; Bowers and Merena (8/1999), lot 104; Richmond Collection (David Lawrence, 3/2005), lot 1235.
4. **PR64 NGC.** Heritage (10/2001), lot 6028. This piece is identified in the catalog and on the NGC slab as the Eliasberg specimen, although the plates do not match.
5. **PR63.** Louis E. Eliasberg, Sr. (Bowers and Merena, 5/1996), lot 1117.

Ex: Phil Kaufman Collection of Early Proof Sets, Part One / Milwaukee ANA Signature (Heritage, 8/2007), lot 1780. PCGS# 84724

### 1848 Dime, Bold and Lustrous PR64

**4069 1848 PR64 PCGS Secure. CAC.** Ex: Simpson. Somewhere around eight to 10 examples of this very rare early proof dime survive today, although that number includes two in the Smithsonian and ANS collections. The population data appeared riddled with re-submissions and cannot be trusted as an more than a very rough indicator. This piece shows the diagnostics given in the Breen proof reference, including repunching on the top of the 1 and the date sloping noticeably downward left to right. The reverse die was reused for several years beginning in 1844. Lovely cobalt-blue and tan-gold patina complement effulgent luster and a full strike on this piece. A couple of minor contact marks determine the grade but are undistracting. Population: 2 in 64, 2 finer (12/14). NGC ID# 23C4, PCGS# 4735

### 1849 Dime, Seldom-Seen PR64 Elusive in Any Grade

**4070 1849 PR64 PCGS. CAC.** Perhaps six examples exist today of the 1849 dime, a recognized yet controversial rarity within the series due to the ongoing discussion on "exactly what that is beneath the 8," some voting for an 8, others for a 6, some for a repunched 9. Gerry Fortin makes a convincing case for the issue not being an 1849/8, given the reduction in size of the date logotypes from 1848 (larger) to 1849 (considerably smaller). He writes, "I have chosen to list the proof Obverse 5 die as a repunched 9 consistent with the Stack's observations from the Floyd Starr coin." (Stack's, 10/1992, lot 366).

This is a lustrous piece with a light gold cast alternating with silver areas dotted with light gray and copper-gold. The proof strike is full on both sides, and there are no singular marks on this piece, a high-end piece for the grade. Population: 1 in 64, 2 finer (12/14). NGC ID# 23C5, PCGS# 4736

## 1852 Dime, PR64 Cameo Untoned and Well-Contrasted

**4071 1852 PR64 Cameo PCGS. CAC.** This gleaming, silver-white near-Gem proof would grade a couple of points finer, in our opinion, were it not for a small fleck of carbon beneath the 1 in the date. This piece is nonetheless a brilliant, beautiful, and quite well-struck example of this proof issue, which survives to the extent of only a handful of pieces today — likely six to eight coins. This piece is currently the sole proof Cameo at PCGS in any grade. In fact, this is the sole example at PCGS in either the Cameo or Deep Cameo contrast levels, and in any case it is an extremely attractive piece in its own right. Population: 1 in 64, 0 finer (11/14). PCGS# 84739

## 1853 Arrows Dime, Beautiful PR66 Ex: Simpson, Tied for Finest at NGC

**4072 1853 Arrows PR66 NGC. Ex: Simpson.** There is no hard evidence but the survival of the 1853 Arrows proof dimes is on the order of five or six pieces, given the combined populations of one PR62 and one PR66+ at PCGS and two PR63, one PR65, and two PR66 at NGC for a total of seven submissions, likely not all separate coins. This piece is in the same grade and service as the Eugene Gardner coin (Heritage, 6/2014), lot 30290, which brought \$52,875. Interestingly, the dies are clashed on each side of this piece, just as they were on the Gardner coin. The prevailing sunset-orange on each side is complemented by dollops of ocean-blue at the obverse margin and some silver areas remaining on the obverse. Tied for finest at NGC with the Gardner coin. Census: 2 in 66, 0 finer (11/14). NGC ID# 23CE, PCGS# 4742

### 1854 Arrows Dime, Colorful PR65 Tied for Finest at PCGS

**4073 1854 Arrows PR65 PCGS. CAC.** Ex: Simpson. This Gem proof 1854 Arrows dime is tied for the finest certified at PCGS with two other examples, one of which is the Gardner ex: Eliasberg coin. That piece, also with CAC green approval sticker, brought \$19,975 in our Gardner Part II Signature (Heritage, 10/2014), lot 98290. Metallic blue and sunset-orange are scattered in liberal quantities around each side of this lustrous coin, which boasts a full proof strike and no obvious defects. This piece and the Gardner coin are the only two Gem proofs at CAC with the green approval sticker. Perhaps eight to 10 examples survive of this rare early proof, its popularity enhanced equally by its status among the two-year Arrows dimes and by the greater rarity of the 1853 Arrows coins. NGC ID# 23CF, PCGS# 4743

### 1874 Arrows Dime, Spectacular PR67 ★

**4074 1874 Arrows PR67 ★ NGC.** Ex: Simpson. This is a spectacular Superb Gem proof example of the second series of Arrows proof dimes put out by the U.S. Mint, these in 1873-1874. The surfaces on this Star-designated piece display enormous eye appeal, due to their bold strike, pristine preservation, and beautiful patina in shades of aqua, mint, and copper-gold prevailing on both sides. The Fortin-101 sole proof dies can be readily identified by a wedge-shaped die defect at Liberty's cleavage. This piece is tied with one PR67 at PCGS and one other (non-Star) example at NGC for numerically finest graded (12/14). NGC ID# 23DJ, PCGS# 4770

## 1876-CC Seated Dime, SP66+ Extremely Rare Specimen Striking One of Only Three Confirmed to Exist

**4075 1876-CC SP66+ PCGS Secure. CAC. Fortin-121, R.8.** Ex: Simpson. Proof or presentation strike dimes were not officially produced at the Carson City Mint in 1876, according to the mint's records, though a few pieces are known that possess distinctly proof-like qualities. These characteristics include unusually deep mirroring in the fields, a degree of sharpness on the relief elements that suggests a second blow from the dies, and a distinct wire rim around much of, if not all of the peripheries.

The reason these coins were struck at all is unknown, though popular theories suggest they were made for an unofficial Centennial celebration, or possibly as presentation pieces for certain officials who might have visited the mint. As their production was not recorded, neither was their number. Researchers have estimated as few as two pieces exist today, though the combined NGC and PCGS population reports suggest the survival of as many as seven examples. We have been able to confirm the existence of three pieces certified as specimen strikings, a roster of which is given below. A fourth example has been suggested to reside in the Smithsonian Institution, though this has not been confirmed. The record auction price realized is held by the Irene Collection specimen, which brought \$178,250 in Superior's January 2008 Orlando sale.

All three examples are from the same die marriage, specifically Fortin's 17-P die pair. Diagnostics include die doubling on ONE DIME and an upward-sloping date with a knobbed 6. This die pair was later used for business strikes, meaning that the specimen strikings are most easily differentiated by the depth of mirroring in the fields and the profound sharpness of the relief elements. This piece is a perfect match in that regard, and also displays attractive shades of green-gold, blue, and lavender-gray toning over each side. A small vertical depression in the middle of Liberty's left (facing) thigh is common to all three known specimens.

Unlike some other special issues in American numismatics, the specimen 1876-CC dime is recognized by both of the major grading services, erasing all doubt in the minds of collectors as to its presentation strike status. Fueled by profound rarity and immense appeal among Carson City enthusiasts, this piece represents a rare and important opportunity for the advanced specialist to acquire this beautifully produced and preserved Carson City Gem.

### Roster of Confirmed Specimen 1876-CC Seated Dimes:

- 1. SP66+BM NGC.** Long Beach Signature (Heritage, 2/2003), lot 6280; Simpson Collection. **The present coin.**
- 2. SP66+BM PCGS.** Public Auction Sale (Stack's, 9/1983), lot 677; Orlando Sale (Superior Galleries, 8/1992), lot 99; Baltimore '93 Auction (Superior Galleries, 7/1993), lot 230; ANA 2000 Auction (Superior, 3/2000), lot 286; Irene Collection; Orlando Elite (Superior Galleries, 1/2008), lot 110.

## MERCURY DIMES

### 1916-D Mercury Dime, MS64 Full Bands Landmark Series Key

**4076 1916-D MS64 Full Bands NGC.** The 1916-D Mercury dime is the premier rarity in the series, drawing a strong premium in all grades. The Denver Mint managed a production of only 264,000 pieces of Adolph Weinman's new type, the lowest annual mintage of the denomination in the entire 20th century. Surprisingly, most examples of this issue seemed to have circulated extensively before being plucked from pocket change by collectors, as the vast majority of the certified population falls in the VF and lower grade range. Mint State Full Bands examples are scarce, and are rarely seen finer than the Choice grade level. This piece shows razor-sharp detail on the hair curls around Liberty's face, as well as on the horizontal and diagonal bands on the reverse. A tinge of golden toning accents matte-like luster on each side, and the surfaces exhibit only a few minor, grade-consistent marks. Only 33 Full Bands coins are numerically finer at NGC (11/14). NGC ID# 23GY, PCGS# 4907

### 1927-D Dime, MS66 Full Bands Among the Finest Full Bands Certified

**4077 1927-D MS66 Full Bands PCGS. CAC.** Production values at the branch mints declined somewhat in the 1920s, a phenomenon that is reflected by the generally poor striking quality of all the Denver issues in 1927. The 1927-D Mercury dime had a mintage of a little more than 4.8 million coins, one of the lower production totals in the series. Mint State survivors are not nearly as plentiful as are those of many Philadelphia issues of the period, and Full Bands examples are scarce across the board. In MS66, the 1927-D is a major rarity will Full Bands definition, and no numerically finer examples have been certified. This piece shows complete separation of all horizontal bands, though the lower diagonal strap is weak at its highest point. Iridescent ice-blue and pale champagne toning beautifully showcase frosty mint bloom on each side, giving this Premium Gem remarkable eye appeal. Population: 12 in 66 (1 in 66+) Full Bands, 0 finer (11/14). NGC ID# 23HV, PCGS# 4963

## EARLY QUARTERS

### 1796 Quarter, Problem-Free XF45 Necessary for an Advanced Type Set

**4078 1796 B-2, R.3, XF45 PCGS.** Tompkins Obverse Die State 2. The high 6 in the date almost touches Liberty's drapery, star 15 is away from the bust, the center crossbar of E in LIBERTY is centered over the top curl, and the left diagonal in Y is above T, all of which attribute the variety. Die State 2 is identifiable by the curl above star 1 being partly lapped.

The 1796 is the first year of U.S. quarter dollar coinage, and the only year for the Draped Bust Small Eagle design type on this denomination. The 6,146-piece mintage was delivered under four warrants:

Warrant	Date	Delivery
6	April 9, 1796	1,800
63	May 27, 1796	2,530
65	June 14, 1796	1,564
81	February 28, 1797	252

The 1796 quarter is necessary for the completion of an advanced type collection of U.S. coinage. In addition to type collections, it is also sought by date and Redbook variety collectors. Needless to say, it is missing from many collections due to its cost of acquisition, even in the lower levels of preservation.

This Choice XF offering displays attractive electric-blue toning imbued with whispers of crimson at the margins which then cedes to soft golden-brown encircling the bright silvery centers. Sharply defined design elements and relatively smooth surfaces further enhance the eye appeal of this gorgeous problem-free specimen. Both sides are completely free of adjustment marks.

The certified population of 1796 quarters shows the highest concentration of coins in the Poor to Very Fine range, with a secondary concentration in AU55 and AU58. PCGS and NGC have seen 71 pieces in mint condition out of the 533 coins submitted, only 13 percent of the total submissions. The former service has graded only 11 examples in XF45 and 88 pieces finer, while the latter has seen a mere eight specimens in XF45 and 70 coins finer (11/14). PCGS# 38920 Base PCGS# 5310

## 1796 Draped Bust Quarter, MS62 First Year of Denomination One-Year Design Type

**4079** 1796 B-2, R.3, MS62 PCGS. Steve Tompkins, in *Early United States Quarters 1796-1838*, makes some interesting points that help explain the low mintage of 6,146 quarters in the first year of the new denomination, 1796, as well as the lack of any subsequent coinage until years later, in 1804:

"The quarter denomination was struck sporadically in the early years with years of low production and many years of no production at all. This was due in part to the actual needs of commerce, but added to this was a lack of the mint having a bullion fund to purchase silver and the need to process and strike each deposit in the order it was received. The mint was at the mercy of the depositor. If bullion was not deposited to be coined, the mint would sit idle. The depositor was also the one who determined what denomination they wished to have their deposit coined into. There was a glut of Spanish colonial silver 2 Reales already in circulation. Many of these pieces even being very worn, traded at par, so the need was small for new coins of the quarter denomination. Consequently, few depositors wished to have their deposits returned in quarter dollars.

"In fact, the new quarter denomination was not only unneeded, it was in all probability unwanted as well. Due to the lack of a denomination stated on the coin, the public even had trouble knowing what it was worth and how to use it for making change in daily commerce. ..."

Two different obverse dies were paired successively with a single reverse to make the complement of 1796 quarters. This coin represents the slightly more available B-2 variety, with the high 6 in the date. The design elements are sharply detailed in most areas, but the eagle's head shows the softness always seen on that feature. A few light planchet adjustment marks on the obverse prevented some of the lower stars on the left from striking up fully, as well. The pleasing surfaces retain much original mint luster and show only minor signs of contact. Eye appeal is quite strong for this iconic first-year type coin. Population: 7 in 62, 23 finer (11/14). PCGS# 38920 Base PCGS# 5310

## BUST QUARTERS

### 1815 Quarter, Well-Struck MS65

**4080 1815 B-1, R.1, MS65 NGC.** The only known variety for the date. The mintage slightly exceeding 89,000 pieces was struck under two warrants. That of December 16, 1815 was delivered to the Planters Bank in New Orleans, and the January 10, 1816 delivery was probably to the Bank of the United States in Philadelphia (Tompkins, 2008).

This Gem displays gunmetal gray hues imbued with hints of sky-blue on the reverse. The design elements are well-impressed and neither side reveals mentionable marks. A very pleasing example of this classic quarter dollar. Census: 11 in 65 (1 in 65+), 7 finer (11/14).

*Ex: Long Beach Signature (Heritage, 1/2004), lot 5731; Central States Signature (Heritage, 4/2005), lot 6903. PCGS# 38942 Base PCGS# 5321*

### 1821 Capped Bust Quarter, MS65 B-3, Probably the Terminal Die State

**4081 1821 B-3, R.2, MS65 PCGS.** Possibly the terminal die state, this piece shows prominent clash marks at star 8 and a heavy die crack through star 12 to the curls and neck. Light die rust is visible left of the 2 in the denomination. Both sides are highly lustrous with satiny surfaces beneath splendid sea-green, russet, and lilac toning on both sides. A fully original and highly attractive representative, this Gem is probably tied for the finest known of the variety, and is likely the finest known of the late die state. The illustration of the late die state in Steve Tompkins' reference is a noticeably worn example that probably only grades VF to XF. The present specimen will serve as a nice replacement for that coin in future quarter references. Population: 6 in 65, 5 finer (11/14) for all 1821 varieties.

*Ex: FUN Signature (Heritage, 1/2011), lot 5510. PCGS# 38965 Base PCGS# 5331*

## PROOF BUST QUARTER

**1827/3 Original Quarter, PR63**  
**Only Nine Originals Known**  
**Classic 19th Century Rarity, Ex: Pittman**

**4082 1827/3 Original PR63 PCGS. B-1, R.7.** The 1827 Capped Bust quarter is one of the most famous and enigmatic issues in the American silver series. According to Mint records, 4,000 business strike Capped Bust quarters were delivered in December 1827, but only nine Original 1827-dated quarters are known to numismatists today, and they were all struck in proof format. Numismatic author and researcher Karl Moulton believes the quarters delivered in December of 1827 were actually dated 1828, and the 1827-dated coins were struck in limited numbers for some different purpose, perhaps as gifts for Mint employees and Treasury officials. The 1827 Capped Bust quarters were known as fabulous rarities as early as the mid-19th century and collector demand for the issue was so great that a number of Restrikes were made in later years, which have become sought-after rarities in their own right.

The first mention of the 1827 Capped Bust quarters in the popular press was in a letter written by “Outsider” in the September 13, 1857 edition of the *New York Dispatch*:

“In 1827 only four quarters were struck from the die. Mickley, of Philadelphia, has one. Long, of the same city, another, Graves and Weston, proprietors of the American Union, of Boston, the third, and the fourth I have not got the run of.”

“Outsider” has not been positively identified, but J.N.T. Levick or John K. Curtis are the most likely candidates. Interestingly, the letter erroneously states only four 1827 quarters were struck. This may be the ultimate source of the numismatic legend about Joseph Mickley purchasing four 1827 quarters from the Mint for face value. The letter identified Mickley, Boston newspaper owners Graves and Weston, and Philadelphia entrepreneur William W. Long as the earliest known owners of 1827 quarters.

The coin offered here is the example traced to William W. Long in 1857. Long was a jack-of-all-trades who ran a combination restaurant/museum/arcade/hotel/shooting-gallery/bowling alley/pool hall establishment in Philadelphia in the 1850s. In addition to his other activities, Long avidly collected coins, visiting the Mint and purchasing a complete set of large cents from the sale of Louis Brechemin’s estate by Davis & Harvey in 1867. He also acquired the 1855-S proof quarter and one of the 1855-S proof half dollars from the San Francisco Mint. According to Edward Cogan, Long sold his 1827 Original quarter sometime before 1867 to prominent Philadelphia collector Robert Coulton Davis. The coin later passed through a succession of famous collections, including those of H.P. Smith, H.O. Granberg, Waldo Newcomer, King Farouk, and John Jay Pittman.

The present coin possesses the high technical quality of the best early 19th century proofs and the aesthetic appeal to match its intense historic interest and illustrious pedigree. The well-preserved surfaces exhibit an attractive mix of lavender-gray, greenish-gold, and cerulean-blue toning, with reflective fields shining through the patina. The design elements are sharply detailed in most areas, but the leaves of the olive branch show just a touch of softness. As on all 1827 Original quarters, the date shows the remnants of an undertype 3 below the primary 7 in the date. Researchers believe the die was originally dated 1822, then overdated in 1823, and finally overdated for the last time in 1827. A small planchet anomaly, possibly from a piece of debris that was struck through during the striking process, is evident near the obverse rim at 5 o’clock and makes an ideal pedigree marker. This is only the third 1827 Original quarter Heritage has handled over the last two decades. Discerning collectors should bid accordingly. Population: 1 in 63, 4 finer (11/14).

*Ex: William Long, circa 1857; Robert Coulton Davis, circa 1867; R.C. Davis Collection (New York Coin & Stamp, 1/1890), lot 1425; Harlan Page Smith Collection (S.H. & H. Chapman, 6/1906), lot 779 (misattributed as a Restrike); H.O. Granberg, exhibited at the 1914 ANS Exhibition; Waldo Newcomer; Charles M. Williams; Abe Kosoff and Abner Kreisberg; Adolphe Menjou Collection (Numismatic Gallery, 6/1950), lot 696; King Farouk; Palace Collections of Egypt (Sotheby’s, 2/1954), lot 1688; John Jay Pittman; Pittman Collection, Part II (David Akers, 5/1988), lot 1283; Americana Sale (Stack’s, 1/2004), lot 3700; J.B. Worthington Collection (American Numismatic Rarities, 5/2005), lot 200.*

*From The Sweet Bloomfield Collection. PCGS# 5340*

## BUST QUARTERS

### 1832 B-2 Quarter, MS65

#### Only One Coin Certified Numerically Finer

**4083** 1832 B-2, R.2, MS65 NGC. The 1832 is the scarcest Capped Bust quarter issue overall from the 1830s, and is one of the rarest in Mint State. The typical piece grades only in the VF to XF range, and AU examples are seldom seen. Mint State pieces are evenly distributed across the MS60 to MS64 grade span, but the population drops off sharply at the Gem grade level. NGC reports only three coins in MS65, with one MS66 piece numerically finer; PCGS has similarly seen only three Gems, but with none finer (11/14). This example is richly frosted and lustrous beneath a blanket of dusky lavender-gray toning that yields wisps of gold and lilac. The strike is bold and the surfaces are carefully preserved. An impressive date or type representative (11/14). PCGS# 38988 Base PCGS# 5351

## 1834 B-1 Quarter, MS66 ★ Prooflike Outstanding Contrast and Eye Appeal Conditionally Rare

**4084** 1834 O Over F in OF, B-1, FS-901, MS66 ★ Prooflike NGC. The first star is distant from the forward tip of the bustline, and star 7 is repunched. On the reverse there is no period after 25 C on this available variety. This is the so-called O/F (in OF) reverse, one carried over from the 1833 B-2 die pairing, according to both Steve Tompkins and Breen-Browning before him. The *Guide Book* lists the O/F variety and therefore many series aficionados separately collect it, but there is little premium over other variants due to its commonplace nature. Tompkins' work identifies this die as produced from a "unique master hub, Reverse-F," the only one that shows two line stripes in the reverse shield and an eagle with no tongue. Another new master hub, Reverse-G, was also employed to make the 1834 B-2 and B-5 and 1835 B-2 varieties. Tompkins mentions the possibility that someone other than Chief Engraver William Kneass engraved those hubs. Kneass would suffer a debilitating stroke in August 1835.

Christian Gobrecht, Kneass' successor and the most logical engraver of the new master hubs, had worked for the Mint off and on since 1823, after the death of Robert Scot and before Kneass' hiring in January 1824. Of course when Kneass had his stroke, Mint Director Robert Maskell Patterson immediately asked for permission to hire Gobrecht full-time as a second engraver. Regardless, after the use of Reverse F in 1834, no later Bust quarters show the two-line stripes. The working dies were obviously used to a great extent, judging by the number of survivors of the B-1 variety.

Clearly the present coin is an early strike off of the new working die, earning it the Prooflike designation from NGC. The surfaces are highly reflective on both sides, with much contrast between the devices and the mirrored fields. There is no discernible color, and the piece is only a few small contact marks away from an even finer grade. NGC has rightly seen fit to award its Star designation for superior eye appeal. For the 1834 date this piece is the second-finest graded at NGC, behind a pair of unattributed MS67 coins that are tied for first (10/14). This piece is also, in MS66 ★ Prooflike, by far finer than the two other 1834s certified as Prooflike. A wonderful and historic coin from the early days of the Mint, suited for the finest type or variety set.

Ex: *FUN Signature* (Heritage, 1/2009), lot 3733. PCGS# 38992 Base PCGS# 5353

## PROOF BUST QUARTER

### 1828 Capped Bust Quarter, PR65 Very Rare Early Proof, B-4 Tied for Finest at PCGS

**4085** 1828 PR65 PCGS. B-4, R.7 as a Proof. The actual number of proof 1828 quarters coined is uncertain, though a popular estimate pegs the count at just 12 pieces. The number of surviving examples sparks an even bigger debate, as a plethora of deeply prooflike business strikes, often offered as proofs in the past, makes forming an accurate roster of true proofs rather difficult. Steve Tompkins, writing in *Early United States Quarters*, lists only six confirmed proofs known, five of which are of the B-4 variety, and the other representing B-1; the PCGS website seems to agree with Tompkins to a certain degree, estimating six to eight pieces survive. NGC has certified a meager six examples of the 1828 proof quarter, including one in PR65 and one finer, while PCGS has encapsulated one in PR64 and two in PR65 (11/14). Defying the number of confirmed survivors, these totals likely reflect one or more resubmissions.

Two die pairs are known to have struck proof quarters of this year, B-1 and B-4, though most are of the latter variety. The two are easily differentiated by the placement of star 1 in relation to the tip of the bust, as on B-4 it is much closer to the rim than it is on B-1. Also, B-4 exhibits the F in OF somewhat lower than the O. Breen reported one or two additional proofs from the B-2 die pair, though they can no longer be traced; it is likely they were only prooflike business strikes.

As can be expected for a proof issue, this Gem representative exhibits boldly impressed design elements in most regions, with notable sharpness appearing on the clasp, the hair curls, and much of the eagle's plumage. Slight softness occurs on stars 5 and 6, as well as on the eagle's talons, a trait not uncommon for issues of this period. Rich ocean-blue and deep lavender hues engulf each side, giving the highly reflective fields a distinctively glossy appearance when tilted beneath a light. An exceptional Gem, worthy of the finest proof quarter collection.

Ex: Baltimore Auction (*Stack's*, 3/2011), lot 1572. NGC ID# 27HC, PCGS# 5375

## SEATED QUARTERS

### 1840-O Drapery Seated Quarter Large O, MS64 Briggs 1-A, FS-501, Doubled Denticles

**4086** 1840-O Drapery MS64 PCGS. CAC. Briggs 1-A, FS-501. Large O, Doubled Denticles on reverse. Only 43,000 pieces were struck of the 1840-O Drapery quarters between the Large O and Small O variants combined — an amount far smaller than the 1840-O No Drapery, struck to the extent of 382,200 coins. The mintmark is considerably larger on the Large O — *Cherrypickers'* calls it “25% larger” — than on normal O-mint quarters of this period, but an easier way to distinguish the Large O versus Small O is the centering and shape. The Large O is neatly centered at the apex of the fletchings and olive stem tip and it is elongated, where the Small O (Briggs Reverse B) is shifted perceptibly to the left (facing the coin), and it is round.

Briggs notes of the curious reverse:

“[Two] sets of dentils were hand cut into the dies. The first set was 0.9 mm high and faint. The second set was 0.7 mm high, boldly cut, and centered over the gaps of the first set. This gives the appearance of diagonal spurs running off the corners of the second cut dentils. A die crack runs from the rim through the left upright of the ‘N’ in ‘UNITED to the wing. A die bulge is at the juncture of right wing and shield. Also another at the lower right thigh - field area.”

When writing his 1991 series reference, Briggs called the 1840-O Large O Drapery quarter R.6 in all grades, adding that it was “to date” the rarest collectible Seated Liberty quarter.

This near-Gem offers muted luster over silver-gray surfaces accented with pale blue and copper tones near the rims. This piece should create a considerable stir within the Liberty Seated collector base. NGC ID# 23SJ, PCGS# 5398

### 1849-O Quarter, MS63 Notable New Orleans Rarity

**4087** 1849-O MS63 NGC. Briggs 1-A. The mintage of the 1849-O quarter dollar was unrecorded by the mint, though researchers estimate about 16,000 of the 412,000 pieces delivered in 1850 from the New Orleans facility were actually dated 1849. This small production estimate, coupled with hoarding and melting of silver coins during the height of the California Gold Rush during this period, resulted in an extremely scarce issue today, arguably the rarest pre-1853 Seated quarter date. The present piece is an exceptional Mint State example, showcasing satiny luster beneath swirling rainbow hues that grow deeper toward the margins. The right-hand stars are not fully defined, though the design elements are otherwise well brought up. NGC has encapsulated only six examples in Mint State, with two in this grade and two Choice pieces numerically finer; PCGS has not certified any above the AU58 grade level (11/14). NGC ID# 23T3, PCGS# 5414

### 1854-O Arrows Quarter, MS65 Conditionally Rare This Nice

**4088** 1854-O Arrows MS65 NGC. Briggs 1-B. The normal mint-mark 1854-O quarter is hardly known as a scarce date by many collectors, partly due to it being overshadowed by the much more popular "Huge O" variety of the same year which is readily collected as a completely separate issue. In actuality, however, the regular 1854-O quarter is a significant condition rarity in any Mint State grade. Most of the known survivors in this range fall in MS64 or lower grades, and only a sparse handful of coins are scatter in finer levels. NGC reports just four pieces in MS65 and one MS67 coin numerically finer; PCGS has seen only one Gem, and just a single MS66 coin finer (12/14). Even if these numbers are not skewed by resubmissions, the rarity of the 1854-O in Gem condition is blatantly obvious.

The present coin is vibrantly lustrous, but with a rich overlay of olive, gold, and aquamarine toning on each side. A couple right-hand stars are not fully defined, but the strike is otherwise sharp. Close study with lens reveals a few faint, grade-consistent marks in the right obverse field, but no distinctive flaws are present. NGC ID# 23U7, PCGS# 5433

## 1855-S Arrows Quarter, MS65 One of Only Two Gems Known Ex: Stickney-Eliasberg

**4089** 1855-S Arrows MS65 NGC. Briggs 1-C. Ex: Eliasberg. Although dies were on hand as early as 1853, the dearth of parting acids prevented the production of silver coinage at the San Francisco Mint until 1855. In the latter year, 396,400 quarters and 129,950 half dollars flowed into California's economic channels. While the half dollar is rightly recognized as a rare issue in all grades, the 1855-S Arrows Seated quarter is also a legitimately scarce coin that is difficult to find problem-free in any grade. Perhaps saved as a first-year souvenir, this satiny Gem has medium sea-green and mauve patina. Well-struck and attractive, a short and faint pinscratch in the right obverse field is nearly invisible to the naked eye. A die crack (as made) journeys across most of the reverse legend. The finest among only five Uncirculated pieces certified by NGC. As of (11/14), PCGS has graded a solitary MS65 piece with none finer.

Ex: Matthew A. Stickney Collection (Henry Chapman, 6/1907); John H. Clapp; Louis E. Eliasberg, Sr. Collection (Bowers & Merena, 4/1997), lot 1461, where it brought \$9,900; Phillip Flannagan Collection (Bowers & Merena, 12/2001), lot 6215, which realized \$11,213; FUN Signature (Heritage, 1/2004), lot 2054, where it realized \$14,950. NGC ID# 23UA, PCGS# 5437

## 1857 Quarter, Toned MS67 Tremendous Eye Appeal

**4090** 1857 MS67 PCGS. CAC. The 1857 Seated Liberty quarter claims a large mintage of nearly 10 million pieces and the date is not difficult to locate in high grade, making it a popular choice for type collectors. That said, the population thins out considerably at the Superb Gem level where this coin is one of only 28 known examples with a mere three finer.

Vivid shades of cerulean-blue, lavender-gray, golden-orange, and sea-green toning are the outstanding visual attributes of this spectacular specimen. The design elements are well-detailed and vibrant mint luster shines through the toning, enhancing the tremendous eye appeal. Population: 7 in 67, 1 finer (11/14). NGC ID# 23TE, PCGS# 5442

### 1860-S Quarter, AU50 Extremely Rare San Francisco Issue

**4091** 1860-S AU50 NGC. Briggs 1-A. Larry Briggs still claims no "real" Uncirculated examples exist, even though both PCGS and NGC have certified one coin each in Mint State (MS61 at PCGS, and MS62 at NGC). About Uncirculated coins are extremely rare, with only a half dozen or so coins certified in any AU grade. This stone-gray example is essentially untoned, with silver luster remaining at the margins and boldly struck motifs. Many collections are missing this San Francisco date altogether, and mid- to high-grade circulated sets often settle for lesser-graded examples. Here is an opportunity to add a sharp and conditionally rare coin to an advanced set. Census: 3 in 50, 4 finer (11/14). NGC ID# 23TS, PCGS# 5453

### 1865 Seated Quarter, MS67 Large 1 Over Small 1, Sole Finest Graded

**4092** 1865 MS67 PCGS. Briggs 1-A, Large 1 over Small 1. The extra bits of the underlying smaller 1 show in the underside apex of the flag, the right-top tip of the bottom serif, and as an extra, thin diagonal right of the final one. The 6 is joined to the 5 by a thin extra canal of connecting metal. The dentils show weakness around one quadrant of each side, as made at the Mint. Variety aside, this Superb Gem is an incredibly smooth, satiny, and distraction-free example of this low-mintage date, struck to the extent of only 58,800 pieces during the final year of the Civil War. This is the sole finest of the issue certified at PCGS (12/14). NGC ID# 23U2, PCGS# 5461

## 1877-S/Horizontal S Quarter, FS-501, MS66 Sole Finest of This *Cherrypickers'* Variety

**4093** 1877-S S Over Horizontal S MS66 PCGS. CAC. Briggs 4-D, FS-501. This Premium Gem is an exceedingly well-struck coin, showing all the star radials on the obverse and bold detailing on the shield lines, gown, and Liberty's hair and the ribbon behind her head. Attractive pink and mauve tones compete with silver and smoke-gray tones on both sides, and the preservation is impeccable. The blundered mintmark is blatant even without magnification.

Most Mint State examples are MS64 at best, with a handful in MS65. The CAC approval further separates this coin from its brethren. This piece was formerly in the Gardner Collection. Mr. Gardner earlier had an MS65 NGC example of this date, but upgraded to this MS66 PCGS coin. Mr. Gardner wrote of his earlier example, "While the S/S striking has its own separate listing in PCGS and NGC, Briggs includes it with all the other 1877-S dies and simply number it as 4-D. No attempt at a rarity rating was made, although Briggs did note that a small hoard of about 15 pieces was discovered in 1978, so it can't be too rare. The current coin is among the finest listed in the pop reports with only one MS66 at PCGS finer." That is the coin that Mr. Gardner eventually purchased. Sole finest at PCGS. The finest at NGC are four in MS65. PCGS# 145562 Base PCGS# 5506

## 1878-S Seated Quarter, MS65 Scarce, Heavily Melted Issue

**4094** 1878-S MS65 PCGS. Briggs 1-A. With a mintage of 140,000 coins, the 1878-S Seated quarter is not generally included among the low-mintage dates that comprise the tail end of the series, but it is actually rarer both in high grades and overall. Large numbers were apparently melted in anticipation of the new Morgan dollar coinage, and remarkably few examples remain for collectors. PCGS and NGC combined have certified only 84 examples in all grades; in Mint State, PCGS has seen only 14 coins, with just two in MS65 and two numerically finer (11/14). With such a low population, this San Francisco issue seems to be somewhat underappreciated. The present example showcases radiant, frosty luster beneath shades of lavender-gold, aquamarine, and dusky gray toning. Evidence of die lapping is seen in some of the eagle's feathers, though the strike is sharply impressed. An important, condition census example of this scarce San Francisco issue. NGC ID# 23VA, PCGS# 5510

**1891-O Quarter, MS65 Prooflike**  
**Only 68,000 Pieces Produced**  
**Sole Prooflike Coin Certified**

**4095 1891-O MS65 Prooflike NGC.** The New Orleans Mint struck silver dollars annually once the mint reopened in 1879; however, no dimes or quarters were minted until the final year of the Seated Liberty design. While the 1891-O dime is relatively common, the 1891-O quarter is rare, with only 68,000 pieces produced. This well-struck Gem has pale sky-blue, gray, and rose toning. The fields show undeniable reflectivity on each side, and there is virtually no sign of coin-to-coin contact. This is the only Prooflike of this rare issue certified by NGC (11/14).

*Ex: ANA Signature (Heritage, 7/2005), lot 10179. NGC ID# 23VS, PCGS# 5525*

## PROOF SEATED QUARTERS

### 1841 Seated Quarter, PR61 Remarkably Rare Early Proof Issue One of Only Three or Four Known

**4096 1841 PR61 PCGS. Briggs 4-B.** The allure of the proof 1841 Seated quarter stems largely from the issue's sheer rarity. The actual mintage was not recorded by the Mint, though it is doubtful if the total was more than four or five coins. PCGS and NGC report four grading events (11/14), although at least one of these is the result of a resubmission. Only three or four pieces are known to collectors, one of which is unattainably housed in the Smithsonian Institution; a roster of known proofs is given below.

This is believed to be the only use of this obverse die, which shows the date with a slight upward slant from left to right. The point of the shield is in line with the right edge of the upright of the first 1 in the date, which is centered between two denticles. On the reverse, several vertical shield lines extend far into the horizontal crossbars, and the top crossbar extends left into the eagle's wing. Slight die doubling is observed on the peripheral lettering, as is diagnostic of this reverse which was later used for business strike coinage.

Both sides of this coin showcase deeply mirrored fields behind razor-sharp design elements. Faintly dappled hues of olive-gray and pale ice-blue accent each side. Several light, scattered ticks and minor hairlines determine the grade, with a few serving well as pedigree markers: a tiny contact mark on Liberty's left (facing) elbow, a thin, vertical line centered below the 84 in the date, and a small linear mark between the second A in AMERICA and the uppermost arrowhead.

The proof status of this piece is undeniable, as is evidenced by the deep mirrors and unusually sharp devices. As one of only two or three pieces available to collectors, the importance of this offering cannot be overstated.

#### Roster of Known 1841 Proof Quarters

**1. PR66 NGC.** The present specimen. Sam Kabealo (1941); 1959 ANA Sale, lot 2480; New Netherlands (54th Sale, 4/1960), lot 1113; John Jay Pittman Collection (David Akers, 10/1997), lot 1302; The Phil Kaufman Collection of Early Seated Proof Sets, Part Two (Heritage, 1/2008), lot 3020; FUN Signature (Heritage, 1/2009), lot 3762; ANA Signature (Heritage, 7/2009), lot 1084.

**2. PR61 PCGS.** Superior (10/1990), lot 3531; Silbermünzen Collection (Heritage, 5/2008), lot 336; Bowers and Merena (11/2008), lot 2016; **The present coin.**

**3. PR61 PCGS.** Superior (6/1985), lot 757. Possibly the same as #2 above - catalog unavailable for comparison.

**4. Proof.** Smithsonian Institution.

*From The Sweet Bloomfield Collection. PCGS# 5535*

## 1842 Small Date Quarter, PR66 Proof-Only 19th Century Rarity Finest Known, Ex: Richmond Collection

**4097 1842 Small Date PR66 NGC.** Ex: Sweet Collection. The 1842 Small Date Seated Liberty quarter is a celebrated 19th century rarity with a surviving population of just seven examples, two of which are impounded in institutional collections and unavailable to collectors. The Small Date coins were struck early in the year for inclusion in the proof sets, and the business-strike Philadelphia Mint quarters were all struck from Large Date dies later in the year (both Large and Small Date business-strikes were coined at the New Orleans Mint, as well). Larry Briggs and Walter Breen believed that a few Large Date quarters were struck in proof format, but David Akers and later researchers believe those coins are prooflike business-strikes. Auction appearances have always been few-and-far-between for this issue, and the earliest offerings were almost always as part of silver proof sets. Recent sales include the PR65 PCGS example in lot 98393 of the Eugene Gardner Collection (Heritage, 10/2014), which realized \$282,000.

This delightful Premium Gem is the finest of the three examples that have been certified, with PCGS grading the Eliasberg coin PR65 and NGC grading the Kaufman piece PR64 Cameo (11/14). The impeccably preserved surfaces of this specimen are lightly toned in attractive shades of pale gold and cerulean-blue. The design elements exhibit razor-sharp definition throughout and the fields are deeply reflective beneath the toning. Eye appeal is tremendous. This is only the fifth time Heritage has offered a specimen of this classic rarity and a comparable specimen may not become available for years.

### Roster of 1842 Small Date Quarters

- 1. PR66 NGC.** Bradley Hirst; Richmond Collection (David Lawrence, 3/2005), lot 1516; Rod Sweet; **the present coin.**
- 2. PR65 PCGS.** Harlan P. Smith Collection (Chapman Brothers, 1906), a tentative pedigree adapted by Q. David Bowers from Walter Breen; Jerome Kern Collection (B. Max Mehl, 5/1950), lot 1432; Eliasberg Collection (Bowers and Merena, 4/1997), lot 1428; Rarities Sale (Bowers and Merena, 7/2002), lot 210; Greensboro Collection, Part IV / Central States Signature (Heritage, 8/2013), lot 5587; Eugene Gardner Collection, Part II (Heritage, 10/2014), lot 98393, realized \$282,000.
- 3. PR64 Cameo NGC.** Connecticut family in the 1940s, part of a complete silver and minor proof set; Oscar Schilke; Hollinbeck-Kagin, still in set; Q. David Bowers, quarter only; Century Sale (Paramount, 4/1965), lot 872; R.L. Miles (Stack's, 4/1969), lot 39; Steckler Collection (Stack's, 9/1874), lot 39; Robison Collection (Stack's, 2/1982), lot 1304; Auction '86 (RARCOA, 7/1986), lot 597; August Sale (Mid-American Rare Coin, 8/1987), lot 332; Stanley Simon Type Collection of United States Coins (Stack's, 1/1989), lot 432; Philip Kaufman Collection / Rosemont Central States Signature (Heritage, 4/2008), lot 2380.
- 4. PR63.** Norweb Collection, Part II (Bowers and Merena, 3/1988), lot 1572; Somerset Collection (Bowers and Merena, 5/1992), lot 1179.
- 5. Brilliant Proof.** James A. Stack Collection (Stack's, 3/1975), lot 55; Julian Leidman; private collection; ANA Sale (Bowers and Ruddy, 8/1978), lot 731; Reed Hawn Collection (Stack's, 10/1993), lot 389.
- 6. Proof.** American Numismatic Society Collection.
- 7. Proof.** Mint Cabinet; Smithsonian Institution.

### Additional Appearances

- A. Proof.** Fifth Semi-Annual Sale (W. Elliot Woodward, 10/1864), lot 293, part of a five-piece silver proof set, realized \$62.50 to J.N.T. Leveck.
- B. Proof.** Thomas Cleneay Collection (S.H. & H. Chapman, 12/1890), lot 837, part of a seven-piece silver and minor proof set.
- C. Proof.** Thomas Cleneay Collection (S.H. & H. Chapman, 12/1890), lot 838, part of another seven-piece silver and minor proof set.
- D. Proof.** Fixed Price List #39 (Charles Steigerwalt, 6/1893).
- E. Proof.** Richard B. Winsor Collection (S.H. & H. Chapman, 12/1895), lot 1066, part of a seven-piece silver and minor proof set.
- F. Proof.** Collection of a Prominent American/H.O. Granberg (U.S. Coin Company, 5/1915), lot 620.
- G. Brilliant Proof.** Granberg/Newcomer/Pray Collections (B. Max Mehl, 11/1919), lot 29, part of a complete silver and minor proof set that Mehl broke up and offered individually.

*From The Sweet Bloomfield Collection. NGC ID# 23W5, PCGS# 5536*

## 1843 Seated Quarter, PR65

### Sole Finest of Only Six Proofs Believed Known

#### Ex: Pittman-Kaufman

**4098 1843 PR65 PCGS Secure. CAC. Briggs 4-E.** John J. Pittman owned two examples of this rare proof issue, including the present coin and another, lower-grade piece which was part of a complete, cent through eagle, proof set that he assembled by combining an original set of copper and silver coins with a different original group of the three gold denominations. The only other complete proof set of all copper, silver, and gold denominations that was intact at its last recorded offering is believed to have been presented by President Tyler, and was first auctioned publicly in 1895 by S.H. and H. Chapman, then ending up in a prominent Holland collection which was auctioned in 1930; B. Max Mehl acquired it for a Mr. Stoddard in California, then reacquired it in 1932 and sold it to "Colonel E.H.R. Green, after whose passing it was placed by Mehl in the Will W. Neil Collection, which was auctioned in 1947; the set reappeared one last time in the Amon G. Carter, Jr. Family Collection sale by Stack's in 1984, and has not been seen since.

The story of these incredible proof sets brings great intrigue to the proof 1843 quarters in general, focusing on their immense rarity and highlighting their desirability. The finer of the two Pittman coins, here offered, while not from one of these two complete sets, is nonetheless the sole finest of the just six proof quarters known to exist. PCGS and NGC combined have certified eight specimens, obviously including a few resubmissions (11/14).

Highly attractive medium intensity cobalt-blue and reddish-gold patina resides in the fields, yielding to primarily reddish-gold that is a shade lighter on the central devices. This hue variance accentuates somewhat the field-motif contrast, especially on the obverse. The design elements are fully defined throughout, enhancing even more the already stunning eye appeal. Even under magnification, the surfaces are free of contact marks and noticeable hairlines.

#### Roster of Proof 1843 Quarters

- 1. PR65 PCGS (formerly PR66 NGC).** 1946 ANA Sale (Numismatic Gallery, 8/1946), lot 442 (unplated); John Jay Pittman Collection (David Akers, 5/1998), lot 1309; Phil Kaufman Collection/ANA Signature (Heritage, 7/2008), lot 1808, where it realized \$74,750; Central States Signature (Heritage, 4/2013), lot 4218. **The present example,**
- 2. PR64 PCGS.** Thomas L. Smith Estate (Stack's, 6/1957), lot 529; FUN Signature (Heritage, 1/2009), lot 3763; ANA Signature (Heritage, 8/2009), lot 1085; Central States Signature (Heritage, 4/2014), lot 5581.
- 3. PR64 NGC.** Dr. Christian A. Allenburger Collection (B. Max Mehl, 3/1948), lot 1015; Floyd T. Starr Collection (Stack's, 10/1992), lot 403; Bowers and Merena (8/1998), lot 155.
- 4. PR64 NGC.** Judge Joseph F. Sawicki (5/1948); John Jay Pittman Collection (David Akers, 10/1997), lot 832 (part of an 1843 Proof Set); Heritage (8/2006), lot 5187; Central States Signature (Heritage, 4/2009), lot 2351.
- 5. Brilliant Proof.** Purchased privately by Richard B. Winsor circa 1880; Richard B. Winsor Collection (Chapman Brothers, 12/1895), lot 1067; Fernand David Collection (J. Schulman, 3/1930), lot 112; "Colonel" E.H.R. Green; Will W. Neil Collection (B. Max Mehl MBS, 6/17/1947); Amon G. Carter, Jr. Family Collection (Stack's, 1/1984), lot 630 (part of an 1843 Proof Set).
- 6. Proof.** Smithsonian Institution.

#### Additional Appearance:

**A. Proof.** Davis-Graves (Stack's, 4/1954), lot 354, impaired. NGC ID# 23W6, PCGS# 5537

## 1850 Quarter, PR67 Single Finest Certified Only Three Proofs Confirmed

**4099 1850 PR67 PCGS Secure. CAC. Briggs 3-C.** The former Philip Kaufman 1850 proof quarter, earlier pedigreed to the John Jay Pittman Collection, is by three grades the finest of the three confirmed specimens. The flawless and fully struck surfaces display rich golden-brown centers bounded by plum-red and ocean-blue borders.

Walter Breen, in his 1989 *Proof Encyclopedia*, calls the issue “prohibitively rare” and claims to have seen records of only two 1850 proof quarters, “aside from those in the unseen proof sets.” Similarly, David Akers writes in the May 1998 catalog of the Pittman Collection:

“The 1850 Quarter in Proof is exceedingly rare, even more so than the Proofs of 1847, 1848 and 1849, and it is in the same rarity class as the 1840, 1841 and 1844 Proof Quarters of which only two or three examples of each are known. Just two Proof 1850 Quarters are known with certainty, with possibly a third example also extant, although the third piece ... is not as obvious a Proof as the other two and is open to debate as to its original minting status.”

In addition to the above pieces, Walter Breen mentioned others in his *Proof Encyclopedia*. Some original “Proof” sets were actually a combination of proofs and business strikes. Breen also mentioned a complete 1850 silver and minor proof set in the collection of H.P. Smith, lot 1240 in the Chapman Brothers sale. That coin has not been identified and is almost certainly one of the three confirmed proofs. Other sets mentioned by Breen are doubted.

Akers wrote of this coin in part in the Pittman Collection:

“Thin date. Open 5. Superb! The quality and beauty of this coin are so extraordinary that no written description can possibly do it justice. The strike is absolutely full and there is a high wire rim, especially prominent on the obverse in the upper right quadrant. The fields are deep mirrors and there is great proof luster under the superb toning which is a fiery reddish-gold, violet, blue, and gold. There are a few faint lines in the fields under the toning, but these are planchet lines that were present at the time of striking and not hairlines. There are tiny die defects on the upper right side and lower left side of the 0 in the date; these defects are characteristic of Proofs and appear on both indisputable Proof 1850 Quarters I have seen. The John Jay Pittman Collection has so many exceptional Proof coins of great quality and beauty that it is difficult to single out any one coin as the ‘most beautiful’; but, if one were to do so, this 1850 Quarter certainly would be one of the leading candidates. ...”

In the era prior to third-party certification, a number of prooflike 1850 quarters were sold or cataloged as proofs. Since the advent of PCGS and NGC, only three different certified proofs have appeared at auction. One, of course, is the present coin, and the other, the PR62 PCGS, is ex: Stack’s (1/1993), lot 455; Bowers & Merena (8/1998), lot 156.

John Dannreuther relates that Paris’ Bibliothèque Nationale in 1986 traded a proof 1850 quarter out of a complete 1850 proof set (including gold) for French coins that the institution lacked. In the last appearance of the Pittman-Kaufman coin above with us, we wrote that the set was “reportedly obtained by Alexandre Vattemare from the Philadelphia Mint in 1850.” Ed Hipps displayed it at the 1998 FUN convention, according to Akers.

Ex: R. Green (5/1949); John Jay Pittman (David Akers, 5/1998), lot 1317; Phil Kaufman Collection / Orlando FUN Signature (Heritage, 1/2008), lot 3035; Greensboro Collection, Part IV (Heritage, 8/2013), lot 5591. According to Akers, this piece is probably from the H.P. Smith Collection (Chapman Brothers, 5/1906), lot 820. NGC ID# 23WD, PCGS# 5544

### 1856 Seated Quarter, PR65 Gleaming Mirrors, Rich Coloration Tied for Finest at PCGS

**4100 1856 PR65 PCGS. Briggs 10-H.** The Briggs reference describes the 1856 proof issue as follows, "Proofs of this year are quite rare and are identified by a large die bulge on the reverse that extends from above the right wing to 'L' of 'DOL.'" The diagnostic bulge is evident on this coin when viewed in light, but perhaps a more visible confirmation of the proof dies are several raised, angled die lines in the obverse shield, under the R of LIBERTY. We have seen these lines before on all 1856 proof quarters viewed.

The smooth, deep mirrors display full reflectivity when viewed at the proper angle. Wonderful shades of purple, blue, and sea-green hug the rims, with translucent orange-gold toning covering the centers. This Gem proof is tied for finest-certified by PCGS. It is estimated that fewer than 30 examples exist in proof format. Population: 3 in 65, 0 finer (11/14). NGC ID# 23WH, PCGS# 5552

### 1857 Quarter, Fully Struck PR66

**4101 1857 PR66 NGC.** Deeply reflective fields shine brightly through the golden-brown central toning that turns blue around the margins. As expected of this Premium Gem proof, all of the devices are boldly struck and fully brought up.

According to PCGS' CoinFacts website, perhaps 30 to 40 different coins survive for the 1857 proof quarters (despite the total of 69 pieces at NGC and PCGS combined), among the last years before the Mint started levying surcharges for silver and gold proof coinage. This example is tied with two other PR66 coins at NGC for finest in the combined certified population (11/14). PCGS reports three coins at the PR65 level with none finer. NGC ID# 23WJ, PCGS# 5553

## 1868 Quarter, PR66 None Numerically Finer at PCGS

**4102 1868 PR66 PCGS. Briggs 2-B.** The proof die pair exhibits mild repunching on the 1 in the date. The proof 1868 Seated quarter had a mintage of just 600 coins, but is one of the more plentiful proof quarters of the period overall. However, its availability declines sharply above the PR64 grade level, and this date becomes exceedingly rare at the Premium Gem level. PCGS has certified only eight coins in PR66, including six non-Cameos and just two Cameos; the only numerically finer representative certified is a sole PR68 ★ Cameo NGC coin (11/14). This piece exhibits deeply mirrored fields and razor-sharp, satiny devices. Rich mint-green and sun-gold hues on the obverse and dusky lavender-gray and gunmetal-blue on the reverse preclude a Cameo designation from PCGS, but deliver exceptional visual appeal. NGC ID# 23WZ, PCGS# 5567

## 1891-O Branch Mint Proof Quarter, PR62 Only Two Specimens Known

**4103 1891-O PR62 ANACS.** This branch-mint proof is extremely rare, one of only two or so specimens known. The New Orleans Mint struck Seated Liberty quarters in 1891 for the first time since 1860, and by the end of 1891 had produced 68,000 business strikes. At least two proofs were also struck, probably to celebrate the resumption of quarter dollars from this branch.

Walter Breen's plate coin for the 1891-O proof quarter in his *Encyclopedia of United States and Colonial Proof Coins* is the specimen that appeared as lot 173 in Lester Merkin's October 4, 1969 sale. An earlier auction appearance of a possibly different 1891-O proof quarter occurred as lot 1144 in Stack's sale of The Empire Collection, November 12-15, 1957, where it brought \$300. Lot 2024 in the 1980 American Numismatic Association Auction (Steve Ivy Numismatic Auctions, Inc., 8/1980), realized \$51,000.

Whispers of electric-blue, purple, and russet concentrate at the borders of this PR62 example, and each side reveals a fair amount of field-motif contrast when the coin is tilted under a light source. A well-executed strike leaves no star center, drapery fold, or feather detail incomplete, and virtual separation is noted between Liberty's foot and sandal. Some light field hairlines and a couple of inoffensive contact marks barely preclude a higher grade. This coin's rarity, historical significance, and popularity among dedicated Seated quarter enthusiasts will elicit a strong bid to secure this ultimate representation of the 1891-O quarter for a prized collection.

Ex: ANA Signature (Heritage, 7-8/2008), lot 1643, where it brought \$20,000.

## BARBER QUARTERS

### 1896-O Quarter, MS66

#### Delicately Toned Condition Rarity Only One Coin Numerically Finer at PCGS

**4104 1896-O MS66 PCGS.** The 1896-O Barber quarter is often overshadowed by its key-date San Francisco counterpart, when in reality it is nearly as rare in Gem or finer grades. PCGS shows a population of two coins in MS66 and none finer for the 1896-S, while for the 1896-O a population of just three coins in this grade and one numerically finer is noted; in MS65, the 1896-O is actually rarer, with just seven and 10 coins certified, respectively (11/14). This piece is boldly struck, with beautiful preservation that leaves no doubt as to its assigned grade. Frosty luster underlies uniform olive-gold toning on the reverse and more mottle violet-gold color on the obverse. An immensely appealing coin in every respect.

*Ex: Anderson DuPont Collection, Part II (Stack's, 11/1954), lot 1935; Farish Baldenhofer Collection (Stack's, 11/1955), lot 503. NGC ID# 23Y8, PCGS# 5614*

### 1898-O Quarter, MS66 Underrated Condition Rarity

**4105 1898-O MS66 PCGS. CAC.** The 1898-O quarter is often overlooked in discussions of scarce Barber issues, though it is actually a distinctly elusive date in Mint State, and is a significant condition rarity above the Gem grade level. The issue circulated extensively in the South, and a number of lower-grade circulated pieces are known. High-end Mint State examples remain curiously underappreciated. This Premium Gem representative exhibits shimmering, frosty luster beneath a veil of light golden patina. Liberty's cheek reveals a few faint, grade-consistent grazes, though the preservation is otherwise perfect. Some striking deficiency is seen on some of the obverse stars and on the eagle's talons, as is typical of this New Orleans issue. Both sides show prominent clash marks in the fields. Population: 7 in 66, 2 finer (11/14). NGC ID# 23YE, PCGS# 5620

## PROOF BARBER QUARTERS

### 1901-S Quarter Remarkably Clean, Original VF25

**4106** 1901-S VF25 PCGS. CAC. David Lawrence's Obverse B with both 1s in the date centered between denticles, and Reverse A with the mintmark slightly angled and low. The 1901-S circulated extensively in the channels of commerce as evidenced by the majority of certified coins in the Poor to Very Good range. Mid-range Very Fine pieces such as the present offering are not seen that frequently; indeed, they are quite unusual as PCGS and NGC have graded only 12 VF25s.

Light silver-gray surfaces exhibit well-defined definition. All letters in LIBERTY show clearly except for the legs of R. Likewise, all letters in the reverse motto ribbon show. Close examination reveals remarkably clean surfaces, unusual for a coin that has seen moderate circulation. Furthermore, the both sides appear to be original. This key-date representative, well-deserving of the CAC endorsement, will see spirited bidding among Barber quarter specialists. Population: 10 in 25, 59 finer (11/14). NGC ID# 23YR, PCGS# 5630

### 1896 Barber Quarter Untoned PR68 Deep Cameo Ex: Bruce Scher #1 PCGS Registry Set

**4107** 1896 PR68 Deep Cameo PCGS. Ex: Bruce Scher. This piece hails from the Bruce Scher Collection of #1 All-Time Finest PCGS Registry Sets, which in 2005 included eight such #1 sets: proof and circulation strike three cent nickels; proof Mercury dimes, Barber dimes, Barber quarters, and Barber halves; silver commemorative 50-piece type set; and (tied for) proof Walking Liberty half set.

This piece is a strong candidate for either an advanced date set or a high-quality type set. The surfaces are silver-white and untoned. Thick, rich mint frost over the devices forms lavish contrast against the deeply mirrored, glassy fields. This coin really needs to be seen to be fully appreciated, showing a full strike and no visible imperfections. PCGS and NGC combined report 16 submissions of this issue in PR68 Deep/Ultra Cameo, and there are only three certified finer (10/14).

Ex: Bruce Scher Collection / Long Beach Signature (Heritage, 2/2005), lot 4088.

From The Empire Collection. PCGS# 95682

## STANDING LIBERTY QUARTERS

### 1916 Standing Liberty Quarter, MS64 Strong Luster, Lightly Toned

**4108 1916 MS64 NGC.** When the Standing Liberty quarter was officially issued to the public in early January 1917, few collectors initially noticed that there were actual two different dates among the coins released. A small run of 52,000 quarters had been accomplished in the final two weeks of December 1916, but rather than issue these by themselves, the Mint opted to release them amid a flood of 1917-dated pieces after the first of the year. As a result, most collectors mistakenly saved the more sharply detailed 1917 pieces as first-year type coins, and much of the 1916 mintage was left to slowly fade away in circulation.

Today, numismatists recognize the 1916 as the first-year key issue that it is, but the number of Mint State survivors is largely inadequate to supply the demand of specialists. Never mind Full Head grades, the 1916 is challenging to locate in any Choice or finer condition.

The piece here offered is a remarkable example for the grade, showing unusually vibrant, satiny luster beneath a blanket of original champagne toning. A few minor marks on the shield are apparently all that preclude a full Gem grade. The figure of Liberty is softly defined, as is diagnostic of this issue, though the coin is nearly worthy of a Full Head designation. NGC has certified only 32 numerically finer non-Full Head pieces (11/14).

*From The A. James Evans Collection, Part II.* NGC ID# 242Y, PCGS# 5704

### 1916 Standing Liberty Quarter MS64 Full Head Bright, Lustrous Surfaces

**4109 1916 MS64 Full Head PCGS.** The 1916 Standing Liberty quarter is a major key date in the series with Full Head detail, as inadequate engraving of the dies severely limited design definition, even on coins that are technically well-struck. The relief on Hermon MacNeil's original models was engraved in relief that was too high to be brought up with a single impression from the dies; therefore, Chief Engraver Charles Barber prepared a low-relief, slightly modified version that conformed to the mechanical requirements of efficient mass-production. These modifications proved ideal for ease of striking, but the changes also weakened many of the finer details that made the design artistically appealing. This softness bothered Mint Director J.H. von Engelken, and in October 1916 he requested that the new low-relief motifs be sharpened slightly in that regard. These final changes were delayed and were only implemented on the later 1917-dated hub. As a result, the dies used for the first two weeks' coinage in late December 1916 were still from the original, unsharpened hub of that year, and all 1916 Standing Liberty quarters by extension exhibit the "mushy" definition which the Mint Director observed on the trial pieces.

In that light, the collector will appreciate that even though the Full Head 1916 quarter offered here is not as sharp as are Full Head representatives of the 1917 Type One issue, it is actually extremely well-struck for the date. The nearly untuned surfaces exude remarkably bright mint frost, and only the slightest abrasions are present. NGC ID# 242Y, PCGS# 5705

## 1916 Standing Liberty Quarter MS66 Full Head Exceptional Quality

**4110 1916 MS66 Full Head PCGS.** The 1916 Standing Liberty quarter was the last of three novel and beautiful coin designs to be developed and released in 1916, along with the Mercury dime and Walking Liberty half dollar. Given the musical chairs going on at the Mint during the time, it is a wonder that three superb new numismatic designs could be launched. There were three new Mint directors in a space of two years. Robert M. Woolley served as director from March 1915 to July 1916, and his successor, F.J.H. von Engelken, managed to oversee the finishing touches to the three designs during his short term, from September 1916 to March 1917. (One wonders if he resigned from exhaustion.) Longtime Mint Chief Engraver Charles Barber would also die unexpectedly during von Engelken's term, in February 1917. Stability in the director's position was restored only with the appointment of Raymond T. Baker, who would serve a respectable term of five years, from March 1917 to March 1922.

Fortunately for Baker, he had an experienced replacement in the form of George T. Morgan, who would finally succeed the less-talented Barber after serving for 41 years — since 1876 — in the post of assistant engraver.

Von Engelken nonetheless took charge of the Mint's three design projects, completing them with the assistance of Barber and the two designers, Adolph Weinman and Hermon MacNeil. While Barber is seen as an obstructionist of modest talent, his in-depth knowledge of the Mint requirements for high-speed coinage nonetheless enabled the modified designs to survive, succeed, and circulate — even if Barber would have preferred his own designs.

This is one of the finest examples of the rare, low-mintage 1916 Standing Liberty quarter. The mint luster is bright and frosted. The obverse is brilliant in the center with a peripheral ring of russet, while the reverse displays just the slightest hint of color. Population: 12 in 66 Full Head, 4 finer (11/14). NGC ID# 242Y, PCGS# 5705

### 1916 Standing Liberty Quarter Premium Gem Full Head Example

**4111 1916 MS66 Full Head NGC.** The short-lived Standing Liberty quarter series contains an unusually high number of key and semikey dates, not counting a plethora of condition rarities. Of these, the 1916 is perhaps the most well-known. A small run of just 52,000 pieces was struck in the latter half of December 1916, with dies that lacked the proper engraving to fully bring up Liberty's head details. As a result, this issue is both an absolute and strike rarity. The present example is a remarkable Premium Gem, showing matte-like luster beneath a faint suggestion of light golden toning. Liberty's head exhibits the proper detail for the Full Head designation, and the eagle's feathers are crisply brought up. NGC has certified only 19 Full Head representatives in MS66, with just three numerically finer (11/14). As with many key issues in the Standing Liberty quarter series, these figures may include a few resubmissions. NGC ID# 242Y, PCGS# 5705

## 1916 Standing Liberty Quarter MS67 Full Head Paramount Condition Rarity Among the Finest Known

**4112 1916 MS67 Full Head PCGS.** The first patterns struck baring Hermon MacNeil's original designs were somewhat less than satisfactory, the chief flaw apparently being that the entire obverse was rather soft and indistinct. A letter, dated June 24, 1916, from the Mint Director to the Superintendent, noted that the obverse of the quarter would "have to be made over."

MacNeil promptly obliged, producing a technically similar but aesthetically superior rendering of Liberty, as well as rearranging many of the obverse elements; among other changes, the new obverse showed the addition of two dolphins (representing the Pacific and Atlantic oceans) flanking each side, and all motifs were sharpened and brought up in much higher relief. This new obverse was readily approved in August, and MacNeil was given permission to place his initial "under [the] head of [the] dolphin on [the] right," per a September 1, 1916 letter from the Mint Director to MacNeil.

Following its approval, however, this second obverse was suddenly scrapped by the Mint, without MacNeil's knowledge, apparently for reasons related to the relief now being "too high to make a perfect coin." Rather than having MacNeil prepare new plates, the Mint opted to resurrect the earlier low relief model and have Chief Engraver Charles Barber modify it as necessary to conform to the mechanical requirements of the Mint. Pattern pieces were struck, which the Mint Director readily approved with only slight adjustments. The Treasury Secretary, however, expressed additional concerns about the "mushiness" of this early obverse design, which had been the cause for its original rejection, and requested that the shield and the figure of Liberty be sharpened.

Such changes, however, would have required the engraving department to prepare new 1916 hubs, which was not feasible if the new coinage was to get underway before the end of the calendar year. Therefore, a small run of 52,000 quarters was struck in December with the old, poorly engraved dies, so that the issuance of all three new coin designs could be completed before the end of year as planned, and the Treasury Secretary's modifications were implemented on the 1917 hubs. The 1916 coins from the earlier hub were released into circulation in early January alongside the first of the sharper 1917 pieces.

The briefly produced 1916 issue is now regarded as one of the most significant key dates in the series, and is technically also a one-year type coin due to the design differences between the 1916 and 1917 hubs. The lack of sharpness in the figure of Liberty is one of the chief diagnostics of this issue, which makes this date one of the most difficult to obtain in Full Head grades. At the lofty MS67 level, PCGS has certified only four Full Head coins (1 in 67+), with none finer, while NGC reports just three Full Head coins in this grade, also with none finer (11/14).

To say the coin here offered is "remarkable" would be an understatement. The viewer's eye is drawn to vibrant, satiny luster shining through pale shades of lavender, champagne, and ice-blue toning, while the figure of Liberty and the shield exhibit as much definition as is technically possible for the issue. The importance of this blazing Superb Gem to the advanced Registry Set or series specialist cannot be overstated. This is far and away one of the finest-known examples of this short-lived issue.

*From The Sweet Bloomfield Collection.* NGC ID# 242Y, PCGS# 5705

### 1918/7-S Quarter, AU58 Full Head Supreme Series Strike Rarity

### 1919-S Quarter, MS64+ Full Head Bold Central Definition

**4113 1918/7-S FS-101 AU58 Full Head PCGS.** In the Standing Liberty quarter series, there are several issues that are absolute or conditional rarities, such as the 1916, the 1919-D and -S, and the 1923-S, and there are also several issues that are distinct strike rarities, including the 1926-D and the 1927-S. The 1918/7-S, however, undeniably claims the blue ribbon in both categories; it is decidedly the scarcest issue in the series overall, and it is arguably the rarest in Full Head, as well. Not surprisingly, the 1927-S in Full Head is a neck-and-neck rival, with both issues having a combined PCGS and NGC certified population of just 45 coins in this category (11/14). With both figures likely inflated by an unknown number of resubmissions, it would be difficult to accurately discern which date is absolutely rarer in Full Head, but if one looks at the average grade of the Full Head coins for each issue, the 1918/7-S becomes the favorite. The vast majority of overdate Full Heads are in AU grades, while the similar majority of 1927-S Full Heads are in Mint State. This pegs the 1918/7-S as the clear winner in a head-to-head comparison.

The present 1918/7-S is a remarkably original near-Mint example, with a sharp Full Head and bold date numerals. The central elements are typically soft, but the overall definition is above-average for this key absolute and strike rarity. Satiny, original luster illuminates pale golden toning over each side, while just a brush of friction on the chain mail and Liberty's knee precludes a Mint State grade. Population: 14 in 58 Full Head, 10 finer (11/14). NGC ID# 243A, PCGS# 5727

**4114 1919-S MS64+ Full Head PCGS. CAC.** The 1919-S is one of the most challenging dates in the series to find in Full Head grades. While a few other dates are notably rarer in this category, the 1919-S nonetheless ranks as one of the most significant semikeys in the series overall and as one of the most overlooked key dates in Full Head. The striking definition on this Plus-designated representative is simply remarkable, showing not only a sharp Full Head, but also strong detail on the shield, the central gown lines, the stars, and the leading edge of the eagle's right wing. That last area is of particular importance, as even most of the Full Head quarters that collectors would consider "well-struck" are still lacking full detail on the highest point of the eagle's wing, which is directly opposite the central gown lines — another element that is frequently soft, even on Full Head coins. The only area of notable weakness is seen on the reverse over UNITED STA. This area is seldom seen weak, which makes this coin, all in all, somewhat of a striking anomaly for the 1919-S. Both sides are frosty and seemingly devoid of discernable abrasions, and display a light golden hue. An exceptional example of this challenging San Francisco issue. Population: 28 in 64 (6 in 64+) Full Head, 19 finer (11/14). NGC ID# 243D, PCGS# 5733

## 1924 Quarter Dollar, MS68+ Immaculately Preserved

**4115 1924 MS68+ PCGS Secure. CAC.** Ex: Just Having Fun Collection. The 1924 Standing Liberty quarter dollar sports a mintage approaching 11 million pieces. This issue is elusive in Premium Gem and rare any finer. PCGS and NGC have certified only seven MS68s, with the present MS68+ offering being the finest seen.

Rainbow toning adheres to the margins on both sides framing the silvery central areas, and each is awash with radiant luster. While Liberty's head is short of fully defined the remaining design elements are well-struck, including all rivets in the shield and the chain mail. This is an immaculately preserved specimen as expected for the numerical grade. Population: 2 in 68 (1 in 68+), 0 finer (11/14). NGC ID# 243L, PCGS# 5746

## 1926-D Quarter, MS65 Full Head Remarkably Well-Struck for the Issue

**4116 1926-D MS65 Full Head PCGS.** The 1926-D is one of the premier strike rarities in the Standing Liberty quarter series. Large quantities of this date were apparently set aside in original bank rolls, as there are numerous examples available through the Gem grade level, but cross over into the Full Head category, and the available population plummets to one of the lowest in the series. Only the 1926-S, 1927-S, and the overdate are rarer overall in Full Head grades. Furthermore, series specialist J.H. Cline questions the accuracy of the certified population data, estimating as many as half of those coins represented may only be the result of resubmissions. If accurate, this would make the 1926-D the third-rarest in the series with Full Head detail, outpacing the elusive 1926-S.

The present coin is beautifully preserved, with softly frosted luster and iridescent lavender-gold toning. Liberty's head is sharp, and the even the lowest obverse stars and Liberty's toes show strong definition. On the reverse, the leading edge of the eagle's left (facing) wing is weak, as usual, but the right-hand stars are sharp — these stars are *almost always flat* on the 1926-D. An important Denver rarity. Population: 20 in 65 Full Head, 12 finer (11/14). NGC ID# 243S, PCGS# 5757

## WASHINGTON QUARTERS

### 1926-S Quarter, MS65 Full Head Remarkable Luster and Eye Appeal

**4117** 1926-S MS65 Full Head PCGS. Although not as highly heralded, the 1926-S is about on par with the 1926-D in terms of Full Head rarity. The certified population reports put the 1926-S as slightly rarer, both overall and in Gem and finer grades, but a review of our auction records suggests the two dates to be relatively equal in rarity, with 43 appearances of the 1926-D in Full Head and 42 appearances of the 1926-S in Full Head. This lends credibility to series expert J.H. Cline's claim that these two dates are favorites for resubmissions, with the certified population figures reflecting more coins than are actually available.

This Gem Full Head 1926-S is a beautiful piece in both strike and preservation. The inner shield rivets and the central gown folds are slightly soft, as usual, though the coin shows otherwise above-average detail. Fresh mint luster illuminates both sides, highlighting splashes of sun-gold, lavender, midnight-blue, and pale russet on the obverse, while the reverse is more evenly colored in a light golden hue. An impressive, sparkling coin that will draw the eye of any numismatist, even if they don't normally collect this series. Population: 18 in 65 Full Head, 10 finer (11/14). NGC ID# 243T, PCGS# 5759

### 1934 Medium Motto Quarter, MS68 The Finest at Both Services

**4118** 1934 Medium Motto MS68 PCGS Secure. CAC. For collectors seeking a finest-graded 1934 Medium Motto quarter, this magnificent MS68 survivor is the only game in town, according to PCGS (11/14). Ownership of this piece will go a long way toward determining the new hierarchy of Registry enthusiasts in the series. Smooth and generous luster is near-colorless on the obverse but distinctly toned silver-blue, lavender, violet, and peach on the reverse, the last color appearing in opaque patches along parts of the rims. Magnificently preserved and gorgeous. NGC ID# 244A, PCGS# 5793

## EARLY HALF DOLLARS

### 1945 Quarter, Partially Toned MS68 Among the Five Finest Known

**4119 1945 MS68 PCGS.** A few hundred 1945 Washington quarters have been certified in mint condition, making this issue relatively obtainable through Premium Gem. The population drops dramatically in MS67 and again in MS68. The two services have seen a mere five examples in the latter grade.

Vivid rainbow-like patination hugs the right and lower obverse margin while the remaining surfaces display occasional whispers of nearly imperceptible ice-blue and violet colors. Both sides are awash with stunning luster and exhibit well-struck design features. This is a remarkably well preserved specimen. Population: 2 in 68, 0 finer (11/14). NGC ID# 245B, PCGS# 5827

### 1795 Flowing Hair Half, AU55 O-110, Two Leaves

**4120 1795 2 Leaves, O-110, R.3, AU55 NGC.** A well-detailed, Choice AU example of this marginally available Two Leaves variety. Deep gunmetal-gray toning blankets much of each side, yielding to tinges of orange-gold and light aquamarine in the recesses. The design elements are well-struck, with just the high points of the eagle and the upper hair curls of Liberty showing grade-limiting friction. This variety is fairly plentiful in lower grades, but it becomes increasingly elusive in the finer AU levels, and Mint State pieces are rare. This piece is one of the finer AU Overton-110 representatives we have handled to this point, and only three Mint State offerings are found in a study of our auction archives. The specialist will appreciate the importance of this undeniably original coin. PCGS# 39228 Base PCGS# 6052

**1795 Flowing Hair Half Dollar, MS62  
Extremely Rare O-120 Variety  
Possibly the Finest of Only 12 to 13  
Pieces Believed Known**

**4121** 1795 2 Leaves, O-120, Low R.7, MS62 NGC. Overton-120 is one of the rarest known 1795 half dollar varieties — only O-118 and O-132 are distinctly rarer, and few others are close rivals. This is the only Mint State example we have ever offered, and it is possibly the finest known of just 12 to 13 representatives believed extant.

This is the only use of this obverse, which is seen with a beginning crack from the below the 7 in the date, up into the bust. This reverse die is seen here in one of four uses, which also include O-117 and O-121, and its final use is on O-122, where it finally cracks heavily from the rim near the M in AMERICA, through the wing tip, to the border below the right ribbon end. This break was likely the cause for the die's retirement. This reverse is also the only die with the 9x8 star combination that also has four berries below the eagle's right (facing) wing. The CA in AMERICA is noticeably recut.

The present coin is in a late stage of this early die state, with a small crack evident from the reverse rim above the A in STATES to the wreath leaves below. This crack appears just prior to the heavy break along the lower-right border, and suggests that this variety was possibly struck immediately preceding, or closely preceding, O-122, which shows the heavy terminal die break.

Both sides display a touch of reflectivity in the fields, though the obverse is slightly more noticeable. Several stars are not fully defined, though the strike is sharp in the centers and the border denticles are bold. The remnants of light adjustment marks are noted periodically around the obverse periphery, though these are hardly detectable to the unaided eye. Gunmetal-gray and pale lavender-blue hues encompass much of each side, though the border recesses also exhibit olive and light golden hues. A highly appealing example of this extremely rare variety. PCGS# 39237 Base PCGS# 6052

## 1797 Half Dollar, O-101a, VF Details Necessary to Complete a U.S. Type Set

**4122 1797 O-101a, R.5 — Cleaning — PCGS Genuine. VF Details. Amato-422.** Light gray toning covers both sides of this VF Details half dollar, with the reverse being a couple of shades deeper. The design elements are well-defined, including relatively strong detail in Liberty's hair, eye, eye lid, and drapery, and the eagle's wing and tail feathers and claws. The surfaces are minimally abraded for a large silver coin that was moderately circulated. A small contact mark on Liberty's cheek and another on the chin are mentioned solely for pedigree purposes, as is a diagonal pinscratch on the eagle's breast. Adjustment marks are completely absent. A die crack through the first T in STATES to the eagle's upper neck, one from the lower neck through the left (facing) wing to the rim, and another connecting these two through the bottom of ST affirm the late (nearly terminal) die state.

This is a pleasing example of this two-year (1796-1797) design type that is necessary for the completion of a type set of U.S. coinage. The cleaning is relatively light, with the surfaces just a bit brighter than one might expect. Our ongoing research on this key series indicates that at least one-third of the 270 or so currently known pieces exhibit one or more impairments, most of which are more severe than on this specimen.

*Ex: Macy's Inaugural Auction (6/1954), lot 1388; Superior Galleries (8/1991), lot 502; Long Beach Signature (Heritage, 9/1998), lot 6747; Superior Galleries (8/2002), lot 944; J.J. Teaparty fixed price list (8/2002). PCGS# 39265 Base PCGS# 6060*

## 1801 Heraldic Eagle Half, AU58 O-101

**4123 1801 O-101, R.3, AU58 PCGS.** This is the first year of issue for the new design with the Heraldic Eagle reverse, and it is a rarity in near-Mint or Mint State grades. Two varieties are known for this date, produced from a common obverse die. The reverse used for the O-101 variety has small die defects, especially at the border below the arrow feathers. Aspects of this coin are sharply detailed with areas of weakness evident on both sides, particularly across the drapery on the obverse and through the stars on the reverse. Both sides have excellent luster beneath gorgeous lilac and iridescent toning.

*Ex: FUN Signature (Heritage, 1/2007), lot 959. PCGS# 39267 Base PCGS# 6064*

**1802 Half Dollar, O-101, R.3, AU55  
Conditionally Rare, Sole Variety of the Year**

**4124 1802 O-101, R.3, AU55 NGC.** Only a single die variety is known for this low-mintage issue (the only such occurrence of the Draped Bust type), of which just 29,890 pieces were struck. This date has historically been elusive, and it remains challenging overall and rare in high grades. "High grades" for this issue are somewhat lower than for many other dates of this type, as the typical representative grades only in the VG to VF range; XF examples are notably scarce and AU pieces are rare across the spectrum. Three Mint State coins have been certified, the finest being a pair of MS62 pieces at PCGS.

The present Choice AU piece is among the finest examples of this date that are usually obtainable, showing sharp detail and well-struck motifs. The recesses show fiery sun-gold toning with the occasional glint of original luster that illuminates the patina. Deeper pewter-gray tones cover the remainder of each side. Overall, this is an immensely appealing, high-end example of this scarce issue. Census: 3 in 55, 4 finer (11/14). PCGS# 39269 Base PCGS# 6065

## 1806 Pointed 6, Stem Half Dollar, MS65+ O-116, Remarkable Condition Rarity

**4125 1806 Pointed 6, Stem, O-116, R.3, MS65+ PCGS. CAC.** O-116 is one of the more plentiful Pointed 6, Stem through claw varieties, though it is noted that any variety of this issue is elusive in Mint State and decidedly rare at the Gem grade level. This variety exhibits the third of four uses for this obverse and one of three uses for this reverse. The obverse is extensively cracked around the periphery from the tip of the bust, through the date, all the way to the R in LIBERTY. This die began cracking early in its second marriage (O-115), and was finally retired after striking a number of O-117 coins. The TY in LIBERTY are recut, though the evidence is not as distinctive on this late die state as it is on early varieties.

This reverse die was also briefly paired with obverses 11 and 13, producing the extremely rare O-128 and O-129 varieties. It is seen here in a late state, with a peripheral crack from below the eagle's tailfeathers, though the top of UNITED, and terminating by the second S in STATES.

Examples of this variety are seldom available in Mint State, and at the Gem level it is a major rarity for the Draped Bust type. The PCGS certified population of all Pointed 6, With Stem varieties is just eight coins in MS65 (2 in 65+), with only four numerically finer (11/14). This dazzlingly lustrous example showcases sea-green, olive, and lavender-gold hues over each side, with a few deeper amber accents also seen in localized areas of the recesses. A few tiny ticks in the right obverse field are seemingly all that keep this Plus-designated piece from a full Premium Gem grade. Light die lapping is evident on the hair curls by Liberty's forehead, also the primary cause of the recutting on the TY in LIBERTY slowly fading. This lapping is much more extensive on later states of this obverse, mostly seen on the O-117 variety, its final usage. The reverse is lightly clashed.

Whether for type, date, or variety purposes, this high-end Gem is an ideal representative of the O-116 variety, showcasing a degree of eye appeal that is not often seen on any half dollar from this period. An impressive and important coin in every respect. The specialist should bid accordingly. PCGS# 39319 Base PCGS# 6071

### 1806 Draped Bust Half, MS64 Finest Known O-123, Outstanding Toning

**4126** 1806 Pointed 6, Stem, O-123, Low R.5, MS64 NGC. Ex: "Col." E.H.R. Green/Eric P. Newman. The present coin is probably the finest example of the O-123. Stephen Herrman lists no specimen graded finer than MS62 in his auction appearance survey. The peripheral design elements are all sharply detailed. Vibrant mint luster shines through vivid shades of cobalt-blue and golden-brown toning, creating exceptional eye appeal. The eagle's head and curls below Liberty's ear are soft, as on most examples of the die pair.

The United States had no dependable domestic source of gold in the early 19th century, so mintages of gold coins were necessarily small. As the largest circulating silver coin, the half dollar was the most convenient option for banks to use as currency reserves and for businesses to settle large transactions. The 1806 Draped Bust half dollar was produced in large numbers to serve these purposes. Thirty die varieties are known for the date. Listed on page 194 in the 2015 *Guide Book*. PCGS# 39329 Base PCGS# 6071

## BUST HALF DOLLARS

### 1815/2 Capped Bust Half, AU55 O-101, Intermediate Die State

**4127** 1815/2 O-101, R.2, AU55 PCGS. CAC. A single die pair was used to produce the entire mintage of 47,150 half dollars in 1815, struck from unused 1812 dies with a 5 repunched over the 2. Early strikes show a perfect state of the dies, but later strikes show a progression through intermediate die states until a diagnostic crack develops through the denomination, indicating the O-101a late die state.

This Choice About Uncirculated example was struck from multiply clashed dies on both sides. Clash marks are easily visible in front of Liberty's neck and face, and in the right obverse field. The reverse shows even more clashing, particularly beneath the wings and around the scroll. Gunmetal blue and bronze-gold toning cover both sides with attractive, original toning. Despite the die clashing, the strike is bold with slight wear on the high points. This coin is CAC endorsed for quality and eye appeal. PCGS# 39491 Base PCGS# 6108

## 1815/2 Bust Half, AU58 O-101a, Late Die State

**4128** 1815/2 O-101a, R.3, AU58 PCGS. Always an in-demand overdate — in both early and late die states — this coin displays attractive, silver-gray patina with lilac overtones and considerable remaining mint luster. The O-101a late die state is somewhat scarcer than earlier states of the dies, and it is identified by several die cracks that encircle the reverse legend and denomination. A bold crack travels from the olive leaves up through UN of UNITED and around the legend to OF, then down again through F and the serif of A to the scroll. Another crack travels from the edge above M through ERICA, across the arrowheads, and diagonally through 50 C. to the edge below the olive leaves. The strike is bold with a trace of the underdigit 2 beneath the primary 5, and the central motifs are sharp. Prominent die clashing produces the only significant marks on the coin, and they are of Mint origin, diagnostic of the die state. PCGS# 39492 Base PCGS# 6108

## PROOF BUST HALF DOLLARS

### 1830 Half Dollar, O-110 Sharply Struck PR65 The Finest Certified at PCGS

**4129 1830 Small O PR65 PCGS, O-110, R.8 as a Proof.** Several diagnostics are useful in confirming the variety of this coin, which is scarce as a Small O variety and extremely rare as a proof. The point of Liberty's upper-right hair curl is beneath and between TY in LIBERTY, a triangular defect rests on the left side of the crossbar of the A in STATES, a high, tall M is seen in AMERICA, and the I in PLURIBUS is centered under the left side of the second T in STATES.

PCGS has graded just two 1830 half dollar proofs — this coin as PR65, and a PR62 Cameo. We have confirmed a single proof at NGC graded MS64.

This Gem example displays light- to medium-intensity indigo-blue with lavender accents on the obverse along with lighter hues of the same coloration on the reverse. Sharply struck design elements are seen on both sides, highlighted by the mirrored fields. Interesting die lines are visible below the bust, as well as some frosted unfinished areas on the reverse beneath the eagle's head and wing, and in the adjacent field, as more care was taken polishing the obverse than the reverse, typical of other true early proofs.

#### Roster of Proof 1830 Half Dollars

**1. PR65 PCGS, O-110.** A recent discovery in the collection of a European noble family, it was in the family collection since the mid-19th century until January, 2014. To our knowledge it has never been in the hands of a U.S. collector since it was minted (per Marc Emory, December 1, 2013 email). **The present coin.**

**2. Gem Brilliant Proof, O-108.** Dr. Christian Allenburger Collection (B. Max Mehl, 3/1948), lot 865; John Jay Pittman; Pittman Collection, Part II (David Akers, 5/1998), lot 1494; Medio-Gomez Collections (American Numismatic Rarities, 6/2004), lot 4360; Public Auction Sale (Stack's, 12/2003), lot 351.

**3. PR64 NGC, O-111.** Terrell Collection (American Auction Association, 5/1973), lot 837; Gary Burghoff Collection (Superior, 1/1980), lot 205; Massachusetts Historical Society Sale (Bowers and Merena, 11/1994), lot 2252; Rarities Sale (Bowers and Merena, 8/1999), lot 125; ANA Sale of the Millennium (Bowers and Merena, 8/2000), lot 4111; Benson Collection, Part II (Ira and Larry Goldberg, 2/2002), lot 966; ANA Auction (Bowers and Merena, 7/2003), lot 1503; FUN Signature (Heritage, 1/2005), lot 30217.

**4. PR63, O-117.** ANA Sale (Kagin's, 8/1977), lot 1460; Auction '84 (Paramount, 7/1984), lot 663; L.W. Hoffecker Collection (Superior, 2/1987), lot 3158; Brilliant-Sieck Collections (Bowers and Merena, 1/1992), lot 347; George "Buddy" Byers Collection (Stack's, 10/2006), lot 1075.

**5. PR62 Cameo PCGS, O-103.** Long Beach Signature (Heritage, 10/1989), lot 602; Thomas Chalkley Collection (Superior, 1/1990), lot 3531; Chicago Sale (Superior, 8/1991), lot 509; Pittsburgh Signature (Heritage, 8/2004), lot 6215; FUN Signature (Heritage, 1/2013), lot 5635.

**6. Brilliant Proof, O-110.** Public Auction Sale (Lester Merkin, 2/1971), lot 720; Reed Hawn Collection (Stack's, 8/1973), lot 93; Robison Collection (Stack's, 2/1982), lot 1589.

#### Other Appearances

**A. Proof.** Parmelee Collection (New York Coin & Stamp, 6/1890), lot 998; William Woodin; possibly Waldo Newcomer and Col. E.H.R. Green.

**B. Proof.** ANA Sale (Numismatic Gallery, 8/1949), lot 1482; R.T. McPherson Collection (Stack's, 2/1953), lot 879; C.A. Cass; Empire Collection (Stack's, 11/1957), lot 1330.

**C. Proof.** Davis-Graves Collection (Stack's, 4/1954), lot 519.

**D. Proof.** Joseph Mickley Collection (W. Elliot Woodward, 10/1867), lot 1709, part of a three-piece silver proof set; realized \$8 to Hodge. PCGS# 6209

## 1835 Crushed Lettered Edge Half Dollar, PR63 'O-111,' Extremely Rare Proof Restrike One of Only Four Confirmed to Exist

**4130 1835 Restrike PR63 PCGS. "O-111," High R.7.** Two different varieties are known for the rare proof half dollars dated 1833 to 1835, consisting of those pieces known as originals and those known as restrikes. Several diagnostics differentiate the restrikes from the originals, some of which shed light on the ever-debated question: When were they struck?

The restrikes, also called the Crushed Lettered Edge proofs, were definitively struck sometime in 1836, with three previously unused obverse dies paired to a common, also previously unused reverse die. The obverses, as well as the shared reverse, are distinctive by having a finely beaded border, noticeably different than the normal denticles seen on the original proofs and business strikes. The reverse die is further significant in that it was later used for regular 1836 business strike production, specifically the O-106 and O-106a varieties of that year. In the late die state variety, O-106a, the die develops cracks, which confirms that all three proof restrikes that feature this reverse in its perfect state must have been coined earlier. Conventional wisdom says that O-106 and O-106a are an early and late stage of the same marriage, and a study of die states and emission sequences for the 1836 half dollar suggests that this die pairing was likely used early in the year, possibly as early as February or March, which would mean that the 1833 to 1835 proof restrikes were struck earlier still. If accurate, this would mean that the restrikes were produced on a screw press, since steam power is not believed to have been operational in the Mint until March 23, when ceremonial medals were struck.

Walter Breen, however, thought these restrikes were made later in 1836, likely in September or October. His reasoning stemmed from the crushed edge lettering that is diagnostic of these issues. Prior to 1836, edge lettering was applied to the planchet before striking. Therefore, the fact that the 1833 to 1835 proof restrikes show edge lettering that is seemingly crushed or filled in, confirms that these pieces must have been struck in a close, plain collar, and when striking pressure expanded the coin laterally, the edge lettering was crushed by the collar confinement. Breen thought that such collars were not available to the Mint until late in 1836, and draws the conclusion that the proof restrikes must have been struck then, and in all likelihood on a steam press. Modern research, however, proves that the crushed edge lettering was applied to the Class I 1804 dollars as early as late 1834 to early 1835, which further supports the former theory. It may never be proven for certain, though the evidence strongly supports the likelihood that the proof restrike halves of 1833 to 1835 were produced in early 1836, likely on a screw press, with a close, plain collar, similarly to the Class I 1804 dollars.

The exact number of 1835 proof restrike halves struck is unknown, and the survival estimate has varied somewhat over the last couple decades. Our analysis of auction data and known appearances confirms the existence of only four specimens of this date, one of which is permanently housed in the Smithsonian Institution. This coincides directly with the PCGS estimate of 2 to 4 pieces known, as well as with the certified population data which lists one PCGS coin (here represented) in PR63, and two NGC pieces in PR65 and PR65+, respectively (11/14). It is conceivable that the two Gems represent the Eliasberg and Pittman specimens, the other two examples known to be in private hands.

This piece showcases deeply mirrored fields beneath pale lavender-gray and gunmetal-blue toning. The eagle's right (facing) talons and the hair curls just above Liberty's eye are not fully brought up, though the strike is otherwise crisp. A small time protruding from the right base of the A in STATES and finely beaded borders are diagnostic of this restrike proof die pair and erase any doubt as to this piece's attribution. A few tiny marks and hairlines limit the grade, but hardly diminish the eye appeal.

The importance of this proof issue (as well as its 1833 and 1834 counterparts) is now more widely understood than at any other point in numismatic history. The die variety, featuring the only use of this obverse, is unlisted in the Overton reference, but the BHNC has assigned it an attribution of "O-111." An example of each 1833 to 1835 restrike was retained at the time of striking for the Mint Cabinet Collection, now in the Smithsonian Institution, which proves that these proofs were of significance even at the time of production. The knowledgeable specialist should not let this incredible, historic rarity get away.

### Roster of Restrike Proof 1835 Crushed Lettered Edge Half Dollars

- 1. Gem proof.** George H. Earle Collection (Henry Chapman, 6/1912), lot 2955; John H. Clapp; Clapp Estate, 1942, to Louis E. Eliasberg, Sr.; Louis E. Eliasberg, Sr. Collection (Bowers and Merena, 4/1997), lot 1900.
- 2. Choice proof.** Christian A. Allenburger Collection (B. Max Mehl, 3/1948), lot 917; John J. Pittman Collection, exhibited at the August 1988 ANA Convention in Cincinnati, Ohio; John J. Pittman Collection, Part II (David Akers, 5/1998), lot 1508.
- 3. PR63 PCGS.** Possibly the same as the Hollinbeck Coin Company specimen, listed below. **The present coin.**
- 4. Proof.** National Numismatic Collection, Smithsonian Institution; illustrated in Eric Newman and Kenneth Bressett's *The Fantastic 1804 Dollar*.

### Additional Appearances

- A. Brilliant proof.** Hollinbeck Stamp & Coin Company (Paul and A.M. Kagin) advertisement (*The Numismatist*, 5/1946). Unplated. Different from the Eliasberg coin.
- B. Brilliant proof.** The Empire Collection (Stack's, 11/1957), lot 1340. Unplated. Possibly a restrike — described as having a "Delicately milled border."
- C. Brilliant proof.** Richard B. Winsor Collection (Chapman Brothers, 12/1895), lot 531. Unplated. Possibly a restrike — sold with an 1833 and 1834 proof half dollars that do appear to have been restrikes. PCGS# 6220

## REEDED EDGE HALF DOLLAR

### 1839 Capped Bust Half, GR-7, MS65 Radiant, Fully Original Type Coin

**4131** 1839 Large Letters, GR-7, R.1, MS65 PCGS. CAC. GR-7 is one of the more plentiful varieties overall, and is likely the most available in Mint State, ideal for type purposes. As a date, however, the 1839 Reeded Edge Capped Bust half dollar is only available through the MS64 grade level; Gems are exceedingly rare, and anything finer is prohibitively so. This representative displays thickly frosted, fresh mint bloom beneath just a blush of light golden toning on each side. This piece is from an early die state, as the diagnostic bust spike and the eagle's tailfeathers are unusually well-defined. Pronounced sharpness is also seen on Liberty's hair curls and the stars, while the vibrant surfaces are devoid of all but the most minute, grade-consistent marks. Housed in an old green label holder. Population: 5 in 65, 1 finer (11/14). PCGS# 531104 Base PCGS# 6179

## PROOF REEDED EDGE HALF DOLLARS

**1836 Reeded Edge GR-1 Half, PR62  
Extremely Rare Early Proof Striking  
One of Only About a Dozen  
Believed Known**

**4132** 1836 Reeded Edge PR62 PCGS. GR-1, Low R.7 as a proof. The Mint did not record the production of proof Reeded Edge half dollars in 1836, but there are nonetheless a small number of pieces known today that exhibit the distinct characteristics of proofs, including unusually well-struck design elements, deeply mirrored fields, and most importantly, an earlier die state than is seen on the business strikes.

A letter written by Mint Director Robert Patterson, dated November 8, 1836, accompanied ten coins that were submitted to the Secretary of the Treasury Levi Woodbury for his inspection. It reads in part:

"I have the pleasure to send you herewith, and to beg you to exhibit to the President, the first specimens of our coinage of Silver by Steam, executed this afternoon. The milling, as well as the striking, has been done by the new machinery, and the steam-power; ..."

Researchers suggest that these initial coins, described by Patterson as "specimens," were in fact proof strikings, and it is conceivable that upon their inspection, a small number of additional proofs were struck later. This theory aligns favorably with the die states of proofs and business strikes, which suggest that the proofs were coined first, or at least very early in the dies' usage. On the proofs, the small die crack from the denticles to the right of the second S in STATES is just beginning, and the die lumps between the ES and within the E are not yet present. On business strikes, the die crack is more advanced, and, save for the earliest pieces, the die lumps amid the ES in STATES are present.

The number of proofs struck is unknown, but survival estimates have been consistently within the 10 to 15-coin range, most suggesting no more than 12 pieces. This would mean that either every single proof survives, or that additional proofs were indeed struck as soon as the first 10 were approved as satisfactory.

PCGS and NGC combined report having certified 24 pieces in all grades (12/14), which is inflated to probably about twice the actual number of coins. This representative is delightfully original, with deeply glassy fields that showcase shades of sun-gold, lavender-gray, and deeper rose toning. The strike is crisp, much sharper than is seen on virtually any business strike, and the surfaces are remarkably devoid of distractions. Accompanied here by a handwritten letter of authentication from Walter Breen, in purple ink, detailing the striking characteristics of this piece as being those of a genuine proof. An extremely important and equally rare early proof. Population: 1 in 62, 9 finer (12/14). PCGS# 6223

## 1836 Reeded Edge Half, GR-1, PR63

### One of the First Half Dollars Struck on a Steam Press Immensely Rare in Proof Format

**4133 1836 Reeded Edge PR63 NGC. GR-1, Low R.7 as a proof.** The first half dollar production on the new steam-powered press at the Mint occurred during the afternoon of November 8, 1836, using dies that featured a slightly modified rendition, by Christian Gobrecht, of John Reich's Capped Bust design. The first 10 pieces struck, delivered by Mint Director Robert Patterson to the Secretary of the Treasury Levi Woodbury, are believed to have been proofs, as evidenced by a letter than accompanied them to Woodbury which referenced the coins as "specimens." This is consistent with die state evidence, which confirms that the proofs were struck either first, or at least in the very early periods of the die pair's usage, as business strikes are seen with more advanced die fatigue than are the proofs. Additional proofs were likely struck after these first 10 pieces, as there are about 10 to 15 examples believed known today.

The new steam press was operated with a close collar, rather than an open collar, which allowed the edge reeding to be applied during the same stroke of the dies that brought up the devices. Prior to steam-powered production, edge lettering had been applied before the planchet was struck. Thus, the steam press was not only easier and faster to operate than the old screw presses, but it eliminated an entire stage of the planchet preparation process.

The present offering is undeniably a proof striking, as affirmed by the early die state (without the die lumps by the ES in STATES), the deeply mirrored fields, and the unusually sharp design definition. On almost all known business strikes, softness can be observed on the eagle's left (facing) leg and inner wing feathers, but on proofs, this area is sharply brought up by a second impression of the dies. The deep mirrors and satiny devices are accented by delicate lavender-gold toning that yields to deeper blue, sea-green, sun-gold and rose around the borders.

The certified population figures for this proof issue record the encapsulation of 24 pieces at NGC and PCGS combined (12/14), but it is doubtful if that many coins were ever struck, let alone survive. We estimate only about a dozen examples are known in all grades. This piece represents a rare and important opportunity for the advanced specialist to acquire one of the first half dollars struck on the steam press at the Philadelphia Mint in 1836. Census: 4 in 63, 5 finer (12/14). PCGS# 6223

## SEATED HALF DOLLARS

**1842-O Seated Half, MS65**  
**WB-102, Medium Date Reverse of 1842**  
**Finest Seen at PCGS**

**4134** 1842-O Medium Date, Reverse of 1842, MS65 PCGS. CAC. WB-102, Die Pair 8, R.3. The absence of any die cracks and the prooflikeness of the surfaces suggest this wonderful Gem half was an early strike from fresh dies. Obviously well-preserved over the years, the devices are fully struck with intricate detail on the normal problem points: Liberty's head and surrounding stars, the eagle's head and talons, and the fletchings on the arrows. Strong mint luster shines through original shades of gunmetal-blue, lilac, and tangerine-gold.

The die pair is confirmed by a die gouge on the left shield edge on the reverse, as well as the lower-most horizontal shield line extending into the eagle's left (facing) wing. The first vertical shield line extends up into the horizontal lines.

In our opinion, this coin is unquestionably the finest known 1842-O Medium Date half dollar. It is a recent addition to the PCGS population report, and the distinctive toning patterns confirm it is the former Eugene H. Gardner coin, crossing over from NGC where it was previously graded MS67. Although NGC lists one other coin at MS66, we are not familiar with that coin (also a new addition to the Census) and it may turn out to be a duplicate submission. Registry Set enthusiasts should take note. Population: 1 in 65, 0 finer (11/14). NGC ID# 24GW, PCGS# 6242 Base PCGS# 6242

**1847/1-46 Seated Half Dollar, MS62  
Rare and Highly-Sought Overdate  
WB-102, FS-301, *Guide Book* Variety**

**4135** 1847/1-46 MS62 NGC. WB-102, FS-301, High R.6. Ex: Dick Osburn Collection. The variety is rare in any grade, with fewer than 30 pieces known, and it is seldom available in Mint State. PCGS and NGC have combined to identify just four confirmed examples — each certified as MS62 (11/14). In a series with some of the most dramatic overdates and doubled dates among all Federal coinage, this *Guide Book* variety is dramatic in its own way, considerably rarer, and more highly valued.

Remnants of underdigits 1, 4, and 6 are plainly seen low and left of the primary date. The remaining details of the 8 do not appear on any examples, where the entirety of that digit must have been fully effaced from the die. The rock base shows die-work to accommodate the high-placed 1847 primary date.

The obverse is partly die-doubled at the shield, with a triple outline of the right shield edge and doubling on LIBERTY. Some of the vertical shield stripes are doubled as well. Fivaz-Stanton assign the FS-004 number for coins with this feature only (without the important overdate) — likely, the doubling remains on late die state coins, where the underdigits are weaker or missing. This bold example is well-struck and sharp on all motifs. It is a “textbook example” of the overdate, with silver-white surfaces and nice luster. A scattering of light field marks do not diminish the appeal. Listed on page 202 of the 2015 *Guide Book*.

Ex: New Netherlands (privately); ANA Auction (Superior, 8/1975), lot 574; James Bennett Pryor Collection (Bowers and Merena, 1/1995), lot 129; Suros Collection (Superior, 2/1999), lot 196; Dick Osburn Collection (Stacks Bowers, 8/2011), lot 7028. NGC ID# 24HA, PCGS# 6258 Base PCGS# 6258

## 1853 Arrows and Rays Half, MS66 WB-101, Essential One-Year Type Lustrous With Outstanding, Original Toning

**4136 1853 Arrows and Rays MS66 PCGS Secure. CAC.** The head-long migration to California and other points West resulted in an unprecedented inflow of gold to the Mints in 1852 and 1853, starting a chain reaction that disturbed the gold-to-silver ratio. Silver coinage was worth nearly a 5% premium on the dollar, and it ceased to circulate while the public hoarded all silver denominations.

The Coinage Act of February 21, 1853 changed the scene for federal silver issues. The half dollar and quarter were redesigned at a reduction in authorized weight, with arrows at the date and rays on the reverse to signify the reduced intrinsic value. Other denominations followed suit. The Portsmouth, NH *Journal* wrote:

"The vexation and annoyance to which almost every person in the community has been subjected by reason of the premium on silver coin will soon be done away with. The directors of the Mint have made arrangements for a prompt execution of the law of Congress, and will soon furnish an abundance of silver change. In most parts of the country silver has been at a premium of five percent and never would have shown itself in general circulation so long as its value was so much enhanced of that of the increasing paper currency."

The Philadelphia Mint responded by producing more than 3.5 million Arrows and Rays half dollars. The New Orleans Mint struck over 1.3 million pieces more. Almost overnight, the silver coin shortage was over.

Despite the high mintage, few high-grade Uncirculated 1853 Arrows and Rays halves survive. Less than two dozen Premium Gem coins are listed in the population reports — a tiny total for the vast number of type and series collectors who need a high-end example to represent the one-year type.

The current coin certainly ranks high among all known examples with its exceptional eye appeal and fully struck motifs. The eagle is sharp from its beak to its talons, where the feather tips are fully defined. Liberty's hair strands are brought up and bold. The star centers are sharp for the issue. Mint bloom is pervasive over the frosted surfaces, with ice-blue margins and amber-gold hues melding into the silver centers on both sides. Housed in a PCGS Secure holder, with CAC endorsement — an approval granted to just four MS66 examples of the issue. PCGS Population: 8 in 66 (1 in 66+), 2 finer (11/14). NGC ID# 24JJ, PCGS# 6275 Base PCGS# 6275

### 1870-CC WB-101 Seated Half, XF45 Weak Drapery, Sharp Liberty

**4137** 1870-CC XF45 NGC. WB-101, Die Pair 2, R.6. With a scant 200 or so survivors in all grades, this famous Carson City half is on the radar of every series collector and Carson City specialist. Many examples exist in low grades or with problems, because few coins were saved at time of mintage. It wasn't until about 25 years after mintage that collectors paid any attention to mintmarks and the relative rarity of several Carson City dates.

This sharp example displays a full LIBERTY on the obverse shield, despite the fact that the high point scroll invited early wear from circulation. The light, silver-gray surfaces show remaining mint luster around the stars and legends. The minimal drapery beneath the elbow narrows the possible die pairs to two, with this example confirming Die Pair 2 based on a light die crack above UNITED, and a small raised dot in the scroll after IN, and the lack of die clash at the lower-right reverse shield. NGC ID# 24K2, PCGS# 6328 Base PCGS# 6328

### 1873 No Arrows, Open 3 Half Dollar Notable Near-Mint Survivor

**4138** 1873 No Arrows, Open 3 AU58 NGC. The 1873 Open 3, No Arrows half dollar is a scarce variety as many coins from a mintage of 214,200 pieces were melted after the weight adjustment in 1873. The 3 was changed from the older Closed 3 style because the digit was easily mistaken for an 8, and the Open 3, No Arrows type was struck for only a short window between the two events. This attractive near-Mint example displays just a hint of high-point wear on the devices. The lustrous surfaces show highlights of gold toning and few signs of coin-to-coin contact. A great example of an underrated Seated half dollar issue beginning to come into its own. Census: 4 in 58, 1 finer (11/14). NGC ID# 24KB, PCGS# 6337 Base PCGS# 6337

## 1874-CC Arrows Half Dollar, MS64 Rare, Low-Mintage Issue

**4139** 1874-CC Arrows MS64 PCGS. CAC. WB-101, Die Pair 3, R.4. Though the change in weight established for minor silver in 1873 was far smaller than the alteration made in 1853, the Mint saw fit to use the arrows device once more to mark the new-tenor pieces. Carson City struck precious few coins with those arrows, particularly in 1874; it made only dimes and half dollars that year, both of which are highly elusive. Stated production for the latter denomination amounted to a mere 59,000 pieces; while the facility was far busier minting coins in 1874 than it had been in any prior year, most of those pieces were gold, and Trade dollars made up the bulk of the silver.

As Rusty Goe states in his *The Mint on Carson Street*, "Choice to Gem Uncirculated specimens [of the 1874-CC half dollar] are prohibitively scarce," and recent data from the PCGS *Population Report* confirms this, with just three MS64 listings and only two finer examples (11/14). Goe suggests that even these small numbers may be inflated by resubmissions, and even if they are not, the total " ... does not come close to meeting demand. For it is safe to say that small crowds are waiting on the sidelines for every high grade specimen that enters the market."

Certainly, the Carson City enthusiast should not stay on the sidelines when this fabulous near-Gem comes up for auction. It offers powerful, swirling luster with a hint of frostiness on the beautifully detailed central devices. A delicate golden aura graces parts of the otherwise silver-white surfaces. Remarkably appealing, even by the standards of the grade assigned, and an important opportunity for the dedicated collector.

Ex: *Central States Signature* (Heritage, 4-5/2009), lot 2475. NGC ID# 24LB, PCGS# 6347 Base PCGS# 6347

### 1874-S Arrows Half Dollar, MS65 Scarce Low-Mintage Issue

**4140** 1874-S Arrows MS65 NGC. WB-101, Die Pair 1, R.3. Ex: "Col." E.H.R. Green. The 1874-S is a better, low-mintage date in the Seated Liberty half dollar series. This coin exhibits the small wide mintmark, positioned above the F in HALF, that identifies the WB-101 variety. The WB-101 is an R.7 variety in Mint State grades.

The coin offered here is an attractive Gem, with sharply detailed design elements and vibrant mint luster throughout. The well-preserved surfaces display pleasing shades of champagne-gold and smoky gray toning, with a few hints of pink and amber. No mentionable distractions are evident and eye appeal is quite strong. Census: 2 in 65, 2 finer (11/14).

Ex: "Colonel" E.H.R. Green; Green Estate; Partnership of Eric P. Newman / B.G. Johnson d.b.a. St. Louis Stamp & Coin Co.; Eric P. Newman @ \$15.00; Eric P. Newman Numismatic Education Society. NGC ID# 24LC, PCGS# 6348 Base PCGS# 6348

## PROOF SEATED HALF DOLLARS

## 1839 Seated Liberty Half Dollar, PR62 One-Year No Drapery Design Type Only Six Examples Traced

**4141 1839 No Drapery PR62 NGC. WB-101.** The 1839 proof No Drapery Seated Liberty half dollar is a celebrated 19th century rarity and a one-year design type that will appeal to series specialists and advanced type collectors alike. Walter Breen listed three specimens in his 1977 *Encyclopedia of United States and Colonial Proof Coins*, but his list contained an example in the Norweb Collection, and that famous gathering did not have a specimen of this issue when it was sold in the late 1980s. PCGS population data lists only two examples, and estimates the surviving population at 2-4 pieces in all grades, while NGC has certified six specimens, including an unknown number of resubmissions and crossovers (11/14). Randy Wiley and Bill Bugert estimated “less than six” different coins were extant in 1993, a figure that closely agrees with our roster below. One of the coins in the roster has been impounded in the collection of the Bibliothèque Nationale in Paris since 1858.

Prominent coin dealers S.H. and H. Chapman described an example of the 1839 No Drapery half dollar in lot 539 of the Richard B. Winsor Collection (Chapman, 12/1895):

“1839 Liberty clad in a chiton, seated on a rock, her right hand supporting a U.S. shield, her left a staff of liberty, 13 stars; ex’g date. R. as 1836 but with HALF DOL instead of 50 CENTS. Edge milled. Type 1839-1865. Brilliant proof, very slightly hairmarked. Sharp impression. No drapery from elbow. Excessively rare. See plate.”

The lot brought \$16.50, the same amount as an 1842 Small Date proof half dollar in lot 545, and much more than any other Seated Liberty half in the sale. More recent appearances include the PR65 NGC (now PR64+ PCGS) specimen in lot 2481 of the Central States Signature (Heritage, 4/2009), which realized \$241,500.

The present coin has no traceable auction history before it appeared in a Stack’s sale in 1996. It may be the specimen included in a proof set from a European holding discovered by Marc Emory in 1981. It is an impressive PR62 specimen, with sharply detailed design elements and reflective fields that show attractive highlights of champagne-gold toning. A few minor hairlines are evident, accounting for the grade, and a small clip on the reverse rim at 10 o’clock (as struck) serves as a useful pedigree marker. The reverse shows the usual die crack through MERICA and HAL DOL that is seen on all examples of this issue. Any appearance of an 1839 No Drapery Seated Liberty half dollar is a major numismatic event and we expect intense competition when this lot is called.

### Roster of 1839 No Drapery Proof Half Dollars

- 1. PR64+ PCGS.** Possibly the 1948 ANA example; Findley Collection; FUN Signature (Heritage, 1/2009), lot 3861; Central States Signature (Heritage, 4/2009), lot 2481, where it brought \$241,500; FUN Signature (Heritage, 1/2013), lot 5653; New York Signature (Heritage, 11/2013), lot 3621, realized \$223,250.
- 2. PR64 PCGS.** Reed Hawn Collection (Stack’s, 8/1973), lot 125; March Sale (Stack’s, 3/1985), lot 1186; Rarities Sale (Bowers and Merena, 8/1999), lot 199; Benson Collection (Ira and Larry Goldberg, 2/2001), lot 1752; ANA Sale (Superior, 8/2002), lot 973; Long Beach Signature (Heritage, 1/2004), lot 5941; Richmond Collection (David Lawrence, 3/2005), lot 1784; FUN Signature (Heritage, 1/2007), lot 988; Eugene Gardner Collection, Part I (Heritage, 6/2014), lot 30526.
- 3. PR63 PCGS.** Exclusively Internet Auction (Heritage, 9/2002), lot 13257; Exclusively Internet Auction (Heritage, 12/2002), lot 19261.
- 4. PR63.** Bibliothèque Nationale
- 5. PR62 NGC.** U.S. Gold, Silver and Copper Coins (Stack’s, 10/1996), lot 300; **the present coin.** Unknown previous pedigree, possibly the coin discovered in a European collection by Marc Emory in 1981.
- 6. PR62 NGC.** F.C.C. Boyd; World’s Greatest Collection (Numismatic Gallery, 4/1945), lot 246; Adolph Friedman; ANA Convention Auction (Numismatic Gallery, 8/1946), lot 812; E.M. Seneca; Berbert & Roe Collections (Stack’s, 3/1965), lot 440; 1976 ANA (Stack’s, 8/1976), lot 1172; Public Auction Sale (Stack’s, 12/1985), lot 942; Worrell Collection (Superior, 9/1993), lot 712; Phil Kaufman Collection (Heritage, 4/2008), lot 2376; FUN Signature (Heritage, 1/2010), lot 2554; Boston Signature (Heritage, 8/2010), lot 3167.

### Additional Appearances

- A. Proof.** An example sent by Mint Director Patterson to the Secretary of the Treasury on August 13, 1839, as an example of the new design.
- B. Proof.** Richard B. Winsor (S.H. & H. Chapman, 12/1895), lot 539; possibly Will W. Neil Collection (B. Max Mehl, 6/1947), lot 474; ANA Convention Auction (Frank Katzen, 8/1948), lot 1766.
- C. Proof.** Joseph Mickley Collection (W. Elliot Woodward, 10/1867), lot 1786, realized \$3.75 to Colonel Mendes I. Cohen; Cohen Collection (Edward Cogan, 10/1875), lot 627, realized \$8.50 to Heman Ely; Ely Collection (Woodward, 1/1884), lot 202.

*From The Sweet Bloomfield Collection. NGC ID# 27SZ, PCGS# 6381*

## 1842 Small Date Half Dollar Remarkable PR66 The Finest Known Proof Ex: Pittman-Kaufman

**4142 1842 PR66 NGC. WB-101.** Ex: Pittman-Kaufman-Gardner. The Phil Kaufman 1842 Small Date proof half dollar is the finest of eight different examples known to us. Like the 1842 proof quarter, there is some indication that a Large Date proof half dollar variety was also struck. The only reference to the Large Date that we are aware of appears in Walter Breen's *Proof Encyclopedia*: "Unverified. Cf. Brand-Lichtenfels I: 2812, impaired." We examined the catalog, where lot 2812 was headlined "Rare 1842 Large Date Proof Half Dollar," and described as a Brilliant Proof. The coin was unplated, undoubtedly leading to Breen's notation "Unverified."

This Premium Gem proof displays simply magnificent toning; iridescent aqua-blue graces the peripheries, turning to a delicate blend of iridescent violet and russet in the centers. What is especially noteworthy is that this palette is nearly uniform on both sides, which is a beautiful characteristic that is difficult to locate on early proofs such as this. The surfaces are virtually flawless, entirely free of hairlines or even the most microscopic of pedigree-determining marks. Needless to say, the combination of full strike, beautiful toning, and immaculately preserved surfaces adds up to exquisite eye appeal that is really unreflected in the numerical grade. This proof obverse die exhibits mild repunching of all four date numerals, but is most prominent on the 42. NGC and PCGS combined report a total of eight proof half dollars of 1842, with the Kaufman PR66 NGC leading the list. NGC has also seen one PR65, two PR64, and one PR62; PCGS shows three PR64 coins, one awarded a Plus designation (12/14). These numbers are artificially inflated, however, as only eight different 1842 proof half dollars are believed extant, and one resides uncertified in the Smithsonian. A roster of known proofs is given below:

1. **PR66 NGC. The Kaufman coin.** R. Green (11/29/1946); John Jay Pittman (David Akers, 5/1998), lot 1524; Philip Kaufman Collection (Heritage, 4/2008), lot 2381. **The present coin.**
2. **PR65 NGC.** Norweb Collection (Bowers and Merena, 11/1988), lot 3131; Phil Kaufman; Rarities Sale (Bowers and Merena, 8/1999), lot 201; Central States Numismatic Society (Heritage, 5/2003), lot 6776; FUN Signature (Heritage, 1/2006), lot 3197; FUN Signature (Heritage, 8/2013), lot 5656; Long Beach Signature (Heritage, 9/2013), lot 6447.
3. **PR64 NGC.** Richmond Collection, Part III (David Lawrence, 3/2005), lot 1787.
4. **PR62.** Eliasberg Collection (Bowers and Merena, 4/1997), lot 1922.
5. **PR60.** Superior (10/2000), lot 4373. Superior catalogers note that this specimen has a "Reverse die crack ... from edge of wing to denticles between IC of AMERICA. Minor hairlines and signs of handling."
6. **Proof.** World's Greatest Collection; F.C.C. Boyd (Numismatic Gallery, 4/1945), lot 255; Adolph Friedman Collection (ANA, Numismatic Gallery, 8/1946), lot 816; Stack's (3/1965), lot 443.
7. **Proof.** American Numismatic Society Collection.
8. **Proof.** Smithsonian Institution. PCGS# 6386

## 1874 Arrows Half Dollar, PR66 Faintly Contrasted Through the Toning

**4143** 1874 Arrows PR66 NGC. The With Arrows, With Motto design type lasted just two years, creating a dilemma for business strike and especially proof enthusiasts. Of 1873 and 1874, the latter has the higher mintage across the minor silver issues, but this amounted to just 700 pieces and carefully preserved representatives are rare in any case. This Premium Gem proof 1874 half dollar is too richly toned for a Cameo designation, though hints of past contrast are ample. When the light is just right, the deep patina reveals startling azure hues at the margins with a fade to pink in the centers. A coin of great charm. Census: 5 in 66, 3 finer (11/14). NGC ID# 27UV, PCGS# 6435

## 1879 Half Dollar, Toned PR67 Cameo Tied for Finest Cameo Certified

**4144** 1879 PR67 Cameo PCGS. WB-101. The scarcity of high-grade business strike 1879 half dollars puts significant date pressure on the more available proofs of this year. The proof 1879 half dollars' availability, however, is largely restricted to Gem and lower grades. PCGS has only encapsulated five PR67 coins, including one non-Cameo, two Cameos, and two Deep Cameos; only a single PR68 non-Cameo has been certified numerically finer (11/14). This Cameo representative is a visually remarkable coin, showcasing vivid bands of aquamarine, royal-blue, violet, and sun-gold, while the reverse is more evenly toned in warm champagne hues. Satiny devices provide pleasing field-motif contrast, while strike is boldly executed. A truly superb late-series proof. PCGS# 86440

## BARBER HALF DOLLAR

### 1905-O Barber Half, Ex: Eliasberg, MS68 A Celebrated Strike and Condition Rarity

**4145 1905-O MS68 PCGS. CAC.** Ex: Eliasberg. This coin is tied for the finest certified PCGS example of the 1905-O Barber half dollar with the Dr. Duckor/David Akers coin, which we offered as lot 3213 of our Boston Signature (Heritage, 8/2010), where it realized \$63,250. That piece had the CAC green approval sticker, as does this MS68 PCGS-certified coin.

The present Eliasberg specimen and the Duckor coin are the only examples of this memorably low-mintage issue at PCGS. Both are remarkable, although they are as different as the day is from the night. The present cataloger (GH) was fortunate enough to be able to lay out side-by-side all of the splendid Dr. Steven Duckor Collection of Barber halves on his worktable at Heritage in Dallas one fine day a few years back; even in that memorable assemblage the 1905-O was a standout coin, boldly and brashly showing a display of blatant original toning.

The Eliasberg example was conservatively graded as MS66 in that 1997 sale, although its presence today in an MS68 PCGS green-label holder with the Eliasberg pedigree tells us that it was certified as such not long after. David Akers mentioned this very coin when cataloging the Dr. Thaine Price Collection (added *emphasis* is ours):

*"The 1905-O is one of the lowest mintage issues in the series; in fact, among all of the branch mint Barber Half Dollar issues, only the 1892-O had a lower mintage. Fortunately, a few extraordinary specimens have been saved; the 1905-O in the Eliasberg sale was nearly perfect, for example, and the Dr. Robert Wynsen specimen is also of exceptional quality. Dr. Steven Duckor owns another example that is similar in appearance and quality to this one. However, other than those mentioned, few other really outstanding examples exist."*

The 1905-O was struck in the meager amount of 505,000 coins, second-lowest among New Orleans issues behind only the 1892-O at 390,000 pieces. The present coin, as mentioned, could not be more different from the Duckor 1905-O (or from the deeply toned Price example, for that matter). The obverse is dove-gray in the center with delicate accents of gold, pale moss, and light aqua at the rim. The reverse shows a similar center, but the rims are pale copper-russet color. The strike is extraordinary, showing full radials on each star and full claws and shield stripes, save for a touch of softness on the upper-right corner — a far bolder strike than most examples of what is overall a softly struck issue. Only this Eliasberg piece and the Duckor-Akers coin have attained the top MS68 level at PCGS (10/14). NGC ID# 24MS, PCGS# 6502

## PROOF BARBER HALF DOLLARS

**1897 Barber Half, PR68 Deep Cameo**  
**Ex: Bruce Scher, Intense Contrast**

**4146 1897 PR68 Deep Cameo PCGS.** Ex: Bruce Scher. This coin is another old friend come to revisit, earlier in one of Bruce Scher's #1 PCGS Registry Sets, which included proof Barber dimes, Barber quarters, and Barber half dollars. Outstanding white-on-black deep cameo contrast projects outstanding eye appeal. The surfaces are brilliant, save for a few wisps of pale tan at the right obverse rim and parts of the reverse rim. The strike is sharp throughout, showing full definition on the fletchings and a hint of softness on the upper-right shield corner and adjoining wing. This magnificently preserved Superb Gem is worthy of the finest collection of proof Barber half dollars and would also be an exemplary contribution to a proof silver type set. Population: 5 in 68 Deep Cameo, 0 finer (9/14).

Ex: Bruce Scher Collection / Long Beach Signature (Heritage, 2/2005), lot 4113.

From The Empire Collection. PCGS# 96544

**1898 Barber Half**  
**Magnificent PR68 ★ Cameo**  
**Ex: Hugon**

**4147 1898 PR68 ★ Cameo NGC.** Ex: Hugon. While certainly not a common date with only 735 proofs struck, the 1898 is, however, one of the better produced issues in the Barber half series. This is the only PR68 ★ coin certified by NGC and there is only one other NGC PR68 graded with two PCGS coins similarly graded. The fields on this magnificent coin are hairline-free and show unfathomable depth of mirrored reflectivity. The devices are nicely frosted and provide a noticeable contrast against the deep fields. Both obverse and reverse are well-balanced with clear, untuned centers that are surrounded by deep reddish-golden and cobalt-blue toning at the margins. An outstanding, original, and pristine type coin.

Ex: John C. Hugon Collection / FUN Signature (Heritage, 1/2005), lot 4278; Long Beach Signature (Heritage, 9/2005), lot 3355.

From The Free Tilly Collection. PCGS# 86545

### 1911 Half Dollar, PR67+ Cameo Delicately Toned and Technically Superb

**4148** 1911 PR67+ Cameo PCGS. CAC. The Barber half dollar design is much more appreciated by modern collectors than it was at the time of issue, and nothing showcases the motifs more appealingly than a high-end proof. For the 1911 issue, struck to the extent of just 543 proofs, anything grading finer than the Gem level is a challenge to locate, but succeeding is an immense reward. Case in point, the present Plus-designated Superb Gem Cameo is one of just six Cameos for the grade at PCGS and the only one with a Plus designation; there is just one coin numerically finer in this category (12/14). The eye appeal is downright captivating, showcasing deep mirrors and strong contrast, but also sharp devices and seemingly pristine surfaces. All this beneath a delicate blanket of gently blended lavender, peach, and mint-gold on the obverse and deeper sun-gold, lavender, and coppery-orange on the reverse. A visually exceptional and conditionally rare proof example of this heavily collected type. PCGS# 86558

## WALKING LIBERTY HALF DOLLAR

### 1940-S Half Dollar, Sharply Struck MS67 An Important Condition Rarity

**4149** 1940-S MS67 PCGS. CAC. Ex: Dawson Oskey Collection. With a mintage exceeding 4.5 million and a good survival rate the 1940-S Walker is readily available through MS65. Strike deficiencies cause the certified population to dwindle rapidly beginning at the Premium Gem level. MS67s are conditionally rare with just 20 known (certified) pieces and none finer.

The design elements are sharply struck, including the gown lines, Liberty's branch hand, and the eagle's breast feathers. Rainbow-like toning occurs at the right obverse margin and the lustrous surfaces are impeccably well preserved. Population: 11 in 67 (2 in 67+), 0 finer (11/14). NGC ID# 24S2, PCGS# 6610

## FRANKLIN HALF DOLLAR

**1953-S Franklin Half, MS65 Full Bell Lines  
Important Strike Rarity**

**4150 1953-S MS65 Full Bell Lines PCGS.** The 1953-S Franklin half is a notorious strike rarity in the series, and pieces such as the present example, a Gem Full Bell Lines coin, regularly bring upwards of \$25,000 at auction. The present coin is basically an untoned silver-white example save for a slight gold accent, and may appeal to a different collector base than some of the other more deeply toned examples that frequently make appearances at auction. Radiant luster is generous and complete on both sides. Despite the low populations, we believe the figures are inflated through resubmissions. Population: 23 in 65 Full Bell Lines, 2 finer (11/14).

*Ex: Long Beach Signature (Heritage, 6/2004), lot 6103. NGC ID# 24T8, PCGS# 86666*

## EARLY DOLLARS

### 1794 Flowing Hair Dollar, VF Details Key First Year of Denomination Always in Demand

**4151** 1794 B-1, BB-1, R.4 — Tooled — PCGS Genuine. VF Details. Bowers-Borckardt Die State IV. The Mint Act of 1792 required both Chief Coiner Henry Voigt and Assayer Albion Cox to post a bond of \$10,000 before they could assume their duties with gold or silver coinage. Neither man could afford such a sum, which was a considerable fortune in the 1790s. As a result, only cents and half cents were struck for circulation in the first two years of the Mint's operations. Mint Director David Rittenhouse finally persuaded Congress to lower the bonds to a more reasonable level in 1794, and both men successfully posted their sureties, opening the way for large scale precious-metal coinage.

The silver dollar was the first denomination struck, as it was the largest, most prestigious silver coin authorized by the Mint Act, and both Rittenhouse and President George Washington considered it an important emblem of sovereignty for the new nation. Engraver Robert Scot prepared the dies for the dollar, with the obverse featuring a head of Liberty based on the design for the earlier Libertas Americana medal. Unfortunately, the largest coin press at the Mint was not adequate to strike coins larger than a half dollar. Approximately 2,000 specimens of the new dollar design were struck late in the year, but the dies were misaligned and the press did not have enough pressure to bring up all design detail in some areas. As a result, almost all 1794 dollars show some weakness in the date and stars on the left. Only 1,758 examples were considered fit to issue, and the remaining examples were melted for recoinage the following year.

The present coin shows evidence of a light cleaning long ago, and a large planchet lamination is evident on the reverse rim from 9 o'clock to 10:30. The obverse shows the usual softness on the lower part of the date and the stars on the left and planchet adjustment marks show on the lower reverse. Some evidence of tooling is apparent on the left obverse. That being said, this coin is a still-attractive representative of this rare and historic issue. The design elements retain some interior design detail and the surfaces are free of large or distracting abrasions. Collectors prize this date in all grades and conditions and we expect intense competition when this lot is called.

*Ex: Stetson University Collection (Bowers and Merena, 5/1993), lot 424. PCGS# 39972 Base PCGS# 6851*

## 1795 Flowing Hair Dollar, VF35 Three Leaves, Silver Plug, B-7, BB-18

**4152** 1795 Flowing Hair, Three Leaves, Silver Plug, B-7, BB-18, R.3, VF35 NGC. Medium gray surfaces exhibit hints of lilac and blue, with lighter reddish-tan on the devices, and a splash of lighter silver color at the lower left obverse. Both sides have the usual minor handling marks that are expected for a coin of this grade and age. Wavy marks across Liberty's neck and jaw suggest the irregular outline of a mint inserted silver plug, intended to adjust the weight of the planchet to the standards of the time. The absence of readily visible adjustment marks suggest that the planchet was initially underweight, and that the silver plug served to bring the planchet up to standard weight.

*Ex: FUN Signature (Heritage, 1/2010), lot 2579.*

*From The Rawlin "Mac" McNelly Collection. PCGS# 39993 Base PCGS# 6854*

## 1795 Flowing Hair Dollar, Choice AU B-1, BB-21, Two Leaves

**4153** 1795 Flowing Hair, Two Leaves, B-1, BB-21, R.2, AU55 PCGS. BB-21 is a plentiful variety in the context of 1795 Flowing Hair dollars, and frequently comes well-struck with excellent planchet quality. These attributes combine to make this variety ideal for the type collector. Most known examples, however, are in XF and lower grades, and this variety becomes somewhat elusive in AU and is rarely seen in Mint State. The present Choice About Uncirculated example boasts a sharp strike, with just slight rub over the high points of the design. Luminous surfaces yield original hues of olive, sun-gold, aquamarine, and gunmetal-gray. The denticles are complete with no evidence of adjustment marks, though a small, insignificant rim bruise is noted near star 8. A visually excellent type coin, sure to please its next owner. Population: 1 in 55, 5 finer (11/14).

*From The Rawlin "Mac" McNelly Collection. PCGS# 39986 Base PCGS# 6853*

**1795 Draped Bust Dollar, AU58**  
**Centered Bust, B-15, BB-52**  
**Ex: Queller Collection**

**4154** 1795 Draped Bust, Centered, B-15, BB-52, R.2, AU58 NGC. Die State V. A faint hairline crack is evident over the R, continuing to the tops of ICA as described in the Superior Gilhausen Catalog (October 1973), there described as one of the last pieces made. The Queller specimen is in a similar late die state, and is a finer example, approaching the Mint State category.

A trace of wear on Liberty's cheek and shoulder, and rub on the eagle's body, are the only traits that prevent a Mint State grade for this lovely piece. Reflective silver surfaces are enhanced by steel and iridescent toning. Perhaps 10 or 12 Mint State coins exist, followed by this piece and a few other exceptional AU coins. In their 1991 catalog, Stack's called this piece Brilliant Uncirculated.

Ex: Stack's (10/1991), lot 837; Queller Collection / Central States Signature (Heritage, 4/2008), lot 2008.

From The Rawlin "Mac" McInelly Collection. PCGS# 39995 Base PCGS# 6858

**1796 B-4, BB-61 Dollar, AU58**  
**Early Die State, Ex: Queller**

**4155** 1796 Small Date, Large Letters, B-4, BB-61, R.3, AU58 NGC. Die State I. The obverse may have been lightly lapped at the top of the die, as indicated by the detached curl near the forehead, consisting of three joined arcs. All other curls are bold and fully defined. The die chip above the 1 is bold, with tiny rust pits nearby.

The 1796 B-4 dollar is the most plentiful variety of the date. Perhaps six or eight full Mint State examples are known, followed by a dozen or more AU pieces. This coin, nearly Mint State quality, still ranks among the 10 finest known of the variety.

RARCOA described this piece as "About Uncirculated, toned pale gold in centers, purple and orange around peripheries. An attractive specimen with semi proof-like fields." To their concise description, we would add that the strike is bold, especially at the center of the obverse. The surfaces are exceptional with pristine fields, and both sides exhibit nearly full frosty mint luster. The reverse has the typical appearance with some weakness on the eagle, although this piece is even more boldly defined than usual. In his *Silver Dollar Encyclopedia*, Bowers wrote: "Due to unsatisfactory impressing of the eagle punch in the working die, specimens of 1796 BB-61 are not as well defined on the reverse as are most others of this general design type. Even AU or Mint State coins are apt to have the feathers appear 'fuzzy' or indistinct."

Ex: Auction '84 (RARCOA, 7/1984), lot 1703; Queller Collection / Central States Signature (Heritage, 4/2008), lot 2009.

From The Rawlin "Mac" McInelly Collection. PCGS# 40000 Base PCGS# 6860

## 1797 10x6 Stars, Large Letters Dollar AU55, B-3, BB-71, Ex: Friend

**4156** 1797 10x6 Stars, Large Letters, B-3, BB-71, R.2, AU55 **PCGS Secure**. Ex: Friend. The sole use of the 10x6 Stars obverse pattern, paired with the Large Letters reverse seen on the B-1 or BB-73 variety of the same year. The 10x6 Stars die pair is the most accessible of three for the year, though still conditionally elusive in AU and better grades. This piece has still-lustrous silvery interiors with reddish-orange and violet peripheral toning that is far more prominent on the reverse. Long crossing adjustment marks on Liberty's portrait are immediately noticeable but do not affect the coin's technical grade. PCGS reports six in AU55 for the 10x6 Stars variety with 18 finer (12/14). PCGS# 40004 Base PCGS# 6865

## 1797 Small Letters Dollar, XF40 Challenging B-2, BB-72 Variety

**4157** 1797 9x7 Stars, Small Letters, B-2, BB-72, R.4, XF40 **PCGS**. Die State I, as always; the obverse is uncracked, and the reverse is lightly lapped from its previous use for the 1796 BB-63 and BB-66 varieties. BB-72 is one of the most well-known and sought-after varieties of this type, and is genuinely the rarest variety of the year. The mintage figure and the survival rate have both been long-debated, with wide-ranging estimates in both regards. Q. David Bowers suggests the survival rate to be in the 200 to 300-coin range, which makes this variety sufficiently scarce, but obtainable. Most pieces, however, are decidedly well-circulated, grading no finer than VF; XF coins are considered upper-end for the issue, and AU and Mint State pieces are "virtually unheard of," per Bowers.

This XF representative is boldly struck, with grade-consistent wear over the central devices. Hints of gold and olive highlight dusky lavender-gray patina on each side, giving this piece a distinctively original appearance. PCGS# 40005 Base PCGS# 6866

**1797 Draped Bust Dollar, AU58 ★**  
**B-1, BB-73, 9x7 Stars**  
**Ex: Queller Family Collection**

**4158** 1797 9x7 Stars, Large Letters, B-1, BB-73, R.3, AU58 ★ NGC. Bowers Die State I. Few circulated 1797 silver dollars retain any semblance of Mint-fresh appeal, but this near-Mint example has it in spades. The obverse devices are perfectly centered, surrounded by wide, sharp denticles and smooth, sheltered fields. Liberty's portrait is sharply struck up, the hair strands crisp, and the drapery folds complete. Silver luster glimmers beneath attractive streaks of russet and lilac-gray patina. The reverse is less patinated, with silvery fields and bright remaining luster, and the strike is remarkably bold. Full breast feathers on the eagle display perhaps a touch of rub at the center, and the eagle's forward leg shows blending although overall the strike is amazingly full. A vignette of slight reddish-gold toning merges from the margins inward, with the reverse strike a smidgen to the left of full centering.

Struck from a perfect state of the dies with no cracks, die clashing, or other distractions, this coin was almost certainly struck in 1798 as described in the 2013 Bowers *Encyclopedia*. It is the BB-73 Large Letters variety, the final die pair of three 1797 varieties. While available in lower grades, full AU and Mint State coins are rare. This coin comes from the Queller Family Collection of Silver Dollars, and ranks fifth in the Bowers' listing of Notable Specimens. Prior to the 2008 Queller sale, it was graded MS60+ in the April 1978 Stack's Spring Sale, where it was described: "But for a minute touch of cabinet friction on the cheek and on the eagle's leg, this would certainly be in the 65 category."

The trace of wear on the high points of the design includes some parallel lines so light they require a glass, located along Liberty's jawline — most likely planchet adjustments not fully struck out during minting. Any marks are minor, though, and without consequence given the coin's impressive visual appeal.

Ex: Spring Sale (Stack's, 4/1978), lot 716; Queller Family Collection of Silver Dollars (Heritage, 4/2008), lot 2015. PCGS# 40003 Base PCGS# 6863

## 1799/8 Draped Bust Dollar, MS62 B-3, BB-141, 15 Stars Reverse

**4159** 1799/8 15 Stars Reverse, B-3, BB-141, R.3, MS62 NGC. Die State IV. The final die crack under the left upright of the M in AMERICA is faint, but there. This variety is not notably rare, but its popularity is heightened by the overdated obverse paired with a boldly blundered reverse. The engraver erroneously punched too many stars in the reverse field above the eagle, forming two rows of seven and six stars, respectively, in addition to the normal two on either side of the eagle's head. This differed from the normal star count of 13, consisting of two rows of six and five stars, respectively, plus the two on either side of the eagle's head. Seemingly in an attempt to correct the number to the appropriate 13 stars, the two end clouds were enlarged, mostly covering the outermost stars, but leaving their lowest points still visible.

The current offering is sharply struck on both sides, showing full centrals on the obverse stars and above-average definition on the reverse stars. Satiny luster underlies pale lavender-gray toning that yields deeper olive and golden accents near the borders. No major abrasions are noted. PCGS# 40064 Base PCGS# 6883

**1799 Irregular Date Dollar, MS65  
13 Stars Reverse, B-15, BB-152  
Late Die State  
Finest-Known of the Variety**

**4160 1799 Irregular Date, 13 Stars Reverse, B-15, BB-152, R.3, MS65 NGC.** The BB-152 die marriage combines the “Irregular Date” obverse with the “Blundered Stars” reverse. The Irregular Date obverse is named for its unusual placement of the individual digits. The serif of the 1 is close to the hair curl, and its upright about perpendicular to the border as normal. The 7 follows in the normal placement, except it is titled slightly to the right. The first 9 is slightly high, and appears tilted to the left, but is actually also perpendicular to the border. The final 9 is upright, leaning a little to the right in relation to the border.

Stars 3 and 4 on the reverse (the center stars in the top row) each overlap the clouds above them. Reverse stars are arranged in a line pattern, rather than the usual arc pattern, significant as the only instance of a line star pattern among all 1799 silver dollars. BB-152 is truly an important transitional variety that bridges the two coinage years. Earlier, the reverse was used with a 1798 obverse die to create the 1798 BB-123 and BB-124 dollars.

The coin shows an extremely late state of the dies — known to Bolender as B-15a — where the obverse die is shattered with several prominent die cracks. A crack through the date curves up through stars 1 to 4, reaching the border at star 5. Another crack begins at the upper right, through the Y and stars 8, 9, and 10, curving through the right field and across the bust and shoulder, eventually joining the first crack at star 1. A crack through RT curves sharply down to the nose and mouth, eventually appearing on Liberty’s neck below the chin. A crack joins stars 4 through 7, reaching the border over L, and a crack begins at star 7, continuing to LIBE and the border above the E.

The reverse shows a crack through ES OF, another through the right wing and field below AMER, and a heavy die flaw joining the stem end to the border. Additional die flaws are seen among the reverse stars. The reverse die has been lapped, showing weak or absent details, including the berries, that are now extremely small. This example is the latest die state seen, and probably could be listed as a new Die State V in the Bowers’ scheme.

The quality of this piece is remarkable. Bowers writes: “most examples of 1799 BB-152 are in lower grades. Any coin grading AU or better is especially notable. Only a few Mint State coins exist.” We are currently aware of the following Mint State pieces:

- 1. MS65 NGC. The present coin.** Formerly, Heritage (1/2007), lot 1034; Heritage (1/2008), lot 2932; Steve Contursi; private collection.
- 2. MS64 PCGS.** Auction ‘85 (Stack’s), lot 1751; Stack’s (1/2002), lot 1520; Cardinal Collection (American Numismatic Rarities, 6/2005), lot 38; Heritage (8/2013), lot 5693, which brought \$99,875.
- 3. MS63 PCGS.** Bowers (1/1999), lot 1174; Stack’s (5/1999), lot 2577; Heritage (2/2005), lot 7328; (11/2005), lot 2193.
- 4. MS61 PCGS.** Thaler Collection as AU58 PCGS (American Numismatic Rarities, 3/2006), lot 1038; Baltimore Sale (Stack’s Bowers, 3/2011), lot 3198; ANA Sale (Stack’s Bowers, 8/2011), lot 7401.

This Gem has frosty cartwheel luster on both sides, enhanced by light gold toning with specks of ivory. Deep steel-blue peripheral toning adds to the sharply original patina. Boldly struck despite the late die state, all of the design elements are sharply defined. The surfaces are essentially pristine, without any blemishes. In our estimation, this is the finest-known BB-152 example, and a coin for the most advanced “variety specialist” of early dollars. PCGS# 40045 Base PCGS# 6879

## 1799 Draped Bust Dollar B-8, BB-165, MS64 Condition Census for the Variety

**4161** 1799 7x6 Stars, B-8, BB-165, R.3, MS64 NGC. Die State III. BB-165 is one of the more plentiful 1799 varieties, but its availability is almost entirely limited to the mid-circulated grades. Many low-grade pieces are known, and there is a concentration of coins in the VF to XF range; AU examples are only infrequently seen, and this variety is decidedly rare in Mint State. This is not overly surprising for silver dollars of this year, as the date in general becomes scarce in Mint State and is genuinely rare in Choice of finer condition.

This is the only use of both the obverse and reverse dies. The reverse is distinctive in that the N in UNITED was originally entered upside-down, and the serif of the errant N is seen as a dash between the bases of the N and I, even on this extremely late die state. The reverse die cracks are extensive, and there is moderate die fatigue evident in the border recesses. Both sides are remarkably well-struck in the margins, particularly on the obverse stars, all of which show full radial lines. The reverse is weak only amid the central stars above the eagle's head, a striking characteristic that appears on most known examples of this variety but is especially prominent on late die state pieces.

This coin is numerically finer than all of the Mint State pieces listed by Q. David Bowers in his *Silver Dollars & Trade Dollars of the United States* under "Notable Specimens." Pale golden-gray toning blankets each side, growing slightly deeper toward the borders, with vibrant underlying luster that illuminates well-preserved, satiny surfaces. Only a few small ticks in the exposed areas preclude a full Gem grade. All varieties included, this is one of only 18 1799 Draped Bust dollars certified by NGC at the MS64 level (1 in 64 Prooflike), with just nine numerically finer (11/14). It is conceivable that these figures reflect a number of resubmissions. This coin is by all means one of the finer-known examples of the BB-165 variety. PCGS# 40056 Base PCGS# 6878

### 1800 Bust Dollar, AU58

#### Rare B-5, BB-189 Variety

#### Tied for Finest Known of the Variety

**4162** 1800 B-5, BB-189, R.5, AU58 NGC. Bowers Die State I. The Bowers *Encyclopedia* states, "Why so few AU and no Uncirculated pieces are known is another of the intriguing mysteries that pervade the early dollar series." Apparently, the finest-known example is an AU58 NGC example from the Warren Miller Collection, although it is not the same coin as this one. While an unattributed Mint State coin may yet surface, for now this attractive, lightly-toned coin is tied for the finest BB-189 dollar.

A diagnostic die dot inside the lower portion of the R in LIBERTY identifies the obverse, while the reverse shows a similar die flaw to the left of the second T in STATES. Struck from a perfect state of the dies, there are none of the die cracks around LIBERTY that characterize later die states. A thin veil of golden-gray toning blankets both sides, with soft luster remaining around the motifs. Liberty shows light wear on the highest curls, and the eagle's head, breast, and talons show evidence of brief circulation. There are no significant marks to mention, and bold detail remains throughout. PCGS# 40075 Base PCGS# 6887

### 1802 Narrow Date Dollar, MS61

#### B-6, BB-241, Among the Finest Known

**4163** 1802 Narrow Date, B-6, BB-241, R.1, MS61 NGC. The date is spaced 18 02 and the right foot of the T in LIBERTY is missing on this die marriage. Also, the cloud beneath the A in STATES has a small spike from its lower right side. In his 1993 silver dollar treatise, David Bowers estimates that 1,500 to 2,750 specimens exist of this common variety. Of these, fewer than 40 pieces are thought to be in Mint State.

This example possesses an attractive melange of grayish-blue, mauve, lavender, and light gold patination, and displays the strongest luster in the recessed areas. The design elements are well-defined, save for the eagle's breast and neck feathers, and are nicely centered on the planchet, and the dentilation is relatively sharp. A few minute contact marks are noted on Liberty's cheek and neck, and no adjustment marks are evident.

Ex: *Long Beach Signature* (Heritage, 2/2006), lot 1633; *ANA Signature* (Heritage, 7-8/2008), lot 1744.

From The Rawlin "Mac" McInelly Collection. PCGS# 40088 Base PCGS# 6895

## 1802 Narrow Date Dollar, MS61 Lustrous B-6, BB-241 Example

**4164** 1802 Narrow Date, B-6, BB-241, R.1, MS61 NGC. Bowers-Borckardt Die State III, the usual light obverse lapping evident. The obverse shows a close perfect date with a wide space between the 8 and 0. The right foot of the T in LIBERTY is absent. The reverse shows cloud 3 with a protruding die spur, and die flaws in the form of roughness under ED. This is a lustrous silver-gray example with a light wash of golden patina and excellent eye appeal. The few light, scattered marks that determine the grade are insignificant, given the overall high quality of this well-struck and nicely preserved example. PCGS# 40088 Base PCGS# 6895

## 1802 Dollar, B-6, BB-241, MS63 Vibrantly Lustrous

**4165** 1802 Narrow Date, B-6, BB-241, R.1, MS63 NGC. Die State III, lapped obverse, as usual. BB-241 is arguably the most available variety of the Draped Bust type, ideal for type representation. This variety comprises the majority of the Mint State 1802 dollars known, and is often encountered when seeking a high-end date representative, as well. The present piece is truly remarkable from both a technical and aesthetic perspective. The strike is even and bold, with all obverse and reverse stars exhibiting sharp radial lines and with strong definition on the central eagle and Liberty's hair curls. Rich golden-gray toning evenly blankets each side, while vibrant underlying luster shines through in a striking cartwheel affect when rotated beneath a light. A well-preserved and unusually lustrous example of this Draped Bust type. PCGS# 40088 Base PCGS# 6895

## GOBRECHT DOLLARS

### 1836 Gobrecht Dollar, Nicely Toned PR55 Judd-60, Die Alignment I

**4166** 1836 Name on Base, Judd-60 Original, Coin Alignment, Pollock-65 PR55 PCGS. Silver. Plain Edge. No Stars Obverse, Stars Reverse. Die Alignment I (coin turn, center of Liberty's head opposite DO in DOLLAR). The diagonal die clash mark above the eagle's wing is just barely visible with magnification, an indication this piece was struck from the second group of dollars (600 pieces) produced in the last week of December 1836. This is a remarkably attractive Gobrecht dollar. Each side is surrounded at the margins by rich sea-green patina and the centers are pale rose. The fields are more reflective than often encountered on 1836s, and the reflectivity greatly enhances the coin's overall appearance. Just a few small contact marks are scattered over each side, none of any singular importance. PCGS# 11225

### 1836 Judd-60 Gobrecht Dollar, Toned PR61 Die Alignment I, Brightly Reflective Fields

**4167** 1836 Name on Base, Judd-60 Original, Pollock-65 PR61 NGC. Silver. Plain Edge. No Stars Obverse, Stars Reverse. Die Alignment I (coin turn, center of Liberty's head opposite DO in DOLLAR). The diagonal die clash mark above the eagle's wing is plainly evident on this piece, clearly pointing toward the AT in STATES. Like many Gobrecht dollars, this piece is deeply toned. In this case blue-gray patina evenly covers both sides. The method of striking has traditionally been called proof, but the fields on Gobrecht dollars do not flash with the intense reflectivity seen on later-date proof coins. In this case, though, the mirroring is significant and the brightness in the fields is not subdued by the depth of the toning present. There are only minor contact marks scattered over both obverse and reverse, and the strike details are fully defined. PCGS# 11225

## SEATED DOLLARS

### 1838 Gobrecht Dollar, Deeply Toned Proof Judd-84, Die Alignment III

**4168** 1838 Name Omitted, Judd-84 Original, Pollock-93 — Obverse Scratched, Improperly Cleaned — NCS. Proof. Silver. Die Alignment III (coin turn, center of Liberty's head opposite the N in ONE). This is an early die state with no trace of a die scratch or die crack connecting the tops of MERI, TE, or the bottom of LAR. Die Alignment III coins are later restrikes, most likely produced either during the tenure of Mint Director James Ross Snowden or Henry Linderman. Several shallow pinscratches are seen in the obverse fields, most notably in the right field. Improper cleaning has dulled the surfaces, which are now covered with deep, almost opaque blue-gray and pinkish-red toning. The strike is strong overall. PCGS# 11350

### 1846-O Seated Dollar, MS64 Conditional Rarity With Enormous Eye Appeal

**4169** 1846-O MS64 PCGS. CAC. The 1846-O Seated dollar issue was the first O-mint production in the six-year-old series at the time it was struck to the extent of only 59,000 coins, and it would be one of only four O-mint entries with the 1850-O, 1859-O, and 1860-O. Most of the 1846-O silver dollars circulated widely, and today certified survivors average no better than XF or Choice XF. The present MS64 PCGS example is a great rarity (and a great coin), one of four such submitted at that service with none finer (12/14). Generous luster and a razor-sharp strike already separate this piece from its cohort, as do the beautiful pastel wash of powder-gray accented with pale blue and citrine. Some random bits of die grease on the reverse bear mentioning but do little to defeat the enormous eye appeal. This is one of two in MS64 with the CAC green approval sticker. NGC ID# 24YH, PCGS# 6933

## 1851 Seated Dollar, MS64 Exceptional Original Business Strike Significant Series Rarity

**4170 1851 MS64 NGC.** Ex: Sweet Collection. By 1851, the rising price of silver in relation to gold caused the melt value of the silver dollar to reach \$1.03, thereby making it profitable for bullion dealers and speculators to hoard and melt the coins in quantity. This and excessive exports of silver are largely responsible for the scarcity of many Seated dollar issues from this period. Only a small run of 1,300 business strike Seated dollars was coined in 1851, likely for either depositors or on the account of the government. Very few if any of these were released into general circulation at the time of striking, but were possibly paid out in return for bullion deposits in the years immediately following, per Bowers.

When numismatic interest in United States coins began increasing in the late 1850s, the 1851 silver dollar's scarcity was immediately recognized. Collectors began searching for examples of this elusive date, but only small numbers were found, with very few uncovered in general circulation. Much of the original mintage was apparently already lost, and the numismatic value of this issue began increasing. The Mint saw a chance for profit, and made a small number of restrikes in proof format for sale to collectors seeking the 1851 date. These proved to be collectible rarities in their own right, but as early as 1864, collectors were already making a distinction between the proof restrikes and the rare original business strikes. In October of that year, a "*splendid original*" 1851 Seated dollar brought an impressive \$35 in the sale of the W. Elliot Woodward Collection. The proof restrikes did not rise to that value until the early 1870s, when several examples sold for the \$22 to \$40 range.

Today, the original 1851 dollars are some of the rarest business strikes in the series, and draw strong bidder attention whenever they are offered at auction. PCGS and NGC combined list 60 survivors in all grades, though this number likely includes resubmissions. NGC has seen only two coins grading as high as MS64, and just one Gem coin finer (11/14). The present piece is a truly remarkable example, showing deep mint-gold, aquamarine, and lavender hues on the obverse, with lightly mottled champagne and golden-gray toning on the reverse. The fields are noticeably semiprooflike, as is characteristic of nearly all examples of this low-mintage issue. The design elements show sharp definition in most areas, though Liberty's head and a few stars a slightly soft. A well-masked grease streak (as struck) is noted in the lower reverse shield. A beautiful condition census example of this key Philadelphia rarity.

Ex: Rod Sweet Collection (Bowers and Merena, 7/2005), lot 1048.

From The Sweet Bloomfield Collection. NGC ID# 24YP, PCGS# 6939

## 1852 Seated Dollar, Unc Details Exceedingly Rare No Motto Issue Only 1,100 Pieces Struck

**4171** 1852 — Corroded, Rim Filed — ANACS. Unc Details, Net AU50. The high price of silver in 1852 played a key role in the limited mintage of silver dollars that year (just 1,100 pieces), though demand for the bulky coin was somewhat lacking in the Treasury as well, which much preferred the smaller and more easily stored gold dollars that had been coined since 1849 — more than 2 million of which were struck in 1852. Of those few silver dollars that were minted, only a tiny percentage survive today. PCGS and NGC combined report only 55 grading events (11/14), including an unknown number of resubmissions. The 1852 is about on par with the 1851 Seated dollar in terms of rarity, with only the legendary 1870-S being rarer overall.

The present coin is well-detailed for the issue, with just a touch of striking softness on the right-hand obverse stars. Splashes of gold and lavender-gray toning complement subtle semiprooflike mirroring in the fields, giving this piece excellent eye appeal. Some minor roughness on portions of the borders, accounts for the Details grade from ANACS, while a few faint file marks are noted on areas of the rims upon close examination. An appealing example of this rare and important Philadelphia issue. NGC ID# 24YR, PCGS# 6940

### 1852 Seated Dollar, MS63 Impeccable Business Strike Rarity The Bowers *Encyclopedia* Plate Coin

**4172 1852 MS63 PCGS. CAC.** The dollar denomination was not without demand by the Treasury in 1852, as is evidenced by the more than 2 million gold dollars produced that year at the Philadelphia Mint alone, but the high price of silver at the time played a significant role in the limited production of silver dollars. Only 1,100 pieces were struck, possibly for depositors, and it is believed that the vast majority were either lost or were melted for their bullion. Survivors are rare in all grades, with most owing their continued existence to contemporary collectors who began saving the few remaining examples from circulation as early as 1858, per Bowers. In fact, the scarcity of this issue and its popularity with collectors of the period prompted the Mint to produce a number of proof restrikes circa the early 1860s; proof examples were bringing \$20 to \$40 apiece by the early 1870s.

The rarity of the business strike 1852 is about on par with the its 1851 counterpart, which had a comparatively low mintage of only 1,300 coins, though the 1852 is slightly more challenging in the finer Mint State grades (MS63 and finer). PCGS and NGC combined report a population of only 55 coins in all grades, a figure that likely includes resubmissions. Most of these are lightly circulated or heavily abraded, as PCGS has seen only two MS63 coins and just four numerically finer (11/14).

The present piece is a beautifully preserved, original example, with noticeable semiprooflike mirroring in the fields. The top of Liberty's head and several adjacent stars are slightly soft, though the design elements are otherwise sharply brought up, with softly frosted luster. A few small, scattered ticks limit the technical grade, but hardly affect the eye appeal. A few splashes of pale violet and aquamarine hues visit areas of light amber-gold toning around the peripheries, while the central regions display more even champagne color. An important, high-end example of this No Motto Philadelphia rarity.

*Ex: Rod Sweet Collection (Bowers and Merena, 7/2005), lot 1049.*

*From The Sweet Bloomfield Collection. NGC ID# 24YR, PCGS# 6940*

## Extremely Rare 1870-S Seated Dollar, XF40 One of Only Nine Confirmed Examples The Miles-Queller Coin

**4173 1870-S XF40 NGC.** For four weeks in the winter of 1914, the ANS sponsored an exhibit of Colonial and U.S. coins drawn from all the prominent collectors and dealers of the era. When one views the catalog of that exhibit today, the number of major rarities is simply staggering. Such an exhibit probably could not be duplicated today. Even if collectors and dealers of today would cooperate and allow their major rarities to be exhibited, the cost of insuring such an exhibit would likely be prohibitive. A review of the exhibit and catalog, as interesting as it would be, is beyond the scope of this writeup. The mention of one major rarity would slight another that would be omitted. However, it is important to note that the catalog is organized by area of specialty and interest, and then by exhibitor. There were 27 exhibitors, and needless to say, the list reads like a Who's Who in numismatics from a hundred years ago.

One of the exhibitors was H.O. Granberg, from Oshkosh, Wisconsin. Granberg made his name and fortune in the railroad and mining businesses. Among the many rarities he contributed to the ANS exhibit was one in the United States Coins chapter on page 36. Under the Silver Dollars section and San Francisco Mint subsection is: "1870. Only specimen known. No record of issue in the mint. (*Illustrated.*)" Undoubtedly the 44-year-old Seated dollar was little noticed among the well-known rarities on display. However, one collector who did take notice was Waldo C. Newcomer, another former railroad employee who then rose to prominence in banking. Newcomer had similar collecting interests to Granberg's, and after a theft of his collection in 1913 (and sometime before 1916), he purchased both the Granberg and Heaton collections. Among the coins he purchased was the allegedly unique 1870-S silver dollar.

As Nancy Oliver and Richard Kelly point out in "The Saga of the 1870-S Silver Dollar" in the May 2005 *Numismatist*, after Waldo Newcomer purchased the coin, he exhibited it at the 1916 ANS in Baltimore. This time the piece was noticed, and *The Numismatist* reported:

"Another excessively rare, if not unique, variety of the silver dollar is the one of the regular die struck in 1870 but bearing the small letter 's' on the reverse, which is shown to most of the collectors probably for the first time, and which to many up to this time has been unknown."

The mystery of the 1870-S dollar had begun, a mystery that would remain unsolved until 2005.

The explanation of the rarity and importance of the 1870-S Seated dollar is rooted in the building of the San Francisco Mint and the laying of its cornerstone on May 25, 1870. For months it had been known that among the items to be included in the time capsule in the new Mint building would be a complete denomination set of U.S. coins dated 1870. The 1870 dies were received in December 1869, shipped from the Philadelphia Mint to San Francisco — with a couple of important omissions. The gold dollar and three dollar dies lacked an S mintmark. Once the reverse dies were received from the Philadelphia Mint and production began in earnest on all of the coins for the time capsule, it was discovered that there was no obverse die for the Seated dollar. Oliver and Kelly found evidence of a close working relationship between San Francisco Mint Superintendent A.H. LaGrange and Carson City Mint Superintendent Abraham Curry. They theorize that LaGrange asked for and received an 1870-dated dollar obverse die from Curry. Unfortunately, vast amounts of data from the various mints were destroyed some 30 years ago as a cost-cutting measure — we will never know for certain. The speculation is plausible, however, as one telegram survives from Curry to LaGrange, dated March 2, 1870:

"I have this day to acknowledge the receipt of silver dollar radius plates, and take this occasion to renew my thanks for your kindness."

What exactly "silver dollar radius plates" are is unknown, but this brief telegram underscores the working relationship between the two mints and the superintendents.

Oliver and Kelly also speculate that an S-mint silver dollar would be an excellent memento for the groundbreaking ceremonies. It is logical to conclude that such coins would be unknown to the collecting public, since they were produced under clandestine circumstances; that is, there is no mint record of the production of these dollars. When one examines the roster of the known 1870-S dollar specimens, it appears that is precisely what they were intended for — mementos — and most appear to have been used as pocket pieces. They certainly show evidence of many years' ownership by non-numismatists. Only one of the nine known examples is Uncirculated. Other pieces are scratched, one shows a test mark, another is pitted, and still another tooled.

The commonly accepted number of 1870-S dollars produced is 12. In the absence of mint records to back up that number, or any other credible primary source, we are left with nine known examples, another that allegedly appeared and then disappeared around 1990, and an 11th piece that is presumably still entombed in the cornerstone of the San Francisco Mint building. That would mean one other piece is lost, which would bring the total to a nice, round figure of 12 pieces. The roster of known and rumored 1870-S dollars follows:

### Roster of 1870-S Seated Liberty Dollars

- 1. James A. Stack Specimen, MS62 PCGS.** Morton and Joseph Stack; James A. Stack (1944); James Stack Collection (Stack's, 3/1995), lot 212; Rudolph Collection (Stack's, 5/2003), lot 2136, realized \$1,092,500; Legend Collection of Seated Liberty Dollars, displayed at the 2005 ANA Convention in San Francisco.
- 2. Norweb Specimen, AU58 PCGS.** Colonel E.H.R. Green; Col. Green estate until 1942; Burdette G. Johnson; Anderson DuPont Sale (Stack's, 11/1954), lot 2551; Art Kagin; Ambassador and Mrs. R. Henry Norweb; Norweb Collection, Part III (Bowers and Merena, 11/1988), lot 3825; Jim Jessen Collection; offered as part of a silver dollar set in *Coin World*, January 1996.
- 3. Eliasberg Specimen, AU53 PCGS.** Henry O. Granberg; illustrated in the 1914 ANS Exhibition; William H. Woodin; Waldo C. Newcomer; exhibited at the 1916 ANA Convention; Col. Green; Col. Green estate; possibly George H. Hall Sale (Stack's, 5/1945), lot 1576; Will W. Neil Sale (Mehl, 6/1947), lot 202; Stack's; Louis E. Eliasberg; Eliasberg Collection (Bowers and Merena, 4/1997), lot 2243; Stanford Coins and Bullion; Certified Acceptance Corporation (John Albanese, purchased for \$1.3 million in 2/2008).

**4. Ostheimer Specimen, XF40 PCGS, formerly XF40 NGC.** Compton Collection; M.H. Bolender; Alfred and Jackie Ostheimer; Ostheimer Sale (Merkin, 9/1968), lot 372, bought in; Gilhousen Sale (Superior, 10/1973), lot 1339; 1975 ANA Sale (Superior 8/1975), lot 1125; Julian M. Leidman; Gary Sturtridge; ANA Sale (Bowers and Ruddy, 8/1978), lot 1160; James E. Pohrer; 1983 ANA Sale (Kagin's, 8/1983), lot 2707; Leon Hendrickson and Sal Fusco; private collection; Phoenix Rare Coin Galleries(7/1992); Richmond Sale (David Lawrence, 11/ 2004) lot 1497; Jack Lee III Collection (Heritage, 11/2005), lot 2226; Central States Signature (Heritage, 4/2009), lot 2581; Boston Rarities Sale (Bowers and Merena, 8/2010), lot 1089; FUN Signature (Heritage, 1/2014), lot 5295.

**5. Queller Specimen, XF40 NGC.** Possibly Charles M. Williams; Adolphe Menjou Sale (Numismatic Gallery, 6/1950) lot 2181; possibly Clinton Hester; Abe Kosoff FPL 1955; Ben Koenig; Fairbanks Collection (Stack's, 12/1960), lot 617; Samuel Wolfson Sale (Stack's, 5/1963), lot 1431; R.L. Miles, Jr. Sale (Stack's, 4/1969), lot 1612; Autumn Sale (Stack's, 9/1978), lot 345 ; David Queller; Queller Family Collection (Heritage, 4/2008), lot 2129, realized \$805,000. **The present coin.**

Note: Walter Breen believed this coin once belonged to 19th century collector Matthew Stickney, but it did not appear in the 1907 Henry Chapman sale of his collection, and his daughters insisted that offering was completely intact. It may be that the coin was sold privately before Stickney's death, but this seems dubious. It is possible that Virgil Brand owned this coin at some point.

**6. Schultz Specimen, VF25 PCGS.** Norman Schultz Mail Bid Sale (12/1935), lot 1302; B. Max Mehl; King Farouk; The Palace Collections (Sotheby's, 2/1954), lot 1676; Hans Schulman, per Gaston DiBello's annotated catalog of the Farouk sale; 1960 ANA Sale (Conn and Whiteneck, 8/1960), lot 1168; Fall Festival Sale (Ben's Coin Company, 10/1961), lot 430 (Ben Dreiske was one of the founders of RARCOA the following year); 10th Anniversary Sale (Kreisberg-Schulman, 4/1967), lot 1253; Herman Halpern Collection (Stack's, 3/1987), lot 1203; private collection; 72nd Anniversary Sale (Stack's, 10/2007), lot 5294; Baltimore Auction (Bowers and Merena, 2/2008), lot 2035.

**7. Carter Specimen, VF.** B. Max Mehl; Colonel E.H.R. Green; James Kelly; Jack Roe; James Kelly again; Jerome Kern (B. Max Mehl, 5/1950), lot 941; Amon G. Carter; Amon Carter Sale (Stack's, 1/1984), lot 285; L.R. French Sale (Stack's, 1/1989), lot 56; James Stack, Sr. Collection (Stack's, 11/1989), lot 546.

Note: This coin has often been listed as a Waldo Newcomer duplicate, but the Newcomer inventory owned by PCGS lists only one coin. Newcomer's notes, written in the late 1920s or early 1930s, include, "Reported that seven were struck but only these two known. Granberg and Woodin specimen (mine) was the only known specimen. Hesslein has one about fine with initials scratched on one or both sides. Mehl is negotiating in another, making three in all. Hesslein offered me his in April 1928 for \$1300.00." Thanks to John Dannreuther for this information. The Carter coin is probably the one Mehl was "negotiating in."

**8. Boyd Specimen, VF Details PCGS, tooled to remove initials F.H.I. engraved before Liberty.** Drake and Munro Collections (William Hesslein, 12/1926), lot 900; F.C.C. Boyd; World's Greatest Collection (Numismatic Gallery, 5/1945), lot 271; Southern Sale (Hollinbeck, 2/1951), lot 1248; Earl M. Skinner Collection (New Netherlands 11/1952), lot 162; Charles A. Cass; Empire Collection (Stack's, 11/1957), lot 1759; Quarter Millennium Sale, Part III (Hollinbeck Coin Company, 3/1964), lot 519; 274th Sale (Hollinbeck, 11/1967), lot 1162; Ancient, Foreign and U.S. Coins (Stack's, 6/1996), lot 1940; 73rd Anniversary Sale (Stack's, 10/2008), lot 457; Baltimore Auction (Bowers and Merena, 11/2009), lot 3086.

**9. Eureka Specimen, F/VF scratched.** Reportedly discovered by an 18-year old man from Eureka, California, before 1922, who kept it until the 1970s. Numerous scratches and nicks; Donovan II Sale (Steve Ivy, 7/1978), lot 1128; Auction '85 (Paramount, 7/1985), lot 1270; Manfra, Tordella, and Brooks fixed price list, spring 1987.

**10. San Francisco coin, Mint State (unverified).** San Francisco Mint employee, 1870; family of preceding Mint employee; owned by San Francisco-area military officer, examined by dealer Sam E. Frudakis who was unable to retain the coin for verification and identification.

**11.** A specimen rumored to be in the cornerstone (whereabouts today unknown) of the "Granite Lady" second San Francisco Mint, unverified.

The surfaces of this piece are bright throughout, with a pale layer of golden and lilac toning. The brightness and color is evenly matched on each side. Unlike several other circulated 1870-S dollars on the roster, there are no mentionable or distracting marks or other problems on this piece. Both sides show the normally expected number of small abrasions that a coin would receive from circulation or as a pocket piece; the brightness is also consistent with several years' residence in a pocket. The only larger mark that helps identify this as the Miles-Queller piece is located to the left of the O in OF. The strike is soft, as always, on the head of Liberty. The mintmark is also predictably small, and it appears to have been weakly punched into the reverse die.

The 1870-S dollar is a major rarity in the Seated dollar series, and is also one of the premier rarities in 19th century numismatics. It is seldom available in any condition, and usually several years pass between appearances at public auction of one of the nine known pieces. NGC ID# 24ZF, PCGS# 6965

## 1871 Seated Dollar Richly Patinated MS65

**4174 1871 MS65 PCGS. CAC.** The 1871 and 1872 are the highest-mintage issues of the Seated dollar series. The 1871 production is slightly lower than the 1872, at 1,073,800 pieces. Most 1871 silver dollars were struck for export but some also went into U.S. circulation, since the median grade at PCGS is XF45, and examples have been graded by PCGS in every circulated grade, including Poor 1.

However, the 1871 is significantly scarcer in Mint State than either the 1859-O or 1860-O, since a few bags of those issues emerged during the early 1960s Treasury releases. The typical Uncirculated 1871 grades MS63. Gems are very rare, because the issue was indifferently handled, and numismatists of the day believed that a proof was a superior substitute for a business strike. Proofs were readily available from either the Mint or East Coast dealers.

Rich peach-gold patina endows the borders of this lustrous Gem Mint State 1871 Seated dollar. The obverse is remarkably devoid of contact, and on its own challenges the MS66 level. The reverse is also smooth, with the grade limited solely by minor marks above the banner. The strike is good, though slightly incomplete in the usual places, such as the eagle's left (facing) ankle and the crest of the left wing. The date is normal with close 71. A wispy die crack connects the tops of NITED. The reverse exhibits master die doubling on the left wing feathers, as seen on all Motto dollars.

PCGS records five MS65 and one MS66 of this issue, and the NGC populations are identical for those grades. CAC lists three MS65 and one MS66 (11/14). NGC ID# 24ZG, PCGS# 6966

### 1872-CC Seated Dollar, MS61 Low-Mintage Carson City Rarity

**4175 1872-CC MS61 NGC.** In terms of overall rarity, the 1872-CC Seated dollar is slightly more available than the 1871-CC and 1873-CC issues (both of which had slightly lower mintages), but is decidedly scarcer than the 1870-CC. At the Mint State level, however, the population gaps tighten drastically, and all four issues become distinctly rare in their own right. In the case of the 1872-CC, NGC has encapsulated just 14 Mint State coins, with five in MS61 and seven numerically finer (11/14). This example exhibits semiprooflike mirroring in the fields beneath splashes of pale golden-gray toning. The strike is slightly soft on Liberty's head, as is typical, though the design elements appear otherwise well-defined. An important Carson City rarity from a scant mintage of only 3,150 business strikes. NGC ID# 24ZK, PCGS# 6969

## PROOF SEATED DOLLARS

**1846 Seated Dollar, PR65**  
**Boldly Repunched Date**  
**Second-Finest Proof Known**

**4176 1846 PR65 PCGS Secure. CAC.** Identified as the Breen-5436 variety, with a noticeably double-punched date and remnants of the secondary digits below the primary numerals, far below their correct position. Although few proof dollars were issued by the Mint dated 1846, David Bowers reports that perhaps as many as 40 to 60 proofs were struck. Robert Julian suspected some well-heeled customer simply purchased several, or extras were struck for future sales in upcoming years.

The Mint was pointedly quiet about the number of proofs struck for each pre-1858 date. All early proof Seated dollars are undoubtedly rare, and most are restrikes made later than their stated date. Many share a "common reverse" with a defect at the final A of AMERICA above the right edge of the crossbar and on the adjacent right upright. Duncan Lee in a notable *CDN Newsletter* considered all such coins with the shared reverse to be restrikes. He mentions the dramatically recut date and rates the 1846 issue as the ninth scarcest of all Seated dollar proofs.

Somehow, the estimated mintage has not translated to the grading services, with PCGS and NGC combined reporting just 23 grading events. PCGS estimates only 20 to 30 proofs survive for the date. Among those that do exist, MS64 seems to be the highest somewhat-attainable grade, with just two coins certified finer by either service.

This MS65 coin is one of the two rare, finest-known examples and it is apparently the second-finest proof 1846 dollar known. The coin is splendid, with watery-deep mirrors and vivid iridescent patina on both sides. Wide, square rims surround the fully struck surfaces. Shades of orange, blue, lavender, and gold cover the glittering fields and lightly frosted devices. A few light lines are visible with a glass beneath the toning near star 13, but they do not detract in the least from the overall visual impact. NGC ID# 24ZW, PCGS# 6987

## 1852 Seated Dollar Restrike Rare Gem Proof Tied for the Finest Certified

**4177 1852 Restrike PR65 PCGS. CAC.** Collectors discovered early on that as a date, the 1852 Seated dollar was prohibitively difficult to locate. At the time, bullion dealers and speculators gathered up as many early silver dollars as could be found and melted them down to profit from the increased value of their silver content, caused by the massive influx of gold from California that upset the gold-to-silver value ratio. Not that the 1852 silver dollar was ever plentiful — the Mint struck only 1,100 business strikes and (officially) no proofs.

By 1858, collectors were pestering the Philadelphia Mint for examples of 1851 and 1852 dollars, and this aided in bringing about the restrikes of those dates. As became a common practice during the 1860s, a few proofs were coined to satisfy the demand, though the restrikes were struck from different dies than the originals and they usually exhibit sharper design definition.

Bowers estimates 45 to 90 restrikes were coined of the proof 1852 Seated dollar and suggests that as few as 29 to 46 survive in all grades, though significantly fewer have thus far been certified or otherwise confirmed to exist. Not all collectors, however, differentiate between the restrikes and originals (of which Bowers estimates 15 to 30 pieces were coined). Akers furthermore suggests that all known proof 1852 dollars are restrikes. Bowers writes of this topic:

“With the exception of Walter H. Breen’s studies, virtually no one has examined the situation in detail ... . More than for any other date in the Liberty Seated series dated in the 1850s, research remains to be done on the 1852.”

Regardless of their year(s) of origin, proof silver dollars dated 1852 are rare in all grades, and this piece stands as one of the finest known. Deep lilac and champagne-gold hues illuminate moderately mirrored fields on each side of this beautifully preserved Gem proof. The design elements are boldly impressed, a characteristic of the restrike issue, and the surfaces fail to reveal any noticeable flaws. Rarely are early proof Seated dollars found in such condition, and only when the most advanced collections are offered do such examples become available, typically settling into strong hands for another prolonged hiatus from the numismatic scene.

This is a foremost and important opportunity for the specialist to acquire one of the most storied key dates in the series. PCGS has certified just 15 proofs in all grades, with three in PR65 and none finer. NGC has seen 13 restrike examples, including two PR65 coins and none finer (11/14).

*ANA Signature (Heritage, 7/2005), lot 10268; Anthony Terranova (11/2007).* NGC ID# 2525, PCGS# 6995

## 1857 Seated Dollar, PR65 Deeply Toned and Mirrored

**4178 1857 PR65 NGC.** An unquestioned proof, from the first proof die pair described by Q. David Bowers in his *Silver Dollars & Trade Dollars of the United States*. Bowers estimates as many as 50 to 100 proof silver dollars were struck in 1857, most of which survive in some form today, if the certified population reports are fairly accurate. NGC and PCGS combined have encapsulated 73 examples (11/14), including an unknown number of resubmissions, which suggests that there are probably as many as 50 coins still in existence, or slightly more. Whatever the exact survival rate, the 1857 proof is widely sought-after not only for its rarity, but also for date representation. Only 94,000 business strikes were produced, most of which were exported to the Orient for trade as in previous years, and high-grade survivors are scarce.

This Gem proof is razor-sharp throughout the stars and the central motifs, with deep, glassy fields and satiny devices. Deep aquamarine and violet-gray toning encompasses the peripheries and margins, lighting just slightly to orange-gold hues in the centers. The colors preclude a Cameo designation, but are in themselves eye-catching and original. An immensely appealing early proof. Census: 3 in 65, 13 finer (11/14). NGC ID# 252B, PCGS# 7000

## 1862 Seated Dollar, Marvelous PR67 Fully Struck and Delightfully Toned

**4179 1862 PR67 NGC.** Incredible original patina encompasses brilliant, deeply mirrored silver-white areas on each side, contrasted against arcs of russet-copper and cobalt-blue on the obverse. The reverse shows a similar effect but adds pale powder-gray into the mix. As expected from the grade, the surfaces, even under a loupe, divulge no mentionable marks or hairlines, but rather only confirm the tremendous quality — essentially a full proof strike throughout, followed by 153 years of excellent preservation. The 1862 Seated dollars were produced in small numbers in both business-strike and proof format, 11,540 of the former and 550 of the latter. This piece and one PR67 Cameo at NGC are tied for finest certified. The finest at PCGS is a single PR66+ (12/14). NGC ID# 252G, PCGS# 7005

### 1864 Seated Dollar, PR65 Cameo Rarely Seen This Nice

**4180** 1864 PR65 Cameo PCGS. CAC. Even though 30,700 business strike dollars were officially struck in 1864, there are only a tiny fraction of that number available today for collectors because of war-time hoarding and exporting. The difficulty in locating an 1864 is further compounded by the limited mintage of proofs, only 470 pieces were struck. Thus, the 1864 in either format is an absolute rarity. This is one of the very few Gem proofs available with cameo contrast. Both services combined have only certified seven Gem Cameos, and NGC is the only service to have graded two numerically finer (11/14). This spectacular dollar has lovely, deeply mirrored fields with nicely frosted, contrasting devices. Exceptional overall quality.

*Ex: Long Beach Signature (Heritage, 9/2010), lot 5079. PCGS# 87007*

## TRADE DOLLAR

### 1877 Trade Dollar, Toned MS65 Conditionally Rare Type Coin

**4181** 1877 MS65 PCGS. Type Two Obverse and Reverse. The status of this date as a common date is well-known, but like many issues in the Trade dollar series, the 1877 becomes conditionally rare at the Gem grade level. This example is boldly struck and remarkably well-preserved. Original, satiny luster underlies varying shades of toning on both sides, with the margins exhibiting deep russet and olive hues and the central regions showing lighter golden and mint-green colors. A few more vivid tinges of coppery-red and forest green are intermingled in between. For the collector seeking a high-end, fully original type representative of the Trade dollar design, few coins would be better suited than this piece. Population: 11 in 65, 2 finer (11/14). NGC ID# 253C, PCGS# 7044

## PROOF TRADE DOLLARS

**1878 Trade Dollar, PR66 Cameo  
Spectacularly Contrasted**

**4182 1878 PR66 Cameo PCGS. CAC.** On October 15, 1877 Treasury Secretary John Sherman instructed the Philadelphia Mint and the New York Assay Office “to discontinue until further order the receipt of deposits” for Trade dollars, and four days later sent the same notice to the San Francisco and Carson City mints. This was his first attempt to discontinue the series, and although he rescinded these instructions two weeks later, a new order in February 1878 permanently ended business strike production.

While the San Francisco and Carson City mints had struck and released 1878-dated Trade dollars before the second order was received, the Philadelphia Mint had not, and therefore only proofs were struck there in 1878. A mere 900 proofs were minted, which makes the 1878 one of the more challenging proof-only issues. Only a select few have survived at the PR66 grade level, and even fewer exhibit a Cameo finish. PCGS reports just five specimens in PR66 Cameo with only three pieces finer (11/14). This spectacular high-grade representative has deeply reflective fields and sharply cameoed devices. The contrast is apparent even through the golden toning that deepens on each side toward the rims. The trace of a fingerprint appears at the upper-left obverse.

*Ex: Chicago Signature (Heritage, 8/2011), lot 7290. PCGS# 87058*

**1879 Trade Dollar, PR67 Cameo  
Largely Untoned and Fully Struck**

**4183 1879 PR67 Cameo NGC.** Seldom does an 1879 Trade dollar come along that has the awe-inspiring cameo contrast that is evident on both sides of the present specimen. Both the devices and fields are devoid of distracting blemishes. No mentionable toning appears, save for a bare hint of golden color near the borders on each side. Every feature rises sharply above the glassy fields with full strike definition and bountiful mint frost. For future pedigree purposes, a couple of tiny lintmarks were struck into the reverse field: one above the first L of DOLLAR, the other above the olive leaf between the right wing and leg. A special coin that will be the showpiece of any advanced collection. Census: 21 in 67 Cameo (4 in 67 ★ Cameo), 7 finer (9/14).

*Ex: Dallas Signature (Heritage, 7/2006), lot 2694; Long Beach Signature (Heritage, 2/2008), lot 896; Summer FUN (Heritage, 6/2008), lot 1275.*

*From The Empire Collection. PCGS# 87059*

## MORGAN DOLLARS

### 1879-CC Dollar MS64 Deep Mirror Prooflike Important and Elusive Date 'Perfect' CC Mintmark

**4184** 1879-CC MS64 Deep Mirror Prooflike PCGS. Normal Mintmark. Among the pre-1886 Carson City Morgan dollar dates, the 1879-CC was the least-represented in the Treasury holdings and so is the most elusive in Mint State condition. This example is not only a near-Gem, it also has Deep Mirror Prooflike reflectivity through the fields. Both sides are faintly toned gold-gray with ample frost across the well-defined devices. A shallow abrasion to the left of Liberty's forehead contributes to the grade, but there are few other flaws of any seriousness. Housed in a green label holder. Population: 19 in 64 Deep Mirror Prooflike, 2 finer (11/14). NGC ID# 253T, PCGS# 97087

### 1879-CC Morgan, MS64+ Prooflike VAM-3, 'Capped Die'

**4185** 1879-CC "Capped Die," VAM-3, MS64+ Prooflike PCGS. A Top 100 Variety. The early die state variant, with the G in GOD just starting to fill. This *Guide Book* variety is believed to have occurred when a large CC mintmark was stamped over a smaller CC, and the die chips in the field around the mintmark are conceivably the remnants of an engraver's attempt to efface the underlying mintmark. In the absolute sense, this variety is not prohibitively scarce, but Prooflike representatives are, and are genuinely rare at the MS64 grade level. This Plus-designated piece is deeply frosted on the devices, with noticeable field-motif contrast. The extreme centers show slight striking deficiency, though the coin is otherwise sharp. A tint of light golden color accents the mirrored recesses. This piece is the sole finest certified Prooflike example at PCGS; population: 30 in 64 Prooflike (1 in 64+), 0 finer (11/14). PCGS# 40776 Base PCGS# 7089

## 1880-CC GSA Silver Dollar, MS67 Among the Finest Certified Beautiful Rainbow Toning

**4186 1880-CC MS67 PCGS. CAC.** The GSA sales of the early 1970s yielded more than 131,000 1880-CC Morgan dollars, more than 22 percent of the original 485,000-coin mintage. As a result, this issue is readily available in grades through MS66, but it remains significantly scarcer at this level than most later Carson City issues from this decade (not counting, of course, the key-date 1889-CC). In MS67, the certified population of the 1880-CC plummets to just 30 coins at PCGS (1 in MS67+) and 24 pieces at NGC (1 in 67 ★), with none numerically finer (11/14).

This superb condition census coin is a visually spectacular piece. Heavily frosted mint bloom cartwheels uninterrupted around each side, yielding to a faint blush of light golden color on the obverse and showcasing beautiful, diagonal rainbow hues stretching across much of the reverse. A sharp strike completes the overall appeal, making this coin undeniably one of the finest-known non-Prooflike examples of this Carson City issue. NGC ID# 2542, PCGS# 7100

## 1880-O Morgan Dollar, MS65 A Landmark Condition Rarity

**4187 1880-O MS65 PCGS.** With an ample mintage of more than 5.3 million pieces, one might think the 1880-O dollar a common coin. While the issue commands a minimal premium in circulated grades, the reality is far different in Mint State, increasingly so with every grade point. By the Gem level, 1880-O dollars are condition rarities, and with only two MS66 or better pieces in the combined certified population (11/14), there is immense pressure on the few dozen MS65 coins available. This minimally toned Gem is bright and beautiful with a strong cartwheel effect. The detail on the hair over the ear is unusually strong, furthering the eye appeal. NGC ID# 2543, PCGS# 7114

### 1884 Dollar, Sharply Struck MS68 An Important Condition Rarity

**4188 1884 MS68 PCGS.** With a production exceeding 14 million pieces, the 1884 Morgan dollar is readily available in mint condition and is a significant condition rarity in MS68, the grade of the present offering. PCGS and NGC have graded only five coins in this level of preservation and none finer. Ebullient luster emanates from the silvery surfaces that exhibit sharply struck design elements, including the hair above Liberty's ear and the eagle's breast feathers. We mention a couple of faint diagonal marks midway between Liberty's forehead and the E in the motto solely for identification purposes. Otherwise there are no identifying marks. Population: 3 in 68, 0 finer (11/14). NGC ID# 254L, PCGS# 7150

### 1884-S Silver Dollar, MS62+ Nearly Prooflike on Both Sides

**4189 1884-S MS62+ PCGS Secure. CAC.** Ex: Simpson. The 1884-S is one of the most conditionally challenging dates in the series from this period. Mint State examples are decidedly scarce in all grades, and are particularly elusive above the MS62 grade level. Prooflike examples are almost nonexistent, as only four such coins have been certified by PCGS in all grades. This Plus-designated MS62 coin shows delicately dappled orange-gold and deep lavender toning that masks any grade-limiting abrasions. The reverse is fully prooflike with distinct cameo contrast, and the obverse fields are nearly as reflective, just falling short of a Prooflike designation and a significantly higher market value. The hair immediately above Liberty's ear is slightly soft, as usual, though the strike is otherwise sharp. PCGS has encapsulated just 67 numerically finer representatives (11/14). NGC ID# 254P, PCGS# 7156

## 1884-S Dollar, Sharply Struck MS64 An Important Condition Rarity

**4190 1884-S MS64 PCGS. CAC.** The vast majority of the 3.2 million Morgan silver dollars produced at the San Francisco Mint in 1884 either entered the channels of commerce or were shipped overseas and likely melted. Michael Standish, in his 2014 *Morgan Dollar* reference writes that:

“San Francisco shipped nearly 100 million surplus dollars to be converted by the British into Indian rupees. Mint records of dates and quantities sold are unavailable, but the answer to the mystery of ‘Where are the Uncirculated 1884-S Dollars?’ likely leads to Calcutta.”

PCGS/NGC population reports indicate that of the more than 15,000 1884-S dollars seen by the two services approximately 95 percent are in circulated grades, especially Very Fine through high-end About Uncirculated. The relatively few extant Mint State coins are concentrated in the MS60 to MS62 grade range. This date becomes elusive in the Select level of preservation, and near-Gems and finer specimens are rare. Twenty-three submissions are graded MS64 and six are certified higher.

The current neat-Gem offering displays bright silvery surfaces with hints of light gray showing up under magnification. Partially prooflike fields are apparent when the coin is rotated under a light source, more so on the reverse. The design elements are sharply struck and exhibit strong definition in the hair above Liberty's ear; the eagle's breast feathers also show relatively good detail. Close inspection reveals nicely cared for surfaces devoid of significant marks. This piece yields pleasing overall eye appeal aptly recognized by CAC. Population: 11 in 64, 3 finer (12/14). NGC ID# 254P, PCGS# 7156

### 1885-O Dollar, Conditionally Rare MS68

**4191 1885-O MS68 PCGS. CAC.** With a mintage exceeding 9.1 million pieces and huge numbers coming out in the Treasury releases, the 1885-O Morgan dollar is common through Premium Gem, and even MS67s are available without too much difficulty. The date is a significant condition rarity in MS68, however, where the two major services have certified only 11 examples.

Radiantly lustrous surfaces display a splash of deep cobalt-blue, crimson, and gold-orange in the lower-left obverse quadrant. The design elements are well-struck except for the usual softness in the centers, and both sides are immaculately preserved. Population: 1 in 68, 0 finer (11/14). NGC ID# 254T, PCGS# 7162

### 1886-O Morgan Dollar, MS64 Practically Unobtainable Any Finer

**4192 1886-O MS64 PCGS. CAC.** Both PCGS and NGC are extremely picky about assigning the MS65 grade to examples of this conditionally rare New Orleans date. Just three coins have broken the Gem barrier at the two services combined (all at PCGS), with three coins in MS65, and one amazing MS67 Deep Mirror Prooflike example (11/14).

In truth, the issue is seldom found well-struck or with good eye appeal. Bowers says, "The luster on the 1886-O ranges from flat, grainy, and lifeless to fairly frosty, the last being in the distinct minority." However, the present coin is deeply frosty, brilliant-white, with bold cartwheel luster. The strike is strong for the issue, with only slight blending of the detail over Liberty's ear and the eagle uniformly bold. Only a few light grazes on the frosted surfaces define the grade. CAC-Approved for quality.

*Ex: FUN Signature (Heritage, 1/2012), lot 7064. NGC ID# 254W, PCGS# 7168*

**1891 Morgan Dollar  
MS65 Deep Mirror Prooflike  
Tied for Finest Certified**

**4193 1891 MS65 Deep Mirror Prooflike PCGS. CAC.** A large mintage of nearly 8.7 million Morgan dollars was accomplished at the Philadelphia Mint in 1891, but the issue was not well-produced, and most examples seen are softly struck, with insipid mint luster. This spectacular Gem is a dramatic exception to the rule, as the design elements are well-detailed and the fields show remarkable prooflike reflectivity throughout. The devices display an unusual amount of mint frost, contrasting boldly with the deeply mirrored fields and creating a pleasing cameo effect. The well-preserved surfaces show only minor signs of contact and a few hints of pale gold toning enhance the outstanding eye appeal. This coin is tied with one other specimen for finest certified honors at PCGS, and NGC has not seen a comparable example. Registry Set enthusiasts should bid accordingly. Population: 2 in 65 Deep Mirror Prooflike, 0 finer (11/14). NGC ID# 255G, PCGS# 97205

**1893-CC Dollar, MS64  
Beautifully Toned Obverse  
Difficult to Locate Numerically Finer**

**4194 1893-CC MS64 PCGS Secure.** Beautiful toning resides on the obverse of this near-Gem dollar. A melange of soft ice-blue and champagne-gold cedes to occasional splashes of deep crimson, orange-gold, and sky-blue, while light silver-gray occurs on the reverse. Partially prooflike fields highlight the devices when the coin is tilted under a light source, more so on the reverse. The design elements are well-struck save for the usual softness in the centers. Some obverse marks determine the grade, the most prominent being a series of "edge reeds" below Liberty's eye. These notwithstanding, higher-grade examples will be difficult to locate. Indeed, the two services have seen fewer than 30 specimens numerically finer (11/14). NGC ID# 255S, PCGS# 7222

## 1893-O Morgan Dollar MS64 Deep Mirror Prooflike Notable Series Rarity With Deep Contrast Sole Example in This Grade

**4195 1893-O MS64 Deep Mirror Prooflike NGC.** This is a coin in a grade — or, more accurately, a contrast level — that is virtually unheard of. The 1893-O Morgan dollar issue is notorious for being a low-contrast issue of generally mediocre quality. The *Bowers Guide Book* to the series, second edition, turns the memorable phrase “Choice MS-64 coins are rare and MS-65 coins are of sufficient fame that an auction house might showcase one in a news release.” We will leave the news releases to our excellent PR department, but this is an *extremely important coin*, and these are coins that seldom appear at auction, since the demand for private trades is intense.

At PCGS, the submissions certified in Deep Mirror Prooflike go from four in MS63 DMPL to two in MS65 DMPL (there are none at PCGS in MS64 DMPL). The last MS63 DMPL PCGS example we offered was in our FUN Signature (Heritage, 1/2006), lot 3330, a piece that brought \$21,850. Our last MS65 DMPL example, also PCGS-certified, was in our Dallas Signature offering of the Jack Lee I/Jack Lee II coin (Heritage, 11/2005), lot 2313, which realized \$258,750.

Needless to say, this is a coin for which we have high hopes. NGC shows only a single DMPL example in each numeric grade from MS61 through MS65, making this *the single MS64 DMPL example certified at either of the two leading services*. This MS64 DMPL NGC piece is the first offered in this grade at public auction since 1999, according to our records, when Bowers and Merena sold a different coin (apparently residing in a different holder today) that was then in the same grade for \$27,600.

Examples of this issue with Prooflike surfaces in this grade are rare, and examples with Deep Prooflike surfaces are extremely rare. This piece is silver-white and deeply reflective throughout. A small tick near star 4 is the most obvious pedigree identifier. Census: 1 in 64 Deep Mirror Prooflike, 1 finer (11/14). NGC ID# 255T, PCGS# 97225

## 1893-S Morgan Dollar, AU55 Premier Key Date, Scarce in This Grade

**4196 1893-S AU55 NGC.** The 1893-S is the premier key date in the Morgan dollar series. Only 100,000 examples were struck (the lowest mintage of the series), and in comparison to the demand for them, high-grade survivors are scarce. The vast majority of extant pieces grade only in the VF and lower grades, with a limited number known in the XF range. There is a distinct shortage of available AU representatives for collectors, and Mint State pieces are decidedly rare. This Choice AU example shows smooth, golden-gray surfaces and strong detail. Subtle remnants of luster are seen in the recesses, easily observed when rotated beneath a light. For the Morgan dollar collector, acquiring an 1893-S in AU or finer condition is a landmark event. Census: 23 in 55, 41 finer (11/14).

*From The Rawlin "Mac" McInelly Collection. NGC ID# 255U, PCGS# 7226*

## 1894 Dollar, Lustrous MS65 A Significant Key Date

**4197 1894 MS65 PCGS.** At 110,000 pieces, the 1894 has the second smallest circulation-strike production in the Morgan dollar series, trailing the 1893-S. Mint State coins are concentrated in the lower levels, and the issue emerges as a significant rarity in MS65 where PCGS and NGC have certified 26 specimens. The present Gem offering displays strong luster and well-struck design features. A few minor obverse grazes are within the parameters of the designated grade. This piece will draw serious attention from advanced Morgan dollar collectors. Population: 21 in 65, 5 finer (11/14). NGC ID# 255V, PCGS# 7228

## 1895-O Morgan Dollar, MS64 Prime Conditional Rarity

**4198 1895-O MS64 NGC.** This is one of the true conditional rarities among Morgan dollars, a coin destined to be the centerpiece of a fine collection.

Each of the three Morgan dollar issues of 1895, from Philadelphia, New Orleans, and San Francisco, is challenging, and each in its own way. The celebrated 1895 Philadelphia issue to this day remains a proof-only issue, as far as the surviving population is known, despite the perplexing record of 12,000 business strikes.

The 1895 San Francisco Morgan dollar issue is seen in fairly plentiful quantities in Mint State, but the issue is notorious for bag-marks and general abuse, so that most certified survivors are in the lower realms of Mint State.

Finally, the 1895-O Morgan dollar is commonplace in XF and AU grades, but examples in the higher Mint State grades rival the price records of some of the most illustrious issues in the entire series. The original mintage of the 1895-O was 450,000 coins only, but it appears that most either circulated (Bowers estimates 100,000 pieces for that) or were melted within a few decades of their mintage, likely in the great Pittman Act meltings of 1918-1921. It seems that none of the vast Treasury holdings of silver dollars dispersed from 1962 through 1964 were 1895-O Morgans.

The present near-Gem NGC-certified 1895-O Morgan is among an even dozen submissions at that service, and there are two finer — one each in MS65 and MS66. The surfaces are largely untuned silver-white and uniformly frosty throughout both sides. Just the slightest golden tinge hugs the left-side obverse margin. Contact marks are few; the only singular marks are one at the bust truncation on the obverse and a few on the reverse, at the eagle's breast and the right field and wreath nearby. The obverse is otherwise free of major marks, and both sides show generous eye appeal and excellent preservation overall. Light evidence of die clashing appears on each side. Census: 12 in 64, 3 finer (10/14). NGC ID# 255Y, PCGS# 7236

## 1899-O Micro O Dollar, VAM-5, MS65+ Sole Finest Certified at PCGS

**4199** 1899-O Micro O, Wing Lines, VAM-5, MS65+ PCGS Secure. A Top 100 Variety. VAM-5 is arguably the scarcest and most significant of the five Micro O varieties, as it also exhibits numerous, heavy, parallel die lines in the eagle's right (facing) wing. Most certified examples of this variety are in circulated grades, and scarcely seen even at that level. In Mint State, PCGS has attributed only seven pieces, with the present coin being one of only two certified at the Gem level and the only one of those awarded a Plus designation; none have been certified numerically finer at that service, though NGC reports a single piece in MS66 (11/14).

Both sides of this coin are awash in vibrant cartwheel luster, showing just a tinge of light golden color. The strike is sharp, and only a few minute ticks on Liberty's cheek limit the grade. An incredibly important offering for the advanced VAM specialist. PCGS# 133951 Base PCGS# 87260

## 1901 Dollar, Lustrous MS63

**4200** 1901 MS63 PCGS. CAC. The 1901 is one of the more conditionally elusive issues in the Morgan dollar series. Select examples can be located with diligent searching but near-Gems are highly elusive and finer specimens are extremely rare. Both sides of this MS63 coin display strong luster emanating from silvery surfaces. The design elements are generally well-struck, including partial definition in the hair above Liberty's ear. A few obverse scuffs limit the grade. Nevertheless, this piece possesses nice overall eye appeal and is well deserving of the CAC label. NGC ID# 256j, PCGS# 7272

**1901 Morgan Dollar, AU58  
VAM-3, The 'Shifted Eagle' Variety**

**4201** 1901 Doubled Die Reverse, VAM-3, AU58 PCGS. CAC. A Top 100 Variety. The popular "Shifted Eagle" variety, exhibiting bold die doubling on most reverse elements. The appeal of this *Guide Book* variety is heightened by the fact that it is seen here on a nearly Uncirculated coin. The 1901 Morgan dollar is well-known as one of the most conditionally challenging dates in the series overall, and thus virtually all known examples of this elusive VAM are in the mid to lower circulated grades; high-end AU pieces are rare, and Mint State coins are prohibitively so. This representative retains substantial mint luster amid just a blush of light golden color. Slight friction over the extreme centers precludes a Mint State grade, but leaves this coin with ample eye appeal. Population: 13 in 58, 3 finer (11/14). PCGS# 133965 Base PCGS# 7302

**1901 Morgan Dollar, MS62  
VAM-3, The 'Shifted Eagle' Variety  
One of the Finest Certified at PCGS**

**4202** 1901 Doubled Die Reverse, VAM-3, MS62 PCGS. A Top 100 Variety. The reverse is boldly die-doubled, with the entire eagle "shifted" upward. This *Guide Book* variety has proven quite elusive in the finer circulated grades, and is considered a must-have for the VAM specialist. The "Shifted Eagle" variety is extremely rare in Mint State, largely due to the fact that the 1901 Morgan in general is one of the most conditionally scarce dates in the series at this level. This representative exhibits dusky silver-gray color on the obverse, while the reverse displays deeper golden-gray hues with a few areas of luminous ocean-blue. Significant luster shines through the patina, while the surfaces exhibit grade-consistent abrasions. PCGS has attributed only four examples of this variety in Mint State, with two in this grade (1 in 62+), and none finer (11/14). PCGS# 133965 Base PCGS# 7302

## PROOF MORGAN DOLLARS

**1878 Morgan Dollar, PR67 Cameo  
Popular Early 8 Tailfeathers Design  
Single-Finest Certified at PCGS**

**4203 1878 8TF PR67 Cameo PCGS.** The reverse die used to strike the first Morgan dollars in 1878 showed an eagle with eight tailfeathers, a feature that was modified later in the year to the more naturalistic 7 tailfeathers design. Silver proof sets containing an example of the Trade dollar were issued early in the year, before the Morgan dollar was authorized. It is believed that the Morgan dollar proofs of the 8 tailfeathers design were offered individually later, at the cost of \$1.25 per coin, plus postage. Mint records indicate a total of 300 proof Morgan dollars were delivered in three separate deliveries between March 12 and March 18, 1878. These coins almost certainly exhibited the 8 tailfeathers design. A further delivery of 200 proof examples was delivered on March 26, which may, or may not, have been 8 tailfeathers coins. Some experts believe only 300 examples of the 8 tailfeathers proofs were struck, based on the frequency of appearance of this issue today, but the 2015 *Guide Book* opts for the more generous 500 piece mintage figure. In any case, the issue is avidly sought by collectors seeking an example of this popular short-lived design type and the small supply of proofs is not adequate to satisfy the demand.

The present coin is a stunning Superb Gem, with razor-sharp definition on all design elements and deeply mirrored fields that contrast boldly with the frosty devices, producing a dramatic cameo effect. The impeccably preserved surfaces are essentially brilliant, but a few subtle hints of pale gold toning are evident at certain angles. Eye appeal is terrific. This coin is the single-finest certified at PCGS and is destined for the finest collection or Registry Set. Population: 1 in 67 Cameo, 0 finer (12/14). PCGS# 87311

### 1883 Morgan Dollar, PR67 Needle-Sharp and Beautifully Toned

**4204 1883 PR67 PCGS. CAC.** The 1883 is one of the better-made proof issues in the Morgan dollar series, with sharply struck design elements and pleasing field-motif contrast being the norm. The present coin is near the top of the population reports, and is a spectacular piece in regards to strike, showing crisp definition on the hair above Liberty's ear and remarkable sharpness on the eagle's talons. The fields provide a deeply mirrored backdrop for the softly frosted devices, though deep multicolor toning on each side precludes a Cameo designation from PCGS. The colors include concentric shades of mint-gold, royal-blue, violet, and sun-gold, with the reverse also showing a crescent of pale cherry-gold along the lower-right border. For type purposes, this Superb Gem proof is not easily trumped. Population: 5 in 67, 1 finer (11/14). NGC ID# 27Z7, PCGS# 7318

### 1892 Morgan Dollar, PR67 Only One Finer Coin at PCGS

**4205 1892 PR67 PCGS.** The proof mintage for the 1892 Morgan dollar was 1,245 pieces. David Bowers (2012) calls this "a high figure explained by the introduction of the new Barber Proof dime, quarter, and half dollar included as part of the silver Proof set."

As indicated by the population data, several hundred of these proofs have survived through the Gem grade level, though they are elusive any finer.

This PR67 specimen displays small areas of brilliance in the centers, flanked by golden-tan, faded crimson, and cobalt-blue toning. Mildly frosted design elements are sharply impressed and highlighted by strongly reflective fields. Both sides are wonderfully preserved. Population: 14 in 67, 1 finer (11/14).

*Ex: ANA Charlotte National Money Show (Heritage, 3/2007), lot 1403.*

*From The Free Tilly Collection. NGC ID# 27ZM, PCGS# 7327*

## 1892 Morgan Dollar Splendid PR67 Ultra Cameo

**4206 1892 PR67 Ultra Cameo NGC.** This completely untuned and optimally contrasted 1892 proof Morgan dollar has that radiant, mirrored, quicksilver appearance that collectors of deep-contrast proofs will absolutely love. There is not the slightest hint of color anywhere on either side, but the raised devices show lavish mint frost that gives them a grayish-white appearance considerably darker than the silver-white, intensely mirrored fields. The largish mintage of 1,245 proofs can be attributed to the (short-lived) popularity of the Barber-designed dime, quarter, and half dollar introduced in 1892. This piece is far better-preserved, and better-produced for that matter, than most survivors. Census: 1 in 67 Ultra Cameo, 1 finer (12/14). PCGS# 97327

## 1895 Morgan Dollar, PR63 Cameo No Business Strikes Known

**4207 1895 PR63 Cameo PCGS.** The 1895 silver dollar, often referred to as the “King of the Morgan Dollars,” is a numismatic enigma. Mint reports for 1895 indicate that 12,880 silver dollars were struck - 12,000 for circulation and 880 proofs. Yet, no circulation strikes have been conclusively identified. The question continues to be asked, however: Were business strike dollars minted in 1895? And if so, what happened to them?

Referring to the 12,000 circulation strikes, David Bowers, in his 1993 *Silver Dollars* reference, writes: “It is presumed that the entire mintage, if it ever existed ... went to the melting pot under the provisions of the Pittman Act of 1918.” In his 2007 *Guide Book*, however, Bowers states: “In 1895, at the Philadelphia Mint, there was no coinage of silver dollars for circulation.” And Michael Standish, in his 2014 *Morgan Dollar* book, contends that the 1895 was “an issue of which circulation strikes were most likely never made.”

In a September 2006 *Coin Values* article entitled “Philly 1895 Morgan Dollars: Where are They? Were they Really Struck?” Roger Burdette provides a more in-depth assessment of the perplexing 1895 dollar question. Among the mint records uncovered by Burdette that appear to show dollars were struck for circulation in that year was a report for 1895, by month, of the *Quantity and Cost of Silver used in the Coinage of Silver Dollars*. This document lists 290 dollars coined in March, 180 in May, 12,000 in June, 90 in September, and 320 in December, adding up to 12,880 pieces.

Additionally, the 1896 Assay Commission Report (for 1895 coinage) lists six circulation-strike and four proof silver dollars. Two business strikes were melted for assay purposes. Burdette notes that the 1896 Assay Commission file is significant because “the commission’s purpose was to verify that the previous year’s coinage was within tolerance for weight and fineness. Thus commission members would have been acting outside the law if they examined any coins dated other than 1895.” Burdette believes that the preponderance of evidence suggests that silver dollars dated 1895 were in fact struck for circulation.

This still begs the question of what happened to these 12,000 circulation-strike 1895 dollars. Burdette suggests that the “most plausible explanation is that they were flattened then melted as part of 270,232,722 silver dollars ... converted to bullion,” most of which was “sold to Great Britain under provisions of the Pittman Silver Purchase Act of 1918.” Regarding the eight assay coins not melted, Burdette theorizes that some or all of them might have been purchased as souvenirs, as was apparently typical.

This is a strongly cameoed example of this key Morgan dollar. Each side shows light hairlines and slight milkiness in the fields. A tinge of light pink covers the otherwise brilliant surfaces. PCGS# 87330

## 1895 Dollar, All-White PR65 Cameo Series Key, Only 880 Pieces Struck

**4208 1895 PR65 Cameo NGC.** It happened 115 years ago: The June 1898 issue of *The Numismatist* included an article by George W. Rice, titled “Die Varieties of Current United States Standard Dollars.” Q. David Bowers notes the article in his third edition of the Morgan dollar *Guide Book*, calling Rice’s contribution “the first in-depth article on Morgan dollar die varieties.”

Bowers mentions that Rice, in addition to describing some basic differences among various Morgan dollar obverses and reverses, made another lasting contribution: “Significantly, Rice in 1898 stated forthrightly, with no ‘perhaps’ or ‘maybe,’ that in 1895 only Proofs had been struck.”

Despite all the research since — the theories and countertheories, the conjectures concerning the mention of the 12,000 Morgan dollar business strikes for 1895 — the fact that an apparent expert on the series stated conclusively only three years later, without waffling, caveats, or qualifiers, that no 1895 proofs were struck should carry considerable weight.

Even though Pete Smith’s *American Numismatic Biographies* carries no information on Rice, Bowers gives us more in a footnote at the back of the book:

“George W. Rice today is an unsung hero of numismatic research. He was among the first collectors to take an interest in mintmarked silver coins, joining such figures as W.M. Friesner, John M. Clapp, Edward Goldschmidt, and, of course Augustus G. Heaton. In *The Numismatist*, February 1895, his article ‘Restrikes of U.S. Half Cents’ was published—then an arcane topic that was confusing to even the most experienced dealers. An article in the October 1897 issue of the same magazine, ‘The Unexplained Rarity of Certain U.S. Coins,’ stated that a certain cent reverse die was used in its perfect state with an obverse dated 1803, but in its cracked or later state with an obverse dated 1802. ‘It will thus be seen that it would be possible to have a large coinage recorded without a piece being struck bearing a corresponding date; and the recorded coinage of cents for 1799 may have been largely from dies of 1798 or 1800, and that of 1804 may have been dated 1803 or 1805, or perhaps both.’ Such comments were unusual for the era. His other contributions were numerous and valuable. In the meantime, he enjoyed hoarding 1856 Flying Eagle cents and amassed hundreds of them. In 1918 he died at the age of 66.”

Given Bowers’ biographical snapshot of him, Rice comes across as a studied and thoughtful numismatist. Concerning the 1895 “business strike” Morgan dollars, Occam’s Razor seems to apply. The simplest explanation is the best. No examples have ever been seen, because *none were made*.

This is a magnificent, deeply mirrored proof striking that displays noticeably frosted devices against the “blackness” of the reflective fields. The surfaces are brilliant throughout, and there are no obvious or detracting contact marks on either side. Census: 20 in 65, 34 finer (11/14).

*From The Rawlin “Mac” McNelly Collection. PCGS# 87330*

### 1898 Morgan Dollar, Stunning PR68 Cameo Ex: Clapp-Eliasberg

**4209 1898 PR68 Cameo NGC.** Ex: Eliasberg. The silver dollars — and the silver coins in general — of 1896 and 1898 are among the best-produced and highest-quality outputs of the Philadelphia Mint in the late 19th century. The silver coins dating from those years are marvels of ultimate quality and unsurpassed collectibility. And that applies to none of those silver coins more so than the present PR68 Cameo 1898 silver dollar, formerly in the also-unsurpassed Eliasberg Collection. This piece was graded PR67 in that auction as lot 2307, described in part as, “Silver obverse virtually as struck. The reverse is champagne toning changing to delicate magenta. A visual treat.” To that we would note the complete absence of mentionable distractions, and call attention to the highly reflective fields contrasting blatantly against frosted devices, an effect more blatant on the reverse but abundant throughout both sides. In addition to its remarkable pedigree, this is the sole finest Cameo example of this issue we have ever offered, by a single grade point. This stunning piece is also among only five submissions in this grade at both leading services combined — four at NGC, one at PCGS, with none finer (10/14).

*Ex: Purchased directly from the Philadelphia Mint in November 1898; John H. Clapp; Clapp estate (1942) to Louis E. Eliasberg, Sr.; Eliasberg Collection (Bowers and Merena, 4/1997), lot 2307.*

*From The Free Tilly Collection. PCGS# 87333*

## PEACE DOLLAR

### 1928-S Peace Dollar, MS65 Only One Numerically Finer at PCGS

**4210 1928-S MS65 PCGS Secure.** The 1928-S is one of the most conditionally challenging dates in the entire Peace dollar series, second in Gem condition only by the 1925-S. Even the key 1928 and the also elusive 1927-S do not challenge this issue in high-grade rarity. This representative displays frosty luster beneath a blanket of light golden toning. The central eagle feathers are lightly struck, but the design elements are otherwise well brought up. No obtrusive abrasions are present, as only a few light, scattered grazes on the obverse limit the grade. Overall, this is an appealing, high-end example of this somewhat overshadowed condition rarity. Population: 56 in 65 (1 in 65+), 1 finer (11/14). NGC ID# 257W, PCGS# 7374

## PROOF PEACE DOLLAR

### 1922 High Relief Peace Dollar, Matte PR61 'Pawn Stars' Label

**4211** 1922 High Relief Matte PR61 NGC. Roger Burdette estimates that only five to 10 "sandblast" proofs were made of the 1922 High Relief Peace dollars. He identifies two clear diagnostics visible on this piece: "All obverses have the point of the bust sharply [overlying] the 9 in the date. The reverses all have a small defect in the area between the eagle's talon and the leg and the olive branch; the rays are rounded." This piece shows a few unobtrusive contact marks, including reeding marks on Liberty's brow. The matte or sandblast texture is obvious, as is the beautiful High Relief design, of which Burdette writes, "To many, this version is the most pleasing and attractive of all Peace dollar variations."

This rare proof pattern is certified in a special-label NGC holder reading Gold and Silver Pawn and On Air Collection with a photo of the iconic store sign out front, the location where the popular TV show "Pawn Stars" is filmed. NGC ID# 2828, PCGS# 7383

## FOUR-PIECE 1907 GOLD PROOF SET

### 1907 Liberty Quarter Eagle, PR65+ Boldly Contrasted Cameo Specimen

**4212** 1907 Quarter Eagle PR65+ Cameo PCGS. CAC. Liberty quarter eagles were struck for the last time in 1907, an important consideration for type purposes. Only 154 proof quarter eagles were struck that year, but the survival rate is fairly high, with approximately 100 examples known to collectors today. Like other proofs of this era, the issue is rare with cameo surfaces. This coin is part of a four-piece complete gold proof set, offered here in four consecutive individual lots.

The present coin is a delightful high-end Gem, with pinpoint definition on all design elements. The deeply mirrored fields create intense cameo contrast with the unusually frosty devices and the well-preserved yellow-gold surfaces show a few accents of green. Eye appeal is exceptional. Population: 11 in 65 (1 in 65+), 9 finer (11/14). NGC ID# 288X, PCGS# 87933

*From The Millford Collection, Part II.*

### 1907 Liberty Half Eagle, PR65 Rare Cameo Example

**4213** 1907 Half Eagle PR65 Cameo PCGS. CAC. Business-strike Liberty half eagles were struck in 1908, but 1907 was the final year that proofs of the design were produced. A small mintage of 92 proof Liberty fives was accomplished that year, and the survival rate for the issue was surprisingly low. Probably no more than 30-35 examples survive in all grades today, despite the higher figures in census data, which have been inflated by resubmissions and crossovers. This coin is part of a complete gold proof set of 1907, offered in this catalog as four consecutive individual lots.

This impressive Gem displays deeply mirrored fields that contrast boldly with the sharply detailed frosty design elements. The pristine yellow-gold surfaces show a few highlights of green, contributing to the tremendous visual appeal. Population: 3 in 65, 3 finer (11/14). NGC ID# 28DD, PCGS# 88502

*From The Millford Collection, Part II.*

### 1907 Liberty Eagle, PR65 Cameo Only 74 Pieces Struck

**4214** 1907 Liberty Eagle PR65 Cameo PCGS. CAC. Only 74 proof Liberty eagles were struck in 1907, and very few show the bold gold-on-black cameo effect this coin displays when tilted in the light. This coin is part of a complete gold proof set of 1907, offered here in four consecutive individual lots. The design of the ten dollar gold piece was changed in 1907, with Liberty eagles produced early in the year and Indian tens struck later. Although a few matte proof 1907 Indian eagles are known today, only coins with the Liberty design were issued with the proof sets.

This delightful Gem exhibits razor-sharp definition on the unusually frosty design elements, and the bright yellow-gold surfaces are free of mentionable distractions. The fields are deeply reflective and visual appeal is terrific. Population: 4 in 65 (1 in 65+), 3 finer (11/14). NGC ID# 28GE, PCGS# 88847

*From The Millford Collection, Part II.*

## 1907 Liberty Double Eagle, PR64+ Cameo Final Year of Design Only 78 Examples Struck

**4215** 1907 Liberty Double Eagle PR64+ Cameo PCGS. CAC. This impressive Liberty double eagle is part of a complete gold proof set, offered here in four consecutive individual lots. Few collectors could afford complete gold proof sets in the late 19th and early 20th century, when those items were offered yearly by the Philadelphia Mint, so mintages were always small. Only 74 sets were struck in 1907, and very few have remained intact. We assume this set was assembled from individual pieces over the years, but the coins are in similar states of preservation and all have unusual cameo contrast, so it is possible that they were originally issued as a set.

The design of the double eagle was changed in 1907, with the venerable Liberty motif giving way to Saint-Gaudens beautiful striding Liberty design later in the year. Substantial business-strike mintages of both types were produced, but only Liberty double eagles were issued with the proof sets. Only 74 sets were issued, but records indicate an additional four proof double eagles were struck. Fortunately, the double eagle had an unusually high survival rate, and probably at least 40-50 examples are extant in all grades.

It is unusual for proofs of this era to show cameo contrast, because the Mint switched to an all-brilliant finish for proof coins, beginning in 1902. This exceptional high-end Choice specimen displays a thick coat of mint frost on the sharply detailed design elements, creating bold Cameo contrast with the deeply mirrored fields. The gold-on-black cameo flash is quite dramatic when the coin is tilted in the light. The well-preserved yellow-gold surfaces show a few highlights of green, and overall eye appeal is terrific. Population: 8 in 64 (1 in 64+), 4 finer (11/14). NGC ID# 26EV, PCGS# 89123

*From The Millford Collection, Part II.*

## GOLD DOLLAR

### 1855-C Gold Dollar, MS61 Sole Type Two Charlotte Issue

**4216 1855-C MS61 PCGS. Variety 2.** The 1855-C gold dollar is widely popular as the only Type Two issue from the Charlotte Mint. The Type Two gold dollar was intended to be slightly larger in diameter than the Type One, but the correspondingly thinner planchets proved inadequate to fully strike up the new designs. As a result, the design was changed again in 1856 to a motif with a slightly lower relief.

The 1855-C is typically only seen in XF and lower grades, and high-end AU examples are seldom available; Mint State coins are rare and are likely fewer in number than the certified population reports would suggest. This representative displays original olive-gold patina, with hints of deeper orange and apricot hues on each side. The hair curls around Liberty's face show the only noticeable striking weakness, though obverse peripheral legends are slightly weakened by die lapping — likely an attempt to efface clash marks, the remnants of which are still visible in the fields. Some mint-made planchet roughness is noted on portions of each side, an often seen characteristic of this issue which was frequently struck on poor quality planchets. PCGS has certified only four examples as Mint State, with three in this grade and none numerically finer (11/14). NGC ID# 25C5, PCGS# 7533

## PROOF GOLD DOLLARS

### 1882 Gold Dollar, PR67 ★ Ultra Cameo

**4217 1882 PR67 ★ Ultra Cameo NGC. CAC.** Only 5,000 business strikes and a complement of 125 proofs were produced for the 1882 gold dollars, and today relatively few survive in the Superb Gem or finer grades, especially of the proof format. This piece offers the well-earned Star NGC designation for superior eye appeal. The contrast is profoundly deep on yellow-gold surfaces that show only minuscule ticks under a loupe. The startlingly attractive surfaces on this piece are enhanced by its desirable status as one of only two in this grade at CAC and the sole Star example at NGC (11/14). NGC ID# 25ES, PCGS# 97632

## 1884 Gold Dollar, PR67 Cameo

**4218 1884 PR67 Cameo NGC.** The mintage of the 1884 gold dollar proofs was a tad more than 1,000 pieces, but few survive as well-preserved as this Superb Gem Cameo. All pieces seen show the repunched 18 in the date. Consistent yellow-gold color complements the nicely frosted devices and mirrored fields. Magnification reveals no mentionable abrasions, although the reverse shows a couple of tiny reddish areas in the fields. PCGS reports only five in PR67 Cameo with none finer, while NGC shows 13 in 67 Cameo and three finer (12/14). A prime acquisition for type-set purposes.

*Ex: Lang Collection / FUN Signature (Heritage, 1/2008), lot 8508.*  
NGC ID# 25EU, PCGS# 87634

## 1886 Gold Dollar, PR67 Cameo None Certified Finer

**4219 1886 PR67 Cameo NGC.** The Superb Gem designation is conservatively given by both services, with just a half dozen or so 1886 proof coins receiving the grade and no examples certified finer by both services combined. This glittering dollar would be difficult to exceed in terms of technical merit or eye appeal. Mint frost covers the devices in bold contrast to the mirrored fields. A full strike complements the unmarked portrait. Only the 1885 proof gold dollars appear at auction more frequently than this date, making it a logical selection for type and for Registry Set caliber collections. Census: 4 in 67 Cameo, 0 finer (11/14). NGC ID# 25EW, PCGS# 87636

## EARLY QUARTER EAGLES

### 1888 Gold Dollar, PR67 Ultra Cameo Optimal Field-Device Contrast

**4220** 1888 PR67 Ultra Cameo NGC. The late-series gold dollars in proof format showed production totals that dramatically increased as dealers and collectors came to the realization that the series likely would not last much longer, given the mounting surfeit of Morgan dollars piling up in Treasury vaults. This created a fortunate situation today, where collectors can acquire nice examples of these late dates in top preservation, virtually as they fell from the dies 125 (give or take) years ago. This Superb Gem proof Ultra Cameo NGC-certified 1888 is a case in point: The reported production was 1,079 pieces, yet NGC shows three submissions in this top grade. A sharp strike, optimal field-device contrast, and excellent preservation all combine to make this among the finest available for the issue. NGC ID# 2B9B, PCGS# 97638

### 1796 No Stars Quarter Eagle, VF Details BD-2, Surprisingly Scarce in Lower Grades

**4221** 1796 No Stars on Obverse, BD-2, R.4 — Repaired — PCGS Genuine. VF Details. Undetermined obverse die state/Reverse die state b. The rarest U.S. coin type overall is the 1796-97 Draped Bust, Small Eagle silver half dollar, a two-year type. The 1796 No Stars quarter eagle is virtually tied with the 1808 quarter eagle for the honors of the rarest U.S. gold type coin. The Bass-Dannreuther *Early U.S. Gold Coin Varieties* places both types at R.4, estimating 125-150 known of the 1808 quarter eagle, compared to 104-131 known of the two die varieties of 1796 No Stars quarter eagles.

Garrett and Guth note that, despite the issue's overall rarity, a surprising number of 1796 No Stars quarter eagles survive in high grades: "In fact, it is easier to find a nice About Uncirculated example of this type than it is to find one in Very Fine."

The obverse field have been extensively smoothed, making it impossible to determine the die state. The surfaces are also hairlined. Still, the piece presents well for this high-demand gold type coin. Even yellow-gold surfaces show just a bit of original reddish patina still clinging to the reverse devices. There are no abrasions that merit mentioning. PCGS# 45501 Base PCGS# 7645

## 1796 Quarter Eagle, XF40 Popular No Stars Type, BD-2 Low-Mintage First Year of Denomination

**4222 1796 No Stars on Obverse, BD-2, R.4, XF40 NGC.** The U.S. Mint struck its first gold coins in 1795, a recorded 8,707 pieces of the five dollar denomination, also called the half eagle, and 5,583 examples of the eagle or ten dollar denomination. Delivery warrants show that the first gold coins minted were 744 half eagles delivered to the Treasury on July 31, 1795, likely of the BD-1 variety, based on the research of Harry W. Bass, Jr. and John Dannreuther. There were a total of 12 documented die marriages used to produce the 1795 Draped Bust, Small Eagle five dollar coins, from a total of 16 obverse and reverse dies.

For the 1795 ten dollar coins, there are five known die pairings among the six total obverse and reverse dies.

It was 1796 before the U.S. Mint would strike its third gold denomination, the quarter eagle, although the total recorded production was only 1,395 pieces between the No Stars and With Stars obverses. There were a total of five dies — three reverse and two obverse — in three known die pairings used to strike the 1796 No Stars and With Stars quarter eagles.

The production of a rather small number of 1796 quarter eagles in the second year of overall gold coin production at the Mint would presage a long history of the denomination's status as the red-headed stepchild of U.S. gold coinage. From 1796 through the 1834 With Motto, only 20 different dates appear on the denomination, with none struck at all dated 1799-1801, 1803, and 1809-1820.

In the first 12 years of the quarter eagle's existence, from 1796 through 1807 inclusive, the Mint would strike only a reported 19,487 pieces with a face value of \$48,717.50. In stark contrast, the Mint's production of the 1807 half eagle *alone*, of the Capped Bust Right and Capped Bust Left varieties, would amount to 84,093 pieces with a face value of \$420,465.

Even though there is an overall dearth of die varieties among the quarter eagles as compared to the much more plentiful half eagles, the 1796 No Stars quarter eagle is a special case. Numismatists from various collecting interests pursue the 1796 No Stars as the first year of the denomination, a low-mintage issue, and a one-year type all rolled into one. This coin represents the popular BD-2 variety with shorter arrows in the eagle's claw. The surviving population of the BD-2 variety probably numbers 100-125 examples in all grades.

The present coin is a pleasing XF specimen, with light wear on Liberty's hair and cheek and antique gold surfaces that show highlights of yellow and green. The surfaces are lightly abraded and retain traces of original mint luster. Census: 2 in 40, 32 finer (11/14). PCGS# 45501 Base PCGS# 7645

## 1796 No Stars Quarter Eagle, XF40 BD-2, Popular and Essential One-Year Type

**4223** 1796 No Stars on Obverse, BD-2, R.4, XF40 NGC. Bass-Dannreuther Die State d/b. The U.S. quarter dollar and quarter eagle share attributes beyond common terminology. The quarter dollar and quarter eagle denominations, silver and gold respectively, each made their debut from the fledgling U.S. Mint in 1796. The first quarter eagle issue, the 1796 No Stars, is a one-year type, as is the 1796 quarter dollar. Both the 1796 No Stars quarter eagles and the 1796 quarters are known in two distinct die varieties, although both issues are usually pursued as single-year type representatives rather than for variety purposes.

Despite some common characteristics, in other ways the denominations diverged at their outset. While the 1796 quarter dollar displayed the Small Eagle reverse, the 1796 No Stars quarter eagle featured the Heraldic Eagle reverse — the second major reverse design style among gold and silver coinage.

The denominations differed as well in their subsequent history. While the Mint coined no more silver quarters until 1804 — also a first-year type, as the denomination then bore the Heraldic Eagle reverse of 1804-1807 — it made gold quarter eagles (or dated them with the year, more accurately) in eight of the first 12 years (inclusive) of the denomination, from 1796 through 1807.

The 1796 No Stars quarter eagle is high on the want lists of many collectors as a gold first-year type coin. (Technically, the 1796 With Stars quarter eagle is also a first-year and one-year type — the only quarter eagle issue having 16 obverse stars — but it is seldom collected as such.) Heritage has been fortunate in the past to handle Gem specimens of both the With Stars and No Stars varieties of 1796, but the No Stars in particular is a popular and pursued issue at virtually every grade level.

Only 897 pieces were struck of the No Stars variant with an estimated 100-125 pieces believed extant in all grades. This is a late die state with the die crack plainly visible from the obverse rim at 9 o'clock into the left field. The reverse shows a lump break at the upper tip of the right (facing) wing. A few light pinscratches can be found with a magnifier in the obverse fields, otherwise the surfaces are distraction-free. Even wear is seen over the high points.

*From The Liberty USA Collection. PCGS# 45501 Base PCGS# 7645*

## 1796 No Stars Quarter Eagle, XF45 Extremely Rare BD-1 Variety Finest of Six Known

**4224 1796 No Stars on Obverse, BD-2, R.4, XF45 NGC.** Bass-Dannreuther Die State a/b. This is among the most compelling coins in the present offering. Few others can compete with its combination of history and rarity, and the pleasing quality of this Choice Extremely Fine example further complements the overall appeal of a numismatic treasure. To begin, only a select group of United States coins can claim a recorded birthday, and September 21, 1796 saw the first delivery of quarter eagles in the upstart Mint. The coiner struck only 66 pieces, and most researchers agree that these represent the BD-1 variety. Survivors reveal extensive reverse die damage, and this is the probable reason for the short run. Of these 66 BD-1 coins, only six have survived, and among these six, the present coin is the finest.

In the current era the BD-1 has become the Holy Grail of early quarter eagle variety specialists. The variety was known to Edgar H. Adams in the early 20th century, but the sheer lack of collectors pursuing gold varieties caused the knowledge to be lost until Harry Bass “rediscovered” the variety. Bass “read the book before the coin,” and was aware of its existence (through the Adams notebook) but could not locate an actual example. The eureka moment came in 1971, and is described in an article draft prepared by Bass in 1973:

“...the thought of rediscovering so important a coin was firmly implanted and I have attempted to examine every 1796 no-star quarter eagle that I possibly could over the past seven years. In 1972 [sic, 1971 is intended] a coin dealer and close friend of mine by the name of Mike Brownlee brought to my office a 1796 quarter eagle which he had recently acquired at a coin show. He was merely showing it to me as a matter of interest for he knew that I would not be interested in the coin. He knew that I already had a nicer example of the 1796 no-star quarter eagle. His mistake was that he had not noticed the fact that the lost reverse was on his coin. You can imagine his surprise when I let out a loud yell, ‘This is it, this is it,’ for he did not know what I was talking about. I proceeded to explain to him that the coin in my hand was a specimen of the reverse die referred to by Edgar H. Adams in his private notebook...”

Robert P. Hilt, II formally documented the variety in *Die Varieties of Early United States Coins* (1980), and the hunt was on. Ed Price, who acquired an example in 1992, recalled his discovery moment, as described in our sale catalog, *The Ed Price Collection of Early Dime and Quarter Eagle Varieties* (July 2008, lot 1450):

“I was lucky to find this coin. In the early 1990s I went to a few Wilmington [Delaware] shows, mostly for the chance to see Jules Reiver so we could discuss the 1801 half dime research we were then collaborating on. I saw this coin at the Long Island Numismatics table. It was clearly attributed as the rare Hilt 2-A [BD-1]. I knew what it was. I had the Hilt book in my car—just in case. So I knew that it was very rare. But, I did not know that I would see only one other example offered for sale in the next 15+ years—the Bass duplicate, which was dismal due to heavy scratches. I also had not yet fully decided to pursue a complete variety collection of quarter eagles. But I did understand that getting the rarities early made sense and I bought it. That purchase pushed me to try to get more of the quarter eagles and I was able to purchase a few more at the Heritage ANA sale the next month...”

Bass and Price successfully found coins, as did Robert P. Hilt, II. Hilt’s opportunity came in 1982, and was described by John Whitney Walter in *The John Whitney Walter Collection of the Coins of 1796* (Stack’s, 5/1999):

“In the course of our [John Whitney Walter and Robert Hilt’s] discussions, I learned about Robert’s ‘quest’ to obtain an example of the 2-A [BD-1] variety. Knowing how much he coveted having one, when I viewed lot 332 at Stack’s during the viewing of the Stack’s portion of Auction ‘82, I thought to myself, that it wouldn’t be proper for me to outbid Robert for this coin, because without his knowledge which he imparted to me about its very existence, I would not have bid on it because I had found a much finer example of what I would have thought previously was the same variety. I never spoke to Robert about not bidding, or that the coin was coming up at auction, but I was there at the auction and knew he was bidding...Bob never knew I laid off the 2-A [BD-1] so he could get it...”

As a result, the reverse die of the BD-1 was the only die unrepresented in the Walter collection of 1796 coinage. Today there are six known examples of the BD-1, one of which is in institutional hands.

#### Roster of the 1796 No Stars Quarter Eagle (BD-1)

1. **XF45 NGC.** Abner Kreisberg (9/1973), lot 1022; Carl S. Carlson; Auction '82 (Stack's, 8/1982), lot 332, realized \$17,000; Robert P. Hilt, II; **the present coin.**
2. **XF40 PCGS. CAC.** Long Island Numismatics (7/16/1992); The Ed Price Collection of Early Dime and Quarter Eagle Varieties (Heritage, 7/2008), lot 1450, realized \$207,000.
3. **XF40.** Mike Brownlee / Goliad, Inc. (12/13/1971); Harry W. Bass, Jr. Foundation. Listed in the *Harry W. Bass, Jr. Museum Sylloge*, HBCC-3001. There is an obverse gouge at 9 o'clock, just inside the rim.
4. **VF20.** Stack's (4/1966), lot 713; World Wide Coin (10/11/1972); The Harry W. Bass, Jr. Collection Part III (Bowers and Merena, 5/2000), lot 80, realized \$24,150. Sharpness of XF45 with heavy horizontal and vertical scratches.
5. **VF20.** William F. Gable Collection (S.H. Chapman, 5/1914), lot 358, realized \$42. Darker toning within the date and RTY of LIBERTY.
6. **VG8.** Stack's (7/1977), lot 498; Auction '88 (Stack's, 7/1988), lot 1347, realized \$5,610. Patch of spots below and to the right of Liberty's bust. Thin reverse scratches. Possibly the same coin described as the "poorest condition" specimen known by Robert P. Hilt, II, in a letter to John Walter Whitney, c. 1982, and owned at that time by Ben Levin.

#### Physical Appearance

The arrow length distinguishes the BD-1 and BD-2 reverse dies. On the BD-1 reverse, the arrows extend past the right side of N in UNITED, almost to the left side of I. The arrows on the BD-2 reach just to the right side of N. The present coin features original surfaces with russet and blue outlining Liberty and the 1796 date. There is a light horizontal line at Liberty's temple and several more in the field to the left of the cap. The reverse exhibits even gold color with darker contrast in the protected areas, an appealing appearance popularly described in recent times as "dirty old gold." A vertical die crack nearly bisects the entire reverse, heavier than on the Bass Foundation coin, but lighter than the Price example. This is a Choice example of an exceptionally challenging variety, one deeply connected with the most advanced gold die variety specialists of the current era.

*From The Liberty USA Collection.* PCGS# 45501 Base PCGS# 7645

## 1796 With Stars Two and a Half, AU58 BD-3, Only 40-50 Pieces Believed Known in All Grades

**4225 1796 Stars on Obverse, BD-3, High R.5, AU58 NGC.** Bass-Dannreuther Die State e. The 1796 With Stars quarter eagle is not only a first-year issue of some rarity, it is also a one-year type coin, the only 16 Star obverse in the entire Capped Bust Right series. The Capped Bust Right quarter eagles run from 1796 only through 1807.

The 1796 With Stars quarter eagles were made from dies prepared after Tennessee joined the Union as the 16th state on June 1, 1796, the coins struck after their No Stars counterparts. Numismatists usually peg the delivery of January 14, 1797, of 432 coins as the 1796 With Stars quarter eagles, leading to the mintage estimate normally given. The With Stars quarter eagles shared the same reverse die with the earlier-struck 1796 No Stars quarter eagles of the Normal Arrows or BD-2 variety. The 1796 No Stars quarter eagles were struck to the extent of about 963 pieces, more than twice that of the With Stars 1796 quarter eagles. Today, John Dannreuther estimates that only 40 to 50 examples of the 1796 With Stars survive, compared to 100 to 125 survivors of the BD-2 1796 No Stars. The 1796 No Stars quarter eagle is in intense demand as a first-year type. But far more are available, and in higher grades overall, than the 1796 With Stars — which, as mentioned, is also a first-year and one-year type, although frequently unrecognized as such.

The year 1796 in American numismatics, broadly speaking, holds many charms for serious numismatists. The year was the first in which the Mint struck every authorized coinage denomination from the half cent through the eagle — 10 different denominations in all. Nonetheless, most of the issues are rare and some extremely rare, such as the 1796 half dollars and the 1796 No Pole half cents.

This is the final die state and all the cracks mentioned in the BD reference show on this piece, making an interesting study in die deterioration. At the AU58 level, this is one of the finer examples known and obtainable of the rare With Stars quarter eagle. Both services combined have only certified 16 pieces in higher grades. The surfaces are bright yellow-gold with a few scattered planchet flakes evident when closely examined. The strike details are remarkably strong with just the slightest high-point softness evident.

*From The Liberty USA Collection. PCGS# 45502 Base PCGS# 7647*

### 1797 Quarter Eagle, BD-1, XF Details Only 427 Examples Struck

**4226** 1797 BD-1, R.6 — Improperly Cleaned — NGC Details. XF. Ex: Hilt Collection. Bass-Dannreuther Die State b. A minuscule mintage of 427 Capped Bust Right quarter eagles was accomplished in 1797, with a single die variety known for the date. As a date, the 1797 quarter eagle is probably the rarest issue of the Capped Bust Right series, with a surviving population of just 20-25 coins in all grades. All examples seen have a prominent obverse die break from the rim near Y in LIBERTY to the rim below star 13. This was obviously the only use of the obverse die, but the reverse was employed on one of the varieties of the 1798/7 dime.

The present coin shows light wear on the well-detailed design elements, and the lightly abraded greenish-gold surfaces exhibit signs of a light cleaning in the past. The overall presentation remains most attractive for this rare early gold issue.

*From The Liberty USA Collection.*

**1797 Quarter Eagle, AU53****Very Rare BD-1****Lowest Guide Book Mintage in the Series**

**4227 1797 BD-1, R.6, AU53 NGC.** Bass-Dannreuther Die State b. The *Guide Book* reports a mintage of 427 quarter eagles in 1797, while John W. Dannreuther and Harry W. Bass, Jr.'s *Early U.S. Gold Coin Varieties* suggests a figure as high as 585 pieces. The Bass-Dannreuther speculation is that 98 coins delivered on February 28, 1797 may have been dated 1796, while a group of 256 delivered on January 11, 1798 may have been dated 1797. In any case, the mintage was certainly no more than a few hundred. From the original mintage, John Dannreuther estimates 20 to 25 pieces exist.

Capped Bust quarter eagles and dimes shared reverse dies between 1797 and 1807. The 1792 Mint Act did not require silver and gold coin to be marked with denominations, and the early Mint was no doubt pleased with the economy of reusing dies whenever possible. The reverse die of the present coin was first used on the quarter eagle in 1797 and later on the 1798/7 JR-1 dime, on which a horizontal die crack developed above the eagle's head. The intermixing of a common die across multiple denominations led to interesting consequences, best represented on the 1807 JR-1 dime, where the reverse die exhibits clash marks imparted earlier by the 1807 BD-1 quarter eagle obverse die. Inter-denominational clashing is seen again in 1857, when Flying Eagle cent dies were variously clashed with quarter, half dollar and double eagle dies. These later irregularities were likely deliberate, as other desiderata quietly flowed out of the Mint during this period. The earlier reuse of the quarter eagle and dime reverse dies was completely legitimate, and the reader is referred to The Ed Price Collection of Early Dime and Quarter Eagle Varieties (Heritage, 7/2008) for a thorough explication of the subject.

The hallmark of the 1797 BD-1 quarter eagle, as seen on the present coin, is the obverse die crack that begins at Y of LIBERTY and passes through stars 12 and 13 before exiting at the rim. This crack is seen on all examples except for a single coin in the terminal state where a large cud has developed from stars 8 to 12. (The 1806/4 BD-1 quarter eagle obverse also deteriorates to a cud, and again, there is only a single known example, held by the Harry J. Bass, Jr. Foundation.) Quarter eagles of 1797 were struck with a single die pair, and the size and depth of the obverse crack invites comparison with other quarter eagles of the same year. There are two such coins in the present sale (an unusual occurrence in itself, as 1797 quarter eagles typically appear at auction only once or twice per year), and it can be seen from the crack that the present coin was the first struck of the two.

This coin exhibits a series of diagonal marks in the right field between Liberty and stars 11 to 13, and a few digs in Liberty's temple, neck, and cheek. Liberty's cap reveals diagonal marks similar to those seen in the right field. There is a planchet depression at Liberty's bust, likely a strike through, as made. The reverse is largely mark-free, save for a couple small depressions in the field to the right of T in UNITED, and another to the left of the star above M in UNUM. The reverse die state is perfect. Original toning appeals throughout, with shades of russet in the lower portion of the central figure and date.

From The Liberty USA Collection. PCGS# 45503 Base PCGS# 7648

### 1798 Quarter Eagle BD-2, Five Berries, AU58

#### Deep Original Coloration, Immense Appeal

**4228** 1798 Wide Date, Five Berries, BD-2, R.5, AU58 PCGS. Bass-Dannreuther Die State a. The Mint struck only 1,094 quarter eagles in 1798, employing two different die pairs. BD-2 is seen about twice as often as BD-1, but it is still distinctly rare, with only 45 to 55 coins believed extant. Coupled demand from both variety and date collectors puts this variety in a state of high bidder attention when offered at auction. This is the only use of this obverse, which cracks in a later state, but the reverse was later employed for the JR-4 1798 dime and the JR-1 1800 dime. The cross-usage of undated reverse dies was a time and cost-saving measure at the early Mint, as the dime and quarter eagle shared a common reverse design and were almost identical in diameter.

This near-Mint BD-2 coin is a remarkably appealing, undeniably original example. Both sides show vivid honey-gold patina with overtones of coppery-orange in the border recesses. Remnants of semi-prooflike mirroring reside in the fields, and the design elements are well brought up. Struck from mildly rotated dies. PCGS# 45505 Base PCGS# 7649

### 1802/1 Quarter Eagle, BD-3, MS61 Delightfully Original Coloration

**4229** 1802/1 BD-3, R.5, MS61 NGC. Ex: Hilt Collection. Bass-Dannreuther Die State b/b. BD-3 is the second rarest variety of the 1802 quarter eagle, scarcer than BD-1, but not quite as elusive as BD-2. This is the third and final use of this obverse die, which is shared by the other two 1802 varieties. The reverse die is seen here in its only quarter eagle pairing, but was also employed for the JR-1 1802 dime and the JR-1 1803 dime. A study of die states on these three issues suggests that this reverse was first used for the BD-3 quarter eagle, then briefly employed for the 1802 dime, then repaired with the quarter eagle obverse for a second production run of that denomination, and finally used for the 1803 dime, where it terminally cracked. The cross-usage of the quarter eagle and dime reverse dies during this period was a cost-reducing measure, as the two denominations were within a millimeter of the having the same diameter.

The present Mint State BD-3 example is richly patinated in original bronze-gold patina with gentle peach and coppery-gold overtones on each side. The peripheries are sharply brought up, though the extreme centers are not fully defined. The central reverse shows the remnants of some faint, crisscrossing adjustment marks. An impressively appealing example of this rare variety.

*From The Liberty USA Collection. PCGS# 45508 Base PCGS# 7650*

## 1804 Quarter Eagle, 13 Star Reverse, AU50 Less Than 10 Known

**4230 1804 13 Stars Reverse, BD-1, High R.6, AU50 NGC.** Bass-Dannreuther Die State a/d. A highlight of the present sale, the 1804 quarter eagle with 13 star reverse is one of the rarest coins in the U.S. gold catalog. The coin was missing in the Eliasberg, Norweb, and Garrett collections, and the National Numismatic Collection in the Smithsonian lacks an example. Harry W. Bass, Jr., who collected multiple examples of many early gold varieties, possessed a single coin. Survival estimates range from 9 to 12 pieces (David Akers) to 12 to 14 pieces (John Dannreuther). We trace nine specimens, and, while a few others may exist, this is nonetheless the most prized Draped Bust quarter eagle. With its own listing in the *Guide Book*, the present coin emerges from a complete enumeration of the quarter eagle die varieties.

Although eclipsed in absolute rarity by the 1796 No Stars BD-1 quarter eagle, that variety has only recently been publicized through the avid pursuits of Harry W. Bass, Jr. and others. Conversely, the 13 and 14 star reverses of 1804 are visually distinctive, and, in 1859, Montroville W. Dickeson's *American Numismatological Manual* recognized two varieties of the 1804 quarter eagle.

The 1804 BD-1 quarter eagle reverse die, like many in the Draped Bust quarter eagle series, was shared across multiple issues in the quarter eagle and dime series. This reverse die first appears in 1802 and was used to strike the BD-2 quarter eagle and JR-4 dime varieties of that year. The same reverse appears again on the 1804 JR-1 dime. The precise emission sequence currently defies consensus. John Dannreuther believes that the 1804 BD-1 quarter eagle was the last struck, and, assuming the die was in a terminal state, this may explain the rarity of the present coin.

### Roster of the 1804 Quarter Eagle, 13 Star Reverse (BD-1)

1. **AU58 PCGS.** Judge T. Gaskill (New Netherlands 48th Sale, 11/1956), lot 184; Stack's (3/1990), lot 629; Auction '90 (Superior, 8/1990), lot 1250; Superior (5/1991), lot 1308; Long Beach Connoisseur Collection (Bowers and Merena, 8/1999), lot 343, realized \$149,500; The R.M. Phillips Limited Partnership Collection (Heritage, 7/2009), lot 1209, realized \$322,000. Reverse pit in field left of I in UNITED.
2. **AU55 NGC.** George Earle (Henry Chapman, 6/1912), lot 2502; later, Charlotte Mint Museum (Stack's, 3/1979), lot 1672; Auction '85 (RARCOA, 7/1985), lot 349; Auction '89 (David Akers, 7/1989), lot 1359; Michael Keston (Superior, 1/1996), lot 6; The Ed Price Collection of Early Dime and Quarter Eagle Varieties (Heritage, 7/2008), lot 1459, realized \$322,000. Diagonal line within Liberty's throat exits into right field.
3. **AU50.** Julian Leidman (5/1970); Harry W. Bass, Jr. Foundation. Obverse rim weak at 5 o'clock. It is possible this might be the Cicero specimen from New Netherlands 55th Sale (12/1960), although the stated grade is different.
4. **AU50 NGC.** Buddy De Sylva (Superior, 2/1978), lot 644, realized \$15,000; Auction '79 (Superior, 7/1979), lot 1659, realized \$13,500; **the present coin.** Small pit below L of LIBERTY.
5. **AU50 PCGS.** Charles Neumoyer Collection (Stack's, 5/1960), lot 2352, realized \$620; The John Jay Pittman Collection, Part Two (David Akers, 5/1998), lot 1715, realized \$82,500; ANA Sale of the Millennium (Bowers and Merena, 8/2000), lot 2045, did not sell; FUN Signature Sale (Heritage, 1/2004), lot 3005, realized \$92,000; Treasures from the S.S. New York (Stack's, 7/2009), lot 1300, realized \$149,500; Chicago ANA (Stack's, 8/2014), lot 11010. Obverse field scratch from stars 2 to 6. Vertical, parallel marks across Liberty's bust.
6. **XF.** The Fairfield Collection (Bowers and Ruddy, 10/1977), lot 1440, realized \$9,250; The "Dallas Bank" Collection (Sotheby's/Stack's, 10/2001), lot 300. Diagonal mark at star 9, extensive obverse adjustment marks.
7. **XF.** Amon G. Carter, Jr. Family (Stack's, 1/1984), lot 533. Weak obverse rim, adjustment marks at 2 o'clock. The corresponding point of the reverse exhibits similar weakness.
8. **VF.** Clark E. Gilhousen (Superior, 2/1973), lot 102, realized \$3,800. Mark in front of Liberty's chin, horizontal lines on either side of star 9.
9. **VF.** "Cicero" (New Netherlands 55th Sale, 12/1960), lot 259. Possibly the same as the Bass specimen (#3 above).

### Physical Appearance

The obverse die is perfect, as on all known examples. There is a pit on the lower portion of Liberty's bust, just inside the rightmost curl. Smaller pits are located above and below the L of LIBERTY, and below star 13. The obverse exhibits a few light scratches, most notably within Liberty's cheek and forehead. Even yellow-gold color presents throughout, with browner shades over the high points. The reverse is similarly toned. The upper portion of the reverse shows a few hairline scratches, the heaviest running from S of STATES to R of AMERICA. Another extends from the highest arrow tip into the lower left field. The leaves immediately to the left of AMERICA are not completely articulated, a marker for this die state. With an exceptionally low population, nearly all examples fall into the Condition Census, with the present coin solidly so.

*From The Liberty USA Collection. PCGS# 45509 Base PCGS# 7651*

**1804 Quarter Eagle, AU55  
BD-2, 14 Stars Reverse**

**4231 1804 14 Stars Reverse, BD-2, R.4, AU55 PCGS.** Bass-Danreuther Die State a/a. BD-2 is usually the variety encountered when an example of the scarce 1804 date is found, as BD-1 is extremely rare. BD-2 is believed to survive to the extent of 150 to 200 coins, and the typical example is in this early, perfect die state. This should not be mistaken to mean that BD-2 is available, as any example of this popular issue is scarcely encountered.

This is the second and final use of this obverse die, which was previously employed for the earlier BD-1 variety. This reverse was also employed for the JR-2 1804 dime. The present BD-2 example is well-struck, with just slight wear over the high points of the design. Bright green-gold coloration engulfs both sides, while the surfaces are free of any major abrasions. Faint remnants of mint-made roller marks are evident along the left obverse border. PCGS# 45510 Base PCGS# 7652

**1805 Quarter Eagle, BD-1, MS61  
Sole Variety of the Year**

**4232 1805 BD-1, R.4, MS61 NGC.** Ex: Hilt Collection. Bass-Danreuther Die State b/a. BD-1 is popular among date and variety collectors as the only variety of the 1805 quarter eagle. Only about 100 to 150 examples are believed extant, making this issue scarce in all grades. This die pairing is of special importance to variety enthusiasts, as the obverse die was later reheated, overdated, and rehardened for continued production of the 1806 BD-2 variety. This is one of only a handful of occurrences for any denomination when this procedure was successfully accomplished for a production die. This reverse die was later employed for all quarter eagle varieties through 1807, as well as for the entire 1807 dime mintage (more than 150,000 dimes). During its usage for dime coinage, the die incurred several clashes and lappings, but apparently never cracked. This is evidence of the Mint's die hardening techniques having drastically improved from just a decade before, when dies cracked frequently.

This BD-1 example displays original olive-gold patina with hints of orange-gold in the recesses. The strike is sharp, save for the extreme centers which are slightly soft, while the upper reverse high points show the remnants of mint-made roller marks that were not completely eradicated by the die impression. An appealing Mint State example of this popular variety.

*From The Liberty USA Collection.* PCGS# 45511 Base PCGS# 7653

## 1805 Quarter Eagle, BD-1, MS62 Among the Finest Known Deeply Reflective Fields

**4233 1805 BD-1, R.4, MS62 NGC.** Bass-Dannreuther Die State c/b. This is the latest die state known for this variety, although neither die is terminal. This is the only variety of the 1805 issue, but the obverse was overdated and employed again for the BD-2 (1806/5) 1806 variety. The reverse die was later employed for both 1806 varieties, as well as for the single 1807 variety — the final issue of this type. An interesting but seldom realized result was that this same die pair struck both the 1805 and 1806 BD-2 issues.

The 1805 quarter eagle is always in strong demand from both date and variety collectors, but only about 100 to 150 examples are believed known in all grades, primarily in circulated condition. Mint State coins are rare, and the present example is high in the condition census. NGC has certified just four coins in this grade and none finer, while PCGS has seen three pieces in this grade and one numerically finer (12/14). It is also possible that these small numbers include one or more resubmissions.

The margins are boldly struck, though some minor weakness in the centers leaves the faint remnants of mint-made roller marks on the eagle and the upper clouds. The fields are noticeably prooflike, shining through pale yellow-gold patina. No significant abrasions are present, and there is only minimal chatter to limit the grade. PCGS# 45511 Base PCGS# 7653

## 1806/4 Quarter Eagle, BD-1, AU50 Elusive Overdated Variety

**4234 1806/4 8x5 Stars, BD-1, High R.4, AU50 NGC.** Ex: Hilt Collection. Bass-Dannreuther Die State b/b. BD-1 is the more often seen of the two 1806 quarter eagle varieties (both overdates), but it is still itself highly scarce, with only 75 to 90 coins believed to survive in all grades. This obverse die is seen here in its final use, as a later die state develops a cud above LIBERTY. This reverse die is uncracked, as it remains for the duration of its usage through 1807 quarter eagle and dime production. The present BD-1 coin exhibits bright yellow-gold patina, with sharp border denticles. The centers are not fully defined, with the reverse showing remnants of parallel roller marks, not fully dissolved by the die pressure during striking. A touch of high-point rub precludes a Mint State grade, but this coin appears well-detailed in comparison to the original striking softness.

From *The Liberty USA Collection*. PCGS# 45512 Base PCGS# 7654

### 1808 Quarter Eagle, BD-1, AU Details Sole Variety of The Type

### 1808 Quarter Eagle, Unc Details Popular One-Year Type Coin, BD-1

**4235** 1808 BD-1, R.4 — Repaired — PCGS Genuine. AU Details. Bass-Dannreuther Die State b, as usual. A rather scant mintage of just 2,710 quarter eagles was accomplished in 1808, this being produced with just one die pair. This was the only issuance of the quarter eagle denomination between 1807 and 1821, therefore also making it the only variety in the large size Capped Bust Left type. John Dannreuther estimates only 125 to 150 examples survive in all grades, these being fairly inadequate to supply the needs of variety, date, and type collectors. Most known examples are tightly held, and this issue is scarcely made available on the market.

The central devices are well-struck, though the peripheries exhibit the usual weakness, with almost no denticles on the obverse. This was likely due more to a design flaw than striking problems, as previous and later issues, also struck with the open collar, frequently exhibit much stronger dentilation than is seen on examples of the 1808. This piece is carefully repaired along the left obverse border, with bright yellow-gold patina. Some minor adjustment marks are noted along the right reverse margin. Overall, this is a still-pleasing example of this scarce and immensely popular early quarter eagle. PCGS# 45515 Base PCGS# 7660

**4236** 1808 BD-1, R.4 — Repaired — NGC Details. Unc. Ex: Hilt Collection. Bass-Dannreuther Die State b. From a small mintage of 2,710 pieces, the 1808 Capped Bust Left quarter eagle is the only issue with the Large Bust obverse, making it an extremely popular one-year type coin. Only a single variety is known for the date, with a surviving population of 125-150 examples in all grades.

A still-attractive representative of this sought-after early gold type coin, this piece offers well-detailed design elements, with just a touch of softness on some stars and the eagle's claws. The obverse shows the weak dentilation always seen on this issue and the pleasing antique-gold surfaces show only minor signs of contact.

*From The Liberty USA Collection. PCGS# 45515 Base PCGS# 7660*

## 1808 Quarter Eagle, MS61 An Essential One-Year Type Coin Only 2,710 Coins Produced

**4237 1808 BD-1, R.4, MS61 NGC.** The year was 1807. The U.S. Mint had been open for about 14 years, and the doughty Elias Boudinot had retired as Mint director in 1805, after a decade of dedicated and enthusiastic service. By the early years of the 1800s, copper cents, silver half dollars and dollars, and gold half eagles and eagles had been struck in relatively plentiful quantities — at least as compared to the Mint's lean first productions.

When Boudinot retired in 1805 his replacement, Robert Patterson, would take office in January 1806 and serve until his death in office, in 1824. The Mint's chief engraver, Edinburgh native Robert Scot (1744-1823), had been in office since the days of David Rittenhouse, the Mint's first director. While Scot had made some improvements in Mint procedures, most notably in the creation of device punches, he was slow, had failing eyesight, and was ill-equipped for any major coinage redesigns. Such die-cutting skills as Scot possessed were largely imitative and learned on the job rather than through previous experience.

By 1807 Patterson had managed to hire Bavarian native John (Johann Matthaus) Reich and tasked him with redesigning American coinage — an insult to Scot, but one that Reich accomplished with celerity, skill, and panache. The first Reich designs were those of the workhorse denominations of American commerce at the time (the silver dollar and gold eagle had ceased to be produced), the half dollar and half eagle denominations in silver and gold, respectively.

In 1808 Reich turned his attention to a lesser gold denomination, the quarter eagle, producing a design similar to that of the half eagle. The quarter eagle denomination, however, was little-loved and less-needed. In addition, the Mint was at the mercy of bullion depositors, who could request what gold or silver denominations they preferred for their coinage. The 1808 quarter eagle turned out to be a one-year type, produced in the meager extent of only 2,710 pieces, whereas the 1808 half eagle saw a mintage of 55,878 coins. Today the 1808 quarter eagle is eagerly pursued by type collectors and early gold specialists alike.

This is one of the best-preserved of all known 1808 quarter eagles. The surfaces are bright and lustrous with strong definition on all the design elements. The yellow-gold color shows just the slightest tinge of reddish patina over the high points. A few small abrasions are scattered about, consistent with the grade, but only two bear individual mention: a shallow scrape out from stars 11 and 12 on the obverse, and another scrape between the 2 and 1/2 on the lower reverse. Census: 6 in 61, 6 finer (11/14). PCGS# 45515 Base PCGS# 7660

### 1830 Quarter Eagle, BD-1, MS61 Scarce Low-Mintage Issue

**4238** 1830 BD-1, R.4, MS61 PCGS. Only one variety in one die state is known for the 1830 quarter eagle. With a mintage of only 4,540 pieces, one would not expect a need for more than one die pairing, but it is somewhat surprising that the dies did not crack, resulting in another die state. The reverse die used on the 1830 was the same die used for the rest of the type. It is most easily identified by a mispunched U in UNITED. The fields are semiprooflike on each side, and both sides display rich reddish-gold color. The surfaces are lightly abraded, typically so for an MS61. The only mentionable abrasion is a reeding mark above the eagle. Population: 4 in 61, 29 finer (11/14).

Ex: ANA Signature (*Heritage*, 8/2010), lot 3411. PCGS# 45524 Base PCGS# 7670

### 1831 Quarter Eagle, BD-1, AU58 Sharp Motifs, Semiprooflike Fields

**4239** 1831 BD-1, R.4, AU58 NGC. Ex: Hilt Collection. Bass-Danreuther Die State a/a. The only known variety for the 1831 quarter eagle, BD-1 is decidedly scarce, with only 110 to 125 examples believed extant, and is of equal importance to both variety enthusiasts and date collectors. This is the only use of this obverse die, but one of five uses for this reverse, which was employed from 1830 through the end of the type in 1834. The present piece is boldly struck, with just a touch of friction precluding a Mint State grade. Bright, green-gold color blankets each side, yielding to deep reflectivity in the fields. With a mintage of only 4,520 pieces, most known representatives of this date exhibit prooflike or semiprooflike fields, a characteristic that is often cause for confusion between high-end business strikes and rare proofs. The current offering is a visually impressive coin, sure to please the most discerning bidder.

From *The Liberty USA Collection*. PCGS# 45525 Base PCGS# 7671

## LIBERTY QUARTER EAGLES

### 1833 Quarter Eagle, BD-1, MS64 Attractive, High-End Example

**4240** 1833 BD-1, R.5, MS64 NGC. Bass-Dannreuther Die State a/c. This is the second-rarest quarter eagle issue of this type, trailing only the extremely rare 1834. A single die pair was used and production amounted to only 4,160 coins, with just 60 to 80 examples believed to survive in all grades. This is the only use of this obverse, but the fourth of five uses for this reverse, which was employed for every variety of the type with the sole exception of the 1829. Many gold issues of the period were subjected to heavy melting which, coupled with the already low mintages, makes any representative of this type an elusive coin.

This piece is beautifully preserved, with satiny green-gold luster that is devoid of any significant interruptions. The central high points and many of the stars are lacking in the finer details, but the major elements are well-defined. A small planchet void above the eagle's head and a tiny, linear mark near star 1 serve as pedigree identifiers. Census: 5 in 64, 2 finer (11/14). PCGS# 45527 Base PCGS# 7673

### 1856-D Quarter Eagle, XF45 Only 874 Pieces Struck

**4241** 1856-D XF45 PCGS. Variety 20-N. Only 874 Liberty quarter eagles were struck at the Dahlonega Mint in 1856, making the issue the rarest coin from the famous Southern mint, regardless of denomination. Probably no more than 40-50 examples are extant today. Unfortunately, the 1856-D was poorly produced, and most specimens display striking problems, subdued mint luster, and poor surface quality.

The present coin is a Choice XF example that exhibits only light wear on the better-than-average, but still softly struck, design elements. The pleasing orange-gold surfaces are lightly abraded and show traces of original mint luster. Altogether, an attractive specimen of this rare Southern gold issue. Population: 6 in 45, 22 finer (11/14). NGC ID# 25J9, PCGS# 7779

### 1875 Quarter Eagle, MS61+ Famous Rarity, Only 400 Pieces Struck

**4242 1875 MS61+ NGC.** The year 1875 is a landmark date for gold collectors, as all the Philadelphia Mint gold denominations except the double eagle were produced in extremely small numbers. The 1875 quarter eagle claims an epically low mintage of just 400 examples, and probably no more than 50 business-strike specimens are extant in all grades today. Accordingly, the 1875 is one of the most sought-after issues of the series.

The present coin is one of the finest survivors, with sharply detailed design elements and prooflike yellow-gold fields, with a few hazy color spots on the obverse. A scattering of minor contact marks on both sides is consistent with the grade. Census: 3 in 61 (1 in 61+), 0 finer (11/14). NGC ID# 25KS, PCGS# 7822

### 1878-S Quarter Eagle, Top-Notch MS66 Sole Finest Certified

**4243 1878-S MS66 NGC.** The 1878-S quarter eagles were struck in the moderate extent of 178,000 pieces, a great increase from the previous year but one probably limited from a larger number by the vast outflows of Morgan dollars from each mint that began in this year. Although the issue is quite common in lower Mint State grades, Gems are quite elusive, where PCGS shows a single MS65 and NGC shows two, and this is the sole Premium Gem certified at either service with none finer (12/14). The last offering of a Gem was more than six years ago, when we handled an MS65 NGC piece that brought \$9,488 in our FUN Signature (Heritage, 1/2008), lot 3096.

The orange-gold surfaces on this piece are fully struck on both sides and show only the most inconsequential contact, a nicely preserved coin throughout. The eye appeal is simply top-notch. Census: 1 in 66, 0 finer (12/14). NGC ID# 25KZ, PCGS# 7829

**1907 Quarter Eagle, MS68**  
**Last-Year Issue, Tied for Finest Graded**

**4244** **1907 MS68 NGC.** This 1907 Liberty Head quarter eagle is a Superb Gem of stunning beauty, fully struck front and back on wheat-gold surfaces that show not the slightest blemish or distraction. This piece is tied for numerically finest with one submission at PCGS and four others at NGC. Even though the 1907 Liberty Head quarter eagle is “officially the most common date of the series,” according to Garrett and Guth, this maximum-impact coin of the last-year 1907 issue would make a prime acquisition for type set purposes or simply to represent the design. The last MS68 example we offered, a PCGS example, brought \$32,200 in September 2010. NGC ID# 25LY, PCGS# 7859

## PROOF LIBERTY QUARTER EAGLES

### **1864 Quarter Eagle, PR64+ Ultra Cameo Rare, Underrated Proof Issue Only 12 to 18 Examples Believed Known**

**4245 1864 PR64+ Ultra Cameo NGC.** The mintage record for the proof 1864 quarter eagle of 50 coins can be misleading as to its rarity in comparison to the lower mintage 1863 and 1865 proofs, and the certified population data even more so. It is doubtful if all 50 proofs were actually sold, as the notable decline in production the following year to just 25 pieces supports Akers' notion that some were likely melted as unsold, a theory that is consistent with the low survival rate. A study of certified population data reports the encapsulation of 31 coins at PCGS and NGC combined (11/14), which leads to a commonly accepted overall availability estimate of possibly 25 to 30 coins. However, we believe this estimate is higher than reality, and suggest the total number of survivors to be closer to Jeff Garrett and Ron Guth's estimate of only 12 to 18 examples, remarkably similar to that of the more popular 1863 and 1865 issues. A study of our auction archives shows nine previous offerings of the 1864 proof, four of which are reappearances of the same coin, leaving a net offering of no more than six individual examples in the past two decades. We also know of at least one coin that was resubmitted for an upgrade at least twice, which supports our conclusion that the certified population data is likely heavily inflated.

This Plus-designated Choice Ultra Cameo representative displays bold field-motif contrast with glassy "black" fields and razor-sharp, heavily frosted devices. No contact marks are present, and only a few limited hairlines preclude a full Gem grade. A small area of deeper coppery toning near star 8 serves as a pedigree identifier. A beautiful example of this rare, underappreciated proof issue. Census: 2 in 64 (1 in 64+), 5 finer (11/14). NGC ID# 287J, PCGS# 97890

## INDIAN QUARTER EAGLES

### 1893 Quarter Eagle, PR65 Ultra Cameo Rare as a Proof

**4246 1893 PR65 Ultra Cameo NGC.** A beautiful Gem Ultra Cameo example of this rare proof quarter eagle issue. Only 106 pieces were ever struck, and it is estimated that only 50 to 75 exist today. NGC and PCGS combined report a population of 79 pieces in all grades, though this figure undoubtedly includes resubmissions. Many known examples are lacking somewhat in field-motif contrast, and Ultra/Deep Cameo representatives make up only a small portion of the available specimens. The level of contrast on this piece is unquestionable, however, with deeply mirrored fields showcasing frosty, razor-sharp devices. No contact marks are present, and the fields reveal only a few minor hairlines upon close examination. Rich honey-gold color attests to the originality of the surfaces, giving this piece outstanding visual appeal. Census: 7 in 65, 14 finer (11/14). NGC ID# 288G, PCGS# 97919

### 1914 Quarter Eagle, MS65 The Lowest Philadelphia Mintage Extremely Rare Any Finer

**4247 1914 MS65 PCGS.** Quarter eagle production at the Philadelphia Mint in 1914 fell off markedly from 1913 (722,000 pieces) to only 240,000 coins. This is the lowest-mintage Philadelphia Mint issue in the series and the second lowest after the 1911-D. With only about 100 Gems certified by PCGS and NGC it will take a fair degree of searching to locate a nice example, while finer specimens, with only six coins graded, are essentially out of reach for most collectors.

Wheat-gold surfaces display above-average luster and exhibit well-struck design elements. Occasional unobtrusive marks are fewer and less severe than ordinarily encountered on this issue that tends to have heavily abraded surfaces. Population: 56 in 65 (1 in 65+), 3 finer (11/14). NGC ID# 2898, PCGS# 7946

### 1914 Quarter Eagle, Appealing MS65 Remarkable Condition Rarity

**4248 1914 MS65 PCGS. CAC.** In the Indian quarter eagle series, the 1911-D is well-known as the major key date across all grades, but in Gem and finer condition, the 1914 and 1914-D issues are remarkably close rivals. According to certified population data, in Gem condition, the 1914-D is rarest, followed closely by the 1911-D, with the 1914 as third-rarest by a margin of just a few coins. Depending on the number of resubmissions for each issue, the 1914 could arguably be considered *on par* with the 1911-D and the 1914-D in Gem grades. This representative is the very definition of a Gem, showing frosty bronze-gold luster with deeper orange accents in the recesses. The strike is sharp and the surfaces are completely devoid of significant abrasions. Certainly near the upper end of the MS65 grade. Population: 56 in 65 (1 in 65+), 3 finer (11/14). NGC ID# 2898, PCGS# 7946

### 1914-D Quarter Eagle, MS65 None Numerically Finer at PCGS

**4249 1914-D MS65 PCGS.** At the Gem grade level this high-mintage (448,000 pieces) issue emerges as one of the most elusive dates in the series; it is slightly rarer at this level than even the lower-mintage 1914, and is barely more available than the key-date 1911-D. This example is sharply struck with frosty honey-gold luster. A few minute disturbances in the cartwheel effect limit the grade, but hardly impede the eye appeal. Struck during a late die state, as evidenced by a thin cud above LIB in LIBERTY and a light die crack extending in from the reverse rim near the mintmark. Population: 47 in 65, 0 finer (10/14). NGC ID# 2899, PCGS# 7947

## PROOF INDIAN QUARTER EAGLES

**1908 Indian Quarter Eagle, PR67**  
**Popular First-Year Matte Proof**  
**Tied With One Other for Finest at PCGS**

**4250 1908 PR67 PCGS. CAC.** The Mint struck 236 proof Indian quarter eagles in 1908, a mintage that exceeded that of every proof issue in the entire Liberty Head series. Anticipation of high sales was likely the warrant for such a large production; it was the first issue of the Indian Head type which historically increased proof sales the first year, and the Mint was beginning to experiment with a sandblast (or matte) finish which was thought to be more artistically appealing. The finish proved quite pleasant on heavier, high relief medals, and its attempted use on proof coins was inevitable.

The public disagreed with the aesthetic appeal, however, and much preferred the old, brilliantly mirrored finish. As a result, many of the 1908 proofs distributed likely ended up being spent or were carelessly handled. Even light wear made these coins virtually impossible to differentiate from business strikes. PCGS and NGC combined report having encapsulated 224 pieces in all grades (11/14), a number that undoubtedly includes many resubmissions. This translates into evidence that a significant portion of the mintage is long lost.

The present Superb Gem is one of just two coins for the grade at PCGS, with none finer (11/14). Soft, glowing surfaces emit uniform olive-gold color, with close examination failing to locate any discernable surface disruptions. The strike is full throughout. Weakness in the eagle's wing feathers is due only to an inadequately engraved die — this characteristic is shared by all known business strikes of this date. The engraving details were sharpened on the 1909 dies, but the striking sharpness of 1908 pieces can only be accurately measured by studying the headdress feathers and the stars, both of which are bold on this remarkable proof. Housed in an old green label holder, with a green CAC endorsement label. NGC ID# 289G, PCGS# 7957

### 1910 Indian Quarter Eagle, PR67 Roman Gold Finish Tied for Finest at PCGS

**4251 1910 PR67 PCGS.** According to Mint records, 682 proof Indian quarter eagles were struck in 1910, but the issue is much more elusive in today's market than that rather generous figure would suggest. The coins were struck with the Roman Gold finish that proved just as unpopular with collectors as the matte finish of 1908. It is likely that many coins went unsold and were melted after the end of the year. A reasonable estimate of the number actually distributed is around 200 pieces.

The innovative sunken design was conceived by sculptor Bela Lyon Pratt and sponsored by Boston Brahmin and friend of President Theodore Roosevelt William Sturgess Bigelow. Some surprising information about the model for the portrait of the Native American was revealed in the description of lot 1005 of the Pre-Long Beach Sale (Ira and Larry Goldberg, 9/2013):

"The obverse portrays Brule Lakota Chief Hollow Horn Bear, who had taken part in Theodore Roosevelt's inaugural parade, March 4, 1905. The Chief died March 15, 1913, age 54, at Providence Hospital, according to the notice in the April 1913 *Numismatist*, which misidentified him as the model for the 1899 \$5 Silver Certificates. His true identity as Boston sculptor Bela Lyon Pratt's model for the 1908 Quarter Eagles and half eagles first came to light in an exhibit in the 1988 ANA Convention; we have not yet learned who was the exhibitor."

The present coin is a spectacular Superb Gem, with razor-sharp definition on all design elements and bright yellow-gold surfaces that show the mixed satiny/semireflective luster typical of the Roman Gold proofs. No mentionable distractions are evident and eye appeal is outstanding. This coin is tied with one other specimen for finest certified at PCGS and will be a welcome addition to the finest collection or Registry Set. Population: 2 in 67, 0 finer (11/14). NGC ID# 289J, PCGS# 7959

## THREE DOLLAR GOLD PIECES

### 1915 Quarter Eagle, Sharply Defined PR65 The Final Year of Issue

**4252 1915 PR65 NGC.** The proof quarter eagles of 1915 saw a tiny mintage of 100 pieces, of which 60 to 75 examples are known, according to the PCGS website. This is the final year of proofs for the Indian Head quarter eagle series. David Akers (2008) writes that: "...most were probably melted as unsold at year's end. Indeed, the 1915 is the rarest proof Indian Quarter Eagle in terms of total number of coins believed to have survived."

The present Gem displays yellow- to greenish-gold color on a matte or sandblast finish that the mint used to produce the proof 1914. The sharply defined design features include the feathers of the headdress and the eagle's plumage. Both sides of this coin are nicely preserved. Census: 7 in 65, 18 finer (11/14). NGC ID# 289P, PCGS# 7964

### 1859 Three Dollar Gold, MS64+ Standout Mint Luster

**4253 1859 MS64+ PCGS. CAC.** While the visual impact and bold strike suggest a higher grade, a few light marks on the reverse and subtle die clashing within the wreath determine the borderline Gem status of this attractive three dollar gold. The portrait is clean and unmarked.

Frosted surfaces offer standout mint luster. The intense medium-gold color combines with mint bloom to create excellent eye appeal. Just 15,558 pieces were minted — not by any means the lowest three dollar mintage, but still a scarce coin in the context of the series and one that is much less frequently seen than the 1854 issue. Scarce in this near-Gem condition. Population: 18 in 64 (2 in 64+), 8 finer (11/14). NGC ID# 25MD, PCGS# 7979

### 1859 Three Dollar, MS65 Above-Average Strike

**4254** 1859 MS65 NGC. Most certified 1859 three dollar gold pieces are in the MS60 to MS62 range. This issue becomes a true rarity in MS65 where NGC and PCGS have graded only nine pieces and eight numerically finer. The peach-gold surfaces of the present Gem display strong luster and exhibit above-average detail in the design features. In particular, Liberty's feathers and plumes and the bowknot and 85 in the date are sharp, elements that are often weak on this date. Clashmarks are visible on both sides, indicative of a later strike. Nicely preserved throughout. Census: 4 in 65, 5 finer (11/14). NGC ID# 25MD, PCGS# 7979

### 1859 Three Dollar, MS65 Very Rare in Such High Grade

**4255** 1859 MS65 NGC. Breen-6361. Both the 1 and the 9 in the date are repunched. This reverse is from the more difficult of two die marriages used in the production of 15,558 business strikes, but is actually more frequently seen on higher grade examples. Perhaps 100-125 Mint State pieces survive of the 1859 three dollar, a quantity that actually places it among the more obtainable issues in the series. Gems, however, are of the utmost scarcity. This shimmering yellow-gold coin is remarkable for its smoothness and displays a soft, frosted sheen over devices that leave only a touch of softness on the often-incomplete bow at the base of the wreath. There is little evidence of die clashing on either side. Census: 4 in 65, 5 finer (11/14).

*Ex: FUN Signature (Heritage, 1/2007), lot 3460; Summer FUN Signature (Heritage, 6/2008), lot 1918. NGC ID# 25MD, PCGS# 7979*

## 1860-S Three Dollar, MS61 Seldom Seen Finer

**4256 1860-S MS61 NGC.** Branch mint three dollar gold coinage included the 1854 issues of Dahlonega and New Orleans, and San Francisco issues of 1855, 1856, 1857, 1860, and 1870. The last date is unique, part of the Harry W. Bass, Jr. Collection on display at the ANA headquarters in Colorado Springs. Less than 100,000 coins were produced at the branch mints for all three dollar issues, including just 7,000 examples of the 1860-S. This example displays satiny bright yellow luster with excellent eye appeal. NGC has never graded a finer example, and PCGS has graded two at the next higher numerical level. Census: 3 in 61, 0 finer (11/14). NGC ID# 25MF, PCGS# 7981

## 1870 Three Dollar Gold, MS65+ Tied for Finest Certified Deep Prooflike Fields

**4257 1870 MS65+ PCGS.** As with almost all dates of three dollar gold pieces, the 1870 had a remarkably small mintage. In this case, only 3,500 pieces were produced. Many of the high-grade survivors (AU and better) show remnants of a pronounced prooflike field on each side. This is explained in the Bowers-Winter reference: "The leaf to the left of the date is mostly missing, from grinding the die face too deeply, a process that also imparted a polished surface." The attenuated leaf is certainly evident on this piece, and the fields are unquestionably prooflike. A few Mint-made planchet flakes and strike-throughs can be seen with magnification, but there are no noticeable post-striking impairments. Rich reddish patina covers each side. Tied for finest certified by one NGC coin in the same grade (actually, an MS65 ★). NGC ID# 25MS, PCGS# 7991

### 1873 Closed 3 Three Dollar, MS62 Rare in Mint Condition

**4258 1873 Closed 3 MS62 PCGS.** No record of business strikes appears in the Mint reports for the 1873 three dollar gold pieces. Officially, just 25 proofs were minted for the date. However, 120 grading events at PCGS and NGC combined prove business strikes certainly exist. Bowers (2005) estimates that 600 to 900 were actually struck for circulation in early 1873. The number of survivors is estimated at about 90 to 130 pieces, although the majority of these are circulated coins. Fewer than 20 Mint State examples are thought to exist.

Partially prooflike and boldly struck, this example displays frosted motifs that contrast with reflective fields. There are no major marks on the yellow-gold surfaces, although the obverse fields are busy with small abrasions. Population: 2 in 62, 3 finer (11/14). NGC ID# 25MW, PCGS# 7995

### 1873 Closed 3 Three Dollar, MS62 Prooflike One of Five Prooflike Examples

**4259 1873 Closed 3 MS62 Prooflike NGC.** The 1873 three dollar gold issue is a mysterious one. Mint records reveal a production of 25 proofs but are silent on the number of business strikes, though it is known a number were minted. Later commentators have suggested mintages ranging from 100 to 1,000 pieces. NGC and PCGS have seen a little over 100 1873 circulation strikes. A mere five pieces have been designated Prooflike, all by NGC.

The prooflike fields on this MS62 piece highlight the devices at various angles. The design elements are well-struck save for the usually seen weakness in the bowknot. Rich orange-gold color with lavender and ice-blue overtones enhances both sides, and the only noticeable marks are in a tight cluster in the field below TA. A marvelous and enigmatic coin. Census: 3 in 62 Prooflike, 1 finer (11/14). PCGS# 77995

## 1878 Three Dollar, MS66+ A Gorgeous Type Coin

**4260 1878 MS66+ NGC.** The 1878 is chronologically last of three generally accepted type issues for the three dollar gold series, an issue that saw more than 82,000 pieces produced despite a staggering lack of economic demand in most prior years. For the collector who wants a single gorgeous type representative, this MS66+ beauty is an excellent choice. The obverse is bright yellow with the issue's characteristic swirling luster, while the peripheral reverse adds just a hint of copper alloy for character. Preservation is marvelous even by Premium Gem standards, hence the Plus grade. Census: 43 in 66 (3 in 66+, 5 in 66 ★), 12 finer (11/14). NGC ID# 25MZ, PCGS# 8000

## 1878 Three Dollar Gold, MS66+ Exceptional Type Coin

**4261 1878 MS66+ PCGS. CAC.** The 1878 three dollar gold piece claims a mintage of 82,304 pieces, a substantial production total in the context of the series. As a result, the 1878 is a relatively available issue and a favorite choice of type collectors. However, the 1878 is very scarce at the MS66 level and finer examples are prime condition rarities.

The present coin is a delightful high-end Premium Gem, with sharply detailed design elements and vibrant satiny mint luster. The impeccably preserved orange-gold surfaces add to the high technical quality and terrific eye appeal. Population: 69 in 66 (3 in 66+), 6 finer (11/14). NGC ID# 25MZ, PCGS# 8000

### 1880 Three Dollar, Lavishly Toned MS65

**4262 1880 MS65 PCGS.** Certified in an early PCGS blue-label holder, this Gem 1880 three dollar is among only 18 submissions in this grade at PCGS — likely not all separate coins — and only four are numerically finer, three MS66 and one MS66+ (11/14). It is doubtful that any of those survivors are nicer in terms of the sheer aesthetics of this piece, showing rich surface texture with a mix of mint frost and semiprooflike character. Lavish color in deep orange-apricot makes a splendid presentation, as does the excellent overall preservation this piece possesses, showing no mentionable abrasions throughout either side. NGC ID# 25N3, PCGS# 8002

### 1883 Three Dollar, MS64 Prooflike Mintage of 900 Business Strikes

**4263 1883 MS64 Prooflike NGC.** The single finest Prooflike representative of the issue certified by NGC (11/14), one of 11 in that category according to the *Census Report*. It is logical that the 1883 three dollar would have a high representation of Prooflike pieces, owing to a business strike mintage of only 900 pieces. This flashy coin exceeds expectations with mirrors that show even reflectivity in the fields on each side. Mildly contrasted but boldly appealing with only a few small marks that are largely scattered in the fields and a handful of wispy abrasions that help determine the grade. PCGS# 78005

## PROOF THREE DOLLAR GOLD PIECES

**1854 Three Dollar, PR61**  
**Rare First-Year Proof**  
**Only 10 to 12 Pieces Believed Extant**

**4264** 1854 PR61 NGC. The exact number of proof 1854 three dollar gold pieces struck is uncertain; we know of at least 15 coins that were delivered to the Secretary of the Treasury in late April 1854, but it is possible that a few more were produced later in the year, after business strike production began in early May. The combined NGC and PCGS certified populations count only 14 coins (11/14), likely including at least a few resubmissions. We estimate only about 10 to 12 examples are extant, one of which permanently resides in the Smithsonian Institution.

Our archives show only seven previous offerings of this first-year proof issue in the past decade. The present piece is numerically the lowest-grade example we have handled, and is an ideal opportunity for the budget-minded collector to acquire this extremely rare proof issue. The design elements are fully brought up and are set against a deeply mirrored, straw-gold backdrop that delivers excellent visual appeal. Light hairlines in the fields account for the grade, but this piece is devoid of detectable contact marks. An important offering of this rare and significant proof three dollar issue. Census: 1 in 61, 3 finer (11/14). NGC ID# 289R, PCGS# 8017

## 1858 Three Dollar Gold, PR65 Very Rare Landmark Proof Gold Issue Finest Certified at PCGS, Ex: Trompeter

**4265 1858 PR65 PCGS. CAC.** Ex: Trompeter. The Philadelphia Mint began its commercial proof set offerings in 1858 and the program was met with gratifying enthusiasm by the general public. A substantial number of minor and silver proof coins were sold, but gold proofs were less popular, due to their higher face value. Mintage figures for proofs were not recorded, but the number of three dollar proofs distributed was undoubtedly small. The gold proofs were sold individually for the most part, but complete sets could be ordered. One such set was offered in lot 712 of the Catalogue of American and Foreign Coins (W. Elliot Woodward, 10/1860):

“1858 A most magnificent set of proofs, comprising \$20, \$10, \$5, \$3, \$2, \$1.”

Perhaps 8-10 examples of the 1858 three dollar gold piece survive today in all grades, with several recent offerings in impaired condition. The small supply for collectors is further reduced by the coins in institutional holdings, one in the collection of the American Numismatic Society, one in the Harry W. Bass, Jr. Foundation, and one in the Smithsonian Institution.

The 1858 three dollar gold piece also boasts a small business-strike mintage of 2,133 pieces, and high-quality coins in that format are just as rare as proofs. Q. David Bowers and Doug Winter provide some diagnostics to help distinguish between proofs and prooflike business strikes:

- On the obverse, the forward plume of the headdress was polished from the die.
- On the reverse, the lower right part of the 5 in the date is positioned over the highest peak of the ribbon bow. (Also seen on strikes for circulation.)
- The mirror surface is often incomplete on the obverse.
- Lint marks are commonly seen.

The present coin is a delightful Gem from the famous Trompeter Collection. Ed Trompeter was a connoisseur, and he assembled the finest gold proof collection of all time. This piece offers sharply detailed design elements throughout, and the deeply mirrored fields provide bold, if unacknowledged, cameo contrast with the frosty devices. The yellow and orange-gold surfaces are well-preserved, but a characteristic number of lintmarks are present, including one near the chin, one near the base of I in UNITED, another in the reverse field, above the left top of the wreath, and one near the lower knob of the 3. Eye appeal is terrific. The leading grading services have combined to certify a total of eight 1858 three dollar gold pieces in proof format, undoubtedly containing some resubmissions and crossovers. This piece is the single-finest certified example at PCGS, and is numerically tied with two other coins at NGC for finest known (11/14). Advanced collectors and Registry Set enthusiasts should bid accordingly. Housed in a green label holder.

*Ex: Ed Trompeter Collection (Superior, 2/1992), lot 100. NGC ID# 289W, PCGS# 8021*

## 1875 Three Dollar Gold Piece, PR64 Cameo Classic Proof-Only Gold Rarity Only 20 Examples Struck

**4266 1875 PR64 Cameo NGC. CAC.** The 1875 three dollar gold piece is a prime rarity in the series and examples are hotly pursued by collectors whenever a specimen becomes available. According to Mint records, only 20 proof three dollar gold pieces were produced in 1875, making the coins rare from the day they were struck. Demand for the issue has always been especially strong because no business-strike examples were minted. The entire mintage was acquired by eager numismatists at the time of issue, and it seems few, if any, specimens have been lost over the years. Prominent coin dealer Thomas Elder commented on this situation in the description for lot 1165 of his William H. Woodin Collection (Elder, 3/1911):

“1875. Ranks next in rarity to the 1870-S. Only 20 pieces were struck. Fortunately most of these got into the hands of collectors, or this date would have been as lost in oblivion as the 1894-S dime.”

The 1875 three dollar gold piece has always done well in its many auction appearances, and it was the first coin to break the \$100,000 barrier when the Ulmer example sold for \$150,000 in 1974. Recently, at least two coins have realized prices in excess of a quarter of a million dollars.

Because of its popularity, the 1875 has appeared at auction frequently over the years, and examples are always featured prominently in the catalogs. This high visibility has led many researchers, like David Akers and Walter Breen, to believe that more than 20 specimens were extant in modern times. Breen postulated that a small number of restrikes were produced at a later time, to satisfy collector demand, but Akers believed more coins were simply struck later in the same year. Q. David Bowers and Doug Winter estimated 28-35 examples survived in all grades in their excellent 2005 series reference.

Recent research has reversed this thinking to some extent. NGC and PCGS have combined to certify 23 examples in all grades and degrees of contrast (11/14). Accounting for the usual number of resubmissions and crossovers, we suspect this total actually represents fewer than 20 coins. PCGS CoinFacts agrees, estimating the surviving population at a very reasonable 17-20 examples all told. In our roster below, compiled from auction records over the years, we account for exactly 20 coins which we believe to be different specimens, but the coins look so much alike, with many surface features in common, that we would not be surprised to learn that some of these citations represent the same example. Our roster coincides well with the PCGS estimate, in any case. In view of these findings, it may well be that no unrecorded later mintage of this issue ever took place.

The present coin is a delightful Choice example, with well-preserved orange-gold surfaces that show minimal hairlines and the often-seen halo effect around the portrait. The design elements are sharply detailed and moderately frosted, providing bold cameo contrast with the deeply reflective fields. Eye appeal is terrific. One of the premier rarities in the American gold series, we expect intense competition when this lot is called. Census: 2 in 64, 2 finer (11/14).

### Roster of 1875 Proof Three Dollar Gold Pieces

- 1. PR66 Ultra Cameo NGC.** Jeff Browning; Dallas Bank Collection (Sotheby's, 10/2001), lot 345; FUN Signature (Heritage, 1/2004), lot 3014; Dr. Robert J. Loewinger Collection (Heritage, 1/2007), lot 3123, realized \$218,500; Baltimore Auction (Stack's Bowers, 11/2010), lot 5041, realized \$253,000.
- 2. PR65 Deep Cameo PCGS.** Richmond Collection, Part I (David Lawrence, 7/2004), lot 1288; Dallas Signature (Heritage, 11/2006), lot 2148, realized \$253,000.
- 3. PR65 Cameo NGC.** Heman Ely; W. Elliot Woodward; purchased by T. Harrison Garrett in 1883; Robert Garrett; John Work Garrett, Johns Hopkins University; Garrett Collection (Stack's, 3/1976), lot 455; Auction '90 (David Akers, 8/1990), lot 1775; Dennis Mendelson Collection (Superior, 2/1991), lot 2735; Michael Keston Collection (Superior, 1/1996), lot 61; New York Connoisseur's Collection (American Numismatic Rarities, 3/2006), lot 1526; Denver ANA Auction (Bowers and Merena, 8/2006), lot 4176.
- 4. PR65 PCGS.** FUN Signature (Heritage, 1/2001), lot 8164; Exclusively Internet Auction (Heritage, 4/2001), lot 3424; Atlanta Signature (Heritage, 8/2001), lot 7743.
- 5. PR64 Ultra Cameo NGC.** FUN Signature (Heritage, 1/2007), lot 3479.
- 6. PR64 Cameo NGC.** Rarities Sale (Bowers and Merena, 7/1997), lot 357; Atlanta Signature (Heritage, 8/2001), lot 7744; **the present coin.**
- 7. PR64 Cameo NGC.** ANA National Money Show (Heritage, 3/1998), lot 6412; FUN Signature (Heritage, 1/2005), lot 8784.
- 8. PR64 PCGS.** Grant Pierce Collection (Stack's, 5/1965), lot 1262; Charles Jay Collection (Stack's, 10/1967), lot 287; Theodore Ulmer Collection (Stack's, 5/1974), lot 421; Harley Freeman Collection (RARCOA, 5/1977), lot 399; Auction '81 (RARCOA, 7/1981), lot 418; Ed Trompeter; Trompeter Collection (Superior, 2/1992), lot 118; Dallas Signature (Heritage, 11/2006), lot 2147.
- 9. PR64.** William Cutler Atwater Collection (B. Max Mehl, 6/1946), lot 1901; Amon G. Carter, Sr.; Amon Carter, Jr.; Amon G. Carter Family Collection (Stack's, 1/1984), lot 610; Auction '85 (Superior, 7/1985), lot 936; Buddy Ebsen Collection (Superior, 5/1987), lot 2419; Charles Kramer Collection (Stack's/Superior, 11/1988), lot 269.
- 10. PR64 PCGS.** Lorin G. Parmelee Collection (New York Coin & Stamp, 6/1890), lot 1398; Lincoln T. Seagrave; C.S. Wilcox Collection (S.H. & H. Chapman, 11/1901), lot 150; John H. Clapp; Clapp Estate; Louis E. Eliasberg, Sr. in 1942, via Stack's; United States Gold Coin Collection (Bowers and Ruddy, 10/1982), lot 301; Harry W. Bass, Jr.; Bass Collection, Part II (Bowers and Merena, 5/2000), lot 283; FUN Signature (Heritage, 1/2012), lot 4818, realized \$218,500.
- 11. PR64 PCGS.** Rarities Sale (Bowers and Merena, 7/2002), lot 759; Richard Jewell Collection (American Numismatic Rarities, 3/2005), lot 644.

- 12. Choice Brilliant Proof.** Henry Chapman; Albert Holden, circa 1908; Norweb Collection, Part I (Bowers and Merena, 10/1987), lot 721; Auction '88 (David Akers, 7/1988), lot 880; Public Auction Sale (Stack's, 3/1994), lot 1480.
- 13. Choice Brilliant Proof.** Western Collection (Stack's, 12/1981), lot 1121; ANA National Money Show (Stack's, 3/2002), lot 1089; Pre-Long Beach Sale (Goldberg, 2/2006), lot 1053.
- 14. Choice Brilliant Proof.** Public Coin Auction (Stack's, 10/1986), lot 911; Public Auction Sale (Stack's, 9/1994), lot 1095.
- 15. Choice Brilliant Proof.** Byron Reed; Omaha City Library; Durham Western Heritage Museum; Byron Reed Collection (Christie's/Spink America, 10/1996), lot 174; 70th Anniversary Sale (Stack's, 10/2005), lot 1218.
- 16. PR60 PCGS.** Charles L. Mackenzie Collection (Stack's, 10/1965), lot 1030; Public Auction Sale (Kreisberg/Schulman, 5/1966), lot 1686; 10th Anniversary Auction (Kreisberg/Schulman, 4/1967), lot 720; Mail Bid Sale (Kreisberg/Cohen, 6/1970), lot 1654; Public Auction Sale (Quality Sales, 11/1972), lot 1141; Carl Carlson; Carlson/Shipkey Collection (Kreisberg, 11/1976), lot 45; Long Beach Signature (Heritage, 10/1989), lot 1053; Cornerstone Sale (Mid-American, 8/1991), lot 681; Heck Dodson Collection (Mid-American, 5/1992), lot 1622; Dr. Jon Kardatzke Collection (Ira and Larry Goldberg, 6/2001), lot 1267; Pre-Long Beach Sale (Goldberg, 9/2011), lot 2001.
- 17. Brilliant Proof.** United States and Foreign Coins and Medals (Sotheby's, 7/1997), lot 292.
- 18. PR64 Cameo.** Mint Cabinet; National Numismatic Collection, Smithsonian Institution.
- 19. PR64 Cameo.** Josiah K. Lilly; Smithsonian Institution.
- 20. Proof.** R.C.H. Brock; J.P. Morgan; American Numismatic Society, exhibited at the 1914 ANS Exhibition.

#### Additional Appearances

- A. Proof.** Thomas Cleneay Collection (S.H. & H. Chapman, 12/1890), lot 426, part of a six-piece complete gold proof set.
- B. Proof.** A specimen purchased by Virgil Brand from Charles Steigerwalt on June 28, 1895.
- C. Proof.** William B. Wetmore Collection (S.H. & H. Chapman, 6/1906), lot 158, part of a six-piece complete gold proof set; possibly William Forrester Dunham Collection (B. Max Mehl, 6/1941), lot 2047.
- D. Proof.** David S. Wilson Collection (S.H. Chapman, 3/1907), lot 335, part of a four-piece partial gold proof set, realized \$460 to Henry Chapman.
- E. Proof.** 34th Sale (Thomas Elder, 11/1909), lot 388a, realized \$530.
- F. Proof.** William H. Woodin Collection (Elder, 3/1911), lot 1165.
- G. Proof.** James Ten Eyck Collection (B. Max Mehl, 5/1922), lot 145.
- H. Proof.** J.F. Bell Collection (Stack's, 12/1944), lot 292; Louis E. Eliasberg, Sr.; H.R. Lee Sale (Stack's, 10/1947), lot 1192.
- I. Proof.** F.C.C. Boyd; World's Greatest Collection (Numismatic Gallery, 1/1946), lot 290.
- J. Proof.** Memorable Collection (Numismatic Gallery, 3/1948), lot 261.
- K. Brilliant Proof Gem.** "Colonel" E.H.R. Green; Jerome Kern Collection (B. Max Mehl, 5/1950), lot 221; ANA Convention Auction (Jim Kelly, 8/1951), lot 794C. "Colonel" Green owned at least three more specimens of the 1875 three dollar gold piece in addition to this coin, according to F.C.C. Boyd's inventory of his collection.
- L. Brilliant Proof.** King Farouk; Palace Collections of Egypt (Sotheby's, 2/1954), lot 268; Abe Kosoff.
- M. Gem Brilliant Proof.** Dr. Clifford Smith Collection (Stack's, 5/1955), lot 1638.
- N. Brilliant Proof.** Farish Baldenhofer Collection (Stack's, 11/1955), lot 1179.
- O. Brilliant Proof Gem.** Thomas Melish Collection (Abe Kosoff, 4/1956), lot 1399; Art Kagin.
- P. Brilliant Proof.** Rinaldi; Delta Sale (Stack's, 9/1961), lot 244; R.L. Miles Collection (Stack's, 10/1968), lot 294; Dr. E. Yale Clark Collection (Stack's, 10/1975), lot 22.
- Q. Brilliant Proof.** Samuel Wolfson Collection, Part I (Stack's, 10/1962), lot 303; ANA Convention Auction (Abe Kosoff, 8/1968), lot 1540.
- R. Brilliant Proof.** Dr. Calvert L. Emmons Collection (Stack's, 9/1969), lot 1043.
- S. Proof.** Mail Bid Sale (Kreisberg, 11/1970). Catalog not available for comparison.
- T. Brilliant Proof.** Carter Collection (Stack's, 1/1986), lot 134.
- U. PR64 Ultra Cameo NGC.** Tuesday Internet Coin Auction (Heritage, 5/2007), lot 13559; Sunday Internet Auction (Heritage, 7/2007), lot 24373. NGC ID# 28AH, PCGS# 88039

### 1885 Three Dollar Gold, PR66 Cameo Stellar, Deeply Mirrored Proof

**4267 1885 PR66 Cameo NGC.** Proof three dollar gold piece mintages began increasing after 1880, and 109 examples were produced in 1885. This is still a paltry mintage compared to later dates in the series, but the 1885 stands as one of the more readily obtainable proof issues overall, ideal for the collector seeking a single representative of this popular type. It is believed that up to 70 or 80 examples survive in all grades, or about 70 percent of the original mintage. The NGC and PCGS combined certified population of 137 pieces — far more than were actually struck — is drastically inflated by resubmissions.

The business strike issue of this year also had a low mintage of just 801 pieces, most of which are deeply prooflike and are sometimes mistaken for proofs. The proofs, however, can be easily differentiated by recutting on the 3 on the reverse. This piece, therefore, is confirmed to be a proof. Beautiful, deep mirrors provide pronounced backlighting for the razor-sharp, frosty devices. Warm honey-gold patina blankets both sides, yielding a few deeper, coppery hues periodically in the fields. Field-device contrast is pleasing, and the overall appeal is remarkable. NGC has certified only four Cameos in PR66 (1 in PR66 ★), with just four PR67 examples numerically finer (11/14). NGC ID# 28AU, PCGS# 88049

**1887 Three Dollar, PR65 Cameo  
Reverse Rotated 180 Degrees  
A Fabulous Undertype**

**4268 1887 — Reverse Rotated 180 Degrees — PR65 Cameo NGC. CAC.** This curious rotated striking on a proof gold coin is unique to this issue. It was discovered by Walter Breen in 1965 while he was cataloging for Lester Merkin. Over the next 11 years, Breen examined 21 other proof 1887 threes, but found only two others with the rotated reverse. The explanation is found in the method of striking proofs of this year. Some were struck with the traditional 180 degree rotation, some were struck in medallion alignment, and some were first struck in medallion alignment and then put back in the press and recoined with the correct alignment, and a few (like this one) were recoined with a 160 degree rotation. Distinct traces of the first (medallion) strike shows with 1887 seen between 3 and DOLLARS, DOLLARS is located between the dominant DOLLARS and the dominant date, and the bottom of the first faint 3 is located between the dominant 1887 and the wreath. The literature states pieces such as this one are struck with a 160 degree rotation, but we believe that is a bit too much. The easiest method to discern the rotation is on the obverse. The letters in UNITED STATES OF AMERICA are only slightly rotated, perhaps 5 degrees. A distinct outline can be seen to the right of UNI and ICA.

Of the 160 proofs struck in 1887, it is estimated that only 90 to 120 examples are known in all grades. No reliable estimates are known of how many rotated reverse proofs are extant. This is a deeply reflective proof three dollar with a strong presence of mint frost over the devices. There are no noticeable or mentionable contact marks on either side. NGC ID# 28AW, PCGS# 88051

### 1795 Capped Bust Right Five, Unc Details First Year of Gold Coinage, BD-1 Variety

**4269** 1795 Small Eagle, BD-1, R.5, — Improperly Cleaned — NGC Details. **Unc.** Ex: Hilt Collection. Bass-Dannreuther Die State a/a. Mint records indicate 8,707 Capped Bust Right half eagles were struck in 1795, the first year gold coins were produced at the United States Mint. The date is known with both Small Eagle and Heraldic Eagle reverse designs, but the Heraldic Eagle coins were undoubtedly struck a few years later, after that design was adopted in 1797. Twelve different die varieties are known with the Small Eagle reverse. This coin represents the scarce BD-1 variety, with the flag of the 5 overlapping the bust and the point of star 15 in the drapery. The surviving population for the BD-1 variety probably numbers 40-50 examples in all grades, and the issue probably accounted for 750-1,500 pieces of the original mintage.

The present coin is from a rarely seen early state of the dies, without the die crack through the 9 in the date. The design elements are sharply detailed and the bright greenish-gold surfaces show only minor signs of contact. The overall presentation is quite pleasing, despite the noted cleaning.

*From The Liberty USA Collection.*

## EARLY HALF EAGLES

## 1795 Small Eagle Five Dollar, MS64 Rare and Important BD-1 Variety Deeply Prooflike Fields

**4270 1795 Small Eagle, BD-1, R.5, MS64 NGC.** Bass-Dannreuther Die State c/b. Half eagle production began in mid-1795, and the first delivery of new coinage to the Mint treasurer was on July 31, in the amount of 744 coins. Production of this denomination from July through September amounted to 8,707 coins, all dated 1795, issued to the treasurer in nine deliveries. Eight obverse and eight reverse dies were used, paired for twelve individual varieties. A careful study of the likely emission sequence, as supported by die states, strongly suggests that BD-1 was almost certainly the first variety produced of this denomination, and likely composed all or at least most of the first 744-coin delivery in July. John Dannreuther, writing in *Early U.S. Gold Coin Varieties*, reaches this conclusion as well:

“Harry Bass concluded that this was the first variety struck of the 12 Small Eagle 1795 issues. Rust on both dies may be due to the delay in striking gold coins, noted elsewhere, due to the high bonds that had to be reduced and posted by three Mint officials. Adams, Woodin, Newcomer, and Mabbott also listed this variety first. ... This variety does fit the characteristics expected for the first variety struck, i.e., one of the four wide date dies (used for BD-1 to 6), 4 reverse berries, and so on.”

Walter Breen thought BD-4 was likely the first variety struck in July, but die state evidence clearly debunks that theory, as BD-4's obverse die is now known to have two previous uses in BD-2 and BD-3. BD-2 shares its reverse die with BD-1, but on BD-1 the reverse is in an earlier die state than on BD-2, which proves that BD-1 was coined earlier, consistent with the virtually unanimous conclusion that BD-1 was in fact the first half eagle variety struck by the United States Mint.

In terms of rarity, BD-1 is about in the middle when compared to the other 11 1795 Small Eagle varieties, with only 40 to 50 examples believed known. It ranks substantially rarer than the most frequently seen variety, BD-3, of which 175 to 225 examples are believed extant. This piece is not quite the finest known of the variety (at least one Premium Gem representative is accounted for), but it is firmly within the condition census.

Deeply prooflike fields and subtly contrasted, frosty devices are the hallmarks of this piece, showcasing eye-catching yellow-gold luster with faint overtones of deeper honey and peach hues. The strike is well-centered and sharp throughout the peripheral relief elements, while the only hint of weakness on the central devices is seen on the eagle's right (facing) leg, which is slightly soft in comparison to the surrounding plumage. Noticeable abrasions are almost nonexistent, with only a few minor marks in the mirrored fields precluding a full Gem grade. A small, semicircular lint mark in the field below the B in LIBERTY serves as a pedigree identifier, and the variety's diagnostic die rust is observed over the lower-left portion of the bust and in the field near the F in OF.

Half eagle production preceded eagle coinage by about three months, making the BD-1 half eagle variety the first gold issue struck at the Philadelphia Mint. The present example is an exceptional piece in not only strike and aesthetic appeal, but also in United States numismatic historical importance. Such a high-end example of this rarity may not become available again for a very long time. Census, all varieties included: 3 in 64, 7 finer (11/14).

*Ex: A Gentleman's Collection (American Numismatic Rarities, 6/2005), lot 1009. PCGS# 519849 Base PCGS# 8066*

**1795 BD-1 Half Eagle, MS66 ★**  
**The First Gold Coin Design Issued by the United States Mint**  
**The Single-Finest-Certified 18th Century Five Dollar Gold Piece**

**4271 1795 Small Eagle, BD-1, R.5, MS66 ★ NGC.** Bass-Dannreuther Die State c/b. This magnificent 1795 gold piece is not just the finest-certified 1795 half eagle seen by either of the leading grading services, it is the single finest graded United States five dollar gold piece with a pre-1800 date. In addition to its unmatched state of preservation, this coin possesses unparalleled historical significance. This is the famous BD-1 variety, widely recognized as the first variety of the first gold coin issued by the United States Mint, and delivered in a batch of just 744 examples on July 31, 1795. As such, this is arguably the most historically important regular issue United States gold coin.

**Breathtaking Quality**

In addition to its unmatched numerical grade, this awe-inspiring Gem has earned the NGC Star designation for its exceptional quality and eye appeal. Both sides display brilliant lemon-yellow mint color with a hint of pale orange that is visible when the coin is tilted under strong light. A razor-sharp strike boldly defines all the design elements, and the surfaces are pristine and nearly flawless. Perhaps most important and noteworthy are the fully prooflike fields on both the obverse and reverse.

**Highly Sought-After and Historically Important BD-1 Variety**

Harry W. Bass, Jr., John Dannreuther, and the present cataloger all consider the BD-1 to be the first half eagle variety struck. The Bass-Dannreuther reference estimates that just 40-50 examples of the BD-1 variety exist in all grades.

There are three stages of each die for BD-1. The obverse has a crack at the 9, from the border to the drapery in the early state; an additional crack through the tops of TY in the middle state; and die lapping in the late state. The reverse is perfect in the early state; lapped in the middle state; and relapped in the late state.

This middle die state Premium Gem shows evidence of heavy die rust at the lower left obverse, with a die crack from the border to drapery, that grazes the left side of the 9 in the date. Another crack connects the tops of TY, and a third crack joins stars 11 and 12 to the border. The reverse has slight signs of lapping where the left facing wing joins the eagle's body. Otherwise, there are no signs of clash marks or die cracks. The small patch of die rust at the top right corner of the F in OF appears on all known examples, to the best of our knowledge. This example is a slightly later die state than the coin in the Harry W. Bass, Jr. Core Collection, plated in the Bass-Dannreuther reference.

In addition to Bass and Dannreuther; numismatic experts Adams, Woodin, Newcomer, and Mabbott also listed this BD-1 die pair first in their variety studies. Walter Breen gave that honor to the BD-4 S over D variety. However, die state evidence clearly disproves BD-4 as first of the half eagles.

**The First United States Gold Coins**

The 1795 \$5.00 Half Eagle was the very first gold coin struck by the United States Mint and the first delivery occurred on July 31, 1795. This was nearly three months before the first delivery of 1795 ten dollar gold pieces, which took place on September 22, 1795.

Mint records show the following quantities of half eagles delivered from the chief coiner to the Mint treasurer on 14 specific dates during the 17 months from July 31, 1795 to December 22, 1796. The 14,903-coin total of the 1795 and 1796 deliveries is thought to be the actual mintage of the 13 varieties bearing those two dates.

July 31, 1795 - 744		
August 11, 1795 - 520	September 3, 1795 - 1,054	September 21, 1796 - 273
August 14, 1795 - 1,000	September 12, 1795 - 2,400	December 8, 1796 - 2,460
August 18, 1795 - 105	September 16, 1795 - 870	December 22, 1796 - 337
August 21, 1795 - 380	June 28, 1796 - 780	
September 1, 1795 - 1,634	July 27, 1796 - 2,346	

The concept of a correlation between die varieties and delivery dates is not new, but it relies on factors that are extremely difficult to pinpoint. After considering all the evidence, the cataloger believes that this piece, from the first die pairing, was probably one of the 744 coins in the very first delivery of half eagles on July 31, 1795, and therefore one of the very first 1795 five dollar gold pieces produced in the United States Mint.

### A Transcendent Rarity

The 1795 five dollar gold piece has always been highly sought after by advanced collectors who desire an example of the first gold coin design issued by the United States Mint. Perhaps more importantly, the unsurpassed desirability and historical importance of this magnificent example can also be easily understood and appreciated by virtually anyone outside of numismatic circles.

PCGS and NGC began authenticating and grading United States coins 29 years ago. This is a chance to acquire the finest graded example — by either service — of the first gold coin ever issued by the United States Mint AND the finest graded five dollar United States gold piece with a pre-1800 date. As such, the next owner of this coin will gain much enjoyment and satisfaction of ownership now ... and an appreciation for this amazing rarity is sure to grow with the passing of time. The discerning collector should bid accordingly. PCGS# 519849 Base PCGS# 8066

**1795 Five Dollar, AU55+  
Small Eagle, BD-2  
Better First-Year Variety**

**4272** 1795 Small Eagle, BD-2, R.6, AU55+ NGC. Ex: Hilt Collection. A rare variety with just 20 to 25 pieces known. Stars 11 is crowded and overlaps both the Y in LIBERTY and its neighbor star. Likely, it was the final element impressed on the obverse die, except for the date. On the reverse, a leaf fragment floats above the wreath. An impressive honey-gold example of this very scarce introductory type. The obverse is very close to Mint state, since the hair and shoulder are unworn, and the cap has only a hint of wear on the folds. The high points of the eagle display moderate wear. Luster illuminates design elements. A minor lamination (as made) is apparent near the lower leaves of the branch. Relatively unabraded except for a slender diagonal mark on the right obverse field and lesser thin marks left of the wreath and above the O in OF.

From *The Liberty USA Collection*. PCGS# 519851 Base PCGS# 8066

**1795 Half Eagle, BD-4, AU Details  
Elusive First-Year Variety**

**4273** 1795 Small Eagle, BD-4, R.5 — Cleaning — PCGS Genuine. AU Details. Bass-Dannreuther Die State c/a. BD-4 is one of the more plentiful of the 12 1795 half eagle varieties, though its availability is only in relation to other rare early gold issues, as just 60 to 75 examples are believed extant in all grades. With such a low survival rate being among the higher for the issue, one begins to realize the scarcity of early gold varieties overall. BD-4 is the third and final use of this obverse die and the only use of this reverse, though a terminal die state surprisingly is not known for this variety. This example is unnaturally bright, due to old cleaning, though the yellow-gold patina is not much different in appearance than that of most other gold issues from this period. The extreme centers are not fully struck up, but actual wear is minimal. Some faint, old adjustment marks remain visible in the left obverse field upon close examination. PCGS# 519853 Base PCGS# 8066

**1795 Five Dollar, AU53  
Small Eagle, BD-4**

**1795 BD-6 Half Eagle, AU50  
Small Eagle, S Over D Blunder**

**4274** 1795 Small Eagle, BD-4, R.5, AU53 NGC. Ex: Hilt Collection. William H. Woodin, eventually the Secretary of Treasury under President Franklin Roosevelt, amassed an imposing coin collection, including 14 different die varieties of 1795 half eagles. Others who collected early gold by variety during the 20th century, prior to published plated die marriage references of the series, included Waldo C. Newcomer, Harry W. Bass, Jr., and Robert Hilt. Despite its scarcity relative to BD-3, the BD-4 marriage was likely in all those holdings, since the variety is promptly attributed by the placement of the wreath directly beneath the O in OF. The present orange-gold example displays substantial luster, and is well defined aside from minor incompleteness at the centers. Liberty's hair has minor adjustment marks, and the fields display the expected number of small marks and hairlines.

*From The Liberty USA Collection. PCGS# 519853 Base PCGS# 8066*

**4275** 1795 Small Eagle, S Over D, BD-6, R.5, AU50 NGC. Ex: Hilt Collection. BD-5 and BD-6 share the blundered reverse die with the second S in STATES entered over a D. Presumably, the inattentive engraver confused STATES with UNITED. No attempt was made to efface the D, and its curve, upright, and serifs are prominent. The variety is mentioned in the *Guide Book* but does not receive a separate line listing. BD-5 is very rare, and collectors that seek the S over D variety nearly always select an example of BD-6. The present example has wheat-gold centers and rose-red borders. Tiny marks are peppered throughout but none are of individual significance. An opportunity to acquire a better grade blundered legend representative.

*From The Liberty USA Collection. PCGS# 519855 Base PCGS# 8066*

## 1795 Large Eagle Five Dollar, AU55 Rare BD-14 Variety Only 14-18 Pieces Believed to Exist

**4276** 1795 Large Eagle, BD-14, High R.6, AU55 NGC. Ex: Hilt Collection. Bass-Dannreuther Die State c/c. Variety collectors need examples of just three die pairs to complete the 1795 Large Eagle five-dollar gold subset, but it is one of the most challenging tasks in numismatics. The most available of the three varieties is the BD-15 die pair, with perhaps 35 pieces known. The current coin is a BD-14 example, with slightly more than a dozen coins known — itself a renowned rarity among early half eagles. All pale in comparison, however, to the BD-13 Large Eagle five, which is unique and always a “stopper.”

The BD-14 variety shares the same reverse with the ultra-rare BD-13 Large Eagle five. The obverse shows a different orientation on star 10, where two points nearly touch the cap. Star 1 touches the lowest curl from behind, and the 1 in the date touches the curl on the opposite side. The date is narrow with an upright 5.

Outstretched wings of the Large Eagle motif frame 16 field stars that form a jumbled pattern that is diagnostic of the reverse. An important die crack at MERICA is light but visible, its presence suggesting the BD-14 variety was struck after the BD-13 variety, rather than before as some have proposed. The existence of a reverse without this crack would change current thinking about the emission sequence.

The original appeal of this BD-14 example is outstanding. Orange-gold accents complement light, olive-gold patina. Bold detail remains on both sides of the coin. Glints of mint luster glow softly over the smooth, minimally marked surfaces of this Choice About Uncirculated half eagle.

*From The Liberty USA Collection. PCGS# 519868 Base PCGS# 8075*

**1795 Half Eagle, AU53  
BD-15, Large Eagle Reverse  
Preferred Variety for Type**

**4277** 1795 Large Eagle, BD-15, High R.5, AU53 NGC. Ex: Hilt Collection. Bass-Dannreuther Die State b/c. The 1795 Heraldic Eagle (or Large Eagle) five dollar gold pieces were all struck in mid-to-late 1797 or possibly in 1798. The issue was certainly struck after the 1797 BD-5 coins according to the Bass-Dannreuther reference, but the exact striking sequence is unknown. Perhaps as many as 500 to 1,000 pieces were struck of the BD-15 die pair, but only 30 to 35 pieces are estimated to survive.

The date is recut, most obviously on the 1(7)95. The 9 is positioned lower than the other numerals. On the reverse, the A of AMERICA is diagnostic, sitting on wing feather four unlike any other 1795 Large Eagle variety. Multiple die breaks are seen through and around the eagle's tail. The obverse die state is confirmed by a lengthy crack that starts at the edge near star 10 and proceeds down through the hat, hair, and to the neck.

No 1795 Large Eagle fives appear at auction with any frequency, although the occasional opportunity does arise. When it comes, the chances are it will be an offering of the BD-15 variety to be pursued not only by date and variety collectors, but also by those who need a 1795 example for type.

Sharp detail remains throughout the surfaces of this appealing, green-gold coin. The fields display prooflike character — especially on the margins surrounding the stars and legend. Liberty's cap and hair strands are boldly detailed. The eagle is a bit weak at the head, neck, and scroll center, although it is normal softness for the assigned grade. The wings and wingtips, shield, and talons are crisp and frosted. The fields and devices show only minor abrasions commensurate with the About Uncirculated designation. Early gold specialists of all inclinations will be on high alert when this attractive lot is called.

*From The Liberty USA Collection. PCGS# 519869 Base PCGS# 8075*

## 1796/5 BD-1 Half Eagle, AU53 Attractive Surfaces

**4278** 1796/5 BD-1, High R.4, AU53 NGC. Ex: Hilt Collection. The 1795 dies were coined into 1796, and only a single 1796-dated die variety is known. It is an overdate, with the crossbar and knob of a 5 partially evident. A similar situation exists with the ten dollar denomination, which has multiple 1795 marriages and just one 1796 variety. This 1796/5 half eagle has honey-gold toning and numerous pockets of mint luster. The high points display light wear, but marks are minor for the grade, and only a brief vertical line left of the wreath merits passing mention.

*From The Liberty USA Collection. PCGS# 519862 Base PCGS# 8067*

**1797 Small Eagle, 15 Stars Five Dollar  
Well-Defined AU53  
A Nice Coin for an Advanced  
Type Collection  
Very Rare B-2 Variety**

**4279** 1797 Small Eagle, 15 Stars, BD-2, R.7, AU53 NGC. Ex: Hilt Collection. The following identification markers confirm the variety: a narrow date, date spaced 1 797, the flag of 1 in the date and the point of star 1 are near the curls, 1 is centered over a dentil, there are 15 obverse stars, and the reverse wreath has one berry on the outside left. BD die state: Obverse State a, no clashing, lapping, or cracks; Reverse State d, a heavy crack from the edge runs through I in UNITED to base of left (facing) wing to the right (facing) wing tip; a vertical crack runs from the edge through the leaves and branch to the right (facing) leg; and another travels from the edge through the right part of E in STATES, the wreath to the eagle's head.

The Capped Bust to Right Small Eagle Reverse was struck from mid 1795 through early 1798, after which the Small Eagle was changed to the Heraldic Eagle. The estimated mintage of the Small Eagle design type is 17,555 pieces, and the PCGS website estimates that 500 to 600 examples are known (11/14). Demand from type collectors has made this series very popular. BD-2 is one of the rarest varieties in the series with eight to 12 pieces known (Dannreuther, 2006).

The present AU53 offering displays bright yellow-gold surfaces that retain traces of luster in the recessed areas. The design elements are well-defined, including Liberty's hair and drapery and most of the eagle's wing plumage. Some feather detail is also visible on the breast and legs, while the head and neck are weak as usually seen. Distributed marks are visible on both sides, more so on the obverse. Adjustment marks are completely lacking. This is an excellent choice for a high-grade, advanced type collection of U.S. coinage.

*From The Liberty USA Collection. PCGS# 519864 Base PCGS# 8069*

### 1797 Capped Bust Right Five, AU Details Rare 16 Stars, BD-3 Variety

**4280** 1797 Small Eagle, 16 Stars, BD-3, R.6 — Obverse Repaired — NGC Details. AU. Ex: Hilt Collection. Bass-Dannreuther Die State a/c. Only 3,609 Capped Bust Right, Small Eagle half eagles were minted in 1797, with four die varieties known for the date and type. Some 1797-dated half eagles were struck with the Heraldic Eagle reverse later in the year (or possibly in 1798). This coin represents the BD-3 variety, with 16 stars on the obverse and two berries outside the wreath on the reverse. All the varieties of this date are rare, and the BD-3 has a surviving population of just 20-25 pieces in all grades. This was the only use of the reverse die, but the obverse was also used to strike the BD-4 Small Eagle and the extremely rare BD-5 Heraldic Eagle varieties of this date.

The coin offered here is a pleasing example of this rare issue, with lightly abraded surfaces that retain significant amounts of original mint luster and just a trace of wear on the well-detailed design elements. Evidence of minor repair is evident in Liberty's lower curls. *From The Liberty USA Collection.* PCGS# 519865 Base PCGS# 8068

**1797 Small Eagle Five, BD-3, 16 Stars, MS61**  
**The Sole Finest Certified at NGC**  
**Only 20 to 25 Examples Believed Known**

**4281 1797 Small Eagle, 16 Stars, BD-3, R.6, MS61 NGC.** Ex: Hilt Collection. Bass-Dannreuther Die State a/c. The Hilt specimen is from an earlier stage of this late die state than was the similarly attributed Bass coin that was offered in Bowers and Merena's October 1999 sale of the Harry W. Bass, Jr. Collection, Part II. The heavy crack from the lower rim to the eagle's right (facing) leg and the lighter crack from the tailfeathers to the second A in AMERICA are both present, but the other two cracks - through the M in AMERICA and between the IT in UNITED - are not yet formed. This stage is very similar to that of the Josiah Lilly coin in the Smithsonian Institution, also a die state a/c representative. The other Smithsonian example of this variety, the Mint Cabinet coin, is in a much later, terminal stage of this final die state. No perfect die state coins are currently known, and it is likely that the first reverse crack - from the eagle's tailfeathers to the bottom edge of the wing - occurred during the hardening process.

BD-3 is an extremely rare variety in the absolute sense, but it is remarkably one of the more plentiful varieties of the 1797 half eagle. There are seven varieties known, including four Small Eagle die marriages and three Large Eagle pairings (the Large Eagle coins were possibly struck in 1798 - it was a common practice at the early Mint to use production dies well into the next year if they were still serviceable, thus reducing manufacturing costs). Of the Small Eagle varieties, BD-4 - unique - is the undisputed rarest, followed by BD-2 with eight to 12 pieces believed known, and then by BD-1 with 10 to 15 coins extant and BD-3 with 20 to 25 examples known (including the two pieces permanently housed in the Smithsonian Institution). The Large eagle varieties are even rarer, with BD-5 and BD-6 each represented by just one coin, and BD-7 surviving in a total of only 16 to 20 pieces. This makes a total of just 57 to 75 1797-dated half eagles known in all varieties and all grades, with the Small Eagle type represented by just 39 to 53 pieces, all varieties included. It is little wonder, then, that the offering of any 1797 half eagle at auction draws substantial bidder attention from not only variety specialists, but also type and date collectors, even if the coin is of one of the more "plentiful" varieties, such as this BD-3 representative.

This is the first of three uses for this obverse die, which was later employed for the unique BD-4 Small Eagle variety and then again for the also unique BD-5 Large Eagle die marriage. This is also the only 1797 obverse with 16 stars, the extra star apparently added to a 15 star obverse below the hair curl near the date to recognize Tennessee's admission into the Union as the 16th state. It became apparent, however, that the rapidly growing country would not permit the coins to accurately exhibit one star for each state, and shortly after this the number of stars was reduced to a fixed total of 13, representing the 13 original colonies. This reverse die is seen here in its only use, as the connecting die cracks that develop quickly in the late die state ultimately proved terminal.

Our archives show just six prior appearances of this variety, out of only nine 1797 Small Eagle fives offered in the past 10 years. The last example, offered in our 2014 FUN Signature sale, was only a net-graded XF coin. The last time we had the pleasure of offering a Mint State example of this rare variety was back in our June 2004 Long Beach sale, where an NGC MS60 coin brought \$126,500. This piece is both technically and visually superior to that coin, showcasing original honey-gold patina with deeper coppery-orange overtones. The eagle's breast and the central hair curls are not fully brought up, but the remainder of the devices and the peripheral stars are sharply struck, set against substantial semiprooflike mirroring in the fields. To see this amount of reflectivity on such a late die state coin might normally be unusual, but this reverse failed early in the dies' usage, and the surfaces were never worn to the point of producing distinctive mint frost. No obtrusive abrasions are present, and we instead note just some minor, evenly dispersed chatter in the fields as being the cause for the MS61 grade from NGC.

This piece is decidedly one of the finest Small Eagle 1797 half eagles we have ever offered, and is also distinctive as the finest BD-3 representative we have handled. NGC reports having certified just seven examples of this 16-star obverse variant, with just two in Mint State and the present coin being the sole finest; PCGS reports another MS61 example, but it is uncertain if that is in fact a different coin (11/14).

Few opportunities to bid on this date let alone this variety, ever surface. The serious specialist should bid accordingly to secure this truly remarkable early gold rarity.

*From The Liberty USA Collection. PCGS# 519865 Base PCGS# 8068*

**1797/5 Half Eagle, BD-7, 15 Stars, MS61  
Extremely Rare Large Eagle Variety  
Only 16 to 20 Pieces Believed Known  
Tied for Finest Certified**

**4282 1797/5 Large Eagle, 15 Stars, BD-7, High R.7, MS61 NGC.** Ex: Hilt Collection. Bass-Dannreuther Die State b/d, terminal. BD-7 is the only collectible of the three known Large Eagle 1797 half eagle varieties, as BD-5 and BD-6 are both represented by just a single specimen, which are both permanently housed in the Smithsonian Institution. While technically obtainable, however, BD-7 is still extremely rare, with only 16 to 20 examples believed known in all grades.

The obverse die, seen here in its only use, exhibits one of the boldest overdates of this type, with the lower curve of an underlying 5 plainly evident to the left of the upright of the primary 7. This obverse exhibits 15 stars, characteristic of dies prepared before June 1797, when Tennessee was admitted into the Union as the 16th state. This reverse was previously used for the unique BD-6 variety, and is seen here in its final marriage.

The Large Eagle (or Heraldic Eagle) motif was introduced in mid-1797, during a period when outdated but still serviceable obverse dies were still being used well into later years. Several 1795-dated half eagles are known with this later reverse motif, and were likely struck during the latter half of 1797 into early 1798, per the research of John Dannreuther. The 1797-dated Large Eagle varieties were likely also struck during this period, or closely following. BD-7 is unique as the only instance when a 1795-dated obverse die was overdated with the 1797 date before being paired with the Large Eagle reverse. This seems to support the conclusion that this variety was likely struck in the latter half of 1797, although there remains a possibility that the die was overdated in that year, but was not employed for production until early 1798, when half eagle coinage began increasing at a rapid rate.

This is only the second representative of this rare variety that we have ever offered at auction. The other piece, an NGC AU58 coin, was offered in our August 2012, Philadelphia Signature sale, where it brought \$129,250. The certified population for this variety is scant, corresponding almost directly with Dannreuther's estimated survival rate. NGC has seen just five examples in all grades, with two in MS61 and none finer; PCGS similarly reports six pieces overall, also with two in this grade and none finer (11/14). It is unknown if four MS61 coins actually exist in private hands, or if perhaps this figure includes one or more resubmissions. A PCGS MS61 representative was offered in Superior Galleries' August 2004, Pittsburgh Elite auction, where it brought \$149,500. The present coin is vastly superior to that example, showing much sharper central detail and beautifully reflective, semiprooflike fields. Rich honey-gold patina yields overtones of deeper orange and coppery hues, and the surfaces are devoid of any significant abrasions — only some light field chatter limits the grade. Several small, struck-through lint marks are noted in the left obverse field, and the remnant of a mint-made, vertical adjustment mark is detected in Liberty's hair curls.

The reverse die cracks are progressed beyond what is described in the Bass-Dannreuther reference for this late die state. The crack from the rim above the second T in STATES curves through the ribbon between the US in PLURIBUS and connects to the earlier crack that extends from the rim between S O, through the wing, to the M in AMERICA. Another crack connects to the crack near the M and extends through the olive leaves to the I in AMERICA. An additional break runs from the rim below the eagle's tailfeathers, up through the center of the shield, and connects to the earlier crack that curves through the upper edge of the shield.

The sheer rarity of this variety is compounded by it being the only obtainable Large Eagle variety of the 1797 issue. This variety is slightly rarer than the BD-1 Small Eagle variety, and appears at auction much less often. As one of the finest known, this remarkable piece is of indescribable importance for the prestige of a high-end early half eagle variety collection. The specialist will want to bid accordingly.

*From The Liberty USA Collection. PCGS# 519872 Base PCGS# 8077*

### 1798 Large Eagle Five, BD-2, MS61 Vivacious, Semiprooflike Surfaces

**4283** 1798 Large Eagle, Large 8, 13 Stars Reverse, BD-2, R.5, MS61 NGC. Ex: Hilt Collection. Bass-Dannreuther Die State c (early)/b (early). It seems that any seasoned numismatist who has seen this dramatic and rare die variety would remember it, given the large numeral 8 aligned with the other date digits and the prominent die crack that arcs below the date on the obverse, combined with the stars on the Large Eagle reverse in a near-perfect cross position. (As seen on the 1798 BD-1 half eagle with Small Eagle reverse, the original arc was a scribe line, which the die crack runs through, overlapping and enlarging it.)

From the estimated mintage for the BD-2 marriage of 3,500 to 4,500 pieces, John Dannreuther surmises that perhaps 50 to 70 survive today. The present example is certainly among the finest of those survivors. Although there are a pair of die cracks that start around star 1 on the obverse, with one running upward into Liberty's hair, many of the later cracks as Dannreuther describes have not yet formed. A pair of die cracks also appear on the reverse, one connecting the left wing with the rim, the second connecting stars 12-13 to the juncture of the last cloud and the wing, but many late-state cracks are absent here as well. The early die state may help explain the considerable semiprooflike texture that gives this yellow-gold piece much character and vivacity. Diagonal planchet adjustment marks on the obverse in the hair are not overly bothersome. Scattered small abrasions define the grade, but this is a beautiful coin, one that Robert Hilt was undoubtedly quite proud of.

*From The Liberty USA Collection. PCGS# 507322 Base PCGS# 8078*

### 1798 Large Eagle, Large 8 Five Dollar, MS60 13 Star Reverse, BD-5, Late Die State

**4284** 1798 Large Eagle, Large 8, 13 Star Reverse, BD-5, High R.5, MS60 NGC. Ex: Hilt Collection. Bass-Dannreuther Die State c/b. This Large 8 obverse shows the date about level and slightly curved, the 8 below the 9 at the bottom. Dannreuther calls the reverse "the most perfect cross pattern seen on a half eagle reverse die" and further on expands:

"As Bass noted, the reverse stars are in a cross pattern as seen on all the reverses produced by John Smith Gardner, who copied this star arrangement from the Great Seal of the United States. The Great Seal is the inspiration for the Large Eagle reverse design."

In this advanced die state, a die crack runs from star 7 downward through the portrait and to the 8 in the date. Another heavy crack runs from beneath the E under the R in LIBERTY. The reverse shows several of the leaves on the wreath sprig lacking their interiors, the product of die lapping. This piece shows appealing amber-gold color and appears technically Mint State, although somewhat weakly struck and with many scattered small marks; some of those marks may be Mint-produced, although the distinction is sometimes difficult to make. A very rare die variety.

*From The Liberty USA Collection. PCGS# 507325 Base PCGS# 8078*

## 1798 Large Eagle, Small 8 Five BD-8, AU55+

**4285** 1798 Large Eagle, Small 8, BD-8, R.5, AU55+ NGC. Ex: Hilt Collection. Bass-Dannreuther Die State a/unlisted. There are no obvious signs of die clashing, lapping, or cracks on this lightly circulated coin, save for a wispy crack from cloud 3 on the reverse to the left star point and the top of the eagle's head. The "Small 8" digit in the date is so called in relation to the "Large 8" varieties, but in reality it is the normal-size digit and that is what John Dannreuther terms it. The date is narrow with the 8 away from the bust, and on the reverse the first A in AMERICA touches the wing and the last A touches the claw, a distinctive and easily remembered appearance. Scattered, mostly small abrasions and high-point wear determine the grade. A small rim bump shows on the obverse at 11:45.

*From The Liberty USA Collection. PCGS# 507328 Base PCGS# 8079*

## 1799 Half Eagle, Near-Mint BD-5, Large Reverse Stars

**4286** 1799 Large Reverse Stars, BD-5, High R.5, AU58 NGC. Ex: Hilt Collection. Bass-Dannreuther Die State c/b with a delicate die crack beneath the B in LIBERTY. BD-5 is a rare variety with only 25 to 35 examples known, per the Dannreuther reference. The second 9 in the date is repunched, and the eagle clutches only seven arrows. This is a sharply defined representative with ample olive-green luster. The open fields are rose-gold. The original toning is certain to appeal to the specialist.

A small spot is present above the E in AMERICA, but abrasions are inconsequential aside from minor field marks near the forehead curl and a thin line in front of the bust tip.

*From The Liberty USA Collection. PCGS# 519878 Base PCGS# 98081*

### 1805 Half Eagle, Close Date, BD-1, MS64 Glorious Luster and Top-Notch Appeal

**4287** 1805 Close Date, BD-1, High R.3, MS64 NGC. Bass-Dannreuther Die State c/b. This is a gloriously lustrous golden-yellow example of this relatively available early gold issue. The Close Date with perfect 1 touching the curl, the 5 touching the bust truncation, and leaf on the reverse touching the I in AMERICA attributes the variety. This is the latest die state but one, showing a die crack through the 0 in the date, another small crack from the to left of the U in UNITED to the rim, but the final reverse state, with the cud above U, is not yet seen. This piece boasts an extremely sharp strike with good centering, no mentionable marks or planchet adjustments, and top-notch eye appeal. PCGS# 45615 Base PCGS# 8088

### 1808 Half Eagle, BD-4, MS62 Luminous Original Luster

**4288** 1808 Wide 5D, BD-4, High R.3, MS62 PCGS. Bass-Dannreuther Die State c/a, as always. The obverse die is lapped, with little evidence of the heavy clash marks that this die incurred during its previous use with the leftover 1807 reverse. This reverse die is seen here in its first of two uses. BD-4 is one of the more plentiful varieties of the 1808 half eagle, with 175 to 225 pieces believed extant, but high-quality Mint State coins remain elusive. The present piece displays remarkably original green-gold luster, with a distinctly frosty texture. The design elements are sharply brought up, save for the right-hand obverse denticles which are slightly weak from 2 to 4 o'clock. The corresponding portion of the reverse rim shows the faint remnants of mint-made roller marks. The obverse shows some minor luster grazes that preclude a finer grade, but the surfaces are otherwise devoid of distractions. PCGS# 507605 Base PCGS# 8102

## 1809/8 Half Eagle, BD-1, MS63 Undeniably Original Surfaces

**4289** 1809/8 BD-1, High R.3, MS63 PCGS. Bass-Dannreuther Die State a/b. This variety, the only one of the year, has traditionally been called an 1809/8 overdate, but many experts, including John Dannreuther, question its overdate status, suggesting the underlying digit may just be a misplaced 9 — the curve does not appear to truly resemble that of an 8. Whatever the case, the issue is in high demand from both variety and date collectors. It is fairly available in the context of early half eagles, with 250 to 325 examples believed known, but it is still distinctly elusive compared to more plentiful dates from years later. Many of these early gold issues were melted during the 1830s for their high gold content in comparison to their face value.

This piece is sharply struck and well-centered, with vibrant honey-gold luster and minimally abraded surfaces. Light clash marks on the reverse are consistent with this early die state, the earliest state confirmed to exist, and both sides remain uncracked. Housed in an old green label holder. Population: 22 in 63, 34 finer (11/14). PCGS# 507603 Base PCGS# 8104

## 1810 Half Eagle, MS62+ BD-4, Large Date, Large 5 Exceptionally Unabraded

**4290** 1810 Large Date, Large 5, BD-4, R.2, MS62+ NGC. Ex: Hilt Collection. Bass-Dannreuther Die State a/a without a clash from the scroll above the date. A lovely early gold type coin. The olive-gold surfaces are refreshingly devoid of abrasions, and luster illuminates the legends, stars, eagle, and portrait. The eye appeal is exceptional, and the strike is crisp with the exception of minor blending at the center of the shield. BD-4 is among the most available of all early gold die varieties, and is often the first variety obtained by a specialist of the series. Dannreuther notes that the traditional Large 5 designation for BD-4 is something of a misnomer relative to the Tall 5 BD-1, and "either Fat or Squat would have been a better description for this numeral."

From *The Liberty USA Collection*. PCGS# 507598 Base PCGS# 8108

**1821 Capped Head Left Half Eagle, MS63+  
Classic Early Gold Rarity  
Second-Finest Business-Strike BD-1 Example**

**4291 1821 BD-1, High R.6, MS63+ PCGS Secure.** Bass-Dannreuther Die State a/a. According to Mint records, 34,641 Capped Head Left half eagles were struck in 1821. This date begins a decade-long run of rare issues in the half eagle series and the 1821 has been somewhat overshadowed by its more famous, and even rarer, 1822-dated counterpart. The 1821 is a classic rarity in its own right, however, with a surviving population of approximately 15 specimens in all grades, split between two different die varieties. The 1821 is also known in both proof and business-strike formats, but the two known proofs are both in institutional collections and not available to collectors. Heritage Auctions is privileged to present the second-finest known business-strike example of this rare early gold issue in this important offering.

The reason for the extreme rarity of all U.S. gold coins of this era lies in the shifting value of gold versus silver in the international marketplace in the early 19th century. When the United States first set up its monetary system in the 1790s, an ounce of gold was worth about 15 times as much as an ounce of silver on the open market. In the following decades, huge quantities of silver entered the market, primarily from Spanish American mines, but the supply of gold remained relatively constant. The principle of supply and demand caused the price of gold to rise compared to silver during these years, but the U.S. coinage system did not adjust. By 1820, the ratio was more like 18 to 1 in favor of gold, and bullion brokers were happy to purchase the old-tenor gold coins at a premium, melt them down, and exchange the bullion for the equivalent amount of silver at the new rate. Foreign governments were eager to acquire the overweight U.S. gold coins and convert them to their own lighter-standard coinage, as well. Walter Breen noted a reference in the National Archives to an assay in Paris in 1831 where 40,000 half eagles of “recent mintage” were destroyed in this manner. That figure represents more than the total production for 1821, and similar events no doubt occurred with some regularity in the 1820s and ‘30s. The great majority of U.S. gold coinage of this era met a similar fate, until congress finally changed the specifications for gold coinage in 1834.

In the case of the 1821 half eagle, there may be another factor that explains the extremely low survival rate of the issue. John Dannreuther believes that the reported mintage of 1821 half eagles may have included many coins that were dated 1820. The fact that 1820-dated half eagles appear with much greater frequency than those dated 1821 or 1822, and that there are nine die varieties known for the date makes this theory plausible. In those early days the Mint often continued using dies from previous years that were still serviceable long after they were technically out of date, as a work-saving and cost-cutting measure.

The present coin represents the more “available” BD-1 variety, if such a term is really applicable to an issue for which we can trace only 12 survivors (see roster below). The BD-1 is easily recognized by the position of star 13, which is lower than the corresponding star on its BD-2 counterpart, and actually has one point touching Liberty’s hair. This was the only use of the obverse die, but the hardy reverse was employed to strike a total of six different die varieties between 1820 and 1824.

The 1821 half eagle has always been a popular issue with collectors, and examples began appearing at auction as early as the A.C. Kline Sale (Moses Thomas & Sons, 6/1855), lot 189, which was described as a proof example. Of particular interest is the description of the coin in lot 1639 of the William Cutler Atwater Collection (B. Max Mehl, 6/1946):

“1821 Beautiful uncirculated specimen with frosty mint surface, with considerable brilliancy. A tiny short hair-line scratch on right obverse, hardly noticeable, but is mentioned here only for the sake of accuracy and due to the great rarity of the coin. Excessively rare. One of the rarest of all Half-Eagles.”

The coin realized \$725, a strong price at the time. Mehl’s description of the Atwater coin could well be applied to the coin offered here, the Amon G. Carter specimen, as it is certainly a “Beautiful uncirculated specimen” with “considerable brilliancy” and an inconspicuous hairline scratch in the right obverse field. We hesitate to declare the Atwater coin is definitely the same coin we are offering in this lot, but the description is certainly similar to this piece, and Amon Carter, Sr. was buying heavily at the Atwater sale. We leave the bidder to reach his own conclusion. The record price realized at auction for an 1821 half eagle was set by this identical coin when it appeared in lot 1777 of the Del Valle Collection (Ira and Larry Goldberg, 1/2014), where it brought \$540,500.

The present coin is a high-end Select example that ranks high in the Condition Census for the variety. Only one business-strike specimen of this date has been certified finer at either of the leading grading services (12/14), and that coin has been off the market for 33 years. The design elements are sharply detailed throughout and the warm olive-gold surfaces show just a few minor contact marks. Both sides radiate vibrant mint luster and eye appeal is tremendous for an early gold issue. This coin was a highlight of the famous Amon Carter Collection for many years and it possesses an irresistible combination of high technical grade, intense historic interest, and outstanding visual appeal. Heritage has only offered a specimen of the 1821 half eagle three times before this memorable lot, and the finest of those examples only graded AU58. The discerning collector should bid accordingly.

**Roster of 1821 Half Eagles.** The grades are per the last auction appearance, unless a later certification is reported. Some coins have undoubtedly been resubmitted since their last public offering.

**1. PR65 Cameo.** BD-1. An example in the National Numismatic Collection, Smithsonian Institution, formerly in the Mint Cabinet. Grade by Garrett and Guth.

**2. PR63 to 64.** BD-1. John Colvin Randall Collection (W. Elliot Woodward, 6/1885), lot 927, per Walter Breen; William H. Woodin, displayed at the 1914 ANS Exhibition (plate 15); Waldo Newcomer, plate matched to Newcomer plates, first example; Colonel E.H.R. Green; B.G. Johnson; King Farouk; Palace Collections of Egypt (Sotheby's, 2/1954), lot 237; Norweb Collection (Bowers and Merena, 10/1987), lot 773; Harry W. Bass, Jr.; Harry W. Bass, Jr. Foundation. Grade per the Norweb catalog.

**3. MS66 PCGS.** BD-1. Abe Kosoff; Texas collector; Roy E. Naftzger Fixed Price List (Paramount, 1981).

**4. MS63+ PCGS.** BD-1. Amon Carter, Sr.; Amon Carter, Jr.; Amon Carter Family Collection (Stack's, 1/1984), lot 659; Pre-Long Beach Sale (Goldberg, 1/2014), lot 1777, realized \$540,500. **The present coin.**

**5. Uncirculated.** BD-1. Wolfson Collection (Stack's, 10/1962), lot 365; Nate Shapero Collection (Stack's, 10/1971), lot 975; Harry W. Bass, Jr.; Harry W. Bass, Jr. Foundation. Grade per the Wolfson catalog.

**6. MS62 NGC.** BD-1. George Seavey, exhibited before the Boston Numismatic Society on February 14, 1869; Seavey Descriptive Catalog (William Strobridge, 6/1873), lot 437; Lorin G. Parmelee, who purchased Seavey's collection intact before the date of the sale; Parmelee Collection (New York Coin & Stamp, 6/1890), lot 930; Harlan Page Smith Collection (S.H. & H. Chapman, 5/1906), lot 209; John H. Clapp; Louis E. Eliasberg, Sr. in 1942, via Stack's; Eliasberg estate; United States Gold Coin Collection (Bowers and Ruddy, 10/1982), lot 377; James Newton Howard; Pre-Long Beach Auction (Superior, 5/2006), lot 1104.

**7. AU58 PCGS.** BD-1. F.C.C. Boyd; World's Greatest Collection (Numismatic Gallery, 1/1946), lot 370; Memorable Collection (Numismatic Gallery, 3/1948), lot 320; Adolphe Menjou Collection (Numismatic Gallery, 6/1950), lot 1466; Farish Baldenhofer Collection (Stack's, 11/1955), lot 1238; FUN Signature (Heritage, 1/2012), lot 4673, realized \$161,000.

**8. AU55.** BD-1. Colonel E.H.R. Green; C.T. Weihman; Josiah K. Lilly; National Numismatic Collection, Smithsonian Institution. Grade by Garrett and Guth.

**9. AU55 NGC.** BD-1. A. Dohrmann Collection (W. Elliot Woodward, 3/1882), lot 514; T. Harrison Garrett; Garrett Collection (Bowers and Ruddy, 11/1979), lot 464; October Sale (Superior, 10/1990), lot 2094; Pre-Long Beach Sale (Superior, 5/2003), lot 3697; Frog Run Farm Collection (American Numismatic Rarities, 11/2004), lot 1797; Baltimore Auction (Bowers and Merena, 3/2009), lot 3707; FUN Signature (Heritage, 1/2014), lot 5427.

**10. AU55 NGC.** BD-1. Belden Roach Collection (B. Max Mehl, 2/1944), lot 545; Jerome Kern Collection (B. Max Mehl, 5/1950), lot 355; ANA Convention Sale (Stack's, 8/1976), lot 2938; March Sale (Stack's, 3/1983), lot 1294; purchased privately from Stack's by the owner of the Rajj Collection, 4/1983; Rajj Collection (Stack's Bowers, 8/2011), lot 7671.

**11. AU53 PCGS.** BD-1. Dr. Clifford Smith Collection (Stack's, 5/1955), lot 1684; Public Auction Sale (Lester Merkin, 9/1967), lot 423; Auction '81 (Paramount, 7/1981), lot 1428; Baltimore Auction (Bowers and Merena, 11/2009), lot 3684.

**12. AU.** BD-1. Golden Sale (Kreisberg-Schulman, 3/1962), lot 2483; S.S. Forrest, Jr. Collection (Stack's, 9/1972), lot 209; Robison Collection (Stack's, 2/1979), lot 357. Grade per the Forrest catalog.

**13. MS61 NGC.** BD-2. James Lawson before 1880; Lawson's collection was stored in a bank vault after his death until it was consigned to Abe Kosoff by Mrs. Mabel R. Sandford, presumably one of his heirs; ANA Convention Sale (Numismatic Gallery, 8/1947), lot 429; Thomas Melish Collection (Numismatic Gallery, 4/1956), lot 1947; J.F. Bell II (RARCOA, 4/1963), lot 599; 10th Anniversary Auction (Kreisberg-Schulman, 4/1967), lot 771; Davies/Niewoehner Collections (Paramount, 6/1975), lot 555; Arnold and Romisa Collections (Bowers and Merena, 9/1984), lot 127; Auction '85 (RARCOA, 7/1985), lot 435; Charles Kramer Collection (Stack's/Superior, 12/1988), lot 323; Auction '89 (Superior, 7/1989), lot 888; Michael Keston Collection (Superior, 1/1996), lot 112; Pre-Long Beach Sale (Superior, 5/2001), lot 4043. Akers plate coin.

**14. AU55 NGC.** BD-2. George H. Earle Collection (Henry Chapman, 6/1912), lot 2391; Waldo Newcomer, pictured on the Newcomer plates, second example; Col. E.H.R. Green; Flanagan Collection (Stack's, 3/1944), lot 1097; J.F. Bell Collection (Stack's, 12/1944), lot 343; H.R. Lee Sale (Stack's 10/1947), lot 1240; Eliasberg-Evans Collections (New Netherlands, 6/1957), lot 378; unknown intermediaries; Baltimore ANA (Heritage, 7/2008), lot 1954; Central States Signature (Heritage, 4/2014), lot 5727. Note: The plates in the Flanagan, Bell, and H.R. Lee sales are all stock photos that depict the proof BD-1 example from the Newcomer/Col. Green collections in number 2 above.

**Other Appearances.** Note: Many of the earlier appearances were not attributed by die variety or pictured in the catalogs.

**A.** A.C. Kline Sale (Moses Thomas & Sons, 6/1855), lot 189, called a proof in the description.

**B.** Sixth Semi-Annual Sale (Woodward, 3/1865), lot 2773, realized \$33 to John F. McCoy; sold privately to Heman Ely for \$40; Heman Ely Collection (Woodward, 1/1884), lot 834.

**C.** Mendes I. Cohen Collection (Edward Cogan, 10/1875), lot 142, realized \$200 to Phineas Adams; William J. Jenks; Sixty-Ninth Sale (John W. Haseltine, 6/1883), lot 356.

**D.** Randall Collection, Part II (Woodward, 9/1885), lot 1029, called proof, possibly a reappearance of the coin in the first Randall sale (see number 4 above). Although Walter Breen indicated that Woodin bought the coin in lot 927 of the June 1885 Randall sale, Woodin himself wrote in the May 1911 issue of *The Numismatist* that he purchased his first gold coins from Randall around 1888. It is possible that Randall bought the coin in at the first sale, where it sold for only \$17, offered it again in the second sale, bought it in again, and finally sold it to Woodin in 1888.

**E.** BD-1. Mathew Stickney Collection (Henry Chapman, 6/1907), lot 664.

**F.** BD-1. James Ten Eyck Collection (B. Max Mehl, 5/1922), lot 187.

**G.** Sale Number 399 (J.C. Morgenthau, 5/1939), lot 142.

**H.** BD-1. William Forrester Dunham Collection (B. Max Mehl, 6/1941), lot 2094.

**I.** BD-1. William Cutler Atwater Collection (B. Max Mehl, 6/1946), lot 1639, possibly the Amon Carter coin in number 4 above.

**J.** Texas Sale (Kagin/Hollinbeck, 12/1951), lot 1822.

**K.** Farish Baldenhofer Collection (Stack's, 11/1955), lot 1239.

**L.** BD-1. FUN Sale (Federal Brand, 1/1963), lot 4182.

**M.** A specimen purchased by Virgil Brand in 1906 from a dealer named Pelletier for \$250.

**N.** BD-1. Rare Coin Auction (Superior, 12/1972), lot 1941.

**O.** Collector's Portfolio (Kreisberg, 10/1978), catalog not available for comparison.

**P.** According to the inventory of his collection, Colonel Green owned at least one more coin, in addition to the three examples attributed to him above. PCGS# 519929 Base PCGS# 8129

**1826 Capped Bust Left Half Eagle, MS66  
Extremely Rare BD-2 Variety, Three Examples Known  
Finest Certified, Ex: Jenks-Newcomer-Akers**

**4292 1826 BD-2, R.8, MS66 PCGS. CAC.** Ex: Jenks-Newcomer-Akers. Bass-Dannreuther Die State a/a. As a group, the Capped Head Left half eagles of the 1820s include more absolute rarities than any 10-year series in U.S. numismatics. The 1826 half eagle figures prominently in the roster of this elite fraternity, a group that includes the ultra-rare 1825/4 (two examples known) and the famous 1822 (three specimens extant). As a variety, the 1826 BD-2 half eagle is of roughly equal rarity with these more famous issues, as only three examples are known, with one in the National Numismatic Collection at the Smithsonian Institution and another impounded in the Harry W. Bass, Jr. Research Foundation. The present coin is the finest known specimen of the BD-2 variety by a wide margin and one of the highest quality half eagles of the entire decade. Heritage Auctions is pleased to offer this remarkable rarity, the only example available to collectors, which once graced the prominent collections of John Story Jenks, Waldo Newcomer, and David Akers.

As a date, the 1826 half eagle is a rare issue with a recorded mintage of 18,069 pieces. Only two die varieties are known for the date, the BD-1 Large Letters variety, with a surviving population of 30-40 examples in all grades, and the present BD-2 variety with exactly three specimens extant. The BD-2 is easily recognized by the position of star 13 located high and away from the curl and the Small Letters reverse. This was the only use of the obverse die, but the reverse was used to strike the single variety of 1827 and the BD-1 variety of the 1828/7 half eagles over the next two years. The BD-2 probably accounted for 3,000-6,000 pieces of the reported mintage, and only the three specimens mentioned above survive today.

The 1826 half eagle has been a favorite with collectors since the earliest days of the hobby. Specimens began appearing at auction at least as early as the Fifth Semi-Annual Sale (W. Elliot Woodward, 10/1864), lot 1650, "1826 Splendid impression, nearly proof; exceedingly rare." The lot realized \$35 to J.O. Emery, a highly respectable price at the time. Since no study of die varieties had been attempted in 1864, the variety of this piece was unrecorded, but the general description provided would be an accurate depiction of the present coin, as far as it goes.

The first auction appearance of this coin that can be traced with any certainty is lot 5769 of the John Story Jenks Collection (Henry Chapman, 12/1921):

"1826. Uncirculated. Sharp, even impression. Mint lustre. Very slight dent on edge of reverse. Very rare. *Plate.*"

Only the obverse of the coin was plated, but the image clearly shows the high position of star 13, away from the hair. The edge of the coin is not visible today because of the PCGS holder, but we can see no evidence of a rim bruise on this coin, so the damage must be "Very slight" indeed. Perhaps Chapman was actually describing some faint planchet adjustment marks (as struck) that can be seen in the denticles with magnification. The lot realized \$130, again a generous price for the era.

The buyer of lot 5769 is unknown, but this coin came into the possession of noted numismatist Edgar H. Adams shortly after the Jenks sale. Adams often acted as partner or agent for William H. Woodin, one of the most accomplished collectors of gold coins and pattern issues of all time. It is possible that Woodin actually owned the coin during this time frame, with Adams acting as his front man. Adams was one of the early pioneers in the classification of early gold die varieties, and he recognized how rare the BD-2 variety is. He classified it as Adams-2 in his extensive notes on early die varieties.

Another avid student of early gold varieties, the wealthy Baltimore financier Waldo Newcomer, was the next owner-of-record of this remarkable piece. Newcomer purchased the coin from Adams for \$1,500, a staggering price for any coin in the mid-1920s. According to the Bass-Dannreuther series reference, Newcomer's notes on the transaction include:

"Close date. Wider space between 6 and star. Reverse: Leaf more distant from 5. Only this specimen seen. (Adams priced this at \$2,000 as being the only known specimen of this die. I secured a reduction in the lot of coins and arbitrary [sic] took \$500 off this."

Adams certainly secured a handsome profit for this piece, which had sold for \$130 at the Jenks sale, an early and dramatic example of the advantage knowledge can give an advanced collector.

Like many prominent businessmen of his time, Waldo Newcomer experienced severe financial hardships during the Great Depression and sold most of his American coins, including this 1826 half eagle, through B. Max Mehl around 1931. Mehl sold the great majority of Newcomer's gold to eccentric millionaire Colonel E.H.R. Green, who eventually acquired seven examples of the 1826, including this coin, a magnificent proof 1826 BD-1 half eagle (also from Newcomer's collection), and a second example of the extremely rare BD-2 variety from another source.

While we have a pretty clear record of this coin's history leading up to its acquisition by Col. Green, we lose sight of it for a long time afterward. Col. Green died in 1936, and his collection was dispersed in the early 1940s in a series of private-treaty transactions. Stack's brokered the dispersal of most of the gold coins, selling marvelous runs of rarities to King Farouk and Clifford T. Weihman. Farouk acquired the proof 1826 BD-1 half eagle from Newcomer's collection, and the second example of the BD-2 went to Weihman, later passing to Josiah K. Lilly and the Smithsonian Institution. Unfortunately, the lucky collector who purchased this delightful coin from Green's estate remains a mystery.

Sometime later noted gold specialist David Akers acquired this piece. Akers was one of the most astute students of U.S. gold coinage, and he did much of the seminal research on the rarity of early dates and varieties throughout the entire gold series. He succeeded in matching this example with the image in the very rare plates of Newcomer's collection that Mehl had prepared when he acquired Newcomer's holdings, thus establishing the link to the illustrious early history of the coin. This piece remained with Akers until his recent passing. It was subsequently offered in lot 5432 of the FUN Signature (Heritage, 1/2014), where it realized a record price of \$763,750.

The coin offered here is a magnificent Premium Gem with well-preserved yellow and reddish-gold surfaces that show no mentionable signs of contact. Close inspection with a loupe reveals some barely perceptible planchet adjustment marks in the dentils of lower reverse rim, possibly the "very slight dent on the edge of the reverse" referred to in the Jenks description, but the marks do not extend into the field. The surfaces display prooflike reflectivity in many areas, mixed with vibrant satiny mint luster on both sides. The design elements exhibit remarkably sharp definition for a coin of this era, with full star centrils and just a touch of softness on the shield. Jeff Garrett and Ron Guth estimate that auction appearances of the 1826 half eagle occur about once per year, but we can find only one offering of an 1826 BD-2 between this coin's appearance in the John Story Jenks catalog in 1921 and its offering in last year's FUN sale. For the advanced student of early die varieties, this offering of the finest-known and only available example of the BD-2 is a once-in-a-lifetime opportunity. Population, including all varieties of 1826 half eagles: 2 in 66, 0 finer (12/14).

#### **Roster of 1826 BD-2 Half Eagles**

**1. MS66 PCGS. The present coin.** John Story Jenks Collection (Henry Chapman, 12/1921), lot 5769; Edgar Adams (possibly acting for William H. Woodin); Waldo Newcomer; Colonel E.H.R. Green; Green estate; unknown intermediaries; David and Sharron Akers; FUN Signature (Heritage, 1/2014), lot 5432, realized \$763,750; **the present coin.**

**2. AU Cleaned, per Jeff Garrett and Ron Guth.** Colonel E.H.R. Green; Green estate; Clifford T. Weihman, via Stack's; Josiah K. Lilly, via Stack's again; Lilly estate; National Numismatic Collection in the Smithsonian Institution.

**3. Extremely Fine Sharpness, Repaired.** S.S. Forrest, Jr. Collection (Stack's, 9/1972), lot 212; Harry Bass; Harry W. Bass, Jr. Research Foundation. PCGS# 519938 Base PCGS# 8135

## LIBERTY HALF EAGLES

**1842-C Small Date Five, AU53  
Rarest Charlotte Mint Half Eagle**

**4293** 1842-C Small Date AU53 NGC. **Variety 1.** Doug Winter calls the Small Date five the rarest collectible coin from the Charlotte Mint, exceeded only by the normally unavailable 1849-C Open Wreath gold dollar. Seldom seen in grades above XF, most examples are either harshly cleaned, impaired, or heavily worn. Its recognition as a separate *Guide Book* variety makes it a necessary part of any complete half eagle date or series set.

The combined mintages of the Small and Large Date varieties in 1842 totaled 27,432 coins. Of these, Winter estimates 4,595 pieces were struck of the Small Date variant. This example is a pleasing green-gold coin, with lightly abraded fields and no large marks. It is struck slightly off-center north on the reverse, with a resultant wire rim on the lower half of the coin below the eagle. Sharp detail remains on the motifs. Census: 1 in 53, 15 finer (11/14). NGC ID# 25SV, PCGS# 8208

## 1842-C Small Date Five Dollar, MS63 Doug Winter's Third Edition Plate Coin

**4294 1842-C Small Date MS63 NGC. CAC. Variety 1.** Sole die pair for the year, in Die State I, the perfect obverse without rim cud at the top of the obverse. **The Winter Third Edition plate coin.** In *Gold Coins of the Charlotte Mint*, Doug Winter has little but praise for the 1842-C Small Date half eagles, at least as far as their rarity is concerned. He suggests that they were struck before their Large Date counterparts (noting that the 1841-C half eagles have a date more Small than Large), and offers these words about their rarity and importance: "The 1842-C Small Date is the rarest Charlotte half eagle. It is also the second rarest Charlotte coin, trailing only the excessively rare 1849-C Open Wreath gold dollar. This variety has long been considered a full-fledged member of the Charlotte half eagle series and no date set is truly complete without an example."

Out of 27,432 total 1842-C half eagles, Winter suggests a mintage of only 4,595 pieces from Small Date dies, and further subdivides the Small Date coins into two die states; he suggests that Die State I, the "perfect obverse," "probably represents the first 2,555 pieces that were produced on March 22, 1842." This would appear to conflict with Winter's next statement about Die State II with obverse cud, that "approximately three-quarters of all the known [Small Date] examples are from this state of the dies." Either one of Winter's population estimates is off, or the coins struck earlier disproportionately bore the brunt of circulation attrition; the latter certainly is plausible.

In any event, the best collection of Charlotte gold, must include an example of the 1842-C Small Date half eagle, and it demands one of the best-preserved survivors. Winter's third edition of the Charlotte reference, with information up to June 2008, suggested that this coin was the finest 1842-C Small Date five available and surmised that the sole MS63 coin in NGC's *Census Report* was actually this coin; a quick comparison between the January 2005 Heritage images and the coin picks up on several obvious pedigree markers, particularly the flaw above the vertical stroke in the 4 in the date, and confirms the surmise.

This remains the only NGC-certified 1842-C Small Date half eagle in MS63 or better, and the only serious rival to this coin's status as the premier 1842-C Small Date half eagle is a single PCGS MS63+ Secure example (11/14); no MS63 PCGS coins appeared in the *Population Report* until 2009, and the Plus Secure designation, which was not introduced by PCGS until 2010, points to a recent grade change. It is uncertain whether the MS63+ Secure PCGS example corresponds to any of the other entries in Winter's census of Uncirculated examples from 2008, all rated MS62 or less; if so, it would suggest that he rated the present coin *circa* 2005 over the MS63+ Secure example. In the absence of such confirmation, though, each collector trying to identify the "finest example" must weigh a PCGS Plus Secure MS63 against an NGC MS63 with CAC green label.

It would be hard to go wrong owning either coin, and certainly this example is a beauty. Like many of the early-state Small Date coins, it is sharply struck, even on the locks below the ERT of LIBERTY, a place Winter flags as a trouble-spot. A mint-made planchet flaw above the 4 in the date, the aforementioned pedigree marker, is common to this date and does not affect the technical grade, though several long, wispy abrasions in the left obverse field have an influence. The luster on each side is flashy and radiant, less overtly orange than the Winter plate would suggest but with clear hints of that color. A coin of great historic importance. NGC ID# 25SV, PCGS# 8208

## 1861 Half Eagle, Bold MS65 Top-Notch Example

**4295 1861 MS65 PCGS.** The 1861 half eagle saw quite a high mintage during the first year of the Civil War, when most pundits assumed an easy victory for the North that was not to be. Despite the production of more than 688,000 pieces, fewer than two dozen survive at the Gem level according to Garrett and Guth, an assertion borne out by the certified populations: six at PCGS (including this piece) with one each in MS65+ and MS66 finer, nine in MS65 (including two Star pieces) and two MS66 finer at NGC (12/14). This piece offers incredible eye appeal with a bold strike and surfaces displaying generous luster and vivid, deep orange color. NGC ID# 25VK, PCGS# 8288

## 1901 Half Eagle, MS67 Tied With One Other for Finest at PCGS

**4296 1901 MS67 PCGS.** With a mintage of 615,900 coins, the 1901 half eagle is available in grades through MS64, but Gems are scarce and finer coins are decidedly rare. In MS67, PCGS has encapsulated only two pieces, with none finer; NGC has seen just eight coins in this grade (1 in 67+), also with none finer (12/14). Sharp design elements beautifully accentuate frosty, honey-gold luster as it cartwheels around each side. Close study fails to reveal any detracting flaws, and only a few faint grazes on the obverse are detectable to the trained eye. This issue is much scarcer than its Philadelphia counterpart in high grades, and the present example would make an ideal first-year 20th century type coin. NGC ID# 25YW, PCGS# 8402

## PROOF LIBERTY HALF EAGLES

### 1873 Liberty Half Eagle, PR65 Ultra Cameo Only One Finer Coin at NGC Closed 3, Ex: Garrett

**4297** 1873 Closed 3 PR65 Ultra Cameo NGC. CAC. Ex: Garrett. Early in 1873 it was noticed that the knobs on the 3 in the date made the date appear to be 1878 rather than 1873. As a result, the knobs were attenuated giving the date the proper appearance of 1873. However, many denominations had already been struck with the so-called Closed 3 date logotype, and in fact, certain issues were only struck with the Closed 3 in the date. In 1960, the research in this area was published by the late Harry X Boosel in his cleverly titled book *1873-1873*.

Only 25 proof half eagles were struck in 1873, all of the Closed 3 date variant. But one has to wonder if all 25 pieces were actually distributed to collectors as so few are known today. Only 14-18 individual proofs are actually believed extant as recognizable proofs. This particular piece appears to have been purchased directly from the Mint in 1873 by Foster Ely of Elyria, Ohio, according to correspondence in Appendix I of the Garrett I Auction. The fields are exceptionally deep in their mirrored reflectivity and close examination reveals the familiar rippling, orange-peel effect commonly encountered on proof gold from the 1870s and 1880s. Standing in stark contrast to the mirrored fields are the thickly frosted devices, the combination of each giving the coin a pronounced cameo effect. For pedigree purposes, we note a tiny planchet flake out of the field above the E in FIVE on the reverse. It was this tiny defect that convinced us this is the same coin that was in the 1998 FUN Auction. Exceptional quality and rarity combined in one amazing coin. Census: 3 in 65 Ultra Cameo, 1 finer (11/14).

*Ex: Presumably obtained from the U.S. Mint by Foster Ely of Elyria, Ohio in 1873; W. Elliot Woodward; T. Harrison Garrett; Garrett I (Bowers and Ruddy, 11/79), lot 485, where it brought \$21,000; 1998 FUN Sale (Heritage, 1/98), lot 7847, where it realized \$37,500; Central States Signature (Heritage, 5/2005), lot 8689, realized \$46,000. NGC ID# 28CA, PCGS# 98468*

## 1876 Half Eagle, PR63 Cameo Exceptional Quality, Gold CAC Label

**4298 1876 PR63 Cameo NGC. Gold CAC.** The 1876 proof half eagle is a significant rarity in all grades. Only 45 examples were struck, and it is doubtful if more than about 15 to 20 still exist, two of which are housed in museum collections. The combined NGC and PCGS population reports indicate a survival of 25 coins, but this number is undoubtedly inflated by resubmissions. Our archives show only eight previous offerings of this proof issue in the past decade, three of which are reappearances of the same coin.

This piece is boldly struck and deeply contrasted, with warm, honey-gold coloration. Only a few faint hairlines are detected in the fields, warranting the coveted gold CAC label suggesting this piece is undergraded by at least one full point. It ranks as the only PR63 Cameo certified at NGC, with 10 submissions numerically finer (12/14). Only one non-Cameo is certified at that service, a PR58 coin. Housed in a prior generation holder. NGC ID# 28CD, PCGS# 88471

## 1887 Half Eagle, PR63 Highly Sought-After Proof-Only Issue Only 35 to 40 Coins Believed Known

**4299 1887 PR63 PCGS.** The San Francisco Mint struck nearly 2 million half eagles in 1887, but the Philadelphia Mint produced only 87 proofs. This was actually a fairly substantial proof mintage for the period, following 72 proofs in 1886 and preceding 95 proofs in 1888, but the 1887's status as a proof-only Philadelphia issue produces unusually high demand for this date, regardless of grade.

Remarkably few examples are known to survive, likely as few as 35 to 40 coins, though even this number may be generous. A significant number were likely spent shortly after their release, accounting for the low survival rate and the unusually high number of slightly impaired coins (compared to other proof issues of the period) that are among the surviving population. In all grades, PCGS reports 18 grading events, with four coins in circulated condition; NGC also reports 18 pieces overall, with two in impaired grades (11/14). A number of Gem examples are reported in the certified population data, but these make only rare appearances at auction, which supports the likelihood that the census data is skewed by resubmissions, mostly in the upper grade ranges.

Despite its scarcity in the absolute sense, the 1887 proof seems to appear auction with some frequency when compared to other proof issues of the same period, but this is largely a product of immense demand for the date which creates strong incentive among owners to sell their examples. Such market activity might normally make this issue seem more plentiful than it actually is, but in the case of the 1887 proof half eagle, it has a strong affect on creating increased collector interest in the prospect of obtaining this date, which only heightens the demand.

The present Select example boasts the razor-sharp strike and deeply glassy fields that are the hallmarks of 19th century proof gold. No contact marks are present, and only minor hairlines in the fields limit the grade. Immensely appealing lemon-gold and honey patina blankets each side. Subtle contrast is evident between the fields and the relief elements, though it is not quite bold enough to qualify for a Cameo designation from PCGS. Still, this is a beautiful, unimpaired example of this elusive and important proof-only rarity. Population: 1 in 63, 2 finer (11/14). NGC ID# 28CR, PCGS# 8482

## 1898 Half Eagle, PR64 Deep Cameo Boldly Contrasted Proof Rarity

**4300 1898 PR64 Deep Cameo PCGS.** The 1898 stands out as the low-mintage date among the proof half eagles from the latter half of the 1890s, with only 75 pieces struck. Of these, Jeff Garrett and Ron Guth estimate only 35 to 40 examples are extant, slightly fewer than the PCGS estimate of 45 to 55 coins. The combined PCGS and NGC population reports indicate 70 encapsulations of this issue (11/14), an obviously inflated number due to resubmissions.

This Choice Deep Cameo representative displays striking field-motif contrast, with heavily frosted devices and a deeply mirrored backdrop. The strike is sharp, and only a few faint marks in the obverse fields limit the numeric grade of this eye-appealing proof. Population: 3 in 64, 8 finer (11/14). NGC ID# 28D4, PCGS# 98493

## 1902 Liberty Half Eagle, PR65 Cameo Only Two Finer Coins at PCGS

**4301 1902 PR65 Cameo PCGS.** The Philadelphia Mint began using an all-brilliant finish on proof coins in 1902, when a fairly generous mintage of 162 proof half eagles was accomplished. As a result, the 1902 five dollar gold piece is seldom encountered with the attractive cameo contrast seen on proofs of earlier years.

The present coin is a delightful Gem, with sharply detailed design elements that show an unusual amount of mint frost for a coin of this vintage. The deeply mirrored fields contrast boldly with the moderately frosty devices to create a noticeable cameo effect. The bright yellow-gold surfaces show no mentionable distractions and eye appeal is outstanding. Population: 2 in 65, 2 finer (11/14). NGC ID# 28D8, PCGS# 88497

**1904 Half Eagle, PR67 Cameo  
Remarkable High-End Example  
Rare in All Grades**

**4302 1904 PR67 Cameo NGC.** Proof half eagle production increased after the turn of the century from previous issues in the 1880s and 1890s, but field-motif contrast decreased to a greater extent due to a change in the method of die preparation at the Mint. The 1904 had a fairly substantial mintage of 136 coins, but only about half are believed to survive, with Cameos being in the minority regardless of grade. The combined NGC and PCGS certified population of 116 coins (11/14), is undoubtedly inflated by resubmissions, something that affects almost all proof half eagle issues from this period.

This Superb Gem Cameo represents only the fourth PR67 offering of this issue we have featured in that past two decades, and is only the third individual coin in this numeric grade we have handled. Brilliant wheat-gold color highlights beautifully preserved, deeply mirrored fields and softly frosted, sharp devices. A tiny toning speck above the I in FIVE serves as the only distinctive pedigree identifier. Census: 6 in 67 (1 in 67 ★), 1 finer (11/14). NGC ID# 28DA, PCGS# 88499

**1905 Half Eagle, PR65 Cameo  
Rare in Proof Format**

**4303 1905 PR65 Cameo NGC.** The proof 1905 half eagle had a fairly low mintage for the period (108 coins), many of which have not survived. The PCGS population report estimates 75 to 100 examples are extant in all grades, but this number seems generous in light of the fact that only 79 pieces have been encapsulated by the two leading services in all grades (11/14), including an unknown number of resubmissions. Most of the certified population is lacking in noticeable field-motif contrast, and Cameo examples represent only about 34 percent of the certified population. Overall, our archives show previous offerings of only 15 coins in the past 20 years, the majority of which grade just PR64 or lower, with several impaired. The Smithsonian Institution contains two pieces, neither of which grade finer than PR64, per Jeff Garrett and Ron Guth.

This Gem Cameo displays deep honey-gold color and fully mirrored fields. The strike is sharp, and the satiny devices provide just enough contrast to warrant the appropriate designation from NGC. No readily obvious marks or hairlines are present. An important opportunity to acquire a high-end example of this elusive 20th century proof. Census: 6 in 65 (1 in 65+), 3 finer (11/14). NGC ID# 28DB, PCGS# 88500

INDIAN HALF EAGLES

---

**1908 Indian Half Eagle, Appealing MS66  
Only Two Numerically Finer at PCCGS**

**4304 1908 MS66 PCCGS.** This is a stunning Premium Gem example of this first Indian Head half eagle issue, the novel (still today) Bela Lyon Pratt design. Even though more than 577,000 examples were struck of the 1908, the MS66 grade level of the present PCCGS piece is about as good as it gets at that service, as only 20 submissions have achieved this grade (including one MS66+) and only two MS67s are numerically finer; NGC reports five numerically finer (12/14). Deep orange, pale lemon-yellow, and hazel hues alternate throughout surfaces that are free of major distractions. NGC ID# 28DE, PCCGS# 8510

### 1908 Indian Half Eagle, MS67 Spectacular First-Year Example Tied for Finest at PCGS

**4305 1908 MS67 PCGS Secure.** As the first-year issue of the Bela Lyon Pratt Indian Head design, the 1908 half eagle issue is a popular one, eagerly sought-after and bid up by collectors of all stripes. The issue is not an uncommon one, even in Gem condition, where Michael Fuljenz ranks it 24th in rarity among the 24 issues that constitute the series. The unusual, sunken design (purists dislike our calling it “incuse”) that debuted in 1908 on the quarter eagle and half eagle meant that considerable numbers of the issue were set aside as novelties at the time. The mintage, at 577,845 pieces, was plentiful, even if lower than the 1909-1913 Philadelphia emissions, some of which exceeded 900,000 coins. (But only two issues — the 1909-D, a huge mintage of more than 3.4 million pieces — and 1911-S, more than 1.4 million — actually topped the 1 million mark. Most of the 1909-D half eagles are in lower grades than the 1908s surviving, however, and the 1911-S is rare enough in Gem condition to suggest that many may have been melted later.)

It is only in the grades finer than Gem condition where the conditional rarity of the first-year 1908 becomes apparent. PCGS has seen 20 submissions at the MS66 level, including one in MS66+, and the present MS67 PCGS example is one of only two at that highest grade (11/14). The surfaces on this piece display vivid orange-gold coloration accented by rose highlights. The surfaces are sharply detailed in most areas, although the eagle’s claws display just the slightest hint of softness. Vibrant mint luster prevails throughout both sides and there are no detectable flaws on either side, producing a breathtaking effect.

It is seldom that Heritage is privileged to offer Indian Head half eagles that exceed the grade of the splendid Jim O’Neal Collection that we offered during our FUN 2011 Platinum Night, but this is one such. The O’Neal 1908 Indian Head five was an MS66+ PCGS CAC-approved coin (Heritage, 1/2011, lot 5133), which realized \$40,250. The present MS67 PCGS coin is the only finer PCGS example we have ever offered, and as such, it represents a spectacular bidding opportunity for Registry Set or type collectors. NGC ID# 28DE, PCGS# 8510

## 1911-S Indian Half Eagle, MS64 Underrated Issue in High Grade

**4306 1911-S MS64 PCGS.** The 1911-S Indian half eagle claims a substantial mintage of more than 1.4 million pieces, but the issue is surprisingly elusive in high grade. Even lower Mint State examples are scarce and the 1911-S is rare in MS64 condition. Finer examples are very rare. This issue is definitely one of the most underrated dates of the series.

The present coin is an impressive Choice example, with sharply detailed design elements and vibrant mint luster throughout. The well-preserved yellow-gold surfaces show pleasing highlights of green, adding to the terrific eye appeal. Population: 23 in 64 (1 in 64+), 8 finer (11/14). NGC ID# 25ZM, PCGS# 8522

## 1915-S Half Eagle, MS63 Rare Any Finer

**4307 1915-S MS63 PCGS. CAC.** This issue is a noteworthy rarity among Indian Head half eagles, particularly at grades any finer than MS63. PCGS has rated a mere 10 examples at MS64, with none finer; while NGC has seen 13 near-Gem coins and just one piece finer at MS65 (11/14).

The current Select example is boldly struck and shows intensely frosty mint luster over shimmering honey-gold and rose surfaces. Die buckling along the lower left reverse periphery causes the mintmark to be incomplete, and leaves a shallow depression between 7 o'clock and 9 o'clock. The carefully preserved surfaces reveal few marks, including a few minuscule nicks just above and to the right of the eagle's head. NGC ID# 25ZR, PCGS# 8531

## 1929 Half Eagle, MS64 Heavily Melted, Final-Year Issue

**4308 1929 MS64 PCGS.** In discussions of key dates in the Indian half eagle series, the 1909-O is usually the first the come to mind, due to its low mintage of only 34,200 coins, its correspondingly low survival rate, and its popularity as the only coin of this type struck at the New Orleans Mint before it ceased coinage operations early in the year. But in terms of absolute rarity, the 1929 is actually the rarer coin.

The 1929 had a fairly substantial mintage of 662,000 pieces, but these were never distributed into circulation. The stock market crashed this same year, and the need for many gold denominations in daily commerce dwindled. As a result, nearly the entire mintage remained in Treasury and bank vaults when President Roosevelt issued Executive Order 6102 in 1933, banning the private ownership of monetary gold. His reasoning was that the supposed public hoarding of gold coins was hurting the recovery process. All gold coins that remained in Treasury or bank vaults at the time, including the 1929 half eagle, were recalled and melted by the government.

A small number of pieces survived, however, and as can be seen from the certified population data, most examples are in some Mint State grade, primarily MS64 or lower. It is not known exactly how these pieces escaped the melting pots, but it is conceivable that certain bank tellers or Treasury employees rescued them by substituting older pieces from their pockets. They certainly were not pulled from circulation, as very few show any sign of wear.

This Choice example is awash in rich orange-gold and olive hues, with sharply struck design elements. A few light, scattered marks in the fields, primarily on the reverse, preclude a full Gem grade assessment, but hardly inhibit the eye appeal. Radiant luster resides beneath the patina. PCGS has certified only eight numerically finer examples (12/14).

The importance of this scarce, final-year issue was not immediately recognized, possibly due to the challenges of the Depression. The first piece we know of that appeared at public auction was a "brilliant Uncirculated" example offered in Stack's 1944 sale of the Col. James W. Flanagan Collection. The coin brought an impressive \$225, some \$150 more than its estimated value at the time. The date's allure has not waned in the least, and any example that appears at auction still draws spirited bidding. NGC ID# 2800, PCGS# 8533

## 1929 Half Eagle, MS64 Attractively Lustrous Melt Rarity

**4309 1929 MS64 PCGS. CAC.** In April 1933, President Franklin D. Roosevelt issued Executive Order 6102, prohibiting “the hoarding of gold coin, gold bullion, and gold certificates within the continental United States.” The order granted exceptions, including jewelry, gold coins with numismatic value, and industrial necessities. However, recently minted currency issues, still clustered in bank and Treasury vaults, were not exempt from the confiscation, including the many late-series double eagle issues and the 1929 half eagle.

The reason why so many double eagles were stacked away in vaults was largely for backing the numerous gold certificates then in circulation. The time in history when Americans distrusted paper currency had largely disappeared into the past, and even the Western regions saw extensive circulation of gold and silver certificates. The concept of these certificates, however, required that they be backed by an equal dollar value of hard specie. Therefore, even though double eagles were not extensively seen in circulation, their production was mandatory, and their storage in Treasury vaults was widespread. There they remained, when the Recall Order was effected.

The 1929 half eagle was a slightly different story. While gold coins of all denominations ultimately served as backing for paper currency, one of the chief reasons that this issue did not circulate was largely due to a lack of need for it. Regular half eagle production had ceased in 1916 (a year earlier in Philadelphia), and the 1929 issue was the first instance since then that the denomination had been struck at any Mint. While the economy might have been ready to absorb the coins in daily commerce, the issue’s coincidental release at the same time that the stock market crashed resulted in any commercial need being dissolved. As a result, most examples of the issue never made it past local bank vaults, and were easily confiscated in 1933.

This surviving representative is one of only a small number known in all grades, and represents an important acquisition for the Indian Head half eagle collector. Both sides display intensely frosted luster beneath shades of rose, olive, and yellow-gold. The lower headdress feathers exhibit slight softness, but the eagle’s feathers are well-defined. A scattering of light ticks on each side limits the grade, but in the context of Indian half eagles, which are often lacking in vibrance, this piece is remarkable. Only eight coins are numerically finer at PCGS (12/14). NGC ID# 2800, PCGS# 8533

## 1929 Five Dollar, MS64+ Final Half Eagle Issue Struck Major Series Key

**4310 1929 MS64+ PCGS. CAC.** A glance at the certified population reports can be misleading as to this final-year key date's actual availability. A few hundred Mint State pieces have been certified, even allowing for the usual percentage of likely resubmissions, but it must be understood that this figure represents virtually the entire survival of the original 662,000-coin mintage. Only a scant number of circulated pieces are known, largely due to the fact that this issue never experienced widespread circulation. Most of the production total remained in Treasury vaults when President Roosevelt, by Executive Order, confiscated all monetary gold in 1933 and had it melted down into bars that were to be deposited in the federal reserve banks as backing for the new federal reserve notes that were issued in replacement of the gold turned in by the public. These federal reserve notes are still in use today, even though they ceased to be backed by actual specie when President Nixon took the country off the gold standard.

The 1929 half eagle, then, was the final issue of the denomination struck, and this, coupled with its rarity as a result of melting, makes it one of the most sought-after of all Indian Head fives. Only the historically significant 1909-O claims a popularity that rivals that of the 1929.

While it is true that the majority of known 1929 half eagles are in Mint State, it is also a reality that almost all of those are in the MS64 and lower grades. Cross over into the Gem category, and this date becomes prohibitively rare. High-end Choice examples, then, are typically the finest available to collectors, and often the finest affordable, as well.

The Plus-designated example here offered is the epitome of desirability for the pursuer of this scarce date. It combines the technical quality of a near-Gem specimen with the affordability of a pleasing Choice example. Both sides display uniform straw-gold luster over frosty, minimally marked surfaces. The strike is well-executed, though we note some of the usual softness on the lower headdress feathers. An important offering of this issue that was almost completely eradicated by Roosevelt's Executive Order. PCGS has seen eight numerically finer submissions (12/14). NGC ID# 2800, PCGS# 8533

EARLY EAGLES

---

**1795 BD-1 Ten Dollar, AU50  
13 Leaves, First Die Marriage**

**4311** 1795 13 Leaves, BD-1, High R.3, AU50 NGC. Ex: Hilt Collection. Bass-Dannreuther Die State b/a. A delicate crack connects several left-side stars but the reverse die remains perfect. Traces of peach-tinged luster outline design elements, although the majority of the coin is wheat-gold. No marks are remotely relevant aside from a faint V on the field above the bust tip. The obverse die is distinguished by a defective left serif on the Y in LIBERTY. On the reverse, a leaf practically touches the U in UNITED. Specialist die study has confirmed that BD-1 was the first marriage struck of the ten dollar denomination. As such, it has a special place in American numismatics, similar to the AMERI. Chain cent, the No Stars 1796 quarter eagle, the 1796 quarter, and the famous 1794 silver dollar.

*From The Liberty USA Collection. PCGS# 45710 Base PCGS# 8551*

## 1795 Eagle, 13 Leaves, BD-2, MS61 Important First Year Issue

**4312 1795 13 Leaves, BD-2, High R.4, MS61 NGC.** Bass-Dannreuther Die State a/d. 1795 was the inaugural year for gold coinage of the United States. Eagles and half eagles were first produced in this year, with quarter eagles joining the lineup in the 1796. These denominations stood constant until the discovery of California gold led to the birth of the gold dollar and double eagle in 1849 and 1850, respectively. The three dollar gold piece completed the Mint portfolio in 1854. Other denominations popped up in pattern form, including attempts at four dollar and fifty dollar denominations. Private coiners, in the 1850s, added fractional pieces valued at 25 cents, 50 cents, and one dollar. Combined with territorial gold of the regular denominations, there is today a wide array of possibilities for the gold collector.

Henry William De Saussure was appointed the Director of the Mint in 1795, succeeding the ailing David Rittenhouse, the brilliant scientist who had reluctantly accepted the post in 1792. Rittenhouse would much rather have remained engaged in scientific research in the comfort of his home and observatory at Seventh and Arch streets in Philadelphia (a stone's throw removed from the first Mint), but the Pennsylvania patriot heeded the call of the President and served until he could serve no more. No good deed goes unpunished, and on top of Rittenhouse's personal sacrifice, he was forced to suffer a Congressional inquiry launched in 1794 to examine the finances of the Mint. Faced with daily production problems on the one hand, and Congressional accusations on the other, Rittenhouse was no doubt relieved to hand the reins to De Saussure at the end of June 1795.

De Saussure's tenure was short and most notably marked by the initial delivery of gold coinage on July 31, 1795. De Saussure's biographer wrote in 1841:

"General Washington, whose habit was to see the heads of departments every week at his table, upon one of these occasions, expressed to the director of the mint [De Saussure] his satisfaction at the activity which had been introduced into the silver coinage, and added, 'I have long desired to see gold coined at the mint, but your predecessor found insuperable difficulties. I should be much gratified if it could be accomplished before I leave office.' 'I will try,' was the reply; and the director went to the mint, summoned the officers, ascertained the wants and difficulties of each department, and by great diligence, speedily removed all obstacles. In six weeks he carried to the President a handful of gold eagles [half eagles were actually struck first], and received his thanks and approbation."

De Saussure gave up the post after four months, at which time Elias Boudinot, who had headed the Congressional inquiry, was appointed Director. Boudinot posted a notice at the Mint on June 20, 1796 that clearly revealed a manager attempting to "clean house." Credit goes to R. W. Julian for publishing Boudinot's statement, in the *Numismatic Scrapbook Magazine* of April 1967:

"The Director having had frequent complaints that the coin, both gold and silver, lately struck in the Mint, have been done in a very slovenly, unworkmanlike manner, has examined a number of them and is sorry to find that the complaints have not been without foundation, and great negligence and inattention is charged on the coinage department, with regard to the late deliveries of coin. He therefore expects that in the future greater care will be taken that no coin is passed through the Mint without being executed in a more perfect manner, as a comparison of the former and latter coin does great discredit to the officers of the Mint concerned with the coinage."

Complaining about the Mint was considerably easier than constructively fixing it, but, to his credit, Boudinot stayed in the post for ten years and oversaw a steady production of gold and silver. Copper coinage, the most profitable endeavor, increased to millions of pieces per year under Boudinot.

Today, the 1795 eagle attracts collector interest as a first year issue and short-lived type coin. The Capped Bust with Small Eagle design was used only from 1795 to 1797, at which time the Mint adapted a reverse design echoing the Great Seal of the United States. Beyond this, 18th century American gold exudes a charm reflective of the earliest work of the Mint, a time of imperfect production and political struggle.

This high grade example features Liberty facing right with ten stars to the left and five to the right. The obverse is evenly toned with contrasting highlights in the protected areas, particularly among the left stars. A series of small marks extend from star 13 to Liberty's throat. There are adjustment marks at the rim, within the lettering and denticles below the digits, and crisscrossing the portrait of Liberty. The reverse surfaces are smooth with the exception of a few scattered marks beneath the right (facing) wing, proceeding from IC of AMERICA. The famed Norweb collection was begun with a 1795 eagle (Stack's, 11/2006, lot 2001) and the present coin offers an opportunity for an enterprising bidder to likewise forge their own path.

*From The Liberty USA Collection.* PCGS# 45711 Base PCGS# 8551

## 1795 Capped Bust Right Eagle, AU58 Rare and Popular *Guide Book* Variety 9 Leaves Reverse, BD-3

**4313 1795 9 Leaves, BD-3, R.6, AU58 NGC.** Ex: Hilt Collection. Bass-Dannreuther Die State d/b. The Philadelphia Mint struck gold coins for the first time in 1795. According to Mint records, only 5,583 Capped Bust Right ten dollar gold pieces were struck that year, but numismatists suspect that the dies continued to be used in 1796, so the surviving population of 1795-dated coins may be larger than the small mintage suggests. Walter Breen noted that all 1796-dated eagles have 16 stars on the obverse, denoting the entry of Tennessee to the Union on June 1, 1796, so the early deliveries reported that year must have been from the 15-star, 1795-dated dies. Five different die varieties are known for the date, with this coin representing the rare BD-3 variety, the only variety with nine leaves on the palm branch on the reverse.

Writing in 1980, Robert P. Hilt estimated that the BD-3 variety probably accounted for 210 pieces of the reported mintage for 1796, and was part of the 960 coins delivered under Warrant 66 on June 21 of that year. Hilt estimated the surviving population at just seven examples in all grades. More coins have surfaced over the years, and research by Harry W. Bass, Jr. and John Dannreuther indicates the production total may have been somewhat larger, somewhere between the 210 pieces Hilt postulated at the low end and an upper limit of about 500 examples. No more than 15-22 specimens survive in all grades today. The obverse die was used to strike two other varieties of 1795 eagles, BD-2 and BD-5.

Although the “9 Leaves” reverse is a celebrated issue today, it was unknown to early students of the series. John Colvin Randall identified four varieties of 1795-dated eagles by 1885, but he did not mention the “9 Leaves” reverse in the catalog of his collection when it was sold by W. Elliot Woodward in June of 1885. Likewise, Silas Wodell exhibited three varieties of the 1795 eagle at the 1914 ANS Exhibition, but the BD-3 variety was not represented. The first numismatist to publish a description of the variety was Edgar Adams, in his article in the May 1934 edition of *The Coin Collector's Journal*:

“5-Same as No. 1. Rev. End of stem does not touch or come very close to ‘A’. End of one leaf touches center of ‘U’. Nine distinct leaves in branch. There is a die defect at the end of the second leaf. Clapp.”

Unfortunately, Adams misremembered the owner of the discovery coin, as there was no example of the BD-3 listed in the Clapp notebook. The coin Adams referred to was almost certainly the example in the fabulous collection of Waldo Newcomer, and it had probably passed to “Colonel” E.H.R. Green, via B. Max Mehl, by the time Adams wrote his article.

The first appearance of the present coin that can be positively identified was in lot 198 the Breen 2 Sale (Pine Tree, 6/1975):

“1795 Small eagle, first design and first year of issue. Breen 4-C, Adams 5, Newcomer 439. Almost R.8. The exceedingly rare variety with only 9 (rather than 13) leaves in branch on which eagle stands. ABOUT UNC. or better, SOME ORIGINAL PROOFLIKE SURFACE, small pre-striking planchet chip between rim and 9th star, small plain lint mark (as made) just above the bottom rev. rim, minor rev. adjustment marks plainest at center (also as made), a number of minute granular defects (in flan before striking), light signs of old cleaning, of no importance. Except in very centers of either side, this is well struck and centered. The variety's extreme rarity is attributed to immediate failure of this reverse die; the breaks at first T of STATES and below branch are well advanced. At present only five specimens are located, despite extensive search, the present one being by a small margin second finest:

1. Dr. Angus Black coll., Unc. very similar to this one.
2. The present example, AU.
3. ‘Cicero’ 61, EF, severe planchet defects.
4. Ex Granberg (misremembered as ‘Clapp’ in Adam’s 1934 series), Woodin, Newcomer. VF. Unlocated.
5. Andrew M. Watson coll. (Oct. 1966), lot 1863. VF but abrasively cleaned. (Photo)”

Except to note that the roster of known specimens would be somewhat longer now, we have little to add to Breen’s description of the coin. This specimen appeared later in the ANA Convention Auction (Kagin, 1977), lot 5020, where it was purchased by Robert Hilt. It has been off the market since then, and the opportunity to acquire a comparable specimen may not recur for years. We expect intense competition from early gold specialists and advanced type collectors when this lot is called. Census: 7 in 58, 3 finer (11/14).

### 1795 Eagle, AU Sharpness Rare BD-5, 13 Leaves Variety

**4314** 1795 13 Leaves, BD-5, R.5 — Repaired — PCGS Genuine. AU Details. Bass-Dannreuther Die State e/c. BD-5 is the second-rarest of the five 1795 eagle varieties, trailing only the very rare and popular BD-3, with the 9 Leaves reverse; only 35 to 45 examples are believed extant in all grades. This is the third and final use of this obverse die and the second and final use of this reverse. Heavy die lapping is evident on the outer points of the obverse stars, as well as on the lower feathers of the eagle on the reverse, diagnostic of this late die state. A small die bulge is noted in the field below the eagle's right (facing) wing, and another between IC in AMERICA, these characteristic of die fatigue. The reverse peripheries are extensively repaired, with tooling primarily evident across the tops of UNITED and OF AMERICA. The strike is bold, and the devices retain sharp detail. Bright yellow-gold color blankets each side. Overall, a still-pleasing example of this rare variety. PCGS# 45713 Base PCGS# 8551

### 1795 Capped Bust Right Eagle, AU Details First Year of Denomination, BD-5 Variety

**4315** 1795 13 Leaves, BD-5, R.5 — Improperly Cleaned — NGC Details. AU. Ex: Hilt Collection. Bass-Dannreuther Die State e/c. Only 5,583 Capped Bust Right eagles were struck in 1795, with five die varieties known for the date. This coin represents the BD-5 variety, with star 11 away from Y in LIBERTY and the leaf distant from the U in UNITED. Among 1795-dated half eagles, the BD-5 variety is one of the most challenging to locate in any grade, with a surviving population of 35-45 examples all told. The obverse die was used previously to strike the BD-2 and BD-3 varieties of this date, while the reverse was employed on the BD-4 emission.

The present coin offers well-detailed design elements, with faint traces of planchet adjustment marks on the bust and obverse rim at 9 o'clock. The lightly abraded surfaces show a mix of greenish-gold and turquoise patina, with an unnatural sheen that indicates light cleaning in the past.

*From The Liberty USA Collection. PCGS# 45713 Base PCGS# 8551*

## 1796 Capped Bust Right Ten, AU Details Only Dies for the Date, BD-1

**4316** 1796 BD-1, R.4 — Obverse Repaired — NGC Details. AU. Ex: Hilt Collection. Bass-Dannreuther Die State c/b. Only 4,146 Capped Bust Right eagles were struck in 1796, and some of those coins may have been born a 1795 date. To further complicate matters, die evidence indicates that some 1796-dated specimens were actually struck in 1797, after the 1797-dated coins were struck. The exact number of 1796 eagles originally produced will never be known for certain, but the surviving population numbers no more than 125-175 specimens in all grades, with a single die variety known for the date.

The present coin is an attractive specimen that exhibits well-detailed design elements with just a trace of actual wear. The bright greenish-gold surfaces show only minor abrasions, but evidence of some slight repair shows in the right obverse field, near Liberty's nose. *From The Liberty USA Collection.* PCGS# 45715 Base PCGS# 8554

## 1797 Capped Bust Right Ten, AU Details Small Eagle, BD-1 Variety

**4317** 1797 Small Eagle, BD-1, R.5 — Polished — NGC Details. AU. Ex: Hilt Collection. Bass-Dannreuther Die State b/b. According to mint records, 3,615 Capped Bust Right, Small Eagle ten dollar gold pieces were struck in 1797, but some of those coins may have been dated 1796. The reverse was changed to the Heraldic Eagle motif later in the year, and only a single die variety (BD-1) of the Small Eagle type is known for the date. The Small Eagle variety is very scarce, with a surviving population of 55-65 pieces in all grades. This was the only use of the obverse die, but die evidence indicates the reverse was first used to strike a number of coins in 1796, then used on this 1797 variety, and finally remarked to the 1796 obverse to strike more coins with that date.

This sharply detailed lemon-yellow example shows the often-seen die crack at 4 o'clock on the obverse. The surfaces are free of large or distracting contact marks, but they have been heavily polished. Faint traces of planchet adjustment marks show on the reverse, under magnification.

*From The Liberty USA Collection.* PCGS# 45716 Base PCGS# 8555

**1797 Ten Dollar, Choice AU  
Heraldic Eagle, BD-2, Late Die State**

**4318** 1797 Large Eagle, BD-2, High R.4, AU55 NGC. Ex: Hilt Collection. Bass-Dannreuther Die State b/b with a slender vertical break through the second 7 in the date. The present well defined caramel-gold representative is lightly abraded except for a cluster of minor abrasions on the field near Liberty's chin. Both sides display scattered small lint marks and strike-throughs, as coined. The head and neck of the eagle is difference on each of the three 1797 Heraldic Reverse varieties: BD-2, BD-3, and BD-4. For BD-2, the eagle exhibits an unusually lengthy and narrow neck. The eagle has a belligerent expression and displays a tongue nearly as long and broad as its jaw.

*From The Liberty USA Collection. PCGS# 45717 Base PCGS# 8559*

## 1797 Capped Bust Right Eagle, AU58+ Heraldic Eagle Reverse BD-2 Variety

**4319 1797 Large Eagle, BD-2, High R.4, AU58+ PCGS.** Bass-Dannreuther Die State b/b. This variety marks the beginning of the Heraldic Eagle design type, part of a transitional year mintage that began with coinage of the earlier Small Eagle reverse design. The 1797 Heraldic Eagle ten claims a mintage of 10,940 pieces split between three die varieties. All 1797 Heraldic Eagle tens are from a single obverse die that has a prominent double die crack from the border through the final 7 to the bust. That crack is heavy below the 7 on this example, branches into two parallel cracks through the 7, and continues as a delicate single crack to the drapery.

The reverse of this coin features an eagle with a long thin neck, identifying the very scarce BD-2 variety. The BD-2 variety has a surviving population of 80-100 examples in all grades and probably accounted for 3,500-5,000 pieces of the reported mintage. This was the only use of this reverse die. When W. Elliot Woodward cataloged an example of the 1797 Heraldic Eagle ten in lot 846 of the Randall Collection (Woodward, 7/1885), he noted:

"1797 No. 1; reverse, large eagle; obverse with 16 large stars; proof."

The following lot was another 1797 which he called variety No. 2, distinguished by the "small stars" on the obverse. Although we realize today that the same obverse was used on all three varieties of this date and type, Harry Bass noted that the obverse stars on the other two varieties have shortened points, due to lapping. This probably accounts for Woodward's large and small stars designation on the two varieties, with the large stars corresponding to BD-2. Recent auction sales of the BD-2 include the AU58 NGC coin in lot 5177 of the FUN Signature (Heritage, 1/2011) that realized \$40,250.

A lovely and lustrous yellow-gold specimen, this example shows prooflike reflectivity in sheltered areas. The obverse exhibits the usual shallow strike characteristic of this die, while the reverse has a bold strike. Faint hairlines are hidden beneath deeper honey-gold toning. Eye appeal is quite strong for the grade. Population (all Large Eagle varieties): 31 in 58 (1 in 58+), 38 finer (12/14). PCGS# 45717 Base PCGS# 8559

### 1797 Large Eagle Ten Dollar, AU55+ BD-3, Middle Die State

**4320** 1797 Large Eagle, BD-3, R.5, AU55+ NGC. Ex: Hilt Collection. Bass-Dannreuther Die State d/b. Obverse star 10 has a short inner point, the outcome of a lapped die. No crack is present beneath the eagle's beak. A straw-gold representative that displays moderate wear on the eagle's breast, Liberty's shoulder, and other high points. Luster is plentiful except across the open fields. There are no distracting marks, and the strike is good aside from portions of the dentils. The eagle on BD-3 has a short neck and an oversized beak, perhaps closer in appearance to a toucan. All four 1797 die varieties have similar rarity factors (High R.4 to R.5) but BD-1 trades at a much higher level due to its Small Eagle reverse.

*From The Liberty USA Collection. PCGS# 45718 Base PCGS# 8559*

### 1797 Heraldic Eagle Ten, AU50 BD-4, Early Die State

**4321** 1797 Large Eagle, BD-4, High R.4, AU50 NGC. Ex: Hilt Collection. Bass-Dannreuther Die State d/a without radial cracks through the C or R in AMERICA. An apricot-gold representative that has an even strike and bold definition. Protected areas of the reverse display sea-green and peach shades. Luster rolls across the curls, eagle, and legends. The fields exhibit minor hairlines but are free from any singularly noticeable marks. As identifiers, we note a slender obverse rim ding at 12 o'clock and a small depression on the reverse rim at 2:30. A scarce die marriage with a distinctive eagle. It has a short, thick tongue, a triangular neck, and an alert expression.

*From The Liberty USA Collection. PCGS# 45719 Base PCGS# 8559*

## 1798/7 Capped Bust Right Eagle, AU50 Popular 9x4 Stars, BD-1 Variety

**4322** 1798/7 9x4 Stars, BD-1, High R.4, AU50 PCGS. Bass-Danneuher Die State c/b. According to the 2015 *Guide Book*, only 900 Capped Bust Right eagles were struck with the 9x4 obverse star pattern that characterizes the BD-1 variety. The BD-1 is a very scarce issue, with a surviving population of 80-100 examples in all grades. Only two varieties are known for the date, and both are strong overdates, struck from different obverse, but the same reverse dies.

The present coin is an attractive AU specimen with lightly abraded orange-gold surfaces and a minor rim bruise on the obverse, below the date. Just a trace of wear shows on the cap, hair, face, and drapery and the surfaces retain traces of original mint luster. Population: 5 in 50, 16 finer (12/14). PCGS# 45720 Base PCGS# 8560

## 1798/7 BD-1 Eagle, AU58 Nine Stars Left, Four Right

**4323** 1798/7 9x4 Stars, BD-1, High R.4, AU58 NGC. Bass-Dannreuther Die State c/b. There are two varieties of the 1798/7 eagles, which differ in their obverse star arrangements. The present coin exhibits nine stars to the left with four on the right. Alternately, the other variety of this year presents seven stars on the left and six on the right. The association of stars and states created any number of artistic problems in the early years of the country. With the 1795 entries of Kentucky and Vermont into the United States, Congress adopted a 15-stripe flag, the most famous representation of which flew over Fort McHenry in 1814. The stripes of the flag could not elegantly accommodate an increasing number of states, and in 1818 the stripes were fixed at thirteen and incoming states were granted a new, white star in the blue canton.

The die makers had less space to work with than the flag makers, and numerous star arrangements are found on the gold coins and silver dollars of this period. Half eagles alone in 1797 and 1798 present star counts of 13, 14, 15, and 16. Obverse stars are balanced in various arrangements, the most extreme being a 1797 eagle variety (BD-1) that presents 12 stars to the left and 4 on the right. The left stars are cramped close to the date, while the empty space about the right stars suggests a plan to later add stars as necessary. The Mint quickly settled on a 13-star standard, although engraving mistakes occurred on the 15-star 1818 cent and the 12-star 1828 half cent. The idea of states and stars appears to have been briefly resurrected on the 1836 Gobrecht dollar, which, possibly anticipating the entry of the 26th state (Michigan) in January 1837, included 26 stars on the reverse.

The present example ranks just inside the condition census of available coins. In our 2014 Central States sale (4/2014, lot 5761) we traced eight Uncirculated examples, of which three reside in institutional collections. Following these are a handful of coins tied at the AU58 level, with NGC reporting 10 such grading events. The limited production of Draped Bust eagles facilitates the study of individual dies, and each coin reveals information about the corresponding dies. In the present case, a late state obverse die is married with an earlier state reverse die. There is an obverse die crack through L of LIBERTY that extends below the lower cap line and through Liberty's hair, exiting at the lower left. There is a lighter die crack that reaches from the rim, through R of LIBERTY, before terminating at Liberty's highest curl. Stars 4 and 13 lack inner detail. The overdate is evident within the lower loop of the 8, while the upper serif of the 7 boldly protrudes from the upper loop. Adjustment marks at the obverse rim are most noticeable at stars 10 and 11. There is a set of parallel, shallow scratches running from star 2 to the right side of Liberty. On the reverse, there is a near-vertical die scratch extending from the bottom of the ribbon, through E of E PLURIBUS UNUM, and through the first feather above the ribbon. There is a small mark on either side of M in UNUM. A faint crack connecting the uprights of U in UNITED identifies the Bass-Dannreuther reverse die state.

*From The Liberty USA Collection. PCGS# 45720 Base PCGS# 8560*

### 1798/7 Eagle, 9x4 Stars, BD-1, MS61 Beautiful Prooflike Fields

**4324 1798/7 9x4 Stars, BD-1, High R.4, MS61 PCGS.** Bass-Danneuother Die State c/b. There are only two varieties known for the 1798 eagle, sharing a common reverse die paired with two different overdated obverses. Of the two, BD-1 is slightly more available, though it remains scarce in the absolute sense, with only 80 to 100 coins believed extant in all grades.

This obverse die (the only occurrence of the 9x4 stars orientation) is seen here in the terminal state of its only use, with extensive die cracks originating from the center and branching out toward the peripheries. The most noticeable break runs from the rim above the L in LIBERTY, through the portrait, to the field near stars 3 and 4. The reverse die is seen here in its first of three uses. It is in an earlier die state than is seen on BD-2, which confirms that BD-1 was the first 1798 variety struck. Its final use, as confirmed by die states, was on the 1797 BD-3 variety, which confirms that the 1798 BD-1 variety was struck before this 1797 issue. The obverse die used for the 1797 BD-3 variety was also employed for the BD-4 variety of that same year, but is seen in a later state on that die pairing. It is confirmed, then, that the 1797 BD-3 and BD-4 varieties were struck *after* both of the 1798 overdates.

It was not unusual for the early Mint to use outdated dies well into the following years if they were still serviceable, although this instance of this occurrence is remarkably distinct. It also makes logical sense, considering the fact that both 1798 varieties are overdates, struck with leftover 1797 dies. The later BD-3 and BD-4 1797 varieties were apparently just struck without the dies being put through the overdating procedure. Given the low mintages and survival rates of the 1798 varieties, it is conceivable that those obverses failed early in their usage, which likely prompted the Mint to employ the other serviceable 1797 dies for the remainder of that year's coinage. The proposed emission sequence, as substantiated by die states, is supported by the 1798 Mint Director's Report, which puts the total eagle production for the year at 7,974 coins — far more than are believed were struck of the two 1798 overdates.

This 1798/7 BD-1 example is certainly among the finer-known representatives, showing noticeable prooflike mirroring in the yellow-gold fields and sharp central devices, while the overdate feature is bold. Some minor chatter in the obverse fields limits the grade, but there are no obtrusive abrasions present. This is a truly remarkable example of this elusive overdate variety. PCGS# 45720 Base PCGS# 8560

## 1799 Small Stars Ten Dollar, BD-7, MS63 Distinctive Date Variety

**4325 1799 Small Obverse Stars, BD-7, R.3, MS63 NGC.** Bass-Dannreuther Die State c/d. The Bass-Dannreuther BD-7 and BD-8 varieties share a common obverse die, one that the naked eye easily distinguishes due to its uneven date. The 17 in the date is slanted to the right, and the second and fourth digits are markedly offset, an anomaly that lends to the appeal of this early Mint emission. The uniformity of modern Mint product is admirable from the perspective of quality control, but a degree of charm has been lost in the technological evolution. Sharing the obverse die, the BD-7 and BD-8 varieties are distinguished by the reverse. The BD-7 reverse exhibits a small separation between the star and beak, whereas the star and beak touch on the BD-8.

Early gold coins of the United States did not bear a denomination. Inscriptions denoting the coin's value were first added in 1807 (for the half eagle), 1808 (quarter eagle), and 1838 (eagle). The Mint Act of April 1792 neither specified nor prohibited such usage, and so this was left to the discretion of the Mint. In the meantime, these coins traded by weight and purity. William Maclay (1737-1804), a Pennsylvania Senator, was the likely author of an article in the *New York Daily Advertiser* of February 19, 1791 that took note of this practice. The article advocated that any United States coinage should be of the highest purity:

"I confess I should feel a pride in thinking that America had set an example on the occasion and had contrived (if she might coin) to render her coins the money of the world. Let her free them from alloy; foreigners will then acknowledge her Mint; when she is compelled to ship them she will do it with less loss; and her Eagles will soar where the Princes and Potentates of Europe will not dare to show their brazen faces."

The author argued that the expense of alloying and the practice of essentially giving away the base metal for free created a competitive disadvantage. The idea that alloys were necessary for durability was "long charged to the account of fraud and ignorance, and refuted by the slightest knowledge of chemistry and the nature of metals." Needless to say, Congress disagreed, and the 1792 Mint Act explicitly set a standard for gold coinage of .9167 fineness.

The copper alloy is certainly evident on the present coin, most notably above IBE of LIBERTY and additionally within the dentils at the top and right of the obverse. Elsewhere, rose and violet toning intermixes with the gold to harmonious effect. There are a few hidden hits within Liberty's hair, to the right of star 4, and several marks in the right field between Liberty's nose and stars 9 and 10. The reverse is similarly toned with lighter areas outlining the stars and STATES OF above the clouds. The shield lines reveal a few scattered depressions. The early die states reveal nicely the engraver's intentions. Indeed, this example is largely free of the die damage that frequently plagues Draped Bust gold. There are faint obverse die cracks connecting stars 1, 2, and 3, while the dentil crumble normally seen at stars 1 and 2 is just in its beginning stage. The reverse die is largely free of damage, although a diagonal crack proceeding from the third feather on left (facing) wing identifies the Bass-Dannreuther die state. Combined with the paucity of adjustment marks, this is a splendid example of the type.

*From The Liberty USA Collection. PCGS# 45730 Base PCGS# 98562*

## 1799 BD-8 Irregular Date Eagle, MS61 Small Obverse Stars, R.5

**4326** 1799 Irregular Date, Small Obverse Stars, BD-8, R.5, MS61 NGC. Bass-Dannreuther Die State b/c. The 17 in the date, especially the 7, is canted crazily to the right, and on the reverse the eagle appears to bite the top of star 12, which also shows two points touching the scroll. In this late die state there is die crumbling showing on the obverse rim above stars 1 and 2. There are many small and some large die cracks appearing on both sides, most notably the ones through MER and C in AMERICA and the D in UNITED on the reverse. Although there is some light field haze, the surfaces show essentially full mint luster underneath. Some light planchet adjustment marks appear in the lower scroll. This piece was incorrectly attributed in our 2005 auction as the more-available (R.3) BD-10, but in reality it is the rare (R.5) BD-8.

*Ex: Long Beach Signature (Heritage, 6/2005), lot 7881. PCGS# 45731 Base PCGS# 98562*

## 1799 BD-10 Eagle, AU53 Large Obverse Stars

**4327** 1799 Large Obverse Stars, BD-10, R.3, AU53 NGC. *Ex: Hilt Collection. Bass-Dannreuther Die State a/a.* Rich orange toning surrounds the letters, stars, and motifs. The open fields and high points are green-gold. Although Liberty's cap and shoulder display slight wear, the surfaces lack the consequential marks usually encountered on large diameter gold coins, although we note for pedigree purposes a hair-thin vertical line on Liberty's hair behind her ear. On BD-10, the second 9 in the date is lightly repunched north, and the first A in AMERICA touches two wing feathers. There are only 12 arrows, and a leaf tip is embedded in the I in AMERICA.

*From The Liberty USA Collection. PCGS# 45723 Base PCGS# 8562*

### 1800 BD-1 Eagle, Choice AU Unlisted Late Die State

**4328** 1800 BD-1, High R.3, AU55 NGC. Ex: Hilt Collection. Bass-Dannreuther Die State c/e with interesting cracks atop LIBERTY and across the eagle's tail and branch. A crack over the M in AMERICA is omitted from the Dannreuther reference, as is the obverse rim die break at 4 o'clock. Obverse star 7 is boldly repunched. Dentil clash marks linger above the first T in STATES. The present pleasing example is well struck except for minor blending on the vertical shield stripes and the left (facing) claw. Flashy luster dominates design elements, and abrasions are inconsequential except for a slender bright mark on the obverse rim at 12 o'clock. Minor adjustment marks on the lower reverse are of mint origin, and the same is true concerning a small strike-through above the first O in the date.

*From The Liberty USA Collection. PCGS# 45732 Base PCGS# 8563*

### 1800 Eagle, BD-1, MS62 Well-Detailed and Flashy

**4329** 1800 BD-1, High R.3, MS62 PCGS. Bass-Dannreuther Die State c/e. This variety was struck on two different occasions, the early die state pieces produced in 1800, and the late die state pieces struck sometime in 1801. The reverse die, leftover from the final 1799 variety, was used in 1800 for coinage and then again in 1801 for the BD-1 variety of that year. That first 1801 obverse, however, failed early, leading to the remarriage of this tail die with the now outdated but still serviceable 1800 obverse. The 1801 BD-1 coins exhibit this reverse die with an earlier die state than is seen on the final 1800 coinage. Therefore, this die state c/e example is the final use of this reverse and this obverse.

Since a small number of the 1801 mintage consisted of coins from this die pair — dated 1800 — it is understandable that this variety is one of the more plentiful early eagle varieties known, with 200 to 300 pieces believed extant. Availability in the context of early gold, however, still leaves this variety scarce in the absolute sense.

The coin here offered is well-struck in the centers, though the lower-left obverse denticles are not complete. A glint of semiproof-like mirroring in the fields complements the rich yellow-gold patina, while the surfaces are free of any major abrasions. An appealing Heraldic Eagle type coin. PCGS# 45732 Base PCGS# 8563

## 1801 Eagle, BD-2, MS60 Lustrous Heraldic Eagle Type Coin

**4330 1801 BD-2, R.2, MS60 PCGS.** Bass-Dannreuther Die State b/b. BD-2 is not only the more available by far of the two 1801 eagle varieties, it is also the most plentiful early eagle variety of any date in the series. The dies proved unusually hardy, and never incurred serious damage throughout the entire use of this marriage. This is the only use of this obverse, though the reverse die was later employed for the BD-3 variety of the 1803 issue. Due to the availability of the BD-2 1801 variety, this issue is ideal for type purposes.

The present coin shows original straw-gold luster and is remarkably sharp throughout the centers and the border denticles, with no evidence of adjustment marks. A segmented, curving planchet flaw is seen from the left obverse field, through Liberty's cap, and into the RT in LIBERTY. This is as made, though the exact cause of the planchet flaw is uncertain. The usual vertical die lines are seen in Liberty's cap. Housed in an old green label holder. PCGS# 45734 Base PCGS# 8564

## 1801 BD-2 Eagle, Lustrous MS62 Lacking the 'Spines in Cap' Anomaly

**4331 1801 BD-2, R.2, MS62 PCGS.** No spines in cap, die state unlisted in Bass-Dannreuther. Although it is scarcely mentioned in Bass-Dannreuther (except in Harry Bass's notes, "nine vertical spines in cap"), the vast majority of examples of this variety show the spines, an anomaly whose origins are unknown. Some numismatists believe that the spines or scoop marks are accidental, and others feel they are intentionally made, the result of idleness. In any case, this is among the few examples we have seen lacking this curious attribute, and we notice that the Hilt Collection example in this auction also lacks them. Is "BD Die State a" with spines, or without? If "with spines," then what state is the "without spines"? This is a beautiful greenish-gold, somewhat prooflike example of this die marriage, nicely struck and with minimal marks. PCGS# 45734 Base PCGS# 8564

### 1801 Capped Bust Right Eagle, MS62 Die State With Spines in Cap, BD-2

### 1803 BD-5 Eagle, MS62 Star on Cloud, Large Reverse Stars

**4332** 1801 BD-2, R.2, MS62 PCGS. Bass-Dannreuther Die State b/b. According to Mint records, 44,344 Capped Bust Right eagles were struck in 1801, with just two die varieties known for the date. This coin represents the more available BD-2 variety, with two points of star 8 pointing to the cap. The BD-2 has a surviving population of 600-800 pieces in all grades and probably accounted for 30,000-40,000 pieces of the reported mintage. This was the only use of the obverse die, but the reverse was used later to strike the BD-3 variety of 1803.

This attractive MS62 example exhibits well-detailed design elements and vivid orange-gold surfaces that show a few traces of prooflike reflectivity in sheltered areas. From a later state of the dies, this coin shows the mysterious spines in Liberty's cap that Heritage numismatist Mark Borckardt believes might have been caused by a set screw falling between the planchet and the obverse die during the striking process. A few light planchet adjustment marks are evident on the obverse, but only minor signs of contact are present. Population: 68 in 62, 1 in 68+, 75 finer (12/14). PCGS# 45734 Base PCGS# 8564

**4333** 1803 Large Reverse Stars, Star on Cloud, BD-5, High R.4, MS62 NGC. Ex: Hilt Collection. A well struck and semiprooflike butter-gold example. The obverse is only lightly abraded, and the reverse is well preserved. Faint parallel roller marks (as made) cross portions of the obverse. BD-5 is the well-known variety with a curious tiny star on the rightmost cloud. The variety is mentioned in the *Guide Book* although it does not receive a separate listing. Harry W. Bass, Jr. is credited as discoverer in 1966, although it is possible that Newcomer, Woodin, or other early gold researchers knew of it but simply failed to publish their find. The die state is between Bass-Dannreuther Reverse State a and b, since a clash mark is evident above the eagle's branch claw. The clash mark near the ear is unmentioned in the Dannreuther reference, and neither is the prominent die scratch within the shield, nor the bold die scratch on the right (facing) wing.

From *The Liberty USA Collection*. PCGS# 45739 Base PCGS# 88565

## LIBERTY EAGLES

### 1804 Capped Bust Right Eagle, AU53 Scarce Crosslet 4, BD-1 Variety

**4334 1804 Crosslet 4, BD-1, High R.4, AU53 NGC.** Bass-Danreuther Die State b/b. 1804 is the most renowned date in American numismatics, pregnant with mystery and mythology. The unpublicized production of 1804 silver dollars in the 1830s (in addition to a second group in the 1850s) piqued the interest of collectors as bits and pieces of information trickled from here and there. By the end of the 19th century it was clear that all 1804 dollars were not created equal (some were originals, some restrikes), but misinformation remained ubiquitous. The Chapman brothers incorrectly argued in their Wetmore catalog (6/1906, lot 208) that the 1804 dollar were contemporary products of the Mint. Eric P. Newman and Kenneth E. Bressett's *The Fantastic 1804 Dollar* (1962) unsorted much of the confusion, but by this time the coin was well established as a premier American rarity.

Four 1804 proof eagles were produced along with the 1804 dollars for diplomatic presentation purposes, and these too are highly prized, ranking 44th in Jeff Garrett and Ron Guth's *100 Greatest U.S. Coins* (2003). The present coin, an 1804 business strike ten, is scarce in its own right, with less than 100 known examples. The crosslet 4 in the date easily distinguishes this variety from the BD-2 proof. The obverse right field, between the face of Liberty and stars 9 and 10, exhibits some roughness, and there is a depression between E and R of LIBERTY. Even gold color contrasts with reddish brown at the high points. The reverse replicates this toning while several of the letters encircle richer shades. Bearing the most famous of dates, this high-graded ten is a noteworthy addition to any collection.

From *The Liberty USA Collection*. PGC# 45741 Base PGC# 8566

### 1848-O Eagle, MS64 Reflective and Rare

**4335 1848-O MS64 PCGS.** The 1848-O eagles are the sole O-mint gold coins from New Orleans for the year. Quarter eagles were struck in Philadelphia, Charlotte, and Dahlonega; half eagles were made in the same locations; but eagles were struck only in Philadelphia and New Orleans, the latter to the extent of only 35,850 pieces. The 1847-O eagle mintage, by way of contrast, was more than 15 times as large, at 571,000 coins. The 1848-O (and the 1847-O, for that matter) is quite rare in Mint State, and this PCGS-certified example is one of only three grading events in MS64 at that service, and one is finer (12/14). This piece displays glorious yellow-gold color on deeply lustrous surfaces that show considerable prooflike tendencies. A few faint surface ticks appear but fail to disturb the enormous eye appeal. NGC ID# 2634, PCGS# 8600

### 1860-O Ten Dollar Gold, MS61 Rare, Brilliant Uncirculated O-Mint Eagle

**4336 1860-O MS61 PCGS. Variety 1.** Seized by Confederate forces in 1861, the New Orleans Mint soon ceased operations and did not produce any gold eagles again until 1879. Just 11,100 eagles were struck in New Orleans for 1860, and today the issue is rare in Mint State. A check of our archives shows this is the first Uncirculated 1860-O eagle we have ever sold at auction.

The coin is bright and somewhat prooflike, with brilliant yellow-gold color. Numerous small marks and lines are distributed over the surfaces. Well-struck at the centers, some peripheral weakness is noted at several stars. The coin is the Date High variety, with a diagnostic clash mark in the shield and bold (unlapped) neck curls. A rare and desirable New Orleans ten, seldom available this fine. Population: 1 in 61, 1 finer (11/14). NGC ID# 2645, PCGS# 98631

### 1865-S Inverted Date Eagle, AU55 865 Over Inverted 186

**4337 1865-S 865 Over Inverted 186 AU55 NGC.** A remarkable and somewhat outlandish diesinker error, where the first three date digits were entered upside down and then corrected by partial effacing and repunching of the die with digits in the correct orientation. The San Francisco Mint made use of the corrected die, and in fact struck a substantial portion of the year's mintage of 16,700 pieces with the obvious error.

Both normal and inverted date varieties are collected for the year, and each is scarce. Higher-grade examples are rare — until recoveries were made from the *S.S. Republic* and *S.S. Brother Jonathan*, no Mint State coins were known. The present coin is a Choice About Uncirculated piece, with honey-gold color and a few minor abrasions. The strike is somewhat soft at the centers, but the repunched date is clear. Census: 5 in 55, 2 finer (11/14). NGC ID# 28ED, PCGS# 8643

## 1869-S Ten Dollar, AU58 6,430 Pieces Struck; Few Survive

**4338 1869-S AU58 PCGS.** Both the 1869 Philadelphia and San Francisco eagles are rarities with low mintages and are valued about the same in the *Guide Book*, although a far-smaller Philadelphia mintage (1,830 pieces) suggests otherwise. The net number of survivors from both issues is remarkably similar. PCGS shows 36 grading events for the Philadelphia Mint coin, and 41 events for the San Francisco issue. Between 60 and 75 pieces are known for each issue.

The fact encouraged Garrett and Guth to write, "The 1869-S eagle is an underrated date that is every bit as rare as the much lower mintage 1869 eagle." Today, the two issues are equally sought by series specialists. This near-Mint San Francisco coin is semiprooflike and pleasing, with medium-gold color. The surfaces are well-struck except for two or three stars, and minimally abraded for the grade. Nice luster remains beneath some delicate hairlines. Population: 3 in 58, 2 finer (11/14). NGC ID# 264S, PCGS# 8656

## 1873 Closed 3 Liberty Eagle, XF40 Rare Issue, Only 800 Pieces Struck

**4339 1873 Closed 3 XF40 NGC.** The 1873 Liberty eagle is a rare issue from a minuscule business-strike mintage of just 800 pieces (25 proofs were also struck). All 1873 eagles show a Closed 3 in the date, as they were struck early in the year, before the punch was changed to the Open 3 style. There was no collector interest in large denomination gold coins at the time of issue and no examples were saved for numismatic purposes. One of the earliest auction appearances of the 1873 was in lot 338 of the Charles W. Cowell Collection (B. Max Mehl, 11/1911):

"1873 Fine. Excessively rare. Only 825 reported to have been coined. I can find no record of one ever having been offered at auction sale. Even the Woodin sale, which contained a collection of 172 different Eagles, did not contain a specimen of 1873."

Mehl followed the practice, common at that time, of listing the mintage of proof and business-strike coins together. He also referred to the famous sale of future Secretary of the Treasury William Woodin's gold collection, cataloged by Thomas Elder in March of 1911. The finest known 1873 eagle, an MS60 PCGS coin, was auctioned by Heritage Auctions in lot 6364 of the October 1995 Long Beach Signature for \$34,100.

The present coin is lightly worn, with more than half the hair detail above the coronet still intact and IN GOD WE TRUST still completely legible. The surfaces are lightly abraded, with pleasing greenish-gold color and a few traces of original mint luster. Census: 4 in 40, 17 finer (11/14). NGC ID# 2654, PCGS# 8666

### 1873 Closed 3 Eagle, AU53 Only 800 Business Strikes Minted

**4340** 1873 Closed 3 AU53 NGC. Struck early in the year, this impressive eagle features the Closed 3 date logotype. In fact, the 800 business strikes and 25 proofs all have the Closed 3 date style. The exact number of survivors is unknown, although it is doubtless small. In all grades, NGC has certified 21 1873 eagles, and PCGS has certified 16 pieces, both figures including resubmissions (11/14). At both services, 14 of those coins grade finer than this example. The light yellow-gold surfaces exhibit myriad trivial abrasions, with faintly reflective fields that remain from the polished dies. Census: 3 in 53, 8 finer (11/14). NGC ID# 2654, PCGS# 8666

## 1876 Ten Dollar, AU58 Impressive Philadelphia Rarity Only 40 to 50 Pieces Believed Known

**4341 1876 AU58 PCGS. CAC.** The overall rarity of the 1876 ten dollar rivals that of almost all other dates in the Liberty eagle series, with only the 1873 and the prohibitively rare 1875 being decisively rarer. The 1876 eagle also had a mintage of only 687 pieces, the second-lowest production total of the series, behind only the 1875 at a paltry 100 coins. Survivors are rare in all grades, with only 40 to 50 pieces believed extant. The sole finest known is an NGC MS61 Prooflike coin; PCGS has also certified a Mint State example — an MS60 coin — though it is unknown if this is perhaps the same as the NGC example. Eight AU58 coins are tied for the next finest known of the date (2 at PCGS and 6 at NGC), though even this figure possibly includes one or more resubmissions (11/14). The combined certified population total of 57 coins in all grades is notably higher than the number of pieces actually believed to exist. The Smithsonian Institution lacks an example of this issue in business strike format.

All known representatives of this date are moderately abraded, as virtually the entire mintage was released into circulation. Prooflike fields, or rather the remnants thereof, are the norm, as can be expected for an issue with such a low mintage. The present coin is a deeply reflective example, with warm honey-gold patina and sharply defined motifs. Light, uniformly dispersed abrasions are observed on each side, slightly subduing the mirroring in the exposed portions of the fields, but actual wear is almost indiscernible, even with a loupe. Overall, this is an immensely appealing, original example of this With Motto Philadelphia rarity. With only one or two numerically finer representatives known, the specialist should not let this one pass by. NGC ID# 265C, PCGS# 8674

### 1883-O Eagle, AU58 Lowest-Mintage Branch Mint Eagle Only 800 Pieces Struck

**4342 1883-O AU58 NGC.** The 1883-O eagle is the rarest New Orleans eagle, and among the rarest O-mint coins of any denomination — unsurprisingly so, given its remarkably low mintage of 800 coins. That mintage figure gives the 1883-O the status of having the lowest mintage figure of any branch mint Liberty Head eagle. Only two Philadelphia Mint eagle issues, the 1875 and 1876, have lower production totals than the 1883-O, at 100 and 687 business strikes, respectively.

Doug Winter writes of the 1883-O issue in *Gold Coins of the New Orleans Mint 1838-1909*:

“The level of eye appeal for the 1883-O eagle is well below average. Most are well worn, poorly struck and show a lack of ‘balance’ between the obverse and reverse. Any piece that is original and which is not covered with deep marks is extremely desirable and should command a strong premium over a typical unappealing example.”

The present AU58 NGC-certified example is among only four submissions in that grade, with a single MS61 finer. PCGS reports equal numbers in AU58 and MS61, with none finer (10/14). The surfaces of this piece are far finer than normally encountered, still showing considerable prooflike surfaces remaining — a byproduct of the extremely low mintage — and deep orange-amber patina on each side. A few tiny contact marks appear on the neck of Liberty and dotting the fields on each side, but they are minor and certainly in context with the high circulated grade. Minor strike weakness shows on some, but not all, of the obverse stars, and this is a coin that is well-balanced in appearance between each side. NGC ID# 2668, PCGS# 8701

## 1899 Eagle, Frosty Greenish-Gold MS66

**4343 1899 MS66 PCGS. CAC.** The 1899 eagle is a relatively available date with a large mintage exceeding 1.2 million pieces. It is considered a common date through the MS64 level, but the number of Gem coins is an order of magnitude less, and Premium Gems such as the present piece number six submissions at PCGS (12/14). This piece is currently one of only two in this grade with the CAC green approval sticker. Powerfully struck surfaces are frosty greenish-gold around the rims and gather more orange-gold toward the centers of each side. A gorgeous coin for type or date purposes. NGC ID# 2671, PCGS# 8742

## 1901-S Ten Dollar, MS67 Beautiful Reddish-Orange Color

**4344 1901-S MS67 NGC.** Gleaming luster and a strike that is virtually full are among the many attributes of this desirable Superb Gem 1901-S, to which we must add the beautiful reddish-orange color and excellent overall preservation. The enormous mintage exceeding 2.8 million coins makes a number of survivors available up to the MS67 grade level, including two at PCGS and 20 at NGC (including one Star-designated coin) (12/14). The 1901-S eagles are noted for their excellent overall production qualities, and this example makes the case in spades. Census: 20 in 67 (1 in 67 ★), 0 finer (12/14). NGC ID# 267S, PCGS# 8749

### 1904-O Ten Dollar, Conditionally Rare MS65

**4345** 1904-O MS65 PCGS. CAC. The 1904-O ten dollar can be located with relatively little difficulty through MS62. Select specimens will take more patient searching and higher-grade coins are conditionally rare. Deep peach-gold patina imbued with traces of greenish-tan runs over the radiantly lustrous surfaces of the present Gem offering and a solid strike imparts virtually full definition to the design elements. No significant marks are visible on either side, further enhancing the coin's pleasing eye appeal that is affirmed by the CAC label. Population: 6 in 65, 1 finer (11/14). NGC ID# 267Z, PCGS# 8756

## INDIAN EAGLES

### 1907 Indian Eagle, MS64 Wire Rim Variant, Judd-1901

**4346** 1907 Wire Rim, Judd-1901, MS64 PCGS. CAC. The 1907 Wire Rim ten is often collected with the pattern series, but Indian eagle enthusiasts rightly consider this issue an integral part of the regular series. Only 542 examples were originally struck, with 472 pieces distributed and 70 coins melted in later years. Most of the coins originally distributed are still extant today.

The present coin is an attractive Choice example, with the typically sharp strike on the central devices. Like all examples seen, the definition is softer on the peripheral elements because of the concave fields. The well-preserved orange-gold surfaces radiate satiny mint luster, with many die polish swirls in the fields. Housed in a green label holder. PCGS has graded 86 numerically finer examples (10/14). NGC ID# 268B, PCGS# 8850

## 1907 Rolled Edge Eagle, MS62 Exceptional First-Year Rarity All but 50 Coins Melted

**4347 1907 Rolled Edge, Judd-1903, MS62 PCGS. CAC.** Saint-Gaudens' gold eagle designs went through two distinct modifications by Chief Engraver Charles Barber before regular production was finally commenced. The first production run of the designs was in a very high relief, similar that of the double eagles from this same period, but lacked the high rims that would have allowed the coins to stack properly and protect them from excessive wear in circulation. To remedy this, Barber prepared new hubs and production dies, using the same models, but incorporating a tall, protective rim to each side. This new variant, known today as the "Rolled Edge" variety, was readily approved and struck to the extent of 31,500 pieces.

The second design change came before these coins were released to circulation. New models of a slightly lower relief and with a sufficient rim (now known as the No Periods variety, due to the removal of the stops on either side of the denomination) were proposed as a replacement for Barber's modified version of Saint-Gaudens' original designs, a proposal that was quickly approved. More than just the designs, however, the recently struck Rolled Edge coins themselves were sentenced to be replaced by new coinage from the No Periods hubs. All but 50 examples of the Rolled Edge tens were melted down for recoinage.

The surviving coins were distributed to various persons, with a few likely ending up as pocket pieces as evidenced by the small number of lightly worn examples known today. It is believed that only about 40 to 42 examples survive, far fewer than the certified population reports would suggest to the novice bidder, showing a supposed total of 77 coins at PCGS and NGC combined. With the date's high collector value jumps between grades, there is little wonder as to why the figures are skewed by resubmissions.

The present coin is a deeply satiny, green-gold representative, with well-struck devices and the occasional hint of orange-gold color in the recesses. The surfaces are remarkably devoid of obtrusive abrasions, with just minor contact on the high points of the eagle and the obverse portrait limiting the grade.

The Rolled Edge 1907 Indian eagle is the second-rarest issue in the entire series, trailing only the extremely rare 1933, and just nudging ahead of the 1920-S. It is interesting to note that all three of these major keys owe their rarity to excessive melting, in 1907 for the Rolled Edge variety and the others in the mid-1930s as a result of the gold recall order. All of these issues necessitate strong bids at auction, though the 1907 Rolled Edge issue is arguably the most storied of the lot. Population: 2 in 62, 44 finer (11/14). NGC ID# 268C, PCGS# 8851

### 1907 No Periods, No Motto Ten, MS66 Radiant Original Mint Bloom

**4348 1907 No Periods MS66 PCGS. CAC.** The 1907 No Periods Indian eagle was the final product of Charles Barber's adjustments to Augustus Saint-Gaudens' designs. The removal of the periods (or stops) on either side of the denomination is the chief difference between this and the previous two 1907 variants. The issue is by far the most plentiful No Motto issue overall, and is a favorite among type collectors. Examples can be found with little difficulty through the Gem grade level, but Premium Gems, such as the current offering, are scarce, and finer pieces are genuinely rare. This coin shows vibrant, satiny luster underlying rich apricot-gold patina. The headdress and the eagle's feathers are sharply detailed, and the smooth surfaces are devoid of mentionable marks. Only nine coins are numerically finer at PCGS (11/14).

*From The A. James Evans Collection, Part II. NGC ID# 28GF, PCGS# 8852*

### 1908-D No Motto Eagle, MS64 Deep Apricot-Gold Color

**4349 1908-D No Motto MS64 PCGS.** This is a nice, well-preserved example of this conditionally elusive date, one that is seldom seen in Gem condition. Only a couple of small marks on Liberty's mouth and in the left field on the reverse seemingly preclude Gem status on this lovely coin. Attractive, deep apricot-gold color and cartwheel luster abound throughout each side. The strike is somewhat weak on the obverse portrait and headdress feathers, typical for the issue, although the central feather details on the reverse are boldly struck up. Population: 48 in 64 (4 in 64+), 8 finer (11/14). NGC ID# 28GH, PCGS# 8854

## 1908-D Eagle, MS64+ No Motto Condition Rarity

**4350 1908-D No Motto MS64+ PCGS.** A challenging ten dollar gold to find in Gem condition and pricey, too. This borderline Gem is a good alternative, with smooth surfaces, exceptional rich-gold color, and vivid mint luster. The strike is first-rate. A few small, light hits on the cheek and a shallow line in the left obverse field determine the grade.

Just 210,000 pieces were minted of the No Motto variant. Another 836,500 coins were struck with the Motto for a total Denver mintage of more than 1 million pieces in 1908. Only the 1910 production was higher for the Denver Mint. This coin is far above average in eye appeal and overall quality for the issue. Population: 48 in 64 (4 in 64+), 8 finer (11/14). NGC ID# 28GH, PCGS# 8854

## 1908 Motto Eagle, MS67 Ex: Jim O'Neal, Top-Notch Type Coin

**4351 1908 Motto MS67 PCGS.** Ex: O'Neal. The 1908 Indian eagle is the first issue of the With Motto type, and it is highly regarded as a type coin and pursued especially by collectors of first-year type coins. It was struck to the extent of a generous 341,370 pieces, and most survivors are lightly circulated or have plentiful bagmarks. Most of the certified Mint State coins cluster in the MS61-MS64 grade range. The certified populations at PCGS and NGC thin out markedly at the Gem grade level. The two services combined report only seven submissions in Superb Gem, with eight finer (9/14). This MS67 PCGS example, formerly in the storied Jim O'Neal Collection, displays beautiful yellow-gold surfaces with faint greenish undertones and a few splashes of deeper orange-gold. The luster is intense, and the design features all show crisp definition. The surfaces are immaculately well-preserved. A pedigree identifier appears in the form of one tiny, unobtrusive mark on the Indian's cheek. The exceptional eye appeal is sure to draw the attention of serious Indian Head gold collectors.

Ex: *Jim O'Neal Collection / FUN Signature (Heritage, 1/2009), lot 3505.*

*From The Empire Collection.* NGC ID# 28GJ, PCGS# 8859

### 1908-D Motto Ten Dollar, Well-Defined MS63

**4352 1908-D Motto MS63 NGC.** Speckles of darker toning visit the peach-gold surfaces of this Select D-mint ten dollar. A touch of granularity is also noted, a typical characteristic of this issue. The design elements are well-defined including a bold mintmark. The luster is somewhat soft, and a few marks and scuffs, also very typical of this date, are visible over each side. Akers (2008) says of the 1908-D Motto ten that it "is difficult to locate with overall smooth surfaces." Nevertheless, this is a decent type coin. Census: 30 in 63, 33 finer (11/14). NGC ID# 28GK, PCGS# 8860

### 1910 Ten Dollar Indian, MS66 Common Date, Uncommon Condition

**4353 1910 MS66 PCGS. CAC.** Scintillating mint luster and remarkably clean fields affirm the exemplary quality of this impressive Premium Gem. Pumpkin-gold patina alternates with glimpses of lime-gold. The strike is pinpoint-sharp, even on the olive branch and the eagle's talons. The Denver Mint struck more than 2.3 million eagles in 1910, but the Philadelphia Mint production was approximately seven times smaller, perhaps because paper money was considered more convenient to use than gold coins in the East. The 1910 is nonetheless available in AU58 to MS63 grades, but as a bag-stored issue, it is significantly rare at the MS66 level. Population: 25 in 66 (1 in 66+), 3 finer (11/14).

*Ex: Dallas Signature (Heritage, 11/2006), lot 2450. NGC ID# 28GR, PCGS# 8865*

## 1910-S Eagle, Top-Notch MS64 Four Numerically Finer at PCGS

**4354 1910-S MS64 PCGS.** The mintage figure of the 1910-S eagle is essentially meaningless today in any sense other than as a historical reference, as much of the 811,000-coin issue was undoubtedly melted after the Gold Recall of 1933. Near-Gems such as the present piece number slightly more than two dozen (submissions, not necessarily all separate coins) at PCGS with five finer, and the situation at NGC is not far different (12/14). This is a top-notch coin, definitely at the high end of survivors. Generous cartwheel luster radiates from each side, and lovely orange-gold color and a relative lack of mentionable marks separate this piece from its cohort. A near-unimprovable coin. NGC ID# 268D, PCGS# 8867

## 1911-D Ten Dollar Indian, MS62 Rare in All Grades

**4355 1911-D MS62 NGC.** This is an extremely important opportunity for the specialist collector to acquire a Mint State example of this elusive date. The 1911-D is rare in all grades, as one would expect from an issue with a mintage of 30,100 coins, the lowest production total in the entire Indian eagle series save for the two 1907 With Periods varieties. Both sides are fully lustrous with matte-like tangerine-gold surfaces and sharp design features. The population totals undoubtedly include a certain number of resubmissions. Census: 71 in 62 (1 in 62+), 22 finer (11/14).

*Ex: FUN Signature (Heritage, 1/2007), lot 6190.*

*From The Free Tilly Collection. NGC ID# 28GU, PCGS# 8869*

### 1912 Indian Eagle, MS67 Vibrant Luster, Pristine Surfaces Tied for Finest Certified

**4356 1912 MS67 PCGS.** The design of the Indian eagle was slightly modified in 1912 to include two more stars around the obverse, commemorating the entry of Arizona and New Mexico to the Union. An adequate business-strike mintage of 405,000 pieces was accomplished, making the issue moderately scarce, but not too difficult to locate in lower Mint State grades. The availability drops off sharply at the Gem level, however, and the 1912 is a prime condition rarity in MS67.

The rarity of the 1912 Indian eagle in extremely high grade is probably due to the collecting habits of early 20th century collectors. The novelty of the Indian design had worn off by 1912, so few examples were saved for their novelty value. The few numismatists who systematically collected large-denomination gold coins in those days, and they were very few, usually just ordered a proof set from the Philadelphia Mint to update their collections every year. As a result, the great majority of the business-strike mintage was either released into circulation, held in bank or Treasury vaults, or used to settle large transactions in overseas trade. Only a small handful of high-quality examples, like the coin offered here, was saved by contemporary collectors for future generations to enjoy.

The present coin is a magnificent Superb Gem, with well-detailed design elements and impeccably preserved orange-gold surfaces that show hints of yellow and rose. The surfaces show some slight granularity, like most Philadelphia issues of this era, but vibrant frosty mint luster radiates from both sides and eye appeal is terrific. This coin is tied for finest certified with two other examples, one at NGC and another at PCGS (11/14). It should find a home in the finest collection or Registry Set. NGC ID# 28GW, PCGS# 8871

## 1913 Ten Dollar, MS66+ High-End Example; None Finer at NGC

**4357 1913 MS66+ NGC.** Always a favorite for type based on the above-average eye appeal demonstrated by the Philadelphia issue, this high-end coin outshines most others and ranks among the finest known. No coins are certified finer at NGC and only a single coin at PCGS exceeds it in numeric grade.

Both the strength of strike and beautiful toning set this Indian eagle apart from other Premium Gem coins. The bonnet and hair strands are fully brought up, and the eagle is full-feathered. Amazing coloration completes the strong visual impression, with orange-gold base toning accented with rose and copper highlights on both sides. Few marks are seen — none of any importance — with a tiny alloy mark at the eagle's neck perhaps the most noticeable mark, so minor that it would be missed by most viewers. Census: 17 in 66 (4 in 66+), 0 finer (11/14). NGC ID# 28GY, PCGS# 8873

## 1913-S Ten Dollar Gold, MS62+ Challenging, Low-Mintage Issue

**4358 1913-S MS62+ PCGS.** Just 66,000 pieces were produced, rivaling the 1911-D and 1911-S issues as primary targets for key date collectors. In many ways, the three coins are similar in scarcity and desirability. This example shows glimpses of the deep carrot-orange coloration often seen for the issue — a characteristic of the gold composition, although one that isn't consistent throughout the Mint's run. The issue is always a challenge to find in Mint State, with granularity and handling marks often restricting the assigned grade. This example earned the PCGS Plus for high-end quality at the MS62 level, one of two such coins to do so. Population: 48 in 62 (2 in 62+), 43 finer (11/14). NGC ID# 28GZ, PCGS# 8874

### 1913-S Ten Dollar, MS63 Rare in Mint Condition

**4359 1913-S MS63 PCGS.** Fully lustrous surfaces with deep orange-gold color and excellent eye appeal. This example is housed in an older green-label holder. Each side has the typical quota of light surface marks expected at this grade level. The mintage of this date was pegged at 66,000 coins, the sixth lowest of the series, and yet David Akers ranked this date as first out of 32 issues for rarity in Mint State grades. He commented: "The 1913-S is the premier rarity of the series and is extremely difficult, if not virtually impossible, to obtain in MS-64 or better condition." Population: 27 in 63, 16 finer (11/14). Ex: *Dallas Signature* (Heritage, 7/2006), lot 1584; *FUN Signature* (Heritage, 1/2007), lot 3685.

From The Free Tilly Collection. NGC ID# 28GZ, PCGS# 8874

### 1920-S Indian Eagle, AU58 Heavily Melted San Francisco Rarity

**4360 1920-S AU58 PCGS.** The 1920-S Indian eagle is the third-rarest issue overall in the series, trailing only the 1933 and the 1907 Rolled Edge variety. A number of pieces were distributed into circulation, and surviving examples of these comprise the majority of the pieces known to collectors. Nearly all the remaining 1920-S eagles were later melted under the dictates of Roosevelt's Executive Order 6102. As a result, this issue is significantly scarcer than one might be led to believe by its mintage of 126,500 coins. PCGS and NGC combined have encapsulated only 111 examples in all grades, likely including a number of resubmissions. The present coin is boldly struck, with satiny bronze-gold luster and remarkably smooth surfaces. Close scrutiny is needed to detect any signs of actual wear, giving this piece exceptional eye appeal for the grade. Population: 9 in 58, 29 finer (11/14). NGC ID# 28H8, PCGS# 8881

## PROOF INDIAN EAGLES

**1908 Motto Eagle, Matte PR65  
An Important and Beautiful Proof**

**4361 1908 Motto PR65 PCGS Secure.** This Gem matte proof example of the 1908 With Motto eagle coinage is both an incredibly important coin and an intensely beautiful one. Although the number of proof eagles reportedly struck in 1908 was 116 pieces, they were quite popular due to their status as the first proofs of the new Augustus Saint-Gaudens design generally made available to collectors. Struck in the year after “the Saint” died of stomach cancer, the pieces saw large orders from numismatists of the era. The few known proofs of 1907, of whatever kind, are great rarities and were never broadly available to collectors. Regardless of the number struck, far fewer survive today, and they see virtually ceaseless demand. A Gem PCGS example in our Chicago ANA Signature (Heritage, 8/2014), lot 5673, brought \$79,312.50 in competition from 11 different bidders.

The Garrett and Guth *Gold Encyclopedia* notes that “possibly three” proof finishes were used for the 1908 Motto eagles, but the vast majority show a dark matte finish consistent with the present piece. A medium mustard-copper color is remarkably uniform throughout both sides. Even under a loupe, this piece appears conservatively graded, given the absence of even the smallest disturbance in the fabric of each side. No contact marks or tiny surface disturbances appear. A fine wire rim appears around portions of each side, the result of excessive pressure pushing portions of the planchet upward into the collar die. PCGS reports 15 submissions in matte PR65 with 10 finer — seven PR66, one PR66+, and two PR67 (12/14). NGC ID# 268E, PCGS# 8890

### 1909 Indian Eagle, Extraordinary PR67 Among the Finest of This 'Roman Finish' Proof Date

**4362 1909 PR67 NGC.** Satiny luster and rich scenic orange surfaces are the characteristics of this Roman finish gold piece. As expected, the surfaces are pristine, and the eye appeal is extraordinary. The depth of the strike gives this piece a medallion appearance that will appeal to any collector of American gold coinage.

There was a time shortly after these coins were minted that some collectors objected to them. They were accustomed to the earlier brilliant proof pieces and failed to understand that the Saint-Gaudens and Pratt designs were unsuited for a brilliant, mirrored finish. William Woodin, for example, wrote to Assistant Treasury Secretary Abram Piatt Andrew that the earlier (matte) finish was most acceptable, and that the new Roman finish was unacceptable. In his August 19, 1910 letter to Andrew, he wrote:

"I am surprised at the statement that the dull finish of the gold proof coins was objected to by many collectors. If any collectors objected to this finish it was because they did not understand that the St. Gaudens [sic] designs are not adapted to the production of polished proofs. The present proofs of the St. Gaudens designs and of the Pratt designs are simply rotten. I know of no other word to express it."

Like most proof Indian eagles, few have survived in the highest grades. Just 74 proofs were struck, mostly in the lighter Roman finish, and about half survive today. In our own auctions since 1993, this example is only the third PR67 we have handled (two previous auctions offered a single coin). NGC and PCGS combined have certified 74 submissions with an average grade of 64.6. Census: 3 in 67, 1 finer (9/14).

*Ex: Los Angeles Signature (Heritage, 8/2009), lot 1313.  
From The Empire Collection. NGC ID# 28HF, PCGS# 8891*

### 1912 Eagle, Matte PR66 Marvelous Sandblast Proof

**4363 1912 PR66 PCGS.** Lighter glints of yellow-gold — most perceptible in the upper headdress feathers, around the right obverse rim, and moving downward toward the recessed field around the date — contrast against the prevailing darker orange-gold tint of this delightful Premium Gem matte proof 1912 eagle. A similar contrasted effect is seen around the upper reverse legend, although it is less obvious there.

The mintage of the 1912 matte proof eagles was 83 pieces, putting it into the median range of the complete Indian Head series. Nonetheless, the second edition of David Akers' *Handbook of 20th Century United States Gold Coins 1907-1933* places the 1912 eagle proof in a tie (with the 1915) for first place out of eight issues in overall rarity, and fourth of eight in high-grade rarity. The sandblast method used to finish these coins resulted in a fine-grained texture on the surfaces. Garrett and Guth write in their *Gold Encyclopedia* that "this sandblast effect appears under a microscope as millions of tiny facets," and they rank the issue fifth out of eight in Gem proof or higher grades.

Rankings aside, this is a marvelous example of the art of creating sandblast matte proofs. To our eyes, the slight color variation gives the surfaces an extra vibrancy and appeal. Each side is virtually devoid of defects, although a long perusal reveals a tiny tick on the rear of the eagle's head. The sharp strike and intricate definition this issue is justly noted for are on abundant display here. The last PR66 PCGS example we offered had the CAC green label and a quite similar appearance to this piece, lot 6835 in our Long Beach Signature (Heritage, 9/2013), realizing \$94,000. Population: 5 in 66, 4 finer (10/14).

From *The A. James Evans Collection, Part II*. NGC ID# 26YD, PCGS# 8894

## LIBERTY DOUBLE EAGLES

### 1850 Twenty Dollar Liberty, Lustrous MS61 Popular First Year of Issue

**4364 1850 MS61 PCGS. CAC.** The 1850 was the first year of production for the denomination and is always a popular issue for type collectors. It is seldom available in mint condition with probably fewer than a hundred pieces known, far fewer than the number of collectors who would like an Uncirculated example. This attractive piece has rich yellow luster with a hint of green toning. The surfaces are satiny, with slightly reflective fields. Moderate abrasions are typical of the grade, but none are of any particular consequence. Population: 24 in 61, 47 finer (11/14).

*Ex: Summer FUN Signature (Heritage, 7/2009), lot 1934. NGC ID# 268F, PCGS# 8902*

### 1850-O Double Eagle, AU55 Inaugural New Orleans Twenty

**4365 1850-O AU55 NGC. Variety 3.** The 1850-O double eagle's mintage of 141,000 coins was one of the larger production totals for the denomination at the New Orleans Mint, but virtually all coins experienced moderate circulation in the South. This issue becomes conditionally scarce in AU grades, and Mint State pieces are extremely rare. The present coin exhibits original bronze-gold patina, with hints of luster remaining in the protected areas. The strike is sharp and just a brush of wear precludes a Mint State grade. A few light, scattered abrasions are present, as is expected at this grade level, though the surfaces remain unusually smooth. Overall, this is an immensely appealing example of this elusive first-year New Orleans issue. Census: 42 in 55, 19 finer (11/14). NGC ID# 268G, PCGS# 8903

## 1850-O Double Eagle, MS61 One of Only Seven Known in Mint State

**4366 1850-O MS61 NGC. Variety 2.** Few gold issues from the New Orleans Mint can claim what would generally be considered a high mintage, especially within the double eagle series. If any O-Mint double eagle is to be considered collectible (at least in comparison the very rare later issues), it would have to be one of the first few dates struck of this denomination.

Until the San Francisco Mint was operational in 1854, gold mined in California during the height of the Gold Rush had to be shipped by steamboat to New Orleans and Philadelphia for coinage. The newly authorized double eagle was the denomination of choice for much of this bullion, which resulted in fairly substantial mintages at the New Orleans Mint in 1850 through 1853. Today, these issues are the most collectible twenties from this facility, with the 1850-O being the most popular due to its first-year issue status.

The 1850-O had a mintage of 141,000 pieces, most of which experienced extensive circulation in the South. Most known survivors are in the VF to XF grade range, and AU coins are considered upper-end for the issue. Only seven pieces have been certified as Mint State, including one PCGS MS61 coin and six NGC pieces — two in MS60, three in MS61, and the sole finest known in MS62 (11/14).

Our archives show only five previous appearances of this date in Mint State, including four MS60 offerings and recently the PCGS MS61 coin, which brought \$111,625 in our June 2014 Long Beach Signature auction. This piece is equally as appealing, with bright yellow-gold patina complementing noticeable semiprooflike mirroring in the fields. The design elements are well-struck. Light, scattered abrasions contribute to the grade, but the overall appeal is unusually high for the grade. A distinct condition rarity and one of the finer-known examples of this popular early New Orleans double eagle. NGC ID# 268G, PCGS# 8903

### 1851-O Liberty Double Eagle, AU58 Excellent O-Mint Type Coin

**4367 1851-O AU58 NGC. Variety 1.** From a mintage of 315,000 pieces, the 1851-O Liberty double eagle is an available issue in the VF-XF grade range, making it a popular choice with mintmark type collectors. However, the 1851-O is very scarce in AU58 condition, and Mint State examples are rare.

This attractive near-Mint specimen shows just a trace of wear on the high points of the well-detailed design elements. The pleasing greenish-gold surfaces retain much of their original mint luster, with the expected number of minor abrasions for the grade. Census: 63 in 58 (1 in 58+), 19 finer (11/14). NGC ID# 268J, PCGS# 8905

### 1852-O Liberty Twenty, AU58 Rare Issue in Higher Grades

**4368 1852-O AU58 NGC. Variety 1.** The 1852-O Liberty double eagle claims a substantial mintage of 190,000 pieces, but the issue circulated heavily in the regional economy at the time of issue and few examples were saved by contemporary collectors. As a result, the 1852-O is readily available in lower circulated grades, but it becomes very scarce at the AU58 level, and Mint State coins are rare.

This attractive near-Mint specimen offers lightly abraded greenish-gold surfaces that retain most of their original mint luster. The design elements are well-detailed, with just a trace of wear showing on the high points. Overall eye appeal is quite strong. NGC has graded 22 numerically finer examples (11/14). NGC ID# 268L, PCGS# 8907

## 1852-O Twenty, AU58 Generous Luster

**4369 1852-O AU58 PCGS.** This near-Mint State 1852-O is considerably nicer than most certified examples of this early O-mint, as those pieces average only AU50. It is only a slight thinning of the luster in the fields, more so than perceptible high-point wear, that separates this coin from the Mint State level. Generous luster nonetheless remains on the yellow-gold surfaces, which show some prooflike tendencies and also boast a bold strike complementing a minimum of abrasions, large or small. This piece is far more conditionally elusive than lower-AU-grade examples. Population: 38 in 58 (1 in 58+), 14 finer (12/14). NGC ID# 268L, PCGS# 8907

## 1858 Liberty Twenty Dollar, MS62 Impressive Mint State Type One Example

**4370 1858 MS62 NGC.** Somewhat prooflike surfaces and an unblemished portrait of Liberty set this original and highly attractive twenty apart from the few similarly-graded Mint State coins seen by either service. A wire rim surrounds the beautifully denticled edges. Marks are limited to a light, scattered abrasions on both sides, with some curious raised, small toothlike projections below star 1. The coin is well-struck on both sides with lovely green-gold color and abundant mint luster. Just 211,714 coins were struck, with most succumbing to heavy circulation and attrition. A rare offering this nice, sure to be a highlight of a nice double eagle collection or type set. Census: 8 in 62, 1 finer (11/14). NGC ID# 2697, PCGS# 8923

**1858-O Double Eagle, MS63**  
**Sole Finest Graded**  
**Ex: *S.S. Republic***

**4371 1858-O MS63 NGC. Variety 2.** Ex: *S.S. Republic*. This is a tale of two key-date Type One double eagles. The New Orleans Mint had been open exactly 20 years when the 1858-O double eagles were struck, including this MS63 NGC top-graded example — the first coin in our tale. The issue was struck to the meager extent of 35,250 pieces. The small production apparently slipped into circulation; today, most survivors grade only Very Fine to Extremely Fine. AU coins can be obtained for a price, but most of them are apt to grade no better than AU55. An AU58 example is a grade rarity, and Mint State examples are virtually unknown. The small mintage of 1858-O twenties would be much more discussed and noteworthy, save that the same decade and mint features remarkable rarities such as the 1854-O and 1856-O — coins that today survive only to the extent of two or three dozen examples in all grades.

The second double eagle in our tale is an 1861-S Paquet Reverse double eagle, certified AU58 NGC, which sold in our FUN Signature (Heritage, 1/2012), lot 5039, for \$184,000. The 1861-S Paquet twenty — any example — is well-known to collectors as the “1893-S Morgan dollar” of the S-mint Type One series, the key to the set and actually even rarer than the 1893-S, since it is unknown in Mint State.

The connection between these two coins is that both were recovered from the shipwreck of the *S.S. Republic*, which sank in a raging hurricane off the coast of Georgia in 1865, en route from New York to New Orleans with a cargo of \$400,000 worth of eagles and double eagle.

New Orleans, a thriving commercial hub and an important, strategic port, had been captured by Union forces in 1862, but due to the recently ended Civil War, hard money — gold and silver — were in short supply.

In the four years since its production, the 1861-S Paquet twenty had made its way to New York, to constitute a small part of the cargo of the doomed *S.S. Republic*, along the way acquiring a few points of wear.

But our 1858-O double eagle, struck seven years before the sinking of the *S.S. Republic*, managed to travel from New Orleans to New York, and yet remain in pristine Mint State. *This is the sole finest certified 1858-O double eagle at NGC and PCGS combined.* NGC shows one MS60, two each in MS61 and MS62, and this lone MS63 (9/14). PCGS reports only a single Mint State example, an MS62 coin.

The surfaces of this coin indicate that it was likely stored in a bank bag for most or all of its existence, acquiring some reeding marks from jostling up against other coins along the way. A couple of small planchet flaws also appear, one just above 58 in the date, a second near star 1. But there is absolutely no trace of wear or friction, and full luster throughout both sides complements the beautiful apricot-gold color. The strike is remarkably well-executed throughout both sides. This sole finest known 1858-O twenty dollar should make both O-mint specialists and double eagle fans take long, hard notice. Interested bidders should bid liberally, as a second chance at this coin may not come for many years. NGC ID# 2698, PCGS# 8924

## 1860-O Double Eagle, XF40 Scarce O-Mint Issue

**4372 1860-O XF40 NGC. Variety 2.** A rare, newly recorded variety; the mintmark is higher and further left than on the Variety 1 reverse. A search of 51 listings in our archives reveals only six coins featuring this reverse die, including a previous appearance of this same piece. As a date, the 1860-O double eagle is not quite as rare as several other New Orleans double eagle dates, but it is scarce in its own right. A single MS60 prooflike specimen was recovered from the *S.S. Republic* shipwreck, but no other Uncirculated examples have been certified by either major service. Doug Winter estimates 85-95 survivors are known from a mintage of 6,600 pieces, all in circulated condition. This example is a smoothly worn XF40 with mellow, reddish-gold color and brighter gold highlights over the devices. The number of surface abrasions is perhaps fewer than expected for a coin of this grade. The 1860-O is significantly scarce in this grade and a favorite Type One date among double eagle collectors. Census: 3 in 40, 51 finer (11/14). NGC ID# 269E, PCGS# 8930

## 1861 Double Eagle, Lustrous MS63 Elusive at This Grade Level

**4373 1861 MS63 NGC. CAC.** The large production approaching 3 million pieces makes the 1861 a common issue in most grades, and available without too much trouble in MS60 to MS62. This date becomes more elusive in the Select level of preservation where the two major services have graded 55 examples and about 40 finer. Lustrous peach-gold surfaces exhibit design elements that are better struck than average, and they are devoid of mentionable abrasions. The overall eye appeal is nice for the grade, appropriately recognized by CAC. Census: 23 in 63, 26 finer (11/14). NGC ID# 269G, PCGS# 8932

### 1863 Twenty Dollar, Bright AU58 Scarce P-Mint Type One Issue

**4374 1863 AU58 PCGS.** Only three dozen examples of the 1863 twenty were recovered from the *S.S. Republic*, a number that did not greatly increase the availability of this scarce Type One issue. Both sides of this attractive near-Mint representative have semireflective fields that are especially obvious on the obverse. The light yellow-gold surfaces show a light tinge of reddish patina, and both sides are minimally abraded. The obverse is a trifle blunt, and the reverse is boldly defined. Population: 15 in 58, 19 finer (11/14).

Ex: *Central States Signature* (Heritage, 4-5/2009), lot 3956. NGC ID# 269P, PCGS# 8939

### 1863 Twenty Dollar, MS63 Condition Census Blazer

**4375 1863 MS63 PCGS.** Gold coin production dwindled in Philadelphia in 1863, reducing to just a little more than 142,000 pieces. Surviving examples are scarce in all grades, and primarily restricted to the VF and XF grades. AU examples are only infrequently seen, and "True Mint State coins are so rare that many old-timers have never seen one," according to Q. David Bowers. In point of fact, most Uncirculated pieces known today were among the 35 examples of this date that were discovered among the treasure of the *S.S. Republic* shipwreck. The finest known of this issue is a sole MS64 coin at PCGS, followed in MS63 by just four others at PCGS and NGC combined (11/14). The Smithsonian Institution lacks an example of the 1863 double eagle, per Jeff Garrett and Ron Guth.

The present coin is a truly exceptional piece, not only in technical preservation but also in sheer eye appeal. Frosty wheat-gold luster delivers dazzling flash when tilted beneath a light, while the design elements are sharply struck. Light, scattered luster grazes on the obverse define the grade, though the reverse is seemingly undisturbed. An outstanding condition census example of this elusive Civil War-era double eagle. Population: 2 in 63, 1 finer (11/14). NGC ID# 269P, PCGS# 8939

## 1865 Liberty Twenty, MS64 Seldom Encountered in Finer Grades

**4376 1865 MS64 NGC.** The 1865 Liberty double eagle was almost never seen in Mint State grades before the recent salvage of the *S.S. Republic*. The collecting picture changed dramatically for this date when 320 examples grading from AU to MS65 were recovered from that famous shipwreck.

This delightful Choice example may, or may not, be a survivor of the *S.S. Republic*, but it certainly has the vibrant mint luster associated with those coins, and the odds are in favor of such an origin. The design elements are sharply detailed and the lightly marked yellow-gold surfaces display highlights of green. Eye appeal is outstanding. Census: 85 in 64 (2 in 64 ★), 24 finer (11/14). NGC ID# 269U, PCGS# 8943

## 1866 Double Eagle, MS61 High-End for the Grade

**4377 1866 MS61 PCGS.** The 1866 double eagle is a heavily melted and exported issue, and most of the known survivors grade only in the VF to XF range. A small number of Mint State pieces survive, but virtually all of these exhibit numerous bagmarks and are generally unappealing. Careful storage and preservation of business strike double eagles was hardly a priority during the latter half of the 19th century, as collectors largely sought out proofs, and coins kept in bank vaults or sent abroad for trade were jostled frequently. This example is certified at the MS61 grade level, but the surfaces are surprisingly smooth, with absolutely no obtrusive abrasions. Frosty wheat-gold luster illuminates each side, while just minor grazes on the obverse appear to have limited the grade assessment from PCGS. The strike is bold and neither side exhibits the die lapping that typically affects double eagles from this period. Population: 31 in 61, 6 finer (11/14). NGC ID# 269X, PCGS# 8949

### 1866 Liberty Twenty, MS61 Lightly Marked Surfaces

### 1867-S Liberty Double Eagle, MS61 Type Two, Mint State Rarity

**4378 1866 MS61 PCGS.** From a substantial mintage of 698,745 pieces, the 1866 Liberty double eagle is prized by type collectors as the first year of the Type Two design, with the motto IN GOD WE TRUST on the reverse. Like most Type Two double eagles, the 1866 is not difficult to locate in lower grades, but Mint State examples are rare.

The present coin is an attractive MS61 specimen, with well-detailed design elements and vibrant mint luster. The pleasing orange-gold surfaces are remarkably free of distracting contact marks, suggestive of an even higher grade. Housed in a green label holder. Population: 31 in 61, 6 finer (11/14). NGC ID# 269X, PCGS# 8949

**4379 1867-S MS61 PCGS.** Small Squat S. The 920,750-piece mintage suggests that this is an available San Francisco date, and on the one hand, it is. The issue is readily available in AU or lesser grades, with virtually the entire mintage obviously released into the channels of commerce. On the other hand, nearly no Uncirculated examples exist, with several borderline pieces looking to make the jump to Mint State but few pieces ever moving up.

This lustrous, Uncirculated example is a step above most of the known Mint State coins. Original and frosted, the natural orange-gold surfaces display olive-gold accents and cartwheel mint luster. The strike ranges from sharp to bold, although Liberty's hair detail is a bit soft. Fewer marks are seen than typical for the roughly handled San Francisco twenties, with a handful of abrasions on the obverse and two minor grease marks near the coronet. Population: 5 in 61, 4 coins finer, all in MS62 (11/14). NGC ID# 26A2, PCGS# 8952

## 1871-CC Double Eagle, AU53 Second-Rarest Carson City Twenty

**4380 1871-CC AU53 PCGS. CAC. Variety 2-A.** The 1871-CC ranks as the second-rarest double eagle from this mint, trailing only the legendary 1870-CC. The recorded mintage is only 17,387 pieces, produced with a single reverse paired with two different obverse dies. Only about 200 to 250 pieces survive in all grades, per the research of Doug Winter, and the majority of these grade only AU50 or lower and are heavily abraded. Virtually all of the gold and silver coinage from the first years of production at the Carson City Mint went straight into circulation, as specie payments were still the preferred medium of exchange in Western territories, even while gold and silver was largely absent from circulation in Eastern states. A handful of Mint State 1871-CC double eagles are known, but high-quality AU examples are typically the finest that most collectors will ever have the chance to acquire. Even the finest piece in the Smithsonian Institution grades only XF45, per Jeff Garrett and Ron Guth.

Aside from the extremely rare 1870-CC, the 1871-CC is far and away the greatest stopper in completing a set of Carson City double eagles, and the acquisition of an example in any grade is a landmark event for the collector. Most known examples, however, have been harshly cleaned, further emphasizing the importance of the present coin, which exhibits fully original orange-gold coloration. Minor, scattered surface ticks are to be expected at this grade level, but no individually significant abrasions are observed. The strike is pleasing, and a brush of light wear leaves remnants of golden luster in the protected regions. An exceptional, high-end example of this elusive Carson City issue. Population: 8 in 53, 10 finer (11/14). NGC ID# 26AB, PCGS# 8961

**1872 Twenty Dollar, MS63  
Important Philadelphia Mint Example  
None Finer at PCGS**

**4381 1872 MS63 PCGS.** Garrett and Guth mention a pair of MS62 coins as representing the top of the line for 1872 double eagles, yet here is a coin that raises the bar. The Select Uncirculated grade is well-deserved based on eye appeal alone, although the technical merit is worthy, too. The fields are semiprooflike with only scattered, light abrasions. However, it is the impressive color that sets this double eagle apart. Vivid orange toning covers the centers, while olive-gold shades occupy the margins. The visual impact is considerable, and a bold strike on the motifs justifies the Condition Census status of this important twenty. Population: 3 in 63, 0 finer (11/14). NGC ID# 26AD, PCGS# 8963

**1872-CC Liberty Twenty, AU58  
Condition Rarity in Finer Grades**

**4382 1872-CC AU58 NGC. CAC. Variety 1-A.** The 1872-CC Liberty double eagle claims a mintage of 26,900 pieces and few high-quality examples were saved by contemporary numismatists. The high face value of the double eagle and a general lack of interest in mintmarked issues that persisted for most of the 19th century made the big gold coins unpopular with collectors. Most of the mintage circulated heavily at the time of issue, making the 1872-CC very scarce in near-Mint condition, and very rare in Mint State.

The present coin displays just a trace of wear on the well-detailed design elements and the pleasing green and rose-gold surfaces retain much of their original vibrant mint luster. The surfaces show the expected number of minor abrasions for the grade and eye appeal is quite strong. Census: 54 in 58, 12 finer (10/14). NGC ID# 26AE, PCGS# 8964

## 1873-CC Twenty Dollar, AU55 Variety 2-A, Misplaced Digit in Dentils

**4383** 1873-CC AU55 NGC. **Variety 2-A.** This interesting variety is characterized by a misplaced digit (3?) in the dentils below the 73 in the date. Considerable luster remains on the light yellow surfaces of this CC twenty, with hints of pale orange toning in the protected areas around the design elements. The mintage of the 1873-CC — 22,410 coins — was slightly less than the 1872-CC mintage, but the date is now a bit more plentiful because of the appearance in the 1990s of several small groups. In all grades, there is a total estimate of 400-500 pieces with 135-150 believed known in AU.

*Ex: Central States Signature (Heritage, 4-5/2009), lot 3974. NGC ID# 26AJ, PCGS# 8968*

## 1875-CC Liberty Twenty, MS62 Richly Lustrous Carson City Type Coin

**4384** 1875-CC MS62 NGC. **Variety 2-B.** The 1875-CC is arguably the most plentiful double eagle from this mint in high grades, this largely due to a significant number of exported trade pieces returning to America in recent decades. The issue is readily available in all AU grades, but MS61 and MS62 coins become somewhat more difficult to locate on-demand. Finer examples are distinctly rare. This piece displays luminous honey-gold luster and is largely devoid of significant, obtrusive abrasions. Liberty's hair curls are not fully defined, though the stars show complete radial lines and the eagle's feathers are crisp. Some minor strike doubling is observed on most reverse design elements, particularly the peripheral legends. NGC has encapsulated only 26 numerically finer representatives (11/14). NGC ID# 26AT, PCGS# 8974

### 1875-CC Double Eagle, MS63 Significant Condition Rarity Only Two Coins Numerically Finer

**4385 1875-CC MS63 PCGS. Variety 1-B.** The availability of this “common” Carson City issue plunges at the MS63 grade level, and finer pieces are nearly unknown. Virtually all of the pieces that survived overseas trade returned to collectors heavily abraded and/or lightly worn, as taking care in handling the coins was hardly of concern during the period. Most of the coins were stored loose in bags, which were jostled with regularity. The few pieces worthy of an MS63 numeric grade are objects of great desire to the collector of Carson City double eagles, and draw significant bidder attention when offered at auction.

This piece is awash in shimmering wheat-gold luster, with a sharp strike and incredible eye appeal. Faint, scattered surface grazes limit the grade, but no detracting abrasions are observed. A simply impeccable coin in every respect. Population: 29 in 63, 1 finer (11/14). NGC ID# 26AT, PCGS# 8974

### 1876-S Double Eagle, Well-Struck MS64

**4386 1876-S MS64 PCGS.** Despite the production approaching 1.6 million double eagles at San Francisco in 1876, only 25 examples are certified MS64 at PCGS and NGC, and the two grading services have only graded three finer pieces. The average certified grade is slightly below AU58.

This example has the date shifted right, with the J in J.B.L. over the left edge of the 8. The reverse has the mintmark centered over the left edge of the second T in TWENTY, and tilted slightly to the left. Light die striations are visible on the reverse. This Choice Mint State double eagle has frosty yellow-gold luster with trivial grade-limiting marks. The design elements are well-impressed. Population: 14 in 64 (1 in 64+), 1 finer (11/14). NGC ID# 26AX, PCGS# 8978

## 1879 Liberty Twenty, MS63 FS-801, Doubled Die Reverse

**4387** 1879 Doubled Die Reverse, FS-801, High R.5, MS63 PCGS. Doubling is strongest on the scroll and E PLURIBUS, as well as on the legends. The variety is mentioned in the Garrett and Guth reference, although this scarce date is perhaps more notable for its Select Uncirculated condition regardless of the variety. PCGS has seen just three higher-graded coins. A frosted and minimally marked Type Three twenty, the honey-gold surfaces are brilliant and lustrous. A single short, thin mark on Liberty's neck is the sole abrasion of any size, and it is minor in the context of most MS63 coins. Only a few pinprick chatter marks exist elsewhere. A true condition rarity for the series, overlooked by many and missing in several advanced collections. Population (all varieties): 14 in 63, 3 finer (11/14). PCGS# 145736 Base PCGS# 8988

## 1881 Double Eagle, XF45 Major Philadelphia Rarity Only 40 to 60 Coins Believed Known

**4388** 1881 XF45 NGC. The 1881 double eagle begins a short run of extremely low mintages of this denomination at the Philadelphia Mint that includes the 1882, 1885, 1886, and the rare proof-only issues of 1883 and 1884. The 1881 had a mintage of only 2,199 coins, and is rare in all grades — only 40 to 60 pieces are believed extant, and even this estimate may be generous. A handful of MS61 coins are at the top of the condition census. Considering only about 40 to 50 examples are known of the legendary 1870-CC double eagle, the 1881 begins to seem somewhat underappreciated. Even the Smithsonian Institution lacks an example of this date in business strike format.

The current piece is lightly circulated, as are nearly all known examples, with bright yellow-gold color. A faint reed mark in the right obverse field is the only mark of note, and the design elements retain a profound degree of detail for the grade level. An important Philadelphia rarity. Census: 4 in 45, 23 finer (11/14). NGC ID# 26BC, PCGS# 8994

## 1881 Twenty Dollar, Semireflective MS61 Tied for Finest Certified of This Major Rarity Only 2,199 Business Strikes Produced

**4389 1881 MS61 PCGS.** The first of seven extremely rare low mintage Philadelphia Mint double eagles, the 1881 had a business strike mintage of 2,199 coins, actually lower than the mintage of the famous 1856-O double eagle rarity. The business strike production provides the first ingredient for rarity and the fact that few were spared from the ravages of commerce secures its place among the most challenging Liberty twenties. Of the 35-40 pieces believed to survive, only a small handful are Mint State; PCGS has graded just two MS61 pieces and none finer (11/14).

Regarding the 1881 twenty, Dave Bowers succinctly writes: "Circulation strikes are rarities in any grade, with no more than a few dozen believed to exist in numismatic hands." The low mintage of Philadelphia issues during the 1880s is unexplained but probably a function of low gold deposits during the silver coinage boom created a few years earlier by the Bland-Allison Act that created the Morgan silver dollar. Today, estimates suggest that about 40 circulation strikes and about a dozen proofs still exist.

This important Uncirculated representative is a bit more reflective than others we have seen. Abrasions are fairly plentiful in the obverse fields, but are not particularly bothersome on the portrait and are a bit less numerous and evenly distributed over the reverse. With interest in "blue chip" gold coins such as this at an all-time high, we feel confident that this low mintage gold rarity in unsurpassable condition could reach a record price level.

The date is centered between the bust and the border, from a four-digit logotype; the 88 appear to be slightly wider than the 18 or the 81. The left edge of the base of the first 1 is over the right edge of a dentil below it. There is no evidence of die polishing, die cracks, clash marks, or other imperfections on either side.

*Ex: FUN Signature (Heritage, 1/2007), lot 3203; Dallas Signature (Heritage, 10/2008), lot 3091; Central States Signature (Heritage, 4-5/2009), lot 2762. NGC ID# 26BC, PCGS# 8994*

## 1882-S Double Eagle, MS63 Challenging San Francisco Twenty

**4390 1882-S MS63 PCGS.** No Gem examples have been seen by either service of this condition-challenged San Francisco date, which includes 66 Saddle Ridge coins. The finest-known example is an MS64+ coin (a hoard find), with two other near-Gem examples. The present coin is a brilliant and lustrous Select Uncirculated coin, in itself a scarce grade for the issue. The yellow-gold surfaces are especially nice for the grade, smooth and brightly lustrous. A glass reveals no more than a few tiny ticks on Liberty's cheek, and virtually no field marks of any kind. A touch of haziness surrounds the date. The strike is unfailingly bold. Population: 40 in 63 (2 in 63+), 3 finer (11/14). NGC ID# 26BG, PCGS# 8998

## 1884-CC Double Eagle, MS62 Radiant Original Mint Luster

**4391 1884-CC MS62 PCGS. Variety 1-A.** The 1884-CC survives in decent numbers in the context of Carson City double eagles, as many examples have returned from overseas holdings in recent decades. However, most Mint State pieces grade only in the MS61 and lower range; MS62 coins are scarce, and finer pieces are decidedly rare. The present coin is boldly struck, with frosty luster in shades of orange and green-gold. Light, scattered abrasions contribute to the grade, but do not overly detract from the overall appeal. Carson City double eagles are immensely popular among date collectors, with strong demand even for the perceivably "plentiful" issues. Population: 51 in 62, 8 finer (11/14). NGC ID# 26BK, PCGS# 9001

### 1885-CC Twenty Dollar, MS61 Very Scarce in Mint Condition

**4392 1885-CC MS61 PCGS. Variety 1-A.** The 1885-CC is notably rare in mint condition, undoubtedly in part from the low mintage of only 9,450 pieces. This particular coin shows bright yellow-gold luster throughout, with minimal surface nicks and marks. Liberty's face is attractive with the most prominent nick hidden along her jaw line, and another hidden nick resides on the lower left base of the Y of LIBERTY, which will serve to identify this coin. Fully struck, as usually seen. The combined NGC and PCGS population reports note 19 pieces in this grade with only 13 coins finer (11/14).

Grover Cleveland was elected to the Presidency for the first time in 1884 (and again in 1892). Cleveland believed the Carson City Mint to be an unnecessary extravagance and worked immediately to shut it down. Cleveland believed that bullion could be shipped to the San Francisco Mint instead and processed into coins there much more efficiently. Cleveland's policy of not favoring any economic group crossed many lines, and cost him in terms of political support. Despite winning the popular vote in 1888, he came up short of electoral votes and thus lost the election. He returned to the White House in 1893 and continued his policy of getting government out of peoples lives. Cleveland's battles with the Carson City Mint reflected who he was as president. The Carson City Mint reopened upon Cleveland's ouster in 1889, only to be closed again when he returned to the Presidency in 1893. The equipment from the Mint was sold, and coinage ceased with 1893 the final year of production.

Ex: *FUN Signature* (Heritage, 1/2005), lot 9732. NGC ID# 26BN, PCGS# 9004

### 1889-S Twenty Dollar, MS65 Exceptional S-Mint Type Coin

**4393 1889-S MS65 NGC.** The 1889-S was unknown in Gem condition until recently, after the discovery of the Saddle Ridge hoard in February 2013. Of the 353 1889-S twenties found in that fascinating grouping, 10 Gems have been certified by both of the major services combined (five and five, NGC and PCGS). There is no pedigree identifier on the NGC insert, and it is our assumption this is a Saddle Ridge coin. This is a magnificent twenty that actually looks even finer than the stated grade. It exhibits smooth, virtually unblemished surfaces. The mint luster rolls across each side and is noticeably frosted. The strike is sharp in all areas. This would make a nearly unimprovable example of the Type Three design. NGC ID# 26BW, PCGS# 9012

## 1890-S Double Eagle, MS65 Impeccable Surfaces

**4394 1890-S MS65 PCGS.** Prior to the Saddle Ridge recoveries, this San Francisco issue was exceedingly elusive in Gem condition and unavailable any finer. Although it remains a challenging issue in high grades, the top end of the population reports have more than tripled from the hoard findings.

Still, there weren't many high-grade Mint State coins to start with, and the 1890-S twenty remains a notable condition rarity. This example is exceedingly lustrous, smooth, and appealing. The surfaces are nearly flawless and essentially unmarked. Evenly dispersed medium-gold patina covers both sides, with subtle orange accents along the upper obverse margin. Population: 10 in 65 (6 in 65+), 2 finer (11/14). NGC ID# 26BZ, PCGS# 9015

## 1891-CC Twenty, MS60 Only 5,000 Pieces Struck

**4395 1891-CC MS60 NGC. Variety 1-A.** "Unlike the Carson City half eagles and eagles of this date, the 1891-CC double eagle is a rare, low mintage issue. In fact, its original production of just 5,000 pieces is the second lowest for any Carson City double eagle, trailing only the 1870-CC." Thus Doug Winter describes the appeal of this issue in his *Gold Coins of the Carson City Mint*. This is an unworn survivor with strong mint luster and pleasing yellow-orange color. Though the coin comes by its MS60 designation honestly, with a pair of significant scrapes on Liberty's cheek and abrasions scattered elsewhere, it retains considerable eye appeal and importance. Census: 10 in 60, 26 finer (11/14).

*Ex: Long Beach Signature (Heritage, 9/2009), lot 1858.* NGC ID# 26C3, PCGS# 9017

### 1892-CC Double Eagle, Semiprooflike MS62 Seldom Located Finer

**4396 1892-CC MS62 PCGS. Variety 1-A.** With a mintage of only 27,265 coins, the 1892-CC at one time was a great rarity, but overseas hoards repatriated in recent years have increased the limited supply. Even today, however, most Mint State coins found are MS62 or below. This piece features deep, rich, mellow orange-gold surfaces with glints of ice-blue at the rims. Considerable prooflikeness is noted over the contrasting surfaces, and bright mint luster radiates from each side. While there may be coins of this issue that possess a higher technical grade, it is doubtful that many offer superior aesthetic appeal.

*Ex: Long Beach Signature (Heritage, 2/2007), lot 5028. NGC ID# 26C6, PCGS# 9020*

### 1892-S Twenty, MS65 None Graded Higher at PCGS

**4397 1892-S MS65 PCGS. Filled S Mintmark.** The surfaces of this remarkable Gem double eagle are wonderfully preserved and appear virtually pristine. The San Francisco date was heavily exported, but no large hoards of high-grade coins have returned from abroad. The Saddle Ridge Hoard yielded 139 examples, from which 8 coins graded MS65 (3 in MS65+) and none were certified finer.

The present coin does not indicate the Saddle Ridge provenance and may be from a more traditional origin, although it cannot be determined with certainty. The yellow-gold surfaces are frosted and extremely lustrous. Minor glossiness on Liberty's cheek is the only possible grade-limiting factor, because there are no other marks to mention. The strike is full throughout. Population (all varieties): 16 in 65 (5 in 65+), 0 finer (11/14). NGC ID# 26C7, PCGS# 9021

## 1893-CC Double Eagle, MS62 Deep Original Patina Final-Year Carson City Twenty

**4398 1893-CC MS62 PCGS. Variety 1-A.** For the collector who prefers deep, original coloration on gold coins, this final-year Carson City double eagle is a must-have item. Frosty, shimmering luster yields to mottled coppery-red, honey, and orange-gold coloration, while the strike is sharp and the surfaces exhibit only minor, grade-consistent abrasions. This Carson City issue is missing from the National Numismatic Collection in the Smithsonian Institution, though it is not as unobtainable as its low mintage of just 18,402 pieces would suggest. Quantities apparently found their way into overseas exports, and have since made their way back to collectors alongside more plentiful branch mint issues. For the patient collector, a pleasing MS62 coin, such as the present offering, is occasionally made available, but finer pieces are rare. PCGS has seen only 21 numerically finer representatives (11/14). NGC ID# 26C9, PCGS# 9023

## 1894 Double Eagle, Highly Lustrous MS65 A Significant Condition Rarity

**4399 1894 MS65 PCGS. CAC.** Ex: Browning Collection. With a mintage approaching 1.4 million pieces and a certified population of about 25,000 examples, the 1894 double eagle has common-date status through MS63, and less so for near-Gem. MS65 specimens are extremely rare; PCGS and NGC have seen eight so-graded and a mere two finer.

Variegated orange-gold and lime-green patination adorns the highly lustrous surfaces of the present Gem offering. The design elements are sharply struck, adding even more eye appeal. Scattered, unobtrusive obverse ticks are within the confines of the grade designation and do not detract. Population: 2 in 65, 0 finer (11/14). NGC ID# 26CB, PCGS# 9025

### 1897-S Liberty Twenty, MS65 Seldom-Seen Gem Example

**4400 1897-S MS65 PCGS.** The significance of mintmarks was starting to catch the attention of collectors, but no one would have considered this S-Mint issue scarce at the time — more than 1.4 million pieces were struck. Most 1890s double eagles minted in San Francisco were earmarked for trade with Europe or South America. Relatively few coins stayed on U.S. soil, and those that did either circulated to some extent or were lost (eventually) to the melting pot.

Today, few examples survive in high grades. PCGS has seen just 11 gem or finer coins, and this is one of them. Olive and peach-gold highlights flash across vibrant medium-gold surfaces. A full strike covers the central motifs, while the stars and legends are bold. Light, insignificant marks are few and far between. Population: 9 in 65, 2 finer (11/14). NGC ID# 26CJ, PCGS# 9032

### 1906-S Double Eagle, MS65+ Only One Finer Coin at PCGS

**4401 1906-S MS65+ PCGS. CAC.** Despite the reported mintage of more than 2 million pieces, the 1906-S Liberty double eagle is a prime condition rarity at the MS65 grade level, and finer examples are virtually unobtainable. High grade specimens are seldom offered and Heritage has never handled a finer example of this issue.

The coin offered here is a spectacular high-end Gem, with well-detailed design elements and vibrant frosty mint luster on both sides. The well-preserved orange-gold surfaces show attractive highlights of rose and eye appeal is terrific. This coin should find a home in a fine collection or Registry Set. Population: 3 in 65 (1 in 65+), 1 finer (11/14). NGC ID# 26D6, PCGS# 9051

## PROOF LIBERTY DOUBLE EAGLES

**1867 Liberty Twenty, PR64**  
**Only Deep Cameo Example at PCGS**  
**Premier Registry Set Candidate**

**4402 1867 PR64 Deep Cameo PCGS. CAC.** Though the official mintage of the proof 1867 double eagle is 50 pieces, far fewer coins survive today. This is the 11th proof 1867 double eagle in Heritage's roster of examples offered at auction; it was previously in a European collection for more than a century, and has only been offered publicly once in recent times. Of the other 10 coins in the roster, three are impounded in museum collections, one at the American Numismatic Society and two at the Smithsonian, and so are unlikely to become available to collectors.

This piece may have had an auction appearance prior to its European sabbatical; collections such as Herman Ely, Lorin Parmelee, Thomas Cleneay, David Wilson, and possibly William Woodin contained 1867 double eagles that have not been traced to present-day specimens, though the quality of photographic plates at that time, if they were taken at all, precludes such tracing. The identification and subsequent offering of this example is also important to Registry Set collectors, for this is the only Deep Cameo PCGS-certified representative of the date (11/14). While Heritage has had the privilege of offering a PR65+ Ultra Cameo representative of the 1867 double eagle (realizing \$276,000 in January 2011), this specimen allows us to offer the PCGS version of ultimate contrast.

The yellow-gold surfaces of this Deep Cameo PR64 specimen show hints of both green and orange. Though both sides are lightly patinated, producing cloudiness around certain obverse stars, the essential contrast between mirrored fields and richly frosted devices remains undimmed. This boldly impressed coin shows just a few light hairlines through the fields that combine to account for the grade. A rare opportunity to own a profoundly contrasted example of this classic proof gold issue. NGC ID# 26DK, PCGS# 99082

## 1872 Liberty Double Eagle PR63 Deep Cameo Only 30 Examples Struck No More Than a Dozen Survive

**4403 1872 PR63 Deep Cameo PCGS.** According to Mint records, only 30 proof Liberty double eagles were struck in 1872, all for inclusion in the proof sets. Unfortunately, the issue also has a low survival rate, and examples are very rare today in all grades. Samuel Hudson Chapman offered a remarkable run of gold proof sets from 1860 -1905 in his sale of the David S. Wilson Collection (Chapman, 3/1907). In an introduction to this run, Chapman reported:

"These proof sets are exceedingly rare, and my estimate would be that there are not over five sets in existence of the years prior to 1890..."

Collecting high-denomination gold coins was not popular in the 19th century, because the face value of each coin represented a significant amount of money to the average collector, and few could afford to tie up enough cash to compile an extensive date run of Liberty eagles or double eagles over a long period of time. In addition, the design of the coins was not viewed as particularly attractive, and the double eagle series (started in 1850) was still perceived as new and not numismatically interesting, as many modern coins are viewed today. Chapman's estimate of five surviving intact gold proof sets in 1907 may have been accurate, as collectors tended to buy the sets and dispense with the large-denomination coins, while keeping the smaller denominations for their collections. There was little profit to be made in auctioning the tens and twenties, as evidenced by the proof 1872 Liberty double eagle sold in lot 1380 of the Lorin G. Parmelee Collection (New York Coin & Stamp, 6/1890), which realized only \$21. Many proof double eagles were undoubtedly just spent for face value or melted down for bullion value over the years.

Of course, some individual double eagles did survive after the proof sets were broken up, and these coins were not included in Chapman's estimate. Experts are in close agreement on the number of surviving 1872 proof twenties today, with David Akers estimating 10-11 pieces still extant, PCGS CoinFacts postulating 8-12 examples, and Jeff Garrett and Ron Guth accounting for 10-12 specimens all told, including two in institutional collections. PCGS and NGC have combined to certify 12 examples in all grades, including an unknown number of resubmissions and crossovers (11/14).

The present coin is an impressive Select specimen, with well-detailed frosty design elements that contrast profoundly with the deeply mirrored fields. The lemon-yellow surfaces show a few highlights of green and only minor signs of contact are evident. This coin is a most attractive representative of this very rare proof gold issue. Population: 2 in 63, 2 finer (11/14). NGC ID# 26DR, PCGS# 99087

**1874 Double Eagle, PR65 Ultra Cameo**  
**20 Examples Struck, Fewer Than 10 Survive**  
**Tied for Finest Certified, Ex: Trompeter**

**4404 1874 PR65 Ultra Cameo NGC.** While circulation-strike examples of the 1874 Liberty double eagle are relatively common (366,780 mintage), proofs of this dated are extremely rare. Only 20 coins were struck, making this issue tied for the lowest number of proof double eagles produced after 1858. Writing in the 2008 edition of their book *Encyclopedia of U.S. Gold Coins, 1795-1933*, Jeff Garrett and Ron Guth say:

“Today, fewer than 10 examples can be traced, including the two that are housed in the Smithsonian and the American Numismatic Society. At least one or two examples known are seriously impaired. The date has also been missing from many important collections offered in the last two decades, including the Harry W. Bass Jr. Collection, which was nearly complete. An NGC PR-64 coin (the coin offered here, now PR65 Ultra Cameo) sold at auction in mid-2004 for \$103,500.”

In addition to the appearance listed by Garrett and Guth above, the present coin also appeared in a Heritage sale three years ago, where it realized a record price of \$218,500.

The experts are in close agreement about the rarity of this issue. David Akers states that, “Proofs of this date (1874) are among the rarest after 1860. Of the 20 minted, less than half can be accounted for today.” Q. David Bowers estimates 8-10 pieces are still extant and Walter Breen suggests that, “Possibly 7-9 proofs survive.”

The population figures indicate that a total of 10 1874 proof twenties have been seen by NGC and PCGS combined and none are certified finer than the present coin. Even though one other coin has been graded PR65 Ultra Cameo at NGC, it is hard to believe any example could match the stunning visual appeal of this specimen, which traces its history to the fabled Trompeter Collection. Writing about proof 1874 double eagles in their treatise entitled *Type Two Double Eagles, 1866-1876: A Numismatic History and Analysis*, Doug Winter and Michael Fuljenz state: “It is estimated that seven to nine of these exist today with the finest being a lovely NGC Proof-64 which is part of the Ed Trompeter Collection of United States proof gold coins.”

Both sides of this gorgeous 1874 Gem Ultra Cameo are blanketed in attractive shades of peach-gold color, and the outstanding motif-field contrast assumes a gold-on-black appearance when the coin is viewed from directly overhead. A well-executed strike manifests itself in sharp definition on all of the design features, including the star centrils, Liberty’s hair, the eagle’s plumage, and the horizontal and vertical lines of the shield. An even higher grade is precluded by a few wispy obverse handling marks. A curved lint mark located beneath Liberty’s eye may help to pedigree the coin. This outstanding example is sure to draw the interest of aficionados of gold coinage who want nothing but the best. As such, we expect spirited bidding on what is one of the finest certified 1874 proof double eagles. Census: 2 in 65 Ultra Cameo, 0 finer (11/14).

*Ex: Amon Carter Collection (Stack’s, 1/84), lot 899, where it realized \$39,600; Ed Trompeter; Ed Trompeter Estate; Heritage Rare Coin Galleries; Philadelphia Bullet Sale (Heritage, 8/2000), lot 760, realized \$51,750; Pittsburgh ANA Auction (Heritage, 8/2004), lot 7688, realized \$103,500; FUN Signature (Heritage, 1/2012), lot 5072, realized \$218,500. PCGS# 99089*

**1882 Liberty Double Eagle  
PR65 Ultra Cameo  
Rare Date in Proof or  
Business-Strike Format  
One Finer Coin at NGC**

**4405 1882 PR65 Ultra Cameo NGC.** The 1882 double eagle proofs have a long collector history — far longer, in fact, than that of the low-mintage business strikes which are now more famous. As Q. David Bowers explains in *A Guide Book of Double Eagle Gold Coins*, the business strike issue experienced collector neglect, while proofs were paid much more attention:

“The 1882 double eagle registered one of the lowest circulation strike figures for any American gold coin. So far as is known, all went into circulation, and not a single coin was saved at the time by a numismatist. The latter bought Proofs. Today, anyone seeking a high grade coin is apt to buy one of the Proofs that occasionally come on the market. Mint State coins are next to impossible to find.”

This is why, among other telling signs, the Smithsonian’s National Numismatic Collection has two of the reported 59 proof examples struck, but none of the 571 circulation-finish pieces; the major gold donations to the NNC came from collectors who favored the proof over the business strike, more than 50 years after the coins’ release. Today’s numismatists, of course, can appreciate the 1882 double eagle on a variety of levels, including as one of the many tough dates in the proof double eagle series.

This is an enchanting example with a light layer of patina over much of the yellow-orange obverse and parts of the reverse. Each side offers distinct and appealing contrast with suggestions of orange-peel texture, and while the fields show a few minor disturbances, the overall eye appeal is impressive. A gorgeous and highly desirable survivor. Census: 2 in 65, 1 finer (11/14). PCGS# 99098

## 1884 Double Eagle, PR65 Deep Cameo The Finest of Two Gem Proofs at PCGS 'Rarest Collectible Liberty Head Twenty'

**4406 1884 PR65+ Deep Cameo PCGS Secure. CAC.** The 1884 double eagle is a proof-only issue, the middle of three struck during the decade of the 1880s, bookended by the 1883 and 1887 proof-only strikes. It was a period of low (or no) circulation strikes at the Philadelphia Mint, part of a concerted effort at the national level on the part of Treasury and Mint officials to increase the circulation of half eagle and eagle coins at the expense of double eagle production.

All three proof-only issues were apparently struck in considerably greater numbers than those that were actually distributed. The Mint had a common practice of striking off a quota of proof coins at the proper time during the year, and it was a matter of little import to melt unsold examples at the end of the year, preparatory to later recoinage. Such melted pieces went unrecorded for the most part, but it is a phenomenon of which numismatists are well aware.

Nonetheless, the reported totals for these proof-only issues were 92 pieces for the 1883, 71 for the 1884, and 121 for the 1887. The 1884 double eagle is among the most-pursued issues in the entire Liberty Head series, and it and the 1883 and 1887 are considered classic rarities of the Type Three design, that with TWENTY DOLLARS on the reverse and the motto IN GOD WE TRUST.

It is doubtful that more than 20 examples of this proof-only date survive in private hands — and perhaps as few as 15 pieces. Several of those pieces are impaired or cleaned. This Gem Deep Cameo PCGS example is clearly a standout among the handful of survivors. PCGS shows precisely two submissions in all Deep Cameo grades from PR60 upward, both PR65 Deep Cameo. There are none others, and obviously none are finer (11/14). We have confirmed that the two submissions represent two separate coins.

According to our Permanent Auction Archives, this appears to be — unsurprisingly, given the absolute and conditional rarity of the issue — the first coin we have ever offered as a Deep Cameo example of the 1884 since we began our archives in 1993. We also find no other offerings of Deep Cameo examples of this date at other firms. The closest parallel we find is the PR66 Cameo NGC piece in the Franklinton Collection (American Numismatic Rarities, 8/2006), lot 1644, which realized \$264,500. The cataloger on that occasion quoted from the Bowers double eagle reference, noting in part: “Among all double eagles of the Liberty Head type, 1850-1907, the 1884 is either the second rarest (if you include the 1861 Paquet Reverse) or the rarest. Perhaps the 1884 is the rarest collectible Liberty Head double eagle. Little argument here. Among Type 3 double eagles, 1884 is absolutely the rarest, closely chased by 1883.”

We note that some of the famous collections of the past have lacked an example of this date. One such was the F.C.C. Boyd “World’s Finest Collection,” auctioned in 1946. Another was the legendary William Forrester Dunham Collection, whose auction catalog was prepared by Fort Worth coin dealer B. Max Mehl in 1941. Dunham was content to fill the hole in his collection with an 1884-CC double eagle!

The present PR65 Deep Cameo PCGS example of the 1884 Philadelphia double eagle offers thick mint frost on all devices front and back. The fields are deeply reflective and easily “fade to black” as the coin is rotated under a light, giving the desired gold-on-jet-black effect of Deep Cameo proof gold. The full proof strike complements surfaces that simply show no obvious contact marks throughout.

The importance of this high-grade Deep Cameo example of the rarest Liberty Head double eagle can simply not be overemphasized. Astute collectors will act accordingly. PCGS# 99100

### 1887 Liberty Double Eagle, PR64 Cameo Rare Proof-Only Issue Finest Cameo at PCGS

**4407 1887 PR64 Cameo PCGS.** Double eagles were produced exclusively in proof format in 1887. Since no business-strike coins were struck, the Philadelphia Mint produced a generous proof mintage of 121 pieces to satisfy collector demand. The 1887 has a low survival rate, suggesting that some of these coins were never released and were later melted. Given the fact that there are around 25-30 survivors, it would seem logical that 50 or so pieces were lost to collectors in this manner. Undoubtedly, some coins were later spent by their owners, as proof double eagles carried extremely low premiums in the late 19th and early 20th centuries. The temptation to spend the coins must have been great during hard economic times when 20 dollars went a long way toward paying for basic necessities. A number of coins are known today in impaired condition, and some were undoubtedly melted after the Gold Recall of 1933.

The present coin is a delightful Choice example with outstanding eye appeal and high technical quality. The bright, watery mirrors of this impressive specimen have the desirable "orange-peel" texture of proof gold coinage from this era and display a noticeable degree of contrast with the central devices. Wispy blemishes on the obverse are well scattered and not immediately obvious to the unaided eye. For those attempting to assemble a date set of twenties or the ultra challenging complete set, the 1887 is certainly one of the most challenging issues in the series. Population: 1 in 64 Cameo, 0 finer (11/14).

**1892 Double Eagle, PR66+ ★ Ultra Cameo  
Only 93 Examples Struck  
Tied for Finest Certified**

**4408 1892 PR66+ ★ Ultra Cameo NGC. CAC.** Collectors of Type Three proof double eagles face a strong challenge when trying to locate a high-grade 1892 example in the finest possible condition. For thirty years (1877 through 1907), Type Three proofs were struck by the Philadelphia Mint in extremely small quantities. Mintages range from a low of 20 pieces to a high of 120 or so pieces — tiny numbers, when you consider less than 40% of these survive.

The 1892 date, in particular, has beguiled double eagle collectors for over a century. The proof issue is rare despite a “generous” mintage of 93 pieces. Today, experts agree no more than 25 examples of the date survive in proof format. Many of the survivors are impaired. Business strikes are also rare: Of 4,430 pieces produced, an estimated 12 to 24 Mint State 1892 specimens exist. Date collectors compete strongly for 1892-dated specimens and any example of the date (proof or not) is fair game.

As might be deduced from the limited mintages, only a few collectors, like John M. Clapp, Virgil Brand, James Ten Eyck, Nathan M. Kaufman, William Forrester Dunham, and David S. Wilson collected proof Liberty double eagles directly from the Philadelphia Mint in the 1890s. In some curious fashion, prominent U.S. gold collector William H. Woodin acquired two 1892 proof double eagles, as well as an example of the five and ten dollar proofs of that date. His collection did not include a proof 1892 quarter eagle, so he probably obtained his 1892 proof coins on the secondary market, rather than ordering gold proof sets from the Mint.

Collecting large-denomination gold coins finally became popular in the 1940s, when astute financiers like Louis E. Eliasberg, Sr. saw collecting double eagles as a legal means of investing in gold, after the Gold Recall of 1933. Proof double eagles were selling for hardly more than face value at the turn of the century, but prices sky-rocketed as the demand for these rare issues increased in the 1940s. A typical example was the coin offered in lot 1284 of the William Cutler Atwater Collection (B. Max Mehl, 6/1946):

“1892 Perfect brilliant proof, sharp with partly wire edge. Just the very faintest hair-line on right reverse, hardly noticeable and hardly worth mentioning, and this is only done for the sake of accuracy. It is as perfect a gem proof as is possible to obtain. Very rare in proof. Record \$300.00.”

The lot realized \$410, increasing the former record by more than 25%. The popularity and value of these classic proof rarities has continued to increase over the years, and the coin offered in our January 2014 FUN Signature realized \$188,000.

The best known 1892 proofs are the John Jay Pittman specimen and the H. Jeff Browning “Dallas Bank” Collection coin. Both grade PR66 PCGS Deep Cameo. The Browning specimen is generally considered the finest-known 1892 double eagle proof, and last sold at our Heritage April, 2012 Central States Signature auction, where it realized a strong price of \$138,000.

Collectors are urged to consider the PR66 NGC Ultra Cameo example offered here as an attractive, equally high-grade alternative to its more famous counterparts. This coin, too, has claims to “finest known” with rich cameo contrast on deeply pooled, black fields. The eye appeal is extraordinary. An exquisitely detailed strike is evident as expected with the Premium Gem designation. This is a memorable, black-on-gold specimen sure to find its way into an advanced set of the finest proof gold. Census: 4 in 66 (2 in 66 ★, 1 in 66+★), 0 finer (11/14). NGC ID# 26ED, PCGS# 99108

### 1905 Double Eagle, PR61 Elusive Late Liberty Head Proof

**4409 1905 PR61 PCGS. CAC.** Two factors contribute to the rarity and demand for the 1905 double eagle proof. Firstly, the circulation strikes had a surprisingly low production total of 58,919 pieces, and secondly, despite the reported total of 92 proofs, many clearly entered circulation, and no more than 30 to 40 survive today in all grades. This is a coin that should be seen in person. The holder shows a couple of scrapes that might appear to be on the coin in photos, but a loupe does reveal scattered contact, on the light side in our opinion, along with several small areas of oil-slick iridescence on the reverse. The surfaces nonetheless still offer quite a lot of intrinsic appeal. NGC ID# 26ET, PCGS# 9121

## 1905 Liberty Double Eagle, PR64+ Nice Mint Frost, Deeply Mirrored Fields Only 92 Examples Struck

**4410 1905 PR64+ PCGS Secure. CAC.** Mintage of proof Liberty double eagles declined in 1905 to a meager 92 pieces, the lowest production total since 1899. Business-strike production was also unusually low, at only 58,919 pieces, because huge numbers of twenty dollar gold coins were struck the previous year at both Philadelphia and San Francisco, and there was an ample supply to satisfy the needs of the national economy. Few high-quality business-strikes were saved by contemporary collectors, putting additional pressure on the small supply of proofs today.

Collecting large denomination gold coins was not popular in the early 20th century, because of the high face value of each coin. Proof double eagles were mostly acquired as part of complete proof sets, by wealthy collectors seeking to update their collection with high-quality examples of each denomination every year. Even among these well-heeled numismatists, the proof double eagles were always the first coins to be dispensed with in hard times, and some coins were undoubtedly just spent for face value over the years, as a number of impaired examples are known today. Probably no more than 30-40 specimens survive in all grades.

The present coin is a high-end Choice example that exhibits razor-sharp definition on all design elements. The devices are unusually frosty for a proof of this period, as the Mint began using an all-brilliant finish on proof coins in 1902. The deeply mirrored fields create noticeable field/device contrast, almost enough for a Cameo designation. The pleasing Lemon-yellow surfaces are well-preserved and eye appeal is outstanding. Population: 7 in 64 (1 in 64+), 2 finer (11/14).

*Ex: Pre-Long Beach Coin and Currency Auction (Ira and Larry Goldberg, 5/2007), lot 1799, realized \$46,000. NGC ID# 26ET, PCGS# 9121*

**1905 Double Eagle, PR63 Cameo**  
**Ex: Jerome Kern, John Jay Pittman**

**4411** 1905 PR63 Cameo PCGS. Ex: Pittman. Only 92 proofs were struck of this late Liberty Head double eagle issue, one struck with the “no-contrast” method of proof manufacturing and therefore seldom seen with a Cameo designation. The surfaces on this piece are a rich, deep yellow-gold. Some stray field hairlines show on the obverse, while the reverse is free of distractions and quite attractive. Perceptible field-device contrast appears on each side, unusually so for this elusive issue. A small luster smudge on the reverse between TY and the tail feathers provides pedigree matching with the Akers plate — a prestigious coin with a prestigious pedigree. Population: 2 in 63 Cameo, 5 finer (11/14).

*Ex: Jerome Kern; Jerome Kern Collection / Golden Jubilee Sale (B. Max Mehl, 5/1950), lot 623; John Jay Pittman; Pittman Collection, Part One (Akers, 10/1997), lot 1182, which brought \$18,700. From The Free Tilly Collection. NGC ID# 26ET, PCGS# 89121*

## PROOF ULTRA HIGH RELIEF DOUBLE EAGLE

**1907 Ultra High Relief Twenty Dollar, PR68****Ex: Saint-Gaudens Estate****First Time Ever Offered at Public Auction, and Off the Market Since the Early 1970s****4412 1907 Ultra High Relief Inverted Edge Letters, "ASG" on Edge, PR68 by both NGC and PCGS Secure.**

*"I am not at all sure how long I shall be permitted to have such a coin in existence; but I want for once at least to have had this nation, the great republic of the West, with its extraordinary facility of industrial, commercial and mechanical expression, do something in the way of artistic expression that shall rank with the best work of the kind that has ever been done."*

Theodore Roosevelt to Mint Director Roberts, December 26, 1906

**BEGINNINGS**

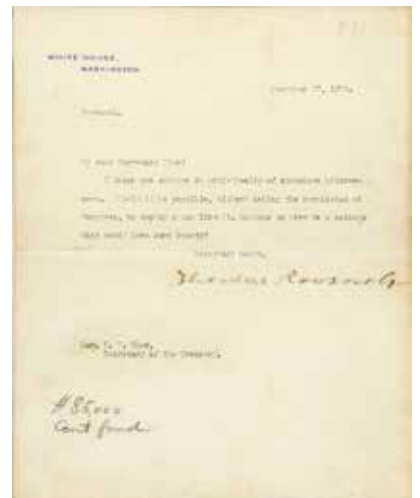

The involvement of President Theodore Roosevelt with the production of new ten and twenty dollar gold coins has been extensively researched and quoted almost since the day they were struck. It is generally assumed Roosevelt first involved Augustus Saint-Gaudens in the project at a White House dinner on January 12, 1905. But the two had a relationship that predated that historic dinner by several years. Saint-Gaudens was involved with the short-lived Senate Park Commission, a small group of artists and architects that was involved with examining ways to improve the appearance of parks in Washington, D.C. Roosevelt and Saint-Gaudens both had a small part in this commission. Saint-Gaudens had minimal involvement because of other private commissions, and Roosevelt had a small part because the project interested him and he was thoroughly bored with being William McKinley's vice-president. Both men's occasional involvement with the commission reacquainted each with the other; on Roosevelt's part it reaffirmed his high opinion of the sculptural work by Augustus Saint-Gaudens. After the assassination of McKinley in 1901 and subsequent election of Theodore Roosevelt in his own right in 1904, the two men's paths crossed again when the subject of Roosevelt's inaugural medal came up. Roosevelt and several notable artists condemned Charles Barber's design for the 1905 inaugural medal. Roosevelt wanted Saint-Gaudens to create a better design and he sought outside funding to pay for the medal which was ultimately designed by Saint-Gaudens and modeled by Adolph Weinman. In his thank-you note to Saint-Gaudens for the inaugural medal design he hand-wrote a postscript below his signature: "I feel just as if we had suddenly implanted a little of Greece of the 5th or 4th centuries B.C. into America; and am very proud and very grateful that I personally happen to be the beneficiary."

Once he was elected in 1904, Theodore Roosevelt felt free to pursue what he later called his "pet crime," the redesign of the nation's coinage. The first written evidence we have of the president's intention to launch a redesign of the nation's coinage came only six weeks after his election and is contained in the often-quoted letter from Roosevelt to Secretary Treasury Leslie Mortier Shaw, dated December 27, 1904: "I think our coinage is artistically of atrocious hideousness. Would it be possible to employ a man like Saint-Gaudens to give us a coinage that would have some beauty?" The subject of the redesign was indeed broached at the January 12 dinner that is mentioned by most sources. It was at that time the president also mentioned the superior design and high relief of ancient Greek coinage, an opinion Saint-Gaudens shared. With this shared understanding as a basis, the president used the power of his office and guarantee of non-interference by Mint personnel as an incentive for Saint-Gaudens to address the subject of coinage redesign. The sculptor was willing, but other commissions and health complications stemming from stomach cancer understandably delayed progress.

When studying the complete works of Augustus Saint-Gaudens it soon becomes apparent how often his works are self-referencing. The sweeping cloak of The Puritan (1883-1886) is similar in treatment to the windswept long coat of Admiral Farragut (1877-1880). The striding figure of Liberty depicted on the twenty dollar gold coins of 1907 were adaptations from his Sherman Monument (1892-1903) combined with the Nike of Samothrace in the Louvre. Even though the central figure of Liberty was an integral part of the coin's design at an early date, Saint-Gaudens adjusted the details for two years. A longer torch was considered and then rejected, an Indian headdress was used on a plaster model and then removed only to reappear on the ten dollar gold coin at President Roosevelt's suggestion. Wings were also added, then removed, as was a large shield.

President Theodore Roosevelt

## PRODUCTION DIFFICULTIES

Saint-Gaudens experienced continuing pain from cancer in early 1906, but by May the designs for the double eagle were far enough along that he could have his assistant Henry Hering fine tune the remaining details. Hering had considerable experience with the design and production of medals, so he was the most qualified person in Saint-Gaudens' atelier to work with Mint personnel and strike the coins as Saint-Gaudens designed them. Reductions were made in Paris during the summer of 1906. Saint-Gaudens believed it was necessary to use the Paris firm because his brother Louis had encountered significant problems in the reductions for his medal of Benjamin Franklin made by Tiffany in New York. The problem that was not understood by either the president or the Mint Director Roberts was the difficulty in producing the high relief twenties lay not in the high relief of the coins; indeed the Mint had been producing medals in high relief for many years. The problem lay in the large diameter of the models Saint-Gaudens produced, making it virtually impossible to cut high relief hubs from them. (To our knowledge, this was first pointed out by Roger Burdette in his *Renaissance of American Coinage, 1905-1908*.) Saint-Gaudens' models varied from 11 to 14 inches in diameter. Mint specifications required 5 3/8 inch-diameter models. A Janvier reduction lathe was ordered from Dietsch Brothers in New York, ending six-month trans-Atlantic shipment of models needing reduction.

On December 15, 1906, President Roosevelt first saw the large design models for the Liberty obverse and Flying Eagle reverse. He wrote Saint-Gaudens: "Those models are simply immense – if such a slang way of talking is permissible in reference to giving a modern nation one coinage at least which shall be as good as that of the ancient Greeks. ... I suppose I shall be impeached for it in Congress; but I shall regard that as a very cheap payment!"

Roosevelt then enlisted Mint Director Roberts in the striking of the double eagles by reminding him of how important these pieces were to him. This was strongly reinforced in a letter in late 1906:

"My dear Mr. Roberts:

I suppose it is needless for me to write, but I do want to ask that you have special and particular care exercised in the cutting of that Saint Gaudens coin. Won't you bring the die in for me to see, even before you send it to Saint Gaudens? Of course the workmanship counts as much as the design in a case like this. I feel that we have the chance with this coin to make something as beautiful as the old Greek coinage. In confidence, I am not at all sure how long I shall be permitted to have such a coin in existence; but I want for once at least to have had this nation, the great republic of the West, with its extraordinary facility of commercial and mechanical expression, do something in the way of artistic expression that shall rank with the best work of the kind that has ever been done."

Mint Director Roberts in turn enlisted the aid and support of San Francisco Mint Superintendent Frank Leach. Leach was familiar with the problems associated with the higher relief coins then being struck in San Francisco for Philippine and Mexican coins. In a letter dated January 4, 1907, Leach reminded Roberts of their recent visit and experiments with high relief coinage:

"You will remember that when you were here [in November] we had some conversation about the possibility of striking pieces with this high relief, and I told you we could put the planchets in shape by manipulation of the milling machine. ... When they decide upon the design and have the dies made I should like very much to have an opportunity of experimenting with my method of making coins. Of course, if there is anything I can do in helping you out in this matter of the new coin, why do not be backward about calling upon me."

## CHARLES BARBER

One theme that runs through the literature on the production of the Saint-Gaudens coinage is the obstructionism of Charles Barber. This is an easy case to make, and much of Barber's correspondence bears out this theme. But Charles Barber was not the one-dimensional character many make him out to be. He certainly was not an artist remotely near the level of Augustus Saint-Gaudens, but he was certainly a capable die sinker who could lay out coin designs that required only one blow from the dies. He also knew that high relief coins were unsuited to mass production. Barber was willing to work with Mint officials and the president to produce first the Ultra High Relief experimental pieces and then the High Relief twenties. It seems

Nike of Samothrace

Courtesy of the Saint-Gaudens National Historic Site

Augustus Saint-Gaudens,  
a later portrait

Chief Engraver  
Charles E. Barber

unlikely that Charles Barber was the complete antagonist as he is often portrayed. He enlisted the support of the Dietsch Brothers when he knew he needed further training on the Janvier Reduction Lathe. He obviously recognized the inherent artistic merit of the Saint-Gaudens twenties as his estate contained eight "1907 \$20 pattern pieces," believed by Roger Burdette to all be Ultra High Reliefs.

Augustus Saint-Gaudens was apparently not as clear about the needs for commercial coin production. The sculptor seemed to believe a high relief coin or medal could be produced with a single blow from the dies. After he was told the first Ultra High Reliefs required seven blows from a hydraulic press to fully strike up, he sent his bill for \$5000 to the Mint. Then the invoice was suspended in late February after he realized more work needed to be done.

The first Ultra High Relief twenties were clearly experimental. The small number struck paired with the later slight reduction when the regular production High Relief twenties were finally produced in late 1907 underscore that the Ultra High Relief double eagles were pattern coins and experimental in nature.

## STRIKING THE COINS

Chief Engraver Charles Barber finished the working dies for the Ultra High Relief double eagles and began striking the experimental coins by February 7, 1907. The striking process was an arduous one, as each coin required seven blows from a hydraulic medal press at a pressure of 150 tons to bring up the full details of the design in high relief. Between each blow the coins were annealed, with the coins heated to soften the metal and cooled in a mild solution of nitric acid to reduce oxidation on the surfaces. The coins were then dried and the process repeated until the design was fully brought up. The multiple annealings produced a finished coin with a thin layer of virtually pure gold on the surfaces. The coins were struck six times with a plain collar, and the final strike was accomplished with a triple-segmented lettered collar to apply the edge lettering. If more than one coin was struck on a given day, each piece would receive a single blow from the press, then all the coins would be annealed together, then each coin would be struck again, etc., until the process was completed. This was much more efficient than going through the whole process individually, coin by coin. The edge lettering varied in style and orientation, as different collars were used at different times, but all coins struck on the same day should show the same edge treatment since they were struck in groups, rather than individually.

It seems that the Ultra High Reliefs were struck during three different striking periods, with four different edge treatments. The first striking period was from February 7-14, 1907, when at least three complete coins and one nearly finished piece were produced. The complete coins featured the simple Sans Serif Edge Lettering that was previously used on Barber's twenty dollar pattern from 1906, Judd-1773. The letters were oriented in the "inverted" position, with the words reading correctly when the edge of the coin is viewed with the obverse facing up. A star separates each letter around the edge. The multiple heavy blows from the medal press proved too stressful for the dies by the time the fourth coin was struck. This coin received the first six blows with the plain collar, but then the reverse die broke on the sixth strike and the coin never received the final blow with the lettered edge collar. This coin is the unique Plain Edge piece known to collectors today, and shows the dramatic die crack on the reverse at 8:30. One of the complete coins was acquired by Mint Director George Roberts and another was given by him to former Mint Director Robert Preston. The third complete piece was sent to Augustus Saint-Gaudens for examination, and returned by him on March 13. This coin may have ended up in Barber's extensive collection, along with the Plain Edge piece, as a 1916 inventory of his holdings included eight specimens of the Ultra High Relief.

Barber also struck approximately 15 specimens of the small-diameter pattern double eagle, Judd-1917, during this time frame. Most of these coins were melted after Frank Leach became Mint director in late 1907. Only two examples of Judd-1917 are known today, both in the National Numismatic Collection at the Smithsonian Institution. With the reverse die broken, coinage of Ultra High Relief double eagles was suspended after February 15.

Saint-Gaudens' assistant, Henry Hering, observed at least some of the early striking and reported about the extensive striking process, which was obviously impractical for large-scale coining operations. Saint-Gaudens wrote to Roberts requesting examples of the Ultra High Relief at different points in the striking process, after one, two, five, and seven blows from the press had been administered. Roberts and Superintendent John Landis agreed to provide these samples, but Barber informed them on February 25 that:

Charles Barber's 1906 pattern for the double eagle

Mint Director Frank Leach

"The dies being broken, I can only furnish such pieces as I have of the Double Eagle in gold, new design, namely; first, second, third strike and a finished piece, and one impression of each diameter, in lead, without the lettering on the periphery.

"I have no doubt that these will answer the desired purpose.

"The finished coin is the best impression of the steel hub that can be furnished."

The finished coin referred to is the coin which Saint-Gaudens returned on March 13. Barber also mentions sending a lead striking of both the regular and small diameter double eagles, with no edge lettering, but these patterns are unknown to collectors today.

Since both Landis and Roberts wanted specimens of the Ultra High Relief struck for the Mint Cabinet, Barber prepared a new reverse die and began a second striking period for the Ultra High Relief double eagles that lasted from March to July of 1907. Most of the coins we know about today were produced during this period, as probably 12 or 13 examples were struck. All the coins from the second striking period employed a new lettered edge collar, with Roman style lettering and stars separating the words, rather than being placed between each letter. The orientation of the edge lettering varies, with most specimens showing "normal" orientation, which reads correctly when the edge is viewed with the obverse facing down. It may be that the coins were struck with different orientations randomly, with one batch struck with Normal Edge Lettering one day and another batch struck with Inverted Edge Lettering the next. Heritage numismatist John Sculley suspects there was a more consistent pattern, however. Barber's 1906 twenty dollar pattern employed Inverted Edge Lettering and all the Ultra High Reliefs from the first striking period also show this orientation (except, of course for the unfinished Plain Edge piece). The coins from the second striking period included the two pieces struck for the Mint Cabinet, and the coin offered in this lot is one of those two coins (see History and Significance of the Present Coin below). It also shows Inverted Edge Lettering, and we suspect its sister coin in the National Numismatic Collection would show this orientation as well. This consistency suggests that this orientation was preferred by Barber, and possibly all the Inverted Edge Lettering examples with the Roman letters were struck in the early part of the second striking period. At some point it seems likely that the orientation was changed to the "normal" position, which was probably favored by Saint-Gaudens, who wanted the motto to arch over Liberty's head when the coin was held upright with the obverse facing and tilted slightly toward the viewer. The coins from the later part of the second striking period and all the pieces from striking period three were probably struck with Normal Edge Lettering.

The third striking period took place on a single day, December 31, 1907. Three coins were struck on that day at the request of the new mint director, Frank Leach. Before the present coin was recently discovered, only three examples of the Ultra High Relief were known with Inverted Edge Lettering and it was believed that they were the three pieces from the third striking period. Now that at least four examples are extant, it is necessary to re-evaluate this theory. With this new information, it seems most likely that some of the specimens with Inverted Edge Lettering preceded the coins with Normal Edge Lettering in the emission sequence, and were struck in the early part of the second striking period.

## HISTORY AND SIGNIFICANCE OF THE PRESENT COIN

On March 4, 1907, Mint Director George Roberts authorized Philadelphia Mint Superintendent John Landis to strike two examples of the Ultra High Relief double eagle for the Mint Cabinet. Unfortunately, the reverse die had broken after the first group of coins (with the Sans Serif Edge Lettering) were struck in early February. Accordingly, Chief Engraver Charles Barber prepared another working die from the original hub and struck the required examples for the Mint Cabinet, along with several other specimens, during the March-July, 1907 time frame. These coins also used a new collar, with more elaborate Roman style lettering and a different arrangement of the stars. The Mint Cabinet coins were probably among the first examples struck during this second striking period. The present coin was one of the two pieces struck for the Mint Cabinet, and it remained in that collection until George Kunz arranged for it to be loaned to the Metropolitan Museum of Art for their Saint-Gaudens Memorial Exhibition, which ran through the first half of 1908.

Meanwhile, Roberts resigned as mint director and was succeeded by Frank Leach, who had been the superintendent of the San Francisco Mint and had significant experience with gold coinage and the higher relief coins produced for Mexico and the Philippines. Few people had actually seen an example of the Ultra

Henry Hering, Saint-Gaudens assistant who worked with the Mint to produce the 1907 ten and twenty dollar gold coins

High Relief in late 1907, and Leach first saw a specimen on December 23, when former Mint Director Robert Preston showed him his coin. Leach was impressed with the Ultra High Relief and directed Landis to strike several more examples:

"Mr. Preston showed me one of the D.E. struck on the medal press from the first model. It is a beautiful piece. If you have any more I would like three—one for the St. Gaudens people, one for the Secretary, one for myself, and if the President has not one I want another for him. I will not give these out until after the first of January or we would be bothered by all the officials and collectors in the country."

The requested coins were struck on December 31, 1907, but Barber only struck three examples, presumably because he knew President Roosevelt already had a specimen. When Leach distributed the coins, he found that Roosevelt did want another piece, so he gave one to him, one to Treasury Secretary Courtney, and kept the third for himself, leaving none for the Saint-Gaudens estate. Following normal mint procedure, the obverse dies for 1907 coinage, including the Ultra High Relief obverse, were destroyed on January 2, 1908, so no other specimens could be struck.

Unfortunately for Leach, his generous idea of giving Augusta Saint-Gaudens (the sculptor's widow) an example of her husband's finest work had not been kept confidential, despite his instruction to her lawyer that, "I think it would be well not to say anything to Mrs. Saint Gaudens about the trial pieces from the first model until I find out whether I can secure one or not." The Ultra High Relief coins were becoming well-known and quite valuable by early 1908. The Metropolitan Museum of Art insured the present coin for \$1,000 when they borrowed it for their exhibition that year. Augusta Saint-Gaudens was a shrewd businesswoman, and she was devoted to keeping her husband's legacy alive for future generations. Although he had seen examples of the Ultra High Relief during the long process of striking the coins, Augustus Saint-Gaudens had never owned an example. Augusta wanted a specimen of this issue once she became aware of its existence. Both Augusta and her lawyer, Charles Brewster, corresponded with Leach and President Roosevelt about obtaining an example for the family. On April 17, 1908, Roosevelt issued an informal instruction that a new obverse die should be prepared with the 1908 date to strike another coin for her, if no other example was available. Leach conferred with other mint officials and decided it was more practical to give one of the coins in the Mint Cabinet to Augusta, and Roosevelt approved this suggestion on April 20, 1908. Charles Brewster sent payment of \$20.12 to the Philadelphia Mint on her behalf on April 22, but Augusta had to wait until June 22 to receive her coin, after the Metropolitan Museum closed their exhibit.

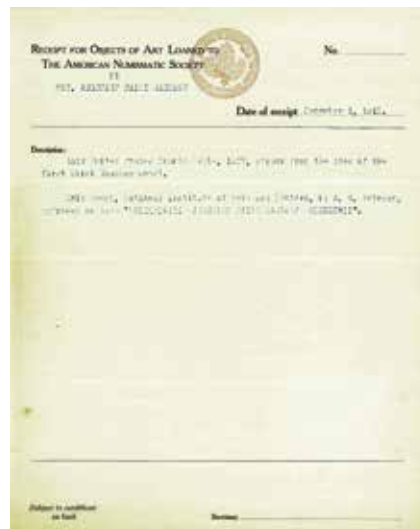

Augusta owned this Ultra High Relief for the rest of her life, but she placed it on long-term loan to the American Numismatic Society a few years later. ANS numismatist David Hill discovered the receipt for this transaction, dated December 1, 1910 (Figure 1). The coin was exhibited by the society in the 1914 ANS Exhibition, and an image of the coin was included in the catalog. Many numismatists have assumed the coin in the 1914 ANS Exhibition was the same one that is in their collection today, but that piece was acquired much later, from a bequest by collector Arthur J. Fecht. The present coin was last mentioned publicly in an article in the August 1949 edition of *The Numismatist*, written by Henry Hering, with a follow up by Martin Kortjohn. Kortjohn notes the following:

"... the piece originally owned by Mr. Saint Gaudens is still the property of his estate and is now housed at the American Numismatic Society. It is marked with his initials on the edge."

The coin offered here does show the initials ASG engraved on the edge, reminiscent of the D punched on the Dexter specimen of the Class I 1804 dollar, and positively identifying it as the coin Kortjohn refers to (see Figures 2 and 3). It is impossible to say for certain exactly when the initials were placed on the edge, but Augusta might have thought it prudent to identify the coin before loaning it to the ANS, in case it was mixed up with other specimens. Although present-day numismatists frown on placing any mark on a high-grade coin, the practice was more accepted in earlier times, and certainly adds interest and character to the coin in this instance. This caution may have been justified, as the Saint-Gaudens coin was in the ANS collection along with the Fecht example for at least five years (1945-1950), and it would have been difficult to tell them apart if they had been displayed together. Homer Saint-Gaudens withdrew this coin and some other pieces on loan from the family collection in late 1950, as evidenced by the November 28-dated letter from ANS Secretary Sawyer Mosser to lawyer A. Carson Simpson in Figure 4 (thanks to

This coin is the only specimen positively traced to the estate of Augustus Saint-Gaudens and its discovery has increased our knowledge about the striking of these coins more than any other event since the publication of Roger W. Burdette's *Renaissance of American Coinage* in 2006. The fact that this piece is a fourth example of the Inverted Edge Lettering variety has forced numismatists to reconsider what we know about the relationship between the various styles of edge treatment on the coins and their emission sequence. The coin has never been offered publicly, and it is one of the finest examples known to the numismatic community. Shrouded in mystery and largely forgotten for decades, the dramatic reappearance of this historically important example is one of the most exciting numismatic events of recent years.

November 25, 1950

L. Simon Minton  
High Street, Bath  
Philadelphie 21, Pennsylvania

Dear Mr. Minton:

Recently Dr. Roger P. Simon  
sent for the return of ten gold medals  
and a gold statue of the Dr. Simon  
twenty dollar piece which had been lost  
on its trip up this column. Before return-  
ing them, we asked for a photographic copy  
of the inscription to verify them. He  
has sent us the enclosed. In my mind  
it is sufficient to cover all I should be  
convinced on for a certification by the  
court of philately. The page photographed  
to a bit enlarged and in vibrant colors.

Sincerely yours,

Isaac M. Simon

Sincerely

Wm. H.  
Baltimore

## ROSTER OF MCMVII ULTRA HIGH RELIEF DOUBLE EAGLES

The coins were produced in three different striking periods, with four different edge treatments (the Plain Edge specimen would have exhibited the Sans Serif Edge Lettering of the other coins from the first striking period, but the reverse die broke while striking this piece and the edge lettering, which was usually impressed during the final blow from the coining press, was never applied). Grades are from the last auction appearance, unless a subsequent certification event is known, or from Jeff Garrett and Ron Guth, in the case of the Smithsonian coins. It is likely that some coins have been submitted, or resubmitted, to the grading services since their last auction appearance.

### FIRST STRIKING PERIOD (FEBRUARY 7-14, 1907)

1. **PR58 NGC.** New York Sale (Sotheby's, 12/1992), lot 837; Morrison/Licht Collection (Stack's, 3/2005), lot 1538; Southern Collection; Samuel Bergard / S.S. New York Collection (Stack's, 7/2008), lot 4242; 74th Anniversary Sale (Stack's, 11/2009), lot 1983; Philadelphia Signature (Heritage, 8/2012), lot 5434, realized \$1,057,500. Edge lettering inverted, discovery coin with Sans Serif style of 1906.
2. **Impaired Proof, AU (uncertified).** United States and Foreign Coins (Sotheby's, 6/1995), lot 485. Edge lettering inverted, Sans Serif style of 1906.
3. **Grade unknown (uncertified).** Possibly Chief Engraver Charles Barber; Captain Andrew North cased set; Stack's exhibited the cased set at the 1956 ANA convention; private collection; Stack's again offered the set in 1980; purchased by NERCG for \$1,000,000; purchased by John Dannreuther at the 1981 ANA Convention; Jim Jelinski circa 1983-1984; private collection. Unique specimen with Plain Edge Lettering.

### SECOND STRIKING PERIOD (MARCH-JULY, 1907) AND THIRD STRIKING PERIOD III (DECEMBER 31, 1907)

4. **PR69 PCGS.** ANA Convention Auction (Jim Kelly, 8/1956), lot 1773; Dr. John E. Wilkison; Paramount; A-Mark; Auction '80 (Paramount, 8/1980), lot 977; Ed Trompeter; Trompeter estate; Heritage Auctions private sale in 1999; Phillip Morse Collection (Heritage, 11/2005), lot 6522, realized \$2,990,000; Madison Collection; private collector; Baltimore Sale (Stack's Bowers, 6/2012), lot 6522, realized \$2,760,000 to Steve Contursi and Don Kagin. Normal Edge Lettering.
5. **PR68 PCGS.** Mint Cabinet in 1907; presented to Augusta Saint-Gaudens in 1908, by order of President Theodore Roosevelt; loaned to the American Numismatic Society on December 1, 1910; exhibited at the 1914 ANS Exhibition; withdrawn by Homer Saint-Gaudens in 1950; private family collection; sold to the present consignor in the early 1970s. Inverted Edge Lettering. **The present coin.**
6. **PR68 PCGS.** A-Mark (Steve Markoff); Bowers and Ruddy Galleries; Abe Kosoff; Sam Bloomfield; Sam and Rie Bloomfield Foundation Collection (Sotheby's, 12/1996), lot 60, Dwight Manley; Southern Collection; John Albanese; Midwest collector. Inverted Edge Lettering.
7. **PR68 PCGS.** Albert Holden, circa 1907-1911; Emery May Holden Norweb; R. Henry Norweb, Jr.; Rarities Sale (Bowers and Merena, 1/1997), lot 353; Dwight Manley; Ariagno Collection (Ira and Larry Goldberg, 5/1999), lot 885; Tangible Assets, Inc.; Benson Collection, Part III (Goldbergs, 2/2003), lot 2178; Ira and Larry Goldberg; Canadian collector. Normal Edge Lettering.

8. **PR68 PCGS.** Possibly Colonel E.H.R. Green; J.F. Bell Collection (Stack's, 12/1944), lot 867A; C.T. Weihman; Frank J. Hein; Hein Family Collection, offered at the 2000 ANA convention by sealed bid, unsold; Monex Rare Coins; Ira and Larry Goldberg; West Coast collector; FUN Signature (Heritage, 1/2007), lot 3258, realized \$1,840,000; Simpson Collection. Normal Edge Lettering.
9. **Gem Brilliant Proof 67 (uncertified).** Mathieu, Townsend, et al. Collections (Thomas Elder, 11/1920), lot 1755b; John H. Clapp; Clapp estate; Louis Eliasberg, Sr. in 1942, via Stack's; Eliasberg estate; United States Gold Coin Collection (Bowers and Ruddy, 10/1982), lot 1021; Mike Brownlee; Harry Bass, Jr.; Harry Bass, Jr. Research Foundation. Normal Edge Lettering.
10. **PR67 (uncertified).** Mint Cabinet in 1907; National Numismatic Collection, Smithsonian Institution. Possibly Inverted Edge Lettering. Grade per Jeff Garrett and Ron Guth.
11. **PR66 (uncertified).** Theodore Roosevelt, Cornelius Van Schaak Roosevelt; National Numismatic Collection, Smithsonian Institution in 1962. Normal Edge Lettering. Grade per Garrett and Guth.
12. **Roman Finish Proof 65+ (uncertified).** Chief Engraver Charles Barber; Captain Andrew North cased set; exhibited by Stack's at 1956 ANA Convention; private collection; Stack's again in 1980 FPL; set purchased by NERCG for \$1 million; Boston Jubilee (New England Rare Coin Galleries, 7/1980), lot 323; Julian Leidman; Hugh Sconyers; Auction '85 (Superior, 7/1985), lot 983; Ira Einhorn; purchased by Warren Trepp in 1990 for \$1.5 million; Kevin Lipton; Blanchard & Co.; private collection. Inverted Edge Lettering.
13. **Choice Proof 65 (uncertified).** Colonel E.H.R. Green; Stack's; King Farouk; Palace Collections of Egypt (Sotheby's, 2/1954), lot 296; Abe Kosoff; Abe Kosoff Collection (Bowers and Merena, 11/1985), lot 848. Inverted Edge Lettering.
14. **PR65 (uncertified).** Robert Schermerhorn; Stack's; Josiah K. Lilly; Lilly estate; National Numismatic Collection, Smithsonian Institution in 1968. Normal Edge Lettering. Grade per Garrett and Guth.
15. **Gem Roman Finish Proof (uncertified).** H. Jeff Browning; Dallas Bank Collection (Sotheby's / Stack's, 10/2001), lot 50; Spectrum Numismatics; John Albanese; private collector. Normal Edge Lettering. Possibly a later appearance of the Ulmer coin in number 17 below.
16. **Gem Roman Finish Proof (uncertified).** Yale University; Empire Coin Company in 1960; Abner Kreisberg; Lichtenfels / Linder Collections (Kreisberg / Schulman, 2/1961), lot 1417; Primary Bartle Collection (Stack's, 10/1985), lot 822. Normal Edge Lettering.
17. **Roman Finish Proof (uncertified).** Theodore Roosevelt; Daniel J. Terra; Theodore Ulmer Collection (Stack's, 5/1974), lot 546; Manfra, Tordella and Brookes. Normal Edge Lettering.
18. **Grade Unknown (uncertified).** Public Auction Sale (Stack's, 6/1979), lot 781; Kagin's. Normal Edge Lettering.
19. **Grade unknown (uncertified).** Chief Engraver Charles Barber; Arthur J. Fecht; American Numismatic Society (on loan since 1945, but did not become the property of the ANS until after the death of Fecht's sister in 1979). Normal Edge Lettering.

20. **Grade unknown (uncertified).** Joseph Mitchelson; Connecticut State Library in 1913. Normal Edge Lettering.

#### OTHER APPEARANCES

- A. A specimen in the possession of Mint Director George E. Roberts in 1907. Sans Serif Edge Lettering, possibly the coin in number 1 or 2 above.
- B. A specimen in the possession of former Mint Director Robert Preston in 1907. Sans Serif Edge Lettering, possibly the coin in number 1 or 2 above.
- C. A coin examined by Augustus Saint-Gaudens and returned to President Roosevelt on March 13, 1907. Sans Serif Edge Lettering, possibly the coin in number 1 or 2 above.
- D. A specimen in the possession of Mint Director Frank Leach in December 1907.
- E. A specimen in the possession of Secretary of the Treasury George Courtelyou in December 1907.
- F. Jerome Kern Collection (B. Max Mehl, 5/1950), lot 626.
- G. According to F.C.C. Boyd's inventory of his collection, Colonel E.H.R. Green owned at least two more specimens, aside from the coins specifically attributed to him above.
- H. According to the inventory of his collection, taken in late 1916, Chief Engraver Charles Barber owned another five specimens in addition to the three coins specifically attributed to him above.

#### PHYSICAL DESCRIPTION

The PR68 grade tells what is essential to know about this remarkable piece: It is nearly perfectly preserved. The minting process differed for Ultra High Relief twenties. The coins were struck seven times with a hydraulic press. In between strikings the planchets were heated to soften the metal, cooled in a mild solution of nitric acid (to reduce surface oxidation), and then struck again. The result of the annealing process was to bring a thin layer of almost pure gold to the top of each side of the coin. This layer of gold gives Ultra High Reliefs a brightness not encountered on other gold coins. That vibrancy is readily apparent on this piece. The fields display the fine, swirling die polishing lines seen on all Ultras as well as regular High Relief twenties. There are no contact marks on either side that we can see. Of course, the most readily identifiable marker are the ASG initials on the rim, located at 4 o'clock as one views the coin face-up. This is a spectacular example of the most visually impressive coin ever produced by any nation.

## HIGH RELIEF DOUBLE EAGLES

### 1907 High Relief, Wire Rim Twenty, MS62 Reddish Tinted Surfaces

**4413** 1907 High Relief, Wire Rim MS62 PCGS. CAC. Irrespective of grade, the three-dimensionality of the High Relief twenty is evident in all grades, even VF and XF. The sculptural quality is unaffected at the MS62 level. The only difference between this coin and a much higher graded coin is the presence of a few randomly placed abrasions in the dished fields and raised devices. The most noticeable one is a vertical scrape in the right obverse field. Otherwise, the strike is full throughout and the wire rim is complete around the reverse and almost so on the obverse. Rich reddish patina is seen over both sides. NGC ID# 26F2, PCGS# 9135

### 1907 High Relief, Wire Rim Twenty, MS63 Bright, Satiny Surfaces

**4414** 1907 High Relief, Wire Rim MS63 NGC. The striding figure of Liberty used on the High Relief twenties by Augustus Saint-Gaudens are revolutionary coins in the world of numismatics. But to the sculptor, the figure was hardly new. Saint-Gaudens attended the École des Beaux-Arts in Paris in the late 1860s and was undoubtedly familiar with the remarkable Nike of Samothrace in the Louvre. He adapted this figure for his statue of Liberty for the Sherman Monument that stands at the entrance to Central Park. Then he slightly changed the details for the double eagle and introduced the revolutionary concept of high relief coinage in the Mint. This concept was contrary to all that Chief Engraver Charles Barber believed in regarding coinage. He was the "master" of shallow relief coins of insipid quality that could be well brought up with a single blow from a steam press. To coin high relief gold double eagles required nothing less than presidential intervention, which is just what Theodore Roosevelt was more than happy to provide. This is a bright, satiny example of this revolutionary design. The only mark we see that limits the grade is located in the left obverse field. The strike is complete, as one would expect from a coin struck five times from a hydraulic press, and the wire rim is complete around the obverse margin. NGC ID# 26F2, PCGS# 9135

### 1907 High Relief, Wire Rim Twenty, MS63 'America's Most Beautiful Coin'

**4415** 1907 High Relief, Wire Rim MS63 PCGS. The High Relief double eagles designed by Augustus Saint-Gaudens were sensations in their day, coins that made a powerful impression in the numismatic marketplace from the day they were finally released to the public. Even today, more than a century later, there is little doubt that this single issue tops most collectors' want lists as America's most desirable and beautiful coin. The mattelike surfaces of this Select Mint State High Relief twenty are veiled in warm honey-gold color. The devices rise powerfully above the smooth fields — perhaps the single most desirable feature of this one-year type. A couple of scratches in the left obverse field are the grade-limiting factor. This piece would make a strong candidate for inclusion in a high-quality type set of U.S. gold coinage.

*Ex: Fort Lauderdale FUN Signature (Heritage, 1/2005), lot 10031.  
From The Free Tilly Collection. NGC ID# 26F2, PCGS# 9135*

### MCMVII Wire Rim High Relief Twenty, MS63 Bold Sharpness, Exceptional Appeal

**4416** 1907 High Relief, Wire Rim MS63 NGC. Modeled after the bold, sculptural relief of ancient Greek coinage, the High Relief Saint-Gaudens double eagle is widely regarded as the most beautiful and technically impressive coin ever issued by the U.S. Mint. At least three die impressions were needed to fully bring up the designs, per the research of Roger Burdette, a process which slowed production to an unrealistic pace for efficient mass production. As a result, Chief Engraver Charles Barber lowered the relief after just 12,367 pieces were struck. This low High Relief mintage might normally have resulted in a very rare issue, but the beauty and boldness of the design prompted substantial saving of this date by collectors and art lovers alike, making this issue obtainable today for the well-funded numismatist.

The present example is fully struck throughout the finer design elements, with characteristically satiny green-gold luster. No obtrusive abrasions are present, and only light, scattered surface grazes appear to limit the grade on this immensely attractive High Relief. NGC ID# 26F2, PCGS# 9135

## 1907 High Relief, Wire Rim Twenty, MS64 Classically Influenced Design

**4417** 1907 High Relief, Wire Rim MS64 PCGS. The dominant art form beginning in the mid-18th century was Neoclassicism. "History paintings" were immensely popular among all classes in Europe. By the 1820s the trend was beginning to die down, but it remained a strong influence in America until the early 20th century. Augustus Saint-Gaudens grew up in a Neoclassical America, and it was a short step from Neoclassicism to classically influenced once he attended the École des Beaux-Arts in Paris in the late 1860s. After the outbreak of the Franco-Prussian War in 1870 he went to Rome and was further immersed in classical sculpture. He was able to pair both Classicism and Realism in many of his sculptural works, most notably the Sherman Monument and the High Relief double eagle, both of which share a common sculptural figure of Liberty. This lovely near-Gem shows the expected thick, satiny luster these coins are so well known for. The strike, of course, is complete — what else could it be after five blows from a hydraulic press? Magnification reveals a few tiny contact marks that keep the coin from an even higher grade. NGC ID# 26F2, PCGS# 9135

## MCMVII Wire Rim, High Relief Twenty Bright, Satiny MS64 Remarkably Well-Preserved Surfaces

**4418** 1907 High Relief, Wire Rim MS64 PCGS. The front-facing, forward-striding figure of Liberty was not only borrowed from antiquity (from the Nike of Samothrace), but it is well-known to have also been borrowed from Saint-Gaudens' Sherman Monument. What is less well-known, however, is after he used the figure on the double eagle, he used it again on the Albright Caryatids seen as architectural elements on the Albright-Knox Gallery in Buffalo. The Caryatids, of course, were also Classical adaptations from the Erechtheum in Athens. This is a remarkably well-preserved High Relief that displays bright yellow-gold color and a near-absence of contact marks. The strike details are complete throughout. NGC ID# 26F2, PCGS# 9135

### **MCMVII High Relief Twenty, MS64 Bold Wire Rim Example**

**4419 1907 High Relief, Wire Rim MS64 PCGS.** A sharp wire rim surrounds both sides of this Choice High Relief Saint. This fin was the result of planchet metal being forced up between the die face and the collar during the successive blows from the dies necessary to fully bring up the motifs. This was viewed as a flaw by the Mint, and steps were taken to correct the problem. A small portion of the surviving High Relief population was struck without the fin, but the majority of known examples are of this variety. The fin on this piece grows exceptionally tall from 12 to 6 o'clock on the obverse, literally standing high above the primary rim. The strike is tack-sharp, as can be expected for a coin that received at least three die impressions, and the luminous, satiny surfaces are largely devoid of noticeable flaws. Rich apricot-gold coloration blankets both sides, giving this piece simply profound visual appeal for the grade. A minor rim bump is noted at 8 o'clock on the reverse. Housed in an old green label holder. NGC ID# 26F2, PCGS# 9135

## MCMVII High Relief Double Eagle, MS65+ Outstanding Example of the Wire Rim Variant

**4420 1907 High Relief, Wire Rim MS65+ PCGS.** A relatively unexamined part of the otherwise minutely detailed life of Augustus Saint-Gaudens is his brief time in Rome. The sculptor was concluding his studies at the École des Beaux-Art when the Franco-Prussian War broke out in 1870. Despite his protests to his French artist-friends who remained in Paris and witnessed the war and subsequent Commune in 1871, the young Saint-Gaudens fled to Rome. While there he immersed himself in the Classics. His first large-sized, commissioned work *Hiawatha*, was completed there. While *Hiawatha* was an entirely American subject, Saint-Gaudens was strongly influenced by both the Classicism that surrounded him in Rome as well as Neoclassicism that had been so influential in the arts in Europe for more than a century. This early work of Saint-Gaudens is the only one that can be said to be in the genre of Neoclassicism. However, Saint-Gaudens was deeply affected by the sculpture from classical antiquity that he saw all around him in Rome. The remaining three decades of his life was devoted to Realism. Yet, toward the end of his life when President Roosevelt asked him to redesign the nation's coinage, both men looked to antiquity for inspiration in both design and precedents of coins struck in high relief. Both the ten and twenty dollar coins from 1907 show strong classical elements. The reverse of the ten dollar gold piece is an adaptation of the shekel of Tyre, an eagle A.A. Weinman (at that time a student of Saint-Gaudens) had used on the reverse of Theodore Roosevelt's Inaugural medal of 1905. The obverse of the twenty dollar coin was clearly an adaptation of the Nike of Samothrace in the Louvre, a statue Saint-Gaudens was undoubtedly familiar with from his days as a student in Paris.

This amazing High Relief brings to life the powerful, striding figure seen on the Nike in the Louvre. The surfaces have thick satiny mint luster and are all but free from post-striking defects. Each side is bright yellow-gold with none of the often-seen reddish patina. NGC ID# 26F2, PCGS# 9135

### 1907 High Relief Twenty, MS65 Reddish Tinted Surfaces Wire Rim Variant

**4421 1907 High Relief, Wire Rim MS65 NGC. CAC.** In the various examinations of the life and works of Augustus Saint-Gaudens, it is inevitably pointed out that he was a consummate teacher and mentor. Apparently this drive extended not only to students but to other artists as well, and it came from a deep-seated desire to understand, appreciate, and share artistic ideas. While Saint-Gaudens was in Paris from 1897 to 1900, he took a vacation to the south of France, the Pyrenees (where his father was raised), and on to Rome and Amalfi. He insisted on taking along his friend Pierre Garnier, a Parisian painter. Garnier later wrote of the trip: "This journey was for me a great joy, especially for us two to be alone together. For it gave us time to talk together of many things ... From the point of view of art, of intellectual art, it filled up a void in my understanding, and you do not know how much I have been able to repair my knowledge as a result of this trip." This comes from a man who was a peer of Saint-Gaudens and attended the École des Beaux-Arts at the same time. Sharing knowledge and exchanging artistic ideas was something innate to Saint-Gaudens. This certainly was manifest from his taking on art students and establishment of the *atelier* system in his studio at Aspet. But it also comes across in his art. Realism and the Classical ideal of beauty were certainly translated to both his ten dollar and twenty dollar gold pieces. Both coins exhibit his deep appreciation and understanding of Classical sculpture and his ability to translate this knowledge into coin form. This Gem High Relief is a wonderful example of this translation of Classical sculpture. The design displays three-dimensionality, a feature simply not seen on any other U.S. coin. This piece has glowing mint frost with rich reddish patina, and there are no mentionable abrasions present. An exceptional High Relief twenty. NGC ID# 26F2, PCGS# 9135

## 1907 Flat Rim, High Relief Twenty, MS64 Exceptional Quality

**4422** 1907 High Relief, Flat Rim MS64 PCGS. After thousands of High Relief twenties were struck, Mint Director Frank Leach noticed his earlier directive to suppress the “fin” surrounding each side of the coins had not been followed. He issued a curt reminder to John Landis, Philadelphia Mint Superintendent that these pieces were not to be struck with “burrs” or “fins.” Landis accommodated Leach’s wishes as much as possible, but the wire rim was never really completely eliminated. The coins we know of today as Flat Rim twenties have more than 50% of the rim lacking the wire extrusion. This particular coin shows more “flatness” than we have seen in recent years. A loupe reveals just the slightest presence of a wire rim. Otherwise, this is a magnificent, problem-free coin. The satiny surfaces are nearly free from contact, and the strike is strong throughout. PCGS# 9136

## 1907 Saint-Gaudens High Relief Twenty Stunning MS67+ Flat Rim Example

**4423 1907 High Relief, Flat Rim MS67+ NGC.** In Thayer Tolles' book *Augustus Saint-Gaudens in the Metropolitan Museum of Art*, the art critic sets the stage for the period in which Saint-Gaudens was at the peak of the sculptural world in America:

"The demand for luxurious goods and imposing mansions was met by an ambitious group of architects, painters, sculptors, and decorators who believed that these collaborative projects stood as powerful reflections of their country's growing cultural presence on the world stage as it assumed its rightful place in a distinguished artistic continuum. These symbiotic partnerships inspired some of the most remarkable products of the American Renaissance, a period of unprecedented artistic cross-fertilization that began in the mid-1870s and continued through the 1910s."

This placed Augustus Saint-Gaudens, and his prodigious artistic talents, at the right time and in the right place to take full advantage of this demand for art in what became known as The Gilded Age. He used his natural artistic talent, coupled it with a successful workshop of apprentice artists, self-referenced his own works when possible, and curried the favor of wealthy patrons. The result was an outpouring of 214 works, many of staggering beauty and all of which display a natural ease of the subject portrayed.

After several decades of exceptional sculptural production, Theodore Roosevelt called on Saint-Gaudens to redesign several of the nation's coins. But he challenged him to redesign them with the high relief seen on coins from ancient Greece. Saint-Gaudens admired such coins as well and accepted the challenge, although reluctantly. Over the previous 15 years he had several encounters with Charles Barber, and the clash between artist and engraver had not turned out well for Saint-Gaudens. However, this time Saint-Gaudens had the president's full support, and Roosevelt used the power of his office to finally get the new coin designs into production. The frustrated president finally ordered that the new twenty dollar gold pieces go into production "even if it takes all day and night to produce one coin." It did not take quite that long, but it did require multiple blows from a hydraulic press usually used to strike medals to strike the High Relief twenties. In the short striking period in late 1907, only 12,367 pieces were produced.

As a Flat Rim coin, this was one of the final examples struck in December, 1907 of this magnificent design. The surfaces display bright yellow-gold color, similar to that seen on Ultra High Reliefs which were annealed between strikings. Diligent searching with a loupe fails to find any post-striking impairments. While we hesitate to call any coin perfect, this is as close to perfection as we can remember in recent memory. The striking details are also notable for extreme sharpness. While High Reliefs were struck multiple times on a hydraulic press, even so the tops of the letters on the upper reverse often blend into the inner rim. Not so here. The berries are rounded in the olive branch. Truly an exceptional High Relief.

Ex: FUN Signature (Heritage, 7/2010), lot 4925. PCGS# 9136

## PROOF HIGH RELIEF DOUBLE EAGLE

**1907 High Relief Twenty, PR64**  
**Iconic Coinage Issue**

**4424 1907 High Relief PR64 NGC.** The satiny, softly lustrous greenish-gold surfaces of this near-Gem specially produced High Relief are more than usually attractive, showing a completely untroubled appearance to the unaided eye. The reference most useful (in our view) for distinguishing the controversial proofs of this issue is *Proof Gold Coinage of the United States*, by Dr. Robert Loewinger. The attributes include a complete absence of die erosion; unusually pronounced die-polishing marks that appear in swirling patterns in the fields; and a buildup of metal around the peripheries, just inside the outermost rim, caused by the immense pressure sustained from multiple die impressions. This piece falls well within those parameters, and only under a loupe do the few scattered, small marks that determine the numeric grade component appear, all quite trivial. A great-looking example of this historic and iconic coinage. PCGS# 9132

## SAINT-GAUDENS DOUBLE EAGLES

**1908-D With Motto Twenty, MS66**  
**Rare This Well-Preserved**

**4425 1908-D Motto MS66 PCGS.** The 1908-D is the most available of the three With Motto 1908 issues, due to quantities of the date showing up in European bank vaults, but it is still scarcer than both No Motto issues of this year. The date is only plentiful in grades through MS64, with Gems being marginally scarce; Premium Gems are distinctly rare, and finer coins are prohibitively so. This piece is sharply struck, with satiny green-gold luster that yields overtones of deeper peach and honey. A few minute ticks on the obverse figure account for the grade, but hardly impede the immense eye appeal. A beautifully preserved example of this With Motto condition rarity. Population: 28 in 66 (2 in 66+), 4 finer (11/14). NGC ID# 26F9, PCGS# 9148

### **1908-S Double Eagle, MS63 Low-Mintage Early Series Issue**

**4426 1908-S MS63 NGC.** Not only does the 1908-S twenty have a very low mintage of only 22,000 pieces (second only to the 1907 High Relief), but it is also scarce in all grades. In Mint State, though, the 1908-S is especially difficult to locate. 1908-S twenties have a reputation for always being sharply struck, and so it is with this piece. The surfaces show the soft, frosted luster usually seen, and there are virtually no marks visible on either side. In fact, one might wonder why this escaped a coveted MS64 grade. Worthy of a premium bid. Census: 23 in 63, 26 finer (11/14).

*Ex: Long Beach Signature (Heritage, 2/2006), lot 3549.*

*From The Free Tilly Collection. NGC ID# 26FA, PCGS# 9149*

## 1910-S Double Eagle, MS67 Ex: Clapp, Eliasberg, Price, Morse

**4427 1910-S MS67 PCGS.** Only one PCGS-certified example — an MS68 that to our knowledge has been hidden from public view for more than two decades — is finer than the current 1910-S MS67 PCGS double eagle, an impressive coin with an impeccable pedigree extending back to John M. Clapp and including Louis Eliasberg, Dr. Thaine B. Price, and Phillip H. Morse. The present offering of this coin marks its first auction appearance in nearly 10 years, and it is also only the second appearance of any certified Superb Gem 1910-S in that same length of time.

The 1910-S Saint-Gaudens twenty is extremely elusive above the Gem level. This Superb Gem, formerly in the Morse Collection, was the only MS67 example in the Morse holdings, but he also had three MS66 examples — two PCGS, one NGC. That was a function of the high grades Mr. Morse sought in every Saint-Gaudens issue, rather than an indication of the availability of the 1910-S in high grades.

The 1910-S in the Dr. and Mrs. Steven L. Duckor Collection was an MS66+ PCGS-CAC example (Heritage, 1/2012), lot 4614, which brought \$29,900.

This fabulous MS67 PCGS example offers surfaces that are frosted rather than the more frequently seen satin finish. The strike details are fully brought up on both sides. Rich reddish patina appears throughout. Population: 1 in 67, 1 finer (9/14).

David Akers wrote of this coin in the Dr. Thaine Price Collection:

"This coin leaves little to be desired in any respect. It is fully struck with magnificent original surfaces and gorgeous medium orange-gold color. The surfaces are nearly pristine with no more than a few extremely small contact marks, mostly on the reverse on the eagle and in the rays below. ... At the grade level represented by this remarkable specimen, the 1910-S Double Eagle is a major rarity, and although not among the highest value coins in the Price Collection, this is certainly among the most impressive."

*Ex: Purchased by John M. Clapp directly from the San Francisco Mint in 1910; John H. Clapp; Clapp estate to Louis E. Eliasberg, Sr. (1942); Eliasberg "United States Gold Coin" Collection (Bowers and Ruddy, 10/1982), lot 1036; Auction '88 (7/1988), lot 989; Dr. Thaine B. Price; Price Collection (Akers, 5/1998), lot 85; Phillip H. Morse Collection (Heritage, 11/2005), lot 6585, which brought \$51,750.*

*From The Empire Collection. NGC ID# 26FH, PCGS# 9156*

### 1911 Double Eagle, MS66 Appealing Condition Rarity

**4428** 1911 MS66 NGC. One of several pre-World War I Philadelphia double eagle issues with low mintages and little availability in Gem and better grades, the 1911 twenty is a clear condition rarity in MS66 and virtually unobtainable any finer. This wheat-gold and apricot example has uncharacteristically warm luster for the issue and a generally crisp strike with only slight weakness on the torch hand and rounded toes. Minimally marked, as demanded of the grade, and for an issue multiple writers have cited as having variable eye appeal, this is among the “nice ones” and demands a commensurate bid. Census: 12 in 66 (1 in 66 ★), 3 finer (11/14). NGC ID# 26FJ, PCGS# 9157

## **1920-S Double Eagle, MS63 Prime Condition and Absolute Rarity Only 19 Coins Certified Finer at PCGS**

**4429 1920-S MS63 PCGS.** The 1920-S Saint-Gaudens double eagle is one of the premier rarities in the series, especially in high grade. David Akers considers the '20-S the fifth rarest coin of the 53 coin series in absolute terms, after the 1921, 1927-D, 1930-S, and the currently uncollectible 1933. The 1920-S holds an even higher place in the rarity rankings when collectors seek a high quality piece. Excluding the "impossible" 1933, only the 1921 is more difficult to locate in high grades. Experts estimate only 65-75 coins survive in all Mint State grades.

The double eagle denomination actually circulated to some extent in the western United States before World War I, but coinage of twenty dollar gold pieces was discontinued after 1916, when the country entered the war. When coinage was finally resumed in 1920, the role of the double eagle had changed. The public had become accustomed to paper money, and the big gold pieces no longer circulated in the regional economy, much like the half dollar denomination today. Most of the double eagles minted after 1920 were held in Treasury vaults or domestic banks as backing for gold certificates, or used in foreign trade. These coins were easily rounded up and melted after the Gold Recall of 1933. Almost the entire mintage of the 1920-S, 558,000 pieces, was destroyed in this manner. While many dates in the later Saint-Gaudens series suffered the same fate, the 1920-S is the first date to experience this kind of rarity, due to melting.

The present coin is a sharply detailed Select specimen, with just the slightest touch of softness on the Capitol building. The surfaces display rich orange-gold color, with green highlights, and vibrant, frosty mint luster. A few minor abrasions on both sides account for the grade, but do little to diminish the considerable visual appeal. Population: 13 in 63, 19 finer (11/14).

*Ex: Long Beach Signature (Heritage, 2/2011), lot 4724. NGC ID# 26FZ, PCGS# 9171*

### 1921 Saint-Gaudens Twenty, MS62 Heavily Melted Series Key Especially Elusive in High Grade

**4430 1921 MS62 PCGS Secure.** The Philadelphia Mint was the sole facility to manufacture gold coins in 1921, and production was restricted to double eagles. The issue's mintage of 528,500 examples is unremarkable at first glance, especially in the context of several lower-mintage dates from the 1920s, but the 1921 is unquestionably one of the most elusive keystones in the Saint-Gaudens series. The coins were all struck in November and December, and the entire mintage was held as backing for a new issue of government notes, making it extremely difficult for contemporary collectors to obtain examples. Research conducted by Dr. Charles W. Green in the 1940s reveals that only 25 coins were actually released through official channels.

Of course, a small number of coins later escaped from government holdings through the actions of Mint personnel and Treasury officials, who exchanged them for more common dates and sold them to coin dealers in the New York and Philadelphia areas. A few coins also reached circulation in later years, and about half of the known survivors are in circulated grades today. The great majority of the coins struck filled Treasury faults and served as currency reserves rather than as instruments of commercial exchange. Few pieces were shipped overseas for international trade and, when the melting of gold coins began in 1933, the 1921 was among the first to suffer near-complete destruction. Today the 1921 Saint-Gaudens double eagle is the third-most-challenging collectible date in the 53-coin set. The PCGS website estimates that 65 representatives survive in Mint State condition, while David Akers provides a range between 50 and 60 coins.

The present coin is an impressive MS62 example with lustrous yellow-gold surfaces that show a few highlights of rose and a scattering of minor contact marks that explain the grade. The design elements are well-detailed and overall presentation is quite attractive. Population: 20 in 62, 17 finer (11/14). NGC ID# 26G2, PCGS# 9172

## 1921 Saint-Gaudens Double Eagle, MS63 Sought-After Series Rarity Colorful, Lustrous Example

**4431 1921 MS63 PCGS.** Saint-Gaudens double eagles are one of the most popular series in American numismatics. Even common dates are prized for their high intrinsic value and artistic beauty. In addition to these valuable attributes, the 1921 is a close match to the rarity and desirability of the 1920-S issue and one of the prime condition rarities among all 20th century coins. High-grade examples are very rare, and any auction appearance of this date is a noteworthy event, as examples have realized more than \$1 million on three different occasions (Heritage, 11/2005, MS66 PCGS; Bowers and Merena, 8/2006, MS63 PCGS; Goldberg, 9/2007, MS65 PCGS PQ). Noted gold specialist David Akers remarks, "Coins that grade MS63 or finer are offered only once in a very long while."

The revival of the Morgan dollar in 1921 absorbed most of the resources of the Bureau of the Mint, and gold coinage was a low priority at all three facilities. In fact, the small mintage of 528,500 double eagles achieved at the Philadelphia Mint were the only gold coins of any denomination struck that year. Mintage only began in November, when the Treasury Department determined that some coins were needed to serve as currency reserves. Only 90,000 specimens were delivered in November, with a larger production of 438,500 pieces coming in December. Virtually all these coins were stored in Treasury vaults at the time of issue, and none were available to collectors through regular channels. However, a few well-connected numismatists were able to secure examples from Mint personnel and Treasury officials. These unofficial acquisitions account for the few high-grade coins that survive today, as the great majority of the mintage was melted after the Gold Recall of 1933.

The surviving population includes a surprisingly high percentage of circulated examples, indicating that a small number of coins must have been released into circulation in the 1920s. Very few coins have surfaced in European holdings over the years, suggesting that the 1921 was not used in international specie payments to any great extent. While the rarity of other dates in the series has varied widely over the last eight decades, as hoards of some dates were discovered in foreign banks and the true rarity of issues like the 1927-D became appreciated, the relative rarity of the 1921 has remained stable. The 1921 was regarded as the third or fourth rarest date of the series in the 1940s, and it has held that position to the present day.

The great difficulty collectors experienced in obtaining an example of the 1921 at the time of issue must have become well-known throughout the hobby, because the rarity of this coin was understood at an early date. In what was probably the first auction appearance of a 1921 double eagle, in lot 547 of the remarkable Sale Number 399 (J.C. Morgenthau, May 1939), the cataloger noted, "Uncirculated, brilliant and excessively rare." The coin realized a staggering \$260, the fourth highest price in the sale, an impressive achievement for a coin that was only 18 years old at the time. The popularity of the 1921 remains undiminished today.

The present coin is a spectacular Select specimen, with mingled orange and greenish-gold surfaces that show a few highlights of lilac. The vibrant mint luster complements the vivid color of the surfaces to produce outstanding eye appeal. The design elements are well-detailed, including Liberty's fingers on the branch and the panes and pillars on the Capitol building. An interesting die crack runs through the letters of LIBERTY. Close inspection reveals a few minor contact marks on the rays of the sun, but the fields are remarkably free of distractions for such a large gold coin. The historic rarity, high technical quality, and terrific visual appeal of this example will likely result in intense competition when this lot is called. Population: 10 in 63, 7 finer (11/14). NGC ID# 26G2, PCGS# 9172

### 1926-S Twenty Dollar, MS65 Flashy Luster on Multicolor Surfaces

**4432 1926-S MS65 PCGS.** An issue seldom seen in this grade and scarcely any finer, as PCGS show 32 submissions in Gem condition and only four numerically finer — three in MS66 and one in MS66+ (11/14). Flashy luster combines with surfaces showing a range of beautiful color from gold through orange, lilac, and crimson on each side. The last Gem PCGS example we offered of this date was at our ANA National Money Show Signature (Heritage, 2/2014), where lot 4332, a CAC coin, brought \$38,187.50. Scattered marks that define the grade mostly require a loupe to see on this rare-issue twenty. NGC ID# 26GF, PCGS# 9185

### 1927-S Twenty Dollar, AU55 Appealing, Collectible Example

**4433 1927-S AU55 PCGS.** The 1927-S likely owes its scarcity to the gold melts of the mid-1930s. More than 3.1 million pieces were struck, but there are probably no more than a couple hundred known to survive in all grades. PCGS and NGC combined have certified 276 examples (12/14), but this figure likely includes a number of resubmissions.

Like other dates that were heavily melted during this period, much of the surviving 1927-S double eagle population is in Mint State grades, suggesting that this issue never experienced widespread circulation. The few lightly circulated pieces that are known are highly sought-after by budget-minded collectors desiring an example of this scarce date.

This Choice AU representative is well-struck, with just light wear over the high points of the design. This piece is from a late die state, with minor die fatigue seen around the obverse periphery and a heavy crack from the 7 in the date curving down and through the capitol building. Substantial luster still resides in the recesses, giving this piece excellent appeal for the grade. NGC ID# 26GJ, PCGS# 9188

# PLATINUM NIGHT

## PROOF SAINT-GAUDENS DOUBLE EAGLES

## 1907 Arabic Numerals Twenty Dollar, Matte PR64, Large Edge Letters Ex: Trompeter

**4434 1907 Large Edge Lettering PR64 Matte NGC. Arabic Numerals.** Ex: Trompeter. The year 1907 was one of great experimentation in the Mint. Great diversity is seen in the double eagle series. In that single year, the Mint struck such coins as MCMVII Ultra High Reliefs; proof MCMVII High Reliefs; regular MCMVII High Reliefs with a wire rim; regular MCMVII High Reliefs with a flat rim; lowered relief Arabic Numerals proofs from both Collar I (Large Edge Letters) and Collar II (Small Edge Letters; and low relief Arabic Numerals business strikes.

This coin is *apparently unique, but it is neither an MCMVII Ultra High Relief nor an MCMVII High Relief coin. It is an Arabic Numerals matte proof in the low relief business strike style, one struck with the same edge-lettering collar used for the standard High Relief double eagles.*

The Barber-modified 1907 twenty dollar Saint-Gaudens gold coins were issued in proof format with Large Edge Letters (the High Relief edge) and with Small Edge Letters (the standard edge). The standard High Relief double eagles were produced with a lettered edge collar, a three-part innovation that enabled the Mint to do two things simultaneously. First and foremost, it imparted the desired edge lettering and devices to the “third side” of the coin. Second, and most ingeniously, it *enabled this to be done while the other two sides were being struck*. After the three sides were stamped, the collar “broke apart” into three segments, enabling the struck coin to be removed without damaging the lettering on the edge. A vertical line (actually visible on the edge of the coin) shows where the break occurred.

Along with the Small Letters, Arabic Numerals low relief proofs, the Large Letters, Arabic Numerals twenty dollar matte proof is technically a pattern, although unrecognized as such in the literature. There is no record of production of any 1907 proof double eagles with the low relief design. This is an extremely powerful statement in support of these coins as pattern issues, for it was required that all standard coinage production quantities had to be recorded. In the early and mid-19th century, production of proof coinage was unrecorded, but beginning in 1858 all silver and gold proof coinages were recorded annually.

The Ultra High Reliefs had the largest edge lettering in the series, followed by the regular issue High Reliefs with Collars I and II. Collar I was either used in error or experimentally on this matte proof and only one coin was produced. Coins with the Large Edge Letters Collar I read: | \* \* \* \* \* E \* | P L U R I B U S | \* U N U M \* \* \* \* \*. The coins struck from Collar II, the Small Edge Letters collar, read | \* \* \* \* \* E \* | P L U R I B U S \* | U N U M \* \* \* \* \*. Note that the Large Edge Letters variant has only the word PLURIBUS on a single section, and one star before and four stars after UNUM, while the Small Edge Letters variant has a single star on the segment with PLURIBUS, and five stars after UNUM, none before.

A passage from Roger W. Burdette's *Renaissance of American Coinage 1905-1908* shows the difficulties that Mint personnel faced in producing the High Relief coins with edge letters:

“The mint had three hydraulic medal presses capable of producing up to three hundred tons of pressure per square inch. The presses were designed to “squeeze” the planchet between the dies rather than “strike” it with a very quick blow as on the automatic production coin presses. Typical tempered steel coinage dies of the era could withstand little more than one hundred fifty tons of pressure before they would collapse or crack. The coiner wanted to use the minimum pressure necessary to bring up the design since this would reduce wear on the dies and make them last longer.

“High relief double eagles presented unusual problems for the mint's mechanics. The coins had high relief obverse and reverse designs, plus an edge with raised lettering instead of the normal vertical reeding. (Plain edge examples are probably production errors.) The relief took three blows of the press to bring up the obverse and reverse designs, but the edge lettering of the motto E PLURIBUS UNUM could only be imparted by an edge collar with recessed lettering. When the coin was struck, the metal flowed into the face designs as well as the raised edge lettering. Obviously, the collar had to be able to open or the newly struck coin would be locked inside the collar.

“For the first five hundred high relief coins made in August and September 1907, a plain retaining collar was placed in the press and the planchet given two blows with the coin removed and annealed between blows. The plain collar was then replaced with the lettered edge collar consisting of three segments. This was surrounded by a second, solid retaining collar. The planchet was placed back on the press, aligned with the anvil die, and given one or two more blows with the edge collar in place. After striking, the mechanic running the press had to lift off the retaining collar and pull the segmented collar away from the coin. This process was slow and resulted in much lower productivity than was achieved beginning in November. It was also partially responsible for a pronounced die fin on many of the coins. The first batch of five hundred double eagles took 105 hours (about twelve minutes each) to make; by late November the medal presses were turning out approximately four hundred eighty coins per day. Productivity continued to improve until 995 high relief double eagles were made during the day's work on December 30. The improvement was due to experience gained in striking the earlier batch of coins, and from a change in the way the segmented collar was used.”

Further distinguishing this coin from its Small Letters sibling, the Collar I coins show the bases of M in UNUM level, but on Collar II coins they are slanted. We believe this unique Large Letters Arabic Numerals proof was produced after the Small Letters proof striking(s). We base this belief on the presence of an area of die polishing seen around 9 o'clock on the obverse rim. Such an area of die polish would surely have been present and visible on an earlier striking, and it is for this reason that we conclude that this piece was struck after the Small Letters proof(s). Also, this piece shows complete definition on the Capitol building, indicating Mint personnel had a better grasp of how many tons of pressure to apply to strike this coin than the Small Letters piece, which displays obvious softness on the Capitol. This particular coin is most easily identifiable by a shallow, horizontal planchet flake to the left of the branch stem held in Liberty's right (facing) hand. There are minor planchet imperfections around the eagle's beak. The coin is lightly hairlined in the fields, but it is quite pleasing, with brighter surfaces than seen on matte proofs struck the following year, more closely resembling the “Roman Gold” finish of 1909-1910 in overall appearance. Medium orange-gold coloration is seen over each side of this impressive and unique proof striking.

Ex: The Captain North cased set; New England Rare Coin Galleries; Ken Goldman; Hatie Collection (Bowers), lot 2855; Trompeter Collection; Heritage private sale, 1999; The Phillip H. Morse Collection of Saint-Gaudens Coinage (Heritage, 11/05), lot 392, which realized \$230,000; FUN Signature (Heritage, 1/2007), lot 3832; ANA Signature (Heritage, 8/2007), lot 2088. PCGS# 9198

### 1913 Double Eagle, Matte PR67 Two Graded Finer Exemplary Surfaces and Strike

**4435 1913 PR67 NGC.** The matte proof double eagles dated 1913 are extremely rare. The mintage was a mere 58 pieces, meaning that these coins were rare even in their year of issue. Trying to estimate the number of survivors today based on population data is an exercise in futility; despite the mintage of 58 pieces, today the grading events for the 1913 proof double eagle, between NGC and PCGS, number 75! This is a more than usually transparent demonstration of how such data are hopelessly riddled with duplicates — an understandable phenomenon nonetheless, when one considers that a one-point grade bump for a coin of this issue successfully “cracked out,” resubmitted, and upgraded can mean tens of thousands of dollars.

Earlier estimates of survival have been as few as 12 to 15 pieces, per Q. David Bowers, and 20 to 25, per David Akers. PCGS estimates 40 to 45 pieces, a survival that would be considered abnormally high, given the mintage. What is more important is that this piece is surpassed in grade by only two submissions in PR68 at NGC (or one coin submitted twice). NGC shows 11 grading events in PR67 including this coin and suspected duplications.

The color of this Superb Gem closely resembles a 1908 matte proof twenty, with its deep brownish-khaki coloration. The depth of color is quite remarkable and would serve to accent and highlight any surface flaws or shiny spots, but no defects appear on this outstanding example. The exemplary surfaces are quite simply fully struck throughout, producing a wealth of detail and an effect of intense beauty. Surely this piece was given multiple blows from a medal press. Census: 11 in 67, 2 finer (9/14).

## COMMEMORATIVE SILVER

### 1900 Lafayette Dollar, MS66 Only Five Numerically Finer at PCGS

**4436** 1900 Lafayette Dollar MS66 PCGS. DuVall 2-C, showing the second S in STATES repunched east and a thick branch stem ending between the two 0s in the date. The variety is common but the condition is rare, with PCGS showing only five numerically finer than the present piece (11/14). Full luster is abundantly apparent under a layer of copper, dove-gray, mint, and pale aqua hues on each side of this splendid Premium Gem. This coin would propel its next owner immediately into the forefront of silver commemorative collectors, a piece that would never require upgrading and that would, in fact, be quite to difficult to upgrade. Population: 89 in 66 (5 in 66+), 5 finer (11/14). NGC ID# 28N8, PCGS# 9222

### 1900 Lafayette Dollar, MS66 Beautifully Preserved DuVall 3-D Example

**4437** 1900 Lafayette Dollar MS66 PCGS. CAC. DuVall 3-D. The AT in STATES is repunched on this variety. Even for the MS66 grade level, this coin is a visual treat — not only are the surfaces devoid of any mentionable abrasions, but Washington's cheek and much of the horse are free of the small, mint-made ticks that typically affect this issue. Radiant, satiny luster cartwheels uninterrupted around each side, illuminating an overlay of light golden toning. The strike is sharp throughout.

The Mint struck 50,000 Lafayette dollars in 1899 (plus 26 pieces for assay purposes), but 14,000 were later melted, leaving a net distribution of only 36,0026 coins (including assay pieces). This was the first commemorative silver dollar issued by the United States, and the only piece of that denomination in the classic commemorative series. High-grade examples, such as the present offering, are equally as popular as they are scarce. Population: 89 in 66 (5 in 66+), 5 finer (11/14).

*From The A. James Evans Collection, Part II.* NGC ID# 28N8, PCGS# 9222

## Spectacular 1900 Lafayette Dollar Superb Gem A Fabulous Condition Rarity

**4438 1900 Lafayette Dollar MS67 PCGS. CAC. DuVall 1-B.** A nationwide campaign by American schoolchildren raised \$50,000 towards the construction of the a statue of Lafayette by Paul Wayland Bartlett, which was to be presented to France at the 1900 Paris Exposition. In 1899, Congress authorized 50,000 (plus 26 for assay) commemoratives to be struck to cover part of the statue's cost, but they had a difficult time selling the one dollar coins at \$2 each. Many were later spent or melted. It is interesting that the engraver of the Lafayette dollar, Charles Barber — who was not known for his modesty — featured Bartlett's name quite prominently on the reverse below the statue. Anthony Swiatek and Walter Breen speculate that this was actually done by Barber to show his disapproval of Bartlett's design, and not as a concession by the engraver.

The present specimen is a superlative, awe-inspiring example of this popular, crown-sized early commemorative. Both sides are beautifully toned in a mix of sea-green, gunmetal-blue, gold, magenta, and crimson. The underlying surfaces exhibit vibrant, satiny luster that serves to highlight the powerfully impressed design elements. A careful inspection reveals only a few wispy grazes under magnification. The typical Lafayette dollar, an issue that was sold in great numbers to the noncollecting general public, is lightly circulated and often cleaned. Even a pleasing MS63 example can be difficult to find and would command a considerable premium. Superb Gem coins are of the utmost rarity and are cherished by serious commemorative collectors. Population: 5 in 67 (2 in 67+), 0 finer at either service (10/14).

*Ex: FUN Signature (Heritage, 1/2004), lot 2233; FUN Signature (Heritage, 1/2008), lot 3414; Central States Signature (Heritage, 4/2008), lot 2528; Los Angeles Signature (Heritage, 8/2009), lot 1388.*

*From The Empire Collection. NGC ID# 28N8, PCGS# 9222*

## 1921 Alabama Half, Boldly Struck MS67 Among the Finest Graded

**4439 1921 Alabama MS67 PCGS.** While the two varieties of Alabama commemorative half dollars had fairly substantial mintages, survivors are rarely found in higher grades. Gems are scarce, Premium Gems are rare, and Superb Gems such as the present specimen are extremely rare. This piece is tied with two other submissions for the finest that PCGS has certified, and NGC has only seen seven grading events in MS67 with none finer (9/14).

This amazing piece displays a bold strike amid frosty mint brilliance that complements the delicate gold and iridescent toning on each side. A tiny splash of dark toning appears on the obverse at 9 o'clock and should conveniently identify a prior provenance with a little searching.

*Ex: Long Beach Signature (Heritage, 2/2011), lot 4059.*

*From The Empire Collection. NGC ID# 28HT, PCGS# 9224*

## 1921 Alabama, MS67 Tied for Finest Known, Vivid Coloration

**4440 1921 Alabama MS67 NGC. CAC.** High-quality examples of the Alabama commemorative half are rare — few were saved, and many were carelessly produced. Most of the mintage was sold to the local populace, where many of the coins circulated and almost none were carefully preserved. Taking the cue from Missouri's successful 2\*2 experiment, two varieties were minted: a limited edition 2x2 coin, and the mass-produced "plain" variety.

This exceptional coin is remarkably well-produced and attractive for the plain variety. As always, it is softly struck on the eagle's talons, but the dual portraits are sharply struck the rest of the memorable eagle design is bold. Variegated rainbow toning covers both sides in shades of orange, pink, blue, and lilac over pearlescent-silver surfaces. The eye appeal is terrific. A Superb Gem example, tied numerically for the finest-known among survivors of this challenging issue. Census: 7 in 67 (1 in 67 ★), 0 finer (11/14). NGC ID# 28HT, PCGS# 9224

### 1936-S Daniel Boone Bicentennial Half, MS68 Vivid Peripheral Multicolor Toning

**4441 1936-S Boone MS68 PCGS. CAC.** The Daniel Boone Bicentennial half dollars, first struck in 1934 and minted for five years, commemorated the 200th anniversary of the frontiersman's birth. The San Francisco Mint struck just 5,000 examples in 1936 (plus six pieces for assay purposes), all of which were distributed. Most are believed to survive today, and this issue is readily obtainable in grades through MS66. In MS67, the collector will find acquiring a piece to be somewhat of a challenge, and PCGS and NGC combined have encapsulated only five MS68 coins (three at PCGS and two at NGC), with none numerically finer (11/14).

This satiny example displays sharply struck design elements and seemingly perfect preservation. The centers are light golden in color, while the border regions exhibit more vivid cherry-red, forest-green, sun-gold, and aquamarine hues. A remarkable condition census example. NGC ID# 28JP, PCGS# 9268

### 1925-S California Half, MS68 Eye-Catching and Powerfully Struck

**4442 1925-S California MS68 PCGS.** Modern numismatists praise the California half dollar's simple, yet boldly attractive design, but at the time the noted sculptor James Earle Fraser recommended that the designer of the coin, Jo Mora, be fired! Joseph Jacinto "Jo" Mora (1876-1947) was a Uruguayan-born American who lived among the Hopi Indians for a few years as a young man. Mora was also a sculptor, author, and illustrator.

Luckily for collectors, his model was approved, and this Superb Gem commemoration of California's Diamond Jubilee shows off the design to maximal impact. Peppered reddish-brown toning in the margins accents the eye-catching silver-gray centers. Shimmering field luster highlights powerfully struck central devices. Both sides are virtually perfect. Certified in a green-label holder. Population: 6 in 68 (1 in 68+), 0 finer (9/14).

*Ex: Louis Bassano Collection / Los Angeles Signature (Heritage, 8/2009), lot 1426.*

*From The Empire Collection. NGC ID# 28JY, PCGS# 9281*

## 1925-S California Half, Impressive MS68 ★ Among the Few Finest Graded

**4443** 1925-S California MS68 ★ NGC. Little time passed between the 1848 discovery of gold in California and its admission to the Union as the 31st state on September 9, 1850. This issue was authorized by Congress on February 24, 1925, the same legislation enabling the Vermont and Fort Vancouver commemorative half dollars.

The design is pure California, depicting a "Forty-Niner" on the obverse and the state emblem, a grizzly bear, on the reverse. James Earle Fraser called the design "amateurish" but the San Francisco Citizens Committee had considerable political influence, and sculptor Jo Mora's design was approved.

This impressive Superb Gem, tied for the numerically finest certified, is a stunning piece with frosty silver mint luster, delicate champagne overtones, and gorgeous peripheral iridescence. Census: 5 in 68 ★, 1 finer in MS68+ ★ (9/14).

*From The Empire Collection.* NGC ID# 28JY, PCGS# 9281

## 1936 Elgin Centennial Half, MS68 ★ Dazzling Visual Appeal Among the Finest Known

**4444** 1936 Elgin MS68 ★ NGC. The 1936 Elgin Centennial half dollars commemorated the 100th anniversary of the founding of Elgin, Illinois, but the chief purpose of their issuance was to raise the funds necessary to erect a Pioneer Memorial monument in an Elgin park, a representation of which is seen on the reverse of the coin. The Mint initially struck 25,000 coins (plus 15 pieces for assay purposes), but 5,000 were later melted, leaving a net distribution of 20,000 pieces. The designs were prepared by Trygve Rovelstad, the same artist who designed the monument.

In numismatic relevance, the Elgin commemorative half dollar was fairly well cared for following its release, and many high-grade examples are known. In MS68, however, only a handful of spectacular Superb Gems have survived, these being the epitome of perfection for the Elgin half enthusiast. This Star-designated piece displays a tinge of deep coppery-gold peripheral toning around soft, mint-gold centers, while the surfaces exhibit the thick, frosty luster that is characteristic of the Elgin halves. The faces of the reverse figures are slightly soft, as is normal, though the strike is otherwise sharp. No surface abrasions are observed. Census: 9 in 68 (7 in 68 ★), 0 finer (11/14). NGC ID# 28KA, PCGS# 9303

### 1922 Grant With Star, MS67 Key Commemorative Half Issue

**4445** 1922 Grant With Star MS67 PCGS Secure. CAC. Ex: Heller. This Superb Gem Grant With Star half dollar is among five such submissions at PCGS, and there are none finer. Given the popularity of the classic 1892-1954 commemorative silver series of U.S. coins and the Grant With Star's longstanding status as one of the keys to the complete set, this is a piece that should see some mighty spirited bidding when it crosses the auction block.

The 1922 Grant With Star was created as a stockkeeping unit, a marketing ploy, although such terms may not have existed when the variety was created. In short, the reason the issue was created was "to sell more coins."

Abrasions are simply a nonissue on this coin, as even a loupe reveals only some interesting die-polishing lines in the fields, as made, that increase the mint luster. The strike is sometimes weak on the hair of General Grant — again a nonissue here, with a wealth of detail in that area. Excellent luster and light patina ranging from glints of gold to pinkish-blue round out what is among the finest survivors available. Population: 5 in 67, 0 finer (9/14).

*From The Empire Collection. NGC ID# 28KC, PCGS# 9307*

### 1928 Hawaiian Half Dollar, MS66+ Delicate Iridescent Toning

**4446** 1928 Hawaiian MS66+ PCGS. CAC. The 150th anniversary of British explorer and navigator Captain James Cook's arrival on the Hawaiian Islands was commemorated by the issuance of the Hawaiian Sesquicentennial half dollar. Congress authorized the production of 10,000 coins, all of which were quickly sold at a then incredible price of two dollars each. Partly due to its low mintage, the lowest of any silver commemorative type up to that point, the Hawaiian half dollar is considered one of the key issues in the classic commemorative series, and is difficult to find above the Gem grade level. This high-end Premium Gem example displays sharp design definition and satiny luster. The peripheries exhibit the deep olive-gold toning that seems characteristic of this issue, fading to pale iridescence in the centers. Only two coins are numerically finer at PCGS (11/14). NGC ID# 28KE, PCGS# 9309

## 1928 Hawaiian Half Dollar, MS66+ Attractive Multihued Patina

**4447 1928 Hawaiian MS66+ PCGS. CAC.** The Hawaii Sesquicentennial half dollar, struck to commemorate the 150th anniversary of Captain James Cook's landing on the Hawaiian Islands in 1778, is regarded as one of the most challenging issues in the classic commemorative series. Only 10,000 pieces were distributed, many of which ended up in the hands of non-collectors and suffered improper storage and handling. Premium Gem examples are decidedly scarce, and finer pieces are prohibitively rare. This Plus-designated example is well-struck, with just a few faint surface grazes limiting the technical grade. Unlike many examples of this issue that show pale greenish toning, this representative displays deeply blended rainbow hues around the peripheries, with pale lavender-blue color in the centers. An eye-appealing example of this popular issue. Population: 97 in 66 (10 in 66+), 2 finer (12/14). NGC ID# 28KE, PCGS# 9309

## 1928 Hawaiian Half, Brightly Lustrous MS67

**4448 1928 Hawaiian MS67 NGC.** This is one of only four Superb Gem examples of the 1928 Hawaiian half known to NGC, only one of which was awarded the Star designation (9/14). Between the low original mintage and the high proportion of the issue which was parceled out to non-numismatists, it is a wonder that an MS67 survivor of this issue exists at all. Yet this immensely lustrous example, smooth silver under a prominent blush of peach and orange patina, can scarcely be called anything else. It is one of the most eye-appealing lightly toned Hawaiians the collector will ever encounter.

*Ex: Long Beach Signature (Heritage, 2/2011), lot 4081.*

*From The Empire Collection. NGC ID# 28KE, PCGS# 9309*

### 1920 Maine Half Dollar, MS68 Sole Finest Graded, Registry Set Essential

**4449** 1920 Maine MS68 NGC. While this design by Anthony de Francisci — better-known as the designer of the Peace dollar — is one of his lesser works (Cornelius Vermeule in particular had some scathing words for the Maine commemorative), collectors respect it as part of the series. This coin is of particular interest, as it is the *single finest* representative in the combined certified population and an NGC Registry Set collector essential as such (9/14). Remarkably smooth surfaces glow beneath a light layer of patina that shifts from pale silver-gray to bolder greenish-gold, with a few hints of crimson-tan away from the well-defined devices.

*From The Empire Collection.* NGC ID# 28KN, PCGS# 9326

## 1925 Norse American Medal, MS64 Uniface Obverse Die Trial in Brass Possibly Unique Variant Without 'THE'

**4450** 1925 Norse Medal, Uniface Die Trial, Brass, Oversize Planchet, MS64 NGC. The 1925 Norse American Centennial medal was struck to commemorate the 100th anniversary of the arrival of the sloop *Restaurationen* in Orleans county, New York, on October 9, 1825. Although individual Norwegians and their families had been living in this country since colonial times, this was the first organized immigration of a large group of Norwegians to the United States. Although it is properly considered a medal, it is often collected with the commemorative series, as well.

This piece is an extremely rare uniface die trial of the reverse design for the 1925 Norse medal, struck on an oversized round brass planchet. The design was conceived by famous sculptor James Earle Fraser, who is best known as the designer of the Buffalo nickel. This reverse design features a Viking ship, with the legend AUTHORIZED BY CONGRESS OF THE UNITED STATES OF AMERICA above, and A.D. 1000 below. The signature "OPUS FRASER" (work of Fraser) is seen in the left reverse field, near the stern of the ship.

An example of the obverse and reverse brass die trials for this design accompanied an April 14, 1925-dated letter from Acting Mint Director M.M. O'Reilly to the Honorable Charles Moore, Chairman of the Commission of Fine Arts. The die trials were received and the design approved by the Commission the following day, with one minor change suggested. The original reverse legend included the word "THE" in front of CONGRESS. It was felt that this was an unnatural expression, and another die was prepared without the offending word, and the piece offered here is the trial subsequently struck from that die. There are thus three brass uniface die trials known for this issue, one obverse and two reverse trials (one with, and one without, the word THE). This coin comes from the outstanding collection of Anthony Swiatek.

This piece offers sharply detailed design elements and original red surfaces that have mellowed to light brown and lilac in some areas. No large or distracting contact marks are evident and the overall presentation is most attractive. This extremely rare issue will appeal strongly to collectors of patterns, medals, and commemorative coinage alike. PCGS# 99450

### 1926 America Sesquicentennial Half Borderline Superb Gem The Finest Certified Example

**4451** 1926 Sesquicentennial MS66+ ★ NGC. CAC. Neither PCGS nor NGC has seen a finer Sesquicentennial of American Independence half dollar, a fact that is almost as surprising as the original mintage, with more than 1 million pieces struck. Distribution was impressive in terms of the total number of pieces sold, yet more than 85% of the mintage was melted as unsold for a net distribution of 141,120 pieces.

Few Sesquicentennial halves were produced with the exceptional eye appeal of this coin. Fewer still possess the technical qualities of bold strike and unmarked surfaces, with full lines on the Liberty Bell and relatively smooth portraits of Washington and Coolidge. Attractive iridescence blankets both sides in pastel hues of pink, lilac, tangerine, and gold. This is the only example to earn the dual NGC Plus and Star designations, plus CAC endorsement. Census: 19 in 66 (6 in 66 ★, 1 in 66+★), 0 finer (12/14). NGC ID# 28LM, PCGS# 9374

### 1936 Wisconsin Half, Splendid MS68+ None Graded Finer

**4452** 1936 Wisconsin MS68+ PCGS. CAC. While the Wisconsin half dollar is available for a price in Premium Gem and even Superb Gem levels, the known population falls off a cliff upon reaching MS68. This is a richly toned and gorgeous representative of the conditionally rare issue, well-defined with strong luster through rich gold, peach, and green shadings. The only obverse flaws visible to the unaided eye are a set of three tiny marks in a line. PCGS Registry Set collectors take note: This is one of just four MS68+ examples certified by PCGS, with none numerically finer known to either service (9/14).

*Ex: Long Beach Signature (Heritage, 2/2011), lot 4135.*

*From The Empire Collection. NGC ID# 28N6, PCGS# 9447*

## COMMEMORATIVE GOLD

**1905 Lewis and Clark Gold Dollar, MS66  
Spectacular Color and Luster**

**4453** 1905 Lewis and Clark MS66 PCGS. CAC. The 1905 Lewis and Clark gold dollar is widely recognized as the key to the gold commemorative series, and it is significantly scarcer than its 1904 counterpart. Only on rare occasions do we have the opportunity to offer for sale an MS66 example of this important coin. This particular coin has exceptionally attractive mint luster. The colorations it exhibits are also noteworthy, particularly the subtle lilac and orange-gold patina on the reverse that deepens significantly on the lower portion of that side. Exceptional quality and definitely worthy of consideration for the one of the finest sets of commemorative gold coins being assembled today. Population: 73 in 66, 3 finer (11/14).

*Ex: Central States Signature (Heritage, 5/2004), lot 11262.*

*From The A. James Evans Collection, Part II. NGC ID# 26HD, PCGS# 7448*

## 1905 Lewis and Clark Dollar Spectacular MS67 Example of This Key Issue

**4454 1905 Lewis and Clark MS67 NGC.** Though the Philadelphia Mint struck 35,000 1905-dated Lewis and Clark dollars in addition to assay pieces, that figure has little connection to the issue's availability today, and even the commonly accepted net mintage of 10,000 pieces may be something of an illusion. The 25,000-coin gap was the result of the Philadelphia Mint striking more pieces than were in Farran Zerbe's original order for the issue, in anticipation of future requests. None were made, and so the pieces were melted again, having never left the Mint. Numerous commemorative specialists have noted that the 1905 Lewis and Clark coins are scarcer than their 1904 counterparts, and some authorities speculate that Farran Zerbe did not sell the entire group of 10,000 1905-dated examples, but later spent them at face value or redeemed them unofficially, removing them from the pool of survivors.

The Lewis and Clark dollars are well-known for their overall elusiveness, and as grades increase, the challenge associated with the pieces only grows. In *A Guide Book of United States Commemorative Coins*, Q. David Bowers writes " ... among commemorative gold [dollars], the Lewis and Clark issues of 1904 and 1905 are singularly distinctive for their rarity in higher grades. They are far rarer than any other commemorative gold dollar varieties." An overview of the combined certified population supports this; NGC has given just three other pieces a numerical grade of MS67, and PCGS has also certified just four such coins, with none finer at either service (10/14).

This brightly lustrous lemon-gold example displays an unusually strong cartwheel effect for a commemorative gold coin, though it also shows degrees of the mirrored finish seen on many high-end representatives. The strike is uncommonly bold, and the surfaces are beautifully preserved. An impressive candidate for the commemorative collector who demands only the finest.

Ex: ANA Signature (Heritage, 7-8/2008), lot 2143.

From The Empire Collection. NGC ID# 26HD, PCGS# 7448

### 1915-S Panama-Pacific Round Fifty Dollar Attractive Unc Details Example

**4455 1915-S Panama-Pacific 50 Dollar Round — Altered Surfaces — Genuine PCGS. Unc Details.** The Panama-Pacific International Exposition, held in San Francisco in 1915 to celebrate both the completion of the Panama Canal and the city's recovery from the earthquake of 1906, was intended to dwarf all previous world fairs, even the prestigious Centennial Exhibition of 1876. The bustling Exposition was constructed on a 635-acre plot in Golden Gate Park, and had the overall appearance of a miniature city. The internal buildings and structures were erected with temporary materials, primarily staff (a combination of plaster and burlap fiber), but the architectural appeal was nonetheless majestic. Numerous artists and sculptors were invited to showcase their works throughout the grounds, further heightening the event's visual excellence. Among the sculptors involved were Adolph A. Weinman, future designer of the Mercury dime, and Buffalo nickel designer James Earle Fraser, who exhibited his famous *The End of the Trail* statue.

Costing about \$50 million, the Exposition was a grand success in all respects, drawing some 19 million visitors between February 20th and December 4th, 1915. This achievement was not without advertisement, as many posters, postcards, and special stamps were issued in the months leading up to the event. Most memorable to numismatists, though, are the five commemorative coins that were issued in conjunction with the Exposition. Two of these coins are the largest and most prestigious gold pieces ever struck at the U.S. Mint: the octagonal and round fifty dollar gold pieces. These were distributed in extremely limited numbers (645 and 483 pieces, respectively), and are highly prized today.

This is an attractive Round fifty, much finer than its net grade would indicate. The surfaces are smooth and lustrous with even, light reddish-gold color throughout. Smoothing in the center of the obverse accounts for the Altered Surfaces designation.

The Panama-Pacific International was not the final large-scale exposition held in America, as Chicago hosted the Century of Progress Exposition in 1933 and the New York World's Fair was later held in 1939, but it was the final exposition for which the U.S. Mint produced special commemorative coins. That fact, along with the coins' scarcity, puts the Panama-Pacific fifty dollar gold pieces among the most highly sought-after of all U.S. commemorative issues.

## 1915-S Panama-Pacific Round Fifty Dollar, MS63 One of the Premier Designs by Robert Aitken

**4456 1915-S Panama-Pacific 50 Dollar Round MS63 PCGS.**  
Quick numismatic quiz:

**Q.** What other commemorative coin issue, besides the Panama-Pacific International Exposition octagonal and round fifty dollar designs, features sculptor Robert I. Aitken's interpretation of the goddess Minerva?

**A.** The 1935-S and 1936-D California-Pacific International Exposition silver commemorative half dollars — better known as the San Diego halves today — offer Aitken's design of Minerva on one side, taken from the State Seal of California.

In between the two designs, Aitken also sculpted the beautiful Missouri Centennial half dollar design. Art critic Cornelius Vermeule (*Numismatic Art in America*) likens the obverse portrait on the Missouri half dollar to a "Medici prince" and the reverse design to "Renaissance condottieri in a large fresco of court ceremonials."

Note that the two designs of Minerva (Athena) are markedly different, yet Aitken uses some of the same devices in each. The gold Pan-Pac fifties show the portrait of the goddess facing left, sporting a heavy, stylized helmet; the silver half dollars show a full-length Minerva seated, clutching a raised spear and lowered shield. Both designs, however, use heavy, raised circular inner borders that serve to uphold the lettering flush with the surface of the coin, while simultaneously delineating deeper levels for three-dimensional modeling of the central figures.

The popularity of the massive 1915-S Panama-Pacific fifty dollar gold pieces is undeniable, for their rarity as well as their artistry. Discriminating collectors who appreciate Aitken's coinage art, however, might consider assembling a four-coin commemorative set containing not only the two Pan-Pac fifty gold pieces, but also the Missouri and San Diego silver issues. This Pan-Pac Round will get such a collection off to a good start. The surfaces are rich orange-gold and a loupe will be required to locate the few tiny contact marks that are present. NGC ID# 26HM, PCGS# 7451

## 1915-S Panama-Pacific Fifty, MS62 Popular Octagonal Gold Issue Only 645 Pieces Distributed

**4457 1915-S Panama-Pacific 50 Dollar Octagonal MS62 PCGS.** In 1911, President William Howard Taft selected San Francisco, which had recovered remarkably from the devastating earthquake of 1906, to be the site of the 1915 Panama-Pacific International Exposition (PPIE), celebrating the opening of the Panama Canal and the 400th anniversary of the discovery of the Pacific Ocean. Representative Julius Kahn of California introduced a bill in Congress on June 3, 1914 advocating the issuance of commemorative coins for the PPIE, as had been done for the 1893 World's Columbian Exposition in Chicago and the 1904 Louisiana Purchase Exposition in St. Louis. Congress passed the legislation on January 13, 1915 and authorized the production of 25,000 gold dollars, 10,000 quarter eagles, 3,000 quintuple eagles (equally divided between round and octagonal format), and 200,000 gold dollars. President Woodrow Wilson signed the bill into law three days later on January 16.

Artist Robert Aitken was selected to design the fifty dollar gold coins, modeled after the famous California 'slugs' of the early 1850s produced by Augustus Humbert of the U.S. Assay Office and the 1877 half union patterns. In a letter to interim Mint Director Frederick P. Dewey dated January 15, 1915, as cited in Roger Burdette's *Renaissance of American Coinage 1909-1915*, Aitken wrote of his design:

"...as the exposition stands for all that wisdom and industry have produced, I have used as the central motif of the obverse, the head of the virgin goddess Minerva. She is the goddess of wisdom, of skill, of contemplation, of spinning and of weaving, of horticulture and agriculture. Moreover, she figures prominently upon the seal of California. This head will make a beautiful pattern in the circle and the use of the dolphins on the octagonal coin do much to add to its charm, as well as express the uninterrupted water route made possible by the canal.

"Upon the reverse I use the owl, the bird sacred to Minerva, also the symbol of wisdom, perched upon a branch of western pine, behind which is seen the web of the spider, suggesting Industry.

"With these symbols, as full of beauty in themselves, I feel that I have expressed the larger meaning of the exposition, its appeal and intellect."

Farran Zerbe, a prominent dealer at the time, was sanctioned with the coins' distribution. However, only 645 examples of the 1,509 octagonal fifty dollar gold coins minted in 1915 were sold. The remaining 864 pieces were melted. The issue's high face value was unaffordable for most visitors, and the widespread sale of imitation slugs and medals as souvenirs during the exposition made many potential buyers suspicious of the quintuple eagles' legitimacy. The low distribution total makes the 1915-S Octagonal Pan-Pac fifty a scarce issue in today's market, although most of the examples issued are still extant.

This attractive MS62 specimen offers vivid orange-gold surfaces, with lemon-yellow highlights and vibrant mint luster throughout. The design elements are well-detailed and the surfaces show the minimum number of minor contact marks for the grade. Eye appeal is outstanding for this marvelous commemorative gold issue. NGC ID# 26HN, PCGS# 7452

## 1915-S Panama-Pacific Fifty Dollar Octagonal, MS67 Unsurpassed Surface Quality

**4458 1915-S Panama-Pacific 50 Dollar Octagonal MS67 NGC.** The Panama-Pacific fifty dollar octagonal gold commemorative piques several collecting interests. It is one of just eight classic gold commemoratives produced from 1903 to 1926. It reprises the gold pieces first produced by Augustus Humbert in 1851 as United States Assayer of Gold in California, thus recalling the heritage of private and Territorial gold issues. It is a large coin, having the approximate size of four quarters arranged in a 2x2 grid, and a weight of about 15 of those quarters. Every auction appearance of the Pan-Pac octagonal commands interest, and the commemorative has been popular since it was released during the Panama-Pacific International Exposition in 1915.

Shortly after the United States started work on the Panama Canal in 1904, Reuben Hale and other members of the San Francisco Merchant's Association proposed an exposition. Not only would the event celebrate San Francisco's status as the major West Coast port for canal traffic, but it would also mark the 400th anniversary of Vasco Núñez de Balboa's discovery of the Pacific Ocean. The disastrous 1906 earthquake put a hold on those plans, but only temporarily. Roger W. Burdette (2007) elaborates: "The rebuilding of San Francisco seemed to stimulate fundraising for the exposition and some individual pledges exceeded \$250,000 ... the exposition was seen by San Francisco businesses as a unique opportunity to '... draw the attention of the world to San Francisco' and promote it as a 'playground of America for tourists.' "

That last sentiment proved prescient, as people came from all over the United States to view the magnificent displays. The crowds included politicians and celebrities such as Woodrow Wilson, Theodore Roosevelt, Eddie Rickenbacker, Thomas Edison, and Helen Keller. The Liberty Bell was there, shipped from Independence Hall in Philadelphia. The Ford Motor Company set up an assembly line in the Palace of Transportation, producing a car every 10 minutes for a few hours each afternoon. The promoters of the exposition did not hide their enthusiasm, stating in the exposition brochure that "the Panama-Pacific Exposition is an encyclopedia of modern achievement. You are afforded an opportunity to make a comparative study of the methods and manners of modern civilization ... such an event will not occur again while you live." Lest the motivation for the event be forgotten, the full-color cover displayed a larger-than-life man pushing apart the earth to make way for the canal.

The authors of the exposition brochure declared that the various architects, artists, and landscape gardeners had built a city that was "straight out of a beautiful dream." For numismatists, there were commemorative coins and a souvenir medal from the U.S. Mint. The coins included a silver half dollar, a gold dollar, a gold quarter eagle, and two types of a "quintuple eagle" or fifty dollar coin, one round and the other octagonal. Both medal and coins were to have been struck by the Mint on-site, but concerns about the legality of minting U.S. coins at a non-official mint location resulted in the moving of coin production to the nearby San Francisco Mint. Legislation limited production of the fifty dollar coins to 3,000 pieces, equally divided between the two styles. Designs for the coins were solicited both internally, from engravers Charles Barber and George Morgan, and from outside through lists of capable artists provided by the Commission of Fine Arts.

Robert Aitken, a New York artist on the commission's list as a possible coin designer, was officially notified on January 21, 1915, that he had been selected to prepare designs for the fifty dollar gold coins. Aitken, who had been persistent in his desire to obtain a design commission for the exposition, was ahead of the game. He had notified Mint Director George Roberts in November that he was willing to "take up this work" immediately, so that the process would not be compromised because of time constraints. Aitken delivered sketches of the obverse and reverse designs to acting Mint Director Frederick P. Dewey (Roberts had resigned November 15, 1914) only two days after receiving his authorization to proceed. After several weeks of negotiation between Aitken and Treasury officials (extensively documented in Burdette's *Renaissance of American Coinage 1909-1915*), Aitken's designs were approved in early March.

The obverse of both fifty dollar coins depicts the Roman goddess Minerva, while the reverse displays an owl, said to be sacred to Minerva and a symbol of wisdom. Some suggest that the motifs alluded to the need for America to be watchful and prepared on the eve of this country's involvement in World War I, already raging in Europe. The basic round and octagonal designs were the same, everything from the outer text ring inward, though reduced in size for the octagonal piece. On both obverse and reverse Aitken placed an unbroken circle of dolphins into the spaces provided by the angled corners of the octagonal design. Dolphins were considered friends and guardians of sailors, and were symbolic of the new connection between the Atlantic and Pacific Oceans provided by the Canal.

The allegorical nature of Aitken's designs received mixed reactions both during design negotiations and after the coins were released. Though some thought the symbolism appropriate, others complained that the designs were nothing more than copies of ancient works. Despite the promotional efforts of the enigmatic and sometimes controversial Farran Zerbe, president of the ANA from 1908 to 1910 and the person in charge of the exposition's coin and medal department, most of the fifty dollar coins went unsold and were melted.

This offering is one of the 645 coins sold either during the exposition or shortly thereafter (though the later sales may have violated the terms of the authorizing legislation). The presentation of this piece is amazing. The surfaces are exceptionally clean, with no toning spots or significant marks, indicating the piece has been carefully treasured and protected for a century. Sharply struck, lustrous surfaces gleam with an orange-tinted, honey-gold patina. Though fifty dollar Pan-Pac octagonals are not uncommon in auction offerings, in this state of preservation the coin is extremely rare. Neither NGC nor PCGS has certified an example finer than MS67, and this sample is one of only four listings at that grade in the *NGC Census Report* (9/14). A rare and beautiful example of a historic issue, this coin is truly a "numismatic sensation" that will be a highlight of the most discriminating collection.

Ex: *FUN Signature* (Heritage, 1/2009), lot 4216.

From *The Empire Collection*. NGC ID# 26HN, PCGS# 7452

### 1922 Grant With Star Dollar, MS68 ★ Sumptuous Eye Appeal

**4459** 1922 Grant With Star MS68 ★ NGC. The sumptuous eye appeal of this condition rarity is paid just dues by the added NGC Star designation, reserved for coins with a top-notch appearance. NGC and PCGS combined show 11 submissions in MS68 (one at PCGS, all the rest at NGC), and none are finer (9/14). Among those coins, this piece is the sole example with the Star designation. A compelling argument could be made for this piece being the finest Grant With Star 1922 gold dollar in existence. The well-defined portrait is as smoothly lustrous as the fields, lemon-gold at the upper obverse and reverse with generally orange-gold surfaces below. The obverse also shows a hint of rose-violet and sea-green near the jaw.

*Ex: Jim O'Neal Collection / Houston Signature (Heritage, 12/2008), lot 1703.*

*From The Empire Collection. NGC ID# 26HH, PCGS# 7459*

### 1926 Sesquicentennial Two and a Half, MS67 One of Three at This Top Grade Level

**4460** 1926 Sesquicentennial MS67 NGC. The 1926 Sesquicentennial quarter eagle was the final commemorative gold issue prior to the modern era of gold commemoratives that began in 1984. Both the Sesquicentennial half dollars and quarter eagles were designed by John R. Sinnock, Mint chief engraver at the time. Today most certified survivors of this issue average no better than MS63. This Superb Gem is one of only three so graded, all at NGC. The devices offer exquisite detail, virtually unheard-of for this often-weak issue. Hints of sparkling frost appear on the uppermost design elements. The surfaces are delightfully lustrous, primarily yellow-gold with occasional hints of peach and straw close to the margins. The preservation is magnificent and the coin appears virtually flawless, even under close inspection. The discerning gold commemorative enthusiast would do well to consider this amazing Superb Gem.

*Ex: Denver Signature (Heritage, 8/2006), lot 5741; Dan McClure Collection / Baltimore ANA Signature (Heritage, 7/2008), lot 2150.*

*From The Empire Collection. NGC ID# 26HL, PCGS# 7466*

## PROOF COMMEMORATIVE GOLD

**1903 Louisiana/Jefferson Proof Gold Dollar  
In Original Signed  
and Sealed Mint Certificate  
56th Out of the First 100 Struck**

**4461** 1903 Louisiana Purchase/Jefferson Gold Dollar Proof, Uncertified, With Original Signed and Wax-Sealed Mint Certificate. Bearing the number 56 in the corner of its certificate, this gold dollar was apparently the 56th of 100 proofs struck. The entire certificate reads:

"This is to Certify, that the accompanying LOUISIANA PURCHASE EXPOSITION GOLD DOLLAR struck at the mint of the United States, Philadelphia, in accordance with an Act of Congress approved June 28th, 1902, [underlined] is one of the first one hundred impressions from the Jefferson dies." (Signed) Rhine R. Freed, Coiner / John M. Landis, Superintendent.

A heavy string holds the coin mounted into the certificate, sealed at the bottom of the string with a red wax seal embossed SUPT. U.S. MINT PHILA., although about half of the wax seal has broken away. The entire ensemble is mounted inside a modern-era Capital plastic screw-mount holder.

A best guess for when these proof coins were issued would be December 1902, when the Mint presumably struck the proofs before beginning to produce around 75,000 examples of the McKinley and Jefferson coins combined.

Proof Jefferson gold dollars survive to the extent of perhaps 80 to 90 coins today, but this is the first we have ever encountered in the original packaging with circa-1902 security features intact. The obverse shows a couple of dark spots in the legend but the reverse is spot-free. We grade this piece PR63. PCGS# 7482

### 1903 Louisiana Purchase/Jefferson Gold Dollar Rare and Impressive Ultra Cameo PR67

**4462 1903 Louisiana Purchase/Jefferson PR67 Ultra Cameo NGC.** Two different gold commemoratives were struck to help offset the cost of the Louisiana Purchase Exposition, which was held in St. Louis to celebrate the 100th anniversary of this monumental event. Although the anniversary actually took place in 1903 — hence the date on each of these pieces — the fair was delayed until the next year because of the enormity of the undertaking. These pieces hold the distinction of being the first gold commemoratives struck by the United States. While both varieties feature a common reverse, one has a bust of Thomas Jefferson, who was president at the time of the Louisiana Purchase, and the other depicts William McKinley, who sanctioned the event.

Attractive yellow-gold patina drapes the surfaces of this carefully preserved specimen. The devices have a splendid frost, which shows outstanding cameo contrast against the deeply mirrored fields. Close inspection with a loupe reveals only a couple of nearly imperceptible handling marks. This dazzling piece has tremendous eye appeal and would suit even the most discerning eye.

Each of the two types had a total distribution of 17,500 pieces and were offered for sale to collectors or attendees of the exposition. The first 100 pieces of each variety were proofs and, rather than being sold, they were given to important individuals and officials. PCGS has certified only 38 proof Jefferson specimens, of which just nine have been certified as Cameo. NGC reports a total of 31 proof Jefferson dollars in all grades, and only 10 have received the coveted Ultra Cameo designation. A mere three examples have been certified in PR67 Ultra Cameo, two of which have received Star designation, and neither grading service reports any finer (9/14).

*Ex: West Palm Beach Signature (Heritage, 6/2008), lot 1697; Long Beach Signature (Heritage, 9/2008), lot 1300.*

*From The Empire Collection. PCGS# 97482*

## 1903 Louisiana/McKinley Proof Gold Dollar In Original Signed and Sealed Mint Certificate 57th Out of the First 100 Struck

**4463** 1903 Louisiana Purchase/McKinley Gold Dollar Proof, Uncertified, With Original Signed and Sealed Mint Certificate. Bearing the number 57 in the corner of its certificate, this gold dollar was apparently the 57th of 100 proofs struck. The entire certificate reads:

"This is to Certify, that the accompanying LOUISIANA PURCHASE EXPOSITION GOLD DOLLAR struck at the mint of the United States, Philadelphia, in accordance with an Act of Congress approved June 28th, 1902, [underlined] is one of the first one hundred impressions from the McKinley dies." (Signed) Rhine R. Freed, Coiner / John M. Landis, Superintendent.

A heavy string holds the coin mounted into the certificate, sealed at the bottom of the string with a red wax seal embossed SUPT. U.S. MINT PHILA., although some small portions of the wax are breaking away. The entire ensemble is mounted inside a modern-era Capital plastic screw-mount holder.

A best guess for when these proof coins were issued would be December 1902, when the Mint presumably struck the proofs before beginning to produce around 75,000 examples of the McKinley and Jefferson coins combined.

Proof McKinley gold dollars survive to the extent of perhaps 80 to 90 coins today, but this is the first we have ever encountered in the original packaging with circa-1902 security features intact. The obverse of this piece is a nice, bold orange-gold with a touch of alloy spotting on the rim at 3 o'clock. The reverse is quite reflective and shows more extensive alloy spotting. We grade this piece PR63. PCGS# 7483

## 1916 McKinley Gold Dollar, PR63 Only Four Known Proofs

**4464 1916 McKinley MS63 NGC. CAC.** Little concrete information survives concerning the proof McKinley gold dollars. It is clear that few exist, probably four or five in all. Walter Breen wrote in his *Proof Encyclopedia* of four examples, including one in the Smithsonian Institution.

However, we offered a PR63 Cameo PCGS example in our Chicago Signature and Platinum Night (Heritage, 8/2011), a piece that brought \$48,875. At that time we published a roster of three specimens, which included none certified by NGC. We repeat the roster below, updated to reflect the most recent appearances including the current NGC coin. It is worth noting PCGS and NGC both recognize the proof issues, with PCGS estimating a survivorship of between five and 8 pieces. We wrote in August 2011:

"Proof examples are extremely rare, with only three confirmed specimens. Walter Breen recorded a proof in the Smithsonian Institution, but Jeff Garrett and Ron Guth report that the Smithsonian coin 'is not a true Proof by today's standards.' "

As far as we can determine, there are four confirmed pieces:

**Choice Proof.** RARCOA (Auction '89, 7/1989), lot 363. Part of a three-piece set that also included a business strike and a nickel trial piece, Judd-1802. This is probably the piece that PCGS has graded PR64 Cameo, and it appears to be the same piece that is illustrated in the Garrett and Guth reference.

**PR64 PCGS.** Superior (10/1990), lot 2283; Superior (5/1994), lot 1745.

**PR63 Cameo PCGS.** Bowers and Merena (1/1996), lot 2320; Stack's (11/2008), lot 5076; Chicago Signature (Heritage, 8/2011), lot 7718.

**PR63 NGC.** Orlando FUN Platinum (Heritage, 1/2012), lot 5140; Philadelphia Signature (Heritage, 8/2012), lot 5471.

### The present specimen.

The present coin is an unquestionable proof, with razor-sharp strike details far sharper than any business strike could possibly show. The surfaces are a medium yellow-gold, incredibly reflective on each side. A few minor contact ticks appear only a loupe. Census: 3 in 63, 3 finer (11/14). PCGS# 7487

## 1925 Norse-American Centennial Gold Medal, PR67 Top-Notch Matte Proof Survivor Only 47 Struck

**4465** 1925 Norse Gold PR67 NGC. CAC. There is no denying that the Norse American silver and gold pieces are medals rather than coins — since they lack any denomination, among other reasons — but, except among a few purists, they are avidly collected alongside the regular series of U.S. gold and silver commemorative coins. However, the medals' lack of status as legal tender (or noncirculating legal tender or NCLT, if you prefer) does mean that many or most of the various numismatic pundits — Breen, Bowers, the *Guide Book* — are mute on the subject of their sources and creation.

Ole Juulson "O.J." Kvale (1869-1929) was born in Decorah, Iowa, and from 1883 to 1894 attended Luther College and Seminary, established in Decorah in 1861 by Norwegian immigrants. He was ordained in 1894 as a Lutheran minister. He obtained a Master of Arts degree from the University of Chicago in 1914, at age 45. Kvale, representing Minnesota's rural Seventh District, ran unsuccessfully as an Independent Republican candidate to the 67th Congress in 1920. He was elected to the House of Representatives in 1922, narrowly defeating Republican Congressman Andrew John Volstead (of Volstead Act fame, which brought about Prohibition beginning in 1920). Kvale was a third-party candidate representing the Farmer-Labor party. His initial election victory was somewhat tainted when the Minnesota Supreme Court ruled that Kvale engaged in an unfair campaign practice when he accused Volstead of being an atheist. Kvale served in the 68th-71st Congresses, winning reelection in 1926. He died unexpectedly in 1929, forcing a special election in which Kvale's son Paul Kvale was chosen to replace him.

O.J. Kvale served as a member of the Coinage, Weights, and Measures Committee, placing him in a position to drive the development of the Norse-American Centennial medals, authorized by Congress in March 1925 and memorializing the 100th anniversary of the first organized arrival of Norse immigrants in the United States. After crossing the Atlantic Ocean on the sloop *Restaurationen*, a group of Scandinavians arrived in Orleans County, New York, on October 9, 1825. Kvale thought it best to petition for a medal instead of a coin because Congress had authorized four commemorative issues earlier in 1925. Besides the thick and thin silver medals, gold and copper-bronze versions were issued, the latter triple silver-plated. The 1-inch gold medals were struck to the extent of a mere 100 pieces, of which 53 were subsequently melted, for a net emission of just 47 gold medals.

The present example is among only a handful of PR67 survivors among the certified populations at NGC and PCGS. NGC has certified three in PR67 with one PR68 finer; the finest at PCGS are four in PR66, including one PR66+ (10/14). The surfaces of this NGC-certified PR67 matte proof example show rich, deep reddish-gold color with the expected fine-grained matte finish, and nary a flaw or blemish is reportable on either side. The CAC green approval sticker further separates this coin from an already meager surviving population. PCGS# 9452

## MODERN ISSUE

### 1988-P Troy Pound Gold Medal, MS67 Space Shuttle in Flight Young Astronauts

**4466** 1988-P Gold Space Shuttle, Young Astronauts MS67 NGC. 76 mm. According to the certificate of authenticity included in this lot, this U.S. Mint medal contains a "minimum 1 Fine Troy Pound of Gold" in an alloy of "90% gold, 6% silver, balance copper." A certificate of edition limit also accompanies the lot and states that the medal is #37 of a maximum 750 pieces. However, according to 1990 Annual Report of the Director of the Mint, the net mintage for this 3-inch, 12-ounce gold medal was only 38 pieces. A number of those may have been melted during the intervening quarter of a century since these pieces were struck. Brian Kachel of Jersey City, New Jersey, then 12 years old, is credited as designer, though the engraving was executed by U.S. Mint sculptor Chester Y. Martin. The design was also issued in 0.845-inch gold format. The present 3-inch caramel-gold medal has a pristine appearance and is fully struck. The sole example certified by either NGC or PCGS (12/14), and the only the second example of this variety offered in a Heritage auction. PCGS# 20510

## MODERN BULLION COIN

### 1995-W Silver Eagle, PR70 Deep Cameo Low-Mintage Key to the Series

**4467** 1995-W Silver Eagle PR70 Deep Cameo PCGS. The proof 1995-W Silver Eagles were struck at the West Point Mint and only offered in 10th Anniversary five-piece proof sets, with a reported mintage of 30,125 pieces, making this issue the key to the series. The 1995-W is listed in the number 4 spot among the *100 Greatest U.S. Modern Coins*.

This magnificent specimen offers technically perfect surfaces and fully struck frosty design elements that contrast profoundly with the deeply mirrored fields to create a dramatic cameo effect when this coin is tilted in the light. Eye appeal is tremendous. Housed in a new holder with a retro-Doily label. Population: 50 in 70 (11/14). NGC ID# 28WZ, PCGS# 9887

## TERRITORIAL GOLD

**(1837-42) C. Bechtler Dollar, MS61  
K-4, N Reversed**

**4468** (1837-42) C. Bechtler Dollar, N Reversed, K-4, R.4, MS61 NGC. A scarce gold dollar variety, produced by Christopher Bechtler during the period from 1837 to 1842. Bechtler operated a coining facility near Rutherfordton, North Carolina beginning in 1831, producing coins in denominations of \$1, \$2.50, and \$5.00, to supply the monetary needs of the specie-starved South and to provide a convenient and safe way for the local miners to transform their dust and ore into manageable coins. Bechtler's gold dollars were the first gold issues of that denomination produced in the United States, preceding the U.S. Mint by some 18 years.

The K-4 variety exhibits ONE on the reverse spelled with an inverted N, and the A's in the peripheral legend are represented by inverted V's, without crossbars. This example is boldly struck on the relief lettering, with semiprooflike fields and medium green-gold coloration. A highly appealing example, struck from mildly rotated dies. Census: 0 in 61, 0 finer (11/14). PCGS# 10055

**1851 Humbert Fifty, K-2, MS62+  
Lettered Edge, No 50, 880 Thous.  
Rarely Seen Finer**

**4469 1851 Humbert Fifty Dollar, Lettered Edge, No 50, 880 Thous. MS62+ NGC. K-2, R.5.** The 1851 Humbert fifty dollar coins were struck under the auspices of the U.S. Assay Office, operating under a contract between the United States government and the firm of Moffat & Company in San Francisco. The firm functioned as a provisional mint, providing a much needed medium of exchange in the currency starved, booming economy of the Gold Rush era. Augustus Humbert was the official U.S. Assayer during this period, and the Assay Office enjoyed a reputation for honesty and reliability that was second to none. The huge octagonal fifty dollar slugs produced from 1851-1853 were extremely useful in settling large business transactions and paying customs duties, etc. because no paper money circulated in California during the Gold Rush time frame. Examples found their way to many Eastern destinations, and were often seen in overseas trade, as well as circulating heavily in the regional economy.

B. Max Mehl described an example of the K-2 variety of the 1851 Humbert fifty in lot 704 of the Charles Cowell Collection (Mehl, 11/1911):

**"Rare Fifty Dollar Gold Piece.** 1851 \$50.00 Defiant eagle to left with head turned to right; supporting a U.S. shield and three arrows in his right talon, and holding olive branch in his left talon, holding in beak a ribbon inscribed LIBERTY; above a scroll on which is inscribed 880 THOUS, below 50 D C. Around UNITED STATES OF AMERICA. The 880 of scroll and the 50 of 50 D are stamped in. On edge, stamped in, AUGUSTUS HUMBERT UNITED STATES ASSAYER OF GOLD CALIFORNIA. Fine to very fine. Very rare."

The reverse of the coin was engine-turned, and the K-2 variety does not show the number 50 on the central reverse. These Lettered Edge fifty dollar coins were extremely difficult to produce because the edge lettering had to be applied in eight separate operations, with the appropriate part of the legend punched into each of the eight sides of the coin. The Lettered Edge fifties were soon replaced by the more practical Reeded Edge design, which was much less labor-intensive to strike. The Lettered Edge coins are seen less frequently than their Reeded Edge counterparts, and a particularly nice MS63 PCGS example of the K-2 variety, with the word HUMBERT punched upside down on the edge, realized \$546,250 when it sold in Heritage Auctions' Boston Signature in August of 2010.

The present coin is a high-end MS62 specimen with lightly marked surfaces that show semiprooflike reflectivity in sheltered areas on the obverse and vibrant mint luster on the reverse. The design elements are well-detailed and the lemon-yellow surfaces show strong highlights of green. Listed on page 384 of the 2015 *Guide Book*. Census: 4 in 62 (1 in 62+), 9 finer (11/14). PCGS# 10196

**1851 Lettered Edge Humbert Fifty  
K-4, VF35  
An Icon of the California Gold Rush**

**4470** 1851 Humbert Fifty Dollar, Lettered Edge, 887 Thous., 50 Reverse, VF35 NGC. K-4, R.5. The first Lettered Edge fifty dollar gold coins produced by Augustus Humbert, from the iconic obverse die designed by Charles Cushing Wright (1796-1854), were flexible in the extreme, capable if need be of adapting to a wide range of finenesses, thicknesses of the resultant struck coins, and even to striking odd values of dollars and cents if need be. In practice, however, the 1851 octagonal Lettered Edge pieces were all struck in the even value of 50 dollars and no cents in two finenesses, 880 and 887, the 887 pieces presumably a smidgen thinner to compensate for the higher purity. This is the K-4 variety, struck with a small 50 on the reverse inside of a 24-pointed star. (Another extremely rare variety, unlisted in Kagin, shows a 12-pointed star with 50 in the center.) As expected from the grade the surfaces show considerable wear and ticks and bumps, but the essential appeal and collectibility of these iconic coins is nonetheless on abundant display. This piece is certified in an NGC "no line fatty" holder, and the variety is listed on page 385 of the 2015 *Guide Book*. PCGS# 10208

### 1851 Humbert Fifty, Lustrous AU55 Reeded Edge, 887 Thous., K-6

**4471** 1851 Humbert Fifty Dollar, Reeded Edge, 887 Thous. AU55 NGC. K-6, R.4. The Moffat & Co. various gold coin issues of the early 1850s, both private and semiofficial in character, are a foremost demonstration of the rapid advance of technology in the face of hurdles to be overcome. On September 9, 1850, California was officially admitted to the Union as the 31st state, despite its not ever having been a territory of the United States. This was directly attributable to the vast California gold discoveries, which even the most vapid Washington politician could see would increase the wealth, standing, and prestige of America among the nations of the world. Very shortly afterward, a New York watchcase maker, Augustus Humbert, was appointed U.S. Assayer of Gold and directed to assay gold and to oversee the production of gold coins and ingots in conjunction with Moffat & Co., a San Francisco enterprise of good repute that had been striking private gold coins and ingots since 1849.

In anticipation of a much-increased business as a contractor for the federal government, the Moffat & Co. firm moved from the corner of Clay and Dupont streets to larger offices on Montgomery Street, between Clay and Commercial.

The first dies that Humbert brought with him to California were “modular” dies that could receive hand-stamped values for dollars and cents, if necessary, as well as a hand-applied fineness. The date 1851 and other legends were relegated to the edges, however, where they also required hand application. A major redesign of the pieces placed reeding on the edges and moved the legends and date to the peripheral obverse. The fifty dollar gold pieces of 1851 were also struck in two different finenesses, 880 and 887.

This Choice AU 887 fineness example represents the R.4 Kagin-6 variety, showing a medium-sized concentric circle on the engine-turned reverse. Copious luster emanates from wheat-gold surfaces that show the usual scattered ticks and rim bumps expected at this grade level. An excellent and appealing example of this historic and iconic Gold Rush issue, listed on page 385 of the 2015 *Guide Book*. PCGS# 10214

### 1852 Humbert Fifty, Unc Details K-11, Iconic California Gold Octagon

**4472** 1852 Humbert Fifty Dollar, Reeded Edge, 887 Thous., NGC Details. Unc. K-11, R.5. Reeded Edge. One of the final fifty dollar issues with the Augustus Humbert nameplate as the United States Assayer of Gold. Struck with a natural alloy of silver at .887 fineness, beneath the .900 mandated standard but adjusted in weight to be of full mint value. Lack of copper and the necessary parting acids to produce .900 coins was a political football and a source of interference by Congress and the Treasury Department to the U.S. Assay Office (even though foreign gold was approved for trade and accepted regardless of fineness). Without reliable sources of lower-denomination coinage, the “monstrous chunks” were necessary for local commerce as well as custom duties and banking transactions. As a result, few fifties have survived in Uncirculated condition.

This example has been cleaned but without serious consequences to its eye appeal or surface quality. It is a bit bright, but hairlines are minimal as a result of the cleaning and some orange highlights remain over the medium gold surfaces. The engine-turned reverse shows only a few pinprick marks and crisp detail. Some original mint luster remains over the lightly marked surfaces. A mint-made planchet flaw at 1 o'clock on the obverse and a raised area at 5 o'clock are the sole rim marks of note. Sharp detail on the eagle and shield remain. Listed on page 385 of the 2015 *Guide Book*.

## 1852/1 Humbert 'Double Eagle,' MS64 Finest Certified

### *Guide Book Plate Coin, Ex: Eliasberg/Riverboat Collections*

**4473 1852/1 Humbert Twenty Dollar MS64 NGC. K-9, R.6.** Ex: Eliasberg. 884 THOUS., as are all of the overdated 1852/1 Humbert twenty dollar coins. The U.S. Assay Office of Gold was established via congressional act in September 1850 under the auspices of Moffat & Co.; Augustus Humbert, who arrived in California in January 1851, was appointed chief assayer. This small issue, amounting to only 7,500 pieces, was reportedly struck all in a single day sometime between March 5 and April 2, 1852, according to both Breen and Kagin. Later 1852-dated (non-overdate) twenty dollar gold pieces would be issued, but bearing the U.S. ASSAY OFFICE OF GOLD imprint rather than AUGUSTUS HUMBERT on the reverse.

These overdated 1852/1 twenty dollar coins and their companion 1852/1 ten dollar gold pieces were struck from dies that had been originally prepared in 1851, in anticipation of U.S. Treasury Secretary Thomas Corwin granting permission for Moffat & Co. and the official U.S. assayer of gold to strike coins in denominations smaller than fifty dollars. That permission was given in December 1851 and then lifted the very next day. An emergency issue of ten dollar gold pieces was struck in early 1852 with the Moffat brand, and in February 1852 the authorization was again given; the 1851 dies were overdated 1852/1, and ten and twenty dollar coins were struck that bore the Humbert-Assay Office identification.

Most examples of the 1852/1 Humbert twenty dollar gold coin, including the present finest known piece certified MS64 NGC, show a die crack joining many of the peripheral letters. This coin shows the crack extending all the way around the obverse periphery, with the sole exception of DOLS. The bright yellow-gold surfaces are quite reflective and prooflike, boldly struck, and simply distraction-free. A loupe reveals die polishing lines evident on each side, which, along with the near-pristine preservation, makes us wonder if this piece would have passed as a special presentation or specimen strike in early Gold Rush California. There is no conclusive evidence one way or the other, but in any case the exceptional surface quality makes this example stand out from the small surviving population. This piece is equally remarkable as the **Guide Book Plate Coin**.

The R.6 rarity rating of these seldom-seen "Humbert double eagle" pieces is possibly understated. Trades of this issue in any grade are infrequent; in fact, except for the Eliasberg coin at hand, we can find no auctions in Mint State for the issue in recent decades, at Heritage or elsewhere. We also handled the second finest known example, an MS61 piece in our April 2014 Riverboat Collection. The certified populations at both NGC and PCGS, particularly in Mint State, seem quite inflated. Listed on page 386 of the 2015 *Guide Book*. Census: 1 in 64 (the present specimen), 0 finer (9/14).

*Ex: Louis E. Eliasberg, Sr.; Eliasberg Collection (Bowers and Merena, 5/1996), lot 345, where it was conservatively graded as "MS-60, prooflike, one of the finest known" (raw), realizing \$31,900; Riverboat Collection Signature (Heritage, 4/2014), where it brought \$211,500.*

*From The Empire Collection. PCGS# 10193*

### 1852 U.S. Assay Office of Gold Fifty, XF40 K-14, Emergency Issue Delivered in 1853

**4474** 1852 Assay Office Fifty Dollar, 900 Thous. XF40 NGC. **K-14, High R.5.** The arrival of new machinery enabled the U.S. Assay Office to produce ten and twenty dollar gold pieces in large quantities under the direction of Curtis, Perry, and Ward, and foreshadowed the demise of the cumbersome fifty dollar octagons in everyday commerce. However, the oft-maligned fifty dollar "slugs" were still preferred for some customs payments and bank-to-bank transactions.

"Emergency" deliveries of 13,800 fifty dollar pieces were made in January, 1853 and another 10,000 pieces in February, 1853 of the 1852-dated coins. Struck with the mandated .900 fineness, these coins were the last of their type. This example shows the "ribbon folding out" design and sharp rims. Numerous marks from transport and handling are small and expected for the assigned XF grade, but do not interfere with the coin's original appeal. Orange accents and slight luster remain over the attractive, medium-gold surfaces. Listed on page 387 in the 2015 *Guide Book*. Census: 4 in 40, 50 finer (12/14). PCGS# 10019

## 1852 Assay Office Fifty 900 Thous., K-14, AU55 Last of the Iconic Octagonal Gold Rush 'Slugs'

**4475** 1852 Assay Office Fifty Dollar, 900 Thous. AU55 NGC. **K-14, High R.5.** The 1852 Assay Office fifty dollar gold pieces bearing the 900 thousandths fineness stamp were actually struck in 1853, the last variety of the denomination struck in California before the San Francisco Mint opened in 1854, and in fits and starts slowly began producing sufficient gold for the coin-starved, thriving California economy.

Earlier variants of the iconic fifty dollar "slugs" or "ingots" or "quintuple eagles" struck in 1851 and 1852 had included 887 thousandths and 880 thousandths, some with lettered edges and some with reeded edges, some bearing a legend beginning AUGUSTUS HUMBERT and some beginning UNITED STATES ASSAY OFFICE OF GOLD, and there were other minor variations as well.

All of these fifty dollar gold coinage types were struck by Moffat & Co. with Augustus Humbert functioning as U.S. assayer, or by its successor entity, the United States Assay Office of Gold with Humbert as assayer under partners Curtis, Perry, and Ward. The Assay Office also struck ten and twenty dollar gold coins in 1853 of 884 thousandths fineness.

All of these lower-fineness (but correspondingly heavier) gold coins were made irrelevant when the U.S. Congress passed a law on August 31, 1852, prohibiting the acceptance at Customs offices of gold coinage in any fineness except 900 thousandths, the federal standard. The politicians in Washington, blithely ignorant of the needs and wants of commerce in faraway California, feared that the use of semiofficial (but nominally substandard) gold coinage in international trade might damage the reputation of the United States.

The *National Intelligencer* newspaper, published in Washington, D.C., commented on September 14, 1852: "Perhaps a more unnecessarily severe and wanton injury has never been committed upon an entire community by the National Legislature, than this enactment, comprised in two lines, has inflicted upon the people of California." It required an emergency issue of 23,800 examples of 900 fine fifty dollar gold pieces, using the 1852-dated dies but, as mentioned, struck in early 1853. Those were the last fifty dollar octagonal coins struck under the Humbert/Moffat/U.S. Assay offices auspices, and they are among the rarest types, given their small production. Smaller-denomination gold coins of the required purity now filled the void, making the cumbersome, larger coins a pesky and unwieldy nuisance. Many were undoubtedly melted to provide the San Francisco Mint with bullion for official coinage in the following year.

The surfaces of this lightly circulated Choice AU coin are quite attractive, showing minimal contact marks and a great wealth of detail remaining on the wheat-gold surfaces. Finding a nicer example will require a long, difficult, and expensive hunt. Listed on page 387 of the 2015 *Guide Book*. Census: 9 in 55, 27 finer (10/14). PCGS# 10019

**1852 Assay Office Ten Dollar, AU55  
K-12a, Faint Beads, Late Die State**

**4476** 1852 Assay Office Ten Dollar AU55 PCGS. K-12a, R.4. Bright luster illuminates the obverse legends and eagle. The reverse has nearly full mint luster. The honey-gold surfaces are only lightly abraded, and the eagle is splendidly detailed, with minor wear confined to the leg feathers and fletchings. The late die state with faint beads or dentils across much of the reverse rim. An impressive example of this scarce variety, struck shortly after the exit of founder John Little Moffat from the firm managing the U.S. Assay Office. Certified in an old green label holder. Listed on page 386 of the 2015 *Guide Book*. PCGS# 10001

## 1852 U.S. Assay Office Ten Dollar, MS63 K-12a, Lustrous Surfaces

**4477** 1852 Assay Office Ten Dollar MS63 NGC. CAC. K-12a, R.4. Ex: Newman. The United States Assay office of Gold continued the government contract to strike gold coinage in California after its predecessor firm of Moffat & Co. was dissolved on February 14, 1852. The company continued to issue coins in ten, twenty, and fifty dollar denominations, in either .884 or .887 fineness. This coinage adequately met the needs of the local economy until late summer of 1852, when a federal law was passed that required the customs collector to refuse any coin of less than .900 fineness in payment of customs duties.

The ten dollar pieces were issued in several varieties, with this coin representing the scarce K-12a variety, identified by the position of the O in OFFICE directly below the N in UNITED, and strong beads around the reverse border. Most of the K-12a coins were promptly turned in for reminting into coins of higher fineness that would satisfy the requirements of the new legislation. As a result, the K-12a is scarce in today's market, but some high-quality examples have survived, possibly because the issue only circulated readily for a short time.

An early auction appearance of the Assay Office ten dollar piece was in lot 213 of the Bruce Cartwright Collection (Sotheby, Wilkinson and Hodge, 6/1907):

*"Ten-Dollar Piece, 1852, Eagle with shield and ribbon inscribed LIBERTY, upon a rock, 884 THOUS on a ribbon above; R in an oblong compartment UNITED STATES ASSAY OFFICE OF GOLD SAN FRANCISCO CALIFORNIA 1852, very fine."*

Cartwright was a collector who lived in the exotic location of Honolulu, Hawaii. It is interesting to see how far the Assay Office coins traveled in the short time they were in circulation, as examples have turned up in collections as far away as England (see Sotheby's Murdoch Collection of 7/1903).

The present coin is an attractive Select example with sharp definition on all design elements and vibrant mint luster throughout. The pleasing yellow-gold surfaces, with a few hints of peach at the peripheries, show only minor signs of contact. A die crack shows on the obverse from the rim, through the lower part of the letters in TEN, continuing on through the top of the letters in UNIT. A network of spidery cracks is also evident on the left reverse, among the letters in the legend. NGC has certified only this single coin in MS63, with three finer examples in MS64 (8/14).

Ex: Eric P. Newman Numismatic Education Society; Newman Collection Part V (Heritage, 11/2014), lot 3463, where it brought \$49,938. PCGS# 10001

**1853 Assay Office Twenty  
900 Thous., MS63  
Copious Luster and a Bold Strike**

**1853 Assay Office Twenty  
Crisply Struck MS63  
K-18 Variety, 900 Thous.**

**4478** 1853 Assay Office Twenty Dollar, 900 Thous. MS63 NGC. **K-18, R.2.** Although these Assay Office twenties are collected by specialists in the Territorial gold private coinage, they are neither in reality. California became a state in September 1850, and the U.S. Assay Office was a provisional mint of the United States operated by the U.S. Assay Office of Gold, the successor entity to Moffat & Co. The tariff charged for producing double eagles was less than that for eagle or ten dollar coins, explaining the wide availability of the larger denomination and the existence of glorious Mint State coins such as this beaming Select example. The mellow yellow-gold surfaces show copious luster complementing a bold strike and no mentionable distractions. A great-looking example of the issue, listed on page 388 of the 2015 *Guide Book*. PCGS# 10013

**4479** 1853 Assay Office Twenty Dollar, 900 Thous. MS63 PCGS. **K-18, R.2.** The 1853 United States Assay Office twenty dollar pieces were struck off over a period of several months in what was the provisional Mint of the United States, in the year before the "official" San Francisco Mint would take its place, opening in 1854 but still periodically short of the "parting acids" require to separate gold and silver from their alloys and refine gold to the correct purity. The pieces were struck from dies that originally showed the fineness as 880, but they were corrected to 900, creating an "overfineness" issue. The underdigits 880 fade with time, but this lovely, crisply struck, lustrous orange-gold example shows the second 8 boldly under the 0. Radiant cartwheel luster and a lack of singular marks make this a highly collectible example of this issue, which is listed on page 388 of the 2015 *Guide Book*. Population: 30 in 63, 26 finer (12/14). PCGS# 10013

## 1853 Assay Office Twenty, MS65 900 Thous. K-18 Variety

**4480** 1853 Assay Office Twenty Dollar, 900 Thous. MS65 PCGS. **K-18, R.2.** The U.S. Assay Office gold pieces are normally included in the Territorial and private mint gold coinage of the early West, but in reality the pieces are neither Territorial nor private. The U.S. Assay Office was the forerunner of what would in 1854 become the San Francisco Mint, which began producing quarter eagles, half eagles, eagles, and double eagles in that year. When legislation was passed that required all Assay Office coinage to conform to the Mint Act of 1837, the effect was to have the older dies, with a listed fineness of 880 THOUS, repunched with 900 over the 880. All the pieces made by the U.S. Assay Office are of the 900 over 880 variety, but the undertype 880 fades over time. The 900 fine pieces were coined from March 1 to Oct. 30, 1853, with a total production of about 2.5 million pieces. Those dies, perhaps 30 in all, were destroyed in the San Francisco Great Earthquake and Fire of 1906, which ironically left the San Francisco Mint standing amid the rubble of hundreds of other nearby buildings.

This piece shows considerable evidence remaining of the 88. While the 9 shows an unrecognizable jumble at the top left loop, the first 0 shows prominent "horns" atop, from the left and right sides of the underlying 8's top loop, which fail to join at the apex of their respective arcs. Both sides are highly lustrous, with deep golden-orange color and a virtual absence of singular distractions. A tiny dig in the engine-turned pattern above STATES is minor for the issue. This delightful specimen of Territorial gold stands squarely atop the Condition Census of known examples of this available variety. It is one of four pieces graded in Gem condition at PCGS, with one finer; NGC has graded an additional five pieces in MS65, with none finer (10/14). Listed on page 388 of the 2015 *Guide Book*.

### 1853 Moffat & Co. Twenty Dollar, AU55 K-19, Curious Late Moffat Issue

**4481** 1853 Moffat & Co. Twenty Dollar AU55 NGC. CAC. K-19, High R.5. The Moffat twenty dollar gold pieces were produced toward the twilight of the Territorial gold issues of the California Gold Rush, in response to one of the recurring shortages of gold coinage that were so prevalent in the region until the years following 1854, when the San Francisco Mint officially opened for production. Even then, sporadic shortages of "parting acids" used to refine gold to the federal 900 fine standard led to sporadic private issues up through 1855. The last issue from the well-respected Moffat firm, the K-19 double eagle is similar in design to the federal issue that it imitates. The 1853 Moffat twenties are a curious issue, given that the Assay Office tens and twenties dated 1853 were struck by the same firm. Why was this issue struck? This lovely Choice AU piece is well-struck and essentially problem-free. Light reddish patina surrounds the devices on both sides, increasing the appeal. Listed on page 388 of the 2015 *Guide Book*.

From The Empire Collection. PCGS# 10255*

**1850 Dubosq & Co. Ten Dollar Gold Piece, MS60  
Very Rare K-2 Example, Ex: Riverboat Collection  
Second-Finest Certified Example**

**4482 1850 Dubosq & Co. Ten Dollar MS60 NGC. K-2, R.7.** The 1850 Dubosq & Co. ten dollar gold piece is one of the most elusive issues in the Territorial gold series. In his 1909 publication *Official Premium List of United States Private and Territorial Gold Coins*, Edgar Adams noted only two examples were known. As late as 1981, Donald Kagin rated the Dubosq ten dollar gold piece a High R.7 issue, meaning he was aware of 4-6 specimens in all grades. A few more have been discovered since, including one in the *S.S. Central America*, another found by a treasure hunter in Placerville, California, and the present coin. This piece was found by Allen Pankey, of Breckinridge, Colorado in the San Francisco Bay area in 1986 with the aid of a metal detector. Even with the recent finds, only eight coins are extant in all grades, with two examples in institutional collections and the status of one coin unknown since its theft in 1967. This coin was last offered in the Riverboat Collection (Heritage, 4/2014), the most important collection of Territorial gold offered publicly in many years, where it realized a record \$329,000 (2015 *Guide Book* value \$275,000 in VF). Heritage Auctions is privileged to offer this piece again, the second-finest certified example of this rare Pioneer gold issue, in just its third auction appearance.

The firm of Dubosq and Co. was founded by Theodore Dubosq, a Philadelphia jeweler, and his family in 1849. Apparently, the Dubosqs came to California for the express purpose of starting a private mint, as evidenced by the following account of their departure on the ship *Grey Eagle* in the January 18, 1849 edition of the *Philadelphia Evening Bulletin*:

“Mr. Theodore Dubosq, Sr., jeweler, North Second Street, we understand takes out with him the machinery for melting and coining gold, and stamping it with a private mark, so as to establish a currency which will afford the greater convenience and facility for dealing in the raw material.”

The Dubosqs arrived in California on May 18, 1849, but they may not have set up business operations right away, despite the dire need for circulating coinage in the local economy. No 1849-dated coins are known with the Dubosq name, but a few pattern quarter eagles and half eagles in copper exist, so it is possible that gold coins were struck, but none have survived. The only surviving gold coins from Dubosq & Co. are the very rare 1850-dated five and ten dollar pieces. Edgar Adams believed Dubosq engraved the dies for the 1849 patterns himself, but there is much speculation that the 1850-dated coins were struck from dies engraved by James B. Longacre, Chief Engraver at the Philadelphia Mint. The design elements on the 1850 five and ten dollar Dubosq coinage closely resemble the motifs used for regular-issue federal coinage of that time, and a pair of Dubosq patterns were found in Longacre's estate, corroborating this theory. However, the 1849 copper patterns do not look at all like the 1850 gold issues, so it seems unlikely that Longacre engraved the 1849 dies. The case for Longacre engraving the 1850 dies is much stronger, and Donald Kagin accepted it in his *Private Gold Coins and Patterns of the United States*. However, when Kagin's offered the present coin in the 1986 ANA Convention sale, the cataloger thought it more likely that Albert Kuner engraved, or at least reengraved, the obverse.

Whoever engraved the ten dollar dies, they were certainly well-made and durable. They were apparently used to strike all the Dubosq ten dollar coins in 1850 and 1851 (without changing the date), and then sold to Wass, Molitor & Co. for use on that firm's 1852 ten dollar coinage. A careful comparison of the 1850 Dubosq ten dollar obverse, K-2, with that of the 1852 Wass, Molitor ten dollar gold piece, K-3, reveals the following similarities:

1. The placement of the stars and their orientation in relation to the dentils and the bust are an exact match.
2. The placement of the first three numerals of the date also matches.
3. The contours of the hair, coronet, and facial features are identical.
4. Both coins show 210 dentils on the obverse.

It would be virtually impossible to duplicate all these features so closely with the technology the California minters had at their disposal in the early 1850s. Kagin noted the final digit in the date had been drilled out and replaced by a 2, but he theorized that Wass, Molitor & Co. had prepared the die in late 1851 and had not used it that year, making it necessary to alter the date for 1852 coinage. It now seems more likely that it was the 0 in the Dubosq ten dollar die that was drilled out and replaced. Of course, the inscription on the coronet was extensively reworked. Remnants of the U and S of DUBOSQ are barely visible in the area of the first and second periods on the W.M. & Co. inscription. The Wass, Molitor coins have always been known for their weak strike, but the extensive reworking of the die probably accounts for much of the incomplete detail. Kagin noted that the reverse dies for the Dubosq ten dollar coins were also used by Wass, Molitor & Co., but we believe this is the first time the reworking and later use of the obverse has been noted.

Dubosq formed a partnership with a man named Goodwin in 1850, and it is likely that the firm began issuing gold coins at that time. Judging by later reports, their output must have been prodigious during this period. The San Francisco *Alta California* reported that Dubosq & Co. struck \$150,000 face value in gold coins during the first three months of 1851. Either the firm was still using the 1850-dated dies, or the entire mintage from this period was later destroyed, because no 1851-dated coins of any denomination are known today. Seven ten dollar coins and three five dollar pieces were assayed by Augustus Humbert, at the behest of James King of William, on March 21, 1851. The ten dollar pieces were found to contain on average \$9.93 worth of gold and the five dollar coins had an intrinsic value of \$4.96. Dubosq claimed the small difference in face versus intrinsic value was made up by the inclusion of silver alloy in each coin, which Humbert failed to evaluate in his assay.

Even though the results of the assay were much better than those for many other firms, Dubosq & Co. was tarred with the same brush as the other private mints. The exact date when the firm stopped operations is not known, but the discredited coinage, which had circulated widely, was soon turned in for recoinage and the Dubosq coins became extremely elusive at an early date.

The first auction appearance of a Dubosq ten dollar gold piece was not until 1929, in lot 1357 of Thomas Elder's Dr. George Alfred Lawrence Collection:

"1850. \$10. Head of Liberty to left. DUBOSQ & CO. on coronet. 13 stars, date. Rx. Eagle holds arrows and sprig in talons. S. M. V. CALIFORNIA GOLD. Below, TEN D. Edge milled. A few edge nicks. Fine. Exceedingly rare. It is believed none has been offered at auction in forty years, if ever. It is said to have cost its owner several thousands of dollars. Adams # 39. **Perhaps the greatest headliner of this sale. Plate.**"

The lot realized \$3,900, a staggering price at the time, when the average car cost \$425 and the median price for a single family dwelling was \$7,882. PCGS has certified only four examples, the finest in AU50, while NGC has graded just two coins, this specimen in MS60 and another in MS61 (11/14).

The present coin is an attractive Mint State example, with sharply detailed design elements that show full star radials and just a touch of softness on the hair above the ear. The pleasing yellow-gold surfaces retain much of their original mint luster and show a scattering of minor contact marks. A shallow scratch between stars 10 and 11 and some light pinscratches in the left obverse field act as pedigree markers. This coin had been off the market for almost 27 years before its recent appearance in the Riverboat Collection, where it realized \$329,000. It may be decades before a coin with this combination of absolute rarity, great historic interest, and high technical grade becomes available again for public offering. Listed on page 391 of the 2015 *Guide Book*.

#### Roster of 1850 Dubosq & Co. Ten Dollar Gold Pieces

1. **MS61 NGC.** Found in a Placerville, California creekbed in 1985; purchased by Ron Gillio; Long Beach Sale (Pacific Coast Auction Galleries, 6/1987), lot 1814, realized \$55,000.
2. **MS60 NGC.** Discovered in the San Francisco Bay area in May of 1986 by Allan Pankey, of Breckinridge, Colorado, using a metal detector; ANA Convention Auction (Kagin's, 8/1986), lot 5456, bought-in at \$46,200; unknown intermediaries; Riverboat Collection (Heritage, 4/2014), lot 5434, realized \$329,000; **the present coin.**
3. **AU53 estimated grade.** Smith & Son; Stack's; Josiah K. Lilly; Smithsonian Institution.
4. **XF40 PCGS.** A specimen recovered from the wreck of the *S.S. Central America*; Gold Rush Treasures (Christie's-Spink, 12/2000), lot 122.
5. **XF estimated grade.** A specimen in the collection of the Bank of California.
6. **VF20 PCGS.** R.C.W. Brock; University of Pennsylvania; Phillip Ward; Rovensky-Hoffecker Collections (B. Max Mehl, 11/1954), lot 1919; Amon Carter, Sr.; Amon Carter, Jr.; Carter Family Collection (Stack's, 1/1984), lot 1153, realized \$38,500; San Francisco Collector; Long Beach Sale (Pacific Coast Auction Galleries, 6/1987), lot 1815; Charles Kramer; Kramer Collection (Stack's-Superior, 11/1988), lot 935, realized \$23,100; Jascha Heifetz Collection (Superior, 10/1989), lot 5550, realized \$25,850; Father Flanagan's Boys Home Sale (Superior, 5/1990), lot 6012, realized \$19,250.
7. **VF estimated grade.** Discovered in California by B. Max Mehl in 1914; Waldo Newcomer; B. Max Mehl, circa 1931; Charles Williams; Numismatic Gallery Monthly January 1951 FPL; Lamot duPont; Willis duPont; stolen in 1967; possibly recovered; present location unknown.
8. **VG 8 PCGS.** Joel Rettew Winter 1976 FPL; Jack Klausen; ANA Convention Auction (Kagin's, 8/1983), lot 3625, realized \$27,500; Paul S. Mory Collection (Bowers and Merena, 6/2000), lot 1042; offered by Bowers and Merena in the June 11, 2001 issue of *The Coin Collector* at \$49,500; Rarities Sale (Bowers and Merena, 1/2002), lot 849, realized \$29,900.

#### Additional Appearances

- A. A specimen reportedly in the possession of B. Max Mehl in 1923; sold to Virgil Brand for \$1,500.
- B. An example exhibited at the January 2, 1924 meeting of the Chicago Coin Club by Henry Chapman, per the March 1924 issue of *The Numismatist*. Walter Breen believed this was the coin in number 8 above. It might also be the coin in C below.
- C. Dr. George Alfred Lawrence; Lawrence Collection (Thomas Elder, 6/1929), lot 1357, realized \$3,900.
- D. **VF in 1948, possibly XF today.** DeWitt Smith; Virgil Brand in 1908 (Brand Journal number 47372); Brand Estate; Armin Brand; purchased by B.G. Johnson on 3/19/1946 for \$4,500; Jacob Shapiro (a.k.a. J.F. Bell); Hollinbeck Coin Company 1946 FPL number 28 at \$6,000, unsold; Jacob Shapiro; Memorable Collection (Numismatic Gallery, 3/1948), lot 960, realized \$1,950. Possibly the coin in number 3 or 5 above. PCGS# 10179

## 1851 Baldwin Ten Dollar, K-4, AU Sharpness Extremely Rare Second-Series California Issue

**4483 1851 Baldwin Ten Dollar — Improperly Cleaned — NGC Details. AU. K-4, High R.6.** The tale of Baldwin & Co. is a similar story to several of the other private coiners of California gold who struck their coins and/or ingots in 1849-1851. A first wave of private coiners included the Mormons (who were instrumental in the first discoveries of gold at Sutter's Mill as well as its subsequent publication and promotion) and the Pacific Company, but the coins of these companies were discredited early on, opening the door for a second set of coiner-assayers including Baldwin & Co., among the most prominent firms from the second period (1850-1851). The Mormon and Pacific Company issues were grossly underweight in gold content, but their demise took several other firm and their products down with them. Only Moffat & Co. escaped seemingly unscathed from that first wave.

Baldwin & Co. bought the coining operations and machinery of Frederick D. Kohler, who in April 1850 had been named California State Assayer (rare Kohler gold ingots are known today). Baldwin & Co. began striking coins in April or May 1850 and produced prodigious amounts of gold coins in denominations of five, ten, and twenty dollars. The coins were well-received for a short time, filling the vacuum created by the commercial needs for such coins. In March 1851, however, James King of William, a river coiner and newspaperman, published an assay (performed by Augustus Humbert) showing that the three Baldwin coins were underweight by anywhere from 1.8% for the five dollar to 3% for the twenty dollar. The public soon lost all faith in the Baldwin coinage, despite the clear conflict of interest that both James King of William and Augustus Humbert had in discrediting rivals, and despite Baldwin's publication of another assay much more favorable to his coins, performed by state assayer Kohler. By April 17, 1851, Baldwin and his partner had left California on the steamer *Panama*, bound for the "Atlantic states." Merchants who accepted the discredited Baldwin coins at a 20% discount also had much to gain by melting them and recovering the gold.

The 1850 ten dollar coins of Baldwin featured the famous Vaquero design — the five dollar 1850s were federal-style — but the 1851 ten and twenty dollar pieces also showed the familiar Liberty Head motif. The 1851 twenty dollar pieces are great rarities, with perhaps four to six known, while the 1851 Baldwin tens are "merely" very rare. Perhaps a couple dozen survive today. This example shows attractive amber-gold color and a decent amount of detail remaining (always better on the obverse than on the reverse, a design deficiency), but the luster is somewhat drab. This is an extremely collectible example nonetheless, posing an attractive entry point to these exceedingly rare Territorials. Listed on page 391 of the 2015 *Guide Book*.

### 1854 Kellogg Twenty Dollar, K-2, MS62 Rich Reddish Patina, Seldom Seen Finer

**4484** 1854 Kellogg & Co. Twenty Dollar MS62 NGC. K-2, R.4. The arrowheads on the reverse are long, and on the obverse the CO of KELLOGG & CO. is centered underneath two beads of the coronet. According to an October 2006 *Coin World* article by Brian Koller titled "Key differences clarify study of Kellogg \$20 die varieties," research has uncovered two different obverses paired with the Long Arrows reverse, one of them, "Kagin-2a," unlisted in the 1981 Donald Kagin reference. "K-2a" is apparently a great rarity, identified by larger letters in the coronet inscription than on the (merely very scarce) K-2. Kagin notes that high-grade examples of the K-2 owe their existence to discovery of the "Thayer County Hoard" but unfortunately provides no further information. A Google search reveals a Thayer County in Nebraska; Bowers' *American Coin Treasures and Hoards* here reveals nothing relevant.

This example of the K-2 is sharply struck in the centers and displays a rich overlay of reddish patina on each side. There are no singularly mentionable abrasions, and the eye appeal is abundant. The Kellogg & Co. twenty dollar issue is listed on page 395 of the 2015 *Guide Book* and on page 287 of Kagin's 1981 reference. Despite the recovery of a few pieces from a small hoard, the 1854 Kellogg twenties are very scarce overall and rare in Mint State; this MS62 NGC example is one of three at that service, and two are finer there (10/14). PCGS reports two in MS62 and one MS65 finer (could this be a duplicate of the MS66 NGC example?). We offered an MS62 PCGS example of the K-2 in our Chicago Central States Signature (Heritage, 4/2014) as lot 5447, which realized \$70,500. We would be hard-pressed to say which example is finer, but the present NGC example certainly holds its own both technically and aesthetically. A finer-graded piece would be hard to find and might not appear at auction for years; forewarned bidders will be forearmed.

*From The Empire Collection. PCGS# 10222*

## 1850 K-5 Mormon Five, AU55 Important Territorial Issue

**4485** 1850 Mormon Five Dollar AU55 PCGS. CAC. K-5, High R.5. The Mormon people settled in Utah's Great Salt Lake Valley in 1847. They arrived nearly broke, with less than \$200 remaining after purchasing supplies on their journey. They had left their homes and property behind when they journeyed westward.

Less than two years passed before the Mormon people established coinage operations in Utah. A supply of gold came from Mormon soldiers in the Mexican-American War who received their pay in gold, and also from California as returning soldiers stopped at the gold fields. The Mormons remained long enough to gather a small fortune, then left before the drama of the Gold Rush developed.

There are only a few varieties of Mormon gold coins, including 1849 quarter eagles; 1849, 1850, and 1860 half eagles; 1849 ten dollars; and 1849 twenty dollars. The designs are simple, featuring the traditional Mormon symbols of a crowned eye and clasped hands. The coins were substandard, with their gold value below the face value, although that was of little concern to the community who accepted the coins without questioning their value. However, once the coins were transported away from Utah, the valuation was an important consideration, and most of the coins were melted to recover as much gold as possible. The result is a limited supply for today's collectors.

One of those is the present Choice AU example that has a distinct green appearance, suggesting a high silver content. This piece has scattered marks and traces of luster on each side. The 1850 Mormon five has a limited population in higher grades. Population: 12 in 55, 4 finer (10/14). PCGS# 10265

### 1860 Clark, Gruber Ten Dollar, AU55 Kagin-3, Pikes Peak Design

**4486** 1860 Clark, Gruber & Co. Ten Dollar AU55 NGC. K-3, R.5. A late die state of this iconic pioneer gold issue. A bold die crack ventures from 3 o'clock to 4:30 across the right border of the landscape. Lesser cracks are noted through the RK in CLARK, the PIK in PIKES, and the EAK in PEAK. The reverse imitates the Federal ten dollar piece, while the obverse differs through a dramatic volcanic representation of Pikes Peak, designed by an East Coast engraver without access to a drawing of the mountain. The present lemon-gold example is lightly circulated and mildly bright with noticeable mint luster. Marks are inconsequential except for a small rim ding beneath the TE in TEN. Listed on page 398 of the 2015 *Guide Book*. PCGS# 10137

### 1860 Clark, Gruber Ten, K-2, MS60 Fully Lustrous, Greenish-Gold Surfaces

**4487** 1860 Clark, Gruber & Co. Ten Dollar MS60 NGC. K-2, R.4. Not many Territorial gold pieces have their specific city of origin on them, but the Clark, Gruber pieces are among them. The 1860 ten dollar gold pieces show a volcanic-looking triangular mountain with PIKES PEAK GOLD DENVER TEN D, while the reverse periphery reads CLARK GRUBER & CO. 1860. In 1861, the ten dollar pieces were modified to resemble the federal-style eagles of the period, placing PIKES PEAK on the coronet of the Liberty head and CLARK GRUBER & CO. DENVER TEN D. around the reverse periphery, encircling an eagle. This greenish-gold 1860 ten is fully lustrous but shows extensive scattered, mostly small marks that constitute the grade. An appealing example of this first-year Colorado gold issue, listed on page 398 of the 2015 *Guide Book*. PCGS# 10137

## 1861 Clark, Gruber Ten, AU58 Popular Colorado Gold Issue, K-7

**4488** 1861 Clark, Gruber & Co. Ten Dollar AU58 NGC. K-7, R.4. Clark, Gruber & Company was the most prominent of the Colorado Gold Rush banking and assaying companies, with an unparalleled reputation for honesty and integrity. They only operated their private mint for two years, but their output was prodigious. Unlike the 1860 Clark, Gruber ten dollar coins, which featured an artist's conception of Pike's Peak on the obverse, the 1861 issue employed more familiar devices and closely resembled the federal issues of that time period. Most survivors show extensive signs of circulation, and even AU specimens are elusive today.

The coin is accompanied by two letters written in reply to queries from an early owner of this piece, Mr. W.D. Hays, of the Hastings National Bank, Hastings, Michigan. The first, dated 27 June, 1895, is on letterhead from the Philadelphia Mint and is signed by Chief Clerk George R. Snowden. It relates some general information about private mints and confirms that this issue is "somewhat rare." The second letter, dated May 19, 1903, is from the Colorado National Bank, Denver, Colorado, signed by a cashier whose name appears to be Berger. He reports "these coins are quite rare, and we have found a party here who states that in case you want to dispose of it, he would give you \$12.50 for same." A fascinating glimpse into the early history of this coin.

This impressive near-Mint example displays pleasing yellow-gold surfaces that show a few minor contact marks and just a trace of wear on the high points of the design elements. This piece retains traces of original mint luster and the visual appeal is quite strong for a Territorial gold issue. Listed on page 399 of the 2015 *Guide Book*. Census: 28 in 58, 14 finer (12/14). PCGS# 10141

## S.S. CENTRAL AMERICA GOLD BAR

### Justh & Hunter Large Gold Ingot 144.25 Ounces, 886 Fine Exceptionally Attractive S.S. Central America Ingot

**4489 Justh & Hunter Gold Ingot, 144.25 Ounces.** CAGB-313. Mold J&H S.F.-08. For those who may not know, the *E-Sylum* is a weekly online publication. It mostly deals with numismatic literature since it is a web-based offshoot of *The Asylum*, a quarterly printed publication for numismatic bibliophiles. However, there is the occasional nugget of pure numismatic information that is included. The June 2, 2013 issue included the following information about the San Francisco Mint in 1857 and its relationship with private gold refineries in the region.

"In April of 1857, the Branch Mint's policy for receiving all forms of gold including unrefined dust to be coined into double eagles and smaller denominated gold coins was suspended with one notable exception. Refined gold bars of a quality suitable for coinage were accepted.

"This temporary change in policy was apparently the equivalent of winning the lottery for gold refineries like the magnificent Eureka Gold & Silver Refinery and the California Metallurgical Works run by Haraszthy's business associate Charles Uznay and the firm of Justh & Hunter or Justh, Hunter & Uznay. The San Francisco Branch Mint's records revealed that from mid to late April through July 28th, 1857, these firms were the dominant depositors of refined gold bars being received at the Mint for coinage. They were supplying the Mint with parted gold bars ranging from 900 to 993 1/2 fine. Three of their bars that assayed out at only 876, 877 and 886 fine were rejected by the Mint.

"Just prior to the Branch Mint's re-opening, Justh, Hunter & Uznay submitted a 14.01 oz. gold bar that was 998 1/2 fine. Perhaps they were just showing off their refining capabilities."

This passage does much to explain the nature of this ingot by Justh. At 886 fine, it was not sufficiently refined to sell to the San Francisco branch mint. It would, however, be salable in New York. So it was loaded on board the *S.S. Central America* which was bound for the East Coast, but sank along with the ship in the Atlantic in September 1857. If this ingot's fineness had been 900 or higher, it would undoubtedly have been converted into S-mint gold (probably twenties) dated 1854. But the quirk of fate of its lower fineness has preserved this massive brick of gold for 158 years.

This is an unusually attractive and problem-free ingot. No dings or scratches are worthy of mention. Just a perfectly formed block of gold, 97mm x 55mm x 47mm. On the back side there is a small area of discoloration, most likely from the rusted iron from the ship's ribbing. The top side contains all the necessary information: NO. 4244. / [Justh & Hunter logo] / 144.25 OZS. 886 FINE. / \$2641.96.

## CALIFORNIA FRACTIONAL GOLD

**(No Date) Round Quarter, BG-209A, MS63**  
**Ex: Jack Totheroh, Possibly Two Known**

**4490** (No Date) Round Quarter, BG-209A, R.8, MS63 PCGS. Ex: Jack Totheroh Collection. A second example of this variety once thought to be unique. The obverse shows 11 stars, several of them with seven points, a broken bridge of the nose on Liberty, star 2 repunched with a second star lightly punched between it and the rim, and star 7 double-punched and touching the hairbun. The reverse is rotated 90 degrees counterclockwise from coin turn, showing a wreath with 1/4 DOLLAR enclosed. A nicely preserved example of this rarity, largely golden-yellow with some lilac toning on each side. Ex: *Superior* (7/1982); *Robert Lecce, sold privately in 2003 or 2004*; *Jack Totheroh Collection (Holabird-Kagin Americana, 4/2013)*, lot 135. PCGS# 10419

## PATTERNS

### 1838 Half Dollar Pattern Judd-72, PR66 Cameo Tied for Finest at PCGS

**4491** 1838 Half Dollar, Judd-72, Pollock-75, R.5, PR66 Cameo PCGS. CAC. The design shows a large profile bust of Liberty facing left, wearing what may be loosely termed a diadem, although rather than a coronet of jewels, the central ornament appears to be a rising sun with rays. Thirteen stars surround her, seven left and six right, with the date 1838 below. Her lush hair curls also sport a ribbon inscribed LIBERTY. The reverse Standing Eagle motif, showing a stocky body, thick, spread wings, and head facing right, comes from a drawing by Christian Gobrecht, depicted as number 38 in the article "From the Drawingboard of a Coin Engraver" by Elvira Clain-Stefanelli, reprinted in the *ANA Centennial Anthology* as well as in *Gobrecht Dollars Illustrated by the Collection of Julius Korein, M.D.*, by Heritage chief cataloger Mark Van Winkle along with Michael Carboneau, Jim Gray, John Dannreuther, and Saul Teichman. Struck in silver with a reeded edge.

The 1838 Judd-72 half dollar patterns are among the earliest Mint patterns that are somewhat obtainable, since the coins were struck as originals and as restrikes, according to USPatterns.com beginning around 1858 and continuing through the 1860s and 1870s. This Premium Gem proof is tied with three other submissions for the finest at PCGS, a great-looking and immaculate coin with original, unperturbed surfaces. Sunset-orange patina with hints of pale blue enhances each side, more prominently near the rims. A squiggly lint mark appears at the rear corner of Liberty's eye, and a small patch of planchet roughness in the reverse field, below the claw and right of the branch tip, is as made at the Mint. A top-quality early pattern. Population: 4 in 66, 0 finer (10/14).

*From The A. James Evans Collection, Part II.* PCGS# 390800

## 1839 Original Half Dollar, Judd-93, PR66 Finest Certified, Possibly Sole Finest Known

**4492** 1839 Half Dollar Judd-93 Original, Pollock-105, R.7, PR66 PCGS. CAC. The obverse design resembles used on the 1839 gold eagles including the rounded forward bust truncation and pointed rear truncation, but the bust of Liberty faces right rather than left. The reverse employs the regular Small Letters die of the year. Per the authoritative USPatterns.com website, the Judd-93 coins are the only original patterns using this obverse die, of which perhaps seven survive today. (Several of those examples, however, are in institutional holdings.) Struck in silver with a reeded edge. This problem-free piece boasts incredible eye appeal on surfaces that show excellent preservation amid the beautiful medium blue tones around the peripheries with pale lavender centers on each side. This PR66 PCGS piece is possibly the sole finest known and apparently the finest certified. It is the finest at PCGS by two grade points; the finest at NGC is a single PR65 (11/14).

*From The A. James Evans Collection, Part II. PCGS# 11396*

## 1857 Flying Eagle Cent in Copper Judd-187, PR63 Brown

### Only Two or Three Pieces Believed Known

**4493** 1857 Flying Eagle Cent, Judd-187, Pollock-223, R.8, PR63 Brown PCGS. Regular dies trial piece for the Flying Eagle cent. Struck in copper with plain edge. This is a genuinely rare Flying Eagle cent pattern that was struck in copper rather than the normal copper-nickel alloy seen on standard Flying Eagle cents. Only two or three pieces are believed known, according to USPatterns.com, one of which shows extensive signs of circulation. The difference is immediately obvious. This piece was definitely not struck in copper-nickel. The color is deep reddish-brown, suggestive of the color seen on large cents. The USPatterns website states: "These appear to have been struck from business strike dies ..." However, close examination of this piece suggests at least the fields of the dies were polished prior to striking, and it appears the piece may have been struck more than once as all the design elements are crisp — certainly not a given on many 1857 Flying Eagle cents. PCGS# 11818

### 1866 Nickel, Judd-486, PR64 In-Demand Lincoln Head Design

### 1870 Aluminum Seated Half Pattern PR66 Cameo, Judd-994, High R.7

**4494** 1866 Five Cents, Judd-486, Pollock-575, Low R.7, PR64 NGC. A bust of President Abraham Lincoln faces right, with UNITED STATES OF AMERICA at the top of the obverse and the date below. The reverse shows an open olive or laurel wreath with IN GOD WE TRUST in tiny letters at the top and a tall 5 / CENTS in the center ("Tall 5 reverse"). Struck in nickel with a plain edge. USPatterns.com estimates that about more than a half-dozen survive of the nickel pieces, including three in museum holdings. The design was also struck in copper and/or bronze (Judd-487/488), the two metals virtually indistinguishable one from another. These pieces are under intense demand as the only 19th century American patterns featuring the martyred President Lincoln. The present attractive near-Gem proof offers pinkish-gold and dove-gray surfaces that show no mentionable distractions save for a few microscopic dark toning flecks. This is the sole example of the Judd-486 at NGC, although PCGS reports seven submissions — one PR63 and six PR64, with duplications almost a certainty (10/14).

**4495** 1870 Half Dollar, Judd-994, Pollock-1124, High R.7, PR66 Cameo PCGS. CAC. Ex: Denali Collection. From regular issue Seated Liberty half dollar dies, but struck in aluminum with a reeded edge. An extremely rare die trials pattern that may have been produced as part of an aluminum alloy proof set for presentation purposes, or for sale to well-connected collectors. This specimen, crisply struck and remarkably light in the hand, also is carefully preserved with faint glimpses of greenish-gold patina over the pale whiteness of aluminum. Clearly contrasted fields and devices make for excellent all-around eye appeal. One of the most remarkable survivors from this extremely rare issue. PCGS# 800069

*From The A. James Evans Collection, Part II. PCGS# 60682*

## 1870 Indian Princess Dollar in Silver Judd-1015, Deeply Toned PR63

**4496** 1870 Dollar, Judd-1015, Pollock-1149, Low R.7, PR63 PCGS. A deeply toned example of Longacre's majestic Indian Princess design. The obverse shows Liberty seated, left hand resting on a globe and right hand holding a Liberty pole with cap on top. There are two conjoined flags behind her, one ornamented with twenty two stars. The reverse is the regular issue Seated dollar design. Struck in silver with a plain edge. The surfaces are heavily and originally toned a deep gray, with gold and electric-blue highlights. The heavy toning covers a few patches of light hairlines, and also somewhat subdues the underlying luster and reflectivity of the coin. The strike, while somewhat average on the reverse, is strong on the obverse, showing excellent detail. Overall a Select and attractive example of this extremely rare pattern.

*Ex: Palm Beach Signature (Heritage, 11/2004), lot 7321.*

*From The A. James Evans Collection, Part II. PCGS# 61263*

## 1871 Dies Trial Half Dollar in Copper Judd-1117, PR65 Brown

**4497** 1871 Half Dollar, Judd-1117, Pollock-1253, R.7, PR65 Brown NGC. *Ex: Samuel Bergard Collection.* The obverse and reverse designs are the same as those of the regular issue 1871 half dollar. Struck in copper with a reeded edge. The so-called regular dies trial piece. These are believed to have been deliberately struck for sale to collectors as part of complete off-metal sets, as opposed to being true dies trial pieces. Fewer than a half dozen are known. This Gem displays fully struck, smooth, sea-green surfaces, which are entirely free of contact or handling marks. There are only a few tiny traces of carbon. A lovely and very rare pattern piece.

*Ex: Baltimore Signature (Heritage, 7/2003), lot 10029; November Signature (Heritage, 11/2003), lot 11183. PCGS# 61376*

### 1871 Standard Silver Pattern Dollar, PR63 Judd-1120, The Harry Bass Specimen

**4498** 1871 Standard Silver Dollar, Judd-1120, Pollock-1256, **High R.7, PR63** PCGS. CAC. The James Longacre Indian Princess design dominates the central obverse, showing no stars or other peripheral elements. The initials J.B.L. appear at the lower right of Liberty's rock, in the field. The date 1871 appears below the rock. The 1870 Standard Silver reverse features an open agricultural wreath enclosing 1 / DOLLAR, with STANDARD at the top rim. Struck in silver with a reeded edge. These were apparently fashioned by Chief Engraver William Barber, as Longacre died in 1869. The Standard Silver patterns sold in sets to collectors, complete from half dime to silver dollar. USPatterns.com estimates that only three or four pieces are known of this issue. This piece shows surfaces that are mostly brilliant, with a touch of light champagne toning on each side.

*Ex: Gene Henry, private sale to Harry W. Bass, Jr. (4/1972), lot ; Harry W. Bass, Jr.; Bass Collection, Part One (Bowers and Merena, 5/1999), lot 1252; Teletrade iAuction 1383 (12/2000), lot 1596.*

*From The A. James Evans Collection, Part II. PCGS# 61379*

### 1872 Trade Dollar, Judd-1220, PR65 Tied for the Finest Certified

**4499** 1872 Trade Dollar, Judd-1220, Pollock-1362, **High R.7, PR65** NGC. One of the popular Trade dollar patterns, a subset collecting specialty among pattern aficionados. The obverse is William Barber's adaptation of Longacre's Indian Princess design. She faces left, with 13 stars each around and on the flag, a large globe inscribed LIBERTY in raised letters, date 1872 below. The reverse is the first Trade dollar pattern, copying the Commercial dollar designs: a wreath with UNITED STATES OF AMERICA at upper rim, and inside TRADE / DOLLAR / (bar ornament) / 420 GRAINS. 900 FINE / (bar ornament). IN GOD WE TRUST is on the ribbon of the wreath. Struck in silver with a reeded edge. Perhaps a half-dozen are known of this design and metal. This attractive Gem proof boasts strong eye appeal on surfaces that are uniform golden-champagne tone with no mentionable distractions. This appears to be the first offering of a Gem proof at Heritage or elsewhere in many years, certainly since we began our Permanent Auction Archives in 1993. The top populations are one PR65 each at NGC (this coin) and PCGS (10/14).

*Ex: Terrell Collection (Bowers and Ruddy, 5/1973), lot 621; Sieck Collection / ANA Auction (Bowers and Ruddy, 8/1981), lot 314; Rarities Sale (Bowers and Merena, 8/1995), lot 494.*

*From The A. James Evans Collection, Part II. PCGS# 61492*

## 1872 Trade Dollar Pattern in Copper Judd-1221, PR66 Red and Brown Rare Market Appearance

**4500** 1872 Trade Dollar, Judd-1221, Pollock-1363, High R.7, PR66 Red and Brown NGC. CAC. Ex: Newman. The obverse is the William Barber adaptation of Longacre's Indian Princess design. She faces left, with 13 stars each around and on the flag, a large globe inscribed LIBERTY in raised letters, date 1872 below. The reverse is the first Trade dollar pattern, copying the Commercial dollar patterns. A wreath with UNITED STATES OF AMERICA at upper rim, and inside TRADE/DOLLAR/(bar ornament)/420 GRAINS. 900 FINE/(bar ornament). IN GOD WE TRUST is on the ribbon of the wreath. Struck in bronze with a reeded edge.

Less than half a dozen examples of this Trade dollar pattern are known. The actual surviving population may be as low as three or four pieces. Prior to certification of the Newman specimen, NGC and PCGS had each certified a single PR63 Red specimen. The two grading events almost certainly represent a single coin that appeared in a 1994 Bowers and Merena sale as PR63 Red PCGS, and reappeared in a 2003 American Numismatic Rarities sale as PR63 Red NGC.

Lightly mirrored and fully brilliant orange surfaces host delicate blue patina, with 90% of the original mint color remaining. A sharp strike and excellent eye appeal are evident.

Ex: "Colonel" E.H.R. Green; Green Estate; Partnership of Eric P. Newman / B.G. Johnson d.b.a. St. Louis Stamp & Coin Co.; Eric P. Newman @ \$75; Eric P. Newman Numismatic Education Society; Newman Collection Part I (Heritage, 4/2013), lot 3999. PCGS# 71493

### 1875 Twenty Cent, Gorgeous PR66 Cameo Judd-1410 Struck in Nickel

**4501** 1875 Twenty Cents, Judd-1410, Pollock-1553, R.8, PR66 Cameo NGC. The obverse die for this pattern is similar to the regular-issue twenty cent piece of 1875, save that the date appears in slightly smaller numerals and LIBERTY is incused rather than raised. The reverse shows an open wreath encircling 1/5 OF A DOLLAR with the issuing country and denomination around the periphery. Struck in nickel with a plain edge. This is a simply gorgeous example with well-contrasted surfaces showing tinges of the palest yellow-green and pastel pinkish-blue in the centers. Only three examples are confirmed of this rare pattern. The population data appear to contain duplications, but this is likely the sole finest survivor of this issue. PCGS# 535136 Base PCGS# 61717

**1876 'Sailor Head' Dollar  
Struck in Silver, PR62  
Judd-1457 Trade Dollar Pattern  
One of Two Known, R.8**

**4502** 1876 Sailor Head Dollar, Judd-1457, Pollock-1606, R.8, PR62 PCGS. William Barber's Sailor Head design, presented without stars or the motto IN GOD WE TRUST. The obverse design, limited to the date and the profile of Liberty (LIBERTY is on her coronet) with no peripheral legends or devices, presents a certain minimalist appeal. The reverse displays a laurel wreath and three statutory legends: UNITED STATES OF AMERICA, ONE DOLLAR, and E PLURIBUS UNUM. The reverse die is familiar to pattern specialists of this important date, since it was used for Judd-1457 through Judd-1469. This range includes five designs, each of which was struck in three varieties: silver, copper with a reeded edge, and copper with a plain edge. The present Judd-1457 is struck in silver with a reeded edge.

All 1876 silver dollar patterns are extremely rare, yet well-known because of their Sailor Head or Liberty at the Seashore motifs. This brilliant and intricately struck piece displays some moderate cameo contrast. Wispy field hairlines and a hair-thin line above the jaw are appropriate for the grade. This piece is certified in a green-label holder. According to USPatterns.com, only two examples of Judd-1457 are known. The pedigree below is based on that from USPatterns.com (lightly edited). USPatterns.com note that these pieces were struck on Trade dollar planchets and can be considered as Trade dollar pattern coins. Bidders should be ready to obtain this exceedingly rare pattern via their most liberal bids: The only other example known, PR65 NGC, is in the Bob Simpson Collection and liable to reside there for many years to come.

*Ex: William Woodin; H.O. Granberg; Abe Kosoff 1/1968 Fixed Price List; Sotheby's 12/1973, lot 282; Rogers M. Fred, Jr. Collection (Bowers and Merena, 11/1995), lot 2296; Jones Beach Collection / FUN Signature (Heritage, 1/2007), lot 1522.*

*From The A. James Evans Collection, Part II. PCGS# 61777*

### 1876 Copper Five Dollar PR65 Red and Brown

#### Judd-1484, Only Two Believed Known

**4503** 1876 Five Dollar, Judd-1484, Pollock-1637, R.7, PR65 Red and Brown NGC. This copper five dollar pattern is struck from the regular dies for the 1876 half eagle. Judd lists it as a die trial; US-Patterns.com calls it a pattern likely deliberately struck for sale to collectors. This piece is the only example certified in any grade at NGC. PCGS has certified a single PR65 Red and Brown, although we believe that to be the Harry W. Bass, Jr. specimen, and a different example as far as we can ascertain. This may nonetheless be one of only two examples in existence, a conclusion that USPatterns.com supports as well. This is an attractive, sparkling Gem with lots of field-device contrast and plenty of mint orange-red remaining in the fields on both sides, punctuated by dollops of cobalt-blue.

*Ex:* 1976 ANA Sale (Stack's, 8/1976); Paramount (3/1978); Dallas Auction (Heritage, 7/2006), lot 773, where it brought \$12,650; 2009 ANA Sale (Bowers and Merena, 8/2009), lot 4198, where it realized \$38,525; 2010 FUN Sale (Heritage, 1/2010), lot 2376, where it brought \$35,000. PCGS# 71806

### 1877 Pattern One Dollar in Copper PR66 Brown

#### Judd-1542, 'Sailor Head' Design

**4504** 1877 Sailor Head Dollar, Judd-1542, Pollock-1715, R.7, PR66 Brown PCGS. The William Barber Sailor Head design, a modified version of which first appeared on 20 cent patterns of 1875. The obverse shows a bust of Liberty facing left, sporting a coronet reading LIBERTY, the motto IN GOD WE TRUST above and the date 1877 below. Two prominent ribbon ends dangle behind her head. The reverse features the denomination 1 DOLLAR centered within a wreath of corn, wheat, and cotton. UNITED STATES OF AMERICA is around the upper periphery, E PLURIBUS UNUM around the lower. Struck in copper with a reeded edge. Pattern dimes, quarters, and (some) half dollars of 1877 also showed the same design. This is a lovely Premium Gem proof for which the Brown designation is totally inadequate. Beautiful golden, lilac, and pale blue highlights swirl on each side of this problem-free example, the sole Brown example in any grade at PCGS. A PR66 Red and Brown piece, formerly in the Queller and McCoy Family collections, brought \$32,200 in its most recent 2011 appearance with us. We know of seven examples of this pattern surviving.

*Ex:* Abner Kreisberg Mail Bid Sale (11/1972), lot 731; Rogers M. Fred, Jr. Collection (Bowers and Merena, 11/1995), lot 2306, which brought \$9,900; Teletrade (12/31/2001); Teletrade (2/6/2002).

*From The A. James Evans Collection, Part II.* PCGS# 61886

## 1915 No S Panama-Pacific Half Dollar Judd-1962, PR66 Red and Brown Only Three Examples Traced

**4505 1915 No S Panama-Pacific Half Dollar, Judd-1792/1962, Pollock-2030, R.8, PR66 Red and Brown NGC.** An ambitious program of five commemorative coins was authorized for the 1915 Panama-Pacific Exposition, which was held in San Francisco to commemorate the opening of the Panama Canal and to celebrate the resurgence of San Francisco after the great earthquake of 1906. The denominations included both round and octagonal versions of a fifty dollar gold piece, a gold quarter eagle, a gold dollar, and a silver half dollar. The authorizing legislation specified that the coins would be struck at the San Francisco Mint. In the case of the half dollars, there was a special provision that coins could also be produced on machinery set up in an exhibit by the Mint on the fair grounds of the exhibition at Golden Gate Park. The design of the half dollar was conceived by Chief Engraver Charles Barber, with help from Assistant Engraver George Morgan and the coins were distributed by the Panama-Pacific International Exposition, Coin and Medal Department (Farran Zerbe).

Because it was intended to produce all the coins at the San Francisco Mint, Philadelphia Mint Superintendent Adam Joyce believed placing a mintmark on the coins would be superfluous. As a result, the dies for the gold dollar and half dollar, which were prepared first, were shipped to the San Francisco Mint without a mintmark. The dollar dies were sent on 4/22/1915 and the half dollar dies on 4/30/1915. Mint Director Robert Wooley happened to be in San Francisco when the dies for the gold dollar arrived on 4/27/1915. When he was informed about the missing mintmark, he rightly believed it would be a mistake to issue the coins without the S, as:

“... numismatists and the public generally, in the absence of this mark, would conclude that they were struck at Philadelphia; also because the people of the far west, who use gold and silver money to the exclusion of paper, are very proud of this Mint and would be justified in regarding the omission of the mark as an intentional slight.”

Joyce was directed to prepare new dies for the dollar and half dollar coins with the mintmark included, and to ensure the mintmark was in place on the quarter eagle and fifty dollar dies, as well. San Francisco officials were instructed to return the sans-mintmark dies to Philadelphia. Luckily, the half dollar dies were still in the Philadelphia express office when Joyce received the order, and he was able to retrieve them before they were sent on. It was a simple matter to add the mintmark before reshipping them to the San Francisco Mint.

Sometime before the mintmark was added to the dies, they were used to strike the very rare 1915 No S Panama-Pacific half dollars. Experts are divided over the question of whether these coins were legitimately struck as die trials, or if they are all fantasy pieces. Examples are known in gold (Judd-1960), silver (Judd-1961), and copper (Judd-1962). All three Judd varieties have a reeded edge. It would make sense if some copper and silver pieces were struck as die trials, but there is no apparent reason to strike gold trials of an issue meant to be struck in silver. Walter Breen quoted Farran Zerbe as stating the coins “may have been struck as trial pieces at the Philadelphia Mint by the instructions of the Secretary of the Treasury (W.G. MacAdoo) who was a coin collector.” Today, we can account for only three examples of the copper Judd-1962, but a fourth coin was long-rumored. Only two examples of the gold Judd-1960 are extant, and four silver Judd-1961 specimens are currently traced.

Prominent coin dealer and commemorative specialist Anthony Swiatek purchased this coin, and many other commemorative patterns in his collection, from Sol Kaplan at a coin show in Shaker Heights, Ohio in 1971. This delightful Premium Gem exhibits sharply detailed design elements throughout. The impeccably preserved original red surfaces have mellowed to brown in most areas, but vibrant original mint luster shines through the patina. Overall visual appeal is tremendous. This coin possesses an irresistible combination of intense historic interest, absolute rarity, high technical grade, and outstanding eye appeal. Census: 2 in 66 (1 in 66 + ★) Red and Brown, 0 finer (11/14).

### Roster of 1915 No S Panama-Pacific Half Dollars, Judd-1962

- 1. PR66+ ★ Red and Brown NGC.** Possibly Treasury Secretary W.G. McAdoo; unknown intermediaries; Eric P. Newman; Selections From the Eric P. Newman Collection, Part I (Heritage, 4/2013), lot 4048, realized \$199,750.
- 2. PR66 Red and Brown NGC.** Possibly Treasury Secretary W.G. McAdoo; William Woodin; Fred E. Olsen Collection (B. Max Mehl, 11/1944), lot 625, realized \$180; Abe Kosoff and Sol Kaplan; purchased by Anthony Swiatek at a Shaker-Heights Coin Show in 1971; **the present coin.**
- 3. PR65 Red and Brown NGC.** Possibly Treasury Secretary W.G. McAdoo; unknown intermediaries; Abe Kosoff; Saint Louis ANA (New England Rare Coin Auctions, 7/1979), lot 1363, offered with an example of Judd-1960 and Judd-1961 in separate lots, realized \$5,000; Sound Beach Collection (Heritage, 11/2003), lot 11251, offered with the other coins from the 1979 ANA in separate lots, realized \$63,250; Southern collection; Simpson Collection.

### Additional Appearances

**A. PR63 Brown PCGS.** Denver ANA (Heritage, 8/1996), lot 5193, realized \$15,400, possibly the same as number 3 above.

**B. Proof.** A specimen exhibited by F.C.C. Boyd at the June 11, 1943 meeting of the New York Numismatic Club, per the July 1943 issue of *The Numismatist*, Page 559. This citation could represent any of the coins mentioned above. PCGS# 72266

## 1922 Grant With Star Gold Dollar, PR65 Judd-2025 Variant, Bronze Die Trial Only Verified Example

**4506** 1922 Grant With Star Gold Dollar, Judd-2025, Pollock-2066, PR65 NGC. **Unique.** This fascinating piece is a die trial for the 1922 Grant With Star gold dollar, struck from the regular dies on an oversized brass or bronze planchet. The 1922 Grant gold dollar and silver half dollar were struck to commemorate the 100th anniversary of President Ulysses S. Grant's birth. The Ulysses S. Grant Centenary Memorial Association was the sponsoring organization and the design was conceived by famous sculptress Laura Gardin Fraser. Congress authorized the striking of 10,000 gold dollars and 250,000 half dollars. The Grant Centenary Association requested that 5,000 gold dollars be struck with a star added to the basic design, following the lead of the distributors of the Alabama and Missouri half dollars. Inadvertently, 5,000 pieces of the Grant half dollar were also struck with the star added.

Experts are divided over whether this piece represents a legitimate trial piece struck to test the dies before striking the gold dollar, or a fantasy piece produced clandestinely in later years. It is almost certainly unique on the oversized planchet, and mentions in the literature are almost as rare as the item itself. The only auction appearance we can locate was in lot 3714 of the ANA Convention Auction (Stack's, 8/1976):

**"Grant Gold Dollar Die Trial.** 1922. Obverse and reverse of the Grant Commemorative gold dollar, regular dies, variety with obverse star, struck upon a broad (23.20 mm.) bronze alloy coin blank. Uneven impression. See Judd, Appendix A ("Die Trials"), p. 239 (where the brass Lohr specimen, obv. normal, rev. incuse hub impression, on a narrow, cracked planchet, lot 2041, 1958 ANA Convention sale, is described and pictured); different than Scott (Taxay) EP1349, 1351. Tarnished Uncirculated. Ex: Farran Zerbe, F.C.C. Boyd. Of unusual interest! Unique."

The lot realized \$1,000, a very strong price at the time. As indicated in the description, this issue is easily mistaken for other die trials of the 1922 Grant dollar, and the standard reference books have been confused about its specifics. It was not mentioned in the Judd reference before the sixth edition, and Pollock (P-2066) was not sure if the dies were the variety with or without the star. The current edition of the Judd reference shows the obverse image and a partial description of this piece under the J-A1922-10 designation, and lists a description of the reverse under designation J-A1922-12. Until now, no one realized these two designations were actually two sides of the same coin. Pattern specialist Saul Teichman believes this piece is actually an example of Judd-2025, struck on an oversized planchet (see [USPatterns.com](http://USPatterns.com)). Anthony Swiatek acquired this specimen shortly after the 1976 auction, and the variety is mentioned on page 89 of his *Encyclopedia of United States Silver and Gold Commemorative Coins 1892-1954*.

This impressive Gem exhibits glossy well-preserved medium brown surfaces that retain much original luster. The design elements are well-detailed, but the strike is slightly off center, with a broad rim on one side of the impression, and the legends slightly clipped on the other. This mysterious trial piece combines intense historic interest with high technical grade and outstanding eye appeal. It has not been publicly offered in 38 years and it may not become available again for a generation, if ever. A terrific prize for the advanced pattern collector.

**1915 Panama-Pacific Gold Dollar  
J-A1915-2, White Metal, Bronzed  
PR64 Brown  
Unique Reverse Die Trial**

**4507 1915 Panama-Pacific Gold Dollar, Judd-A1915-2, Unique, PR64 Brown NGC.** This unique experimental piece is a uniface trial of the reverse die for the 1915-S Panama-Pacific gold dollar. A corresponding obverse die trial exists, and the trials were struck before the S mintmark was added to the die. The design of the 1915-S Pan-Pac gold dollar was conceived by George Keck, of New York City. This piece, and the corresponding obverse trial, were discovered in his estate. The coins were first offered publicly in the 1952 ANA Convention Auction (New Netherlands, et al, 8/1952), lot 1166:

**"Trial Strikes of the 1915 Panama Pacific Dollar.** 1915. Dollar, as last above. Uniface trial impressions, obverse and reverse separate, struck in White Metal, Bronzed. Similar to the regular dies, but without the mintmark "S" on reverse. The obverse is slightly thicker, and the reverse is slightly thinner than the regularly issued coin. Ex. Fine. Obtained from the estate of the late Charles Keck by R.J. Lathrop and believed to be unique. 2 Pcs. Plate."

Subsequently, the two trials were offered in the Dr. Curtis Paxman Collection (Bowers and Ruddy, 11/1974), lot 1051. This reverse die trial was later acquired by Anthony Swiatek.

The glossy light brown surfaces of this attractive Choice specimen are free of mentionable distractions, but a minor rim bruise is evident at 3 o'clock on the obverse. The design elements are sharply detailed throughout. We expect intense competition from both pattern collectors and commemorative enthusiasts when this lot is called.

## 1915 Octagonal Pan-Pac Fifty, PR65 Red Obverse and Reverse Hubs Trial Unique Judd-A1915-3

**4508 1915 Panama-Pacific Octagonal Fifty Dollar, Judd-A1915-3, Unique, PR65 Red NGC.** The octagonal 1915 Panama-Pacific fifty dollar gold pieces were intended to capture the romance and historic appeal of the old fifty dollar slugs issued by the United States Assay Office in San Francisco from 1851-1853. The design was conceived by New York artist Robert Aitken. The obverse features the helmeted goddess Minerva (who also appears on the arms of the State of California) inside a circle with the legend UNITED.STATES.OF.AMERICA. above and FIFTY.DOLLARS. below. The reverse displays an owl (symbolic of wisdom) perched on a branch of western pine inside a circle with the legend PANAMA.PACIFIC.EXPOSITION. above and SAN FRANCISCO. below. Dolphins appear in the angles of the octagonal corners, outside the circle on both sides.

The present piece is a unique hubs trial of these dies struck on an oversized copper planchet. It was probably in the fabulous collection of Virgil Brand for many years, and made its only auction appearance in lot 2249 of the Brand-Lichtenfels, et al Collections (Kreisberg/Schulman, 3/1964):

**"\$50 PANAMA-PACIFIC TRIAL PIECE.** To test the die prior to the striking in gold an impression of the \$50 Octagonal die both obverse and reverse was struck on a round copper planchet (60 mm in diameter). We have never seen any other such trial piece offered. Possibly unique. Perfect condition. Mounted in a custom plastic case. PLATE."

Of course, the cataloger of this lot misspoke slightly, as the impression was taken from the hubs used to impress the die and not the die itself. Thus, this piece shows the mirror image of the devices that actually appear on the coins. Razor-sharp definition is evident throughout and the well-preserved surfaces of this impressive Gem radiate vibrant mint luster. A medium-size carbon spot at 3 o'clock on the obverse is the only mark of note. Anthony Swiatek purchased this hubs trial from Sol Kaplan at a coin show in Shaker Heights, Ohio in 1971, and it has been off the market ever since. This lot represents a once-in-a-lifetime opportunity to acquire this unique numismatic treasure.

**1935 Hudson Half Dollar, PR66  
Uniface Obverse Hub Trial, J-A1935-2  
Possibly Only Two Copper-  
Plated Examples Known**

**4509** 1935 Hudson Half Dollar, Judd-A1935-2, R.8, PR66 NGC. This beautiful piece is an obverse hub trial for the 1935 Hudson, New York Sesquicentennial half dollar. Three of these obverse hub trials (J-A1935-2) are mentioned in the literature. Two are struck on copper-plated silver planchets, including the example offered here, and a single specimen is struck on an oversized copper planchet. The piece in this lot and the unique copper example are both from the collection of prominent coin dealer Anthony Swiatek, and the copper piece is offered in another lot in this sale.

According to Don Taxay, both of the copper-plated hub trials were originally in the collection of Steven Nagy. Nagy was a coin dealer with an intense interest in patterns and restrike issues from the United States Mint. He was a protege of Captain John W. Haseltine in the early 20th century. Together, they handled the marketing for the 1884 and 1885 Trade dollars when those coins first came on the market, circa 1908. Nagy and Haseltine were also involved in the famous scandal of the 1877 Half Union patterns, which were improperly sold to coin collector William Woodin and returned to the Mint Cabinet around 1910. In the 1920s, Nagy owned all five examples of the 1913 Liberty nickel, before selling them to Wayne Raymond. Nagy died in 1958 and his estate contained many numismatic items that were handled by Catherine Bullowa and, later, Lester Merkin.

All three of the obverse hub trials were acquired at some point by R.E. Cox, a collector known for his fabulous half dollar collection. The three pieces were sold as a single lot in the Stack's 1962 auction of his collection. Sometime shortly afterward (or perhaps at the sale itself), Sol Kaplan acquired at least two of the hub trials, this piece and the unique copper example. Both coins were sold to Anthony Swiatek at a Shaker Heights, Ohio coin show in 1971.

This delightful Premium Gem depicts the obverse design of the 1935 Hudson half dollar in mirror image of the way the design elements appear on the regular-issue coins. The devices are sharply rendered and the well-preserved surfaces are a pleasing copper-red on the obverse, with vibrant mint luster and extraordinary eye appeal. The blank reverse shows the unplated silver planchet. This fascinating hub trial has been off the market for 43 years and it may be decades before another example becomes available. The discerning collector should bid accordingly.

**1935 Hudson Sesquicentennial  
Half Dollar, PR67  
Uniface Obverse Hub Trial, J-A1935-2  
Possibly Unique in Copper**

**4510** 1935 Hudson Half Dollar, Judd-A1935-2, R.8, PR67 NGC. A wonderful Superb Gem specimen of the obverse hub trial for the 1935 Hudson, New York Sesquicentennial half dollar. Three obverse hub trials of this issue are known to numismatists today, classified as J-A1935-2 in the Judd pattern reference. The hub trials were struck on planchets with different composition and sizes. Apparently, two of the known trial pieces were struck on copper-plated silver planchets and the third example (the coin offered here) was struck on an oversized copper planchet (a copper-plated example of this trial was also in Anthony Swiatek's collection and is offered in another lot in this sale). The first auction appearance of this hub trial was probably in lot 2047 of the ANA Convention Auction (Abe Kosoff, 8/1958):

"Hub impression (incused) of the obverse of the Hudson Sesqui-Centennial half dollar, 1935. Struck in copper, uniface, on a large planchet. Probably unique."

The lot was purchased for \$80 by bidder number 172. Several other extremely rare trial pieces, including the obverse of the 1925 California Jubilee half dollar in lead (J-A1925-1), the reverse of the 1935 San Diego half dollar in copper (J-A1935-3), and the incomplete trial of the 1918 Lincoln half dollar in copper were also purchased by bidder number 172. Bidder 172 is identified as Harry Forman in a sale-room copy of the catalog, but all four of these extremely rare issues later appeared in the collection of R.E. Cox, Jr., so Forman must have been acting as an agent for him. All three of the known examples of the 1935 Hudson half dollar hub trial appeared together in lot 2306 of the R.E. Cox, Jr. Collection (Stack's, 4/1962):

"1935 Hudson, N.Y. 3 different hub impressions of obverse design (the ship) of this rare half dollar. Each shows minor die adjustments over preceding piece. As these are so close to each other in actual appearance we decided to sell them as a lot, so that the owner could have this set. 3 pieces."

Oddly, the cataloger did not mention the composition of the planchets. At least two of these hub trials (the present coin and the copper-plated example in this sale) were acquired by Sol Kaplan at some point and sold to Anthony Swiatek at a Shaker Heights, Ohio coin show in 1971. The other copper-plated example was offered in a Coin Galleries auction in 2004. Don Taxay indicated that the two copper-plated examples that were not in the 1958 ANA sale were once owned by Steven Nagy.

The present coin is a stunning Superb Gem, with sharply detailed design elements in mirror image of the way they appear on the obverse of the regular-issue coin. The original red surfaces are free of mentionable distractions and eye appeal is terrific. This lot represents a rare opportunity to acquire this historic issue, which has only been offered publicly twice before.

## INGOTS

**1930-Dated New York Assay Office  
Gold Ingot  
20.96 Ounces**

**4511 1930-Dated New York Assay Office Gold Ingot. 20.96 Ounces.** The New York Assay Office was established in the autumn of 1854 and lasted until 1982. The February 15, 1902 issue of *Scientific American* explained its location and significance:

“The United States Assay Office is located in a low modest-looking marble building located beside the more imposing Sub-Treasury building at the intersection of Wall and Broad Streets, which marks one of the most historic spots in the country, namely, the site of the old Federal Hall where Washington took the oath as first President of the United States. Although the building is small, yet it only masks a really large, inner building surrounded on all sides by office buildings and the Sub-Treasury. The Assay Offices, and particularly this one, have an important position in the world of finance, for here the precious metals — gold and silver — in all forms and conditions of fineness are assayed and refined.”

The NYAO produced gold ingots that approached 100% purity. This is a smaller ingot that measures 35mm x 55mm x 16mm. The Assay Office imprint is partially obliterated, most likely by an imperfection (gas bubble?) in that area. The top side reads: [1930 NYAO imprint] / FINE. / 999.7. The sides show 7099 / 20.96 / 177 / \$433.15.

### 1945-Dated New York Assay Office Gold Ingot 27.40 Ounces

**4512 1945-Dated New York Assay Office Gold Ingot. 27.40 Ounces.** We take much for granted with gold and silver ingots. But precious metals are not found in a pure state in nature. The high-fineness ingots and coins we are accustomed to requires a great deal of labor. It also requires a surprising amount of acid to separate the various elements found in naturally occurring alloys. In the March 15, 1902 issue of *Scientific American*, the entire melting and refining process was broken down in its individual parts. The Separating Room was described as:

"This is termed the "separating room," for here the silver is separated from the gold. About 200 pounds of sulphuric acid are added gradually during approximately three hours' boiling. The silver is also dissolved and the resulting solution is siphoned off into reducing vats on the floor below. Another charge of 150 pounds is added and heated for one and one half hours, when it is also run off. The fire having been withdrawn a third charge of acid is added, and the gold is taken out with a perforated iron ladle and put in small kettles. Here it is heated in three successive charges of acid for about six hours."

The results of several days' labor (and parting acids) at the U.S. Assay Office were ingots that approached 100% purity. This is an especially well-made and well-preserved gold ingot. The top side shows: [1945 NYAO imprint] / FINE / 999.8. This is ingot number 199 and melt number 1061. The weight is stamped on the long side with OZS placed diagonally followed by 27.40. The surfaces are bright yellow-gold with no noticeable defects.

## 7 Easy Ways to Bid

## 1 Internet

Simply go to [www.pearsoncmg.com](http://www.pearsoncmg.com)

Simply go to [www.HA.com](http://www.HA.com), find the auction you are looking for and click "View Lots" or type your desired Lot # into the "Search" field. Every lot is listed with full descriptions and images. Enter your bid and click "Place Bid." Internet bids will be accepted until 10:00 PM CT the day before the live auction session takes place.

## 2 eMail

You can also

You can also email your bids to us at [Bid@HA.com](mailto:Bid@HA.com). List lot numbers and bids, and include your name, address, phone, and customer # (if known) as well as a statement of your acceptance of the Terms and Conditions of Sale. Email bids will be accepted up to 24 hours before the live auction.

### 3 Postal Mail

Simply complete the B

Simply complete the Bid Sheet on the reverse side of this page with your bids on the lots you want, sign it and mail it in. If yours is the high bid on any lot, we act as your representative at the auction and buy the lot as cheaply as competition permits.

## 4 In Person

Come to the auction and view the lots in person and bid live on the floor.

**5 FAX**  
Follow t

Follow the instructions for completing your mail bid, but this time FAX it to (214) 409-1425. FAX bids will be accepted until 12:00 PM CT the day prior to the auction date.

## 6 Live By Phone

Call 877-HERITAGE (437-482)

Call 877-HERITAGE (437-4824) Ext. 1150 and ask for phone bidding assistance at least 24 hours prior to the auction.

**7 Live using HERITAGE Live!®**  
Auctions designated as "Heritage Live Enabled" have

Auctions designated as "Heritage Live Enabled" have continuous bidding from the time the auction is posted on our site through the live event. When normal Internet bidding ends, visit [HA.com/Live](http://HA.com/Live) and continue to place Live Proxy bids. When the item hits the auction block, you can continue to bid live against the floor and other live bidders.

*Because of the many avenues by which bids may be submitted, there is the real possibility of a tie for the high bid. In the event of a tie, Internet bidders, within their credit limit, will win by default.*

# Terms and Conditions of Auction

## Auctioneer and Auction:

1. This Auction is presented by Heritage Auctions, a d/b/a/ of Heritage Auctioneers & Galleries, Inc., or Heritage Auctions, Inc., or Heritage Numismatic Auctions, Inc., or Heritage Vintage Sports Auctions, Inc., or Currency Auctions of America, Inc., as identified with the applicable licensing information on the title page of the catalog or on the HA.com Internet site (the "Auctioneer"). The Auction is conducted under these Terms and Conditions of Auction and applicable state and local law. Announcements and corrections from the podium and those made through the Terms and Conditions of Auctions appearing on the Internet at HA.com supersede those in the printed catalog.

## Buyer's Premium:

2. All bids are subject to a Buyer's Premium which is in addition to the placed successful bid:
- Fifteen percent (15%) on Domain Names & Intellectual Property Auction lots;
- Seventeen and one-half percent (17.5%) on Currency, US Coin, and World & Ancient Coin Auction lots, except for Gallery Auction lots as noted below;
- Nineteen and one-half percent (19.5%) on Comic, Movie Poster, Sports Collectibles, and Gallery Auction (sealed bid auctions of mostly bulk numismatic material) lots;
- Twenty-two percent (22%) on Wine Auction lots;
- For lots in all other categories not listed above, the Buyer's Premium per lot is twenty-five percent (25%) on the first \$100,000 (minimum \$14), plus twenty percent (20%) of any amount between \$100,000 and \$1,000,000, plus twelve percent (12%) of any amount over \$1,000,000.

## Auction Venues:

3. The following Auctions are conducted solely on the Internet: Heritage Weekly Internet Auctions (Coin, Currency, Comics, Rare Books, Jewelry & Watches, Guitars & Musical Instruments, and Vintage Movie Posters); Heritage Monthly Internet Auctions (Sports, World Coins and Rare Wine). Signature® Auctions and Grand Format Auctions accept bids from the Internet, telephone, fax, or mail first, followed by a floor bidding session; HeritageLive! and real-time telephone bidding are available to registered clients during these auctions.

## Bidders:

4. Any person participating or registering for the Auction agrees to be bound by and accepts these Terms and Conditions of Auction ("Bidder(s)").
5. All Bidders must meet Auctioneer's qualifications to bid. Any Bidder who is not a client in good standing of the Auctioneer may be disqualified at Auctioneer's sole option and will not be awarded lots. Such determination may be made by Auctioneer in its sole and unlimited discretion, at any time prior to, during, or even after the close of the Auction. Auctioneer reserves the right to exclude any person from the auction.
6. If an entity places a bid, then the person executing the bid on behalf of the entity agrees to personally guarantee payment for any successful bid.

## Credit:

7. In order to place bids, Bidders who have not established credit with the Auctioneer must either furnish satisfactory credit information (including two collectibles-related business references) or supply valid credit card information along with a social security number, well in advance of the Auction. Bids placed through our Interactive Internet program will only be accepted from pre-registered Bidders. Bidders who are not members of HA.com or affiliates should preregister at least 48 hours before the start of the first session (exclusive of holidays or weekends) to allow adequate time to contact references. Credit will be granted at the discretion of Auctioneer. Additionally Bidders who have not previously established credit or who wish to bid in excess of their established credit history may be required to provide their social security number or the last four digits thereof so a credit check may be performed prior to Auctioneer's acceptance of a bid. Check writing privileges and immediate delivery of merchandise may also be determined by pre-approval of credit based on a combination of criteria: HA.com history, related industry references, bank verification, a credit bureau report and/or a personal guarantee for a corporate or partnership entity in advance of the auction venue.

## Bidding Options:

8. Bids in Signature, Auctions or Grand Format Auctions may be placed as set forth in the printed catalog section entitled "Choose your bidding method." For auctions held solely on the Internet, see the alternatives on HA.com. Review at <http://www.ha.com/c/ref/web-tips.zx#biddingTutorial>.
9. Presentment of Bids: Non-Internet bids (including but not limited to podium, fax, phone and mail bids) are treated similar to floor bids in that they must be on-increment or at a half increment (called a cut bid). Any podium, fax, phone, or mail bids that do not conform to a full or half increment will be rounded up or down to the nearest full or half increment and this revised amount will be considered your high bid.
10. Auctioneer's Execution of Certain Bids. Auctioneer cannot be responsible for your errors in bidding, so carefully check that every bid is entered correctly. When identical mail or FAX bids are submitted, preference is given to the first received. To ensure the greatest accuracy, your written bids should be entered on the standard printed bid sheet and be received at Auctioneer's place of business at least two business days before the Auction start. Auctioneer is not responsible for executing mail bids or FAX bids received on or after the day the first lot is sold, nor Internet bids submitted after the published closing time; nor is Auctioneer responsible for proper execution of bids submitted by telephone, mail, FAX, e-mail, Internet, or in person once the Auction begins. Bids placed electronically via the internet may not be withdrawn until your written request is received and acknowledged by Auctioneer (FAX: 214-409-1425); such requests must state the reason, and may constitute grounds for withdrawal of bidding privileges. Lots won by mail Bidders will not be delivered at the Auction unless prearranged.
11. Caveat as to Bid Increments. Bid increments (over the current bid level) determine the lowest amount you may bid on a particular lot. Bids greater than one increment over the current bid can be any whole dollar amount. It is possible under several circumstances for winning bids to be between increments, sometimes only \$1 above the previous increment. Please see: "How can I lose by less than an increment?" on our website. Bids will be accepted in whole dollar amounts only. No "buy" or "unlimited" bids will be accepted.

The following chart governs current bidding increments (see [HA.com/c/ref/web-tips.zx#guidelines-increments](http://HA.com/c/ref/web-tips.zx#guidelines-increments)).

Current Bid	Bid Increment
< \$10	\$1
\$10 - \$49	\$2
\$50 - \$99	\$5
\$100 - \$199	\$10
\$200 - \$499	\$20
\$500 - \$999	\$50
\$1,000 - \$1,999	\$100
\$2,000 - \$4,999	\$200
\$5,000 - \$9,999	\$500

Current Bid	Bid Increment
\$10,000 - \$19,999	\$1,000
\$20,000 - \$49,999	\$2,000
\$50,000 - \$99,999	\$5,000
\$100,000 - \$199,999	\$10,000
\$200,000 - \$499,999	\$20,000
\$500,000 - \$999,999	\$50,000
\$1,000,000 - \$4,999,999	\$100,000
\$5,000,000 - \$9,999,999	\$250,000
>= \$10,000,000	\$500,000

12. If Auctioneer calls for a full increment, a bidder may request Auctioneer to accept a bid at half of the increment ("Cut Bid") only once per lot. After offering a Cut Bid, bidders may continue to participate only at full increments. Off-increment bids may be accepted by the Auctioneer at Signature® Auctions and Grand Format Auctions. If the Auctioneer solicits bids other than the expected increment, these bids will not be considered Cut Bids.

## Conducting the Auction:

13. Notice of the consignor's liberty to place bids on his lots in the Auction is hereby made in accordance with Article 2 of the Texas Business and Commercial Code. A "Minimum Bid" is an amount below which the lot will not sell. THE CONSIGNOR OF PROPERTY MAY PLACE

WRITTEN "Minimum Bids" ON HIS LOTS IN ADVANCE OF THE AUCTION; ON SUCH LOTS, IF THE HAMMER PRICE DOES NOT MEET THE "Minimum Bid", THE CONSIGNOR MAY PAY A REDUCED COMMISSION ON THOSE LOTS. "Minimum Bids" are generally posted online several days prior to the Auction closing. For any successful bid placed by a consignor on his Property on the Auction floor, or by any means during the live session, or after the "Minimum Bid" for an Auction have been posted, we will require the consignor to pay full Buyer's Premium and Seller's Commissions on such lot.

14. The highest qualified Bidder recognized by the Auctioneer shall be the Buyer. In the event of a tie bid, the earliest bid received or recognized wins. In the event of any dispute between any Bidders at an Auction, Auctioneer may at his sole discretion reoffer the lot. Auctioneer's decision and declaration of the winning Bidder shall be final and binding upon all Bidders. Bids properly offered, whether by floor Bidder or other means of bidding, may on occasion be missed or go unrecognized; in such cases, the Auctioneer may declare the recognized bid accepted as the winning bid, regardless of whether a competing bid may have been higher. Auctioneer reserves the right after the hammer fall to accept bids and reopen bidding for bids placed through the Internet or otherwise.
15. Auctioneer reserves the right to refuse to honor any bid or to limit the amount of any bid, in its sole discretion. A bid is considered not made in "Good Faith" when made by an insolvent or irresponsible person, a person under the age of eighteen, or is not supported by satisfactory credit, collectibles references, or otherwise. Regardless of the disclosure of his identity, any bid by a consignor or his agent on a lot consigned by him is deemed to be made in "Good Faith." Any person apparently appearing on the OFAC list is not eligible to bid.
16. Nominal Bids. The Auctioneer in its sole discretion may reject nominal bids, small opening bids, or very nominal advances. If a lot bearing estimates fails to open for 40–60% of the low estimate, the Auctioneer may pass the item or may place a protective bid on behalf of the consignor.
17. Lots bearing bidding estimates shall open at Auctioneer's discretion (approximately 50%-60% of the low estimate). In the event that no bid meets or exceeds that opening amount, the lot shall pass as unsold.
18. All items are to be purchased per lot as numerically indicated and no lots will be broken. Auctioneer reserves the right to withdraw, prior to the close, any lots from the Auction.
19. Auctioneer reserves the right to rescind the sale in the event of nonpayment, breach of a warranty, disputed ownership, auctioneer's clerical error or omission in exercising bids and reserves, or for any other reason and in Auctioneer's sole discretion. In cases of nonpayment, Auctioneer's election to void a sale does not relieve the Bidder from their obligation to pay Auctioneer its fees (seller's and buyer's premium) and any other damages or expenses pertaining to the lot.
20. Auctioneer occasionally experiences Internet and/or Server service outages, and Auctioneer periodically schedules system downtime for maintenance and other purposes, during which Bidders cannot participate or place bids. If such outages occur, we may at our discretion extend bidding for the Auction. Bidders unable to place their Bids through the Internet are directed to contact Client Services at 877-HERITAGE (437-4824).
21. The Auctioneer, its affiliates, or their employees consign items to be sold in the Auction, and may bid on those lots or any other lots. Auctioneer or affiliates expressly reserve the right to modify any such bids at any time prior to the hammer based upon data made known to the Auctioneer or its affiliates. The Auctioneer may extend advances, guarantees, or loans to certain consignors.
22. The Auctioneer has the right to sell certain unsold items after the close of the Auction. Such lots shall be considered sold during the Auction and all these Terms and Conditions shall apply to such sales including but not limited to the Buyer's Premium, return rights, and disclaimers.

## Payment:

23. All sales are strictly for cash in United States dollars (including U.S. currency, bank wire, cashier checks, travelers checks, eChecks, and bank money orders, and are subject to all reporting requirements). All deliveries are subject to good funds; funds being received in Auctioneer's account before delivery of the Purchases; and all payments are subject to a clearing period. Auctioneer reserves the right to determine if a check constitutes "good funds": checks drawn on a U.S. bank are subject to a ten business day hold, and thirty days when drawn on an international bank. Clients with pre-arranged credit status may receive immediate credit for payments via eCheck, personal, or corporate checks. All others will be subject to a hold of 5 days, or more, for the funds to clear prior to releasing merchandise. (Ref. T&C item 7 Credit for additional information.) Payments can be made 24-48 hours post auction from the My Orders page of the HA.com website.
24. Payment is due upon closing of the Auction session, or upon presentment of an invoice. Auctioneer reserves the right to void an invoice if payment in full is not received within 7 days after the close of the Auction. In cases of nonpayment, Auctioneer's election to void a sale does not relieve the Bidder from their obligation to pay Auctioneer its fees (seller's and buyer's premium) on the lot and any other damages pertaining to the lot or Auctioneer, at its option, may charge a twenty (20%) restock fee on the amount of the purchase and offset the restock fee against any monies paid to the Auctioneer or against any of the purchaser's properties held by the Auctioneer.
25. Lots delivered to you, or your representative in the States of Texas, California, New York, or other states where the Auction may be held, are subject to all applicable state and local taxes, unless appropriate permits are on file with Auctioneer. (Note: Coins are only subject to sales tax in California on invoices under \$1,500, and there is no sales tax on coins in Texas.) Bidder agrees to pay Auctioneer the actual amount of tax due in the event that sales tax is not properly collected due to: 1) an expired, inaccurate, or inappropriate tax certificate or declaration, 2) an incorrect interpretation of the applicable statute, 3) or any other reason. The appropriate form or certificate must be on file at and verified by Auctioneer five days prior to Auction, or tax must be paid; only if such form or certificate is received by Auctioneer within 4 days after the Auction can a refund of tax paid be made. Lots from different Auctions may not be aggregated for sales tax purposes.
26. In the event that a Bidder's payment is dishonored upon presentment(s), Bidder shall pay the maximum statutory processing fee set by applicable state law. If you attempt to pay via eCheck and your financial institution denies this transfer from your bank account, or the payment cannot be completed using the selected funding source, you agree to complete payment using your credit card on file.
27. If any Auction invoice submitted by Auctioneer is not paid in full when due, the unpaid balance will bear interest at the highest rate permitted by law from the date of invoice until paid. Any invoice not paid when due will bear a three percent (3%) late fee on the invoice amount. If the Auctioneer refers any invoice to an attorney for collection, the buyer agrees to pay attorney's fees, court costs, and other collection costs incurred by Auctioneer. If Auctioneer assigns collection to its in-house legal staff, such attorney's time expended on the matter shall be compensated at a rate comparable to the hourly rate of independent attorneys.
28. In the event a successful Bidder fails to pay any amounts due, Auctioneer reserves the right to sell the lot(s) securing the invoice to any underbidders in the Auction that the lot(s) appeared, or at subsequent private or public sale, or relist the lot(s) in a future auction conducted by Auctioneer. A defaulting Bidder agrees to pay for the reasonable costs of resale (including a 15% seller's commission, if assigned to an auction conducted by Auctioneer). The defaulting Bidder is liable to pay any difference between his total original invoice for the lot(s), plus any applicable interest, and the net proceeds for the lot(s) if sold at private sale or the subsequent hammer price of the lot(s) less the 15% seller's commissions, if sold at an Auctioneer's auction.
29. Auctioneer reserves the right to require payment in full in good funds before delivery of the merchandise.

# Terms and Conditions of Auction

30. Auctioneer shall have a lien against the merchandise purchased by the buyer to secure payment of the Auction invoice. Auctioneer is further granted a lien and the right to retain possession of any other property of the buyer then held by the Auctioneer or its affiliates to secure payment of any Auction invoice or any other amounts due the Auctioneer or affiliates from the buyer. With respect to these lien rights, Auctioneer shall have all the rights of a secured creditor under Article 9 of the Texas Uniform Commercial Code, including but not limited to the right of sale (including a 15% seller's commission, if consigned to an auction conducted by Auctioneer). In addition, with respect to payment of the Auction invoice(s), the buyer waives any and all rights of offset he might otherwise have against the Auctioneer and the consignor of the merchandise included on the invoice. If a Bidder owes Auctioneer or its affiliates on any account, Auctioneer and its affiliates shall have the right to offset such unpaid account by any credit balance due Bidder, and it may secure by possessory lien any unpaid amount by any of the Bidder's property in their possession..

31. Title shall not pass to the successful Bidder until all invoices are paid in full. It is the responsibility of the buyer to provide adequate insurance coverage for the items once they have been delivered to a common carrier or third-party shipper.

## **Delivery; Shipping; and Handling Charges:**

32. Buyer is liable for shipping, handling, registration, and renewal fees, if any. Please refer to Auctioneer's website HA.com/c/shipping.zx for the latest charges or call Auctioneer. Auctioneer is unable to combine purchases from other auctions or affiliates into one package for shipping purposes. Lots won will be shipped in a commercially reasonable time after payment in good funds for the merchandise and the shipping fees is received or credit extended, except when third-party shipment occurs. Buyer agrees that Service and Handling charges related to shipping items which are not pre-paid may be charged to the credit card on file with Auctioneer.

33. Successful international Bidders shall provide written shipping instructions, including specified customs declarations, to the Auctioneer for any lots to be delivered outside of the United States. NOTE: Declaration value shall be the item(s) hammer price together with its buyer's premium and Auctioneer shall use the correct harmonized code for the lot. Domestic Buyers on lots designated for third-party shipment must designate the common carrier, accept risk of loss, and prepay shipping costs.

34. All shipping charges will be borne by the successful Bidder. On all domestic shipments, any risk of loss during shipment will be borne by Heritage until the shipping carrier's confirmation of delivery to the address of record in Auctioneer's file (carrier's confirmation is conclusive to prove delivery to Bidder; if the client has a Signature release on file with the carrier, the package is considered delivered without Signature) or delivery by Heritage to Bidder's selected third-party shipper. On all foreign shipments, any risk of loss during shipment will be borne by the Bidder following Auctioneer's delivery to the Bidder's designated common carrier or third-party shipper.

35. Due to the nature of some items sold, it shall be the responsibility for the successful Bidder to arrange pick-up and shipping through third-parties; as to such items Auctioneer shall have no liability. Failure to pick-up or arrange shipping in a timely fashion (within ten days) shall subject Lots to storage and moving charges, including a \$100 administration fee plus \$10 daily storage for larger items and \$5.00 daily for smaller items (storage fee per item) after 35 days. In the event the Lot is not removed within ninety days, the Lot may be offered for sale to recover any past due storage or moving fees, including a 10% Seller's Commission.

36A. The laws of various countries regulate the import or export of certain plant and animal properties, including (but not limited to) items made of (or including) ivory, whalebone, turtle shell, coral, crocodile, or other wildlife. Transport of such lots may require special licenses for export, import, or both. Bidder is responsible for: 1) obtaining all information on such restricted items for both export and import; 2) obtaining all such licenses and/or permits. Delay or failure to obtain any such license or permit does not relieve the buyer of timely compliance with standard payment terms. For further information, please contact Ron Brackemyre at 800- 872-6467 ext. 1312.

36B. California State law prohibits the importation of any product containing Python skin into the State of California, thus no lot containing Python skin will be shipped to or invoiced to a person or company in California.

36C. Auctioneer shall not be liable for any loss caused by or resulting from:

- a. Seizure or destruction under quarantine or Customs regulation, or confiscation by order of any Government or public authority, or risks of contraband or illegal transportation of trade, or
- b. Breakage of statuary, marble, glassware, bric-a-brac, porcelains, jewelry, and similar fragile articles

37. Any request for shipping verification for undelivered packages must be made within 30 days of shipment by Auctioneer.

## **Cataloging, Warranties and Disclaimers:**

38. NO WARRANTY, WHETHER EXPRESSED OR IMPLIED, IS MADE WITH RESPECT TO ANY DESCRIPTION CONTAINED IN THIS AUCTION OR ANY SECOND OPINE. Any description of the items or second opine contained in this Auction is for the sole purpose of identifying the items for those Bidders who do not have the opportunity to view the lots prior to bidding, and no description of items has been made part of the basis of the bargain or has created any express warranty that the goods would conform to any description made by Auctioneer. Color variations can be expected in any electronic or printed imaging, and are not grounds for the return of any lot. NOTE: Auctioneer, in specified auction venues, for example, Fine Art, may have express written warranties and you are referred to those specific terms and conditions. .

39. Auctioneer is selling only such right or title to the items being sold as Auctioneer may have by virtue of consignment agreements on the date of auction and disclaims any warranty of title to the Property. Auctioneer disclaims any warranty of merchantability or fitness for any particular purposes. All images, descriptions, sales data, and archival records are the exclusive property of Auctioneer, and may be used by Auctioneer for advertising, promotion, archival records, and any other uses deemed appropriate.

40. Translations of foreign language documents may be provided as a convenience to interested parties. Auctioneer makes no representation as to the accuracy of those translations and will not be held responsible for errors in bidding arising from inaccuracies in translation.

41. Auctioneer disclaims all liability for damages, consequential or otherwise, arising out of or in connection with the sale of any Property by Auctioneer to Bidder. No third party may rely on any benefit of these Terms and Conditions and any rights, if any, established hereunder are personal to the Bidder and may not be assigned. Any statement made by the Auctioneer is an opinion and does not constitute a warranty or representation. No employee of Auctioneer may alter these Terms and Conditions, and, unless signed by a principal of Auctioneer, any such alteration is null and void.

42. Auctioneer shall not be liable for breakage of glass or damage to frames (patent or latent); such defects, in any event, shall not be a basis for any claim for return or reduction in purchase price.

## **Release:**

43. In consideration of participation in the Auction and the placing of a bid, Bidder expressly releases Auctioneer, its officers, directors and employees, its affiliates, and its outside experts that provide second opines, from any and all claims, cause of action, those of action, whether at law or equity or any arbitration or mediation rights existing under the rules of any professional society or affiliation based upon the assigned description, or a derivative theory, breach of warranty express or implied, representation or other matter set forth within these Terms and Conditions of Auction or otherwise. In the event of a claim, Bidder agrees that such rights and privileges conferred therein are strictly construed as specifically declared herein; e.g., authenticity, typographical error, etc. and are the exclusive remedy. Bidder, by non-compliance to these express terms of a granted remedy, shall waive any claim against Auctioneer.

44. Notice: Some Property sold by Auctioneer are inherently dangerous e.g. firearms, cannons, and small items that may be swallowed or ingested or may have latent defects all of which may cause harm to a person. Purchaser accepts all risk of loss or damage from its purchase of these items and Auctioneer disclaims any liability whether under contract or tort for damages and losses, direct or inconsequential, and expressly disclaims any warranty as to safety or usage of any lot sold.

## **Dispute Resolution and Arbitration Provision:**

45. By placing a bid or otherwise participating in the auction, Bidder accepts these Terms and Conditions of Auction, and specifically agrees to the dispute resolution provided herein. Consumer disputes shall be resolved through court litigation which has an exclusive Dallas, Texas venue clause and jury waiver. Non-consumer dispute shall be determined in binding arbitration which arbitration replaces the right to go to court, including the right to a jury trial.

46. Auctioneer in no event shall be responsible for consequential damages, incidental damages, compensatory damages, or any other damages arising or claimed to be arising from the auction of any lot. In the event that Auctioneer cannot deliver the lot or subsequently it is established that the lot lacks title, or other transfer or condition issue is claimed, in such cases the sole remedy shall be limited to rescission of sale and refund of the amount paid by Bidder; in no case shall Auctioneer's maximum liability exceed the high bid on that lot, which bid shall be deemed for all purposes the value of the lot. After one year has elapsed, Auctioneer's maximum liability shall be limited to any commissions and fees Auctioneer earned on that lot.

47. In the event of an attribution error, Auctioneer may at its sole discretion, correct the error on the Internet, or, if discovered at a later date, to refund the buyer's purchase price without further obligation.

48. Exclusive Dispute Resolution Process: All claims, disputes, or controversies in connection with, relating to and/or arising out of your Participation in the Auction or purchase of any lot, any interpretation of the Terms and Conditions of Sale or any amendments thereto, any description of any lot or condition report, any damage to any lot, any alleged verbal modification of any term of sale or condition report or description and/or any purported settlement whether asserted in contract, tort, under Federal or State statute or regulation or any claim made by you of a lot or your Participation in the auction involving the auction or a specific lot involving a warranty or representation of a consignor or other person or entity including Auctioneer { which claim you consent to be made a party} (collectively, "Claim") shall be exclusively heard by, and the claimant (or respondent as the case may be) and Heritage each consent to the Claim being presented in a confidential binding arbitration before a single arbitrator administrated by and conducted under the rules of, the American Arbitration Association. The locale for all such arbitrations shall be Dallas, Texas. The arbitrator's award may be enforced in any court of competent jurisdiction. If a Claim involves a consumer, exclusive subject matter jurisdiction for the Claim is in the State District Courts of Dallas County, Texas and the consumer consents to subject matter and in personam jurisdiction; further CONSUMER EXPRESSLY WAIVES ANY RIGHT TO TRIAL BY JURY. A consumer may elect arbitration as specified above. Any claim involving the purchase or sale of numismatic or related items may be submitted through binding PNG arbitration. Any Claim must be brought within two (2) years of the alleged breach, default or misrepresentation or the Claim is waived. Exemplary or punitive damages are not permitted and are waived. A Claim is not subject to class certification. Nothing herein shall be construed to extend the time of return or conditions and restrictions for return. This Agreement and any Claim shall be determined and construed under Texas law. The prevailing party (a party that is awarded substantial and material relief on its damage claim based on damages sought vs. awarded or the successful defense of a Claim based on damages sought vs. awarded) may be awarded its reasonable attorneys' fees and costs.

49. No claims of any kind can be considered after the settlements have been made with the consignors. Any dispute after the settlement date is strictly between the Bidder and consignor without involvement or responsibility of the Auctioneer.

50. In consideration of their participation in or application for the Auction, a person or entity (whether the successful Bidder, a Bidder, a purchaser and/or other Auction participant or registrant) agrees that all disputes in any way relating to, arising under, connected with, or incidental to these Terms and Conditions and purchases, or default in payment thereof, shall be arbitrated pursuant to the arbitration provision. In the event that any matter including actions to compel arbitration, construe the agreement, actions in aid or arbitration or otherwise needs to be litigated, such litigation shall be exclusively in the Courts of the State of Texas, in Dallas County, Texas, and if necessary the corresponding appellate courts. For such actions, the successful Bidder, purchaser, or Auction participant also expressly submits himself to the personal jurisdiction of the State of Texas.

51. These Terms & Conditions provide specific remedies for occurrences in the auction and delivery process. Where such remedies are afforded, they shall be interpreted strictly. Bidder agrees that any claim shall utilize such remedies; Bidder making a claim in excess of those remedies provided in these Terms and Conditions agrees that in no case whatsoever shall Auctioneer's maximum liability exceed the high bid on that lot, which bid shall be deemed for all purposes the value of the lot.

## **Miscellaneous:**

52. Agreements between Bidders and consignors to effectuate a non-sale of an item at Auction, inhibit bidding on a consigned item to enter into a private sale agreement for said item, or to utilize the Auctioneer's Auction to obtain sales for non-selling consigned items subsequent to the Auction, are strictly prohibited. If a subsequent sale of a previously consigned item occurs in violation of this provision, Auctioneer reserves the right to charge Bidder the applicable Buyer's Premium and consignor a Seller's Commission as determined for each auction venue and by the terms of the seller's agreement.

53. Acceptance of these Terms and Conditions qualifies Bidder as a client who has consented to be contacted by Heritage in the future. In conformity with "do-not-call" regulations promulgated by the Federal or State regulatory agencies, participation by the Bidder is affirmative consent to being contacted at the phone number shown in his application and this consent shall remain in effect until it is revoked in writing. Heritage may from time to time contact Bidder concerning sale, purchase, and auction opportunities available through Heritage and its affiliates and subsidiaries.

54. Rules of Construction: Auctioneer presents properties in a number of collectible fields, and as such, specific venues have promulgated supplemental Terms and Conditions. Nothing herein shall be construed to waive the general Terms and Conditions of Auction by these additional rules and shall be construed to give force and effect to the rules in their entirety.

## **State Notices:**

Notice as to an Auction in California. Auctioneer has in compliance with Title 2.95 of the California Civil Code as amended October 11, 1993 Sec. 1812.600, posted with the California Secretary of State its bonds for it and its employees, and the auction is being conducted in compliance with Sec. 2338 of the Commercial Code and Sec. 535 of the Penal Code.

Notice as to an Auction in New York City. These Terms and Conditions of Sale are designed to conform to the applicable sections of the New York City Department of Consumer Affairs Rules and Regulations as Amended. This sale is a Public Auction Sale conducted by Heritage Auctioneers & Galleries, Inc. # 41513036. The New York City licensed auctioneers are: Sam Foose, #095260; Kathleen Guzman, #0762165; Nicholas Dawes, #1304724; Ed Beardsley, #1183220; Scott Peterson, #1306933; Andrea Voss, #1320558, who will conduct the Sale on behalf of itself and Heritage Numismatic Auctions, Inc. (for Coins) and Currency Auctions of America, Inc. (for currency). All lots are subject to: the consignor's rights to bid thereon in accord with these Terms and Conditions of Sale, consignor's option to receive advances on their consignments, and Auctioneer, in its sole discretion, may offer limited extended financing to registered bidders, in accord with Auctioneer's internal credit standards. A registered bidder may inquire whether a lot is subject to an advance or a reserve. Auctioneer has made advances to various consignors in this sale. On lots bearing an estimate, the term refers to a value range placed on an item by the Auctioneer in its sole opinion but the final price is determined by the bidders.

Notice as to an Auction in Texas. In compliance with TDLR rule 67.100(c)(1), notice is hereby provided that this auction is covered by a Recovery Fund administered by the Texas Department of Licensing and Regulation, P.O. Box 12157, Austin, Texas 78711 (512) 463-6599. Any complaints may be directed to the same address.

Notice as to an Auction in Ohio: Auction firm and Auctioneer are licensed by the Dept. of Agriculture, and either the licensee is bonded in favor of the state or an aggrieved person may initiate a claim against the auction recovery fund created in Section 4707.25 of the Revised Code as a result of the licensee's actions, whichever is applicable.

# Terms and Conditions of Auction

## Additional Terms & Conditions:

### COINS & CURRENCY

COINS and CURRENCY TERM A: Signature. Auctions are not on approval. No certified material may be returned because of possible differences of opinion with respect to the grade offered by any third-party organization, dealer, or service. No guarantee of grade is offered for uncertified Property sold and subsequently submitted to a third-party grading service. There are absolutely no exceptions to this policy. Under extremely limited circumstances, (e.g. gross cataloging error) a purchaser, who did not bid from the floor, may request Auctioneer to evaluate voiding a sale: such request must be made in writing detailing the alleged gross error; submission of the lot to the Auctioneer must be pre-approved by the Auctioneer; and bidder must notify Ron Brackemyre (1-800-872-6467 Ext. 1312) in writing of such request within three (3) days of the non-floor bidder's receipt of the lot. Any lot that is to be evaluated must be in our offices within 30 days after Auction. Grading or method of manufacture do not qualify for this evaluation process nor do such complaints constitute a basis to challenge the authenticity of a lot. AFTER THAT 30-DAY PERIOD, NO LOTS MAY BE RETURNED FOR REASONS OTHER THAN AUTHENTICITY. Lots returned must be housed intact in their original holder. No lots purchased by floor Bidders may be returned (including those Bidders acting as agents for others) except for authenticity. Late remittance for purchases may be considered just cause to revoke all return privileges.

COINS and CURRENCY TERM B: Auctions conducted solely on the Internet THREE (3) DAY RETURN POLICY: Certified Coin and Uncertified and Certified Currency lots paid for within seven days of the Auction closing are sold with a three (3) day return privilege unless otherwise noted in the description as "Sold As Is, No Return Lot". You may return lots under the following conditions: Within three days of receipt of the lot, you must first notify Auctioneer by contacting Client Service by phone (877-HERITAGE (437-4824)) or e-mail (Bid@HA.com), and immediately ship the lot(s) fully insured to the attention of Returns, Heritage, 3500 Maple Avenue, 17th Floor, Dallas TX 75219-3941. Lots must be housed intact in their original holder and condition. You are responsible for the insured, safe delivery of any lots. A non-negotiable return fee of 5% of the purchase price (\$10 per lot minimum) will be deducted from the refund for each returned lot or billed directly. Postage and handling fees are not refunded. After the three-day period (from receipt), no items may be returned for any reason. Late remittance for purchases revokes these Return privileges.

COINS and CURRENCY TERM C: Bidders who have inspected the lots prior to any Auction, or attended the Auction, or bid through an Agent, will not be granted any return privileges, except for reasons of authenticity.

COINS and CURRENCY TERM D: Coins sold referencing a third-party grading service are sold "as is" without any express or implied warranty, except for a guarantee by Auctioneer that they are genuine. Certain warranties may be available from the grading services and the Bidder is referred to them for further details: Numismatic Guaranty Corporation (NGC), P.O. Box 4776, Sarasota, FL 34230, <http://www.ngccoin.com/services/writtenguarantee.asp>; Professional Coin Grading Service (PCGS), PO Box 9458, Newport Beach, CA 92658, <http://www.pcg.com/guarantee.html>; ANACS, 6555 S. Kenton St. Ste. 303, Englewood, CO 80111; and Independent Coin Grading Co. (ICG), 7901 East Bellevue Ave., Suite 50, Englewood, CO 80111.

COINS and CURRENCY TERM E: Notes sold referencing a third-party grading service are sold "as is" without any express or implied warranty, except for guarantee by Auctioneer that they are genuine. Grading, condition or other attributes of any lot may have a material effect on its value, and the opinion of others, including third-party grading services such as PCGS Currency, PMG, and CGA may differ with that of Auctioneer. Auctioneer shall not be bound by any prior or subsequent opinion, determination, or certification by any grading service. Bidder specifically waives any claim to right of return of any item because of the opinion, determination, or certification, or lack thereof, by any grading service. Certain warranties may be available from the grading services and the Bidder is referred to them for further details: Paper Money Guaranty (PMG), PO Box 4711, Sarasota FL 34230; PCGS Currency, PO Box 9458, Newport Beach, CA 92658; Currency Grading & Authentication (CGA), PO Box 418, Three Bridges, NJ 08887. Third party graded notes are not returnable for any reason whatsoever.

COINS and CURRENCY TERM F: Since we cannot examine encapsulated coins or notes, they are sold "as is" without our grading opinion, and may not be returned for any reason. Auctioneer shall not be

liable for any patent or latent defect or controversy pertaining to or arising from any encapsulated collectible. In any such instance, purchaser's remedy, if any, shall be solely against the service certifying the collectible.

COINS and CURRENCY TERM G: Due to changing grading standards over time, differing interpretations, and to possible mishandling of items by subsequent owners, Auctioneer reserves the right to grade items differently than shown on certificates from any grading service that accompany the items. Auctioneer also reserves the right to grade items differently than the grades shown in the prior catalog should such items be reconsigned to any future auction.

COINS and CURRENCY TERM H: Although consensus grading is employed by most grading services, it should be noted as aforesaid that grading is not an exact science. In fact, it is entirely possible that if a lot is broken out of a plastic holder and resubmitted to another grading service or even to the same service, the lot could come back with a different grade assigned.

COINS and CURRENCY TERM I: Certification does not guarantee protection against the normal risks associated with potentially volatile markets. The degree of liquidity for certified coins and collectibles will vary according to general market conditions and the particular lot involved. For some lots there may be no active market at all at certain points in time.

COINS and CURRENCY TERM J: All non-certified coins and currency are guaranteed genuine, but are not guaranteed as to grade, since grading is a matter of opinion, an art and not a science, and therefore the opinion rendered by the Auctioneer or any third party grading service may not agree with the opinion of others (including trained experts), and the same expert may not grade the same item with the same grade at two different times. Auctioneer has graded the non-certified numismatic items, in the Auctioneer's opinion, to their current interpretation of the American Numismatic Association's standards as of the date the catalog was prepared. There is no guarantee or warranty implied or expressed that the grading standards utilized by the Auctioneer will meet the standards of any grading service at any time in the future.

COINS and CURRENCY TERM K: Storage of purchased coins and currency: Purchasers are advised that certain types of plastic may react with a coin's metal or transfer plasticizer to notes and may cause damage. Caution should be used to avoid storage in materials that are not inert.

COINS and CURRENCY TERM L: NOTE: Purchasers of rare coins or currency through Heritage have available the option of arbitration by the Professional Numismatists Guild (PNG); if an election is not made within ten (10) days of an unresolved dispute, Auctioneer may elect either PNG or A.A.A. Arbitration.

COINS and CURRENCY TERM M: For more information regarding Canadian lots attributed to the Charlton reference guides, please contact: Charlton International, PO Box 820, Station Willowdale B, North York, Ontario M2K 2R1 Canada.

COINS and CURRENCY TERM N: Some of the lots offered herein have been assigned to 1031 Services, Inc. for the purpose of consignor's tax deferred exchange.

COINS and CURRENCY TERM O: Financing. Auctioneer offers various extended payment options to qualified pre-approved persons and companies. The options include Extended Payment Programs (EPP) Flexible Payment Program (FPP) and Dealer Terms. Each program has its specific terms and conditions and such terms and conditions are strictly enforced. Each program has to be executed by the purchaser. Auctioneer reserves the right to alter or deny credit and in such case these auction terms shall control.

For wiring instructions call the Credit department at 877-HERITAGE (437-4824) or e-mail: CreditDept@HA.com

## New York State Auctions Only

Notice as to an Auction in New York City. These Terms and Conditions of Sale are designed to conform to the applicable sections of the New York City Department of Consumer Affairs Rules and Regulations as Amended. This sale is a Public Auction Sale conducted by Heritage Auctioneers & Galleries, Inc. #1364738. The New York City licensed auctioneers are: Samuel Foose 0952360; Robert Korver 1096338; Kathleen Guzman 0762165; Michael J. Sadler 1304630; Scott Peterson 1306933; Andrea Voss 1320558; Nicholas Dawes 1304724; Ed Beardsley 1183220; Bob Merrill 1473403; Paul Minshull 2001161; Fiona Elias 2001163; Brian Nalley 2001162; Jennifer Marsh 2009623; Alissa Ford 2009565, who will conduct the Sale on behalf of itself and Heritage Auctioneers & Galleries, Inc. All lots are subject to: the consignor's rights to bid thereon in accord with these Terms and Conditions of Sale, consignor's option to receive advances on their consignments, and Auctioneer, in its sole discretion, may offer limited extended financing to registered bidders, in accord with Auctioneer's internal credit standards. A registered bidder may inquire whether a lot is subject to an advance or a reserve. Auctioneer has made advances to various consignors in this sale. On lots bearing an estimate, the term refers to a value range placed on an item by the Auctioneer in its sole opinion but the final price is determined by the bidders. Rev 10-6-2014

# HERITAGE AUCTIONS HA.com

Dear Bidder:

We are extremely pleased to present the first of four unprecedented auctions featuring the collection of U.S. Colonials from Donald Groves Partrick. To be held the evening of January 8, 2015 as Session 4 of the Orlando FUN Convention, this memorable sale showcases 355 lots from what is undisputedly among the finest sets of colonial American coins ever assembled. The collection also includes a tremendous group of 1792 U.S. Mint Patterns and coinage of the Confederacy.

The sale leads off with the extraordinary group of 1792 U.S. Mint Patterns – 12 distinct patterns of our earliest federal coinage, a total that exceeds the number of such examples that appeared in the Garrett Collection auctions, the Norweb sales, and the seven examples held in the Smithsonian Institution. These lots are cataloged as numbers 5501 through 5512 in the current auction.

Another "group of 12" commands attention in this sale: a dozen Continental dollars, including (incredibly) two of the four-known silver examples. Seven die varieties in all are represented, in all known metals: the most complete set ever formed. The Continental dollars appear as lots 5834 through 5845 in this catalog.

An equally impressive array of rarities represents early state coinage. The "states series" are led by a fabulous group of Massachusetts silver ... Higley coppers (including six different varieties, including the unique "WHEEL GOES ROUND" copper) ... plus Massachusetts half cents and cents by variety in high grades.

New York coppers include five Confederatio pieces as well as 11 Immune and Immunis Columbia examples and a beautiful set of Nova Eborac coppers. An unrivaled gathering of early Maryland colonials includes the finest known Lord Baltimore Groat, the famous Lord Baltimore Pattern Denarium, and several other unsurpassed Maryland colonials. Collectors of Vermont coppers will find multiple examples (including several Mint State coins) with nearly 100 Vermont pieces represented including each of the rarest Ryder-Richardson varieties.

Several lots are of special interest to specialists in Confederate States of America coinage. The collection includes one of the four known original Confederate half dollars, pedigreed to Jefferson Davis, as well as a Jefferson Davis "dime" also linked to the president of the Confederacy. See Lots 5847 to 5854.

Other Donald Groves Partrick Collection sales are planned in conjunction with the 2015 and 2016 ANA conventions as well as the Tampa FUN event in 2016. We strongly encourage your attendance at these auctions for a once-in-a-lifetime opportunity to view and bid on these exceptional colonial rarities.

Sincerely,

Jim Halperin  
Co-Chairman of the Board

# Don Partrick

## The Consummate Collector

An Appreciation by Jon Hanson

Jon Hanson (front left) seated next to Don Partrick (light sweater) at the December 1968 New Netherlands 60th auction.

I first met Don Partrick while manning the New Netherlands Coin Company bourse table at the GENA convention in the fall of 1966. Don had sought me out at the show, as I had just joined the firm in August of that year assisting at the New Netherlands ANA bourse table.

Don was interested in early American and colonial coinage and sought someone knowledgeable in these fields that would take the time to answer questions, find nice coins reasonable, teach old school conservative grading, and generally assist in building a decent collection of coins. Don was a very busy and highly successful businessman with great energy, working seven days a week and liked me as someone

who could be "on call" to guide him as what to acquire and pay. Shortly after that initial meeting in New York City, Don and I became great friends. Other coins besides colonials were acquired, and a decent collection was gathered. Then one day, the decision was made to sell unwanted federal coins and continue to concentrate on historically significant American colonial coins. I begged him for years to buy early historical American medals, but he just didn't have the time to devote to them as he did his Colonials. So I continued counseling, advising and locating fine coins for him, and what a journey – buying, owning and handling great colonial coins for a collector who would listen and wanted to learn.

With the advent of many of the great collections of the time going on the auction block, such as Taylor, Roper, Garrett, Norweb, etc., and eventually Ford, Don called me one day and stated that he had decided to upgrade everything and go for higher quality and all rarities that either I selected or he liked. So the hunt was on for what arguably has become the finest collection of American colonial coins ever auctioned.

In the mid to latter part of the 1990s, I moved East from Southern California and our friendship continued with the addition of relaxing trips to Don's nature preserve and hunting grounds in upstate New York during the summer months. Don has always been a very energetic and busy guy, famously independent. In fact, one night at the preserve he held up dinner at his lodge for an hour because he wanted to take a walk with me in the woods to talk coins! Coins were truly one of his great passions.

This year marks the 49th year I have been closely associated with Don Partrick, a fine and honorable man with unbelievable energy, high accomplishments, and wonderful philanthropic endeavors. He will go down in numismatic history as one of the greatest American colonial collectors of all time.

# Developing a Collection

## Donald Groves Partrick and His Quest for the Best

### A foreword and Appreciation

During more than 50 years as a serious collector, Donald Groves Partrick succeeded in building the finest cabinet of colonial coins ever assembled. A man of seemingly boundless energy, Don built his collection while running a very successful real estate and development business in his home state of New York. His passion for Early American numismatics, and his tireless quest to obtain the best examples of coins possible, will be evident to all who peruse this catalog. Throughout his life, Don has also generously donated his time and financial resources to business associations, conservation concerns, community facilities, educational institutions, and numismatic organizations.

Don became a member of the American Numismatic Society in 1969, a Fellow of the organization in 1987, and a Life Fellow in 1992. His service on the Board of Trustees began in 1990, and he remains an Honorary Trustee today. He has chaired the standing committee of the ANS Coinage of the Americas Conference and served as President of the ANS (1999-2007). Don has long endeavored to encourage the study of the American numismatics, stating "that one of our priority goals is to make the ANS the premier organization for the U.S. collector" and "continue to seek ways to make numismatics as a whole more accessible to both specialized scholars and the general public."

A generous benefactor of the Society and a charter member of the Augustus B. Sage Society, Don was the "angel" who provided significant funding to acquire the former home of the ANS in Manhattan's financial district; he was honored with a gold medal designed by Eugene Daub to commemorate the move to Fulton Street. Additionally, he endowed the position of North American Curator and established the Donald Groves Fund, which promotes research and writing on early American numismatics.

Don's contributions to the numismatic community were also recognized by the American Numismatic Association, which in 1999 presented him with its Presidential Award. He is also a Life Member of the ANA.

All great collectors form connections that lead them to the rarities they seek. In Don's case, he sought out Jon Hanson, an eager, like-minded young dealer, at the 1966 Great Eastern Numismatic Association convention. This led to a lifelong business and personal relationship. Equally enthusiastic about early American coinage, Jon has been instrumental in assembling the exquisite Partrick Collection. We encourage you to view this unprecedented offering.

Maureen and Stuart Levine, Catalog Editors  
December 2014

Selections from the

**DONALD G. PARTRICK COLLECTION OF  
EXTRAORDINARY UNITED STATES COLONIALS PART I**

Lot 5501

## PATTERNS

Collection	Year	Silver Center Cents (Judd-1 and Judd-2)	Birch Cents (Judd-3 to Judd-6)	Half Dimes (Judd-7 and Judd-8)	Dimes (Judd-9 to Judd-11)	Eagle-on-Globe Quarters (Judd-12 and Judd-13)	Total
Mickley	1867	1	1	1	2	0	5
Seavey	1873	2	2	1	2	0	7
Bashnell	1882	1	1	1	1	3*	7
Parmelee	1890	2	2	2	2	1	9
Lehr (FPL)	1961	2	1	2	1	1	7
Judd	1962	1	2	1	2	1	7
Garrett	1981	2	2	1	2	2*	9
Lauder	1983	2	1	1	1	0	5
Norweb	1988	2	2	1	2	1	8
Smithsonian	2015	2	1	2	1	1	7
Patrick	2015	3	2	1**	4	2	12

\* The Bashnell collection included obverse and reverse surface trial impressions of the Eagle-on-Globe quarter, which are included in this count. These two pieces reappeared in the Garrett sale.

\*\* The Patrick set includes the copper half dime (Judd-8), but not the silver half dime (Judd-7), which is no longer considered a pattern issue.

### 1792 Silver Center Cent, Judd-1, XF45+ United States' First Bimetallic Coin

**5501** 1792 One Cent, Judd-1, Pollock-1 XF45+ NGC. CAC. 67.9 grains. This Silver Center cent begins an unprecedented offering of 1792 pattern coinage. The Partrick collection comprises 12 specimens of that year, exceeding by three the closest competitors. The Act establishing the Mint passed on April 2, 1792, and considerable experimentation with multiple aspects of coining continued for the remainder of that year. The Partrick group details this process more fully than any other previous or existing collection. Bimetallism was one of these early experiments, embodied in the Judd-1 Silver Center cent, which is known to the extent of 14 examples. Appearances of any 1792 patterns demand attention, and even more so when a piece exhibits the quality seen on this choice XF45+ example.

#### Design

Liberty faces right with hair flowing behind. The obverse periphery reads LIBERTY PARENT OF SCIENCE & INDUSTRY, with 1792 just below the bust. The reverse has a wreath tied with a ribbon at the bottom; ONE CENT is within. Around the rim is UNITED STATES OF AMERICA with the fraction 1/100 below. Struck in copper with a silver insert in the center and a reeded edge. Medallic die alignment.

#### Sets of 1792 Coinage

Section 10 of the Coinage Act of April 2, 1792, reads in part "That, upon the said coins respectively, there shall be the following devices and legends....and the year of the coinage." The inclusion of the date places the coin within a historical context and invites a chronological connection with the collector. Birth year coins are ever popular as gifts and have launched many a collector on their journey. The *American Journal of Numismatics* in 1878 wrote of the collector Joseph Mickley, "He was about seventeen years old (say in 1816) when he formed a wish to own a cent, coined in the year of his nativity. He had hard work to find one, as you can readily understand. A good cent of 1799 now brings many dollars." Similarly, other collectors have focused on a single date, not necessarily of their birth year, but for other reasons. Harry X Boosel was fascinated with the wide array of coinage of 1873, and formed a substantial collection that was sold at auction by RARCOA in 1972. John Whitney Walter's collection of 1796 coinage, sold in 1999, extended the concept with the inclusion of the numerous

die varieties of that year. "First year of issue" is a similar theme for type collectors, who might form a collection consisting of a 1793 cent, 1796 dime, 1796 quarter eagle, and so on.

Aside from obvious "stopper" years represented by extreme rarities (the 1804 dollar, the 1885 trade dollar, the 1913 Liberty nickel), 1792 represents the stiffest challenge for collectors of United States coinage by year. The most accessible entry coin, the 1792 silver half disme (Judd-7), is by itself a prized rarity that would be the centerpiece of many collections. From there the pursuit becomes considerably more difficult, requiring not only financial capability but also *opportunity*. Donald G. Partrick accordingly pursued the 1792 coinage for a long period of time, purchasing from auctions and private collections as each rarity became available.

As a result, the present selection of 1792 coinage is unparalleled. Most other collections of 1792s are defined by what *is* included - perhaps a silver half disme, a copper disme, or a low-grade cent. The Partrick collection, unlike any other, is better defined by what is *not* included. The consignor aimed for completeness by Judd variety, and, viewed in that light, only three pieces are absent - the plain edge Birch cent (Judd-3), the G★W.PT. Birch cent (Judd-6), and the silver half disme (Judd-7). Of these three, one is unique (Judd-6) and one is represented by two known (Judd-3). Even beyond the Judd varieties, this collection includes the thick-flan silver disme and the unique Sans Silver Center cent, which are not specifically listed in that reference as separate varieties. No other collection compares. Besting the finest private cabinets by three coins, and the Smithsonian's National Numismatic Collection by five, the current assemblage of 1792 coinage surpasses all previous attempts and rightly claims title to the ultimate date set of United States coinage. The accompanying table summarizes the most important collections of 1792 coinage.

### Early American Views of Bimetallic Coinage

The legislative development of the United States' Mint took root in the 1780s within the Continental Congress. On July 6, 1785, Congress named the dollar as the official "money unit of the United States of America." More important, Congress mandated a "decimal ratio," a progressive idea for the time, and likely influenced by Thomas Jefferson, who sought to unite the young country's system of weights, measures, and coinage. While unsuccessful with respect to weights and measures, as the United States retained the British standards, the infant republic was able to throw off the burden of pounds, shillings, and pence, thereby simplifying monetary calculations for all time. Congress next approached the subject on August 8, 1786 when it mandated coinage standards including denomination and fineness. With the dissolution of the Continental Congress in 1789, these old proposals faded away and the discussion began anew with the advent of the first United States Congress on March 4, 1789, which now operated under the newly approved Constitution.

Coinage was a topic that invited many ideas but little action. Proposing a series of denominations or ideal ratios for gold and silver was easy on paper; actually building a Mint and engaging the requisite equipment and technicians proved considerably more arduous. That did not stop people from weighing in. In 1785 William Barton (nephew of the eventual first Mint Director David Rittenhouse) "humbly submitted to Congress" a plan which proposed free coinage of gold and silver, to be financed by the seigniorage on copper. The plan was wonderful on paper, but in practice the procurement of sufficient copper was problematic. Another offering his viewpoint was the popular patriot Thomas Paine. (His pamphlet *Common Sense* (1776) sold half a million copies, an extraordinary number for a country of several million.) Paine offered his thoughts on bimetallic coinage in a letter to Thomas Jefferson on September 28, 1790:

"The metal convenient for a coin under the silver coin, should not differ more in its value from silver than silver does from gold - and if it differed still less it would be better; but as the relative values now stand, the difference increases where convenience requires it should decrease. But as no such a metal, which convenience requires, exists naturally, the question is whether it will answer to produce it by composition.

"Of compositions, three methods present themselves-1st. Mixing silver and copper in fusion-2d. Plating the copper with silver-3d. Plugging the copper with silver. But against all these there are very capital objections. Wherever there is a want of satisfaction there must necessarily be a want of confidence; and this must always take place in all compounded metals. There is also a decrease in the intrinsic value of metals when compounded; one shilling worth of silver compounded with one shilling worth of copper, the composition is not worth two shillings, or what the metals were worth before they were compounded, because they must again be separated to acquire their utmost value, and this only can be done at a refiner's [sic]. It is not what the coin cost to make, but what the coin is intrinsically worth when made; that only can give it currency in all cases. Plugging copper with silver is the least detrimental to the intrinsic value of the metals, because they are the easiest separated; but in all these cases the value of the silver put into the composition will be so predominant to the value of the copper, that it will be rather a base silver coin than a copper coin."

While Paine considered the idea of bimetallic coppers, the real answer, he thought, was to introduce a lower denomination of silver coin. The lowest silver denomination in the Continental Congress resolution of August 8, 1786 had been a dime. In his letter to Jefferson, Paine suggested an extension to the half dime:

"In England, the lowest silver coin is six-pence, which is equal to twelve coppers, and therefore the recourse to coppers for change, or for the purchase of small articles under the value of six-pence is frequently recurring; but if in America we were to coin silver as low as the twentieth part of a dollar, which would be pieces of five cents, the occasion for coppers would be very much diminished, and such pieces would be nearly of the size of the French silver six sous. I think the policy is in favor of keeping as much silver coin as we can in the country; and this is one of my motives for excluding copper as much as possible. Some denomination under the five cent pieces would still be necessary-but as the occasions would be diminished, a small quantity would be sufficient."

Alexander Hamilton, the Secretary of the Treasury, next approached the subject of bimetallic coinage in his masterful report to Congress on January 28, 1791:

"With regard to the proposed size of the Cent, it is to be confessed, that it is rather greater, than might be wished, if it could, with propriety and safety, be made less; and should the value of Copper continue to decline, as it has done for some time past, it is very questionable, whether it will long remain alone a fit metal for money. This has led to a consideration of the expediency of uniting a small proportion of silver with the copper, in order to be able to lessen the bulk of the inferior coins. For this, there are

precedents in several parts of Europe. In France, the composition, which is called billon, has consisted of one part silver and four parts Copper; according to which proportion a Cent might contain seventeen grains; defraying out of the material the expense of coinage. The convenience of size is a recommendation of such a species of coin, but the Secretary is deterred from proposing it by the apprehension of Counterfeits. The effect of so small a quantity of silver, in, comparatively, so large a quantity of Copper, could easily be imitated by a mixture of other metals of little value, and the temptation to doing it would not be inconsiderable."

Hamilton's essay neatly summarizes the essential problem - the size of the Cent as legislated was heavy and awkward, but alloying with silver invited counterfeits. With these thoughts in mind, the Mint went to work.

### The Silver Center Cent

Among the 1792 patterns, the Judd-1 Silver Center cent is one of the best documented. Henry Voigt's second account book, which covered the period from October 12 to December 31, 1792, contains the first mention of the coin. While the whereabouts of the Voigt volume are currently unknown, Frank Stewart made extracts in 1921 for his landmark *History of the First United States Mint* (1924). On December 17, the coiner Voigt (who was not appointed "Chief Coiner" until January 29 of the following year) wrote in the account book "struck off a few pieces of copper coin." As Voigt normally used the account book to record expenditures, the addition of this comment indicates that he considered the occasion noteworthy. The following day, Thomas Jefferson sent two Silver Center cents to George Washington:

"Th: Jefferson has the honor to send the President 2 Cents made on Voigt's plan, by putting a silver plug worth  $\frac{3}{4}$  of a cent into a copper worth  $\frac{1}{4}$  of a cent. Mr. Rittenhouse is about to make a few by mixing the same plug by fusion with the same quantity of copper. He will then make of copper alone of the same size, and lastly he will make the real cent, as ordered by Congress, four times as big. Specimens of these several ways of making the cent will be delivered to the Committee of Congress now having that subject before them."

"Voigt's plan" seemingly satisfied Hamilton's concerns voiced almost two years previous. It reduced the weight of the coin while not alloying the copper and silver. The *Baltimore Evening Post* commented on December 28, 1792:

"It is proposed by some persons connected with the mint of the United States, in order to make the real value of the copper coinage equal to the nominal, and at the same time, reduce the piece to a convenient size to introduce a silver stud of a certain size in the coin, thro' a hole in its centre, and after this operation to coin it so that the silver should bear part of the impression. The idea is certainly ingenious, and the improvement it is said, is not difficult of execution, nor does it increase the labour in any material degree.

"One objection to this mode of coining, strikes at first view; whether it might not be a temptation to counterfeit, by coining with studs of base white metal. Perhaps, however, the silver saved in this way may not equal the expense of coining, and then the objection falls to the ground."

Although the insertion of the silver plug was claimed to be "not difficult of execution," the practical reality was that each individual cent planchet required additional processing. Congress took matters into its own hands and solved the problem with the Act of January 14, 1793, which decreased the weight of the large cent from 264 to 208 grains. The Act debased the copper coinage but provided financial relief to the Mint in the form of increased seigniorage on the copper cents and half cents.

### Physical Appearance

This Choice XF+ coin is a pleasing specimen of the 18th century Mint. Smooth obverse surfaces surround a well detailed figure of Liberty. The plug is cleanly inserted and the design flows seamlessly between the copper and silver. A few minor marks surround the all-important 1792 date. The strike is slightly off-center and the dentils present more prominently on the upper and right portions. As the dies are medal aligned, the reverse exhibits the same effect with extended dentils on the upper and left sides. The reverse is minimally marked as expected for the grade. The coin is an even brown and gray throughout, and would be most desirable even as a specimen of a later date large cent.

### 1792 Silver Center Cent Roster

The following roster was expanded from earlier work by Scott Rubin, Saul Teichman, Mark Borckardt, and David Stone with the important assistance of Wayne Burt, Stuart Levine, Pete Smith and Joel Orosz.

**1. MS67 Brown PCGS.** Peter Gschwend Collection (Thomas L. Elder, 6/1908), lot 116; Henry Chapman; James W. Ellsworth; purchased by Wayne Raymond and John Work Garrett via Knoedler Galleries in May of 1923; John Work Garrett; Johns Hopkins University; Garrett Collection, Part IV (Bowers and Ruddy, 3/1981), lot 2347; Joel Perlin; Bob Simpson Collection.

**2. MS64 Brown.** R.C.H. Brock Collection; University of Pennsylvania; Philip H. Ward; Charles Dochus; Harry Forman; New Netherlands Coin Company; purchased by the Norwebs on 3/14/1958; Norweb Collection (Bowers and Merena, 11/1988), lot 3392; Americana Sale (Stack's, 1/2002), lot 724; Ed Milas; Marvin Browder; purchased for \$2.5 million and subsequently resold in 2011 by Stuart Levine, Joe O'Connor, and Anthony Terranova; Oliver Jung; ANA Signature (Heritage, 8/2014), lot 5517. Pollock plate coin.

**3. MS63+ Brown NGC.** F.C.C. Boyd; Eric P. Newman (Newman traded the Clinton cent from the Theodore Grand collection for this piece in 1951); Eric P. Newman Numismatic Education Society; Selections From the Eric P. Newman Collection Part IV (Heritage, 5/2014), lot 30426; realized \$1,410,000.

**4. MS61+ Brown NGC.** Possibly Edward Cogan Collection (Edward Cogan, 4/1863), lot 1075, per New Netherlands catalog of 12/1958; Charles Ira Bushnell (S.H. & H. Chapman, 6/1882), lot 1766; Lorin G. Parmelee (New York Coin & Stamp Co., 6/1890), lot 5; Harlan Page Smith (S.H. & H. Chapman, 5/1906), lot 1315; George H. Earle (Henry Chapman, 6/1912), lot 2179; Carl Wurtzbach; Virgil M. Brand; Col. E.H.R. Green; Belden Roach Collection (B. Max Mehl, 2/1944), lot 3111; Will W. Neil Collection (B. Max Mehl, 6/1947), lot 1794; Stockmayer Collection (Stack's, 7/1952), lot 174; Mrs. R. Henry Norweb; Landau Sale (New Netherlands, 12/1958), lot 104; Corrado Romano Collection (Stack's, 6/1987), lot 143; Jay Parrino FPL; Americana Sale (Stack's, 1/1999), lot 143; 65th Anniversary Sale (Stack's, 10/2000), lot 56; Southern Collection; Simpson Collection; Central States Signature (Heritage, 4/2013), lot 4113; Long Beach Signature (Heritage, 9/2014), lot 3007, realized \$705,000. The 1914 ANS Exhibition plate coin; Standard Catalog plate coin; former Guide Book plate coin. The October 2000 Stack's catalog cites an appearance in "Stack's sale of January 3, 1952," but there was no such sale. Scott Rubin suggests this might be a misprint for the Stack's 7/1952 sale listed in the pedigree above.

**5. MS61 Brown PCGS.** Charles Morris (S.H. & H. Chapman, 4/1905), lot 361; James O. Sloss; William Mitkoff; Great Eastern Numismatic Association Sale (Pine Tree, 9/1974), lot 1272a; William T. Anton; private collection; Liberty Collection (Heritage, 4/2012), lot 5403, realized \$1,150,000; Kevin Lipton and Anthony Terranova; Cardinal Foundation. Breen *Encyclopedia* plate coin; former *Guide Book* plate coin. We believe this specimen is earlier from William J. Jenks Collection (W. Elliot Woodward, 9/1880), lot 1383; A. Dohrmann Collection (W. Elliot Woodward, 3/1882), lot 437; Lady of Western New York Collection (W. Elliot Woodward, 2/1887), lot 816.

**6. Mint State.** Thomas Warner (S.H. & H. Chapman, 6/1884), lot 3215; Richard B. Winsor (S.H. & H. Chapman, 12/1895), lot 291; Loye Lauder (William Doyle Galleries, 12/1983), lot 233; Alan Weinberg. Featured on the front cover of Joel Orosz and Leonard Augsburg's *Secret History of the First United States Mint* (2011).

**7. AU.** Robert Coulton Davis (New York Coin & Stamp, 1/1890), lot 1008a; John Story Jenks (Henry Chapman, 12/1921), lot 5569; Waldo Newcomer; F.C.C. Boyd; Lenox R. Lohr; Empire Coin (1961 FPL); River Oaks Collection (Bowers and Ruddy, 11/1976), lot 908; New England Rare Coin Gallery; private sale; Robert Hughes; private collection; Smithsonian Institution. Judd plate coin for the ninth and 10th editions; current *Guide Book* plate coin.

**8. XF45+ NGC.** Bernard Gimelson (5/15/1968); sold for \$9,400 to Donald Groves Partrick. **The present specimen.** Bruce Gimelson, son of Bernard, related that this example was found by a contractor from Doylestown, PA. During a building renovation, a jar of coins was discovered in a wall. Bruce recalled the moment: "My father emptied the jar on his desk and there it was - a Silver Center cent in super condition."

**9. XF.** C.H. Stearns Collection (Mayflower, 12/1966), lot 280; Lester Merkin; Henry P. Kendall.

**10. XF.** Hersch, Levick, Farrell Collections (Thomas Elder, 10/1907), lot 1732; later, Dr. J. Hewitt Judd; Illustrated History (A. Kosoff, 1962), lot 19; Julian Leidman; Eastern Collector. The original Judd plate coin.

**11. VF30 NGC.** Joseph J. Mickley (W. Elliot Woodward, 10/1867), lot 2135; Colonel Mendes I. Cohen (Bangs, Merwin & Co. for Edward Cogan, 10/1875), lot 380; William Sumner Appleton; later, Virgil Brand; Brand-Lichtenfels Collections (Abner Kreisberg and Hans M.F. Schulman, 3/1964), lot 1106; Gibson Collection (Stack's, 11/1974), lot 14; John L. Roper (Stack's, 12/1983), lot 425; Stuart Levine and Anthony Terranova; Bertram Cohen; San Diego Show (Dana Linett, 10/1988), lot 9; Denis Loring; Stack's, privately; David Queller (Lemus Collection); Queller Family Collection (Heritage, 1/2009), lot 1500; offered at fixed prices by Heritage in 2010 and 2011; Philadelphia Signature (Heritage, 8/2012), lot 5015.

**12. VF.** Nigel Willmott; Glendining's Sale (1997); Stu Levine and Anthony Terranova; Larry Stack; Martin Ohgigian; Ohgigian Estate.

**13. Fine 15 PCGS.** George Seavey; Seavey Descriptive Catalog (William Strobridge, 6/1873), lot 842; Lorin G. Parmelee; Virgil M. Brand (Brand Journal number 20765); Armin Brand, per his notebook; 311th Sale (J.C. Morgenthau, 10/1933), lot 78; Floyd Starr; Starr Collection (Stack's, 10/1992), lot 3; Jay Parrino, offered in several fixed price lists in the mid-1990s; unknown dealer intermediaries; Stuart Levine in 2004; purchased by Ed Price on 5/14/2004; Stuart Levine again in 2006; Old West and Franklinton Collections (American Numismatic Rarities, 8/2006), lot 13.

**14. VG10 Details, Scratched ANACS.** A Northern California collector purchased this piece for \$400 in 2006. The coin was offered at a police department auction of unclaimed property. Reported in *Coin World*, January 5, 2009.

#### Additional Auction Appearances

With a single exception, none of the following were plated, and no further information in the catalog descriptions provided help determining provenance.

John K. Wiggin Collection (Edward Cogan, 3/1862), lot 747.

Finotti Collection (W. Elliot Woodward, 11/1862), lot 1528.

Benjamin Haines Collection (Bangs, Merwin & Co., 1/1863), lot 780.

John W. Haseltine (10/1872), lot 434.

George Massamore (11/1883), lot 579 as Uncirculated.

Heman Ely Collection (W. Elliot Woodward, 1/1884), lot 444.

Matthews Collection (W. Elliot Woodward, 12/1885), lot 2120.

Woodside Collection (New York Coin and Stamp Co., 4/1892), lot 1. The Silver Center cent is plated (obverse only) and its appearance is bizarre, unlike anything else that we have seen. It is almost certainly a false piece.

H.G. Brown Collection (Lyman H. Low, 10/1904), lot 209.

Poillon, Lee, and Ralston Collections (Thomas L. Elder, 10/1926), lot 1436.

Lenz, Sloane, and Chapman Collections (Thomas Elder, 1/1936), lot 2968.

1941 ANA Sale (Ira Reed, 8/1941), lot 77.

12th Sale (Celina Coin Co., 2/1945), lot 2022.

Ohio State Numismatic Society Convention Sale (Celina Coin Co., 10/1949), lot 591.

#### Other Reported Appearances

Judson Brenner exhibited a Silver Center cent at the 1916 ANA Convention.

B. Max Mehl advertised an example as part of the Fred Joy Collection (which he had just acquired) on page 599 of the November 1925 issue of *The Numismatist*. PCGS# 11001

A crowd gathers at the demolition of the front building of the first United States Mint at 37-39 N. Seventh Street. Photograph by Frank H. Stewart, 1911.

### 1792 Silver Center Cent, Judd-1a, MS62 Red and Brown Unique Sans Silver Example

**5502 1792 One Cent, Judd-1a, Pollock-1a, MS62 Red and Brown NGC.** 72.3 grains. Numismatics constantly offers new discoveries, and part of the excitement is that no one knows when or how they will arrive. The first Mint of the United States still has secrets to reveal, even two hundred years after its founding. This unique Sans Silver example of the Silver Center cent first came to light in 1993. It was discovered by Sil DiGenova, Stuart Levine, and Anthony Terranova, before making its initial public appearance at auction in 1995. Twenty years later, the present sale marks only the second auction appearance of this unique coin.

#### Design

Liberty faces right with hair flowing behind. The obverse periphery reads LIBERTY PARENT OF SCIENCE & INDUSTRY, with 1792 just below the bust. The reverse has a wreath tied with a ribbon at the bottom; ONE CENT is within. Around the rim is UNITED STATES OF AMERICA with the fraction 1/100 below. Struck in copper without a plug in the center.

#### The Frank H. Stewart Silver Center Cent Planchets

In 1907, the electrical supply dealer Frank H. Stewart purchased the first United States Mint property at 37 and 39 N. Seventh Street in downtown Philadelphia. Stewart had been operating out of the adjacent space at 35 N. Seventh since the 1890s, and the availability of the neighboring parcel was fortuitous, coming just as Stewart's business blossomed and required a larger footprint. More fortunate for numismatics was the fact that Stewart immediately grasped the history of the moment. And, while the inexorable growth of the electrical business demanded physical changes to the property, Stewart attempted to preserve what history could be unearthed on the site. Although he failed to save the actual buildings, which were offered to the City of Philadelphia without success, he did preserve and document coins and relics.

The site had been unused as a Mint since 1833, but Stewart approached the demolition with the expectation of finding *something*. He even dreamt of discovering an 1804 dollar; capturing Stewart's imagination was the Stickney example, sold in Philadelphia in June 1907 for \$3,600. Of course, at this time it was not understood that the 1804 dollar had actually been struck in the second Mint (1834), as this was not revealed until Eric P. Newman and Kenneth R. Bressett's *The Fantastic 1804 Dollar* (1962). Stewart thus failed to catch the King of American coins, but still excavated a few treasures.

The demolition site was open, and, although Stewart paid his own workmen for archaeological finds, passersby were able to help themselves. Stewart explained in *History of the First United States Mint* (1924):

"Every noontime, while the workmen were eating their luncheon, a crowd of boys would search the dirt for relics, and the finds made by these boys will unquestionably be saved by them. Scores of pieces of iron, brick, stone and wood were taken away and curiosity was unhampered to the fullest extent. I stood around as the work progressed for a period of four weeks and when a coin or planchet was found I got it by liberal use of modern money unquestioned at the grocery store."

Among the discoveries were a 1795 copper dime, an 1803 copper half eagle, and a half dollar reverse die that Stewart surrendered to the Secret Service. He recovered numerous planchets of multiple denominations, including two holed pieces thought to be planchets for silver center cents. Stewart bequeathed his collection to the City of Philadelphia and today it is on permanent loan to Independence National Historical Park, which has in turn loaned the holed planchets and other pieces to the United States Mint for exhibition in the Mint gallery. The two pieces identified as Silver Center cent planchets are catalogued in the Independence Hall collection as follows.

**1. Independence National Historical Park inventory no. 9249.** 5.6 grams (86.4 grains), diameter 22mm, thickness 2mm. Plain edge.

**2. Independence National Historical Park inventory no. 9250.** 4.9 grams (75.6 grains), diameter 21mm, thickness 2mm. Partially reeded edge.

The weights and diameters of these planchets are inconsistent with the known Silver Cent cents. The Silver Center cent in the Newman IV sale (Heritage, 5/2014) was 23mm. The present coin, which exhibits exceptionally long dentils, is 29mm. An intriguing possibility is that the Independence Hall specimens were intended for experimentation as thick planchets, similar to the thick flan 1792 silver disme (Judd-9a) in this sale, or the ANS example of 1792 Eagle-on-Globe quarter (Judd-13). In any case, the two planchets are highly desirable products of the first Mint. J. C. Mitchelson, who donated a significant pattern collection to the Connecticut State Library, offered Stewart a \$50 slug in return for one of the planchets. Stewart, ever the local historian, declined on the basis that the objects should remain in Philadelphia.

### The Unique Sans Silver Example

The present coin does not have a silver insert and may have been a trial striking before making the Silver Center pieces. The center opening is a V-shaped cross section, with a larger entrance on the obverse and smaller exit on the reverse. The interior of the opening shows evidence of being compressed during striking and as a result is smaller than that of the specimens struck with the silver plug in place. The coin exhibits a vertically reeded edge and the die alignment is 360 degrees. The NGC composition analysis is 99% copper.

### 1792 Sans Silver Cent (Judd-1a) Roster

**1. MS62 Red and Brown NGC.** Philadelphia estate, found in a piece of furniture; Silvano DiGenova and Stuart Levine; Anthony Terranova, 1993; Stack's (3/1995), lot 1400; Donald Groves Partrick; **the present coin.** In his 1984 provenance study, published in *America's Copper Coinage, 1783-1857*, Scott Rubin mentions Thomas Elder's sale of October 1926, lot 1436, where a piece was described as "1792. Pattern for Silver Centre Cent (freak)." This may represent an earlier appearance of this coin. Terranova exhibited the coin at the July 9, 1994 Early American Coppers meeting in Somerset, NJ.

### Physical Appearance

This coin is exceptionally well struck, and Liberty's hair is strongly detailed. Indeed, this example may well demonstrate the finest strike among all known Judd-1 and Judd-2 cents. The surfaces are light brown with significant mint red remaining. The right obverse field exhibits light hairlines. On the reverse, the leaf veins further demonstrate the strong strike. Reverse color is similar to the obverse, with a few darker areas scattered about the lettering in UNITED STATES. The coin presents long dentils, particularly on the left and upper portions of the reverse. Any 18th century United States copper coin with remaining red draws immediate attention; that this coin is a unique pattern of 1792 only serves to highlight the present combination of rarity, condition, and desirability. PCGS# 11002

## 1792 Fusible Alloy Cent, Judd-2, XF40 Tied For Finest Available Example

**5503 1792 One Cent, Judd-2, Pollock-2 XF40 NGC.** 63.2 grains. The December 18, 1792 correspondence from Thomas Jefferson to George Washington outlined a series of four experiments with the one-cent piece. Jefferson transmitted two Silver Center cents with the letter and detailed plans for the remaining three formats. The Mint would first fuse together copper and silver in a coin using the same amount of copper as the Silver Center cent, 66 grains by statute. Then, the Mint would prepare a coin of the exact same size, but using copper only with no silver. Finally, the Mint would prepare cents of the legislated weight (264 grains), “four times as big” as the others, according to Jefferson. The Judd-2 designation applies to the second and third experiments, small format cents without the silver plug.

### The Fusible Alloy (Judd-2) Cent

While the Silver Center cents of 1792 bear a distinctive plug, the Fusible Alloy pieces are at first glance less remarkable. To the average American of the 18th century, they would have appeared as simply another type of American cent. As several major types appeared on the scene in 1793 (Chain, Wreath, and Liberty Cap), the design of the 1792 Fusible Alloy cent would not have seemed so out of place in a commerce just getting familiar with American coinage. Far more distinctive was the weight of the coin. If anything, a 1792 Fusible Alloy cent would have been disdained as a light copper, and someone who received it in change might be glad to be rid of it. The grades of the surviving pieces indicate that most escaped into circulation. The population profile contrasts strongly with that of the Silver Center cents. Nearly half of the Silver Center cents survive in uncirculated condition. Only one of the Fusible Alloy pieces has claims to Mint State, and that piece is in the Smithsonian, possibly plucked early on by Adam Eckfeldt for the Mint Cabinet. The December 18, 1792 letter from Jefferson to Washington places two of the Silver Center pieces in George Washington’s hands, and it is likely these were preserved by Washington or some other dignitary. Similarly, many other Silver Center cents were almost certainly set aside as keepsakes at the time of issue.

No similar documentation exists for the Fusible Alloy cents, and the remaining specimens suggest they were not initially distributed with the same fanfare as the Silver Center cents. Apart from the sole Mint state example in the National Numismatic Collection, all other Fusible Alloy cents range in grade from Good to Extremely Fine. Most of these circulated until being pulled from change as collectible examples. The present coin, at the XF40 level, is tied for highest graded among the available examples. It is noteworthy that the Partrick collection of 1792 patterns contains not only unique pieces, but also combines condition rarity, as exemplified by the present coin. Partrick’s 1792 collection began with the acquisition of the Silver Center cent in 1968, and he spurned multiple opportunities to acquire a lower graded Fusible Alloy cent. The lofty grade of this specimen testifies to Partrick’s commitment to the highest attainable quality.

The Fusible Alloy cents are divided into two types - those made with an alloy of copper and silver, and those made from pure copper. For those containing silver, the proposed proportion was minimal. The Silver Center cent included a plug of silver worth three-fourths of a cent, or about 2.8 grains of silver, in addition to copper valued at one-fourth of a cent, or 66 grains. Given the small amount of silver, a fine test is required to detect its presence in a particular specimen. The composition of most examples is unknown. Testing status is known for four pieces:

- 1. XF40 NGC.** NGC measured this coin prior to encapsulation and reported a composition of 99% copper. **The present coin.**
- 2. Fine 15 NGC.** Lauder collection (William Doyle, 12/1983). The FUN Signature catalog (Heritage, 1/2012) reported the results of energy-dispersive X-ray fluorescence testing. The testing indicated 1%-1.3% silver content. However, the margin of error with this test was 1.8%, and the results were thus inconclusive.
- 3. Good.** Harmer Rooke sale (11/1969). Per the Norweb III catalog (Bowers and Merena, 11/1988), X-ray fluorescence determined this coin to be of the fusible alloy type. The precise silver content was not stated.
- 4. Good.** ANA Museum. The ANA tested this coin for Michael Hodder during the preparation of the Norweb III catalog and did not detect the presence of silver.

Clearly, much testing remains to be done. Comprehensive testing of all pieces will reveal information about the early Mint’s capability to refine and alloy copper and silver, and may shed light on how closely the Mint adhered to its stated plan to strike pieces in both fusible alloy and in copper. Regardless of the composition of any specific piece, the experimentation of December 1792 was short lived, for in January 1793, Congress lowered the weight of the cent from 264 to 208 grains. That standard existed until December 1795 when the weight was again reduced, to 168 grains. The Mint was concerned about rising copper prices, as reported in the May 1911 *Numismatist*:

“When Congress established its first mint in 1792, the original Coinage Act provided that the copper cent should weigh 264 grains, but before any coins of this weight were struck [in 1793], Congress found it desirable, in January of the next year, 1793, to reduce the weight of the cent to 208 grains. According to tradition in mint circles, copper bullion became worth in the neighborhood of 35 cents per pound at this time, and as it only required 33.65 cent pieces to weigh a pound, the Treasury authorities were confronted with the fact that their new coins were worth more than their face value as bullion, and Congress was again required to reduce the weight of the cent to 168 grains each, which gave 41.66 pieces to the avoirdupois pound. The Act placed the face value of the coins below the bullion value for the time being, but subsequently the price of copper advanced, and people who wanted small amounts of copper for mechanical use found it more economical to melt up copper cents for the purpose than to purchase an equal weight of copper bullion. The records do show that for the first twenty-five years of the coinage of the coppers the cost of the metal to the Government averaged about 30 cents per pound.”

With the legislated weight reduced, there was no further need to continue the experiments with silver-alloyed cents. Today, the remaining Silver Center and Fusible Alloy pieces document the struggle of the early Mint to deliver a practical coin that at the same time provided full value in terms of bullion content. The struggle to balance bullion values with the needs of commerce continues to the present era, as the intrinsic values of the nickel and cent represent a substantial portion of their face value, and, in the case of pre-1983 Lincoln cents, exceeds the face value by a factor of two. The Silver Center and Fusible Alloy cents demonstrate the early Mint's best efforts to address a timeless problem.

### 1792 Fusible Alloy Cent (Judd-2) Roster

- 1. MS63 Uncertified.** A specimen in the National Numismatic Collection, Smithsonian Institution, inventory number 1985.0441.1898, formerly in the Mint Cabinet. Pictured on page 19 of *The History of the National Numismatic Collections* by Vladimir Clain-Stefanelli. Probably the finest known. The Adams-Woodin plate coin and the plate coin for Judd's *United States Pattern Coins* 1st through 7th editions.
- 2. XF40 Uncertified.** Lorin G. Parmelee, purchased for \$110 prior to 1886; Parmelee Collection (New York Coin and Stamp, 6/1890), lot 6, realized \$37 to Charles Steigerwalt; Vigil Brand; purchased by the Norwebs on January 11, 1937 via B. Max Mehl; Norweb Collection, Part III (Bowers and Merena, 11/1988), lot 3393, realized \$35,200.
- 3. XF40 NGC.** George Seavey; Seavey Descriptive Catalog (William Strobridge, 6/1873), lot 841, not sold, as Lorin G. Parmelee purchased the collection intact; Lorin G. Parmelee; sold to Dr. Maris sometime before 1886, as related in correspondence between H.P. Newlin and T. Harrison Garrett dated June 30, 1886; Dr. Edward Maris Collection (Harlan Page Smith, 6/1886), lot 146, realized \$67.50; T. Harrison Garrett; Robert Garrett; John Work Garrett; Johns Hopkins University; Garrett Collection, Part IV (Bowers and Ruddy, 3/1981), lot 2348; Donald Groves Partrick; **the present coin.**
- 4. VF30 PCGS.** Wolcott Family, possibly preserved by the family since 1792, surfaced at the 2004 ANA Convention; Pre-Long Beach Auction (Ira and Larry Goldberg, 2/2005), lot 806, realized \$437,000; Donna Levin and Denis Loring; Madison Collection (Heritage, 1/2008), lot 3462, realized \$603,750, Legend Numismatics, Bob Simpson Collection.
- 5. VF Uncertified.** Fewsmith Cabinet (Ebenezer Locke Mason, 10/1870), lot 1140, realized \$41 to William Sumner Appleton, Massachusetts Historical Society via Appleton's bequest in 1905, cataloged in that collection in the 1920s but not traced since. The Crosby plate coin, Plate X, no. 22.
- 6. Fine 15 NGC.** Loye Lauder Collection (William Doyle Galleries, 12/1983), lot 234; Dana Linett, sold for \$15,000 in 1983; David Henderson; *Rare Coin Review* number 53, October 1984, listed for \$24,750; Benson Collection Part I (Ira and Larry Goldberg, 2/2001), lot 151, realized \$57,500; Old West and Franklinton Collection (American Numismatic Rarities, 8/2006), lot 14, realized \$218,500; Southern Collection; Simpson Collection; Laura Sperber; John Albanese; Al Pinkall / Gold Rarities; FUN Signature (Heritage, 1/2012), lot 3401, realized \$299,000.
- 7. Good-VG Uncertified.** Century Sale (Paramount, 4/1965), lot 50, realized \$1,050; *Rare Coin Review* numbers 18, 19, and 20, offered at \$14,950; later offered by Douglas Robbins, Inc. at \$37,500, *Coin World* ad on December 4, 1974; Washington, D.C. Sale (Pine Tree Auctions, 2/1975), lot 59; American Numismatic Association.
- 8. Good-VG Porous, Uncertified.** Harmer-Rooke in November 1969; Anton collection.
- 9. Net Good, Genuine PCGS.** Major Lenox Lohr Collection; offered in the Empire Coin Company's fixed price list in 1961 at \$3,750; River Oaks and Krugjohann Collections (Bowers and Ruddy, 11/1976), lot 909; Public Auction Sale (Stack's, 1/1987), lot 476; Rarities Night Auction (Stack's Bowers, 8/2013), lot 4017, realized \$70,500; also possibly the coin in the Belknap / Martin Collection (Thomas Elder, 10/1908), lot 617, per Stack's.

### Other coins:

**ANS:** Saul Teichman, Alan Weinberg, and John Dannreuther examined the ANS coin (ANS accession number 1956.163.25) that was included in the roster presented in our January 2012 (FUN Signature) catalog. This example exhibits a cracked obverse die and a plain edge, whereas other Judd-2s were struck with reeded edges. The ANS coin appears to be struck or cast from copy dies, using the Norweb coin as a host.

### Physical Appearance

This coin exhibits pleasing medium brown color with lighter highlights in the protected areas of the lettering. Some strike weakness is evident, particularly in the lower portion of Liberty's hair and within the reverse wreath. There is an arcing line, possibly a planchet cutter mark, which originates in the obverse right field, exits the rim at P of PARENT, and continues on the reverse through NIT of UNITED. The overall eye appeal is good with hints of original color around Liberty's hairline, nose, and lips. PCGS# 11004

Lot 5504

## 1792 Birch Cent, Judd-4, MS65 ★ Red and Brown The Finest Known

**5504 1792 Birch Cent, Judd-4, Pollock-5 MS65 ★ Red and Brown NGC. CAC.** 220.8 grains. From the famed Garrett collection, this Gem Uncirculated specimen is a wonder to the eye, a coin that should not exist. Without doubt set aside at the time of issue, careful storage has preserved to full effect spectacular color and prooflike surfaces. Choosing the most desirable specimen of the Partrick 1792 pattern set would be an equally pleasant and difficult task, and this coin would be a leading contender.

### The 1792 Birch Cents

The 1792 Birch cents are among the most enigmatic of the 1792 pattern issues. Conflicting and ambiguous data surround the identity of the engraver (discussed in the next lot), the chronology of the striking, and their place within the legislative history of the Mint. The story begins with the unique Judd-6, the Birch cent that features the reverse inscription G★W.P.T., an abbreviated form of “George Washington President.” The thought of depicting Washington on the coinage of the infant republic was raised as early as 1789, in a letter from the English coiner Matthew Boulton to John H. Mitchell. Boulton was interested in executing the United States coinage on a contract basis, with Mitchell acting as a liaison to the federal government. Boulton wrote on November 25, 1789:

“It will be also necessary that you (in conjunction with General Washington or such persons as may be appointed) fix on a proper device and proper inscription. I saw a design for an American half penny with a sun dial on one side, with a motto, ‘mind your business,’ and on the other a chain with 13 links [no doubt referring to the Fugio cent]. This device is easily copied by a moderate artist; but if there was on one side the head of General Washington, or a beautiful female figure representing in proper attributes the 13 United States, it would not only be a handsomer piece of money but it would be more difficult to copy, particularly if an inscription was struck upon the edge.”

In conveying Boulton’s message to South Carolina congressman Thomas Tudor Tucker, Mitchell added that each of the 13 reverse chain links should encircle the Coat of Arms for its respective state. Mitchell may have been politically connected but clearly did not understand the intricacies of die engraving. In any event, Boulton did not receive the much-coveted federal coinage contract, as Thomas Jefferson considered construction of the Mint an important symbol of sovereignty. But the idea of honoring the President on the nation’s coinage persisted. The Hancock and Getz pieces of 1791 and 1792, presumably issued as samples in pursuit of a federal contract (similar to Boulton’s overtures), all featured an obverse bust of George Washington with some variation of the inscription WASHINGTON PRESIDENT.

The idea of using Washington’s portrait on the coinage was not without controversy. As the Mint Act worked its way through the second Congress (1791-1793), the House erupted over the issue on March 24, 1792. Sadly, the full debate was not transcribed for posterity, but an extract from the *Federal Gazette* of March 27 captured some of the tension:

“Mr. Livermore did not know what gentlemen would be at, by making such a rout about this Liberty; was it the liberty of a bear broke loose from the chain meant to express - a savage freedom, wild as that of the Indians? He was for peace and good government, and he knew of no emblem so proper to express this, as the head of the President. Mr. Niles suggested the idea of adopting emblems properly expressive of the two great interests of the United States, agriculture and commerce - a plough and a ship. Mr. Gerry was witty upon Mr. Niles, and asked whether a figure half man half fish, was his object? Mr. Mercer took notice of the irregularity used in this debate, in naming the President so often - in the British Parliament it was a rule, not to bring the King’s name into any debate - he was severe on Mr. Livermore for attempting to throw any reflections on Mr. Page, who had been the first to move for the amendment in the bill, and Mr. Seney particularly noticed the impropriety of introducing gospel wit, instead of argument; he thought it very disrespectful conduct towards the whole house...he further remarked that it had been called a trivial matter, yet those who call it so, have protracted the debate for two days...”

Within a few days, the House and Senate settled on an obverse of Liberty instead of using the President’s portrait. The question of whether a sitting President should sign an Act authorizing the use of his own image appears to have been an influential idea in the debate. The intense emotion surrounding this issue suggests that the Judd-6 G★W.P.T. Birch cent was struck before the April 2nd passage of the Mint Act. Jefferson’s letter to George Washington on October 15, 1792 may further date the striking of the Birch cents. Jefferson, in preparing a draft for a Presidential address, wrote: “There has been also a small beginning in the coinage of half dismes *and cents* [italics added]; the want of small coins in circulation calling our first attentions to them.” Although Washington excised the words “and cents” in his address to Congress on November 6, Jefferson’s language indicates an intention to first work on the smaller denominations.

An alternate view is that the Birch cents were produced as part of the cent experiments of December 1792, outlined in Jefferson’s letter to Washington on December 18. Jefferson mentioned the Silver Center cents (Judd-1), the Fusible Alloy pieces (Judd-2), and finally “the real cent, as ordered by Congress, four times as big.” Were the Birch cents the “real cents?” And if so, then what were the cents referred to by Jefferson in October? An interesting possibility is that the Birch cents may be the answer to both questions. The weights of the two known Judd-5 (one star edge) Birch cents are 262.2 and 240.6 grains. The lighter (Lauder) coin exhibits considerable wear and was no doubt heavier at the time of striking. These two coins appear to have been struck to the 264 grain standard legislated by the Mint Act of April 2, 1792. The reported weights of the Judd-4 (two star edge) coins are 220.8 (the present coin), 209.25, 206.3, 193, 218.3, 216.8, and 200 grains, with an overall average of 209.2 grains. These are more

consistent with the 208-grain standard set by the Act of January 14, 1793 (this bill had been introduced into Congress on December 31, 1792). In this scenario, the Judd-6 G★W.PT. Birch cent would have been struck sometime prior to March, and then later paired with a new reverse die for the remaining Birch cents. Finally, the emerging 208-grain standard would have been anticipated by Rittenhouse and substituted for the then-current value of 264 grains, with a second star distinguishing the lighter planchets.

### The David Rittenhouse Pedigree

The records of the Garrett collection included a notation that the present coin, purchased from the Ellsworth collection in 1923, was pedigreed to David Rittenhouse, the first Director of the United States Mint. Frank H. Stewart's *History of the First United States Mint* (1924) discussed a group of 1792 half dismes, one of which was in the possession of George S. Gerhard, said to have descended through the Rittenhouse family. The Rittenhouse pedigree was further mentioned in Henry Chapman's sale of October 1919. Chapman cataloged lot 21, a 1792 half dime, and wrote "This specimen has an interesting history, being one of four that belonged to David Rittenhouse, the astronomer and first director of the U.S. Mint, 1792-1795, and has never been out of the family until now." It thus appears that Rittenhouse preserved a small group of 1792 patterns including several half dismes, a Birch cent, and possibly other pieces. A finer provenance can hardly be imagined.

### 1792 Birch Cent (Judd-4) Roster

**1. MS65 ★ Red and Brown NGC.** 220.8 grains. David Rittenhouse; later, James W. Ellsworth; purchased by Wayte Raymond and John Work Garrett via Knoedler Galleries in May of 1923; John Work Garrett; Johns Hopkins University; Garrett Collection, Part IV (Bowers and Ruddy, 3/1981), lot 2349; Donald Groves Partrick; **the present specimen.**

**2. AU58 PCGS.** 209.25 grains. Charles Ira Bushnell (S.H. & H. Chapman, 6/1882), lot 1763; Lorin G. Parmelee (New York Coin and Stamp, 6/1890), lot 7; John Story Jenks (Henry Chapman, 12/1921), lot 5571; Col. E. H. R. Green; Stack's Spring 1949 Special Price List; Stockmayer (Stack's, 7/1952), lot 175; Kreisberg-Schulman (4/1959), lot 1166; Kendall Foundation. Exhibited at the Daytona Beach Numismatic Club by Kirk Adams, per *The Numismatist*, January, 1953. There are two small toning spots at Liberty's temple.

**3. VF.** 206.3 grains. Richardson-Moore (Beebe's ANA Sale, 8/1955), lot 1421; Hollinbeck-Kagin's MANA Sale (11/1973), lot 1373; later, Stuart Levine; Anthony Terranova; Joseph Lasser; Colonial Williamsburg Foundation accession #2004-38. There is a toning spot on Liberty's cheek, and another directly in front of Liberty's eye.

**4. VF.** 218.3 grains. Stack's (5/1998), lot 107. There is a reverse scratch running from the top of the fraction to A in STATES.

**5. VF.** 216.8 grains. George F. Seavey (W.H. Strobridge, 6/1873), lot 843; Lorin G. Parmelee; Virgil M. Brand; B. Max Mehl (private sale, 1/1937); Norweb Collection (Bowers and Merena, 11/1988), lot 3394; Harvey and Larry Stack; Smithsonian Institution catalog no. 1993.0532.001. This coin exhibits an obverse scratch from Liberty's ear to nose.

**6. Fine-VF details, ANACS Genuine.** 200 grains. Dr. J. Hewitt Judd (Kosoff *Illustrated History*, 1962), lot 11; John L. Roper, 2nd (Stack's 12/1983), lot 426; Stack's (12/1984), lot 611; Dana Linett (10/1988), lot 10. The N in ONE is weak, all other letters in ONE CENT are clear.

**7. Fine/Good.** Arnold Perl (Stack's, 12/1969), lot 604; Bowers & Ruddy *Rare Coin Review* nos. 27-32; Roy Harte (Bowers & Ruddy, 11/1977), lot 2070; Wilfred Helwig (Bowers & Ruddy, 2/1979), lot 1539. The reverse is heavily worn with ONE CENT indistinguishable.

### Other Appearances

**VF.** 193 grains. William R. Sieck (Bowers & Ruddy, 7/1981), lot 2730. A near vertical mark on the reverse extends upward from E in ONE to the lower edge of the wreath. This coin was recently submitted to NGC, whose opinion was questionable authenticity.

### Physical Appearance

Smooth, prooflike surfaces highlight this coin, the epitome of the 1792 pattern coinage. LIBERTY is prominently centered above the portrait, the most aesthetically pleasing arrangement within the 1792 pattern series. The lettered edge bears the inscription TO BE ESTEEMED \* BE USEFUL \*, while BIRCH is inscribed on the neck truncation. The die alignment approaches medal turn at 330 degrees. The protected areas within the hair and lettering preserve generous amounts of original red. There are a few trivial marks in the right obverse field, none inconsistent with the Gem Uncirculated designation. Liberty's cheek is clean. The overall appearance is outstanding and the importance of the current offering cannot be overemphasized. From the birth of the nation's Mint, with a provenance to the first Mint Director, this extraordinarily preserved treasure is a highlight of the current sale. PCGS# 11012

Lot 5505

### 1792 Birch Cent, Judd-5, MS61 Brown Finer of Only Two Pieces Known

**5505 1792 Birch Cent, Judd-5, Pollock-6 MS61 Brown NGC.** 262.2 grains. Struck to the weight standard of the April 2, 1792 Mint Act, this high grade Birch cent is by far the finer of the two known specimens of this variety. Once again, the Partrick collection combines ultra-rarity with the highest quality that can be attained for the issue.

#### The Birch Cent Engraver

The identity of the engraver Birch is one of the oldest riddles in American numismatics. For that matter, none of the engravers of the 1792 patterns are known with much certainty, with the exception of the Eagle-on-Globe quarters (Judd-12 and Judd-13), for which there is evidence associated with the artist Joseph Wright. The prominent clue on the truncation of Liberty, BIRCH, should ostensibly resolve the issue for the Birch cents, but, even after 150 years of numismatic investigation, the mystery remains. A longstanding speculation, and a natural guess, has been the miniature painter and enamellist William Russell Birch (1755-1834).

Birch was a socially connected painter in Philadelphia especially known for portrait enamels of Washington based on the iconic Gilbert Stuart painting. The Historical Society of Pennsylvania holds the manuscript of Birch's autobiography, and in 2011 this document was published in *William Birch: Picturing the American Scene*. Unfortunately, Birch did not emigrate from Britain to the United States until October 1794. Carl Carlson, writing in the March 1982 *Numismatist*, was aware of the late emigration date but suggested that Birch made one or more visits to the United States in 1792.

Birch's autobiography argues against this. Although coverage of the period from 1791 to 1794 is thin, there is no discussion of the Mint in Philadelphia or die engraving. Furthermore, Birch's autobiography discusses letters of recommendation prior to the 1794 voyage. Had Birch already traveled in the United States and established contacts at the Mint, these would have been unnecessary. Birch did carry one letter of recommendation from the celebrated painter Benjamin West and this was sufficient to secure his initial employment in Philadelphia. Birch's first patron in America was William Bingham, whose wife, Anne Willing Bingham, has traditionally been cited as the model for the 1796 half dollar. (Researcher R. W. Julian disagrees with this idea and argues that the choice of Anne Willing Bingham, a Federalist ally of Washington, would have been politically inflammatory.)

William Birch seems to have been in the right place at the wrong time. But the more convincing case against Birch is found in his overall portfolio. Birch simply was not involved in the plastic arts. He painted, executed enamels, published collections of print engravings, and eventually settled into the occupation of landscape architect. In this capacity he designed the estates and gardens of "country seats," properties created by American elites to escape the bustle of nearby cities. If William Russell Birch had any involvement with the Birch cents, it was an isolated incident that escaped his autobiography.

Speculation has also fallen on Birch's son Thomas Birch (1779-1851). Thomas Birch was an accomplished marine painter, but placing him in Philadelphia, as a 13-year old engraving the Birch cent dies, stretches the known facts beyond a credible level.

In the December 2012 *Numismatist*, R. W. Julian noted a "Bob Birch" in the expense records of the Chief Coiner, Henry Voigt, for 1793. The payments, several dollars in total, are "on account," "for services," and "for medicine," suggesting that Birch was in some way connected with the care of the horses used to operate the rolling mill. Indeed, the July 20th entry, for one dollar ("Bob Birch on account"), is followed immediately by the July 22nd entry, for eight cents, "Ferriage for the hostler [horse groom or stableman]." The Birch entries were duly recorded and then later crossed out on the final quarterly accounts, for reasons unknown. This places a Birch in the Mint but says nothing about engraving dies in 1792.

Philadelphia city directories reveal only a Mathias Birch (alternately rendered "Matthew Burch"), "ship joiner" during the period of interest. From these scant records in the 1790s, the record is silent on the identity of Birch until 1843. In that year, Jonas McClintock, melter and refiner at the Mint, wrote the following in reference to 1791 and 1792 Washington cents, in the *Pittsburgh Morning Chronicle*:

"...Mr. Ino. Harper, (an extensive manufacturer of saws), then located on the corner of Sixth and Cherry streets, caused dies to be engraved under the direction of Mr. Robt. Birch, and which were it is believed, executed, by a German artist in his employment, with the exception of the lettering, which in all probability was done by himself."

McClintock (1808-1879) was almost certainly reciting oral history, and his most likely source was the retired Chief Coiner Adam Eckfeldt, who maintained an office at the Mint until his death in 1852. McClintock (or Eckfeldt) was mistaken on the matter of the 1791 Washington cents, as R. W. Julian, writing in *Seaby's Coin and Medal Bulletin* (October and November, 1962), demonstrated these originated in Birmingham, England, not Philadelphia. That aside, "Robert Birch" now becomes a possible identity for the enigmatic Birch. Although McClintock did not specifically mention the Birch cents, Philadelphia was a small town, and likely supported only a single Birch in the die-sinking business.

Don Taxay, in *The U.S. Mint and Coinage* (1966) identified a "B. Birch" working out of New York in the 1780s:

"Birch had evidently come to America from England after the Revolution. On November 25, 1784, he advertised his work in the New York Packet as follows:

'Likenesses (simply imitative of the originals) are painted in crayons, at one guinea each; with elegant oval frames included. Seals and Copperplates, Cyphers, Crests, Toys, Trifles, &c. Engraved. Hair Devices set in Rings, Locketts, &c. Watches Repaired: And any wheel, Arbor, Pevot, Spring, Cock, Slide, Figure-piece, verge, &c. made new and fitted. Watch glasses at one shilling each, and a quantity to be sold cheap for ready cash. Any curious Punch or Instrument made in steel, iron brass, &c. By B. Birch, from London.'

Note that "Robert Birch" is not specifically identified in the Packet, only "B. Birch." Taxay suggests the name "Robert 'Bob' Birch," and apparently felt that any qualified artisan with a closely matching name was a possibility. Taxay's suggestion is plausible but far from confirmed. Following Taxay, Carl Carlson took the next stab at identifying Birch in the March 1982 *Numismatist*. Carlson centered on William Russell Birch and apparently did not have access to the Birch autobiography discussed above. From there the trail stops and awaits the efforts of future researchers.

### 1792 Birch Cent (Judd-5) Roster

The Judd-5 Birch cent is represented by only two specimens. The present sale constitutes only the seventh opportunity in history to acquire an example of the variety at public auction and only the fourth opportunity to acquire the present coin, which is considerably the finer of the two. The Patrick collection of 1792 patterns boasts an array of ultra-low population specimens, and, once dispersed, becomes a part of numismatic history that is not likely to be repeated.

**1. MS61 Brown NGC.** 262.2 grains. San Francisco Collector (Stack's, 5/1946), lot 742; Theodore Grand (Stack's, 12/1947), lot 16, realized \$800; Hollinbeck Stamp and Coin Company private sale (1956); Norweb Collection (Bowers & Merena, 11/1988), lot 3395, realized \$59,400; Donald Groves Partrick; **the present coin.**

**2. Fair 2 NGC.** 240.6 grains. Hollinbeck-Kagin (10/1958), lot 1392; Loye Lauder (William Doyle Galleries, 12/1983), lot 235, realized \$3,200; Stack's private treaty transaction (1983); Fritz Weber; Denis Loring; Stack's; Lemus Collection / Queller Family Part Two (Heritage Signature, 1/2009), lot 1501, realized \$86,250; Denis W. Loring and Donna Levin. This coin exhibits about half of the obverse lettering and is worn smooth on the reverse.

### Physical Appearance

Pleasing brown color highlights this well-detailed example of the Judd-5 Birch cent. There is a touch of softness in Liberty's curls and some strike weakness on the lettering to the right of Liberty. The protected areas of the obverse, among the letters and Liberty's hair, contrast nicely with the lighter fields. The obverse right field exhibits what appears to be, at first glance, a patchwork of light scratches. However, upon further examination, much of this disturbance is likely the result of a defective planchet. The planchet is centered and reveals sharp dentilation. The edge lettering reads TO BE ESTEEMED BE USEFUL \*, with the crucial single star distinguishing this from the more common Judd-4 Birch cent with the two star edge. Die alignment is 180 degrees (coin turn). The reverse is virtually perfect for the grade, with the slightly uneven engraving of ONE CENT adding to the charm of this exceptionally desirable specimen of the early Mint. PCGS# 11014

## 1792 Half Disme, Judd-8, AU55 Unique Copper Example

**5506 1792 Half Disme, Judd-8, Pollock-8 AU55 NGC. CAC.** 18.2 grains. One of the most discussed pieces in the entire United States series, the 1792 half dime is a perennial collector favorite. There are approximately 250 extant silver half dimes, but only one in copper. This is that coin. Of the 12 coins in the Partrick 1792 pattern set, three are unique, and two more represent the only examples available to the collecting public. The present coin combines the highest rarity with the history of the first coin struck for circulation by the nascent Mint.

### The 1792 Half Disme

The 1792 half dime is the best chronicled of the 1792 coinage. The week of July 9, 1792, brought a flurry of activity to the Mint. Rittenhouse summarized the current situation in correspondence to George Washington on Monday, July 9:

"On consulting the Secretary of State I find that some of the Officers for the Mint are still expected from Europe. This will occasion further delay, at least as to going generally into coining. But as small money is very much wanted we think proper, in the mean time, if your Excellency approves it, to coin some copper cents and half cents, and likewise some small silver, at least dimes and half dimes. I have purchased on account of the United States, a House & Lot which I hope will be found convenient for the Mint, but considerable alterations must be made, and some small new buildings erected. I have likewise engaged Mr. Voight to act as Coiner, and he has several workmen now employed in making the necessary engines, and preparing the dies..."

Rittenhouse was ready to get to work. All that remained was the President's authorization. There was no email in 1792, but Washington nonetheless responded the same day:

"Having had under consideration the letter of the Director of the Mint of this day's date, I hereby declare my approbation of the purchase he had made of the house and lot for the Mint, of the employment of Mr. Voight as Coiner [Washington formally commissioned Voight as Chief Coiner on January 29, 1793], of the procuring fifteen tons of copper, and proceeding to coin the cents and half cents of copper and dimes and half dimes of silver..."

On Wednesday, July 11, the Secretary of State Thomas Jefferson made a deposit at the Mint. Jefferson's account book reads "Delivd. 75 D. at the mint to be coined." Precisely what Jefferson delivered is a matter of debate. Speculation has suggested Spanish dollars, George Washington's household silver plate, or finished planchets ready to be coined immediately. The salient point is that Jefferson delivered something and expected coins in return. Two days later, they were ready. On Friday, July 13, Jefferson noted in his account book "Recd. from the mint 1500 half dimes of the new coinage." The very next entry is "Set out for Monticello." Over the next nine days, during Jefferson's journey, he recorded more than 20 small transactions denominated in multiples of half dimes. The entries mentioning children are the most charming. Among these are "A child .05," or "[at] Adams's a child .05." Elsewhere, servants received 15, 30, 35, 40, 50, or 60 cents, barbers 15 or 20 cents, and, on July 19, Jefferson purchased "grog" for 15 cents. Quartered pistareens also passed at 5 cents, but it seems much more likely that Jefferson was distributing half dimes, and it is not hard to imagine that he remarked upon the new coinage as it was dispensed here and there.

In Washington's fourth annual message to Congress, delivered November 6, 1792, he stated:

"In execution of the Authority given by the legislature, measures have been taken for engaging some artists from abroad to aid in the establishment of our mint; others have been employed at home. Provision has been made for the requisite buildings, and these are now putting into proper condition for the purposes of the establishment. There has also been a small beginning in the coinage of half-dimes; the want of small coins in circulation calling the first attention to them."

The intentions of the principals are clear. Rittenhouse and Washington both referred to half dimes in the context of addressing the need for small, circulating coin. Jefferson called it "the new coinage" in writing, and then proceeded to use the half dimes in everyday commerce. The three most important individuals in the formation of the Mint thus thought of these coins as circulating money - and yet, numismatic tradition calls them patterns. In analyzing this contradiction, one must consider what numismatists knew, and when they knew it. The Jefferson account book was unknown as a numismatic source until 1966 when Don Taxay first referenced it in *The U.S. Mint and Coinage*. In 2003, Joel Orosz and Carl Herkowitz mined additional data from the account book in their article "George Washington and America's 'Small Beginning' in Coinage: The Fabled 1792 Half Dimes." Additionally, modern researchers have ready access to the papers of many early American political figures, as this material has come online in recent years.

In contrast, many of the earliest numismatic sources referencing the 1792 half dime are based on oral history. In 1844, the Philadelphia antiquarian John McAllister visited the retired Chief Coiner Adam Eckfeldt at the Mint and recorded the highlights of their discussion:

"In conversation with Mr. Adam Eckfeldt (Apr. 9, 1844) at the Mint, he informed me that the Half Dimes, above described, were struck, expressly for Gen. Washington, to the extent of One Hundred Dollars, which sum he deposited in Bullion or Coin, for the purpose. Mr. E. thinks that Gen. W. distributed them as presents. Some were sent to Europe, but the greater number, he believes, were given to friends of Gen. W. in Virginia. No more of them were ever coined. They were never designed as Currency. The Mint was not, at the time, fully ready for being put into operation. The Coining machinery was in the cellar of Mr. Harper, saw maker, at the corner of Cherry and 6th Sts., at which place these pieces were struck."

The McAllister memorandum was largely echoed in William E. Dubois' *Pledges of History* (1846), a volume that described the contents of the Mint Cabinet. Dubois was a son-in-law of Eckfeldt, and it is reasonable to assume he received his information from the same source as McAllister. The *Philadelphia Dispatch* followed suit in 1853 as they published a series of articles on the Mint and credited Edward C. Dale, Franklin Peale, Jacob R. Eckfeldt (son of Adam Eckfeldt) and William E. Dubois for information. Although Adam Eckfeldt died in 1852, these individuals had close ties to him and no doubt simply repeated Eckfeldt's version of the half dime history. Montroville W. Dickeson's *American Numismatical Manual* (1859) formally classified the half dime as a pattern. The work was influential, and succeeding authors simply agreed. Today, the Judd pattern listing still includes the coin, albeit with the disclaimer:

"Although the 1792 silver half dime has been called a pattern and designated as J-7, it is most assuredly a coin made for general circulation. This is confirmed by the significant wear of such coins in existence today."

A Chinese proverb states that the palest ink is better than the strongest memory. Today's researchers struggle to reconcile the documentation from the 1790s with the recollections of Adam Eckfeldt as recorded in the 1840s and 1850s. In some cases this is straightforward. Eckfeldt indicated that many coins were presents. Modern census data tends to corroborate this. The surviving population is disproportionately large, and the grading distribution demonstrates an unusually high number of high-grade examples. For an 18th century coin, this is exceptional. Clearly, many coins were considered special and preserved as such. But Eckfeldt's claim that the half dimes were not intended as "currency" is more difficult to align with the facts. Washington and Rittenhouse thought of the coin in terms of circulation, while Jefferson referred to them as the "new coinage" and almost certainly used them as such. The coins themselves tell us they were well used in commerce.

Eckfeldt's lack of knowledge concerning the circulation patterns of the half dime can be rationalized, but his claims associating the coins with Washington are a stumbling block. The best documentation points to Jefferson, and Rittenhouse has also been suggested as a possibility for the original source of the bullion used to coin the silver half dimes. This is a mystery that continues to perplex researchers. The current explosion of digitization and online resources will only help to resolve the question, but for now the riddle remains one of the greatest in American numismatics.

While the silver half dime (Judd-7) is rightly considered a regular issue of the Mint, the copper half dime (Judd-8) is decidedly a pattern, a trial in copper preceding the silver strikes. All of the 1792 designs (with the exception of the G★W.PT. Birch cent reverse) are known in copper. The Mint stayed on course in 1794 and produced five distinct designs as copper patterns. Many of these early patterns are unique or nearly so; indeed, when Frank Stewart discovered, during the demolition of the first United States Mint, a 1795 copper half dime, the known population was doubled. The 1792 copper half dime is one of the unique issues of this early pattern coinage, and, when combined with the mythology of the silver half dime, extraordinarily desirable as such.

#### **Pedigree of the Unique 1792 Copper Half Dime**

**AU55 NGC.** Joseph J. Mickley (Mason & Co., 11/1878), lot 348, realized \$9; Lorin G. Parmelee (New York Coin and Stamp, 6/1890), lot 4, realized \$13; Charles Morris (S.H. and H. Chapman, 4/1905), lot 360, realized \$12; Waldo Newcomer; Major Lenox Lohr (Empire Coin Company FPL, c. 1961), offered at \$9,750; Hazen B. Hinman (Paramount Century, 4/1965), lot 51, realized \$2,800; John L. Roper, 2nd (Stack's, 12/1983), lot 428, realized \$20,900; Donald Groves Partrick. **The present coin.**

#### **Physical Appearance**

This coin exhibits medium brown color with occasional contrasting highlights in Liberty's lower curls and portions of the obverse lettering. There are no marks of note apart from a small planchet flaw on Liberty's cheek. The extremities of the strike are soft on the left obverse, and cause weakness in the dentils and tops of the letters. The catalogers suggest that the softness of strike, rather than wear, gives the appearance of light circulation. Both the obverse and reverse present smooth surfaces blanketed with even toning. This coin has a plain edge, as opposed to the diagonal reeding used on the silver half dimes. The die orientation is 350 degrees, or close to medal alignment. The allure of the present offering is difficult to overstate. It is a unique pattern, impressed by the same dies used to strike the first coins issued by the United States for circulation. George Washington's "small beginning in the coinage" began with *this very coin*. The foundering steps of the fledgling Mint, Jefferson's symbol of sovereignty, are embodied in this enchanting piece of copper. History has chosen to preserve this treasure, and history will again be made as it passes under the hammer for the first time in a generation. PCGS# 11021

Lot 5507

## 1792 Silver Disme, Judd-9, AU50 The Finer of Two Known

**5507 1792 Silver Disme, Judd-9, Pollock-10 AU50 NGC.** 41.5 grains. There are two known thin flan silver dismes of 1792, and, in addition, a unique thick flan specimen (see following lot). Thus, the Partrick collection includes two of the three known silver dismes.

### The 1792 Disme

In contrast to the 1792 half disme, there is little in the historical record that directly addresses the disme of the same year. On July 9, 1792, Rittenhouse requested permission from George Washington to coin half cents, cents, half dismes, and dismes. Washington approved the same day. In between, Thomas Jefferson wrote to Washington and suggested that the President ought not to feel obligated to manage what he apparently considered routine details of the Mint operation. Jefferson's recommendation, while well-intended, probably had the unfortunate side effect of reducing the depth of the historical record. As a result, the otherwise little-discussed disme has inherited some of the mythology associated with the half disme.

Authors have grouped the two together since at least 1864. Edward Cogan's January 1, 1864 announcement letter (for the Neff sale), in describing a silver disme, referred to "the acknowledged fact that it was made from silver sent to the mint by George Washington..." Ebenezer Mason, the Philadelphia coin dealer, wrote in the February 1885 issue of his house organ *Mason's Coin Collectors' Magazine* "It is recorded that Washington resorted to this mint for the private coinage of the 1792 silver dimes and half dimes, which were coined from a portion of his old silver plate, and presented by him to friends of the family." Mason sadly failed to indicate exactly where "it is recorded," and the thread continued. In 1914, the American Numismatic Society Exhibition Catalogue again lumped the two coins together and stated "The silver used in the above two pieces was furnished by Washington."

The Washington association was a potent force during the expansion of American coin collecting in the 1840s and 1850s. Connecting a coin to Washington was commercially a good thing to do, and the Mint itself got in the act with the publication of *A Description of the Medals of Washington* (1861). Jacob R. Eckfeldt and William E. DuBois took note of the interest in Washington material in *A Manual of Gold and Silver Coins of All Nations* (1842):

"The Mint was not fully in operation until 1795. Before that time it was rather engaged in experimenting; hence the variety of specimens, in silver and copper, anterior to that date, which are now so much in request among the virtuosi. The most noted of these is the Washington Cent...The 'Washington Cent,' of which a few specimens escaped the Mint, is now one of the greatest numismatic curiosities, and is eagerly sought after, by collectors [Which Philadelphia Mint Washington piece the authors are referring to is unclear. This could possibly be a reference to the 1792 coppers struck by Getz or the 1792 Washington President, 13 Star Above Eagle coppers]."

An 1851 newspaper account of the Dr. Lewis Roper sale, the first major rare coin auction in America, naturally began its coverage with the Washington pieces. A 1792 Getz half dollar crossed the block at \$18, an extraordinary sum at the time. The veneration of the first President created a temptation to stretch the truth, and the "fact" that Washington had deposited silver for the 1792 half dismes evolved into a connection with the silver disme as well. In actuality, Washington's supposed silver deposit for the half disme was only first recorded in 1844 by the Philadelphia antiquarian John McAllister, who was relating the history as told to him by the retired Chief Coiner, Adam Eckfeldt. The story was oft-repeated and resonated strongly with 19th century collectors. Today, it falls into the category of "unsolved mystery," provocative but proven to no one's satisfaction.

### Roster of the 1792 Silver Dismes (Judd-9)

**AU50 NGC.** 41.5 grains. Dr. J. Hewitt Judd (acquired in 1946 or before), *An Illustrated History of United States Coins* (Abe Kosoff, 1962), lot 13; Kosoff reported this coin sold to an anonymous collector in the January 24, 1973 edition of *Coin World*; Donald Groves Partrick; **the present coin.**

**F15 NGC.** 39.5 grains. This coin was presented by Edward Cogan in the introductory letter to the J.P.W. Neff Collection (Cogan, 1/1864), but not listed in the catalog, sold to George Seavey for \$205; Seavey Descriptive Catalog (William H. Strobridge, 6/1873), lot 839, not sold as Lorin G. Parmelee bought the collection intact before the sale took place; Parmelee Collection (New York Coin & Stamp, 6/1890), lot 1, realized \$61 to Charles Steigerwalt; offered in Steigerwalt's FPL numbers 22-25 at \$125; H.O. Granberg, displayed at the 1914 ANS Exhibition; Waldo Newcomer; "Col." E.H.R. Green; Eric P. Newman and Burdette G. Johnson; offered on page 946 of the August 1946 edition of *The Numismatist* by the Celina Coin Company, price on request; purchased by Floyd T. Starr in late 1946 for \$750; 65th Anniversary Sale (Stack's, 10/2000), lot 478; Rick Sear; southern collection; Bob Simpson.

### Other Appearances

DeWitt Smith; Virgil Brand (1908); Wayte Raymond (1935); untraced. Brand purchased Smith's collection, including this coin, in 1908. The Brand ledger (entry #46511) indicates "Pattern in Silver: An Excessively Rare Coin. But this piece has been skillfully plugged and the surface has also been polished. A. W. 1." The coin was appraised by Burdette G. Johnson for \$125.00 and sold at the same price to Wayte Raymond on October 20, 1935. Currently untraced.

### Physical Appearance

Liberty faces left with flowing hair extended to the right. The motto LIBERTY PARENT OF SCIENCE & INDUSTRY begins below and to the right of the truncation point and extends around the periphery, while the date is placed in the field below the portrait and above the motto. The obverse exhibits coin gray toning with scattered areas of more intense color outlining the devices. There is a hidden mark within the hair, to the left of the second E in SCIENCE, just above the outstretched strand. The die orientation is 330 degrees (near medal alignment). The reverse shows evidence of multiple strikes, with doubling seen in STATES and in the dentilation to the top and right. PCGS# 11025

## 1792 Disme, Judd-9a, XF Details Unique Thick Flan

**5508 1792 Silver Disme, Judd-9a, Pollock-10 — Scratches — NGC Details. XF.** 66.1 grains. The Partrick collection of 1792 patterns achieves far beyond any previous attempt. The present coin, the unique thick flan silver disme, represents yet another one-of-a-kind specimen in the Partrick cabinet.

### The Donald G. Partrick 1792 Pattern Set

Besides privately held pieces, 1792 patterns exist in several institutional collections, including the Smithsonian, American Numismatic Society, American Numismatic Association, and New-York Historical Society. The institutional holdings further restrict an already ultra-low population, and, as a result, there are six coins in the 1792 set for which only a single example is available to collectors. Of these six, five are in the present offering. Yet, the Partrick collection goes even further. Combining the quest for extraordinary rarity with extraordinary quality, Partrick consistently pursued the finest known specimens. With only two exceptions (Judd-1 and Judd-10), every piece in the Partrick 1792 pattern set is the finest available to collectors. Among the most important specialized collections ever formed within the American catalog, the Partrick 1792s will long be considered a colossal achievement. The accompanying table captures the sheer difficulty of the task:

### Thick Flan Planchets in the 1792 Series

The present coin was struck on a thick flan, as was the ANS specimen of the Eagle-on-Globe quarter in white metal (Judd-13). Piedforts, coins struck on thick planchets, are traditionally associated with presentation or ceremonial intent. In this case, they more likely represent a coinage experiment within the early Mint. Other presentation pieces during this period (for example, the George Washington set of silver Comitia Americana medals) were preserved at such. The silver center cent planchets (discussed in an earlier lot) are also thick flan pieces, and the group as a whole may indicate experimentation with the strip rolling apparatus in the early Mint.

Further arguing against presentation status, two of the surviving 1792 piedforts are defaced. The 1792 date was removed from the present coin, and there are tooling marks in the left obverse field. This work was done before 1867, as it is described in the Mickley catalog of that year. The ANS Eagle-on-Globe quarter dollar exhibits two heavy gouges at the throat. The marks on these coins may represent cancellation attempts. Two other early patterns exhibit severe impairments, including the recently discovered 1792 plain edge copper disme (Judd-11) and the 1795 copper half dime in the Independence Hall collection (Judd-21). The 1795 copper half dime is especially significant as it was excavated from the site of the first Mint. The sample size is small, but at least one early pattern piece was almost certainly defaced within the Mint.

### Pedigree of the Unique 1792 Thick Flan Silver Copper Disme (Judd-9a)

**XF Details NGC.** 66.1 grains. Joseph J. Mickley Collection (W. Elliot Woodward, 10/1867), lot 2131, realized \$39 to Mendes I. Cohen; Colonel M.I. Cohen (Edward Cogan, 10/1875), lot 379, realized \$20 to Jules Fonrobert, bidding as "Roberts"; Die Jules Fonrobert Sammlung (Adolph Weyl, 2/1878), lot 366; George Ulex Collection (Lyman Low, 7/1902), lot 431, realized \$33.50; Henry Jewett Collection (S.H. Chapman, 6/1909), lot 1605, realized \$280 to Thomas Elder; Colonel E. H. R. Green; Eric P. Newman and Burdette G. Johnson; Celina Coin Company, offered on page 1327 of the November 1946 edition of *The Numismatist* for \$750; J. P. Morgan, et al (Hans M. F. Schulman, 4/1952), lot 855M, realized \$300; Wayne Raymond; New Netherlands Coin Company, purchased by the Norwebs on January 31, 1958; Norweb Collection Part III (Bowers and Merena, 11/1988), lot 3390, realized \$28,600; Donald Groves Partrick; **the present coin.**

Note: It seems likely that S.H. Chapman was the buyer at the Ulex sale and placed the coin in the Jewett auction for his own account. Henry Jewett died in 1897, so he could not have purchased the coin from the Ulex sale in 1902.

### Physical Appearance

Liberty faces left, as on all the half dismes and dismes of this year. The reverse eagle is level and faces the right, differing with the upward flying, left facing eagle of the half disme. The thick flan weighs 66.1 grains, as compared to the statutory weight of 41.6 grains. The obverse is well struck with sharp lettering, and the depth of relief within Liberty's portrait reinforces the overall appeal of this thick flan specimen. The silver gray and brown color contrasts nicely with the protected areas in Liberty's hair. The 1792 date has been effaced and there are tooling marks in the left obverse field. The die alignment is 350 degrees (near medal alignment). The reverse exhibits smooth surfaces with even light brown color, with no marks of note save for a depression in E of STATES. The composition analysis by NGC reveals content of 92% silver and 7% copper.

### 1792 Copper Disme, Judd-10, XF40 The 1914 ANS Exhibition Plate Coin

**5509 1792 Copper Disme, Judd-10, Pollock-11 XF40 NGC.** 57.0 grains. Along with technical aspects of coinage, the Mint in 1792 experimented with visual representations of Liberty. Three distinct styles emerge. The Birch cents and the half disme present Liberty with loose and curly hair, while the Eagle-on-Globe quarters depict a neatly coifed and braided Liberty. Finally, the Silver Center cents, Fusible Alloy cents, and dismes adorn Liberty's head with straighter, flowing hair. All three approaches find similarities within contemporary art.

#### The 1792 Disme Design

The Liberty of the Eagle-on-Globe quarter compares favorably to that of Samuel Jennings's 1792 painting "Liberty Displaying the Arts and Sciences," today reposing in the reading room of the Library Company of Philadelphia. Liberty is virginal, slender, and personifies the association between learning and liberty. The painting is somewhat evocative of the motto LIBERTY PARENT OF SCIENCE AND INDUSTRY as books, scientific instruments, and symbols of artistic endeavor are placed at Liberty's feet, squarely within her dominion.

The Birch cents and the half disme reflect the fashion sensibility of the 1790s, a decade shifting in the direction of informality. "Hedgehog hair" is especially apparent on the G★W.P.T. Birch cent (Judd-6), while the other Birch cents, and the half disme, present Liberty surrounded with free flowing and curled hair. The informality did not reflect any less preparation. Diderot's *Encyclopedie*, well known among numismatists for its description of coining machinery, even included a plate depicting the construction of coiffure. The similarity of Liberty on the half disme and Birch pieces has led many writers to assume a common engraver. This is a plausible conjecture, but further evidence eludes researchers.

The Silver Center and Fusible Alloy cents, with the disme, present Liberty with straighter, flowing hair. The most obvious design source is Augustin Dupré's *Libertas Americana* medal, conceived and produced under the direction of Benjamin Franklin beginning in 1782. The *Libertas* medal was distributed throughout Europe and the United States and reproduced in various media. By 1792, the image was well known. The *Libertas* portrait faces west (signifying the New World), with the hair extended in the opposite direction. Franklin included an "Explication" with each medal, which indicated that the streaming hair was intended to convey the idea of "Liberty in action." The *Libertas* medal exhibits substantial texture in the hair not replicated in the American coinage, a reminder that the best engravers still resided in the Old World. Certain design elements of the 1792 disme carried forward to the 1793 half cent, including the left-facing Liberty with hair flowing to the right, Liberty's apple cheek, and recessed eye.

### Roster of the 1792 Reeded Edge Copper Dimes (Judd-10)

The 1792 reeded edge copper dime is the most available of the 1792 patterns, but remains rare in an absolute sense. Fewer than 20 examples are traced, similar to the Getz silver half dollars of the same year. The population profile is similar to that of the silver half dime. A disproportionate number of high grade examples survive, yet, at the same, time, a good number of coins exhibit signs of circulation. The following roster is based on work by Pete Smith, as part of research for the book *1792: Birth of a Nation's Coinage*, to be published, along with co-authors Joel Orosz and Leonard Augsburger, by Heritage Galleries.

- 1. SP65 Brown PCGS.** 58.6 grains. James W. Ellsworth private sale (3/1923) to John Work Garrett; The Garrett Collection Part IV (Bowers and Ruddy, 3/1981), lot 2352, realized \$54,000; Marvin Browder; Alhambra Coin Center, private sale (1998); Hanks & Associates; Heritage (E-Fair Signature, 10/1999) lot 6187, not sold; *Coin World* ad 5/22/2000, listed at \$700,000; Rare Coin Wholesalers; Benchmark Ventures L. P.; Legend Numismatics; Bob Simpson.
- 2. PR62 Brown NGC.** Dr. J. Hewett Judd; Abe Kosoff, 1962, *Illustrated History* lot 14; Stuart Levine private sale 3/26/2001; Ed Price; ANA World's Fair of Money (Heritage, 7/2008), lot 1406, realized \$690,000; Greensboro Collection; ANA National Money Show (Heritage, 10/2012), lot 366, realized \$587,500; Cardinal Collection Educational Foundation.
- 3. Uncirculated.** ANA (Jess Peters, 8/1973), lot 1088, realized \$9000; Alan V. Weinberg.
- 4. Uncirculated.** 58.8 grains. Mint Cabinet (T. L. Comparette 1914 catalog, #1494); Smithsonian Institution #87.060.28/29.
- 5. AU58 PCGS.** Crosby plate X, 18; Allison W. Jackman (Henry Chapman 6/1918), lot 224; Loye L. Lauder (William Doyle Galleries 12/1983), lot 237, realized \$15,000; Stuart Levine and Anthony Terranova; Bertram Cohen; Dana Linett; David Henderson; Benson Collection (Goldberg's 2/2001), lot 152, realized \$109,250; Stuart Levine; Ed Price; Stuart Levine 10/4/2004; William H. LaBelle, Sr. (American Numismatic Rarities 7/2005), lot 604, realized \$175,000.
- 6. SP55 PCGS.** 57.6 grains. Eric P. Newman Numismatic Education Society (Heritage 5/2014), lot 3042, realized \$499,375; Anthony Terranova and Kevin Lipton.
- 7. AU55 PCGS.** 60.2 grains. Hollinbeck (7/1954), lot 964; Norweb Collection Part III (Bowers and Merena, 11/1988), lot 3391, realized \$28,600; Andy Lustig; David Hall; 73rd Anniversary Sale (Stack's, 10/2008), lot 32, not sold; Rarities Night Auction (Stack's Bowers, 8/2011), lot 7481, realized \$362,250.
- 8. AU50 PCGS.** Midwest Collector; Stuart Levine (privately 3/2001); Ed Price; Stuart Levine (3/2003); Liberty Collection.
- 9. XF40 NGC.** 57.0 grains. Carl Wurtzbach (exhibited at ANS Exhibition of United States and Colonial Coins, 1914, plate VI); Sol Kaplan; Phillip E. Benedetti; Gary Fitzgerald; Donald Groves Partrick; **the present coin.**
- 10. XF40 NGC.** Virgil M. Brand; New Netherlands (9/1953), lot 416, realized \$160; June Sale (Stack's, 6/1973), lot 879, realized \$10,000; Laird U. Park Collection (Stack's 05/1976), lot 203, realized \$18,000; Ellis Robison (Stack's 02/1982), lot 968, realized \$25,000; Allen Lovejoy Collection (Stack's 10/1990), lot 1; Andy Hain; Julian Leidman; Ed Price; Stuart Levine; Haig A. Koshkarian Collection (American Numismatic Rarities 3/2004), lot 300, realized \$101,200; Harry Laibstain and Rick Sear; Denis Loring and Donna Levin.
- 11. XF40.** New England Rare Coin Gallery (11/1975), lot 383, realized \$21,000; ANA (Stack's, 8/1976), lot 131, realized \$19,000.
- 12. VF30.** 52.82 grains. Byron Reed Collection; Omaha Public Library; The Durham Museum.
- 13. VF25 PCGS.** 57.8 grains. Superior (2/1997), lot 2646; Stack's (5/1998), lot 108; Stuart Levine and Anthony Terranova, private sale (5/1998) to Ed Price; Stuart Levine; Pre-Long Beach Sale (Superior, 5/2001), lot 1046, realized \$45,425; New York Connoisseur's Collection (American Numismatic Rarities, 3/2006), lot 37, realized \$87,400; Coin Rarities Online; Park Avenue Numismatics; private collection; Americana Auction (Stack's Bowers, 2/2014), lot 2002, realized \$211,500.
- 14. VF.** Colonel Mendes I Cohen (Edward Cogan, 10/1875), lot 378; Heman Ely (W. Elliot Woodward, 1/1884), lot 446, realized \$26; W. Elliot Woodward (5/1888), lot 1605; James Ten Eyck (B. Max Mehl, 5/1922), lot 566-A, realized \$73.50; Virgil Brand; Burdette G. Johnson; Michael F. Higgy (Abe Kosoff, 10/1943), lot 1397, realized \$167.50; Will W. Neil (B. Max Mehl, 6/1947) lot 1197, realized \$210; Abe Kosoff / Numismatic Gallery (8/1958), lot 37, realized \$650.
- 15. F12 PCGS.** FUN Signature (Heritage 1/2007), lot 1200, not sold; FUN Signature (Heritage 1/2008), lot 3463, not sold.
- 16. VG/Fr.** 52.33 grains. New England Rare Coin Galleries (10/1981), lot 334, realized \$5170; Stack's (05/1985), lot 51, realized \$4,400; Bill Subjack, private sale (1/1992), to Ed Price; Stuart Levine (3/2001); private collection.
- 17. AG.** River Oaks Collection (Bowers and Ruddy, 11/1976), lot 937, realized \$3600; Stack's (1/1987), lot 515, realized \$7,150; Denis Loring, private sale (2/1988), to Kenneth Goldman.
- 18. AG.** Frank H. Stewart; Congress Hall Collection; Independence National Historical Park, catalog #9267.
- 19. P01 PCGS.** Bowers & Merena, c. 2000; John Dannreuther

### Physical Appearance

Liberty faces left with hair flowing to the right. High relief showcases Liberty's cheek and forehead. There is patch of roughness at NT OF. Brighter color in the same area suggests that something may have rested on the coin for many years. The remainder of the obverse is evenly toned with lighter highlights in the lettering. The motto LIBERTY PARENT SCIENCE & INDUST[RY] is more strongly impressed on the left than right. The die alignment is 45 degrees (near medal alignment). The reverse exhibits light corrosion in the northeast quadrant, again suggesting that something may have rested on the coin for an extended period of time. PCGS# 11026

Lot 5510

### 1792 Copper Disme, Judd-11, MS64 Red and Brown Finest of Three Known

**5510** 1792 Copper Disme, Judd-11, Pollock-12 MS64 Red and Brown NGC. CAC. 61.5 grains, plain edge. Once again, the Partrick collection of 1792 patterns combines rarity with the highest quality. The Mint experimented with reeded and plain edges on the dismes of this year, and the plain edge pieces are considerably scarcer, with only three pieces known. Of the three, the Partrick piece is the finest.

#### The 1792 Disme Design

As the Mint experimented with various depictions of Liberty (see previous lot), the design of the reverse eagle also came under consideration. The Mint Act of April 2, 1792 called for "the figure or representation of an eagle" on the reverse of the gold and silver coins. The choice of the eagle was not a nod to some longstanding American tradition. Ubiquitous today, it is hard to imagine a time when it was not so, but in fact the eagle as a symbol of American fortitude emerged only during the Revolutionary War. Other symbols appeared here and there, ironically including a buffalo, which ultimately found a home many years later on the reverse of the Buffalo nickel. The beaver gained certain traction and appeared on the \$6 Colonial Currency issue of July 22, 1776. The original seal of the city of New York also incorporated the beaver, although in this context its meaning was more economic than political.

The Continental Congress put its imprimatur on the eagle as a national symbol with the adoption of the Great Seal in 1782. Numismatists can claim part of the creation, for one of their own, Pierre Eugène Du Simitière, contributed to the design of the Great Seal. Du Simitière, portraitist and museum proprietor in Philadelphia, formed one of the earliest known coin collections in America. A partial inventory survives and demonstrates that the artist made perhaps the first attempt in America to devise a classification scheme for numismatic objects. Du Simitière contemplated publication of an overall guide to American numismatics, a plan cut short by his death in 1784. Such a work might have done much to preserve coinage of that period, but collectors would have to wait for the efforts of John H. Hickcox (1858), Montroville W. Dickeson (1859), and Sylvester S. Crosby (1875).

Benjamin Franklin was famously opposed to the eagle and expressed as much in a 1784 letter to his daughter Sarah Bache:

“For my own part, I wish the bald eagle had not been chosen as the representative of our country; he is a bird of bad moral character; he does not get his living honestly; you may have seen him perched on some dead tree, where, too lazy to fish for himself, he watches the labor of the fishing-hawk; and, when that diligent bird has at length taken a fish, and is bearing it to his nest for the support of his mate and young ones, the bald eagle pursues him, and takes it from him. With all this injustice he is never in good case; but, like those among men who live by sharpening and robbing, he is generally poor, and often very lousy. Besides, he is a rank coward; the little kingbird, not bigger than a sparrow, attacks him boldly and drives him out of the district...

“I am, on this account, not displeased that the figure is not known as a bald eagle, but looks more like a turkey. For in truth, the turkey is in comparison a much more respectable bird, and withal a true original native of America. Eagles have been found in all countries, but the turkey was peculiar to ours; the first of the species seen in Europe, being brought to France by the Jesuits from Canada, and served up at the wedding table of Charles the Ninth. He is, besides (though a little vain and silly, it is true, but not the worse emblem for that), a bird of courage, and would not hesitate to attack a grenadier of the British guards, who should presume to invade his farmyard with a red coat on.”

Franklin, writing from France, favored the turkey, but the eagle resonated with the American public. Here was a fierce symbol reminiscent of the revolutionary rattlesnake. The eagle of the Great Seal carried an olive branch, willing to make peace but prepared for retaliation if provoked. The message to the world was clear. But while the American population coalesced around the eagle, the Mint failed to convey the same meaning in the execution of the half dime. Here was a feeble creature, fluttering about and struggling to get off the ground. The engraver of the dime improved the situation, and this serves to place the dime in sequence following the half dime. The dime's reverse eagle flies steadily and exhibits a stronger head than the blunt-beaked bird of the half dime. The best strikes, such as the present coin, present a lean and muscular body.

While the dime improved the situation, the eagle of the Eagle-on-Globe quarter dollar was more influential with respect to subsequent coinage. Silver coinage, beginning in 1794, adopted Joseph Wright's standing eagle with outstretched wings, surrounded by a wreath. The gold coinage, starting in 1795, also employed the standing eagle and wreath, but the 1796 quarter eagle adopted a design clearly derived from the Great Seal. The eagle and shield devices dominated the gold and silver coinage of the 19th century, and thus the roots of this coinage actually predate the coinage experiments of 1792.

#### **Roster of the 1792 Plain Edge Copper Dimes (Judd-11)**

**1. MS64 Brown NGC.** 61.5 grains. Mint Cabinet, Dr. Edward Maris (H. P. Smith, 6/1886), lot 147, realized \$67.50; The Garrett Collection Part IV (Bowers and Merena, 3/1981), lot 2353, realized \$45,000; Donald Groves Partrick **the present coin.**

**2. MS61 Brown NGC.** Lenox Lohr (Empire Coin Company FPL, c. 1961), offered at \$9,750; Hazen B. Hinman (Paramount Century, 4/1965), lot 52, realized \$3,200; John L. Roper, 2nd (Stack's, 12/1983), lot 429, realized \$19,800; Anthony Terranova and Stuart Levine; Bertram Cohen; Dana Linett (San Diego Show, 10/1988), lot 12, realized \$41,250; 70th Anniversary Sale (Stack's, 10/2005), lot 1378, did not sell; southern collection; Bob Simpson.

**3. PCGS Genuine.** 58.2 grains. Pre-Long Beach Sale (Goldberg's, 2/2005), lot 805, realized \$55,200; Long Beach Signature (Heritage, 2/2008), lot 2301, not sold; Peter Cabral. The coin is uncirculated but exhibits severe obverse cuts. The Goldberg's description speculated these were cancellation marks.

#### **Physical Appearance**

The visually arresting strike nicely showcases the intentions of the engraver. Liberty's hair exhibits strong detail even between the primary strands, and the eagle's breast presents fully outlined feathers, a perennial stumbling block on much of the 18th century United States coinage. The two-tone obverse reveals lighter areas below the portrait truncation and within the lettering PARENT OF to the left. There is some softness on the tops of the letters to the right. The die alignment is 30 degrees (near medal alignment). The reverse eagle flies to the left but glances back to the right, ever on guard and ready to strike. The reverse exhibits even, medium brown toning with olive highlights found in the lettering about the periphery. PCGS# 11030

## 1792 Eagle-on-Globe Copper Quarter Dollar

### Judd-12, MS63 Brown

### The Only Specimen Available to Collectors

**5511 1792 Copper Quarter Dollar, Judd-12, Pollock-14 MS63 Brown NGC. CAC.** The 1792 Eagle-on-Globe quarter dollar patterns exhibit a number of stylistic differences from the other coinage of 1792. The cents, half dimes, and dimes all indicate their denomination, while this coin remains silent with regard to its value. The other 1792 patterns further bear the legend LIBERTY PARENT OF SCIENCE AND INDUSTRY (or its abbreviation), while this piece displays only LIBERTY. The quarter dollar pattern's eagle is markedly different from that of the half dime and dime, which clearly share a common source. The eagle here is a powerful bird exercising dominion over the earth, as opposed to the eagle of the half dime and dime, a scrawny, goose-necked creature (Cornelius Vermeule, in *Numismatic Art in America*, called it an "ailing barnyard fowl"). The engraver finely rendered the figure of Liberty on the quarter dollar pattern, with the hair gathered in a bun. Remaining coinage of this year depicts Liberty with flowing hair, a feature not without controversy in early American coinage. *Dunlap's American Daily Advertiser* reported the European reaction on May 1, 1793:

"A French gentleman of great classic knowledge, who lately arrived from England by the way of New York, happening to visit at my house, I shewed him the Cent, with other coins, in a frame contrived, that he could see the head only, which he immediately pronounced - a Medusa."

The design variances in total suggest a different engraver than that of the remaining 1792 coinage, with Joseph Wright being the leading candidate. Wright (1756-1793) was a well-connected American painter with access to the highest levels of society. Born in Bordentown, New Jersey, Wright trained at London's Royal Academy of Arts. During his time in London, he traveled to Paris to execute a portrait of Benjamin Franklin, who was at the time serving as United States Minister to France. Wright returned to the United States in 1782. He quickly acquired a coveted commission to paint Washington's portrait, which the retired General acknowledged by letter on January 10, 1784. Thomas Jefferson praised the work, declaring "no hesitation in pronouncing Wright's drawing to be a better likeness of the General than [Charles Willson] Peale's." At some point in 1792, Wright associated with the Mint as a "die-sinker." Although never officially appointed Engraver, it seems he acted in that capacity, for on October 3, 1793, Thomas Jefferson wrote to George Washington on the occasion of Wright's death: "The death of Wright will require a *new* [italics added] nomination of an engraver. If it be left to Mister Rittenhouse, I think he would prefer Scot." Robert Scot was duly appointed and is today recognized as the first official Engraver (later, the title of the position was changed to Chief Engraver).

Wright's pieces were admired, but his work habits were not highly regarded. The medal researcher Georgia S. Chamberlain established the case against Wright in the December 1954 *Numismatist*, in which she in part cited George Washington's letter to Robert Morris on January 10, 1784:

"I will thank you for putting the letter herewith enclosed into a proper channel of conveyance. The Count de Bruhl is informed by it that my Portrait (which I have begged the Count de Solms to accept) will be forwarded to his care by you, so soon as it is finished, & I request the favor of you to do it accordingly. Mr. Wright is desir'd to hand it to you for this purpose & as he is said to be a little lazy, you would oblige me by stimulating him to the completion. By promise, it was to have been done in five or six weeks from the time I left Philadelphia, near four of which are expired. I am sorry to give you trouble about trifles, but I know you will excuse it, in this instance."

Two pieces of evidence argue for Wright as the engraver of the Eagle-on-Globe quarter dollar. Don Taxay's *The U.S. Mint and Coinage* (1966) cites the September 11, 1793 memorandum of Moid Wetherill:

"Joseph Wright being very ill [Wright died of yellow fever in 1793] and not expecting to recover requested the subscriber to make a memorandum as follows: That the said Joseph Wright had presented an account against the United States for cutting a medal amount fifty Guineas [about 12 ounces of gold]. Two Essays of a Quarter Dollar, cut by direction of David Rittenhouse, Esqr. and presented to him (broke in hardening) value about 40 Guineas [about 10 ounces of gold]."

While Wetherill's memorandum suggests the quarter dollar dies "broke in hardening," Thomas Jefferson suspiciously used the exact same language to refer to Joseph Wright's engraving of the Henry Lee Comitia Americana medal (Julian MI-5). On December 31, 1793, Jefferson wrote "Wright's representatives to be paid for engraving the medal of Govr Lee and (that being broke in hardening) another to be engraved." Jefferson's Notes on the History of the Medals (undated, but circa July 8, 1792) had earlier referred to the problems with the Henry Lee dies:

"After I returned to America [from France, in 1789] Genl. Lee applied to me for the medal voted him by Congress, which Mr. Morris's list had by mistake omitted, and producing to me the resolution of Congress for the purpose I put it in hand with Wright to be executed in Philadelphia. Wright, as well as I recollect, would not agree to warrant against the quality of the steel. His dies broke after they were executed, so that this matter was not concluded when I left Philadelphia."

John Adams and Anne Bentley (*Comitia Americana and Related Medals*, 2007) trace only three test strikes of the Lee medal with an undamaged obverse; the remainder exhibit a prominent obverse crack which nearly bisects the whole of the medal. Although Wright's quarter dies may have cracked as well, it seems possible that Wetherill's account is simply mistaken on this point. Taxay notes the presence of "heavy die cracks on the reverse of one of the eagle-on-globe pieces," but here again, a visual inspection of the current coin does not reveal die cracks, nor does a photograph of the other piece in the Smithsonian.

Taxay lastly notes William Dunlap's *A History of the Rise and Progress of the Arts of Design in the United States*. Dunlap (1766-1839) was a contemporary of Wright and stated the following:

"He [Wright] was a modeler in clay and practiced die-sinking, which last gained him the appointment, shortly before his death, of die-sinker to the Mint. (I have before me a design for a cent, made by Mr. Wright, and dated 1792. It represents an eagle standing on the half of the globe, and holding in its beak a shield with the thirteen stripes. The reverse has been drawn on the same piece of paper, and afterwards cut out.)"

Dunlap's description does not precisely match that of the Eagle-on-Globe quarter, although it does confirm certain elements. Taxay suggests Dunlap's attribution of the design as a cent is in error, as the 1792 Mint Act specified the use of an eagle for silver and gold, not copper. The drawing to which Dunlap refers is today missing, perhaps waiting to be discovered in a Dunlap archive. Whether Dunlap guessed at the denomination, or whether the denomination was noted by the artist on the drawing itself, remains an open question.

Taxay's research convinces many that the current coin is intended as a quarter, but this opinion is not universally held. Traditionally, the pattern was considered a cent, despite the fact that it has a reeded edge (the 1793 cents exhibited lettered and decorated edges). Sylvester S. Crosby (*The Early Coins of America*, 1875) referred to this coin as the "eagle pattern cent." R. Coulton Davis attempted the first comprehensive listing of the U.S. pattern coins in *The Coin Collector's Journal*, which was published serially beginning in 1885. Davis did not explicitly refer to the Wright coin as a cent, but sequentially placed the piece along with the other pattern cents of 1792. The Adams-Woodin pattern reference (*United States Pattern, Trial, and Experimental Pieces*, 1913) went further and directly called the Wright piece a cent. In 1953, Wayne Raymond's *Standard Catalogue of United States Coins* speculated that the pattern was intended for a half eagle while admitting "little is known" about the coin. Q. David Bowers echoed this opinion in the Lenox Lohr fixed price list of patterns (undated, c. 1961). Andrew W. Pollock, III (*United States Patterns and Related Issues*, 1994), no doubt influenced by Taxay's work, accepted the piece as a quarter dollar, as do the current editions of the Guide Book and Judd pattern references.

Taking a contrary position is the researcher Pete Smith. Writing in *The Story of the Starred Reverse Cent* (1986), Smith makes two points. First, the diameter of the Wright piece (29mm) is larger than that adapted for the regular issue quarter coinage in 1796 (27.5mm). The Wright piece has a surface area 11% greater than the 1796 quarter and would have required a thinner planchet if used for production coinage. Second, the initial coinages of gold and silver in the regular Federal series did not indicate denomination (except on the edges of the half dollar and dollar). This is consistent with the Coinage Act of April 2, 1792, which specified the inclusion of the denomination on the reverse of the copper coins. The Act made no mention of the denomination on silver and gold coinage, neither requiring nor prohibiting it. The Wright piece bears no inscription indicating its denomination. Smith suggests the Wright piece was commissioned with no specific denomination in mind, perhaps as a test of die production or the engraver's skill.

Regardless of its denomination, the current sale marks only the fourth public auction appearance of this coin in the last 152 years. With one of the two known pieces firmly secured in the National Numismatic Collection, this is the only coin available to collectors. History suggests an opportunity of only once per generation to acquire one of the most prized patterns of 1792. This is that moment.

#### Census of the two coins known to exist:

**1. MS63 NGC.** 178.9 grains. Edward Cogan (4/1863), lot 1074; Charles I. Bushnell (S.H. & H. Chapman, 6/1882), lot 1764; Lorin G. Parmelee (New York Coin & Stamp, 6/1890), lot 9; H.P. Smith; DeWitt Smith; Virgil M. Brand (journal #46508); J. Hewitt Judd; Abe Kosoff (*Illustrated History*, 1962), lot 15; Donald Groves Partrick; **the present coin.** Vertical reeded edge. NGC composition analysis is 99% copper.

**2. AU50.** 175.5 grains. National Numismatic Collection; Smithsonian Institution 1991.0357.0121, previously enumerated in T. L. Comparette's inventory of the Mint Cabinet (1914), #1561. "Cleaned in acid" per the Bushnell (1882) catalog. Large pit in obverse left field. Numerous spots, especially on the reverse.

#### Physical Appearance

This is an aesthetically pleasing early copper coin. Large obverse fields reveal smooth surfaces. Liberty's hair is highlighted with tinges of red and purple; the entire obverse is a warm copper color. Liberty is slender and delicate. The obverse fields are surrounded by a beveled edge, as the diameter of the obverse die appears to have been slightly less than that of the reverse die (the Smithsonian coin demonstrates a similar effect). There is a light mark hidden in Liberty's hair to the left and a thin, diagonal scratch underneath the neck. The reverse is brown and gray with no marks of note save for two lines that extend diagonally from the globe and the eagle's left foot. The overall eye appeal is considerable and combines with the coin's history and rarity to present a most desirable specimen of the Mint's earliest coinage. PCGS# 11033

Lot 5512

**1792 White Metal Quarter Dollar  
Eagle-on-Globe Judd-13, XF45  
The Sole Available Example**

**5512** 1792 White Metal Quarter Dollar, Judd-13, Pollock-15 XF45 NGC. The white metal strikings of the 1792 Eagle-on-Globe quarter dollar complete the experiments of the inaugural year of the United States Mint. Across the 1792 patterns (Judd-1 through Judd-13), the Mint conducted experiments with metal composition, edge devices, reeding, planchet thickness, collar usage, and die alignment. The cents were struck in copper, or copper with a silver plug, while the half dimes and dimes are found in both silver and copper. The quarter dollar was struck in copper and white metal. Edge devices similarly varied with plain, lettered, vertically reeded, and diagonally reeded edges. The Mint experimented with both regular and thick planchets, the latter of which are found on the silver dime and white metal Eagle-on-Globe quarter. The white metal Eagle-on-Globe quarter was struck with and without a collar. Finally, 1792 coins are found with both coin and medal alignment. Although the population of surviving 1792 coinage is minimal, the evidence demonstrates deliberate choices on the part of the coiners to work through a number of technical options.

For many years, the population profile of the Eagle-on-Globe coin in white metal paralleled that of the same coin in copper - one institutional piece and one example held privately. In 2002, Anthony Terranova discovered and, along with Michael Hodder authenticated two additional white metal pieces at the New-York Historical Society. Chronicled on the front page of *Coin World* on June 9, 2003, the spectacular find doubled the known population from two to four. Society associate curator Margaret K. Hofer noted "We were unaware of their significance until we had them on display with other Colonial coinage." The Society initially discovered the two coins during an inventory of the coin, medal, button, and badge collections. An announcement of the discovery was made May 17, 2003 as part of the American Numismatic Society's Coinage of the Americas Conference. In email to the cataloguer, Margaret Hofer indicated that there is "no record of when the pieces entered the collection. The New-York Historical Society was founded in 1804 and numismatics were among the early items collected ... the Joseph Wright pieces were probably early gifts."

The New-York Historical Society has revealed other numismatic treasures, including the Horatio Gates Comitia Americana medal in gold, and prototype sketches of John Ward Dunsmore's *Washington Inspecting the First Money Coined by the United States*. Researcher Katherine Jaeger (now Katherine Moller de Silva) hit similar paydirt with a February 2006 *Numismatist* article which detailed dies and medals of the American Institute discovered at the New-York Historical Society. While the two Eagle-on-Globe quarter dollars located at the New-York Historical Society are compelling from a historical point of view, they do nothing to change the collectability of the situation - with three of the four known coins permanently housed in institutional collections, the present coin remains the only example available to the collecting public.

Extending the New York connection, the Eagle-on-Globe design is well known within American numismatics. Several of the New York pattern coppers of 1787 employ the device, including the Excelsior, George Clinton, and Standing Indian types (Breen 989, 990, and 991). The New York state coat of arms incorporated the Eagle-on-Globe in 1778. Later, the New York state flag and seal in turn included the coat of arms. The Erie Canal medal of 1826 (HK-1) depicts the New York coat of arms, including the Eagle-on-Globe design.

As with the preceding lot, this coin is the sole example available to collectors. The current sale marks only the seventh appearance of the coin since 1863. The inclusion of either a copper or white metal Eagle-on-Globe quarter in a sale is a landmark event; the appearance of both together is unprecedented, and speaks to the dedication of the consignor in forming the premier cabinet of 1792 pattern coinage. The bidding opportunity is equally unique, and the winning bidder will add their name to the most exclusive group of 1792 specialists.

#### Eagle-on-Globe Quarter Dollar (Judd-13) Roster

1. **MS63.** New-York Historical Society, INV.13862a, discovered in 2002. Regular planchet. Plain edge, 16 grams (246.9 grains). Die alignment 180 degrees.
2. **MS63.** New-York Historical Society, INV.13862b, discovered in 2002. Plain edge, 14 grams (216.0 grains). Die alignment 180 degrees.
3. **MS60.** Lenox Lohr (Empire Coin Company FPL, 1961), Hazen Hinman, Century Sale (Paramount, 4/1965), lot 53; Lester Merkin; Chase Manhattan Bank Money Museum, inventory number 01401; American Numismatic Society, accession number 1980.66.2. Don Taxay, writing in the *Whitman Numismatic Journal* (January, 1966) notes "...recently I had the privilege of acquiring it for the collection of the Chase Manhattan Bank Money Museum." While the bulk of the Chase Bank collection ultimately went to the Smithsonian, the American Numismatic Society notably procured a class III 1804 dollar, this piece, and other material. Vertical gouges in neck and bust. Thick planchet, 345.0 grains, broadstruck (struck without a collar).
4. **XF45 NGC.** George F. Seavey (William Strobridge, 9/1863), lot 837; W. Elliot Woodward (4/1867), lot 882; Henry Chapman (3/1930), lot 44; Morgenthau (10/1935), lot 295; New Netherlands private treaty (6/17/1955); Norweb (Bowers and Merena, 11/1988), lot 3396; Donald Groves Partrick; **the present coin.** Plain edge. 242.3 grains, broadstruck. Die alignment 180 degrees. NGC composition analysis is 50% lead, 48% tin.

In addition to these four specimens, two uniface die trials have traded as a single pair since 1882:

1. **EF40.** Judd-A1792-1. Uniface obverse die trial, 480.8 grains. Bushnell (S.H. & H. Chapman, 6/1882), lot 1765; Garrett (Bowers and Merena, 3/1981), lot 2354; Rare Coin Review #39 (Bowers and Merena, 7/1981); The Rarities Sale (Bowers and Merena, 1/1999), lot 1011; Bob Simpson.
2. **VF30.** Judd-A1792-2. Uniface reverse die trial, 432.9 grains. Bushnell (S.H. & H. Chapman, 6/1882), lot 1765; Garrett (Bowers and Merena, 3/1981), lot 2354; Rare Coin Review #39 (Bowers and Merena, 7/1981); The Rarities Sale (Bowers and Merena, 1/1999), lot 1011; Bob Simpson.

#### Physical Appearance

This silver-gray example, the only one available to collectors, exhibits moderate wear with field marks as expected for the grade. Liberty's neckline, cheek, and hair indicate light handling with wear at the high points. The lower right obverse field presents a pair of light, curved scratches, while rim dents are found at 3 o'clock and 6 o'clock. Although broadstruck, the planchet is well centered, but as a result the lettering is weakly detailed at the extremities, particularly in the upper portion of the reverse. The reverse reveals a minor scrape at the rim adjacent to the eagle's left (facing) wing, with two perpendicular scratches surrounding this area. PCGS# 11036

## COLONIALS

## (1652) Noe 1-A NE Shilling, AU50 Exceptional Punches

**5513 (1652) New England Shilling AU50 NGC. Noe 1-A, W-40, Salmon 1-B, High R.6.** 70.2 grains. Ex: B. Cohen. The NE shillings, sixpence, and threepence were the first coins struck in the English colonies of the New World. These pieces were struck from approximately June to October 1652, although production may have continued to the end of that year. Prior to this coinage, the early New World economy was chiefly a barter system, with various products such as furs, grain, and fish serving as a medium of exchange. The Native Americans used shell money or wampum for trade purposes. Sylvester S. Crosby provides considerable historical background that is still useful today, 140 years after the publication of his reference, *The Early Coins of America*.

The General Court of Massachusetts Bay Colony provided for the use of musket balls as a medium of exchange, those of full bore to pass at one farthing. The same legislation outlawed the use of British farthing coins. Finally, a Mint act was passed on May 27, 1652, providing for the coinage of silver money. John Hull was appointed Mintmaster, and he worked with Robert Sanderson to issue the first coins actually made in the colonies.

The design and production was simple. Planchets were round pieces of silver that weighed 72 grains per shilling (36 grains for the sixpence and 18 grains for the threepence). One side received a stylized NE punched at the top of the blank, and the other side had the denomination, XII, VI, or III, punched at the opposite position so that the two punches were aligned 180 degrees apart. For the shillings, three different NE punches are identified, and four different XII punches are recognized.

In "Early Massachusetts Silver - NE Types" that appeared in the August 2010 issue of *The Colonial Newsletter*, collector and researcher Jack Howes provided a catalog of all known NE coins with illustrations of each specimen, recording 58 NE shillings, seven sixpence, and one threepence. With appreciation and thanks to Mr. Howes, we are providing a Census of each variety while recognizing that a mixture of old-time grades and modern certified grades opens the ranking to interpretation.

This example is number four in his list, and this identical piece appeared with the caption "New England Shilling-Genuine (Weinberg Specimen)" in Eric P. Newman's article, "Superb Numismatic Forgeries Are Upon Us" that appeared in the April 1979 issue of *The Numismatist*. Depicted immediately after the illustration of this piece are two forgeries that were copied from this specimen.

The flan is imperfectly round with a V-shaped outline at the bottom of the obverse, corresponding with the upper left of the reverse, indicating that the NE panel and the XII panel are nearly but not exactly aligned opposite each other. Both sides have pleasing light gray surfaces with hints of gold or champagne toning around the bold punches. An exceptional example.

### Census of Noe 1-A NE Shillings

1. **AU55 PCGS.** DeWitt Smith; Virgil Brand; Carl Wurtzbach (1937); T. James Clarke; John J. Ford, Jr. (Stack's, 10/2005), lot 1; David Sundman Collection (Stack's-Bowers, 11/2013), lot 4001. Noe Plate 1, No. 1.
2. **AU55 NGC.** Waldo Newcomer; "Colonel" E.H.R. Green; Eric P. Newman Numismatic Education Society (Heritage, 5/2014), lot 30259; Heritage (12/2014), lot 3437.
3. **AU50 NGC.** Sotheby's London (9/1972), lot 162; Kreisberg/Cohen (9/1973), lot 444; Alan Weinberg; Early American Numismatics, Buy or Bid Sale #2 (10/1984), lot 3; Bertram Cohen (8/9/1989); Donald Groves Partrick. **The present example.**
4. **AU50.** Richard Picker; later, New England Rare Coin Auctions (11/1975), lot 362; Kagin's (1982 FPL).
5. **XF40 NGC.** Central States Numismatic Society (James Kelly, 4/1957), lot 1; Herbert M. Oechsner Collection (Stack's, 9/1988), lot 927; Donald Groves Partrick. **Offered in the next lot.**
6. **XF.** Andrew Zabriskie (Henry Chapman, 6/1909), lot 1; Sterling Groves Collection (S.H. Chapman, 1/1912), lot 276; Waldo Newcomer; "Colonel" E.H.R. Green; later, ANA Sale (Bebee's, 8/1955), lot 1422.
7. **XF,** estimated grade. William B. Osgood Field; ANS. Noe Plate 1, No. 2.
8. **VF.** Belden E. Roach Collection (B. Max Mehl, 2/1944), lot 2; Floyd Starr (Stack's, 10/1992), lot 1; Joe Lasser; Colonial Williamsburg Foundation.
9. **VF,** estimated grade. Chapman Collection (Chapman Brothers, 5/1885), lot 514; later, J. Hewitt Judd; William J. Wild; Norman Stack. Kleeberg 1992, No. 1.
10. **VF,** estimated grade. Emery May Norweb; Smithsonian Institution (inv. 1982.0798.0001).
11. **Fine,** estimated grade. British Museum (Inv. BM E4148).
12. **Fine,** estimated grade. British Museum (Inv. BM 4149).
13. **Fine,** estimated grade. British Museum (Inv. BM C4981).
14. **Uncertain Grade.** Thomas Coats (circa 1920s); Hunterian Museum.

Ex: Sotheby's London (9/1972), lot 162; Kreisberg/Cohen (9/1973), lot 444; Alan Weinberg; Early American Numismatics, Buy or Bid Sale #2 (10/1984), lot 3; Bertram Cohen (8/9/1989). PCGS# 13

**(1652) Noe 1-A NE Shilling, XF40**  
**One of 14 Known Examples**  
**Only Eight Available to Collectors**

**5514 (1652) New England Shilling XF40 NGC. CAC. Noe 1-A, W-40, Salmon 1-B, High R.6.** 70.1 grains. Ex: Oechsner. The literature covering the earliest Massachusetts silver issues, the NE coinage, spans many decades. Sylvester S. Crosby published *The Early Coins of America* in 1875, provided substantial historical information, much that is still useful today. However, his record of varieties was limited to the basics, illustrating each variety, but nothing more.

A detailed variety study was accomplished by Sydney P. Noe. *The New England and Willow Tree Coinages of Massachusetts* was published as part of the American Numismatic Society's *Numismatic Notes and Monographs* series. The Noe reference, published in 1943, recorded five varieties of NE shillings along with one sixpence and one threepence.

The *Whitman Encyclopedia of Colonial and Early American Coins* was published in 2009. Q. David Bowers recorded six shilling varieties in that reference.

Christopher J. Salmon produced an impressive tome, *The Silver Coins of Massachusetts*, published by the American Numismatic Society in 2010. Salmon renumbered the NE shillings and recorded six varieties for that denomination.

At about the same time, colonial collector and researcher Jack Howes produced an exhaustive study of the NE coinage, "Early Massachusetts Silver—NE Types," that was published in the August 2010 issue of *The Colonial Newsletter*. Howes provides extensive information about known specimens that is invaluable to today's collector and researcher. However, the Howes reference should not be considered a "Condition Census" as the examples that he records are not in order by grade. Such a grade-ranked Census would be nearly impossible to attain, as no two collectors would agree on the proper order.

Howes records 14 examples of Noe 1-A in his article, including one in the ANS collection, another in the Colonial Williamsburg collection, a third in the Hunterian Museum, and three examples in the British Museum. Those institutional examples account for six of the 14 known specimens, leaving just eight available to collectors.

The top examples of Noe 1-A include the AU55 NGC coin from the Eric P. Newman Numismatic Education Society that we sold in November 2014, and the AU55 PCGS coin that Stack's-Bowers sold a year earlier in November 2013. The Partrick coin ranks among the better coins that are known. This piece is produced on a pleasing round planchet with light to medium gray surfaces. The punches on both sides are sharply detailed.

As this duplicate example of Noe 1-A is recorded in the Census for the lot above, here we are providing a Census of Noe 1-D, the only variety not represented in the Donald Groves Partrick Collection:

**Census of Noe 1-D NE Shillings**

**1. EF40.** Sylvester S. Crosby (John W. Haseltine, 6/1883), lot 845; Allison W. Jackman Collection (Henry Chapman, 6/1918), lot 2; Garrett Collection (Bowers and Ruddy, 10/1980), lot 1200; David Silberman Collection (Bowers and Merena, 11/1988), lot 6001.

**2. Choice VF.** ANA Sale (Frank Katen, 8/1948), lot 38; Charles W. Ingle Collection (Bowers and Merena, 9/1986), lot 654.

**3. VF.** Chaloner Collection (Chapman Brothers, 4/1895), lot 630; Thomas Elder (6/1926), lot 1903; ANA Sale (Federal Coin Exchange, 8/1957), lot 2; Laird U. Park Collection (Stack's, 5/1976), lot 2.

**4. Uncertain Grade.** Judge Alphonso Clearwater (before 1920); Metropolitan Museum, New York City.

Ex: *Central States Numismatic Society* (James Kelly, 4/1957), lot 1; *Herbert M. Oechsner Collection* (Stack's, 9/1988), lot 927; *Donald Groves Partrick*. PCGS# 13

## (1652) Noe 2-A NE Shilling, VF35

### Historic Provenance

**5515 (1652) New England Shilling VF35 NGC. Noe 2-A, W-60, Salmon 2-B, Low R.7.** 69.5 grains. A diagonal die line extends down to the right from the center of the E in NE, identifying Noe's obverse 2. The reverse is the same as seen on the previous pieces, with a diagonal die line extending up to the right from the top of the first I in XII. A bulge through the upper left arm of the X is advanced further than on Noe 1-A, and appears to vary in size on different examples of Noe 2-A.

This pleasing pewter-gray example has the usual bumps and old scratches found on most surviving NE shillings. The wavy planchet is typical of all NE pieces. An old scratch across the lower reverse serves to establish the pedigree of this piece. Jack Howes identifies this piece as the Clay; Warner; Cole specimen. All of the various identifying marks on this piece are visible in the plate of the Warner catalog published 130 years ago. Howes records 12 examples of the Noe 2-A NE shilling, including two in the ANS Collection, another in the Durham Western Heritage Museum, and two in the British Museum, leaving just seven examples in private collections.

Lot 63 in the W.H. Strobridge catalog of the Dr. Charles Clay Collection was described as: "Entirely circular. Weight two dwts. 22 grs. Size 19. Silver; but little worn by circulation." A similar description appeared in the 1884 catalog of the Thomas Warner Collection:

"(1652) Shilling. N E in an incused square on a plain silver planchet. Rev. XII in an incused square. Fine. Very rare and in great demand. Size 19. See plate.

"Note.-This was the first coin issued in America."

Ezra Cole was a professional philatelist who acquired important numismatic items from time to time. This historic piece, hidden for several decades, shows that Mr. Cole had excellent judgment, and the next owner will undoubtedly be rewarded for similarly exceptional judgment.

### Census of Noe 2-A NE Shillings

**1. XF.** Ferguson Haines (Chapman Brothers, 10/1888), lot 18; Ben G. Green (10/1906), lot 477; John Story Jenks (Henry Chapman, 12/1921), lot 5383; Morgenthau (10/1933), lot 1; Charles Jay (Stack's 10/1967), lot 2; Gibson Collection (Stack's, 11/1974), lot 1; Andrew Hain Family Collection (Stack's, 1/2002), lot 1.

**(1652) Noe 3-A NE Shilling, VF Details**  
**Finest Privately Held**  
**Salmon Plate Coin**

**5516 (1652) New England Shilling — Scratches — NGC Details. VF. Noe 3-A, W-70, Salmon 3-B, High R.7.** 68.4 grains. Ex: Eliasberg. This is the plate coin in Christopher Salmon's study on Massachusetts silver coinage. The prior provenance of this example is unknown, although Louis E. Eliasberg, Sr. acquired the coin prior to its illustration in the publication (circa 1955) of his booklet, *An Exhibition of the World's Foremost Collection of United States Coins*.

Sydney Noe's obverse 3 is the same physical coinage die as obverse 2, with the identical die line down from the center of the E in NE. However, the die was substantially re-engraved, and is now classified with a new number. This variety has the first reverse punch found with obverse varieties 1 and 2. The punches that were used to produce the NE coinage consisted of a small, rectangular piece of steel that had the NE or XII lettering cut into the surface. When struck against the flan, the punch sank into the silver, with its outline visible, at the same time creating the raised letters. The amount of stress these punches endured after repeated striking was certainly sufficient that some amount of re-engraving was necessary.

The Eliasberg-Partrick coin has light heather-gray surfaces with bold, well-placed punches, especially so on the obverse. Both sides have ancient scratches and marks that are mostly obscured to the naked eye by the combination of toning and wear. Q. David Bowers wrote in the Eliasberg catalog that this example is "among the top dozen finest known," true enough since only five are known, including one in the Massachusetts Historical Society and another at Yale University. The Eliasberg-Partrick piece is the finest of the remaining three examples.

**(1652) Noe 3-B NE Shilling, AU58**  
**The Wurtzbach Plate Coin**  
**Finest of Six Identified**

**5517 (1652) New England Shilling AU58 NGC. CAC. Noe 3-B, W-80, Salmon 3-C, High R.7.** 71.9 grains. Ex: Wurtzbach. This nearly Mint State survivor is an exceptional example on a well-made, round planchet with lovely bluish-steel surfaces and delicate gold toning that serves to backlight the NE and XII. Both punches were sharply entered into the flan. The obverse punch is a recutting of obverse 2, while the reverse is a new punch that has a heavy break extending from the left edge of the second I downward to the edge of the cartouche.

The Noe 3-B NE shilling is extremely rare. Jack Howes identifies exactly five examples of this variety, including a low-grade example in the collection of the American Numismatic Society. A new sixth example appeared in the January 2013 Stack's-Bowers sale. The Partrick example is the finest of those known, clearly finer than the Robison and Atwater coins, and likewise finer than the 1978 Kreisberg auction coin and the newly discovered example. Several prominent colonial collectors lacked this variety. Among those collectors are C.H. Stearns, John Work Garrett, Richard Picker, Mrs. Norweb, the Hain Family, and Herbert Oechsner.

A cousin of Virgil Brand, Carl Wurtzbach (1864-1947) was a resident of Massachusetts who served as president of the Lee National Bank. An avid collector of Massachusetts silver and copper, Wurtzbach published photographic plates depicting the obverse and reverse of 83 coins. The 1937 publication included eight printed leaves and four double-page plates. Wurtzbach donated his Massachusetts coppers to the American Numismatic Society. He also served as president of the American Numismatic Association from 1917 to 1919.

### (1652) Noe 3-C NE Shilling, VF30 Ideal Colonial Type Coin

**5518 (1652) New England Shilling VF30 NGC. Noe 3-C, W-90, Salmon 3-D, R.6.** 70.6 grains. Noe 3-C is slightly more plentiful than Noe 1-A, with 16 and 14 examples identified, respectively. Just under 60 NE shillings are known for all die varieties. The obverse punch is the recut variation of obverse 2, while reverse C has a diagnostic die crack from the top of the first I, diagonally over the second I. There is no doubt about the attribution.

Although both sides of this medium coin-silver shilling have several old dents, the eye appeal is excellent. Some old timers wrote about “teeth marks” and described pieces with the look of this coin as “witch pieces.” Noe discussed such pieces in his Pine Tree reference, although his remarks might just have easily applied to the NE, Willow, and Oak coinage:

“We are told that it was the superstitious belief of the time that wearing a bent coin afforded protection against the power of ‘witches.’ Some of our Pine Tree coins show evidence of having once been bent even though as we see them now they have again been flattened. Some show dents which imply that teeth must have been the means of bending them initially.”

This example was the cover coin for Numismatic Enterprises’ Mail Bid Auction Number 4, listing a closing date of October 10, 1967. However, we have only the cover page and not the complete catalog, so we are uncertain if this coin actually appeared in that sale. Don Partrick wrote an acquisition date of September 9, 1967 on his envelope, one month before the sale closed.

On October 19, 1652, the General Court of the Massachusetts Bay Colony mandated that the NE silver coinage be discontinued, and recommended that advanced coinage designs be implemented. With that recommendation, the Willow Tree series commenced.

**1652 Noe 1-A Willow Tree Shilling, XF45**  
**Full Tree, Date, and Denomination**  
**Ex: Smith, Stearns, Oechsner, Hain Family**

**5519 1652 Willow Tree Shilling XF45 NGC. CAC. Noe 1-A, Salmon 1-A, High R.6.** 67.9 grains. This richly detailed Willow Tree shilling has an impressive pedigree, and an equally imposing auction history. In its earliest recorded appearance, it opened the 1906 Harlan P. Smith sale, where the Chapman Brothers included it on Plate I and described it as "1652 Shilling. MA(SAT)HVS(ET)S. (I)N. Tree sketchily drawn, and resembling a bush, usually [referred to as] a willow tree. Rev. (NEW) ENL(AND) : AN : DOM.; in center 1652; XII. Double struck as usual, except the tree. Very Fine. Extremely rare."

At its 1966 Stearns auction sale, the coin was cataloged by Robert Vlack as "Noe Plate III, #4. This is the actual specimen pictured in the above reference. Ex: Smith Sale (1906). Unquestionably one of the most attractive Willow Tree shillings in existence and the best of about 6 known."

For its 1988 Oechsner auction appearance, the coin was cataloged as "The Noe plate coin. A full sharp tree, most of the legend visible. The reverse is double struck, with the date reading 166522. A wonderful example of this rarity. Even medium gray, and free from any detractors. One of the finest extant of the variety and probably in the top 6 of all [Willow Tree shilling] varieties."

The coin later participated in the 2002 Hain Family auction, where it was cataloged as "lovely, medium silver gray in color on both sides. The Noe Plate Coin (1-A, No. 4). On the obverse, MA, THVS, N show, along with much of the inner and outer beaded borders. Full tree, a remarkable feature on a Noe 1-A and clearly the reason Noe chose to plate this specimen. On the reverse, AN DOM shows, the XII denomination is clear, the rest shift double struck with the date reading 166522 and the balance of the legend a jumble. The 1991 ANA Exhibition Coin (No. 13). One of the nicest Noe 1-A's your writer [Michael Hodder] can remember seeing and a rival to the piece [Don] Taxay once called the finest he had seen. The Garrett specimen was superb and the Stearns:5 coin is nearly Unc[irculated] but both of these are off the market for the foreseeable future. Your writer knows of 12 different examples of N. 1-A. This is a variety that seems to survive in Extremely Fine and better condition more frequently than not."

To these former lot descriptions we will add that the tree has nearly complete detail. All branches appear present, and although a few are lightly brought up, most of the tree is bold. The date and denomination are also sharp, but the date is composed of three different strikes: 16, 652, and 2. The peripheral legend shows a majority of the letters, but a few are indistinct on each side. The coin was struck three times, rotating moderately clockwise (relative to the reverse) between strikes. The gunmetal-gray surfaces are remarkably free from distractions, and the centering is close to ideal.

A complete variety collection of Willow Tree shillings is practically unobtainable, since just two Noe 2-A examples are known. The Willow Tree threepence provides another stopper, represented by only three survivors. But it is possible to secure a Willow Tree type coin with an essentially full tree, date, and denomination, if the present lot is secured.

*Ex: Harlan P. Smith Sale (S.H. & H. Chapman, 5/1906), lot 1; C.H. Stearns Collection (Mayflower, 12/1966), lot 4; Herbert M. Oechsner Collection (Stack's, 9/1988), lot 928; Hain Family Collection (Stack's, 1/2002), lot 4; Donald Groves Partrick. PCGS# 16*

### 1652 Willow Tree Shilling, Fine Details Noe 1-A, Ex: *H.M.S. Feversham*

**5520 1652 Willow Tree Shilling — Saltwater Damage — NGC Details. Fine. Noe 1-A, W-150, Salmon 1-A, High R.6.** 67.1 grains. The *H.M.S. Feversham* was a 32-gun British warship, built in 1696 at Shoreham. The vessel had a belated role in Admiral Walker's 1711 expedition to attack French-held Quebec during Queen Anne's War. Like many ships from the convoy, the *Feversham* foundered on rocks. It met its fate on October 8, 1711, on Scatarie Island, Nova Scotia, with a loss of 102 lives among the 149 on board. In the 20th century, a quantity of Massachusetts silver coins were recovered from the wreck, and appeared in a January 1999 Stack's catalog. Most were Pine Tree shillings, but the present lot was an exception. The discovery provided a time capsule of Massachusetts silver coinage in circulation in New York more than half a century after they were first minted.

The pearl-gray surfaces are granular from more than 250 years of resting in seawater, and there are a few specks of dark verdigris. Moderately wavy, as coined, with two minor edge splits at 6 and 11 o'clock relative to the tree. On the obverse, the N and SE are bold, and the bottom of the tree is clear, easily sufficient to confirm the die variety. The reverse is double struck, with a clockwise rotation of approximately 30 degrees between impressions. One strike shows the top of the date, and the other strike shows the bottom portion of the date, along with a faint XII. DO from one strike is bold, while the other displays M and the N and W of NEW. Many beads from the inner circle are also evident. All Willow Tree shillings are very rare, and absent from most early American collections.

Ex: *Massachusetts Silver Coins from the H.B.M.S. Feversham* (Stack's, 1/1999), lot 1; Donald Groves Partrick.

**1652 Willow Tree Shilling, VF30**  
**Noe 2-B, Eight Known**  
**Ex: Crosby, Winsor, Jackman**

**5521** 1652 Willow Tree Shilling VF30 NGC. CAC. Noe 2-B, W-170, Salmon 2-B, R.7. 71.6 grains. Six die varieties exist of Willow Tree shillings, and all are very rare. Just two Noe 2-B shillings are confirmed, and the other five varieties range from High R.6 to R.7.

The Noe 2-B variety was known to Crosby, and listed as Crosby 2-B in his *Early Coins of America*. Crosby once owned the present example, although it is not plated in his seminal reference. Noe knew of three pieces, listed as #7 through #9 among the Willow Tree shillings in his 1943 reference. The present coin is #9 in his Plate IV. Eight were recorded by the time of the 2005 Ford auction. The pedigrees for those coins were briefly noted in the 2002 Hain Family catalog as "T.J. Clarke (ex Wurtzbach), Earle sale, Steinberg (ex Jackman) sale, Roper sale, Lauder sale" and the Rusbar and two Hain Family examples. The present coin was in the Jackman sale but was not offered in any of the four Gilbert G. Steinberg auctions.

The present coin was struck three times. From the first impression, all that remains evident is a thick line above the date, likely a row of denticles merged together by subsequent strikes and circulation wear. The coin rotated slightly between the second and third strikes, creating a double I in IN and a lesser shift on XII, DO, and GLA.

Unlike some of those pieces, much of the design is present on this coin, including the left and right borders of the tree, its roots, XII, and the partial legends SATH, ETS IN, N DOM NE, and NGLAN. The 52 in the date is faint, but readily located. The gunmetal-gray surfaces are pleasing and without mentionable detractions. An important example of a very rare variety and type.

Ex: *Sylvester S. Crosby Collection* (John W. Haseltine, 6/1883), lot 486; *Richard Boswell Winsor Sale* (S.H. & H. Chapman, 12/1895), lot 2; *Allison W. Jackman Sale* (Henry Chapman, 6/1918), lot 3; *Peales*; *H.R. Newcomb*; *Col. Green*; *L. Young*; *Reed Hawn Collection of Massachusetts Silver* (Stack's, 5/1998), lot 7; *Donald Groves Partrick*. PCGS# 16

**1652 Willow Tree Shilling, AU50**  
**Noe 3-D, Well Defined**  
**Ex: Wurtzbach, Clarke, Boyd**

**5522 1652 Willow Tree Shilling AU50 NGC. Noe 3-D, W-190, Salmon 3-D, R.7.** 69.6 grains. A well-defined Willow Tree shilling that displays all but the upper-left portion of the tree. The denomination is bold, as is the 16 in the date. The obverse legend is sharp except for the V and second A. The reverse peripheral legend is mostly present but lacks GLA and the A in AN DOM. There is little evidence of the multiple strikes associated with Willow Tree coinage, aside from a jumbled reverse legend near 5 o'clock. The sea-green and dove-gray surfaces are attractive, and problem-free aside from a dull, narrow mark on the upper left branches of the tree.

The present lot is the Noe plate coin for Reverse Die D (plate XI). It is also featured on Noe plate V, along with four other examples of the variety available to Sydney P. Noe. In addition, it is the 1914 ANS Exhibition plate coin for the variety, then on loan from Carl Wurtzbach. Since it is absent from the 1937 Wurtzbach photographic plates of his collection, it had to have been sold by Wurtzbach to Virgil Brand prior to that time. Wurtzbach acquired the coin a second time from the Brand estate in 1937.

Walter Breen's notes on the coin have survived, and were included in the Ford lot description: "Noe 16 (3-D); only six known. Fine or better, all but 2 or 3 letters of inscription legible; much better than it appears in Noe's illustration (Plate V and Enl. Pl. XI). Ex Wurtzbach (1938), Brand estate (1937), Wurtzbach (1911) and S.H. Chapman, who purchased it in England. III. Plate 1, ANS 1914 Exhibition. Said by its former owner to be one of the 3 finest known, but we will be conservative and say that we know only three or four distinctly better-looking examples."

All Willow Tree die varieties are very rare. We are aware of only nine Noe 3-D shillings:

1. Noe plate #16. S.H. Chapman; Carl Wurtzbach; Virgil Brand; Carl Wurtzbach; T. James Clarke; F.C.C. Boyd; John J. Ford, Jr. Collection, Part XII (Stack's, 10/2005), lot 8; Donald Groves Partrick. **The present coin.**
2. Emanuel Wertman Collection (Henry Chapman, 11/1910); Norweb Collection, Part I (Bowers and Merena, 10/1987), lot 1155; Hain Family Collection (Stack's, 1/2002), lot 10.
3. Purchased by Emery May Norweb from Fred Baldwin, 5/1963; Norweb Collection, Part I (Bowers and Merena, 10/1987), lot 1156; Hain Family Collection (Stack's, 1/2002), lot 9.
4. Noe plate #17. Dr. Thomas Hall; Virgil Brand.
5. Noe plate #18. J.W. Scott; ANS Exhibition 1914, Plate XIII; Ezra Collection (Bowers and Merena, 1/1986), lot 1103.
6. Noe plate #20. Waldo C. Newcomer; Col. Green; F.C.C. Boyd; John J. Ford, Jr.; Philip Benedetti; Gore Collection; Kensington Collection (Bowers and Ruddy, 12/1975), lot 216.
7. Noe plate #19. (Barney Bluestone, 12/1942), lot 615. Clipped to 53.4 grains.
8. New York Public Library Collection (Bowers and Ruddy, 10/1982), lot 2002. Indistinct at centers.
9. Hudson Valley Collection (Heritage, 4/2002), lot 7630. Corroded and repaired.

*Ex: S.H. Chapman; Carl Wurtzbach; Virgil Brand; Carl Wurtzbach; T. James Clarke; F.C.C. Boyd; John J. Ford, Jr. Collection, Part XII (Stack's, 10/2005), lot 8; Donald Groves Partrick. PCCGS# 16*

### 1652 Willow Tree Sixpence, AU50 Noe 1-A, Full Date

**5523** 1652 Willow Tree Sixpence AU50 NGC. CAC. Noe 1-A, W-130, Salmon 1-A, High R.6. 38.4 grains. Noe 1-A is the only Willow Tree die variety of the sixpence denomination. Like all other Willow Tree varieties, Noe 1-A is very rare. Sydney P. Noe listed 10 examples in his 1943 ANS standard reference to the series, and those coins appear on his Plate VII. The present lot is not among that gathering. Thirteen examples were known at the time of the 2004 Ford auction, although the cataloger presented the caveat "there are certainly a few more out there."

As is customary for the Willow Tree series, the present coin was struck twice, creating a jumble of designs and omissions that can sometimes confuse even the experienced specialist. The upper left branch of the tree is evident twice, separated by approximately 30 degrees, which confirms that the second strike was shifted clockwise, and to the left, relative to the obverse from the first strike.

The second strike obliterated much of the first strike, but on the obverse, from the initial impression, the letters NM and ATH are visible, respectively at 12 and 5 o'clock relative to the second strike. On the reverse, the letters DOM, NEW EN, and LAN are from the second strike. A faint ND and nearby partial beaded circle are from the first strike, as is the date and denomination. The date and VI are complete, although the 2 and V are comparatively faint. A majority of Willow Tree sixpence show only a partial date.

The coin is strongly buckled near 12 and 6 o'clock, as made, since those are the areas that retain letters from the first strike. A small dig on the reverse, near the A in LAN, helps create a small flat area on the obverse below the tree. The date displays moderate wear, as it is the high point of the reverse. Otherwise, this is a lovely and unmarked example with chestnut-gold recesses and slate-gray high points.

*Ex: Ken Goldman, 5/1987; Donald Groves Partrick. PCGS# 15*

**1652 Noe-1 Oak Tree Shilling, MS65  
The First Oak Tree Variety  
The Extraordinary Finest Known**

**5524** 1652 Oak Tree, IN at Left MS65 NGC. CAC. Noe-1, W-430, Salmon 1-A, R.3. 70.5 grains. Ex: Hanson. Noe recorded this variety as being first among the Oak Tree shillings in his reference, and modern knowledge supports his placement. The operators of the Boston Mint gained little knowledge of rocker-press production during the Willow Tree period, and were still inexperienced in terms of die engraving. The die faces were convex, and had to produce a round coin. The solution was to engrave those dies in an oval shape. When those dies met a flan, the result was a round design on the finished coin. The evidence of all known Noe-1 Oak Tree shillings indicates that the obverse die was round, and the reverse die was oval, accounting for an off-center obverse and a centered reverse.

This highly lustrous Gem clearly shows the sinusoidal wave of rocker-press coinage, and has a distinctive oval shape, resulting in part from the strike and in part from crimping of the flan at the Boston Mint. The weight is a trifle light, but insufficiently so to suggest outside clipping after the coin was produced. The inwardly curved left side of this piece encroaches slightly upon the legend so that the tops of IN on the obverse and NDO on the reverse are absent. Otherwise, the legends are complete. Intermingled gold and pale blue toning heightens the eye appeal of this exceptional shilling. This is the finest Noe-1 shilling known to us, slightly better than the Eric P. Newman coin that we sold last May. Following those two coins and the MS63 in the next lot, the Condition Census falls sharply through the AU grades.

Ex: Jon Hanson; Donald Groves Partrick. PCGS# 45361

**1652 Noe-1 Oak Tree Shilling, MS63**  
**Ex: Eliasberg Collection**  
**Condition Census**

**5525** 1652 Oak Tree, IN at Left MS63 NGC. Noe-1, W-430, Salmon 1-A, R.3. 72.5 grains. Ex: Eliasberg. Only slight evidence of the rocker-press production appears on this fully lustrous piece. Light gray surfaces exhibit delicate gold and blue toning on each side; eye appeal is excellent. The top of the obverse is slightly crimped, affecting the tops of AS, and the lower legend is slightly off the flan. That feature was undoubtedly characteristic of the planchet, as the weight is slightly greater than the 72-grain standard. The tree is well detailed inside an oval-shaped inner circle. The reverse is nicely centered with complete legends and a perfectly round inner circle. Slight evidence of die rust appears on the reverse, although insufficient to call this piece Noe-1.5, a die state with heavy rust.

Following the limited NE and Willow Tree coinages, the Oak Tree pieces were struck in substantially greater numbers. For example, there are more survivors of the Noe-1 Oak Tree coinage than for the combined total of NE and Willow Tree pieces of all denominations. The Oak Tree coinage was probably struck in the early to mid-1660s, including the 1662-dated twopence. All other Oak and Pine Tree pieces maintain the 1652 date, regardless of the actual time of striking.

Ex: Louis E. Eliasberg, Sr.; Eliasberg Estate (Bowers and Merena, 5/1996), lot 2; Jon Hanson (5/20/1996); Donald Groves Partrick. PCGS# 45361

**1652 Noe-2 Oak Tree Shilling, MS64  
Plated in Wurtzbach and Noe  
The Finest Known**

**5526** 1652 Oak Tree Shilling, ANDO MS64 NGC. CAC. Noe-2, W-440, Salmon 1-B, Low R.7. 70.1 grains. This Choice Mint State piece is plated on Carl Wurtzbach's 1937 photograph record, and in the Noe reference. It is also plated in the Whitman *Colonial Encyclopedia* and in the Salmon book. The distinctive rocker-press wave is clearly visible on this oval shilling that features a sharp tree and full legends. Rich grayish-gold toning appears on the fully lustrous surfaces graced with splashes of navy-blue patina. Nicely centered with most of the outer border beads visible on each side.

This piece is the finest known, and the only Mint State example that we have seen or heard of. Second place in the Condition Census appears to be the XF in the Stearns Collection, along with an XF in the Alan Weinberg Collection. A small number of VF coins follow the top three examples. There are nine or 10 representatives known, according to Michael Hodder in the Ford catalog.

Carl Wurtzbach's collection ticket accompanies this lot, inscribed:

"Uncirculated Small Cleft. Excessively rare always unique in this condition. Another grand prize. Crosby's 1883 good. Clapp to CW very good. Probably same piece. This one from Virgil Brand Collection to Carl Wurtzbach March 18th 1936."

Ex: Virgil Brand; Carl Wurtzbach; T. James Clarke; F.C.C. Boyd; John J. Ford, Jr. (*Stack's*, 10/2005), lot 17; Jon Hanson (10/18/2005); Donald Groves Partrick. PCGS# 20

**1652 Oak Tree Shilling, MS61  
Very Rare Noe-2, ANDO Variety**

**1652 Oak Tree Shilling, MS64  
The Finest Known Noe-3, AN DO**

**1652 Oak Tree Shilling, MS63  
Condition Census Noe-3**

**5527 1652 Oak Tree Shilling, ANDO, MS61 NGC. Noe-2, W-440, Salmon 1-B, R.7.** 68.9 grains. This variety was missing from the Picker and Garrett Collections, and most other major collections of the past half-century. The Donald Groves Partrick example is far sharper than the Norweb piece, the Stearns-Roper coin, the Hain specimen, and most others from major sales of the last three decades. Only the Ford coin is comparable. The present rich silver-gray shilling is generally sharp throughout, aside from slight softness near the edge at 3 o'clock on the obverse and at 9 o'clock on the reverse. A mint-made edge flaw affects the top of the G. Close to ideal centering.

*Ex: Public Auction Sale (Stack's, 5/1997), lot 331; Donald Groves Partrick. PCGS# 20*

**5528 1652 Oak Tree Shilling, AN DO, MS64 NGC. Noe-3, W-450, Salmon 1-C, R.6.** 72.2 grains. A rare variety despite three examples in the Ford Collection, two others in the Hain Collection, and two pieces in the present sale. This specimen is the finest of those from Ford, and was previously in the F.C.C. Boyd Collection. An impressive oval-shaped example that displays AN DO instead of the usual AN DOM, this Oak Tree shilling is toned medium sea-green and caramel-gold with shimmering luster and pleasing surfaces. The tree, date, and denomination are bold, as are most of the peripheral letters. DO is weak due to the die state, and a planchet wave near the edge causes softness on HV. The obverse is slightly misaligned toward 12 o'clock with the tops of MASAT incomplete. The reverse is moderately misaligned toward 3:30, affecting portions of WEN.

*Ex: F.C.C. Boyd Collection; John J. Ford, Jr. Collection, Part XII (Stack's, 10/2005), lot 18; Donald Groves Partrick. PCGS# 20*

**5529 1652 Oak Tree Shilling, AN DO, MS63 NGC. Noe-3, W-450, Salmon 1-C, R.6.** 74.7 grains. Struck on a granular planchet, this golden-brown and slate-gray Oak Tree shilling displays attractive, lustrous surfaces that indicate its true quality. Unevenly struck, this piece presents a round appearance, although the obverse is partially off the planchet to the right. This Condition Census piece exhibits impressive eye appeal.

*Ex: Dr. Thompson, etc. Collections (Thomas L. Elder, 7/1915), lot 539; Hillyer Ryder; F.C.C. Boyd; 59th Public Auction Sale (New Netherlands, 6/1967), lot 1030; Purchased from W.A. Anton, Jr., 10/1972; Donald Groves Partrick. PCGS# 20*

**5530** 1652 Oak Tree Shilling, IN at Bottom — Plugged — NGC Details. Unc. Noe-4, W-460, Salmon 2-D, R.4. 71.4 grains. The strike is generally sharp, and the entire tree is well defined. Luster rolls across the pearl-gray surfaces of this oval-shaped Oak Tree shilling. The legends are complete except for portions of S and NE. The straight upper edge of the obverse die is apparent on the upper obverse. Plugged and re-engraved at SE on the obverse, and opposite on the reverse at WE.

Ex: A.H. Baldwin; Purchased from Jon Hanson, 4/1973; Donald Groves Partrick.

**5531** 1652 Oak Tree Shilling, IN at Bottom, MS65+ NGC. CAC. Noe-5, W-470, Salmon 3-D, R.2. 70.2 grains. An apple-green and stone-gray example that boasts vibrant luster and outstanding eye appeal. This is the finest known Noe-5 Oak Tree shilling seen to date. The obverse is moderately misaligned toward 6 o'clock. The reverse letters are complete, although the W is tight against the edge. The "S" bend expected of rocker press varieties is prominent near the top of the tree. The vertical breaks near ND A are characteristic of Noe-5, as is the heavy horizontal break on the upper obverse margin. Much of the tree appears blurry due to the die state. The tree would soon after be completely re-engraved by the coiner to create Noe-6.

Ex: 95th Sale (Barney Bluestone, 12/1946); later, Donald Groves Partrick.

**5532** 1652 Oak Tree Shilling, IN at Bottom, MS64 NGC. Noe-5, W-470, Salmon 3-D, R.2. 67.7 grains. A satiny, deep gunmetal-gray example. The strike is crisp except at the top of the tree, which is at the crest of the S-wave characteristic of rocker press emission. As usual for Noe-5, the obverse is somewhat misaligned due south with IN M partly off the flan. The reverse of this Choice Mint State piece has nearly perfect centering. The familiar die state for Noe-5, which features a heavy horizontal obverse break at 12 o'clock, prominent vertical breaks on the right reverse, a less conspicuous vertical break below the 2 in the date, and chipping within the N and M in AN DOM.

Ex: Reed Hawn Collection of Massachusetts Silver (Stack's, 5/1998), lot 8; Donald Groves Partrick. PCGS# 20

### 1652 Oak Tree Shilling, Noe-4 Uncirculated Details

### 1652 Oak Tree Shilling, MS65+ Noe-5, IN at Bottom Lustrous, Finest Known

### 1652 Oak Tree Shilling, MS64 Condition Census Noe-5

### 1652 Oak Tree Shilling, MS63 Noe-6.1, Finest Known

**5533** 1652 Oak Tree Shilling, IN at Bottom, MS63 NGC. CAC. Noe-6.1, W-480, Salmon 4-D, R.6. 71.0 grains. 1991 ANS Exhibition Coin, #41. Described in the Levinson catalog as "a truly sensational example of the variety." This piece is finer than any others we have seen. The dove-gray surfaces are unabraded. The obverse centering is good, although the tops of TS IN MA are off the flan; the reverse centering is nearly perfect. The strike is bold. Cataloged as Noe-6.1.1 in the Hain Family sale, but instead it is Picker's 6.1 since the "bottom curve of first S [is] completed."

Die states of the Noe variety numbers are complicated. A decimal ".1" indicates an earlier die state, while other decimals indicate later die states. Therefore, Noe-6.1.1 is earlier than 6.1, which in turn is earlier than Noe-6.

Ex: Estate of Sidney A. Levinson (*Stack's*, 4/1988), lot 1; Hain Family Collection (*Stack's*, 1/2002), lot 25; Purchased from Jon Hanson, 1/2003; Donald Groves Partrick. PCGS# 20

### 1652 Oak Tree Shilling, AU50 Late Die State Noe-6

**5534** 1652 Oak Tree Shilling, IN at Bottom, AU50 NGC. Noe-6, W-480, Salmon 4-D, R.7. 68.8 grains. A late die state of Noe-6, more rare than Noe-6.1 and its associated states Noe-6.1.1 and "Noe-6.1.1.1" (Norweb: 1163). Heavy clash marks from XII and N DO affect the sharpness of the lower obverse. Half of the D in ENGLAND is consumed by a break, and other breaks enlarge near the AN in AN DOM. Nonetheless, the reverse is well defined, as are the upper and right portions of the obverse. Well centered and unblemished with glints of luster in the design recesses.

Ex: Public Auction Sale (*Stack's*, 3/1994), lot 5; Reed Hawn Collection of Massachusetts Silver (*Stack's*, 5/1998), lot 10; Donald Groves Partrick. PCGS# 20

### 1652 Oak Tree Shilling, MS62 Late Die State Noe-7

**5535** 1652 Oak Tree Shilling, IN at Bottom, MS62 NGC. CAC. Noe-7, W-480, Salmon 5-D, R.5. 71.0 grains. A lovely silver-gray example with outstanding surfaces. Evenly struck throughout; the tree is well defined. The coin appears slightly off-center toward 3 o'clock, partly due to a straight mint clip at 2:30. Moderately wavy, as issued from a rocker press. The die state is later than usual for Noe-7. A break occupies more than half of the N in AN DOM, and that break extends up to join the advanced break below the 2. This exceptional Condition Census example might be the finest known. The Ford Collection had AU and EF examples, Hawn had two XF pieces, and the Hain cabinet contained VF pieces.

Ex: Richard Picker; Donald Groves Partrick. PCGS# 20

**1652 Oak Tree Shilling, XF45  
Noe-8, Ex: Hain Family**

**1652 Noe-12 Oak Tree Shilling, XF45  
High Condition Census**

**5536** 1652 Oak Tree Shilling, IN at Bottom, XF45 NGC. Noe-8, W-490, Salmon 6-E, High R.6. 69.8 grains. An attractive lavender-gray example. The tree is evenly defined and the obverse legend is complete. The reverse legend is full except for the top of LAN. The "S" shape is natural for the issue, and is responsible for the area of uneven wear above the date.

Pedigree researchers should note that a mishap in the March 1993 Stack's catalog caused the correct photos for lot 2043 (this coin) to appear with lot 2042. The photos plated for lot 2043 belong with lot 2044.

Ex: Public Auction Sale (Stack's, 3/1993), lot 2043; Hain Family Collection (Stack's, 2/2002), lot 29; Donald Groves Partrick. PCGS# 20

**5538** 1652 Oak Tree Shilling, IN at Bottom XF45 NGC. CAC. Noe-12, W-510, Salmon 9a-Fii, High R.6. 72.2 grains. Ex: Hain. IN at Bottom. Smooth surfaces exhibit attractive grayish-heather patina with delicate gold overtones on each side. The central obverse is expectedly weak for Noe-12. An exceptional example of the variety, this piece is finer than either the Ford coin or the other Hain example. The Stearns Collection had four examples of this variety, but none were plated or graded in that catalog. The Donald Partrick coin is closest to the description of lot 45 in the Stearns catalog. This example ranks high in the Condition Census, and may qualify as the finest known.

Ex: C.H. Stearns Collection (Mayflower, 12/1966); Robert A. Vlack Collection; Andrew Hain Family Collection (Stack's, 1/2002), lot 40; Jon Hanson (1/15/2002); Donald Groves Partrick. PCGS# 45362

**1652 Oak Tree Shilling, Noe-11  
XF Sharpness, Ex: Norweb**

**1652 Oak Tree Shilling, AU50  
Rare Noe-13, Early Die State**

**5537** 1652 Oak Tree Shilling, IN at Bottom — Scratches — NGC Details. XF. Noe-11, W-510, Salmon 9-F, R.6. 66.8 grains. A walnut-brown shilling that has a sharply defined tree and a complete reverse legend. The obverse legend is close to full, but the tops of IN M are off the flan. The glossy surfaces exhibit trivial pinscratches. Noe-11 has a different, bold tree relative to Noe-10. The tree also varies slightly from Noe-12. This moderately scarce variety is seldom encountered in grades above Very Fine.

Ex: David Prosky (11/1909); Albert Fairchild Holden; Norweb Collection (Bowers and Merena, 10/1987), lot 1168; Donald Groves Partrick.

**5539** 1652 Oak Tree Shilling AU50 NGC. CAC. Noe-13, W-520, Salmon 10-G, R.6. 66.4 grains. IN at Bottom. The initial die state of Noe-13 with a bold tree that lacks the "spiny" appearance of its eventual Noe-14 successor. The shrub to the right of the tree has a thin base. Cream-gray surfaces show pleasing sharpness on the tree. SATHVSETS is crisp and complete. The obverse is slightly off-center toward 6 o'clock, and the lower letters are partial. Aside from the upper serifs of the M in DOM, the reverse legend is complete. Abrasions are minimal, and the wave through the center of the coin is characteristic of rocker press emission.

Ex: Andrew C. Zabriskie Collection (Henry Chapman, 6/1909); Albert Fairchild Holden; Emery May Norweb; Norweb Collection, Part 1 (Bowers and Merena, 10/1987), lot 1170; Donald Groves Partrick. PCGS# 20

**Ex: Ferguson Haines, C.H. Stearns**

**1652 Oak Tree Shilling, AU53**  
**Noe-13.3, Rare Intermediate Die State**

**1652 Oak Tree Shilling, Choice VF**  
**Rare Noe-13.3, Middle Die State**

**5540 1652 Oak Tree Shilling, IN at Bottom — Repaired — NGC Details.** AU. Noe-13, W-520, Salmon 10-G, R.6. 72.0 grains. This Oak Tree shilling exhibits rich silver-gray patina with impressive sharpness and attractive surfaces. The obverse letters are mostly intact, except for the tops of N MA. The reverse legend is complete. A straight mint clip is visible at 3 o'clock. NGC calls the piece "repaired," likely due to the scattered wispy field marks on the reverse, but these were probably on the planchet prior to the strike. The distinctive field texture on the reverse inner ring matches other better-grade Noe-13 shillings.

*Ex: Ferguson Haines Collection (S.H. & H. Chapman, 10/1888); Henry Chapman to C.H. Stearns, 2/1889; C.H. Stearns Collection (Mayflower, 12/1966), lot 49; Herbert M. Oechsner Collection (Stack's, 9/1988), lot 934; Hain Family Collection (Stack's, 1/2002), lot 42; Donald Groves Partrick.*

**5541 1652 Oak Tree Shilling AU53 NGC. CAC. Noe-13.3, W-520, R.7.** 70.9 grains. IN at Bottom. Along with Noe-13.6, this is one of the two intermediate die states of Noe-13. Both were first detailed in 1959 by Eric P. Newman. Die buckling on the central obverse distinguishes Noe-13.3 from Noe-13. The lack of "spines" on the tree, and the shape of the first and second S, separate Noe-13.3 from Noe-13.6. The present chocolate-brown Noe-13.3 shilling has full legends, although NEW and the final S are lightly impressed. No marks are remotely consequential. Minor granularity on the central reverse is as made from die erosion. The eye appeal is excellent, and obtaining a finer example would prove to be a Herculean task.

*Ex: Purchased from New Netherlands in 1956 by Emery May Norweb; Norweb Collection, Part I (Bowers and Merena, 10/1987), lot 1171; Hain Family Collection (Stack's, 1/2002), lot 45; Donald Groves Partrick. PCGS# 20*

**5542 1652 Oak Tree Shilling VF35 NGC. CAC. Noe-13.3, W-520, R.7.** 67.0 grains. IN at Bottom. Noe-13.3 is an intermediate die state between Noe-13 and Noe-14. The tree is indistinct from die buckling, the first S has a short base, and the second S has an upper serif. Eric P. Newman was the first to designate and delineate Noe-13.3 and Noe-13.6, in his 1959 reference *The Secret of the Good Samaritan Shilling*. The present cream-gray and sea-green Noe-13.3 example is well defined for the grade except on the first A in MASATHVSETS. The tree is somewhat faint, a diagnostic for Noe-13.3. Light granularity near the tree is due to die erosion. The legends are close to complete although the top portions of IN and NGLAND are absent. An attractive rarity with unmarked surfaces.

*Ex: 11th Public Auction Sale (New Netherlands, 2/1943); Maj. Alfred Walter; F.C.C. Boyd; 60th Public Auction Sale (New Netherlands, 12/1968), lot 197; Herbert M. Oechsner (Stack's, 9/1988), lot 936; Donald Groves Partrick. PCGS# 20*

**5543** 1652 Oak Tree Shilling XF45 NGC. CAC. Noe-13.6, W-520, R.6. 68.1 grains. IN at Bottom, Spiny Tree. Noe-13.6 is a fairly late die state of Noe-13. The first S has a longer tail, the second S has an upper serif, and the tree has spines. Unlike Noe-14, the top of the 5 is straight, and the diagonal breaks on the central obverse are still present. Noe-13.6 is sometimes cataloged as Noe-14, e.g. Ford:43, due to the popularity and *Guide Book* listing of the Spiny Tree "type." This Noe-13.6 shilling is predominantly stone-gray, but exhibits olive-green, wheat-gold, and lilac undertones. The surfaces are mildly glossy but refreshingly unabraded. The reverse has exemplary centering while the obverse is slightly off toward 5 o'clock, with IN partly off the flan. The slight bulge present on the obverse center is usual for a rocker press product.

Ex: Reed Hawn Collection of Massachusetts Silver (Stack's, 5/1998), lot 14; Donald Groves Partrick. PCGS# 20

**5544** 1652 Oak Tree Shilling XF40 NGC. CAC. Noe-13.9, W-520, High R.7. 69.6 grains. IN at Bottom, Spiny Tree. Noe-13.9 is the third and final recognized intermediate die state of Noe-13. It was first described by Richard Picker (using the present coin to plate the variety) within his contribution to the 1976 ANS publication *Studies on Money in Early America*. Noe-13.9 retains the obverse of Noe-13.6, with advanced field buckling near the tree, but the reverse differs slightly from Noe-13.6. Specifically, the top of the 5 is curved instead of straight. Noe-13.9 is effectively a Spiny Tree variety, although the tree was sharpened at the Boston Mint when the breaks were removed to create Noe-14. The present Noe-13.9 example has pleasing walnut-brown surfaces. The flan is somewhat oval due to a Boston Mint clip near 3 o'clock. The obverse legends are complete except for ETS. The tops of GLA are absent but the reverse legend is otherwise complete, although NEW is worn and flush against the rim. Moderately wavy because of its rocker press origin. Overall, this is an impressive example of the very rare final die state of Noe-13.

Ex: Richard Picker Collection (Stack's, 5/1991), lot 6; Hain Family Collection (Stack's, 1/2002), lot 50; Donald Groves Partrick. PCGS# 20

**5545** 1652 Oak Tree Shilling, Spiny Tree, XF45 NGC. Noe-14, W-530, Salmon 11a-Gi, R.4. 71.8 grains. The plate coin for the "Spiny Tree" variety in the 18th (and final) edition of *The Standard Catalog of United States Coins*. The "Oak" tree of Noe-13 was re-engraved at the Boston Mint, and the result appears similar to a Pine Tree shilling. This charming problem-free steel-gray example shows refreshingly unabraded surfaces. The obverse appears moderately misaligned toward 6 o'clock with the tops of IN M off the flan. The reverse centering is excellent. The coin exhibits the classic "S" wave of rocker press production, but the strike is consistent throughout. Undoubtedly a Condition Census example.

Ex: Waldo C. Newcomer; T. James Clarke; F.C.C. Boyd; 60th Public Auction Sale (New Netherlands, 12/1968), lot 198; Herbert M. Oechsner Collection (Stack's, 9/1988), lot 937; Donald Groves Partrick. PCGS# 20

### 1652 Noe-16 Oak Tree Sixpence, MS64 The Finest Known Example

**5546** 1652 Oak Tree Sixpence, IN on Reverse, MS64 NGC. CAC. Noe-16, W-360, Salmon 1-A, R.5. 34.4 grains. Ex: Merkin. This exceptionally well-centered sixpence exhibits most of the outer border beads on each side, and that is highly unusual for the die marriage. This Choice Mint State example is visually finer than the better Ford coin that was described as the finest seen by the cataloger. The fully lustrous surfaces exhibit lovely gold toning with bluish-steel overtones, especially on the obverse. A planchet crack is evident at 8:30 relative to the obverse. The lower obverse has "stretch" lines identical to lot 44 in the Ford sale, and they are characteristic of the strike, although failed to weaken the design at that location. This extraordinary sixpence is important as a well-centered strike rarity, and as the finest known of the variety.

Ex: Lester Merkin (privately, 8/29/1967); Donald Groves Partrick. PCGS# 45359

### 1652 Oak Tree Sixpence, MS61 Ex: Oechsner, Hain Family The Finest Known Noe-20

**5547** 1652 Oak Tree Sixpence, IN on Obverse MS61 NGC. CAC. Noe-20, W-400, Salmon 2-B, R.6. 33.7 grains. A satiny and unmarked dove-gray example. The strike is generally bold, although SET and WE are soft, and a crease (as issued from a rocker press) affects the base of the tree and the field above the date. A slender diagonal flan flaw at 9 o'clock is as made. The obverse is misaligned toward 1:30. The reverse is well centered despite a straight Mint clip at 6 o'clock. As noted in the Hain Family catalog, hints of an undertype are evident, particularly near 7 o'clock on the obverse, and beneath the I in IN. This example, the finest that is known to us, was plated as number 60 in the 1991 ANS Exhibition catalog.

Ex: John G. Mills Collection (S.H. & H. Chapman, 4/1904), lot 18; Charles Jay Collection (Stack's, 10/1967), lot 6; Herbert M. Oechsner Collection (Stack's, 9/1988), lot 938; Hain Family Collection (Stack's, 1/2002), lot 57; Donald Groves Partrick. PCGS# 45360

**1652 Oak Tree Sixpence, AU Details**  
**Noe-20, IN on Obverse**  
**'6 Over 12' Discovery Coin**

**5548** 1652 Oak Tree Sixpence, IN on Obverse — Plugged — NGC Details. AU. Noe-20, W-400, Salmon 2-B, R.6. 35.0 grains. The present coin was featured on the front page of the September 1971 issue of *The Colonial Newsletter*. It was the first Noe-20 sixpence known to be struck over a cutdown Noe-14 Oak Tree shilling. (Noe-14 also served as an undertype for a few Noe-21 sixpence). According to the article: "The N from the shilling falls in front of the A NO and appears as NA NO. On the obverse, the shilling A of MASATH appears over the left stand of the M in MASATH, and the crossbar and right stand of H appears above S of MASATH." The present silver-gray example is sharply defined and has a perfectly centered reverse. The obverse is misaligned toward 1:30 with HVSETS partially absent. Plugged and re-engraved between 7 and 9 o'clock relative to the obverse, and 3 to 5 o'clock relative to the reverse. Ex: Ted L. Craige (5/1971); Donald Groves Partrick.

**1652 Noe-21 Oak Tree Sixpence, AU50**  
**Overstruck on a Noe-14 Shilling**  
**The Second Finest Noe-21**

**5549** 1652 Oak Tree Sixpence, IN on Obverse AU50 NGC. Noe-21, W-400, Salmon 2a-B, R.5. 32.7 grains. Overstruck on a Noe-14 shilling with the undertype, OM NE and beading, obvious between 9 and 12 o'clock on the Noe-21 reverse. Portions of ETS IN are plain on the Noe-21 obverse margin between 12 and 4 o'clock. This is the finest of the publicized Noe-21 over Noe-14 examples, and the discovery overstrike, identified as such by Walter Breen in 1957. It was formerly in the William J. Wild collection. Wild published the 1966 pamphlet *Six Over Twelve* that documented Oak Tree sixpence overstruck on cutdown shillings. The present cream-gray and charcoal example is nicely struck except where the undertype is conspicuous. This is the second finest Noe-21 known to us.

Ex: William J. Wild (1/1974); Donald Groves Partrick. PCGS# 45360

**1652 Oak Tree Sixpence, MS66 ★  
The Finest Known Noe-22  
Sensational Thick Planchet Piece**

**5550** 1652 Oak Tree Sixpence, IN on Obverse MS66 ★ NGC. CAC. Noe-22, W-400, Salmon 2b-B, R.5. 38.9 grains. Ex: Hanson. This thick-planchet piece weighs eight percent above the 36-grain standard for the Massachusetts silver sixpence. The inner beaded ring on each side is bold, with a full tree and sharp central reverse lettering. Only a trace of the outer ring is evident at the lower obverse, with most of the lettering partially off the flan on each side.

The varieties identified as Noe-20, 21, and 22 are all from the same physical die pair, in various stages of recutting. Noe-20 has a normal first S in MASATHVSETS, and MA separated. Noe-21 also has a thin first S, although now it is retrograde. The Noe-22 recutting again has a normal first S in MASATHVSET, and now has the feet of MA solidly joined.

The scarce Noe-22 Oak Tree sixpence is typically encountered in grades below AU. The Ford specimen, called Choice Extremely Fine in that catalog, was regraded MS63 PCGS. The Norweb piece was graded AU55, while the Hain example and the lesser Ford coin were both called XF. The present highly lustrous Premium Gem with its NGC Star designation is far finer than any of those other pieces, and it is clearly the finest known example. This piece exhibits a slight S-wave from the rocker press, with gorgeous gold, steel, and blue toning. This piece is the only Oak Tree sixpence that NGC has graded MS66, with the aforementioned MS63 the finest that PCGS has certified (12/14).

Ex: Jon Hanson (3/244/1999); Donald Groves Partrick. PCGS# 45360

**5551** 1652 Oak Tree Threepence, IN on Obverse AU58 NGC. CAC. Noe-23, W-260, Salmon 1-A, R.6. 18.1 grains. Each instance of the letter S in MASATHVSETS is retrograde (inverted), diagnostic for Noe-23. It is also the only collectible threepence die variety with IN on the obverse (Noe-35, just three pieces known, is the other IN on obverse marriage). The tree is distinctive for its many "floating" branches, separated from the trunk. The present gunmetal-blue example ranks among the finest known of Noe-23, tied with one other example that is graded AU58 PCGS. It shows the slight S-wave characteristic of rocker press manufacture. The wave favors the date, which is sharp, at the expense of the upper portion of the tree. The remainder of the coin is bold. It is interesting to compare the present piece, which has heavy die lines through THVSE, with the Salmon plate example, which lacks any trace of those lines. The difference is significant, and worthy of further study by the specialist.

Ex: Lester Merkin (privately, 8/1967); Donald Groves Partrick. PCGS# 45358

**5552** 1652 Oak Tree Threepence, No IN on Obverse, XF45 NGC. Noe-27.1.1, W-300, Salmon 5-Aii, R.7. 15.2 grains. Although cataloged as Noe-27.1.1 in the Hain Family Catalog, the distinction between Noe-27.1.1 and Noe-27.1 is unclear. Both are early die states of Noe-27, before the break at EW was removed by a mint worker. The tops of the 1 and 5 in the date also differ from Noe-27 prime. This pearl-gray example is oval-shaped with essentially complete legends. Well struck at the centers, although peripheral letters show some softness. This piece ranks high in the Condition Census for the Noe-27 die pair, regardless of the die state, and it is tied with the next lot for the finest of only three known examples of Noe-27.1.1, the die state absent from the Ford Collection.

Ex: Carmel Stamp & Coin (6/1989); Hain Family Collection (Stack's, 1/2002), lot 69; Donald Groves Partrick. PCGS# 45357

**5553** 1652 Oak Tree Threepence, No IN on Obverse, XF45 NGC. CAC. Noe-27.1.1, W-300, Salmon 5-Aii, R.5. 16.6 grains. The discovery coin for Noe-27.1.1. For its 1968 auction appearance, New Netherlands noted that the present coin was intermediate between Noe-26 and Noe-27. It had the die break at EW, removed for Noe-27, but the 6, 2, and EWEN differ from Noe-26. The 1 and 5 differ from Noe-27. It was listed by Ford as "Noe-26.8," then renumbered by Picker in his 1976 ANS article in *Studies on Money in Early America*. The coin is an attractive cream-gray piece with sharp definition except on the right obverse and left reverse borders. All letters are intact despite a straight mint clip at 3 o'clock.

Ex: Purchased from Elmer Sears, 1930 Buffalo ANA; T. James Clarke; F.C.C. Boyd; 60th Public Auction Sale (New Netherlands, 12/1968), lot 204; John M. Foreman, Sr. Collection (Stack's, 5/1989), lot 1149; Donald Groves Partrick. PCGS# 45357

### 1652 Oak Tree Threepence, AU53 Noe-27

**5554** 1652 Oak Tree Threepence, No IN on Obverse, AU53 NGC. CAC. Noe-27, W-300, Salmon 5-Aii, R.5. 16.2 grains. This lavender-gray and chestnut-gold example is well struck at the centers. The tree is particularly sharp. The borders display clear, complete legends aside from lightness of impression near 3 o'clock on the obverse and opposite at 9 o'clock on the reverse. A fairly early die state example with the break on the E in NEW, but later than Noe-27.1 since the 1 in the date has an upper crossbar, and the top of the 5 lacks a crossbar. This scarce variety was lacking in the Norweb Collection.

*Ex: Reed Hawn Collection of Massachusetts Silver (Stack's, 5/1998), lot 18; Donald Groves Partrick. PCGS# 45357*

### 1652 Oak Tree Threepence, MS63 The Finest Known Noe-28.5 Excellent Eye Appeal

**5555** 1652 Oak Tree Threepence, No IN on Obverse, MS63 NGC. CAC. Noe-28.5, W-310, Salmon 6-B, R.7. 15.2 grains. Described as "The Finest Seen" of Noe-28.5 in the Hain Family catalog. Some confusion exists concerning what distinguishes Noe-28.5 from Noe-28 and Noe-28.5.5. Picker refers to obverse die re-engraving, Hodder more accurately (in the Hain Family catalog) refers to obverse die lapping, and Salmon describes the die cracks on the right reverse. The present coin shows the indistinct design on the lower obverse characteristic of Noe-28.5, as well as cracks and breaks on the AN in ENGLAND. This magnificent example displays smooth and dusky tan-brown and silver-gray surfaces. Well struck given the state of the dies. The reverse has excellent centering, and the obverse is moderately misaligned toward 5 o'clock. The flan is nearly oval-shaped due to straight edge clips by the Boston Mint.

*Ex: Brigandi Coin Company (10/1987); Hain Family Collection (Stack's, 1/2002), lot 74; Donald Groves Partrick. PCGS# 45357*

**5556** 1662 Oak Tree Twopence, Small 2, MS63 NGC. CAC. Noe-29, W-240, Salmon 1-A, R.6. 11.9 grains. The plate coin in Noe's ANS standard reference *The Oak Tree Coinage of Massachusetts*. It was also a plate coin in Carl Wurtzbach's 1937 publication, a "limited edition leather bound set of black and white photographic plates of his collection," as described in the Ford catalog, Part XII. The tail on the 2 in the date is a stub, diagnostic for Noe-29. All Oak Tree twopence were coined from the same die pair. Noe-29, 30, and 31 are identified by die breaks on the 2, which is small and distant from 166. The 2 was then re-engraved on the die, larger and closer, to make the Noe-32, 33, and 34 varieties. This well-preserved gunmetal-gray example has a fully struck tree, date, and denomination. All letters are completely present, despite moderate obverse misalignment toward 7 o'clock.

Ex: Virgil Brand, Carl Wurtzbach, T. James Clarke, F.C.C. Boyd; 60th Public Auction Sale (New Netherlands, 12/1968), lot 206; Donald Groves Partrick. PCGS# 45355

**5557** 1662 Oak Tree Twopence, Small 2, MS63 NGC. CAC. Noe-30, W-240, Salmon 1-A, R.4. 12.2 grains. The surfaces on this outstanding example show golden-brown fields and lavender high points. All peripheral letters are fully intact, although the obverse is misaligned a few degrees toward 7 o'clock. The long tail on the 2 in the date, and the absence of a parallel break above, respectively differentiate Noe-30 from Noe-29 and Noe-31. This piece is superior to any others that are known to us. The Ford coin was called Choice AU, and three others are also graded AU.

Ex: Richard Picker (7/1966); Donald Groves Partrick. PCGS# 45355

**5558** 1662 Oak Tree Twopence, Small 2, MS61 NGC. CAC. Noe-31, W-240, Salmon 1-A, High R.6. 8.7 grains. A lovely chocolate-brown example. Wavy, as struck from a rocker press, with an incomplete strike near 3 o'clock on the obverse and opposite near 9 o'clock on the reverse. The obverse is misaligned toward 7 o'clock with a couple of letters partly off the flan, but the reverse has ideal centering. This final subvariety of Salmon 1-A is noted for die breaks from the 2 in the date. Four or five Mint State examples of Noe-31 are known

Ex: Reed Hawm Collection of Massachusetts Silver (Stack's, 5/1998), lot 20; Donald Groves Partrick. PCGS# 45355

### 1662 Oak Tree Twopence, MS63 Noe-29, Small 2 Noe Plate Coin

### 1662 Oak Tree Twopence, MS63 Small 2, Noe-30, Ex: Picker The Finest Known

### 1662 Oak Tree Twopence, MS61 Small 2, Noe-31, Ex: Reed Hawm

**1662 Oak Tree Twopence, AU58  
Small 2, Noe-31 Ex: Hain Family**

**5559** 1662 Oak Tree Twopence, Small 2, AU58 NGC. CAC. Noe-31, W-240, Salmon 1-A, High R.6. 11.3 grains. A lovely near-Mint example of this challenging variety, this piece is crisply struck and free of marks. The steel-gray fields are minutely granular, as coined from lightly rusted dies. The obverse is aligned toward 6:30, with S IN MAS partly absent. The reverse alignment is toward 12 o'clock, with NGLA partly off the flan. Noe-31, a late die state of Salmon 1-A, is identified by the dual prominent horizontal die cracks east of the 2 in the date.

Ex: Stack's (privately, 5/1987); Hain Family Collection (Stack's, 1/2002), lot 80; Donald Groves Partrick. PCGS# 45355

**1662 Oak Tree Twopence, VF30  
Small 2, Ex: Norweb  
Very Rare Noe-31.5**

**5560** 1662 Oak Tree Twopence, Small 2, VF30 NGC. CAC. Noe-31.5, Salmon 1-A, W-240, R.7. 11.6 grains. A pearl-white and charcoal-gray twopence. The obverse appears misaligned toward 7:30, with N M partially absent. A straight Mint clip affects portions of NGLA. The branches of the tree are clear, although the base exhibits wear caused by a flan wave. The central reverse has a few wispy marks. The Hain Family catalog describes the intermediate Picker variety Noe-31.5 as: "fully formed break above 2 runs through bead to right leg of A, second 6 lost the lower left side and resembles a contorted 7." Eric P. Newman was the first to list Noe-31.5, in his 1959 monograph *The Secret of the Good Samaritan Shilling*. The bedraggled shape of the date digits probably inspired the recutting of the reverse die to create the Large 2 Noe-32. Only a few examples of Noe-31.5 are currently identified, although others likely reside in collections as Noe-31.

Ex: Art Kagit (privately, 1962); Norweb Collection (Bowers and Merena, 10/1987), lot 1187; Donald Groves Partrick. PCGS# 45355

**1662 Oak Tree Twopence, MS64  
The Finest Known Large 2, Noe-32**

**5561** 1662 Oak Tree Twopence, Large 2, MS64 NGC. CAC. Noe-32, W-240, Salmon 1-B, R.6. 11.4 grains. A beautiful twopence that exhibits peach-gold fields and steel-gray high points. Described in the May 1998 Reed Hawn catalog as "certainly one of the finest known of this rare variety." The legends are complete and the strike is consistently crisp. The coin appears slightly off center toward 9 o'clock, partly due to a pair of straight mint clips on the left border and a small edge flaw at 8:30. Noe-32 is identified by a Large 2 and the lack of a clear die crack through 166, although the shapes of the A and D in ENGLAND differ slightly from Noe-33 and Noe-34. We have tracked six examples of Noe-32, and the present piece from the Reed Hawn Collection is finer than any of the others.

Ex: Reed Hawn Collection of Massachusetts Silver (Stack's, 5/1998), lot 21; Donald Groves Partrick. PCGS# 45356

### 1662 Oak Tree Twopence, AU Details Large 2, Noe-33, Ex: Hain Family

**5562** 1662 Oak Tree Twopence, Large 2 — Plugged — NGC Details. AU. Noe-33, W-240, Salmon 1-B, R.6. 10.6 grains. A lovely medium to deep silver-gray example, featuring full legends and a crisp strike. The tree is especially bold. The small plug noted by NGC is located on the obverse near 5 o'clock, where a stop should separate the letters S and I. On the reverse, the plug appears at 7 o'clock; the right stand of the N and upright of the E are re-engraved. Noe-32 through Noe-34 pieces were struck from the same die pair featuring a large 2 close to the other three date digits. Noe's notes and plates make it unclear exactly what distinguishes the three varieties, aside from the progression of the horizontal crack across 166. The crack is indistinct or absent on Noe-32, delicate on Noe-33, and bold on Noe-34. Additional intermediate die states are attributed as Noe 33.3, 33.5, and 33.7.

Ex: James Ruddy, 9/1968; Rhode Island Collection of Colonial Coins (Stack's, 9/1993), lot 878; Hain Family Collection (Stack's, 1/2002), lot 86; Donald Groves Partrick.

### 1662 Oak Tree Twopence, MS61 Large 2, Noe-34, Ex: Norweb Second Finest Known

**5563** 1662 Oak Tree Twopence, Large 2, MS61 NGC. CAC. Noe-34, W-240, Salmon 1-B, R.5. 12.4 grains. The Norweb catalog stated the present twopence is "among the finest known of the variety." The deep silver-gray surfaces are evenly struck aside from minor blending at the left obverse border. The tree has exquisite definition. The obverse is misaligned toward 9 o'clock, but all letters are complete. The partial wire rim on both sides is unusual for the Massachusetts series. Described as an early reverse die state in the 1987 Norweb catalog, it is a matter of conjecture whether the present piece is Noe-33 or Noe-34. The varieties are from the same die pair, and distinguished by the strength of the horizontal crack through the first three date digits. This piece is the second finest known of Noe-34 behind the finer Mint State Hain Family coin.

Ex: O.B. Windau (1956); Norweb Collection (Bowers and Merena, 10/1987), lot 1188; Donald Groves Partrick. PCGS# 45356

**'1652 Good Samaritan Shilling'**  
**Thomas Wyatt Fantasy, MS65 W-14082**

**5564** "1652" Good Samaritan Shilling, Wyatt Fantasy, Silver, MS65 NGC. W-14082, Low R.7. 56.7 grains. In 1776, the English *Middlesex Journal* discussed the 17th-century Massachusetts silver coins. The shillings were described as "two sorts, viz. a bigger and a lesser ... and a third sort varying from these, having on it the story of the Good Samaritan." This rare "variety" turned out to be a counterstamp on a Pine Tree shilling, as described in Eric P. Newman's 1959 publication, *The Secret of the Good Samaritan Shilling*.

But 18th-century collectors coveted the ephemeral variety. That encouraged Thomas Wyatt of New York City to strike fantasy Good Samaritan shillings, circa 1856, in silver and copper. The well-made pieces have heavy die polish lines, unlike their predecessors. The present mark-free piece is out-of-round and has an obverse misaligned toward 7 o'clock. The D in ENGLAND has a broad, lengthy spur, as made and perhaps intended to simulate a die break.

Ex: Julian Leidman (8/1997); Donald Groves Partrick.

**1652 Pine Tree Shilling, MS65+**  
**Noe-1, Ex: Reed Hawn**  
**Large Planchet, Pellets**

**5565** 1652 Pine Tree Shilling, Large Planchet MS65+ NGC. CAC. Noe-1, W-690, Salmon 1-A, R.2. 72.7 grains. This Large Planchet variety has pellets at the tree trunk, and it is a beautiful walnut-brown and dove-gray Pine Tree type coin that was described in the Hawn catalog as "far nicer than any other we have seen recently." The lustrous surfaces exhibit the classic S-wave characteristic of rocker press emission. The obverse is moderately misaligned toward 5:30, but all legends are complete except for the lowest corner of the obverse M. The die state is relatively early, with light horizontal cracks crossing the tops of 16 and XII, and extending from the tail of the 2. Further cracks and small breaks affect the N and D in AN DOM. This Gem is lightly clashed on the lower obverse, as nearly always for the variety. Noe-1 is a plentiful variety although few Mint State pieces exist. This example is tied with two or three others for finest known.

Ex: Reed Hawn Collection of Massachusetts Silver (*Stack's*, 5/1998), lot 22; Donald Groves Partrick. PCGS# 23

### 1652 Pine Tree Shilling, MS65 Flipover Double Strike, Noe-1

**5566** 1652 Pine Tree Shilling, Large Planchet MS65 NGC. Noe-1, W-690, Salmon 1-A, R.2. 66.0 grains. A lovely Gem example of the variety with pellets at the trunk. Satiny surfaces display lovely golden-brown and steel-gray luster. The flip-over double strike is uncommon for the series, especially considering that these pieces were coined on a rocker press. The first strike was approximately 10% off center toward 10:30. Because it was off center, the coiner placed it through the dies again, where it received a second, bold, and normal impression. From the first strike, the letters NEW are faintly discernible near 9 o'clock on the obverse, relative to the second strike. A portion of the tree from the first impression is found above the 5 in the date, and fragments of first strike letters are apparent at the N and D in AN DOM. The edge near 6 o'clock is ragged, as punched from coinage strip. The obverse appears several degrees off center toward 5:30, though all letters are complete aside from a corner of the M. An early die state without evidence of the eventual die crumbling from the 16 and 2 of the date or the N in AN; XII is faintly clashed beneath the tree, and the O in DOM is clashed near the first A in MASATHVSETS. The combination of an unusual double strike and exceptional quality will delight the advanced Massachusetts silver specialist.

*Ex: Barney Bluestone; Major Alfred Walter Estate; 60th Public Auction Sale (New Netherlands, 12/1968), lot 207; Donald Groves Partrick. PCGS# 23*

### 1652 Pine Tree Shilling, MS65 Large Planchet Noe-1

**5567** 1652 Pine Tree Shilling, Large Planchet MS65 NGC. Noe-1, W-690, Salmon 1-A, R.2. 73.8 grains. Ex: Hanson. The Pine Tree shilling captures the imagination of the American collecting and non-collecting public unlike any other colonial issue. Nathaniel Hawthorne wrote a story, "Grandfather's Chair," about a mint master whose daughter, Betsey, was said to have a dowry equal to her weight in silver shillings:

" 'And now,' said honest John Hull to the servants, 'bring that box hither.' The box to which the mint-master pointed was a huge, square, iron-bound, oaken chest; it was big enough, my children, for all four of you to play at hide-and-seek in. The servants tugged with might and main, but could not lift this enormous receptacle, and were finally obliged to drag it across the floor. Captain Hull then took a key from his girdle, unlocked the chest, and lifted its ponderous lid. Behold! It was full to the brim of bright pine-tree shillings, fresh from the mint; and Samuel Sewell began to think that his father-in-law had got possession of all the money in the Massachusetts treasury."

Noe-1 is a plentiful variety with several exceptional examples known. Although toned over the centuries, the present Gem might be one of those bright pine-tree shillings that Hawthorne mentioned in that passage. This highly lustrous example has gray coin-silver surfaces with delicate gold and blue overtones. Both sides are flawless. The sharp strike of this excess-weight example has above-average centering with the tops of only a few letters off the flan.

Ex: Jon Hanson (4/1/2000); Donald Groves Partrick. PCGS# 23

### 1652 Noe-1 Pine Tree Shilling, MS65 Large Planchet Rocker-Press Issue

**5568** 1652 Pine Tree Shilling, Large Planchet MS65 NGC. Noe-1, W-690, Salmon 1-A, R.2. 70.6 grains. Ex: NN 6/67. The pellets at each side of the tree on this obverse are described as a type of privy mark, and that feature is diagnostic for the obverse of Noe-1. The colon punctuation is diagnostic for the reverse die.

The irregular planchet of this piece has trivial clips at the sides, almost certainly done at the Boston Mint as this piece has a similar appearance to many other examples of Noe-1. The Large Planchet Pine Tree shillings were made on the rocker press that remained in use following production of the Willow Tree and Oak Tree coinage. All of these pieces were struck on strips of planchet stock, which helps to explain centering issues on many varieties. Once coined, the individual pieces were cut from the strip with heavy cutting shears, explaining the many ragged edges, straight clipped-edges, and other defects.

Both sides are highly lustrous with sky-blue and sunset-gold toning. A minuscule mark at the bottom of the reverse positively identifies this Gem as the 1967 New Netherlands coin. This intermediate die state piece is approximately equal to lot 88 in the Hain Family Collection. A die break joins the tops of 16, and others appear at the upper left and lower right parts of the N in AN, with a further break at the left top of the D in DOM.

*Ex: New Netherlands (59th Sale, 6/1967), lot 1041. Earlier from England; Donald Groves Partrick. PCGS# 23*

**1652 Pine Tree Shilling, MS64  
Noe-2, Finest Known  
Ex: Eliasberg**

**5569** 1652 Pine Tree Shilling, Large Planchet MS64 NGC. Noe-2, W-700, Salmon 2-C, R.5. 73.1 grains. No Pellets at Trunk. The Straight Tree. In a Ford:XII catalog description for a Noe-2 lot, the writer noted "the fact that none of the four Boyd-Ford coins are better than Choice EF shows that this is about as good as it gets for the variety."

The present lot proves an exception to the rule. Graded "MS-60 or finer" in its Eliasberg catalog appearance two decades ago, the coin was noted as "clearly a Condition Census contender" with the comment, "it would be difficult to imagine a finer example of N-2."

One can imagine a Noe-2 with complete peripheral legends, but that would be the sole consequential improvement over the present coin. The light-to-medium cream-gray and chestnut-gold surfaces are satiny. They are also unabraded, save for a solitary tick on the base of the first I in XII and a trivial hairline west of the lowest left tree branch. The strike is bold throughout, although about half of IN MAS is absent; several other letters, mostly on the reverse, are missing their upper tips.

Incomplete peripheral letters are characteristic of Large Planchet Pine Tree shillings, which were struck on dies that were oversize relative to the irregular diameter planchets, typically clipped down to standard weight at the Boston Mint. The current piece is larger than most Noe-2 examples. For example, it exceeds in weight three of the four Ford:XII pieces, and all five of the Hain Family coins.

As of (12/14), the NGC Census has recorded a total of 45 Large Planchet, No Pellets Pine Tree shillings. Among all varieties (Noe-1 through Noe-14), NGC has certified four pieces as MS64, two as MS65, and none finer. This example is probably the finest known.

*Ex: Louis E. Eliasberg, Sr. Collection (Bowers and Merena, 5/1996), lot 9; Donald Groves Partrick. PCGS# 23*

**1652 Pine Tree Shilling, MS65  
Large Planchet, No Pellets  
Finest Known Noe-3**

**5570** 1652 Pine Tree Shilling, Large Planchet MS65 NGC. Noe-3, W-710, Salmon 3-C, R.6. 74.1 grains. No Pellets at Trunk. N in IN Reversed. The Norweb catalog (lot 1193) description for a different Noe-3 shilling stated that “the finest example of this rare variety known to the present writer is currently in a major Eastern collection and is an exceptionally well struck and perfectly round example,” a reference to the present coin. There is little if any doubt that this Noe-3 Pine Tree shilling is the single finest known.

The present lot is clearly superior to the Noe plate coin, which has a smaller diameter and shows a diagonal mark to the right of the tree roots. The Boyd-Clarke-Wurtzbach-Norweb-Hain specimen had “two planchet wrinkles” and a noticeable straight edge clip at 3 o’clock. The Mills-Boyd-Ford example has a similar distracting clip at 3 o’clock. Garrett’s coin is comparable in grade to the present lot, but has an edge split and a smaller diameter. The Newcomer-Clarke-Boyd example from New Netherlands’ 60th sale had an “irregular flan split.” The Stickney-Breisland-Roper coin is circulated, oval-shaped, and “has a few old minor scratches and some incrustation.” Three circulated examples are held by in the ANS. The variety was absent from Stearns, Eliasberg, Picker, Oechsner, Hawn, and Massachusetts Historical Society auctions.

A remarkable Gem, this MS65 example displays shimmering luster across lightly toned and unabraded gunmetal, ice-blue, and caramel-gold surfaces. The strike is bold and the reverse legends are complete. The obverse legends are nearly complete, with only the very tops of N MA absent. In fact, a majority of the outer beaded circle is present on both sides, something that can be said about few Large Planchet shillings. The aesthetic, technical, and market appeal are all outstanding and unsurpassable.

*Ex: Donald Groves Partrick. PCGS# 23*

**1652 Pine Tree Shilling, MS65  
Large Planchet, No Pellets, Noe-4  
Ex: F.C.C. Boyd**

**5571** 1652 Pine Tree Shilling, Large Planchet MS65 NGC. Noe-4, W-720, Salmon 4-D, R.4. 72.6 grains. No Pellets at Trunk. Reversed N in IN. First N reversed in ENGLAND. Noted in the Ford catalog as "on a par for technical grade with both Uncirculated Hain coins (ex: Roper and ex: Norweb) and far nicer than Picker's. ... The top of the reverse seems scraped but this is actually a result of the piece going through the roller dies, elongating the letters in AND and the dots in the outer beaded border above them. Struck from the broken state of the reverse with die breaks forming in the left reverse field." The field break somewhat resembles a narrow cauldron with flames flickering from the top. The break lacks the unified upper "tail" found on the late die state Noe-4.5. The "stretching" of upper obverse or reverse design elements is encountered fairly often on Large Planchet Pine Tree shillings, and helps make each piece unique, along with other characteristics such as the irregular diameters and degree of "S" shaped wave.

The present Gem is a magnificent example. The walnut-brown, dove-gray, and jade-green surfaces shimmer with luster and are devoid of remotely mentionable detractors. The centers retain the central horizontal wave characteristic of rocker press emission. The strike is crisp across all design elements, although portions of MAS and the N and W in NEW lack their tops due to a Boston Mint straight clip. Among the finest Noe-4 shillings, and a desirable contribution to either a variety or type set of Massachusetts silver. 'N' Reversed Pine Tree shilling NGC Census: 4 in 65, none finer (12/14).

Ex: F.C.C. Boyd Collection; John J. Ford, Jr. Collection, Part XII (Stack's, 10/2005), lot 84; Donald Groves Partrick. PCGS# 23

### 1652 Pine Tree Shilling, AU58 Noe-4, Ex: Reed Hawn

**5572** 1652 Pine Tree Shilling, Large Planchet AU58 NGC. CAC. Noe-4, W-720, Salmon 4-D, R.4. 69.3 grains. An attractive deep cream-gray near-Mint example. It is nicely struck, and shows minimal wear aside from the obverse border near 3 o'clock, where a Mint clip affects the tops of a few letters. The remaining luster is considerable, and made more evident by the S-wave characteristic of rocker press production. The Large Planchet Pine Tree shillings were struck on the rocker press that was used for all of the earlier Willow Tree and Oak Tree silver pieces. Eventually, the Boston Mint would begin using a screw press for the production of the Small Planchet Pine Tree shillings.

Noe-4 and Noe-5 are from the same pair of dies, and feature two retrograde Ns, one on each side. Examples classified as Noe-4 have a small break at the top of the M in AN DOM. The later die state Noe-5 Pine Tree shillings have that die break extending through the "V" of that letter, continuing down to the beads of the inner circle. This is the usual die state of Noe-4 with die breaks left of the X and within the M in DOM. Less than six Mint State examples are known, and this piece is next in the Condition Census. The variety is typically found in grades of Very Fine or below, while XF examples are scarce, and AU or better pieces are rare.

*Ex: Reed Hawn Collection of Massachusetts Silver (Stack's, 5/1998), lot 26; Donald Groves Partrick. PCGS# 23*

**1652 Pine Tree Shilling, MS65**  
**Noe-4.5, Full Legends**  
**The Finest Known Noe-4.5**

**5573** 1652 Pine Tree Shilling, Large Planchet MS65 NGC. Noe-4.5, W-720, Salmon 4-D, R.5. 73.9 grains. No Pellets at Trunk. N in IN Reversed. First N in ENGLAND Reversed. The Noe-4.5 variety, a missing link between Noe-4 and Noe-5, first received notice in print in lot 213 of New Netherlands' 60th sale held December 1968. John J. Ford, Jr. wrote: "Dies of Crosby 5-B in transitional state, not known to Noe. Upon the obverse the forms of M ... TV. E ... are as on Noe 5 as is the inner circle, but the tree is as on Noe-4; the letter M has its third stroke so weak as to be hardly discernible. Rev. Die injury and failure at AND\*; die reground at O leaving that letter partly open; break at M extended; inner beads, date and XII as on Noe 5 but as yet not strengthened; die extensively reground. ... The total appearance of this piece is quite different from that of both Noe 4 and 5. In addition to our comments above, attention might be called to the following obv. details: top horizontal of first T, the bottom serifs of the H, all of the letter V, and, possibly, the bottom serif of the second S."

Eight years later, Noe-4.5 was recorded in Richard Picker's list of intermediate Massachusetts silver varieties in the 1976 ANS reference *Studies on Money in Early America*. No variety collection of Pine Tree shillings is complete without an example. Both Crosby and Noe overlooked the distinct variety, partly due to its scarcity.

The present Gem ranks among the finest known examples of the variety. In its 2005 Stack's appearance, the cataloger noted "the Hain collection contained a similarly graded specimen (lot 102), but that one had planchet and striking issues that are missing from the very attractive and problem-free specimen offered here." The pastel sea-green and wheat-gold toning is as pleasing as the crisp strike and coruscating luster. The slight wave on the piece is characteristic of original examples. Unabraded and desirable with full legends and outstanding eye appeal  
*Ex: Americana Sale (Stack's, 1/2005), lot 2446; Donald Groves Partrick.*  
 PCGS# 23

**1652 Noe-4.5 Pine Tree Shilling, MS63  
High Condition Census  
The Roper-Hain Example**

**5574** 1652 Pine Tree Shilling, Large Planchet MS63 NGC. Noe-4.5, W-720, Salmon 4-D, R.4. 73.0 grains. Ex: Hain. The top edge is nicely rounded from 10:30 to 1:30, while the other three sides are straight, the result of mint clipping. The 73.0-grain weight, one grain over the Massachusetts shilling weight standard, proves that this piece was clipped inside the Boston Mint, rather than outside the mint at a later date. The production method for the Massachusetts silver coinage, struck in strips using a rocker press, and then cut out with heavy shears, resulted in many oddly shaped pieces that look like they were clipped later by individuals trying to accumulate a small quantity of silver at the expense of others. However, the weight of the piece in question will always differentiate between the later clipped pieces, and those that were poorly shaped within the Mint. The former are undesirable, while the latter, such as this lovely Mint State piece, are charming.

The strike is exceptional except at the top of the reverse, where the rocker-press stretched the planchet and obscured the letters. This piece is the third finest known to us. Exceptional gray patina rests on fully lustrous surfaces with delicate gold and sky-blue overtones.

Ex: John L. Roper, 2nd (*Stack's*, 12/1983), lot 29; *Stack's* (1/1992), lot 12; Hain Family Collection (*Stack's*, 1/2002), lot 102; Jon Hanson (1/15/2002); Donald Groves Partrick. PCGS# 23

**1652 Pine Tree Shilling, MS64  
Large Planchet, Noe-5  
Ex: Brand, Clarke, Boyd**

**5575** 1652 Pine Tree Shilling, Large Planchet MS64 NGC. CAC. Noe-5, W-720, Salmon 4-Di, R.4. 72.4 grains. 1942 ANS Exhibit Coin #116. Noe-5 is another recutting variety from the Crosby 5-B dies. Crosby identified the varieties 5-B1, 5-B2, and 5a-B2, which respectively became Noe-4, 5, and 6. Later, Ford discovered, and Picker confirmed, the important intermediate Noe-4.5 variety. Noe-5 has an oval O in DOM. That letter is round and bold on Noe-4, and round and weak on Noe-4.5. A Boston Mint engraver strengthened and reshaped the O to create Noe-5. Noe-6 is the final chapter in the life of the die pair, distinctive for its awkwardly re-engraved obverse M.

Edge splits and upper border elongation are prevalent traits on Noe-5 shillings. For example, two consecutive Hain Family lots, 105 and 106, exhibit both characteristics. The cause of upper border stretching is explained in lot 106 of that catalog as "from the rocker press action [of] squeezing the planchet forward." The edge splits may arise from an improperly rolled planchet strip. The strip was too thick; the planchets would be subject to greater stress at the border during coinage.

The present near-Gem is outstanding from the technical perspective, and ranks among the finest examples of the variety. The satiny cream-gray and straw-gold surfaces display only incidental contact. The usual die state, this example shows a clashed N southwest of the denomination and noticeable breaks close to the inner reverse beaded circle, near the letters M, W, second E, and first A.

Two flan splits, at 5:30 and 11 o'clock, each extend about four mm radially into the coin. The upper reverse shows the stretching characteristic of the variety. These aspects are all as made. Of greater significance is that the coin is nearly round and has virtually complete peripheral letters. Only the very tops of MA and (DO)M N(EW) are absent. The upper edge flaw passes between TH and, opposite, (LAN)D A(N) without affecting any letters. The lower edge split impacts the first N in both peripheral legends.

Ex: Virgil Brand; B.G. Johnson; T. James Clarke; F.C.C. Boyd; 60th Public Auction Sale (New Netherlands, 12/1968), lot 214; Donald Groves Partrick. PCGS# 23

**1652 Noe-6 Pine Tree Shilling, MS63  
The Finest Known**

**5576** 1652 Pine Tree Shilling, Large Planchet MS63 NGC. CAC. Noe-6, W-720, Salmon 5-Di, R.6. 73.9 grains. A rich silver-gray example with exemplary surfaces and pleasing eye appeal, this piece is nicely centered, and the legends are complete aside from the tops of SA near 9 o'clock. The rocker-press coining technology produced the wavy surfaces seen here. The strike is sharp except on the obverse exergue, which has a distorted appearance due to die slippage during production. In the Hain Family catalog it was described as Noe-6.1, which implies a striking prior to Noe-6. However, the die breaks through the M in DOM, and over the 6 in the date, are more advanced than sometimes seen on Noe-6. The AU58 Newman coin is the finest we have previously handled, and we believe this piece from the Hain Family Collection is the finest known.

Ex: Corrado Romano Collection (Stack's, 6/1987), lot 4; Hain Family Collection (Stack's, 1/2002), lot 110; Donald Groves Partrick. PCGS# 23

**1652 Pine Tree Shilling, MS63  
Noe-8 Plate Coin**

**5578** 1652 Pine Tree Shilling, Large Planchet, Ligatured NE, MS63 NGC. CAC. Noe-8, W-740, Salmon 7-E, R.4. 70.6 grains. The Noe plate coin for the variety (*Pine Tree Coinage of Massachusetts, 1947*) it was also depicted on the 1937 Wurtzbach plates of the series. Satin luster, complete legends, and an even strike are seen on this attractive medium gray Condition Census coin. The flan displays the mildly sinusoidal wave characteristic of rocker press emission. Clashed from the tree near the date and denomination, the die state is early, without breaks at the dentils below GL.

Ex: DeWitt Smith; Virgil Brand; Carl Wurtzbach; T. James Clarke; F.C.C. Boyd; 60th Public Auction Sale (New Netherlands, 12/1968), lot 210; Donald Groves Partrick. PCGS# 23

**1652 Pine Tree Shilling, AU Details  
Rare Noe-6, Ex: Hain Family**

**5577** 1652 Pine Tree Shilling, Large Planchet — Improperly Cleaned — NGC Details. AU. Noe-6, W-720, Salmon 5-Di, R.6. 68.3 grains. A pearl-gray and olive-gold example with full legends and generally bold definition. This piece was described as "one of the nicest seen" in the Hain Family catalog. The strike is slightly soft at 5 o'clock on the obverse, and opposite near 7 o'clock on the reverse. The 1 in the date and the rightmost portion of the tree also show incompleteness. This is the customary die state with beaded clash marks on the lower obverse, breaks from the M in DOM, and another break above the 6 in the date. Ex: Stack's (privately, 5/1987); Hain Family Collection (Stack's, 1/2002), lot 111; Donald Groves Partrick.

**1652 Noe-8 Pine Tree Shilling, MS63  
1942 Exhibit Coin**

**5579** 1652 Pine Tree Shilling, Large Planchet, Ligatured NE, MS63 NGC. CAC. Noe-8, W-740, Salmon 7-E, R.4. 70.9 grains. This is the 1942 ANS Exhibition Coin, #100. A caramel-gold and powder-blue example of the popular NE monogram variety. The flan exhibits the "S" wave usual for original large planchet shillings. The definition is sharp throughout, and luster dominates the legends and tree. A very early die state without any evidence of the eventual breaks from the GL in ENGLAND. Clashes from the tree are present on the central reverse. Although confirmed to the Clarke collection, the present Condition Census piece was probably also in the F.C.C. Boyd holdings, and likely privately sold by New Netherlands during the 1950s or 1960s.

Ex: Virgil Brand Collection; T. James Clarke Collection; Donald Groves Partrick. PCGS# 23

**1652 Pine Tree Shilling, MS64  
Noe-8.2, Ex: Hain Family**

**5580** 1652 Pine Tree Shilling, Large Planchet, Ligatured NE, MS64 NGC. Noe-8.2, W-740, Salmon 7-E, R.6. 71.7 grains. Described as "An outstanding specimen ... One of the nicest seen" in the Hain Family catalog. A splendid gunmetal-gray example. Moderately oval-shaped, but the reverse legends are essentially complete, and only the tops of THVS are absent from the obverse. The evenly struck and unmarked surfaces are slightly wavy, as issued. The later die state of Noe-8 with a fairly large break beneath GL and lesser breaks on the M in DOM and the second N in ENGLAND. Several slender cracks are noted from beads of the reverse inner circle. This example is the finest of the die state, and second finest from the Noe-8 die pairing.

Ex: Spink & Son; Vlack Collection; Hain Family Collection of Massachusetts Silver Coins (Stack's, 1/2002), lot 120; Donald Groves Partrick. PCGS# 23

**1652 Pine Tree Shilling, Choice XF  
Noe-9, Large Planchet  
Ex: Hain Family**

**5581** 1652 Pine Tree Shilling, Large Planchet XF45 NGC. CAC. Noe-9, W-750, Salmon 7a-Diii, R.6. 70.2 grains. Rich cream-gray toning embraces the fields, and contrasts with the stone-white high points of this lovely shilling. Some of the tree branches are faintly brought up, usual for Noe-9. The flan is oval-shaped but only the N in AN DOM is incomplete, due to a straight Boston Mint clip. Moderately wavy, as is customary for its rocker press origin. This example ranks high in the Condition Census for Noe-9, a rare variety that is typically encountered in VF or lower grades when it is found at all.

Ex: Spink & Son (London); Robert A. Vlack Collection; Hain Family Collection (Stack's, 1/2002), lot 123; Donald Groves Partrick. PCGS# 23

**1652 Pine Tree Shilling, MS65  
Noe-10, Large Planchet  
Ex: Reed Hawn Collection**

**5582** 1652 Pine Tree Shilling, Large Planchet, MS65 NGC. CAC. Noe-10, W-750, Salmon 8-Diii, R.3. 71.2 grains. A beautiful Gem ideal for the finest quality early American type set or specialized collection. In its Hawn catalog appearance, described as "a wonderful specimen, one of the finest known." It realized the second-highest price from the Reed Hawn Collection of Massachusetts silver, behind only the very rare Noe 2-B Willow Tree shilling. Although the Noe-10 Pine Tree shilling is frequently encountered, this piece is the finest known, and we have records of only one other Mint State example. The Wurtzbach plate coin was called Uncirculated in the Ford catalog, an XF example in the Hain Family Collection was regraded AU55 PCGS, and the Norweb coin was graded XF45.

The planchet is taller than it is wide, due to straight Boston Mint clips along the left and right borders to bring the weight within standard. The parallel "stretch marks" at the top of the obverse are as made. The Hawn catalog explains the cause: "The elongation in the HV at the top of the obverse resulted as the rocker dies squeezed the silver strip between and through them. As the strip passed through, the dies pinched and then slipped as they completed their pass. The letters HV were struck properly as the dies pinched, then were drawn out and elongated as the strip was squeezed through the dies. This elongation is very typical on Large Planchet Pine Tree shillings and is always found at the top of the one or the other side of the coin."

The lustrous and unabraded surfaces appear as issued, aside from rich gunmetal and tan-gold toning, with mint die lines visible beneath the denomination and across the lower half of the reverse border. The obverse is slightly off toward 7 o'clock with N MAS partly absent. The reverse is nicely centered with only the tops of M N off the flan. The centers are bold, and the "bird's nest" die flaw is plain near the middle of the tree. Somewhat wavy, as expected from its rocker press emission. Ex: Reed Hawn Collection of Massachusetts Silver (*Stack's*, 5/1998), lot 31; Donald Groves Partrick. PCGS# 23

**1652 Noe-10 Pine Tree Shilling, MS64**  
**Ex: Newcomer, Clarke, Boyd**

**5583** 1652 Pine Tree Shilling, Large Planchet, MS64 NGC. Noe-10, W-750, Salmon 8-Diii, R.3. 70.9 grains. The first N in ENGLAND is reversed, as is the N in IN. From the same die pair as Noe-9, but the tree is strengthened and appears similar to its Noe-8 predecessor, except that the roots are more prominent. A die flaw, referred to as a "bird's nest" by Ford, appears at the center of the tree, to the right of the trunk. Noe states that "the V and S [near 1 o'clock] at the top have been repaired" but appear unchanged from Noe-9. The reverse die is unchanged from Noe-9 despite a retrograde N.

Medium golden-brown, navy-blue, and dove-gray toning endows satiny and mark-free surfaces. Moderately wavy with minor wrinkling in selected areas, as made and usual for high-grade examples struck by a rocker press. The stretched appearance of HIV is also as-made and seen on other Noe-10 examples. The centers are sharp, especially the tree. The left-side letters have low relief due to unobtrusive obverse die buckling at NASA. Well centered for a Large Planchet variety.

Regarding the present lot, the New Netherlands catalog stated: "we have not handled its equal. The Stearns offering had only one and that was far inferior." Four Noe-10 Pine Tree shillings appeared in the Ford auction, each previously from the F.C.C. Boyd Collection. The present example, that was sold with other coins from the Boyd Collection, appeared in the 60th New Netherlands sale despite ranking as the finest Noe-10 that Boyd owned. In our opinion this piece is the second finest known Noe-10 behind the lot offered above in this sale.

*Ex: Waldo Newcomer Collection (B. Max Mehl, 7/1914), lot 3040; T. James Clarke; F.C.C. Boyd Collection; 60th Public Auction Sale (New Netherlands, 12/1968), lot 212; Donald Groves Partrick. PCGS# 23*

**1652 Pine Tree Shilling, MS64+  
The Finest Known Noe-11  
Extensive Provenance**

**5584** 1652 Pine Tree Shilling, Large Planchet, No H in MASATUSETS, MS64+ NGC. CAC. Noe-11, W-760, Salmon 9-F, R.4. 72.0 grains. The 1991 ANS Exhibition Coin, #105. An outstanding near-Gem displaying powder-blue and wheat-gold toning that graces lustrous and unblemished surfaces. The planchet displays the slight sinusoidal wave characteristic of its manufacture, but no wrinkling is present. Well struck where the dies allow, since softness on the I in IN and the N DO in AN DOM is due to the die state. The quality and preservation is such that the guide lines for laying out the obverse legend are visible. Described in the Hain Family catalog as "an excellent specimen, one of the finest we have seen, superior to Norweb's, Garrett's, Appleton's (MHS), better looking on the back than the Noe plate coin." To the best of our knowledge, this piece is the only surviving Mint State shilling from the Noe-11 dies.

The introduction of the Davis-Graves catalog explains the pedigree of the present lot between 1883 and 1954: "George L. Davis was born in Lawrence, Mass., in 1828, the son of a textile machinery manufacturer. He followed the profession of his father, and did not begin his collecting career until around the year 1870. ... Mr. Davis conceived a great admiration for Captain John Haseltine, and dealt chiefly with him from 1880 on ... When Haseltine sold his personal U.S. type collection in 1883, Mr. Davis bought liberally of the outstanding specimens ... By the time of Mr. Davis' death in 1890 he possessed a truly formidable cabinet ... His collection was deposited intact in the vaults of a trust company in North Andover, Mass., where it lay undisturbed until October, 1953 ... The cataloguers were called in to witness the unsealing of the deposit box, which had lain unopened for sixty-three years. What was disclosed exceeded every reasonable expectation."

*Ex: Charles I. Bushnell Collection (Chapman Brothers, 6/1882), lot 162; Captain John Haseltine U.S. Type Collection (1883); George L. Davis; Davis-Graves Collection (Stack's, 4/1954), lot 3; Empire Sale (Stack's, 11/1957), lot 3; Herbert Oechsner Collection (Stack's, 9/1988), lot 944; Hain Family Collection (Stack's, 1/2002), lot 126; Jon Hanson; Donald Groves Partrick. **1652 Pine Tree Shilling, AU55  
Noe-11, Large Planchet  
Condition Census**

**Contemporary Counterfeit Noe-13  
1652 Pine Tree Shilling**

**1652 Pine Tree Shilling, Choice AU  
Noe-16, Small Planchet  
Substantial Mint Luster**

**1652 Pine Tree Shilling, AU53  
Noe-17, Ex: F. Dabney Caldwell**

**5585 1652 Pine Tree Shilling, Large Planchet, No H in MASATUSETT, AU55 NGC. CAC. Noe-11, W-760, Salmon 9-F, R.4.** 72.3 grains. The offering of an AU55 Noe-11 shilling represents a landmark opportunity to acquire a piece that is high in the Condition Census. This duplicate in the Partrick Collection is equal to the finest Ford coin, and finer than the Newman AU53 coin, the XF Norweb and Garrett coins, and the VF Picker, Stearns, Roper, and Craige coins. A dove-gray example, it shows unmarked, well-defined surfaces. Weakness on the lower right reverse letters is due to the die state. The obverse appears moderately misaligned toward 8 o'clock, with the tops of MASAT absent. The reverse legends are complete, although left-side letters approach the edge. The misspelling of the colony name, and the reversed Ns in IN and NEW ENGLAND, suggest a less experienced Boston Mint engraver. But the tree is well formed, and the date and denomination also have aesthetic appeal.

*Purchased 9/1966; Donald Groves Partrick. PCGS# 23*

**5586 1652 Pine Tree Shilling, Large Planchet Uncertified. Noe-13, W-780, R.6.** 35.4 grains. A walnut-brown example clipped to a nearly octagonal shape, as seen on other examples of the rare Noe-13, such as Roper lot 33. About two-thirds of the tree is clear; the date and denomination are faint but legible. The dies apparently contacted the coin only at the centers. Noe had only the Massachusetts Historical Society example to research, and accepted it as a Boston Mint product. Other examples eventually surfaced, and Noe-13 was regarded as a contemporary counterfeit by the time of the 1983 Roper sale.

*Ex: Saccone Collection (Bowers and Merena, 11/1989), lot 1667; Donald Groves Partrick. PCGS# 23*

**5587 1652 Pine Tree Shilling, Small Planchet AU55 NGC. CAC. Noe-16, W-835, Salmon 2-B, R.2.** 72.2 grains. A pleasing early colonial type coin that boasts substantial luster on apple-green and autumn-brown surfaces. The obverse is slightly misaligned toward 6 o'clock, and the reverse is mildly misaligned toward 11:30, but all legends are intact. Noe-16 is a boon for collectors of die progression. Eventually, the obverse displays a large break on the lower left branches and a semicircle break between 4:30 and 6 o'clock. But the present coin is from a relatively early die state with only minor breaks and crumbling at the aforementioned areas. A plentiful variety, this example of Noe-16 is ideal for type collectors.

*Ex: Jon Hanson (8/1972); Donald Groves Partrick. PCGS# 24*

**5588 1652 Pine Tree Shilling, Small Planchet AU53 NGC. Noe-17, W-840, Salmon 3-B, R.3.** 70.9 grains. A lovely cream-gray example with mark-free surfaces and good centering. All peripheral letters are complete and the strike is generally bold. The usual die state is seen here, with a small break from the trunk at the center of the tree and scattered minor crumbling across the reverse margin. This Condition Census example is equal to the Garrett coin, and finer than most others that we have seen, including the VF25 Newman piece. The best Ford coin was called Choice XF, and the Eliasberg Collection had a Fine example. Forée Dabney Caldwell, Jr. (1918-1971) was a World War II Navy veteran and a colonial specialist who worked closely with Richard Picker.

*Ex: F. Dabney Caldwell, Jr. Collection (Stack's, 4/1988), lot 1961; Donald Groves Partrick. PCGS# 24*

**5589** 1652 Pine Tree Shilling, Small Planchet AU55 NGC. CAC. Noe-18, W-845, Salmon 4-B, R.7. 71.7 grains. This is the Noe plate coin for N-18 in his 1947 standard reference, *Pine Tree Coinage of Massachusetts*, and it also appeared in the photographic plates of the series that were prepared by former ANA President Carl Wurtzbach in 1937. Described in the Ford catalog as “a superior specimen and one of the finest seen, in the same class as Hain’s and far superior to Norweb’s. ... There was no Noe-18 in Stearns, Garrett, Picker, Roper, Oechsner, or even the 1970 MHS sales.” This piece was also absent from our Eric P. Newman offering last May. In fact, we have records of only three examples: the present piece that is likely finest known, the XF Hain coin, and the VF Norweb example that is offered below.

This very rare variety is distinctive for its two “dropped roots” beneath the tree. Small breaks are present on the upper right branches and above the O in DO. Since the piece is slightly off center toward 5 o’clock, breaks are also visible at 2:30 and 3:30 on the reverse. All letters are complete but IN is flush with the rim. The gunmetal-gray and chestnut-gold surfaces display glimmers of luster.

Ex: Waldo C. Newcomer; Charles E. Clapp; Carl Wurtzbach; T. James Clarke; F.C.C. Boyd; John J. Ford, Jr. Collection, Part XII (*Stack’s*, 10/2005), lot 115; Donald Groves Partrick. PCGS# 24

**5590** 1652 Pine Tree Shilling, Small Planchet — Clipped — Very Fine Uncertified. Noe-18, W-845, Salmon 4-B, R.7. 62.7 grains. The Ford and Hain examples respectively weighed 71.7 and 73.1 grains. This steel-gray example has attractive surfaces. A narrow flaw above the D in ENGLAND was likely on the planchet before the strike. The usual die state is seen, with a vertical break on the upper right tree branches. The obverse appears off center toward 1 o’clock due to clipping near 12 o’clock. Although others likely exist, this piece and the one offered above are two of the three examples that appear in our notes.

Ex: Andrew C. Zabriskie Collection (Henry Chapman, 6/1909); Albert Fairchild Holden; Emery May Norweb; Norweb Collection, Part I (*Bowers and Merena*, 10/1987), lot 1208; Donald Groves Partrick. PCGS# 24

**5591** 1652 Pine Tree Shilling, Small Planchet, VF35 NGC. CAC. Noe-19, W-850, Salmon 5-B, R.5. 67.9 grains. A charming Massachusetts silver type coin, this example has pearl-white high points and cream-gray fields, while the protected areas display charcoal toning, characteristic of original circulated pieces. Although struck a few degrees off center toward 12 o’clock, all letters are complete. The usual die state for Noe-19, distinguished by numerous breaks and cracks on the reverse margin between 5 and 8 o’clock. The obverse die is in better shape, and shows only a small break at 1:30. This is clearly a Condition Census example from the scarce Noe-19 die pair.

Noe-19, Small Planchet**

**1652 Pine Tree Shilling, XF45  
Very Rare Noe-20  
Ex: Boyd, Ford**

**5592** 1652 Pine Tree Shilling, Small Planchet XF45 NGC. CAC. Noe-20, W-860, Salmon 6-B, R.7. 70.6 grains. An attractive walnut-brown shilling with pleasing definition, especially on the tree. The obverse is off several degrees toward 1:30, with THVSE partial, but the reverse is well centered. The usual die state, it has a fairly sizeable break beneath the left side of the tree. This break presumably soon led to obverse die failure: the reason for the rarity of Noe-20. This is the second Ford sale coin, finer than the Norweb and Hain Collection coins.

Ex: F.C.C. Boyd; John J. Ford, Jr. Collection, Part XII (Stack's, 10/2005), lot 119; Donald Groves Partrick. PCGS# 24

**1652 Pine Tree Shilling, XF45  
Rare Noe-22, Small Planchet  
Condition Census**

**5594** 1652 Pine Tree Shilling, Small Planchet XF45 NGC. CAC. Noe-22, W-870, Salmon 8-B, R.6. 69.2 grains. A well-defined lavender-gray and sea-green example with smooth surfaces. The obverse appears misaligned toward 11 o'clock and the reverse appears off-center toward 5 o'clock, but only the upper portions of ATHV are absent. The reverse border displays numerous cracks and breaks, most conspicuous from the G and above the N in NEW. Described as "an outstanding specimen" in the Hain Family catalog. The 1991 ANS Exhibition Coin, No. 117, it is tied for the finest of 11 examples in our records.

Ex: Robert A. Vlack Collection; Donald Belcher; Hain Family Collection (Stack's, 1/2002), lot 147; Donald Groves Partrick. PCGS# 24

**1652 Pine Tree Shilling  
Very Rare Noe-20  
Ex: Hain Family**

**5593** 1652 Pine Tree Shilling, Small Planchet — Clipped — Very Fine Uncertified. Noe-20, W-860, Salmon 6-B, R.7. 62.8 grains. The two Ford examples weighed 70.5 and 71.6 grains. Lightly impressed on the upper third of both sides, but the remaining two-thirds of the coin is well defined. As often seen with examples of the very rare Noe-20, the obverse appears off center toward 12 o'clock, caused by a misaligned die. The letters AN DO are very tight against the lower edge. A late die state with distributed evidence of pending obverse die failure that is visible on the smooth deep gray surfaces.

The Hain catalog states that the present coin appeared in the December 1966 Mayflower catalog of the C.H. Stearns Collection, which was cataloged by Robert Vlack. The Noe-20 from that auction, lot 106, is further pedigreed to a purchase from the Chapman brothers on September 26, 1887, but its catalog description is incompatible with the present piece.

Ex: Robert A. Vlack Collection; Hain Family Collection (Stack's, 1/2002), lot 146; Donald Groves Partrick. PCGS# 24

**1652 Pine Tree Shilling, XF45  
Noe-22, Small Planchet  
Ex: Norweb Collection**

**5595** 1652 Pine Tree Shilling, Small Planchet XF45 NGC. CAC. Noe-22, W-870, Salmon 8-B, R.6. 69.5 grains. Exemplary reverse centering is seen on this gunmetal-gray shilling. The tree, date, and denomination are bold. Several letters in MASATHVSETS are partial, but all remain legible. An early die state, it lacks the break that usually joins the GL in ENGLAND. Nonetheless, cracks and breaks are prominent at D AN and across the top of the E in NEW. Equivalent to the previous lot, this example is also tied for the finest in our records, along with a third XF45 example that appeared two years ago in the Sundman sale.

Ex: New Netherlands (9/1954); Norweb Collection, Part I (Bowers and Merena, 10/1987), lot 1211; Donald Groves Partrick. PCGS# 24

### 1652 Pine Tree Shilling, AU Details Norweb's Very Rare Noe-23

**5596** 1652 Pine Tree Shilling, Small Planchet — Repaired — NGC Details. AU. Noe-23, W-875, Salmon 8-C, High R.6. 65.8 grains. A well-defined example of this rare variety, described as “possibly second finest known” in the Norweb catalog, and that statement applies equally today. Five other examples in our records are each graded in the Very Fine range. The deep gray surfaces are evenly granular, as issued. A light impression from a planchet cutter, as made and present prior to the strike, is noted near the top of the tree and opposite at top of 52. The shape is somewhat oval; the obverse appears misaligned toward 4 o'clock with right-side letters partly off the flan. Smoothed on the reverse border between 1 and 3 o'clock, removing the letters D and A, and the period between them. The coin remains as plated in the 1987 Norweb catalog, and the repair is presumably more than a century old, since Albert Holden died in 1913.

*Ex: Elmer Sears; Albert Fairchild Holden; Emery May Norweb; Norweb Collection, Part I (Bowers and Merena, 10/1987), lot 1212; Hain Family Collection (Stack's, 1/2002), lot 150; Donald Groves Partrick.*

### 1652 Pine Tree Shilling, XF40 Noe-25, Ex: Hain Family

**5597** 1652 Pine Tree Shilling, Small Planchet XF40 NGC. CAC. Noe-25, W-890, Salmon 8-E, R.5. 64.7 grains. A pleasing gunmetal-gray shilling. The obverse is glossy, while the reverse exhibits a microgranular texture, as made. Struck slightly off center toward 7 o'clock, with the tops of the lower letters off the flan. The strike is generally crisp, although the right branches of the tree are lightly brought up. The finest of 11 examples in our notes are four XF examples.

The die state is usual for Noe-25 and features a break from the upper left corner of the first I in XII, reminiscent of the break from the clock on the backdated 1789 Mott store card. A second, smaller break is beneath the X, and a pair of narrow cracks pass through N DO.

*Ex: Vlack Collection; Emerson Gaylord; Hain Family Collection (Stack's, 1/2002), lot 153; Donald Groves Partrick. PCGS# 24*

**1652 Pine Tree Shilling, MS62**  
**Noe-26, Ex: Boyd, Ford**  
**The Finest Known**

**5598** 1652 Pine Tree Shilling, Small Planchet MS62 NGC. CAC. Noe-26, W-900, R.5. 71.3 grains. A remarkable multiple-struck mint error. Perhaps its curious appearance caused this piece to be set aside, since it ranks among the finest examples of Noe-26, and is clearly the finest known to us. The first strike was well centered, but nonetheless, the coin was struck a second time from the same dies, rotated approximately 120 degrees counterclockwise from the first impression. The coin was then struck a third time, with the reverse die shifting north a few degrees relative to the stationary obverse die.

From the first strike, the letters MAS are clear, at 12 o'clock relative to the second impression. SETS is weak, but evident, as are traces of other design elements. On the reverse, the AN in AN DO remains from the first strike, also at 12 o'clock of the second strike. The third strike had little effect on the obverse, but the reverse letters and numerals are shifted north.

Small Planchet Pine Tree shillings were coined using a screw press, a decidedly more modern and efficient mechanism than the rocker press previously in use at the Boston Mint. Rotated and shifted multiple strikes occur easily when the screw press coiners are inattentive. Typically, such pieces are melted on the premises and eventually recoined, although a late 17th-century colonial mint undoubtedly had a greater tolerance for novelties.

Apart from its status as an error coin, this is a high-grade example that boasts substantial luster. The apple-green and sun-gold toning is attractive, and no abrasions are apparent. Condition Census for the variety, in addition to its significance as a mint error.

*Ex: F.C.C. Boyd Collection; John J. Ford, Jr. Collection, Part 12 (Stack's, 10/2005), lot 126; Jon Hanson; Donald Groves Partrick.*

**5599 1652 Pine Tree Shilling, Small Planchet AU50 NGC. Noe-26, W-900, R.5.** 67.3 grains. 1991 ANS Exhibition Coin #123. A charming steel-gray example. The strike is consistent aside from minor weakness at the base of the tree and the lower portion of the reverse inner circle. A small curved clip affects upper extremities of HV. Most examples of Noe-26 are the same die state as Picker-26.2, distinguished by two spindly cracks near N DO, two pellet-shaped breaks near XII, and a light radial crack on the reverse at 3 o'clock.

*Ex: Dr. Charles Ingle Collection (Bowers and Merena, 9/1986), lot 661; purchased from Robert Vlack, 2/1988; Hain Family Collection (Stack's, 1/2002), lot 154; Donald Groves Partrick. PCGS# 24*

**5600 1652 Pine Tree Shilling, Small Planchet VF35 NGC. Noe-26.2, W-900, R.5.** 76.7 grains. This broad-flan steel-gray example is evenly struck except for softness on the obverse near 12 o'clock. The obverse is misaligned several degrees toward 10:30, while the reverse is well centered. The usual die state (Picker-26.2) with cracks near the D in DO, a small break beneath the X, and a larger break above the upper left corner of the first I in XII.

*Ex: Hollinbeck Stamp & Coin Company (11/1953); Norweb Collection, Part I (Bowers and Merena, 10/1987), lot 1215; Jon Hanson; Donald Groves Partrick. PCGS# 24*

**5601 1652 Pine Tree Shilling, Small Planchet XF45 NGC. Noe-28, W-920, Salmon 10-D, High R.6.** 71.0 grains. The rare Noe-28 is the crudest (and perhaps the earliest) Pine Tree variety. The branches are unusually straight and long. The date and denomination are also widely spaced. NEW ENGLAND is awkwardly engraved, although no letters are reversed. Noe-27 shares the same reverse but has a better-formed tree. According to Hodder, the two varieties alternated in the press, which makes it difficult to confirm which reverse was engraved first. Presumably, the Boston Mint was idle for a spell prior to Small Planchet production, and a new engraver was brought in who either improved promptly or was replaced.

The present example is the finest known, toned deep gunmetal gray, with mark-free surfaces. A minor ragged straight clip at 12:30 is as coined. The strike is slightly soft near 6 o'clock, and the lower reverse retains glimpses of the textured planchet surface. The later die state with THVS clashed on the upper reverse. An XF in the Roper Collection is the only similar piece that we know of, ahead of the VF Ford and Craigie coins.

*Ex: Richard Picker Collection (Stack's, 10/1984), lot 35; Reed Hawn Collection of Massachusetts Silver (Stack's, 5/1998), lot 40; Jon Hanson; Donald Groves Partrick. PCGS# 24*

**1652 Pine Tree Shilling, Noe-26  
AU50, Ex: Hain Family**

**1652 Pine Tree Shilling, Choice VF  
Ex: Norweb, Noe-26.2  
Heavy Planchet**

**1652 Pine Tree Shilling, XF45  
Very Rare Noe-28  
Ex: Reed Hawn**

**1652 Pine Tree Shilling, Choice AU  
Noe-29, Among Finest Known**

**5602** 1652 Pine Tree Shilling, Small Planchet AU55 NGC. CAC. Noe-29, W-930, Salmon 11-F, R.3. 70.9 grains. Michael Hodder described the present Noe-29 example as "definitely one of the two nicest ever seen [along with] the Eliasberg-Hain coin." The lilac high points show a whisper of wear but the ocean-blue fields are unabraded, with glints of luster that outline the design elements. The coin appears slightly off center toward 12 o'clock with the tops of the letters absent between 11 and 1 o'clock.

Ex: F.C.C. Boyd Collection; John J. Ford, Jr. Collection, Part 12 (Stack's, 10/2005), lot 129; Jon Hanson; Donald Groves Partrick. PCGS# 24

**1652 Pine Tree Shilling, Choice XF  
Noe-29, Ex: Reed Hawn**

**5604** 1652 Pine Tree Shilling, Small Planchet XF45 NGC. Noe-29, W-930, Salmon 11-F, R.3. 69.4 grains. A charming lavender and tan-brown example of this plentiful variety, with smooth surfaces except for a couple of inconsequential field marks near the base of the tree. Nicely centered, although the tops of ASATHV and NGLA are off the flan. Cataloged in the Reed Hawn sale as "far nicer than the Norweb coin." This piece is equal to the Newman and Garrett coins, and far finer than most others.

Ex: Reed Hawn Collection of Massachusetts Silver (Stack's, 5/1998), lot 41; Jon Hanson; Donald Groves Partrick. PCGS# 24

**1652 Pine Tree Shilling, AU53  
Noe-29, Ex: Clarke**

**5603** 1652 Pine Tree Shilling, Small Planchet AU53 NGC. CAC. Noe-29, W-930, Salmon 11-F, R.3. 69.5 grains. 1942 ANS Exhibit Coin #128. Traces of luster beckon from protected areas of this impressive Noe-29 shilling. The centering favors the right side obverse and lower left reverse. This piece is devoid of marks aside from a wispy hair-thin line between the date and denomination. An evenly microgranular example, it was delivered by long-lived dies. Peculiarities of the variety include a D over retrograde D in ENGLAND. Nearly equal to the piece offered above, and well within the Noe-29 Condition Census.

Ex: Horace M. Grant; T. James Clarke Collection; Donald Groves Partrick. PCGS# 24

**1652 Pine Tree Shilling, Choice AU  
Condition Census Noe-30**

**5605** 1652 Pine Tree Shilling, Small Planchet AU55 NGC. CAC. Noe-30, W-935, Salmon 12-G, R.3. 71.9 grains. Cataloged in its Reed Hawn auction appearance as "Full tree and roots, denomination and date. ... Far nicer than either the Noe plate or Norweb: 1220 coins." Our Massachusetts silver records also show that this piece is finer than the Hain, Ford, Newman, Stearns, and Roper coins. This example is clearly a Condition Census piece, and is possibly the finest known. The unabraded dove-gray and chestnut-brown surfaces are mattelike, as made from textured dies. A few peripheral letters are lightly brought up, and Boston Mint clips impact the tops of DO NE. Probably, no example exists with complete legends.

Ex: Reed Hawn Collection of Massachusetts Silver (Stack's, 5/1998), lot 42; Jon Hanson; Donald Groves Partrick. PCGS# 24

### 1652 Pine Tree Sixpence, AU50 Rare 'Spiny Tree' Noe-32

**5606** 1652 Pine Tree Sixpence AU50 NGC. Noe-32, W-660, Salmon 1-A, High R.6. 36.2 grains. This attractive steel-gray piece displays lovely ocean-blue undertones. The "Spiny Tree" Noe-32 is a missing link between the Oak and Pine Tree series, since the reverse die previously coined the Noe-20 to Noe-22 Oak Tree sixpence. For Noe-32, the dies were larger than the planchets, and as usual, portions of NGLA and ANO are off the flan. A high grade for this indifferently struck issue, which nearly always shows weakness along the right obverse and left reverse margins. The dies failed prematurely, and some examples, such as the Hain Family coin, are weakly defined. The Garrett and Norweb coins grade XF and most others are no finer than VF.

*Ex: Purchased by Emery May Norweb from Hollinbeck Stamp & Coin Company, 7/1955; Norweb Collection (Bowers and Merena, 10/1987), lot 1222; Jon Hanson; Donald Groves Partrick. PCGS# 22*

### 1652 Pine Tree Sixpence, MS64 Exceptional Quality Noe-33

**5607** 1652 Pine Tree Sixpence MS64 NGC. Noe-33, W-670, Salmon 2-B, R.3. 35.5 grains. This impressive and unmarked Choice Mint State Pine Tree sixpence has the obverse misaligned toward 12 o'clock, characteristic of Noe-33, while the reverse is well centered. The consistent strike is strong with no indistinct areas. Richly toned golden-brown and ocean-blue, the latter shade is prevalent on the central reverse. Both sides shimmer with luster. An early die state with a wispy vertical break above the left serif of the V in VI. On Noe-33, the Ns were each formed from a double impression of the letter I, joined by a slender diagonal. The Pine Tree sixpence that are designated Noe-33 and Noe-33a differ in the obverse centering. Noe-33 has the obverse uncentered toward 12 o'clock, and Noe-33a has the obverse normally centered. The present example is the finest of the uncentered Noe-33 pieces known to us.

*Ex: Jon Hanson; Donald Groves Partrick. PCGS# 22*

**1652 Pine Tree Sixpence, MS63  
Noe-33, Ex: Clarke, Bauer**

**5608** 1652 Pine Tree Sixpence MS63 NGC. Noe-33, W-670, Salmon 2\*-B, R.3. 32.5 grains. 1942 ANS Exhibit Coin #166. This pleasing piece has a walnut-brown obverse and a slightly deeper gunmetal-brown reverse. Free of contact except for a faint vertical mark beneath the 2 in the date. Minor waves and creases are noted, as made due to its rocker press manufacture. The die state is fairly late, with the crack left of the 6 becoming thick near its top. This lovely Mint State piece may qualify as the second finest known of the Noe-33 sixpence.

Ex: George J. Bauer Collection; Barney Bluestone; Newton Forney; T. James Clarke; Donald Groves Partrick. PCGS# 22

**1652 Pine Tree Sixpence, MS62  
Condition Census Noe-33a**

**5610** 1652 Pine Tree Sixpence MS62 NGC. CAC. Noe-33a, W-670, Salmon 2\*-B, R.5. 32.5 grains. This is the properly centered Noe-33a subvariety. The fields are deep sea-green, while the motifs and legends are lavender-brown. Mint luster abounds, as seldom seen on Massachusetts silver. The obverse is misaligned a few degrees toward 3 o'clock, while the reverse has ideal centering. This piece shows the expected die state, with a slender vertical break left of the 6 in the date. Lightly strike doubled, most apparent on the obverse letters between 4 and 5 o'clock, and on the reverse near 8 o'clock. A Condition Census example formerly in the Eliasberg Collection.

Ex: Louis E. Eliasberg, Sr. Collection (Bowers and Merena, 5/1996), lot 6; Donald Groves Partrick. PCGS# 22

**1652 Pine Tree Sixpence, MS64  
Noe-33a, Finest Known**

**5609** 1652 Pine Tree Sixpence MS64 NGC. CAC. Noe-33a, W-670, Salmon 2\*-B, R.5. 33.4 grains. Luster rolls across this evenly struck and unabraded near-Gem that ranks as the finest known Noe-33a sixpence. The borders are deep sea-green, and traces of mahogany-red outline the central elements. The reverse appears slightly misaligned toward 7 o'clock. Mint clips affect the tops of several peripheral letters, as made and customary for the series, certainly for weight adjustment. The die state is early, since the vertical break left of the 6 is spindly except near its base. Mildly wavy, as issued, due to the nature of rocker press coinage. This is the properly centered Noe-33a; presumably, the coiner noticed that the obverse of Noe-33 was off center. The alignment was then corrected, but by that time a majority of the variety had already been produced.

Ex: Jon Hanson; Donald Groves Partrick. PCGS# 22

**1652 Pine Tree Sixpence, XF  
Noe-33a, Double Struck**

**5611** 1652 Pine Tree Sixpence — Double Struck, Clipped — XF Uncertified. Noe-33a, W-670, Salmon 2\*-B, R.5. 28.3 grains. 1942 ANS Exhibit Coin #167. Initially struck approximately 30% off center toward 7 o'clock, relative to the obverse of the first strike. Struck a second time with proper centering, but the sides were flipped relative to the first strike. WEN, 1652, and VI are lightly to clearly visible on the obverse. The reverse retains VS from the initial strike, along with other traces of the first impression. Cataloged merely as "Curious double impression" in its Morgenthau auction appearance, but it was among the lots plated in that catalog. Presumably clipped post-production, since Noe-33 is typically 31 to 35 grains.

Ex: Great American Collection [Virgil Brand] (J.C. Morgenthau, 10/1933), lot 15; Carl Wurtzbach Collection; T. James Clarke; Donald Groves Partrick. PCGS# 22

**1652 Pine Tree Threepence, MS63  
Noe-34, Ex: Eliasberg**

**5612 1652 Pine Tree Threepence MS63 NGC. Noe-34, W-630, Salmon 1-A, R.4.** 18.0 grains. Pellets at Trunk. This splendid threepence is evenly struck and free from any marks or spots, with smooth deep gray fields and pale lavender high points. The usual die state has softness at EN due to a clash or other damage to the reverse die at 3 o'clock. The uppermost obverse letters are off the flan, characteristic of Noe-34. The dies were misaligned similar to the Noe-33 sixpence. Described as Condition Census for its Eliasberg auction appearance, it is clearly finer than any others known to us. The present coin is superior to the two Ford examples, which were listed as Choice Extremely Fine and Very Fine. The two Hain pieces were cataloged as Extremely Fine and Fine. The Garrett coin was AU, Richard Picker's was XF, and The Norweb example was called VF.

*Ex: Louis E. Eliasberg, Sr. Collection (Bowers and Merena, 5/1996), lot 4; Donald Groves Partrick. PCGS# 21*

**1652 Pine Tree Threepence, MS64  
The Finest Known Noe-36**

**5614 1652 Pine Tree Threepence MS64 NGC. Noe-36, W-640, Salmon 2-B, R.4.** 18.4 grains. No pellets at Trunk. A magnificent dove-gray near-Gem. The boldly struck surfaces are devoid of marks or spots. Mint clips affect the top of the HV, but all other letters are complete, although NEW is tight against the edge. Nicer than any of the four examples in the Ford: XII auction. This is a middle die state piece. The obverse die was lapped and shows thinner design elements than on the other (AU58) example in the present auction. Horizontal die lines are noted at the top of the tree, but no obverse cud is present at 1:30. This piece is slightly finer than the MS63 NGC Eric P. Newman example that we sold last year, and it is likely the finest known.

*Ex: Richard Picker; Donald Groves Partrick. PCGS# 21*

**1652 Pine Tree Threepence, AU53  
Noe-34, Ex: Norweb**

**5613 1652 Pine Tree Threepence AU53 NGC. Noe-34, W-630, Salmon 1-A, R.4.** 17.3 grains. Pellets at Trunk. This deep steel-gray example shows a bold tree and an unmarked obverse. A small cluster of abrasions is noted near the first numeral in the denomination. As usual for Noe-34, the obverse appears off center toward 12 o'clock, but the reverse is nicely centered. Noe-34 and Noe-35 threepence coins were produced from the same obverse and reverse dies. Noe-35, not offered in the present sale, has the reverse further engraved with the D in NEW ENGLAND backward and the addition of ANO.

*Ex: Henry Grunthal (12/1952); Norweb Collection (Bowers and Merena, 10/1987), lot 1223; Jon Hanson (11/1987); Donald Groves Partrick. PCGS# 21*

**1652 Pine Tree Threepence, Near-Mint  
Noe-36, Early Die State**

**5615 1652 Pine Tree Threepence AU58 NGC. Noe-36, W-640, Salmon 2-B, R.4.** 16.8 grains. No pellets at Trunk. 1942 ANS Exhibit Coin #176. A lovely threepence with unmarked surfaces, ideal centering, and a consistent strike. Toned deep gunmetal-gray aside from selected areas of light tan patina near the tree and the first A in MASATHVSETS. A trivial spot above the 6 provides an identifier. An early die state, sometimes listed as Noe-36.1, without an obverse break at 1:30 or horizontal die lines at the top of the tree.

*Ex: John H. Clapp; Carl Wurtzbach; T. James Clarke Collection; Donald Groves Partrick. PCGS# 21*

### 1652 Pine Tree Threepence, AU53 Noe-37, Ex: Hain Family

**5616** 1652 Pine Tree Threepence AU53 NGC. CAC. Noe-37, W-640, Salmon 2a-B, R.5. 18.0 grains. No pellets at Trunk. A pleasing dove-gray representative. Well centered for the variety with full letters except for the M at 12 o'clock. Noe-37 retains the same physical dies of Noe-36, with the obverse die reworked. The tree is similar, and the letters are generally in the same place, but each letter has been re-engraved. Clashed with the denomination at 6 o'clock on the obverse, and a large break affecting the A at 3 o'clock.

Ex: Carmel Stamp & Coin (6/1989); Hain Family Collection (Stack's, 1/2002), lot 177; Donald Groves Partrick. PCGS# 21

### 1652 Pine Tree Threepence Copy Noe-K, Unknown Maker

**5617** 1652 Pine Tree Threepence Copy, XF Uncertified. Noe-K. 15.4 grains. Noe described the variety as having a "crudely formed tree with three pairs of branches. Borders of disproportionately heavy beads. ... The date is high in the field and the heavily-beaded borders are not true circles." A diagonal die line extends from the G in ENGLAND. The L in ENGLAND is stretched. The variety is unlisted in Crosby, Newman, or Whitman. T. James Clarke had an example, and another was in the Vlack and Hain collections. Undoubtedly very rare; the Picker catalog stated "we have seen no others." The silver-gray and tan surfaces are problem-free. The reverse is slightly off-center toward 11 o'clock, and the strike is even except on the upper left obverse.

Ex: Richard Picker Collection (Stack's, 10/1984), lot 44; Boston C4 Sale (11/1997), lot 535; Donald Groves Partrick. PCGS# 21

## The Famous Lord Baltimore Pattern Denarium, MS62 Brown By Far the Finest Known, Hodder 1-A, Ex: Mickley, Ford America's First Copper Pattern

**5618 (1659) Maryland Lord Baltimore Denarium (Penny), Hodder 1-A, W-1000, High R.7, MS62 Brown NGC.** Ex: Mickley. 57.3 grains. This piece is by far the finest known example of the extremely rare Lord Baltimore copper pattern denarium/denarius or penny coinage.

The Lord Baltimore coinage of Maryland occupies an important position in the very early coinage of America's Colonial era. The Sommer Islands or Bermuda Hogge money of 1616 was the first struck by an English colony in the New World, but the Massachusetts Bay Colony's New England and Pine Tree, Oak Tree, and Willow Tree coinages were the first Colonial issues struck in what would later become the United States. Although the later Tree issues are all dated 1652 (save for the Oak Tree twopence dated 1662), they were struck during the period 1653-1682 and are thus roughly contemporaneous with the Lord Baltimore coinage, made sometime from 1659 to 1661 (possibly including more than one striking period; details are sketchy).

The Lord Baltimore coins were the first struck overseas for North America during the Colonial period, and they were also the first circulating portrait coinage in America.

### Historical Background

The first Baron Baltimore, George Calvert (1579-1632), an English politician and colonizer, found political favor in the 1600s-1610s in various positions under King James I (also known as King James VI of Scotland). Calvert's political ambitions reached their zenith in 1619, when King James appointed him a Secretary of State. Although he purportedly espoused the faith and practices of the Church of England, George Calvert lost much political power and alienated many former allies in Commons by espousing in 1621 a "Spanish match" between the Prince of Wales (James I's son, the future King Charles I) and a Spanish Catholic bride — part of a proposed alliance with the Hapsburgs. Calvert's wife died in 1622, leaving George with 10 children, the eldest of whom, Cecil, was 16 at the time. George Calvert resigned from the English secretariat in 1625 and immediately converted to Catholicism. In recognition of his loyalty, James I granted him the title of Baron Baltimore, in County Longford, Ireland, along with a 2,300-acre tract of land. King James I died in 1625, and King Charles I ascended the English throne.

George Calvert had long had an interest in colonizing the New World, first establishing an English settlement named Avalon on the island of Newfoundland, and later seeking a royal charter to settle the province of Maryland (called in Latin *Terra Maria*, "Mary's land"). The royal charter was drafted by Charles I in 1632 for George Calvert, but after his death in that same year the charter fell to Cecil Calvert (1606-1675), the second Lord Baltimore. The charter for Maryland was long, containing 22 chapters, the foundational document that imbued Cecil Calvert with all his rights and privileges as Lord Baltimore. One chapter endowed Lord Baltimore "with all, and singular such, and as ample ... rights, jurisdictions, privileges, prerogatives, royalties, liberties, immunities, and royal rights, and temporal franchises whatsoever ... to be had, exercised, used, and enjoyed, as any bishop of Durham, within the bishopric or county palatine of Durham, in our kingdom of England, ever heretofore hath had, held, used, or enjoyed, or of right could, or ought to have, hold, use, or enjoy." It was within such broad, extraordinary powers that Lord Baltimore assumed the right to coin money, just as the Prince Bishops of Durham had done from around the 12th through the 16th centuries.

### The Lord Baltimore Coinage

The Lord Baltimore coinage denominations included the denarius/denarium (penny) copper patterns, along with silver threepence, groats (fourpence), sixpence, and shillings (twelve pence), struck at London's Tower Mint (or by employees thereof at its facilities) at the behest of Lord Baltimore for shipment to and use in Maryland.

Lord Baltimore, despite the plenipotentiary rights and powers conferred upon him by the royal charter, was neither specifically granted nor enjoined from the right to coin money, but in any case an action was taken against him by Richard Pight, Clerk of the Irons of the Tower Mint, and he was summoned to appear before the Privy Council. The objections were mainly of two kinds. First, the silver coinage was being exported from England during the interregnum of Oliver Cromwell (a period from 1649 to 1660 when there was no monarch and England was nearly insolvent). Second, the silver coinage failed to comply with the English standard, an impossibility which would have made the coins overweight in Maryland (where all commodities, save tobacco, were scarce) and subject to melting. No disciplinary action appears to have been taken by the Privy Council, however. Calvert overcame numerous objections both in England and in Maryland to his coinage, and by 1662 a mandatory exchange of tobacco for coinage finally propelled the silver Lord Baltimore pieces into circulation.

### The Lord Baltimore Denarium Patterns

The denarium or penny coins struck in copper were strictly a pattern issue. A 1671 account of Maryland commerce mentions only "groats, sixpences, and shillings ... which his Lordship at his own expense caused to be coined" along with barter and English and other foreign coins as the principal means of exchange. The denarium patterns are also surpassingly rare in any grade; only six or seven examples survive today, two of those in museum collections.

## Design

The obverse features a bust of Cecil Calvert, Lord Baltimore, facing left with long, well-groomed hair, the Latin legend CAECILIUS DNS TERRAE MARIAE & C around, meaning “Cecil Lord of Mary’s Land.” The legend reinforces that the coinage was a proclamation of Lord Baltimore’s sovereignty as well as an apparent commercial necessity. The reverse is substantially different from the Maryland silver coins. A ducal coronet appears in the center with two pennons flying, the legend DENARIUM TERRAE-MARIAE (“denarius of Mary’s land”) encircling the periphery. (Note that throughout these descriptions, we use the modern letter U rather than the archaic V that appears in its place on these coins. DENARIVM = DENARIUM, CAECILIUS = CAECILIUS, MVLTIPPLICAMINI = MULTIPLICAMINI. And the AE in CAECILIUS, MARIAE, and TERRAE is uniformly engraved on the coins in its ligature form, A and E connected.)

The presence of Latin legends, as opposed to English, on the Lord Baltimore coins is itself interesting; the Lord Baltimore coins were struck at the tail end of the interregnum or Commonwealth period (1649-1660) when there was no British monarch, a period during which British coinage bore English legends. The Spink standard reference notes that “the coins struck during the Commonwealth have inscriptions in English instead of Latin which was considered to savour too much of popery.”

The present piece, as mentioned, is by far the finest known survivor and boasts a *continuous pedigree chain nearly two centuries long*. Its absolute and conditional rarity is attested to multiple times over by the sums at which it has changed hands, each an extraordinary amount for its time: more than £12 in 1819; £75 in 1859; \$370 at the Mickley sale in 1867; and \$241,500 in the 2004 Ford Collection sale, where the present piece was graded About Uncirculated (uncertified) and “the finest of six known.” The Whitman *Encyclopedia of Colonial and Early American Coins*, published in 2009, mentions seven examples known and notes that “finest is the Ford coin.”

## The Present Example

The surface preservation on this Lord Baltimore copper pattern denarium is nothing short of extraordinary, an amazingly well-kept specimen for the whole of its 355-year lifespan. As documented below, we can trace its pedigree back nearly 200 years, and it was clearly handled with loving care even in the early bloom of its existence. The surfaces on this MS62 Brown NGC-certified coin convey an overall pleasing golden-brown appearance, save for an area at the upper obverse which is more darkly toned and shows small areas of verdigris. The bold strike raises sharp detail on all of Lord Calvert’s hair, the drapery, and inner areas of the coronet. The obverse is slightly porous but not distractingly so, while the reverse is especially nice and problem-free, showing medium copper-gold tones throughout. Several letters in the legends front and back show double-punching and/or underlying characters. Dentilation is present around portions of each side, although varying in strength and double-struck at parts of the reverse rim.

This *pattern copper penny, the first such struck for America*, is a numismatic treasure of paramount importance. The early pedigree appeared in the *American Journal of Numismatics*, 1868, and was expanded, corrected, and clarified by Walter Breen in 1952. Another example in the Donald Groves Partrick Collection, graded XF Details NGC, ex: Roper is slated to appear in a future Partrick sale.

*Ex: unknown intermediaries; a “Mr. Hodsol” (before 1819), of whom nothing else is known; James Bindley; Bindley Collection, sold to Richard Miles, coin dealer and agent for William Dimsdale, for £12.1s. (1819); Dimsdale Collection; sold to Matthew Young, coin dealer and agent for the Rev. Joseph Martin of Keston, Kent, England, for £9.9s (1824); Martin Collection, sold to William Webster of London for £75 (an enormous sum at the time) (1859); sold privately to Frederick Lincoln of London “at an advanced [unspecified] price” for the collection of Joseph J. Mickley of Philadelphia (1859); Mickley Collection (W. Elliot Woodward, summer 1867), brought \$370 to Mr. Stevens, “said to be an agent of the British Museum” but “Stevens” later turned out to be an agent for Charles Ira Bushnell, as the Mickley coins purchased by Stevens turned up in the Bushnell Collection 15 years later; Bushnell Estate; Lorin G. Parmelee; Bushnell Estate sale (S.H. and H. Chapman, 6/1882), lot 184; Lorin G. Parmelee (bought in); Parmelee Collection (David Proskey and Harlan P. Smith, 1890), lot 296, \$350; to “Clay” (H.P. Smith) for Robert C.W. Brock; Brock Estate; University of Pennsylvania; P.H. Ward; C.J. Dochkus; Harry Forman; New Netherlands Coin Co.; F.C.C. Boyd; John J. Ford; Ford Collection, Part II (Stack’s, 5/2004), lot 274, where it was conservatively graded AU, “finest of six known,” brought \$241,500; Donald Groves Partrick. PCGS# 29*

Lot 5619

## Finest Known Lord Baltimore Groat (Fourpence), MS64 Large Bust, Hodder 1-A Ex: Connecticut Historical Society

**5619 (1659) Maryland Lord Baltimore Groat (Fourpence), Large Bust, Hodder 1-A, W-1010, R.6, MS64 NGC. CAC.** Ex: Connecticut Historical Society. 28.2 grains. The English “groat” originally referred to an English coin worth four pennies or fourpence, and that meaning adheres today in the Lord Baltimore pieces as well as much older coins, such as the silver groats first issued under King Edward I of England (1272-1307), in Scotland under King David II (1329-1371), and in Ireland beginning in 1425. Similar contemporaneous silver coins circulated in the form of the *gros tournois* or “groat of Tours” in France, the *denaro grosso* or “large penny” in Italy, the *groschen* in Germany, the Czech *grosz*, and the Dutch *groot*. Just as the English word “gross” still carries a meaning “thick” or “fat,” such thick coins were in contrast to deniers or pennies, thinner, lighter-weight coins of less value. A more generalized meaning arose and persisted for centuries among all these similar terms from different nations, with the thicker, largely silver grosso or groat coins usually worth from several to a dozen pennies.

In England, although the first groat or fourpence coins issued under Edward I should have contained four pennyweights, or 96 grains, of sterling silver, they actually contained 90 grains of sterling, and later issues became progressively lighter-weight. By the Restoration of King Charles II in 1660, the English groats or fourpence were struck of less than sterling silver and infrequently coined, to a standard of about 30 grains. The three Lord Baltimore groats in the present auction, coined around the same time, average 22.8 grains of sterling silver but show wide variability. Their much lighter weight than comparable English coins was one of the main objections put forth by the Tower Mint authorities that Cecil Calvert had to overcome.

A direct weight-to-weight comparison of the Lord Baltimore versus English fourpence (the prevailing terminology by the 17th century) is meaningless in any case; the Maryland economy of the time was largely barter- and tobacco-based. Silver was scarce, and any silver coins that conformed to the English standard would have been immediately relegated to the melting pot.

### Design

The basic obverse design (although numerous minor variations exist among dies and denominations) is common to all Lord Baltimore coinage, from the pattern copper denarium through the silver shillings: bust of Cecil Calvert, Lord Baltimore, facing left with long, well-groomed hair, the Latin legend CAECILIUS DNS TERRAE-MARIAE &C around (note the intervening hyphen), meaning “Cecil Lord of Mary’s Land.” The reverse design is common (save for the Roman-numeral denomination) to all of the silver coinage, but not the copper denarium patterns. The Calvert or Baltimore family arms occupy the center. A crowned shield divides I and V with the legend CRESCITE ET MULTIPLICAMINI around the rim. The literal translation is “increase [or grow] and be multiplied,” indicative of a biblical origin.

### Variety

The Hodder 1-A fourpence dies. *Obverse*. Large Bust. A hyphen connects TERRAE and MARIAE. T is noticeably shorter and lower at the top than E in TERRAE. A stop shows after MARIAE and before &C, and the right top of the ampersand shows a short right-angle dogleg. The two R’s in TERRAE are centered beneath the forward bust tip at the bottom. The I in MARIAE lacks the right-bottom serif. *Reverse*. Many of the I’s lack the bottom-right serif or else it is weak (although they were clearly each hand-engraved rather than stamped from letter punches). The orb is misshaped at the bottom, filling the area left of the central point in the crown. The last I in MULTIPLICAMINI is much lower than the adjacent N.

### The Present Example

Another top-quality Lord Baltimore coin from the Partrick Collection, one that sets a new high standard for Colonial coins and Maryland coinage in particular. This Maryland groat graded MS64 NGC is the finest certified by two grade points, backed up by another NGC coin in MS62. The third-finest certified pieces are each AU55 at NGC and PCGS, possibly duplicates. The present coin was last offered publicly more than 30 years ago in the Bowers and Merena sale of holdings from the Connecticut Historical Society, where this piece was conservatively graded AU and described as:

“A marvelous ... coin of exceptional sharpness and quality. Obverse struck slightly off center, with inscription intact but with border beading absent from the right side and with a corresponding amount of surplus metal to the left. The reverse is well struck and well centered. A small diebreak is noted to the right of the shield.

“The surfaces are a pleasing, warm light gray with traces of gold. Finer than the Garrett coin we catalogued for The Johns Hopkins University several years ago, a remarkable statement. ...”

A rather large retained die cud has formed on the right side of the shield, connecting it with the V in the denomination (IV for fourpence separated by the shield). This interesting feature implies both that the die was used long enough to develop signs of die wear, and that its continued utility was limited. The reverse is nonetheless exceptionally pleasing and well struck. A coin for the finest Colonial cabinet. Another example in the Donald Groves Partrick Collection, graded AU55 NGC, ex: Eliasberg, is slated to appear in a future Partrick sale.

## Lord Baltimore Fourpence, XF40 Collectible Maryland Groat

**5620** (1659) Maryland Lord Baltimore Groat (Fourpence), Large Bust, Hodder 1-A, W-1010, R.6, XF40 NGC. CAC. 20.5 grains. It has been concluded in the past in numismatic circles that among the foremost objections to the Lord Baltimore coinage on the part of the English authorities was the depiction of Cecil Calvert in regal pose on the obverse, as well as the use of the abbreviation "DNS" for *Dominus* or "Lord," a monetary usurpation of the rights of the English monarchs to strike coinage. However, the powers granted to Cecil Calvert, the second Lord Baltimore, by the charter from King James I on June 20, 1632, were extraordinarily broad and bore no specific abjuration of the right to bear coinage; neither was such a right specifically spelled out.

Moreover, the English monarchy was overthrown in 1649, Charles I (son of King James I) had been beheaded, and Oliver Cromwell served as Lord Protector of England from 1653 until his death in September 1658. Cromwell's son Richard served as lord protector from September 1658 until May 1659. At the time the Lord Baltimore coinage was struck at the Tower Mint, apparently sometime between May and October 1659 (and perhaps on more than one occasion), there was effectively no head of government in England.

The silver content of the Lord Baltimore coins was more problematic than the image that they bore, as the coins were struck of sterling silver but contained less net silver than their English counterparts — the infrequently struck English fourpence were of lower fineness but higher silver content. Such a high silver content for the Lord Baltimore coins would have been impossible in Maryland, where silver was at an appreciable premium compared to its price in England at the time, and in fact virtually every commodity besides tobacco was scarce.

### Variety

The Hodder 1-A fourpence dies. *Obverse*. Large Bust. A hyphen connects TERRAE and MARIAE. T is noticeably shorter and lower at the top than E in TERRAE. A stop shows after MARIAE and before &C; the right top of the ampersand shows a short right-angle dogleg. The two R's in TERRAE are centered beneath the forward bust tip at the bottom. The I in MARIAE lacks the right-bottom serif. *Reverse*. Many of the I's lack the bottom-right serif or else it is weak (although they were clearly each hand-engraved rather than stamped from letter punches). The orb is misshaped at the bottom, filling the area left of the central point in the crown. The last I in MULTPLICAMINI is much lower than the adjacent N.

### The Present Example

Certified XF40 NGC, this piece is in fifth place among NGC-graded examples, surpassed by one submission each in AU53, AU55, MS62, and MS64 with possible duplications (11/14). PCGS reports one Fine, three Very Fine, and one each in XF45, AU53, and AU55. Although moderate wear appears, this silver-gray piece is well centered on the nicely rounded planchet and shows most of the beading around the obverse rim, save for an area from about 1 to 2:30, where much of CAECILIUS is illegible. Much bold detail remains in the peripheral legends elsewhere and the hair curls in the portrait. The reverse shows a similar appearance, well-matched to the obverse with weakness on the beading from about 4 to 6 o'clock. Planchet adjustment marks appear on the lower reverse through MUL and the lower shield, and a die crack between MUL and T makes the planchet no longer coplanar near the reverse rim there. The Lord Baltimore groats in midgrade condition, as here, are "merely" very rare as opposed to the unobtainable status of so many issues and varieties in this historic series.

Lot 5621

## Unique Lord Baltimore Small Bust Groat, Hodder 2-B, AU53 Plate Coin in Sylvester Crosby's 1875 Colonial Reference

**5621 (1659) Maryland Lord Baltimore Groat (Fourpence), Small Bust, Hodder 2-B, W-1020, Unique, AU53 NGC. CAC.** Ex: Crosby Plate. 19.7 grains. This is the sole known example of the Hodder 2-B Small Bust groat or fourpence of Lord Baltimore, the plate coin in the 1875 Sylvester Crosby work, *The Early Coins of America* — a coin of immense importance and prestige.

### Commentary

The Lord Baltimore silver coinage, issued in denominations of fourpence (groat), sixpence (half shilling), and one shilling (one-twentieth of a pound sterling), was struck apparently before October 1659 at London's Tower Mint and exported to the province of Maryland (*Terra Mariae* or Mary's Land) under the auspices of Cecil Calvert, the second Lord Baltimore. The coins occupy an important and *peculiar* position in American and British coinage history. Coming a few years after the 1652 Massachusetts Bay Colony's NE shillings and sixpence and the Pine Tree, Oak Tree, and Willow Tree coinage that followed, the Maryland coins were the first struck abroad for an American colony. They were also struck during the interregnum when there was no British monarch or head of state, Oliver Cromwell having died in September 1658.

Finally, the Lord Baltimore coinage was struck in the period of English minting technology just before the widespread introduction of milled (or machine-struck) coinage into English commerce. The Lord Baltimore pieces thus are among the last species of hammered silver coinage to emanate from the Tower Mint (or one of its moneys; the exact source is unclear). The technology of manually hammering a coin blank between two dies had remained essentially unchanged since the time of ancient Greece. The French adopted the milled coinage technology under King Henri II in the 1550s, but traditional moneyers fought the technique, fearing the loss of employment, and France abandoned it by 1562.

Around 1560 the milling technology was demonstrated to the Tower Mint coiners by Eloye Mestrelle, formerly employed at the Paris Mint. Although his coins were superior, traditional moneyers again opposed the new technology. Mestrelle was dismissed in 1572, fell into wanton ways, and was hanged for counterfeiting in 1578.

Nicholas Briot, another Frenchman formerly employed in Paris, struck both gold and silver English coins in 1631-32 and 1638-39, both of superior quality and perfectly round — a chief improvement over hammered coinage, one that went far towards eliminating the practice of "clipping" or shaving off slivers of precious metal from the edge, which hammered coins were prone to. The technology was slow to be adopted, however, not only because of opposition from old-guard moneyers and because it was slower than traditional coin-hammering methods, but also due to the looming Civil War in England that broke out in 1642. King Charles I fled to Oxford, where the famous Oxford crown was struck in 1644 by Thomas Rawlins, thought to have been a pupil of Briot.

The beheading of King Charles I in 1649 ushered in the Commonwealth period; in 1653 Oliver Cromwell was named Lord Protector of England. Cromwell, however, died in 1658, and the Commonwealth collapsed by 1660, leading to the Restoration under Charles II. Meanwhile, another Frenchman, Pierre Blondeau, had demonstrated that he could not only produce superior-quality milled coinage but also make *lettered edges* on them, finally a death knell for the practice of clipping. It was in the reign of Charles II that the Roettiers brothers were brought from the Netherlands along with their improved screw press. This, combined with horse-powered rolling mills to produce blanks or planchets of uniform thickness, ushered in the era of milled coinage in England. The first milled English coins were silver crowns struck in 1662 bearing the Latin edge inscription DECUS ET TUTAMEN, "an ornament and a safeguard." Milled coinage and the old hammered coinage circulated side-by-side until the Great Recoinage of 1696.

It was during this interesting, brief, crucial window of change in mint technology, in 1658 or 1659 most likely, that the Lord Baltimore hammered coinage was produced. Although there was neither a king nor head of British government at the time these pieces were apparently struck, the presence of a regal-looking portrait of Lord Baltimore on their obverse, the Latin legend DOMINUS TERRAE MARIAE, "Lord of Mary's land" (this at a time when the circulating Commonwealth coinage was in English, as the Latin was considered to smack of Catholicism), and symbols of full sovereignty on the reverse — two arcs above a coronet in the shape of that of a European count palatine, surmounted by an orb crucifer — pushed the envelope in several directions at once.

In July 2002 a silver cylinder with 19 Lord Baltimore sixpence was discovered in Lincolnshire, England, at the ancestral seat of the Fane family, part of the estate of Mary Fane Fry. The remarkable hoard of coins was offered by Morton and Eden in November 2002, where the catalogers wrote in part:

“The Tower Mint, with its satellite workshops and competing factions of traditional moneyers and machine-coiners, was in a bitterly divided, parlous, unhappy state by 1658, and a commission such as Calvert’s would surely have been welcomed by any part of it.”

Lord Baltimore was called to account in October 1659 by Tower Mint authorities not only for striking underweight (by British standards) silver, but for exporting silver coin out of the realm at a time when the nation was nearly bankrupt. It helped that there was no reigning sovereign, and both he and his coins survived the challenge and kept their heads. There is no record of disciplinary or other action that followed, and the coins clearly circulated from the early 1660s through at least 1671.

#### **Variety of This Unique Example**

The Lord Baltimore Small Bust groat or fourpence is unique. The present coin has been the subject of close numismatic examination, and in fact this single coin was known as far back as 1875, when Sylvester S. Crosby published his seminal work on *The Early Coins of America* and plated the piece as number 4 on Plate 3. The obverse shows the bust of Lord Baltimore considerably smaller than on the Large Head variety, and with noticeably more space between the bust truncation and the peripheral legend at 6 o’clock. The Small Bust groat lacks a hyphen in TERRAE MARIAE where the Large Bust has the hyphenated TERRAE-MARIAE. The reverse also shows a smaller shield, but there are better pickup points: On the Small Bust, the top-left and top-right points of the crown are centered beneath I(NI) in MULTIPLICAMINI and R of CRESCITE; on the Large Bust, those points are between IN(I) and (C)RE.

A crack runs through the obverse planchet from the rim at the M(ARIAE) to the field before the mouth; this same crack is visible in the 1875 Crosby plate. On the reverse, the crack runs diagonally downward from the A in MULTIPLICAMINI to the I left of the shield.

The Massachusetts Historical Society at one time listed a Small Head groat among its collections, but there was no record of deaccession of the item. In the Norweb Collection the present example was pedigreed to the deceased dealer Richard Picker, one of America’s foremost Colonial coin dealers and a man of impeccable reputation. Nonetheless, it was clearly possible (although certainty could not be established) that the coin had formerly been in the MHS collection and removed by an unknown person or persons. This coin was sold with a clear title in the Bowers and Merena Norweb auction and the proceeds given to the Massachusetts Historical Society, which waived any claim it might have previously had on the piece. Apparently both Mrs. Norweb and Picker made efforts to ascertain the origins of the coin. The lack of any earlier provenance in the 1875 Crosby edition (unusual for that reference) also proved a dead end. Given the continuous scrutiny that this coin has had for the past 140 years, it is safe to conclude that it is unique. The crack partially through the planchet may have been responsible for the survival of this extraordinary and well-preserved coin, showing beautiful golden patina on dove-gray surfaces with little obvious wear. The peripheral strike on the legends is boldest on the left sides of each face in the area of the crack and softer on the right sides, namely CAECILIUS on the obverse and CITE ET on the reverse.

*The Crosby Plate Coin (Plate 3, no. 4). Ex: Massachusetts Historical Society; unknown intermediaries; Richard Picker (1956); Norweb Collection (Bowers and Merena, 11/1988), lot 3399; Donald Groves Partrick. PCGS# 32*

Lot 5622

## The Unique Hodder 1-B Lord Baltimore Sixpence, AU Details Ex: Boyd, Norweb

**5622 (1659) Maryland Lord Baltimore Sixpence, Large Bust, Hodder 1-B, W-1040, Unique — Obverse Scratched — NGC Details. AU.** Ex: Norweb. 33.6 grains. Plenty of bold detail remains on this lightly circulated Lord Baltimore sixpence, but the NGC caveat derives from a large X or + sign etched into the obverse, in the left field before the bust. *This unique piece, struck from the Hodder 1-B dies, was the discovery coin from the Norweb Collection and remains today the only known example of this sole sixpence die pairing.*

### Variety

The Hodder 1-B dies, Michael Hodder's classification system as laid out in the Norweb Collection (Bowers and Merena, 11/1988, lots 3399-3404) having been adopted by the numismatic community at present as the "official" schema. *Obverse.* Large Bust. The lowest hair curls behind the head end in two distinct strands; the letters LIU in CAECILIUS are widely spaced. The T in TERRAE is lower while the letters ER are even (double-punching shows on the first R); there is more space between the two R's than between TER, and the two R's are about equally high. The lowest curl behind the head ends in two distinct strands of hair that touch only at their extreme tips in a "dot" or bead shape. Double-punching shows on the I in MARIAE. The upper stroke ending the ampersand (&) ends in a straight line. *Reverse.* There is a stop after MULTIPLICAMINI. The V in the denomination is double-punched and opposite the C(AMINI), and the I in the denomination is double-punched and under (CRESCI)TE.

### The Present Example

The large, crisscrossing lines in the left obverse field are called a "cancellation or rejection mark" in the Norweb catalog, where this piece last appeared, a theory to which we also subscribe (another rare Lord Baltimore piece is known with similar marks). Beautiful golden and green patina amid a silver-gray background appears on the obverse, while the reverse is more deeply toned in silver, greenish-gold, and charcoal.

Ex: F.C.C. Boyd; Richard Picker (12/1/1962); Norweb Collection (Bowers and Merena, 11/1988), lot 3402, realized \$19,800; Donald Groves Partrick.

## Small Bust Lord Baltimore Sixpence, AU58 Hodder 2-C, High in the Condition Census

**5623 (1659) Maryland Lord Baltimore Sixpence, Small Bust, Hodder 2-C, W-1060, R.5, AU58 NGC. CAC.** 44.2 grains. The London firm of Morton & Eden in November 2002 auctioned 19 silver Lord Baltimore sixpence that had been uncovered in a silver cylinder in Fulbeck Hall, the Lincolnshire, England, estate of Mary Helen Fane Fry (1947-2000). Fulbeck Hall and Fulbeck Manor are among several ancestral seats of the extremely wealthy Fane family. The progenitor of the Fanes, the Welshman Ivon Vane or John Fane, was among three captains who captured King John II of France at the Battle of Poitiers in 1356, earning a knighthood and a share of the ransom monies for his actions. A November 2002 article in *The Baltimore Sun* relates that the coins were found in a "cylindrical silver counter box, circa 1680, with the initials 'I.C.' within a heart, and the base engraved with the larger initials of 'M.B.'" The catalogers of the treasure trove, Morton & Eden, wrote:

"It is known that the coins have been at Fulbeck for several generations, and quite possibly since the 17th century, although no firm provenance details linking them to an individual member of the family has been established so far ... . Similarly, the identity of 'M.B.', whose initials are engraved on the box, remains a matter for speculation. Research into Fane, Calvert and Brent families has yielded a number of possible connections and coincidences but not, as yet, any firm evidence."

Two different die pairings were included in the auction, which brought a total price of \$222,122. Included was lot 785, a Small Bust sixpence (Hodder 2-D, MULTILICAMINI error reverse) that sold for \$50,379. A late-state sixpence of the Small Bust Hodder 2-C sold for \$17,093, and another example of Hodder 2-C with heavy die clashing above the bust sold for \$15,295. Cataloger James Morton told *The Baltimore Sun* via telephone that he estimated between 50 to 100 Lord Baltimore sixpence survived, and that the Lincolnshire hoard had increased the total by 25 percent.

Of the 19 Lord Baltimore sixpence in the Mary Fane Fry estate, 18 were of the Hodder 2-C dies, with the 19th coin the Hodder 2-D MULTILICAMINI error reverse.

### Variety

The present sixpence is not pedigreed to the Fane-Lincolnshire trove. Hodder 2-C. *Obverse*: The lowest hair curl shows two distinct strands that intersect midway to their ends; the letters LIU in CAECILIUS are closely spaced; and the second R in TERRAE is much higher than the first. The A in MARIAE is lower than the M and the bottoms of those letters touch, as does the ligature AE with the I adjacent. The upper stroke ending the ampersand is long and shows a near-90-degree angle. *Reverse*: The orb crucifer is somewhat right of the center-top crown point. There is no stop after MULTIPLICAMINI. The VI in the denomination are opposite I(CAMINI) and CI(TE), respectively.

### The Present Example

This is a simply beautiful coin whose preservation would equal that of many pieces made in 1959 rather than ca. 1659. Delicate pale blue-heather patina dominates the centers of each side, while greenish tints appear at the margins. Most of the dentilation is present on each side, and the strike is well centered. The planchet is indented at 7 o'clock on the obverse and correspondingly at 11 o'clock on the reverse. The hair details on Lord Baltimore are particularly generous, and this coin retains an essentially as-struck appearance, save for the patina.

Ex: Jon Hanson (8/28/1968); Donald Groves Partrick. PCGS# 33

**Finest Known Lord Baltimore Sixpence**  
**MULTILICAMINI Error Reverse, Hodder 2-D, MS62**  
**Ex: Parmelee, Norweb**

**5624 (1659) Maryland Lord Baltimore Sixpence, Small Bust, MULTILICAMINI, Hodder 2-D, W-1070, High R.7, MS62 NGC.** Ex: Norweb. 44.3 grains. Although they were centuries and many miles apart, the problems Lord Baltimore faced with the Maryland coinage in dealing with the Tower Mint authorities were not all that different from those that private coiners in Gold Rush California encountered when dealing with federal officials in Washington. Both official entities attempted to enforce uniform standards of coinage that were locally impossible.

Silver was plentiful in Great Britain of the late 1600s; between 1521 and 1660, Spanish imports of silver tripled the total silver supply in Europe. The Tower Mint had abandoned the sterling silver standard (925 fineness) by 1560, consequently, vast quantities of groats, sixpence, shillings, and larger silver coins were struck in lower finenesses over the ensuing three centuries. The Lord Baltimore silver coins, on the other hand, were struck in sterling silver but were much under par in British terms.

Philip Mossman writes in *Money of the American Colonies and Confederation: A Numismatic, Economic and Historical Correlation* (published in 1993 by the American Numismatic Society):

“Massachusetts and Maryland silver coinages share some common features. Both were currencies created for the want of a domestic, circulating medium, having originated without any precise legal authority during the period of the Commonwealth. ‘England had ‘refused to allow separate colonial mints on the grounds that all the money of the Empire should conform to one single standard,’ but such conformity was an unacceptable alternative for the colonists since it would devastate creditor-debtor relationships. In both colonies, their respective monies were of sterling alloy but significantly lighter than their Tower Mint counterparts. The reduced weights of the colonial monies were necessary because of the inherent inequities between colonial and metropolitan exchange rates and monies of account. Had the colonial and Tower shillings been of equal weight, then the bullion price for the Massachusetts and Maryland issues would have far exceeded their commercial value of 12d., thus ensuring an immediate trip to the melting pot and subsequent export.”

**Variety**

Hodder 2-D. *Obverse*: Small Bust. The lowest hair curl shows two distinct strands that intersect midway to their ends; the letters LIU in CAECILIUS are closely spaced; and the second R in TERRAE is much higher than the first. The A in MARIAE is lower than the M and the bottoms of those letters touch, as does the ligature AE with the I adjacent. The upper stroke ending the ampersand is long and shows a near-90-degree angle. *Reverse*. The famous MULTILICAMINI error, a misspelling of MULTIPLICAMINI.

**The Present Example**

The pedigree for this famous coin extends back precisely 125 years to the celebrated Parmelee Collection, and later to the equally illustrious Norweb Collection. The other examples are the Garrett coin, a VF example also with a long provenance — it was formerly in the collection of Waldo C. Newcomer — and one found in the Mary Helen Fane Fry estate, auctioned by Morton & Eden in 2002 graded “almost extremely fine” by British standards (realizing \$50,379).

This outstanding piece shows a few light ticks but no perceptible wear on well-struck surfaces. The planchet is also top-notch, nearly fully round and well centered for the strike. Heather and golden-green patina is among many admirable qualities that make this a standout example of this extremely rare variety, and one of the most desirable pieces in this incredible run of Lord Baltimore coins.

*Ex: Lorin G. Parmelee (New York Coin & Stamp Co., 6/1890), lot 294; H.P. Smith; Brock; University of Pennsylvania; New Netherlands Coin Co. (privately, 3/14/1958); Norweb Collection (Bowers and Merena, 11/1988), lot 3401; Donald Groves Partrick. PCGS# 33*

## Lord Baltimore Shilling, Large Bust, Hodder 1-A, AU58 Only One Graded Numerically Finer

**5625 (1659) Maryland Lord Baltimore Shilling, Large Bust, Hodder 1-A, W-1080, R.6, AU58 NGC. CAC.** Ex: Oechsner. 79.6 grains. This AU58 NGC-certified Lord Baltimore shilling is tied for the second-finest certified at NGC and PCGS combined; only one MS61 PCGS example is graded higher.

### Commentary

The Calvert arms and motto, and the Latin legend *Crescite et multiplicamini* ("Increase and multiply" or "Increase and be multiplied") that first appeared on the common reverses of the Lord Baltimore silver coinage (the copper pattern denariums bear a distinctly different reverse) have interwoven themselves deeply into the subsequent fabric and culture of Maryland. *Crescite et multiplicamini* is now the Latin state motto of Maryland, although it is not the official state motto. A Civil War-era song "Maryland! My Maryland!" by James Ryder Randall, "written by a Baltimorean in Louisiana," bears the alternative title "*Crescite et multiplicamini*" and is set to music of the familiar German Christmas carol "O Tannenbaum" ("O Christmas Tree").

The so-called Sparrow Seal of the state of Maryland, which first appeared in 1765 on the title page of the Rev. Thomas Bacon's compilation of the *Laws of Maryland*, bears the Latin phrase. (Thomas Sparrow [1746-1784], the creator of the Sparrow Seal, also engraved some — and possibly all, of the dies for the John Chalmers Maryland coinage dated 1783.) The official Great Seal of the State of Maryland, however, bears a different motto in Italian, *Fatte maschii, parole femine* ("Manly deeds, womanly words" or the official version, "Strong deeds, gentle words"). The Italian motto — the only official American state motto in Italian — was the family motto of George Calvert, the first Lord Baltimore, who adopted it in 1622.

The Latin motto reappeared in the 18th century on various issues of Maryland state currency. Even though *Crescite et multiplicamini* was neither a Calvert family motto nor originally one of Maryland itself, the planned name for the original Colonial settlement was to be *Crescentia* before the name *Mary's Land* was substituted. The Latin legend on the obverse of the Lord Baltimore coins, *CAECILIUS DNS TERRAE-MARIAE*, "Cecil Lord of Mary's Land," as well as the reverse devices, make much of Cecil Calvert's sovereignty over the Province of Maryland — one that he successfully interpreted as including the right to strike coinage. The portrait coinage that ensued was the first such in America and must have represented quite a novelty at the time.

The Calvert family shield is the central device on the reverse of the official Great Seal of the State of Maryland. Maryland is also among the few U.S. states to have a two-sided seal; a figure of Cecil Calvert mounted on a rearing charger occupies the seal's central obverse. Around the obverse rim is the Latin *Cecilius Absolutus Dominus Terrae Mariae et Avalonia Baro de Baltimore*, "Cecil Absolute Lord of Maryland and Avalon, Baron of Baltimore."

### Variety

Hodder 1-A, the most commonly seen die pair for the Baltimore shillings — but as a group all of them are very rare, particularly in such a fine state of preservation as the present near-Mint State example. Obverse. Large Bust, *MARIAE* with colon (:) after; &CT follows (unusual since most of the silver pieces read &C). Reverse. The shield point is between M and U in *MULTIPLICAMINI* is much closer to M.

### The Present Example

Silver-gray centers and greenish-gold high points and rim accents distinguish this scarcely circulated piece, struck on a nicely rounded planchet. Most of the obverse is strongly struck save for the rim from 5:30 to 8:30. The strike is correspondingly weak around the reverse rim from 9:30 to 12 o'clock. Boldly incuse clash marks appear under the II in the denomination, as apparently always seen on this die pairing. We have offered 13 examples of this variety since we began our Permanent Auction Archives in 1993, and every one of them shows the same bold clash marks, apparently from the dentils of another coin that clashed against the dies early in its use.

Prospective bidders should contemplate the likelihood that the sole clearly finer example may not appear at auction for many years, if ever, in formulating their bids.

Ex: Mayflower Coin Co. (4/1957), lot 949; Herbert Oechsner Collection (*Stack's*, 9/1988), lot 949; Donald Groves Partrick. PCGS# 34

## Uncirculated Details Lord Baltimore Shilling Large Bust, Hodder 1-A

**5626 (1659) Maryland Lord Baltimore Shilling, Large Bust, Hodder 1-A, W-1080, R.6 — Improperly Cleaned — NGC Details. Unc. 77.1** grains. Cecil Calvert (1605-1675), the second Lord Baltimore and founder of the colony of Maryland, inherited the royal charter for the Province of Maryland — delayed in the court of Britain's King James I (James VI of Scotland) for scattered tweaks to its voluminous text — in 1632 at the young age of 26 upon the death of his father George Calvert (1579-1632), the first Lord Baltimore. They were lords in the Irish peerage, George Calvert having earned the gratitude of James I through numerous royal positions and assignments (including Member of Parliament) from the early 1600s onward. George Calvert was knighted by James I in 1617 and he served as co-Secretary of State from 1618 onward.

By 1623, James I had granted him a 2,300-acre estate in County Longford, Ireland, with Baltimore Manor as its seat. However, beginning in 1621 Calvert had supported a "Spanish match" between the Prince of Wales (son of James I, the future King Charles I) and a Catholic bride, with disastrous consequences to his political fortunes. This led to Calvert's resignation as Secretary of State in February 1625, although he did maintain his seat on the Privy Council. George Calvert immediately made a public profession of his Catholic faith.

James I died the following month, in March 1625, and his son King Charles I eliminated Calvert's position as privy counselor, freeing George Calvert to tend to his interests in Ireland and his desire to establish colonies in the New World.

George Calvert's father Leonard Calvert (1550-1611) was a Yorkshire country gentleman, and from the year of George Calvert's birth in 1579 onward, the Calverts were subjected to authoritarian intrusion in religious matters as a result of the prevailing Elizabethan-era prejudice against Catholicism, or "popery" as it was often called. The Calverts were forced to swear oaths of conformity, compelled to attend services of the Church of England, and abjured from hiring any Catholic servants.

Today it is unclear whether George Calvert had been a secret Catholic from an early age, or whether he was truly converted just before publicly announcing his Catholic faith. George Calvert turned his attention to pursuits in the New World after 1625, first to the establishment of a colony named Avalon in Newfoundland. The climate and months-long winters made the colony inhospitable over the long term, but George Calvert nonetheless made the journey to Avalon twice. Calvert adopted a policy of the free practice of religion in Avalon, allowing Protestants to worship in one part of his house and Catholics in another.

After the miserable winter of 1628-9, George Calvert sought a new charter, meeting resistance from Protestants in Virginia and finally persuading King Charles I to grant a charter for the colony north of the Potomac River and west of the Chesapeake Bay. But George Calvert died a few weeks before the final charter was remitted, and it fell to his 26-year-old son to guide the development of "Mary's Land," the name chosen to honor Charles' I wife, Queen Henrietta Maria (1609-1669), Queen Consort of England.

Incredible though it may seem, Cecil Calvert never set foot in Maryland, relying instead on his younger brother Leonard Calvert, to serve as the first governor of Maryland. Cecil Calvert, mindful of the religious intolerance that had plagued his ancestors (and Catholics in particular) for decades, invited both Protestant and Catholic families to come settle in the new colony. Cecil Calvert governed Maryland and protected its interests from his home in England, where he lived with his wife Anne Arundell. Religious disputes and civil wars and uprisings continued to occur both in Britain and in Maryland until the Restoration in 1660. Cecil Calvert died in 1675, having governed Maryland from abroad for 42 years.

### Variety

Hodder 1-A, very rare but the most frequent die marriage among the Lord Baltimore shillings. *Obverse*. Large Bust, MARIAE with colon (:) after; &CT follows, unlike the usually seen &C. *Reverse*. The shield point is between M and U in MULTIPLICAMINI, much closer to M. Clash marks that appear as incuse dentils under the II of the denomination appear to be from another coin but they seem to be in the die, and are seen on every example of this die pairing we have offered since 1993 — 13 in all.

### The Present Example

This piece is Uncirculated in terms of details but the obverse center in particular appears to have been cleaned; the obverse margins show attractive patina in greenish-gold with some charcoal flecks. A well-centered and well-struck piece that retains much eye appeal.

*Ex: English dealer (1978); later, Atlanta Sale (Kagin's, 8/1987), lot 3637; Anthony Terranova; Donald Groves Partrick. Said to be from the "Bishop Sharpe collection, where it was acquired in a church collection plate in the early 1700s."*

## Lord Baltimore Copper Shilling Pattern AU58 Brown, Small Bust, Hodder 2-B By Far the Finest of Three Available

**5627** (1659) Maryland Lord Baltimore Shilling, Small Bust, Copper, Breen-66, Hodder 2-B, W-1092, High R.7, AU58 Brown NGC. CAC.

Ex: Norweb. 75.9 grains. According to the *Whitman Encyclopedia of Colonial and Early American Coins*, Walter Breen traced five examples of this copper Small Bust shilling, including "one in the British Museum and another in the Glasgow University Museum Collection." This piece sold for \$12,100 in the 1988 Norweb Collection sale (Bowers and Merena, 11/1988), a price that strikes us as a remarkable bargain today for the issue, which seems clearly a copper pattern issue struck (likely at London's Tower Mint or one of its satellite facilities) to test the dies before the silver shillings were struck. Apparently only a theoretical maximum of three examples are available to the collecting public, as two are in museum collections, although we are not privy to the whereabouts of the other two pieces. The Garrett Collection example was graded Fine (Garrett Collection Part III, Bowers and Merena, 10/1980, lot 1231), although by today's standards it appears to be more XF-AU, as noted in the Whitman reference. A third example mentioned in Don Taxay's *Scott's Encyclopedia of United States Coins* is regarded as "well-worn."

### Variety

Hodder 2-B, *by far* the rarer of the two confirmed shilling die varieties. (The other confirmed variety is Hodder 1-A: Large Bust, MARIAE; shield point between MU. The Crosby reference from 1875 notes a third [C] reverse that is untraced since.) *Obverse*. Small Bust. CAECILIUS : DNS (large NS with horizontal bar above) TERRAE-MARIAE & CT. The E in TERRAE is slightly lower at top than R. *Reverse*. The orb crucifer is completely round and centered directly above the center point of the crown below. The lower shield point touches the U in MULTIPLICAMINI (or V in the archaic Latin font). Recutting shows on the left-side upright of the P in MULTIPLICAMINI.

### The Present Example

This piece appears struck with special care on a nicely rounded planchet, showing full (if not fully struck) dentilation on both sides. A few scattered, diagonal planchet marks appear on each side from the planchet preparation process, as made, and there are essentially no post-striking distractions. Although NGC has conservatively certified this coin AU58 Brown, we believe a case could be made for a Mint State designation. In any case this piece is by far the finest available of this copper pattern, given the evidence available, a point that is much more important than the technical grade.

Ex: B. Max Mehl (1/11/1937); Norweb Collection (Bowers and Merena, 11/1988), lot 3404, brought \$12,100; Donald Groves Partrick. PCGS# 34

## Lord Baltimore Hodder 2-B Shilling Sole Silver Example Available Uncirculated Sharpness, Marvelous Quality

**5628 (1659) Maryland Lord Baltimore Shilling, Hodder 2-B, W-1090, R.8 — Obverse Scratched — NGC Details. Unc.** Ex: Norweb. 73.3 grains. Enthusiasts of early American and Colonial coins can generally find a nice, affordable example of the Massachusetts coinage struck under the auspices of John Hull, mintmaster, due to the support and promotion by the Massachusetts Bay Colony and the hardiness and longevity of the mint facility. This establishment was located in its own building in Boston (although today the precise location is unknown, due to Hull's extensive land holdings).

The Maryland coinage, however, is far rarer overall, issued for a much shorter time in only three circulating denominations: fourpence (groat), sixpence, and shillings. The striking period was ca. 1659, although it is possible that the coins may have been struck on more than one occasion into the early 1660s, and it was almost certainly all struck in Britain and exported to Maryland, where there is evidence that the silver groats, sixpence, and shillings did circulate for at least a decade.

### Variety

Hodder 2-B, the rarer of the two confirmed shilling die varieties. *Obverse.* Small Bust. CAECILIUS : DNS (large NS with horizontal bar above) TERRAE-MARIAE &CT. The E in TERRAE is slightly lower at the top than R. *Reverse.* The orb crucifer is completely round and centered directly above the center point of the crown below. The lower shield point touches the U in MULTIPLICAMINI, and the left-side upright of P in that word shows recutting. This die pairing is actually more available in the copper shilling patterns, of which five are known, than the two silver pieces extant.

### The Present Example

This is the only example available to the numismatic marketplace of the Hodder 2-B variety silver shilling. Only two examples are known, and the remaining piece is held by the American Numismatic Society. This coin was offered as lot 3403 in the Norweb Collection in 1988, where it realized \$9,350. Albert Fairchild Holden (1866-1913), father of Emery Mae Holden (Mrs. R. Henry) Norweb, bought this piece from coin dealer Samuel H. Chapman two years before Holden's death. The present auction represents only the third time it has appeared for sale in 103 years.

The NGC caveat derives from some crisscrossing pinscratches in the obverse field vaguely reminiscent of a plus sign or an X, perhaps some sort of cancellation mark. Despite that minor drawback this is a breathtakingly beautiful shilling, showing generous luster remaining on dove-gray surfaces with greenish-gold accents in the device recesses and at the rims on each side. The bold strike — quite well brought up throughout both sides — and the appearance of completely original preservation make this an exceptional piece, even if it were a survivor of the usually seen Hodder 1-A shilling dies. For a comparison, an example of that R.6 Hodder 1-A shilling variety, certified AU58, brought \$126,500 in our FUN 2008 Signature, lot 2636. This piece, the only available silver example of Hodder 2-B dies, should engender spirited bidding at the auction block.

*Ex: Henry Chapman (6/29/1911); Albert Fairchild Holden; Norweb Collection (Bowers and Merena, 11/1988), lot 3403; Donald Groves Partrick.*

## Undated New Yorke in America Token, AU50 100 Greatest Plate Coin

**5629 Undated New Yorke Token, Brass, W-1705, R.6 AU50 NGC.** 37.3 grains. 70% copper, 29% zinc. Attractive yellow-brass surfaces exhibit a few splashes of darker patina on both sides. Faint blue overtones add to the eye appeal of this exceptional example that is the finest certified by NGC. This is the plate coin in *100 Greatest American Medals and Tokens* where it is ranked as number 25.

Recent research by John Kleeberg suggests that these tokens were issued in the late 1660s during the administration of Francis Lovelace (1621-1675), the second English governor of New York, who served from 1668 to 1673. Accomplishments during his leadership in New York included the purchase of Staten Island for its strategic importance; he also organized militia and expanded New York's defense. However, while he was visiting the Connecticut governor in 1673, Dutch forces conquered New York with virtually no opposition. Lovelace was imprisoned in the Tower of London and died in 1675, shortly after his release.

The first public notice of the New Yorke in America tokens dates to May 1861, in an article by Fisk Parsons Brewer. His piece, "The Earliest New York Token" appeared in the *Historical Magazine*. Little was learned of these pieces for the next 130 years, until Kleeberg researched the tokens and presented his findings at the 1991 American Numismatic Society's Coinage of the Americas Conference. His study was published in *Money of Pre-Federal America* in 1992.

Will Nipper (*In Yankee Doodle's Pocket*) shares a theory about these pieces that are generally considered pattern issues produced in England: "Perhaps the tokens were for use in Manhattan's King's House tavern. Lovelace had it built next door to the old Dutch Stadt Huys (state house) in 1670. The tavern served as New York's city hall from 1697 to 1793." Of the 20 or so pieces known in brass, this example ranks as one of the finest.

Ex: Jon Hanson (5/10/2003); Donald Groves Partrick. PCGS# 226

## Undated New Yorke in America Token, Fine Details From the Robison Collection

**5630 Undated New Yorke Token, Brass, W-1705, R.6 — Scratches — NGC Details. Fine.** 34.9 grains. 72% copper, 26% zinc. This patinated example exhibits rich chocolate-brown surfaces with peripheral weakness. Myriad scratches are mostly blended with the surrounding surface. The two examples in the present sale bring to five the total of different examples that we have handled over the past two decades.

Both examples in the current auction have similar compositions of about 70% copper and nearly 30% zinc, known as alpha brass. Approximately 20 examples are known in this composition. At least one example is known struck in lead or pewter. Most of the few surviving examples are substantially worn, having circulated for a long period of time. The New Yorke tokens, or patterns as they are sometimes labeled, were likely minted in England and probably circulated there. John Kleeberg's in-depth study of this series shows that the provenance of most known examples can be traced to an English origin.

The denomination of the New Yorke in America token is uncertain, perhaps a farthing or halfpence, although it may have been intended as a sixpence. The obverse device is described as a palm tree with Cupid and Psyche on either side. The popular explanation is that Cupid ensnared Psyche in the lace of love, a pictorial representation of the surname Lovelace. The eagle on the reverse is likely unrelated to the eagle that later appeared on the New York Coat of Arms adopted in 1778. It is believed also to relate to Governor Francis Lovelace, whose family seal was an eagle with spread wings.

*Ex: Robison Collection (Stack's, 2/1982), lot 59; David Sonderman (2/12/1982); Donald Groves Partrick.*

### 1737 Higley Copper, VF30 The Parmelee Coin Freidus 1.2-A, Five Known

**5631** 1737 Higley Copper, CONNECTICVT, VF30 NGC. Crosby VIII-18, Freidus 1.2-A, W-8200, R.7. 132.5 grains. Ex: Parmelee. Obverse Type 1. A deer with the legend THE VALVE OF THREE PENCE. Reverse Type A. Three crowned hammers with the legend CONNECTICVT 1737. This pleasing example shows olive-tan surfaces and blue-steel patina at the peripheries on each side. The well-centered impression exhibits most of the obverse border details. The date is full and the legends are complete.

The Higley coppers are challenging to collect, and to comprehend. Two recent articles explain most of what is known about the series, and recount much of the speculation surrounding the Higley coinage. Daniel Freidus prepared *The History and Die Varieties of the Higley Coppers* for the 1994 Coinage of the Americas Conference, published by the American Numismatic Society in 1994.

Most references identify Samuel Higley as the minter of the 1737 Higley coppers, and (noting his death in the spring of that year) suggest that John or Jonathan Higley made the later issues. Roger A. Moore, M.D. and David D. Gladfelter compiled "Which John Higley was the Minter and Which John Higley Signed the Land Transfer Papers?" that was published in the December 2012 issue of *The Colonial Newsletter*. The principal author was Dr. Moore, who had recently acquired a 1749-dated land transfer document signed by Joseph and Sarah Higley, and witnessed by John Higley.

To support their discussion about the probable minter of the later Higley coppers, the authors delved into the genealogy of the family. A synopsis of that research will help present-day collectors understand the production of these coppers, and who probably made them. Captain John Higley (1649-1714), an English immigrant, and his first wife Hannah were the parents of 10 children, including John, Jr. (1673-1741), Samuel (1687-1737), and Brewster (1680-1775). Samuel married Abigail Beman (or Bement according to some sources); multiple family trees at Rootsweb.com record Jonathan Higley (1721-1771) as their son. Brewster Higley had a son named John (1721-1802) as well.

Therefore, the question is: Out of the four, which John Higley minted the later coppers? Captain John Higley died in 1714, so he is eliminated. Samuel and Brewster's sons, Jonathon and John, respectively, would have been just 18 years old in 1739. They are unlikely candidates, although may not be eliminated entirely. The most likely person is John Higley, Jr., the older brother of Samuel who was 66 years old in 1739.

Ex: Lorin G. Parmelee (New York Coin & Stamp Co., 6/1890), lot 274; later, Donald Groves Partrick. PCGS# 201

**1737 Higley Copper, VF30**  
**The Picker Coin**  
**Freidus 1.3-A, Six Known**

**5632** 1737 Higley Copper, CONNECTICVT, VF30 NGC. Crosby Unknown, Freidus 1.3-A, W-8215, R.7. 133.1 grains. Ex: Picker. Obverse Type 1. A deer with the legend THE VALVE OF THREE PENCE. Reverse Type A. Three crowned hammers with the legend CONNECTICVT 1737. This piece is light brown with some golden-tan highlights; surfaces are exceptional for a Higley copper. The obverse design is complete with a bold legend, while the reverse is mostly complete and shows slight weakness of the central hammer motif.

When Daniel Freidus wrote about the Higley coppers two decades ago, he enumerated four obverse types (1-4) and four reverse types (A-D), with seven combinations thereof. The rarest types are 4-C, 1-B, and 2-B, with one, two, and three pieces known, respectively according to the Freidus Census of 63 Higley coppers. The obverse and reverse types are further distinguished by individual variations, forming a total of 15 distinct die varieties that were produced from eight obverse and five reverse dies. The Freidus 2-B.a and 4-C are unique; there are eight of the 3.1-B.a and 3.2-C. All others have populations between two and six.

No collector has ever succeeded in acquiring all varieties of the charming and elusive Higley coppers. Donald Groves Partrick, Eric P. Newman, and John L. Roper, 2nd owned six; Charles Bushnell, John Work Garrett, and Andrew Zabriskie, had five; and the famous Virgil M. Brand obtained only three. This analysis demonstrates the challenge of assembling a Higley copper die variety collection, an endeavor we encourage you to pursue.

Ex: Richard Picker Collection (*Stack's*, 10/1984), lot 98; Donald Groves Partrick. PCGS# 201

**1737 Higley Copper, VF20  
The Roper Coin  
Freidus 1.3-A, Six Known**

**5633** 1737 Higley Copper, CONNECTICVT, VF20 NGC. Crosby Unknown, Freidus 1.3-A, W-8215, R.7. 119.9 grains. Obverse Type 1. A deer with the legend THE VALVE OF THREE PENCE. Reverse Type A. Three crowned hammers with the legend CONNECTICVT 1737. A pleasing example, this Higley copper has lovely tan surfaces with trivial surface marks on each side. A few small splashes of maroon and steel patina are apparent. While the central designs are a trifle weak, the legends are mostly complete and the date is clear.

Daniel Freidus identifies the first printed reference to the Higley coppers as a drawing prepared by Pierre Eugène Du Simitière in the 1770s, less than four decades removed from the production of these coins. Du Simitière's drawing suggests that surviving coins were well worn even then. Freidus comments: "Even then he could not find all varieties in good enough condition to make out the legends." Type 1-A, offered here, is one that Du Simitière illustrated, with only partial legends, in his drawing. He also illustrated Type 3-B and reverse Type D.

Although mentioned in an 1845 history of the region, the next numismatic reference to the Higley coppers dates to 1858 in *An Historical Account of American Coinage* by John H. Hickcox, according to Moore and Gladfelter. Hickcox noted that the coinage was clandestine, with no authority from the colony.

Ex: John L. Roper, 2nd Collection (Stack's, 12/1983), lot 148; Donald Groves Partrick. PCGS# 201

## 1737 Higley Copper, XF Details Ex: New Netherlands Freidus 3.2-B.a, Five Known

**5634 1737 Higley Copper, Good Copper — Scratches — NGC Details. XF. Crosby VIII-22, Freidus 3.2-B.a, W-8255, R.7.** 98.3 grains. Ex: New Netherlands. Obverse Type 3. A deer with the legend VALUE ME AS YOU PLEASE and the Roman numeral III below the deer. Reverse Type B. Three crowned hammers with the legend I AM GOOD COPPER 1737. Light bluish-steel surfaces show slight roughness with some splashes of tan, especially on the reverse. A few light scratches are evident on the obverse and more apparent on the reverse. A small post-minting planchet clip is evident at 3 o'clock on the obverse and 4 o'clock on the reverse. The upper reverse legend is tight, indicating imperfect die alignment when this piece was struck.

The 1845 *History of Simsbury, Granby and Canton, from 1643 to 1845*, by Noah A. Phelps specifically mentions Doctor Samuel Higley (1687-1737) as the “supposed” manufacturer of these coins. In the absence of contemporary documentation, the identity of the minter(s) of these rare coppers remains uncertain. Higley’s copper mines later housed British prisoners during the Revolutionary War, and became known as Newgate Prison. Located in present-day East Granby, the site is now a National Historic Landmark.

The multi-talented Samuel Higley was a medical doctor, blacksmith, and expert metallurgist who held a patent for steel making. Although circumstantial, the evidence points to Dr. Higley as the originator of the eponymous 1737 coppers. Moore and Gladfelter, in their 2012 *Colonial Newsletter* article, provided several facts that support the identity of the minter of the 1737:

1. “Samuel Higley was born in 1687 and was lost at sea with a load of copper ore from his mine in May 1737.
2. “Samuel Higley bought 143 acres of land 1 ½ miles south of Copper Hill in 1728 where he dug a copper mine of his own.
3. “Samuel Higley was a metallurgist of note who discovered a method of steel production and obtained exclusive rights to produce it for 10 years, beginning in 1728.
4. “Samuel Higley was a blacksmith who was knowledgeable in working metals.
5. “Steel was ideal for making long lasting dies to stamp out tokens.”

The Higley coppers have long fascinated and charmed the numismatic community. Part I of the Donald Groves Partrick Collection provides an excellent opportunity to acquire one or more of these legendary coins.

Ex: New Netherlands Coin Co. (7/1976), lot 812; Donald Groves Partrick.

**Undated (1737) Higley Copper, VF25  
The Brand Coin  
Freidus 3.3-C, Four Known**

**5635** (1737) Higley Copper, Broad Axe, VF25 NGC. Crosby VIII-25, Freidus 3.3-C, W-8280, High R.7. 111.8 grains. Ex: Hanson. Obverse Type 3. A deer with the legend VALUE ME AS YOU PLEASE and the Roman numeral III below the deer. Reverse Type C. A broad axe with the legend J CUT MY WAY THROUGH. Most of the design elements are sharp with the central motifs outlined, although weakness is seen at 2 o'clock and 8 o'clock on the obverse, and at 3 o'clock and 9 o'clock on the reverse. The surfaces show minimal, grade-consistent blemishes. Light tan and olive appears on the obverse, with rich olive and steel-brown on the reverse. Most of the lettering remains, save for VAL and PLEA on the obverse, and J C and THR on the reverse. Portions of the obverse and reverse border details are evident.

Reverse types A and B are dated 1737, reverse type C is undated, and reverse type D is dated 1739. Varieties 3.1-C, 3.2-C, and 3.3-C are generally identified as (1737), and variety 4-C is identified as (1739). Obverse dies 3.2 and 3.3 are known with 1737-dated reverse dies, 1739-dated reverse dies, and undated reverse dies. Reverse C coins from those two obverse dies could have been made in either year. The dating of these pieces is important, as it may help identify the manufacturer.

Considering the evidence or lack thereof, and the belief that Samuel Higley and his brother, John Jr., were the likely minters of this coinage, perhaps these coins should be known as "Higley Family Coppers." In addition to various sources mentioned in the descriptions of the Higley coppers in the present sale, the reader is also invited to consult "Higley's Coppers" by John Kraljevich, Jr. in the July 2007 issue of *The Numismatist*.

Ex: DeWitt Smith (12/1908); Virgil M. Brand Collection; Brand Estate (Bowers and Merena, 6/1984), lot 954; Jon Hanson; Donald Groves Partrick. PCGS# 213

**1739 Higley Copper, VF25  
The Brand-Roper Coin  
Freidus 3.3-D, Seven Known**

**5636** 1739 Higley Copper, Broad Axe, VF25 NGC. Crosby VIII-26, Freidus 3.3-D, W-8285, R.7. 132.1 grains. Ex: Roper. Obverse Type 3. A deer with the legend VALUE ME AS YOU PLEASE and the Roman numeral III below the deer. Reverse Type D. A broad axe with the legend J CUT MY WAY THROUGH 1739. Both sides of this light olive and golden-tan copper show parallel file marks that are almost certainly adjustment marks, as made. The Stack's cataloger in 1973 wrote: "It is sharply struck on a nice smooth planchet that had evidently been adjusted before striking." We agree with that conclusion, although adjustment of copper planchets in later years was highly unusual. The strike in the unaffected areas on both sides is sharp, but shows weakness and thinning of the flan in those sections where the file marks are located. That striking pattern is consistent with federal silver and gold coins showing adjustment marks.

For date collectors who seek one 1737, one undated, and one 1739, the present issue will pose a challenge. The Daniel Freidus Census of 63 Higley coppers reveals that 33 known examples are dated 1737, 18 are undated, and only 12 are dated 1739. Three of the 12 1739-dated Higley coppers are held in museum collections, leaving just nine others for collectors.

Ex: Virgil M. Brand Collection; Stack's (6/1973), lot 831; John L. Roper 2nd Collection (Stack's, 12/1983), lot 153; Donald Groves Partrick. PCGS# 219

### Unique (1739) Higley Copper, VF30 The Wheele Goes Round Copper From the Garrett and Roper Collections

**5637 (1739) Higley Copper, THE WHEEL GOES ROUND, VF30 NGC. Crosby Unknown, Freidus 4-C, W-8295, Unique.** 152.2 grains. Ex: Garrett. Obverse Type 4. A wheel inscribed THE WHEEL GOES ROUND. Reverse Type C. A broad axe with the legend J CUT MY WAY THROUGH. Both sides feature the index hand (fist with outstretched index finger) and the W-punch with its connected top; the workmanship on the obverse is similar to that of the Higley broad axe reverse. Thus, there is no doubt Higley coppers dies accomplished the striking of this unique piece. Chestnut and steel-brown appear on the obverse, and mostly bluish steel-brown graces the reverse of this most important copper. A few handling marks are evident, as expected for the grade and age of this copper.

Don Partrick's unique Freidus 4-C is the only known Higley copper of this distinctive type: the only such Higley copper and the pivotal coin for the ultimate Higley collection. (The Higley 2-B.b is part of the 2-B type.) The obverse design is quite a departure from the usual deer motif seen on all other Higley varieties. Freidus writes: "Given that all features of this [obverse] die are dramatically different than all other dies no diagnostic details are needed."

The obverse depicts a wheel with 12 spokes, likely from a central hub, although the coin is indistinct at the center. An index hand marks the beginning of the legend, THE . WHEEL . GOES . ROUND. The C reverse is from the undated Broad Axe die inscribed J. CUT. MY. WAY. THROUGH. That reverse also appears with obverse dies 3.1, 3.2, and 3.3.

Howland Wood discovered this variety in 1913 and reported his findings in the July issue of *The Numismatist*, with a photo of this identical example:

"The above illustration represents an entirely new discovery in the Colonial series, being a variety of the well-known Higley series of coppers that has never been mentioned or known of until a short time ago, when it came into the possession of Mr. Howland Wood among a lot of old coppers. It was covered with dirt and verdigris to such an extent that its character was not suspected until it had been thoroughly cleaned.

"The reverse of this interesting coin bears the same device as Crosby's Type No. 3, Reverse C., which is illustrated on Plate VIII of his work on "Early Coins of America," and bears the number 24. This is the broadaxe device with the motto "I CUT MY WAY THROUGH." This reverse goes with the undated variety of the Higley pieces, which has the deer obverse, in contrast to the varieties bearing dates, respectively 1737 and 1739.

"This would seem to show that the new variety was struck about the same time as No. 24. The curious obverse of the new variety, however, is entirely different in design from that of the other pieces of the series, although its quaintness of inscription clearly indicates the same origin. "THE WHEEL GOES ROUND," with the wheel as the central device, is exactly of the same workmanship as the Higeys showing the deer, and the letters and index hand are undoubtedly from the same punches."

The article continues to reprint an address of Joseph C. Mitchelson, delivered before the New York Numismatic Club in 1910. The three-page *Numismatist* article is reproduced on the following pages in the present catalog.

More than three decades have passed since this historic and unique copper coin has appeared at auction, and it is reasonable to assume that the present appearance may be the last for many years.

Ex: Howland Wood; Henry Chapman; Col. James W. Ellsworth; Wayte Raymond; John Work Garrett; Johns Hopkins University (Bowers and Ruddy, 10/1980), lot 1306; John L. Roper 2nd Collection (Stack's, 12/1983), lot 154; Donald Groves Partrick. PCGS# 216

---

A NEW VARIETY OF THE HIGLEY COPPERS.

---

The above illustration represents an entirely new discovery in the Colonial series, being a variety of the well-known Higley series of coppers that has never been mentioned or known of until a short time ago, when it came into the possession of Mr. Howland Wood among a lot of old coppers. It was covered with dirt and verdigris to such an extent that its character was not suspected until it had been thoroughly cleaned.

The reverse of this interesting coin bears the same device as Crosby's Type No. 3, Reverse C., which is illustrated on Plate VIII. of his work on the "Early Coins of America," and bears the number of 24. This is the broadaxe device, with the motto "I CUT MY WAY THROUGH." This reverse goes with the undated variety of the Higley pieces, which has the deer obverse, in contrast to the varieties bearing dates, respectively 1737 and 1739.

This would seem to show that the new variety was struck about the same time as No. 24. The curious obverse of the new variety, however, is entirely different in design from that of the other pieces of the series, although its quaintness of inscription clearly indicates the same origin. "THE WHEEL GOES ROUND," with the wheel as the central device, is exactly of the same workmanship as the Higleys showing the deer, and the letters and index hand are undoubtedly from the same punches.

Apropos of the discovery of this new variety of the Higley series, it no doubt will be of interest to the readers of *The Numismatist* to read an address upon the subject of the Higley coppers which was delivered before the New York Numismatic Club by the late Mr. Joseph C. Mitchelson, of Tariffville, Conn., in 1910, and which was printed in *Mehl's Numismatic Monthly* of June of that year. The address possesses particular interest for the reason that Mr. Mitchelson lived within sight of the famous copper mines for many years. The address was as follows:

"Mr. President and Gentlemen: At the last meeting of our club I was asked by the entertainment committee to read a paper on the Higley Copper Coinage. Now, as you all know, I have made no practice of preparing papers on numismatic subjects, but as I have lived within a short distance, of the place where those pieces were made, off and on, for my whole life, the mines being within sight of my home, I have consented to give the members here all the information that has come my way.

"Being interested in the subject probably more than any one else on

Reprinted courtesy of *The Numismatist*, official publication of the American Numismatic Association ([www.money.org](http://www.money.org)).

account of these coins having been made in my own town, I have made inquiries from all the old residents in that section of the country in the hope of being able to add something to the very little that is known regarding them. I have really devoted a lot of my time to the subject ever since I was a boy.

"The terms of Simsbury Mines and Granby Mines are apt to be confusing to the average person, and it may be well to state here just why the two terms were used. The township of Simsbury originally embraced all the territory within the present limits of Simsbury, Granby, East Granby, and Canton. Granby was made a separate township fifty years after the coppers were made, and since then has been divided again.

"While the Higley coppers are now often referred to as Granby coppers, still this is a modern term, as the coins really were Simsbury coppers, as the townships of Granby and East Granby were created many years after the coppers were made, the mines now being located in East Granby.

"Where the Higley mines are located is on the west side of the range known as Turkey Hills, which is now in East Granby. Among the early settlers this section was considered as waste lands, and was held in common by the inhabitants of the township. It was here that they used to hunt deer and turkey and beaver. The land was very mountainous, at the bottom being large swamps, which since have been drained. Nearby was a large pond. It is probable that hunters for game originally discovered the mines. This hill is the highest in the settlements and the mines run underneath for fully a half mile.

"Several companies were organized at different times to work the copper mines. The first was composed of local land owners, and that was followed by companies from London, Holland, Boston, New York, and other places. The working of the mines was never very profitable, two vessels of the early companies loaded with ore having been lost, one captured by the French, and the other sunk. These losses were due to the mine owners being compelled to send the ore to England to be smelted.

"The copper is found only in streaks, here and there through the rocks. There is a great deal of this ore at the present time, but the mines have not been worked since 1833, although experiments have been made within a few years, and a carload of ore was taken from there two years ago. Whether the working of the mines with modern processes would be profitable at the present time I do not know.

"Dr. Ensign of Tariffville, Conn., who was a noted doctor in his day, and the leading physician of Simsbury, and a collector of curios, got a piece of pure smelted copper from some one connected with the mines, from which it was said the Higley coppers were made. This specimen has been in the possession of the family for years, and was given me by his son, Mr. Charles A. Ensign, of Simsbury.

"For a long time it was customary to send prisoners of the State to work the Simsbury mines, and in 1773 it was made a State Prison by the Legislature, and was called Newgate. When the Revolution took place the prison was used to hold English Loyalists, and Washington sent prisoners there from Cambridge. It is supposed that this bowl, and spoon, were used for porridge by the prisoners at Newgate Prison.

"The reason Higley made the coppers was probably not so much to provide a currency that would be acceptable at a nearby tavern, (as has been stated by one historian) but rather to fill a need for coin of small denomination among the colonists. At that time there was very little coin in circulation, as one can understand from this extract on 'Currency and Banking in Connecticut,' written by Joseph G. Woodford, which I am sure is interesting enough to read. \* \* \*

"It is always interesting to numismatists to know something about the man who has made a rare coin, but I regret that very little is known about the history of John Higley. But there is one thing certain, and that is we know enough to show that he was a man of means and a great deal of ability, and was anything rather than the drunken blacksmith that he has been at times represented to be.

"John Higley, Jr., from all that can be learned, was born in March, 1673. His father, John Higley, settled in Simsbury in 1683, John being ten years old at the time. His father was a great politician, and was elected to the Connecticut Legislature in 1691, serving for a good many years. In 1704 he had the title of Captain attached to his name, he belonging to the

Home Guards, which had been formed for protection against the Indians.

"Upon referring to the list of representatives from the town of Simsbury to the General Assembly of 1709, we also find the name of John Higley, which would make it appear that the son had also become a representative of Simsbury, each township being allowed two representatives. John Higley, Jr., also served in the Assembly until 1711, and after a lapse of a good many years we again find his name among the representatives of 1731, which was only a few years before he commenced to make the coppers that have made his name so well known.

"The Higleys were one of the most important families in Connecticut. In 1695 Higley, Sr., was the largest taxpayer, having become the wealthiest man in the colony. His daughter, Hannah, the sister of John Higley, Jr., was the mother of the first Governor Trumbull of Connecticut.

"From 1731 we hear nothing about Higley in particular until he began to make coppers on his own account in 1737. He had been interested in the copper mines with the different companies from 1709, or from the time when copper was first discovered. The exact time copper was first found is not definitely known, but it is supposed to have been about 1700. In 1707 a company was organized to work the mines, composed of local landowners, among whom it is natural to suppose was John Higley, his home being the nearest to the mines of any in the settlement, and as he was one of the leaders of the community.

"A very interesting fact in connection with the working of the copper mines is that it was agreed by the owners to pay the sum of ten shillings on each ton of copper produced by them, a part of which was devoted to the support of the school of Simsbury and Yale College.

"It may strike the average person as somewhat peculiar that John Higley is nowadays always referred to as a blacksmith, when we know it to be a fact that he was the son of the most prosperous man in the colony, as it is natural to think that he shared in the wealth of his father. But in those days, no matter how prominent a man may have been, or how much he was worth, he was found to pursue some one of the trades. As a matter of fact, the early colonists were made up of mechanics—blacksmiths, wheelwrights, carpenters, shoemakers, etc.

"The exact time the Higley coppers were first made is not known for a certain reason. The matter was intentionally kept a secret. The colonists had no right to smelt their ore, which was usually taken from the mines in saddlebags and boats to Saybrook, at the mouth of the Connecticut River, where it was placed aboard sailing vessels and sent to England to be smelted, although sailing vessels could have come up to Windsor, about ten miles from the mines.

"Certain authorities state that Higley was regarded as a counterfeiter. This probably was not on account of his having made counterfeiters of the current coin, but rather his private copper threepences, which, proving beyond a doubt that he had smelted the ore, in all likelihood was what had gained for him the name of a counterfeiter. But careful research of all the existing records fails to show that he was ever prosecuted on such a charge.

"The home of Higley was situated about a half mile from the mines, as shown by the map of Simsbury of 1730, which is in the State Library at Hartford, under the charge of Mr. George Goddard, who would be glad at any time to show it to any one taking an interest in it. The foundation walls of the old home are still standing, as is also the foundation of the chimney, which occupied about two-thirds of the cellar.

"There are no descendants of the family by the name of Higley within the present limits of the town of Simsbury as far as I know, but there are some in the town of Canton, which is a part of the original Simsbury.

"I have known every inhabitant of the town of Simsbury, within three miles of the mines, from early childhood up to the time I was twenty-one, but I never met a single person who knew anything about the Higley coppers with one exception, Eno Viets, who lived near the mines, and was a prosperous farmer. A few years ago he was to buy one of the coppers from a man in Suffield for something like \$20 or \$25, but the owner changed his mind about selling. A lawsuit took place, which cost Viets about \$100, and he did not get the coin after all.

"This was the only Higley copper I ever heard of in that part of the country when I was a young man, with the exception of the one in the Athenaeum at Hartford."

## 1785 Inimica Tyrannis Cent, XF40 NGC Immensely Historical Issue Only Six or Seven Known

**5638** 1785 Inimica Tyrannis America / Confederatio, Large Circle Cent, Crosby Plate VII, No. 11, Breen-1123, Whitman-5630, High R.7, XF40 NGC. Ex: Roper. 112.3 grains. An Indian maiden tramples the British crown on this immensely historical coin, issued just two years after the Treaty of Paris ended the Revolutionary War. There is little known about the Confederatio coppers; speculation abounds. A detailed, scholarly study of these coins is long overdue, and must include information about Thomas Jefferson's connection with these coins, and the possibility that they were minted in America and not in England.

The existing population of this important rarity is limited to only six or seven examples. One of the seven recorded in our census is the Whitman *Colonial Encyclopedia* plate coin, with no further information available. Another has not been seen since its 1961 fixed price offering. Those two entries may represent a single coin.

This impressive example has pristine surfaces that exhibit pleasing bluish steel-brown patina. Slight central reverse weakness is typical of most of those that are known.

### Census of Known Specimens

- 1. MS63 Brown NGC.** 120.6 grains. Waldo Newcomer; "Colonel" E.H.R. Green; Green Estate; Partnership of Eric P. Newman / B.G. Johnson d.b.a. St. Louis Stamp & Coin Co.; Eric P. Newman @ \$750.00; Eric P. Newman Numismatic Education Society (Heritage, 11/2014), lot 3018.
- 2. XF40 NGC.** 112.3 grains. John L. Roper, 2nd Collection (Stack's, 12/1983), lot 214; Donald Groves Partrick. **The present piece.**
- 3. VF20 NGC.** 112.4 grains. Lorin G. Parmelee; Col. James W. Ellsworth; John Work Garrett; Garrett Collection; Johns Hopkins University (Bowers and Ruddy, 10/1980), lot 1329; Donald Groves Partrick. Slated to appear in a future Partrick sale.
- 4. VF, estimated grade.** Illustrated on page 186 of the Whitman *Encyclopedia of Colonial and Early American Coins*. Nothing else is known of this piece.
- 5. VF.** 1961 Metropolitan Coin Company Fixed Price List.
- 6. Fine, estimated grade.** 118.0 grains. George Clapp; American Numismatic Society Collection, acquired in 1941.
- 7. VG, holed and plugged.** 117.7 grains. Henry Chapman; Waldo Newcomer; B. Max Mehl; "Colonel" E.H.R. Green; B.G. Johnson; James Kelly; R. Prann; Alan Harper; James Kelly; New Netherlands Coin Co.; ANA Sale (New Netherlands, 8/1952), lot 2416; Sol Kaplan (1953); Emery May Norweb; Norweb Collection (Bowers and Merena, 3/1988), lot 2626. PCGS# 45411

**1785 Inimica Tyrannis America  
Large Circle Piece  
Unique Silver Composition, VF Details  
The Only Reeded Edge Confederatio**

**5639** 1785 Inimica Tyrannis America, Cinfederatio, Large Circle Silver, "W-5632," Unique — Holed — NGC Details. VF. Ex: Hanson. 101.3 grains. 90% silver, 9% copper. This piece has a small hole at 6 o'clock, just above the R in AMERICA. A small attempted puncture is evident above the D in CONFEDERATIO. Light gray devices contrast with pewter surfaces, exhibiting delicate blue overtones on the obverse, and steel patina on the reverse. Eight examples of this die pair are known, the other seven in copper.

Past studies of the Confederatio coinage suggested an English origin. Until two decades ago, when the present piece was discovered, all known examples were copper. The existence of this design in silver with a reeded edge suggests that it was produced in some official capacity, likely as a pattern for an intended coinage. The drawing of the reverse design that appeared in the May 13, 1785 report in the *Journals of the Continental Congress* indicates official government notice of this coinage. The existence of this piece in silver alludes to a formal pattern issue, and strongly suggests that the Confederatio and related pieces had an American origin.

Thomas Jefferson is closely associated with the Inimica Tyrannis pieces, and may have conceived the design. A sketch of the reverse appears in the *Papers of the Continental Congress* in May 1785.

The eight Confederatio varieties are individually rare, and they are rare as a group, with a combined population of about 30 pieces. We were pleased to offer four examples last November in the Eric P. Newman Collection Part V sale, and we are similarly pleased to offer three more Confederatio pieces in the present sale. Of all those pieces, the reeded edge silver example offered here remains unique. All others are copper with a plain edge.

Ex: Stack's (6/1995), lot 18; Anthony Terranova; Jon Hanson; Donald Groves Partrick.

**1785 Inimica Tyrannis  
Americana Copper, XF40  
Small Circle Confederatio  
Tied for Second Finest Known**

**5640** 1785 Inimica Tyrannis Americana, Confederatio, Small Circle, W-5635, Low R.7 XF40 NGC. CAC. Ex: Roper. 142.7 grains. This splendid copper ranks near the top of the short Condition Census of eight known examples. The discovery specimen, now in the Roger S. Siboni Collection, is the finest known example. The Donald Groves Partrick coin is tied with the Norweb example for the second finest. This piece has exceptional olive and chestnut-brown surfaces with hints of peripheral maroon toning. A single rim bump at the upper obverse is the only imperfection.

A 12-page pamphlet dated May 13, 1785 was published at the same time as the report in the *Journal of the Continental Congress*. The pamphlet, *Propositions Respecting the Coinage of Gold, Silver, and Copper*, is attributed to Thomas Jefferson, and also included the work of Hugh Williamson, Robert Morris, and Gouverneur Morris. That report stated the original vision for the Inimica Tyrannis obverse design:

“An Indian, his right foot on a crown, a bow in his left-hand, in his right-hand thirteen arrows, and the inscription MANUS INIMICA TYRANNIS.”

The two Confederatio reverse dies are distinguished by the size of stars, and the size of the circle containing those stars, small or large. Those two dies were combined with various obverse dies to create eight varieties, each in copper except as noted. The numbers in parenthesis are the estimated number known for each variety:

1. Inimica Tyrannis America, Large Circle W-5630 (7)
2. Inimica Tyrannis America, Large Circle, silver (1)
3. Inimica Tyrannis Americana, Small Circle W-5635 (9)
4. General Washington, Large Circle W-5645 (6)
5. 1786 Immunis Columbia, Large Circle W-5665 (2)
6. 1786 Heraldic Eagle, Large Circle W-5690 (2)
7. 1787 Heraldic Eagle, Small Circle W-5695 (2)
8. Libertas et Justitia (Nova Constellatio), Large Circle (1)

With nine examples known, the Americana Small Circle Confederatio is the most plentiful variety, if indeed any could be called plentiful. This example has similar sharpness to the Eric P. Newman specimen from our November 2014 sale, but with much finer surfaces. A second example in the Donald Groves Partrick Collection is slated to appear in a future Partrick sale. It is graded AU50 NGC, but possesses granulated surfaces.

Ex: George C. Ham Collection; *Stack's* (6/1973), lot 828; *Park Sale* (*Stack's*, 5/1976), lot 126; John L. Roper, 2nd (*Stack's*, 12/1983), lot 215; Marvin Browder; *Miles; Stack*; Jon Hanson (8/8/1998); Donald Groves Partrick. PCGS# 846

### 1785 General Washington Copper, AU50 Large Circle Confederatio Reverse Only Six or Seven Known

**5641** 1785 General Washington / Confederatio, Large Circle Cent, Crosby Plate VII, No. 14, Baker-9, Breen-1125, Whitman-5645, High R.7, AU50 NGC. CAC. Ex: Roper 129.1 grains. An exceptional likeness of General George Washington appears on the obverse, with sharp stars on the reverse. The likeness of Washington is so well executed that it provides further evidence of an American origin for these pieces, traditionally attributed to England. Most of the 1780s Washington tokens that originated in England displayed rudimentary images.

Despite the imperfect edge, this impressive piece is sharper than the Newman example that we sold in November 2014. This piece has pleasing mahogany-brown surfaces with a few scattered marks of no consequence. Current Condition Census data reveals a population of only seven examples of this rare colonial issue, and the status of one of those is uncertain.

**1. AU53 PCGS.** Bill Anton Collection. The Breen *Complete Encyclopedia* plate coin.

**2. AU50 NGC.** John L. Roper, 2nd Collection (Stack's, 12/1983), lot 216; Gil Steinberg; Stack's (5/1993), lot 48; Jon Hanson (5/5/1993); Donald Groves Partrick. **The present piece.**

**3. Choice Very Fine.** Lyman Low (201st sale, 5/1920), lot 20; Hillyer Ryder; Wayte Raymond; F.C.C. Boyd; Boyd Estate; John J. Ford, Jr. (Stack's, 5/2004), lot 287.

**4. VF30 NGC.** Charlestown Bridge (Massachusetts) Toll Collector; Hon. Richard Frothingham; Thomas G. Frothingham; Lorin G. Parmelee (New York Coin & Stamp Co., 6/1890), lot 609; Chapman Brothers; James Ten Eyck (B. Max Mehl, 5/1922), lot 837; Waldo C. Newcomer; B. Max Mehl; "Colonel" E.H.R. Green; Green Estate; Partnership of Eric P. Newman / B.G. Johnson d.b.a. St. Louis Stamp & Coin Co.; Eric P. Newman @ \$1,000.00; Eric P. Newman Numismatic Education Society (Heritage, 11/2014), lot 3024.

**5. VF20 NGC.** Wayte Raymond (4/11/1924); John Work Garrett; Johns Hopkins University (Bowers and Ruddy, 10/1980), lot 1331; Donald Groves Partrick. Slated to appear in a future Partrick sale.

**6. VG/AG.** Prann Collection; Hollinbeck Stamp & Coin Company (10/1/1953); Norweb Collection (Bowers and Merena, 3/1988), lot 2628.

**A. Uncertain.** An example reported in the Massachusetts Historical Society, from William Appleton. PCGS# 864

**Duo-Dated 1785 Confederatio  
Copper, VF35  
1786 Heraldic Eagle Obverse  
Finer of Two Known**

**5642 1786 Heraldic Eagle, Confederatio, Large Circle, W-5690, R.8 VF35 NGC.** Ex: Picker. 112.7 grains. Steel patina highlights the eagle on the olive and light brown surfaces. Trivial surface roughness is evident on both sides of this attractive and extremely important Confederatio copper. The obverse of this duo-dated copper, dated 1786, depicts a Heraldic Eagle with the motto E PLURIBUS UNUM. The 1785-dated reverse is the Confederatio Large Circle design; each side features 13 stars.

Walter Breen claimed that this Heraldic Eagle die was the work of Walter Mould, based on punch-linkage, although that attribution remains tentative. Breen stated that Mould arrived in the United States in 1785, bringing dies with him. However, evidence suggests that Mould arrived circa 1783, long before the 1785-dated Confederatio coins were produced. That evidence indicates that these copper pieces may have been produced in America. As some dies that appeared with the Confederatio reverse dies are in turn muled with New Jersey dies, the American production of these pieces is further supported.

The Donald Groves Partrick example is the finer of just two known of this die pair. The other example has similar sharpness but rough surfaces, and has been held in the American Numismatic Society collection since its acquisition in 1942. The Partrick coin matches the plate in the 1873 Seavey descriptive catalog, and later appeared in the Parmelee Collection, where it was sold to the Chapman Brothers.

Ex: George F. Seavey (*1873 Descriptive Catalog*), lot 98; Lorin G. Parmelee (*New York Coin & Stamp Co.*, 6.1890), lot 600; Chapman Brothers; later, George J. Bauer; Richard Picker; Plainfield Coins (9/9/1968); Donald Groves Partrick. PCGS# 855

### 1785 Immune Columbia Copper, MS63 Brown Constellatio, Pointed Rays Reverse

**5643** 1785 Immune Columbia Copper, Constellatio, Pointed Rays, W-1960, High R.6 MS63 Brown NGC. Ex: Norweb. 148.2 grains. The solitary 1785 Immune Columbia die is paired with obverse 2 from the Nova Constellatio series, appearing on 1783 Crosby 2-B in that series. Sharply detailed and fully lustrous, this important copper exhibits attractive olive and tan surfaces under delicate mahogany toning. Pre-striking scattered marks on the planchet remain on both sides.

There are eight varieties that are known from a single 1785 Immune Columbia obverse die. All are rare, ranging from unique to 30 extant. With the exception of the unique gold example in the Smithsonian Institution, every variety appears in the present sale, perhaps an unprecedented offering. The Garrett Collection had six of the eight varieties, Roper had five, and the Norweb Family had five. The Ford Collection was only half complete.

1. 1785 Immune Columbia, Pointed Rays, star and period in legend, copper, W-1960, B-1117. About 20 known. The variety offered here.
2. Same, gold, W-1970, B-1118. Unique, in the Smithsonian Institution.
3. 1785 Immune Columbia, Pointed Rays, without star and period, copper, W-1980, B-1119. Two known per Michael Hodder; five to eight known per Q. David Bowers. Offered below.
4. Same, silver, plain edge. W-1982, B-1121. Two or three known. Offered below.
5. Same, silver, reeded edge. W-1985, B-1120. Perhaps 15 known. Offered below.
6. 1785 Immune Columbia, Blunt Rays, copper. W-1990, B-1122. Two known. Offered below.
7. 1785 Immune Columbia, George III Rex, copper. W-1995, B-1000. About 15 known. Two examples offered below.
8. 1785 Immune Columbia, Vermont Auctori, copper, W-2250, B-734, Ryder-1. About 30 known. Offered in the Vermont section of the present sale.

A second example in the Donald Groves Partrick Collection, graded AU58 NGC and ex: Garrett is slated to appear in a future sale.

Ex: Virgil M. Brand; B. Max Mehl (1/11/1937); Norweb Collection (Bowers and Merena, 3/1988), lot 2621; Ken Goldman (8/25/1988); Donald Groves Partrick. PCGS# 830

## 1785 Immune Columbia Copper, MS61 Brown W-1980, From the Garrett Collection The Finest Known

**5644 1785 Immune Columbia Copper, 13 Stars, W-1980, R.7 MS61 Brown NGC.** Ex: Garrett. 121.1 grains. The obverse is the solitary 1785 Immune Columbia die that appears on all known varieties. The reverse is the same as obverse 3 that appears on 1785 Crosby 3-B in the Nova Constellatio series. Although blunt high points are evident, the surfaces are smooth and pleasing on this distinctive olive-brown copper. Scattered marks are consistent with the grade.

There is little positively known about the 1785 Immune Columbia series that is filled with speculation, much like many other colonial issues. Walter Breen attributed these pieces to Birmingham's Wyon family in England, suggesting that Walter Mould brought the dies to America in 1785; however, Mould actually arrived in 1783. These pieces are part of a tangled web of colonial varieties that may have been produced in England or the United States, but more likely in the latter location. Missing from our current numismatic knowledge is that one record that might prove where these pieces were made, and by whom. Unless that document is found, we are left to make educated guesses regarding this coinage series.

Some disagreement exists regarding the number of examples of this variety. Michael Hodder stated definitively in the 2004 Ford catalog that Garrett: 1332 (offered here) and Oechsner: 1004 (holed) are the only two pieces known. In the Garrett catalog, Q. David Bowers reported that the *Scott Encyclopedia* listed seven to nine. Walter Breen suggested a population of five or six in his *Complete Encyclopedia*. Recently, Bowers assigned a rating of URS-4 in the *Whitman Colonial Encyclopedia*, suggesting a total of five to eight. Regardless of the small number extant, we are confident that the present piece, from the Ellsworth, Garrett, and Partrick collections, is the finest known example.

Ex: Col. James W. Ellsworth; John Work Garrett; Johns Hopkins University (Bowers and Ruddy, 10/1980), lot 1332; Ken Goldman; Donald Groves Partrick. PCGS# 826

**1785 Immune Columbia Silver, XF Details  
Plain Edge, W-1982  
Two or Three Known  
The Finest Seen**

**5645** 1785 Immune Columbia, 13 Stars, Silver, Plain Edge, W-1982, R.8 — Reverse Graffiti — NGC Details. XF. Ex: Roper. 86.4 grains. 90% silver, 9% copper. The same Immune Columbia and Nova Constellatio dies as the previous lot. This die pairing in silver is usually found with a reeded edge as in the next lot, and rarely with a plain edge as offered here. Attractive bluish pewter-gray surfaces exhibit rose highlights on the devices. Delicate hairlines include trivial graffiti at the lower left reverse.

Like other Immune Columbia die pairs, the number of examples known is uncertain, although a total of only two or three has been posited. In the 1982 Roper catalog, Stack's suggested that two examples exist. Breen also recorded two pieces in his 1988 *Complete Encyclopedia*, identifying the other example as the Lauder specimen, lot 191 that was plugged. Michael Hodder noted three in the Ford catalog. Q. David Bowers said URS-3 (three or four known) in the *Whitman Colonial Encyclopedia*. Neither Hodder nor Bowers recorded the identity of the third piece. In his article about the series that appeared in the January 1992 issue of *The Numismatist*, J. Bruce Jackson identified a third example in the Ted Craige estate with no prior provenance. However, no such piece appeared in the 2013 sale of colonials from the Craige Collection.

Ex: John L. Roper, 2nd (*Stack's*, 12/1983), lot 210; John Hanson (12/22/1984); Donald Groves Partrick.

**1785 Silver Immune Columbia, AU55  
Diagonally Reeded Edge, W-1985  
Possibly the Finest Known**

**5646** 1785 Immune Columbia Piece, 13 Stars, Silver, Reeded Edge, W-1985, High R.6 AU55 NGC. Ex: Garrett. 87.2 grains. 92% silver, 7% copper. NGC has recorded the weight of this piece as 87.2 grains, while the Garrett catalog gave the weight as 133.7 grains. J. Bruce Jackson records eight examples with weights that fall in the range of 75.1 to 93.1 grains, suggesting the weight in the Garrett catalog was a typographical error. The weight is nearly identical to the 87.3 grains standard of contemporary British shillings.

From the same dies as the previous two lots, although here it is a silver impression with a Reeded Edge. Q. David Bowers suggested in the *Whitman Encyclopedia of Colonial and Early American Coins* that these silver pieces were "Likely made at a later date." However, we have compared the reverse of this piece to the obverse of Eric P. Newman's 1785 Nova Constellatio Crosby 3-B, and the Newman piece is a later die state, proving that these silver pieces are contemporary issues of 1785.

Vibrant cobalt-blue, gold, and rose toning appear on the light gray surfaces of this attractive silver example. A few scattered marks and trivial rim bumps are evident on this appealing piece.

Like so many others in the series, the exact number of these pieces is uncertain. A population of seven to nine was recorded in the Garrett catalog. Breen called this "shilling" extremely rare, but failed to venture a guess as to how many are known. The Norweb cataloger suggested a total of eight to 10, while Jackson recorded 11 examples in his 1992 survey. Michael Hodder raised the population to 15 examples in the 2004 Ford catalog, while Q. David Bowers said URS-4 (?) in the *Whitman Colonial Encyclopedia*. The actual number of Reeded Edge coins appears to be in the range of 12 to 15.

Examples are known both with vertical and diagonal edge reeding. Most catalogers fail to differentiate, although we know of at least four vertically reeded edge coins (Norweb, ANS, New Netherlands 60th, and Newman), and at least two (Robison and the present Garrett piece) with diagonal edge reeding. A second example in the Donald Groves Partrick Collection, graded VF35 NGC, is slated to appear in a future Partrick sale.

Ex: Edouard Frossard (2/13/1883); T. Harrison Garrett; Robert Garrett; John Work Garrett; Johns Hopkins University (Bowers and Ruddy, 10/1980), lot 1333; John J. Ford, Jr. (Stack's, 5/2004), lot 284; Donald Groves Partrick. PCGS# 829

### 1785 Immune Columbia, W-1990, XF40 Finer of Two Known Blunt Rays Coins

**5647** 1785 Immune Columbia Copper, CONSTELLATIO, Blunt Rays, W-1990, R.8 XF40 NGC. CAC. Ex: Norweb. 109.3 grains. This variety combines the 1785 Immune Columbia obverse with obverse die 3 of the 1783 Nova Constellatio series, the same Blunt Rays die reappearing as obverse 1 of the 1785 Constellatio series. Pleasing olive and chocolate-brown are blended over both surfaces of this important copper. The strike is imperfectly centered with the upper obverse and reverse legends tight against the border.

The buyer of this piece in the 1890 Parmelee sale was "Clay," an alias for Harlan P. Smith, who apparently purchased many coins on the consignors behalf as prices were considered too low. After Parmelee repurchased this coin from his own sale via H.P. Smith, it was probably sold privately to DeWitt Smith, who was a supplier to Virgil Brand.

#### Census of Two Known Examples

**XF40 NGC.** Lorin G. Parmelee; Lorin G. Parmelee Collection (New York Coin & Stamp Co., 6/1890), lot 593; "Clay" (Harlan P. Smith); Lorin G. Parmelee; probably DeWitt Smith; Virgil M. Brand; Brand Estate; B. Max Mehl (1/11/1937); Norweb Collection (Bowers and Merena, 3/1988), lot 2622; Ken Goldman (8/25/1988); Donald Groves Partrick. **The present specimen.**

**VF25 NGC.** Dr. Edward Maris Collection; T. Harrison Garrett; Robert Garrett; John Work Garrett; Johns Hopkins University (Bowers and Ruddy, 10/1980), lot 1335; John L. Roper, 2nd (Stack's, 12/1983), lot 212; Donald Groves Partrick Collection. This coin is slated to appear in a future Partrick sale.

PCGS# 831

**1785 Immune Columbia,  
George III Mule, XF40  
From the Mills and Garrett Collections  
Tied for the Finest Known**

**5648** 1785 Immune Columbia Copper, George III Obverse, W-1995, High R.6 XF40 NGC. CAC. Ex: J.G. Mills. 122.5 grains. Chestnut-brown surfaces exhibit a few splashes of steel patina on each side of this famous Machin's Mills copper. The strike is imperfectly centered with GEORGIVS partly off the flan. Similarly, most of IMMUNE is lost to the edge of the planchet. The problem-free surfaces exhibit inconsequential handling marks. This piece was graded Extremely Fine in the Garrett catalog, and carries the same grade from NGC today.

When Michael Hodder cataloged the Ford coin (Part II, lot 285), he wrote: "One of the finest known, up there along with Garrett: 1336 and Norweb: 2623." Only two of the 14 examples recorded in J. Bruce Jackson's roster were graded Extremely Fine, the Garrett and Norweb coins. None were considered finer. The Ford coin was omitted entirely. Noted briefly, the following rank of coins is observed, from best to worst: Garrett: 1336 (offered here); Norweb: 2623; Ford: 285; NN59: 1066 (offered below); Park: 125; Bareford: 8; Stacks 6/1981: 48; Oechsner: 1005; Robison: 100; Roper: 211; Lauder: 193; Steinberg: 69; Yale University; and Bowers and Merena, privately (2). The first three are approximately tied for finest known, and the position of the last three is uncertain as no grades were recorded.

Jackson recorded weights of eight examples, and only the Norweb coin is heavier than this example. With some examples cut-down or clipped, such as that in the next lot, the full weight of this piece is an important observation. Another specimen in the Donald Groves Partrick Collection, ex: Parmelee, Norweb, graded XF40 NGC is slated for a future Partrick sale.

Ex: John G. Mills Collection (Chapman Brothers, 4/1904) lot 121; Robert Garrett; John Work Garrett; Johns Hopkins University (Bowers and Ruddy, 10/1980), lot 1336; Donald Groves Partrick. PCGS# 835

**1785 Immune Columbia,  
George III Mule, VF20  
Lightest Recorded Weight**

**5649** 1785 Immune Columbia Piece, George III Obverse, W-1995, High R.6 VF20 NGC. CAC. Ex: New Netherlands. 96.9 grains. The small planchet of this example is insufficient for the legends, with III REX mostly absent on the obverse, and only IMMU visible on the reverse. The date is almost entirely off the flan, with only the tops of each digit visible. The surfaces are generally smooth with trivial grade-consistent marks. Light brown devices contrast with the steel and maroon fields. Because the planchet was not perfectly round, the edges are irregular. The obverse die was too deeply engraved, so that the central device rarely shows detail, even on the finest survivors.

The mystery of where these pieces were made, and by whom, continues with this copper. Those who believe the Confederatio, Immune Columbia, and Nova Constellatio coins were all struck in England consider these pieces to be of English origin as well. American manufacture is suggested by others, who attribute this piece among Machin's Mills coins struck in upstate New York. However, the obverse does not appear with any other copper issues. The letters VS in GEORGIUS are low, and lost in the hair detail at the back of the head: That feature alone is diagnostic. A firm answer to the question of manufacture for this piece may help solve the numismatic riddle regarding the manufacture of all related varieties.

*Ex: From England; New Netherlands (59th Sale, 6/1967), lot 1066; Ted L. Craig; Alan Kessler; David Sonderman (4/4/1983); Donald Groves Partrick. PCGS# 835*

**1786 Immunis Columbia Copper, AU58**  
**Large Eagle Reverse**  
**Transposed Arrows**  
**The Finest of Three Known**

**5650** 1786 New York Immunis Columbia / Large Eagle, Breen-1135, W-5675, R.8, AU58 NGC. CAC. Ex: Roper 143.3 grains. This 1786-dated rarity is the Breen *Complete Encyclopedia* plate coin, exhibiting excellent obverse centering with full border details and imperfect reverse centering, the border detail on that side visible clockwise from 5:30 to 12 o'clock, although that off-center reverse impression still permits full and complete lettering. The other known example has nearly identical obverse and reverse centering. The strike is sharp with only the highest design points lacking detail. Exceptional surfaces exhibit lovely light to medium brown color with darker steel on the reverse showing a "wood-grain" appearance. This is an exceptional opportunity to acquire an important piece of colonial coinage history.

The 1786 Immunis Columbia, Large Eagle copper was unknown to Crosby in 1875. He authenticated the Dr. Maris discovery specimen in 1886, just prior to its offering in the Maris Collection sale. The present example is plated in the 1976 second edition of Scott's *Comprehensive Catalog* where Roper was recorded as the owner.

The obverse is the same design as found with the New Jersey Shield reverse on Maris 3-C, although the two varieties are from different obverse dies. The date has a dissimilar treatment, and the head is distant from the C in COLUMBIA on this variety, while it is close to the C on Maris 3-C. The scale joins the B in that word on this die, while it is separated on the New Jersey variety. There are other variances as well.

**We are aware of only three examples:**

**AU58 NGC.** 143.3 grains. Richard Picker; John L. Roper, 2nd (Stack's, 12/1983), lot 213; Marvin Browder; Ed Milas; Stack's; Jon Hanson (8/8/1998); Donald Groves Partrick.

**AU50 NGC.** 118.9 grains. Richard Picker (privately in 1970 @ \$7,500); Frederick B. Taylor (Bowers and Merena, 3/1987), lot 2095; Donald Groves Partrick. Slated to appear in a future Partrick sale.

**Choice VF.** 137.4 grains. Dr. Edward Maris (H.P. Smith, 6/1886), lot 501; Elmer S. Sears (privately, 2/12/1915); Hillyer Ryder; F.C.C. Boyd; John J. Ford, Jr., Part II (Stack's, 5/2004), lot 289.

**1787 Immunis Columbia Copper, MS64 Brown  
Wide Planchet Variant  
Struck over New Jersey Maris 26-S  
The Finest of Four Known**

**5651** 1787 New York Immunis Columbia / Large Eagle, Wide Planchet, Plain Edge, Breen-1136, W-5680, High R.7, MS64 Brown NGC. CAC. Ex: Mills. 155.3 grains. The New Jersey undertype is prominently visible on this fantastic overstrike. Both sides exhibit glossy and lustrous light brown surfaces with splashes of maroon patina. The strike is exceptionally sharp, lacking in detail only as a result of the overstrike. The pristine surfaces show no contact marks on either side.

Michael Hodder considered the Immunis Columbia coinage in his detailed article "The 1787 'New York' Immunis Columbia, A Mystery Re-Ravelled" that appeared in the January 1991 issue of *The Colonial Newsletter*. Hodder noted that the four known Wide Planchet Immunis Columbia pieces are all struck over New Jersey Maris 26-S coppers. These pieces were long considered patterns that were produced by Matthias Ogden in a petition to Congress for a Federal coining franchise. However, Hodder provides evidence to the contrary, writing:

"This new study indicates that the issue was struck circa late 1788-middle 1789 under the auspices of Matthias Ogden in the original Rahway mint, where New Jersey 16-S and 26-S had also been coined. It is probable that the entire issue was planned for circulation, and was not struck to support Matthias Ogden's March 3, 1787 coinage proposal, but rather, to provide Ogden with another source of revenue free from the 10% seigniorage payable to the state on the New Jersey coinage."

Considering the Maris 26-S undertype on all four known examples, this variety rightfully deserves a place within an advanced New Jersey coinage collection. Roger S. Siboni, John L. Howes, and A. Buell Ish discuss the New Jersey-Immunis Columbia relationship in *New Jersey State Coppers*:

"Many New Jersey varieties are found struck over a wide array of undertypes, but it is extremely rare to find New Jersey coppers used as host coins. Only Maris 26-S and 35-J are known to have been used as host coins in a systematic manner, thereby suggesting that the overstriking actually took place in one of the New Jersey mints. Maris 26-S is therefore not only an attractive New Jersey variety, but it is also a coin that hints at the complexity and interrelationships of the coinages, mints, and the men involved. An IMMUNIS COLUMBIA certainly would make a logical supplement to a New Jersey collection, allowing its owner greater opportunity to consider the full complexities of the numismatic situation."

**Census of Known Specimens**

**MS64 Brown NGC.** John G. Mills Collection; possibly to Col. James Ellsworth; John Work Garrett; Johns Hopkins University (Bowers and Ruddy, 11/1979), lot 605; Marvin Browder; Ed Milas; Stack's; Jon Hanson (8/8/1998); Donald Groves Partrick. **The present piece.**

**AU55 ★ NGC.** Lorin G. Parmelee Collection (New York Coin & Stamp, 6/1890), Lot 596; James Ten Eyck; Albany Historical Society; James Ten Eyck (B. Max Mehl, 5/1922), Lot 845; Waldo Newcomer (circa 1931 via B. Max Mehl); "Colonel" E.H.R. Green; Green Estate; B.G. Johnson in the early 1940s; Eric P. Newman, purchased for \$50.00; Eric P. Newman Numismatic Education Society (Heritage, 5/2014), lot 30425.

**EF.** ANA Sale (Stack's, 8/1976), lot 73.

**Uncertain grade.** Col. Phares O. Sigler Collection. PCGS# 841

### 1787 Immunis Columbia Copper, Plain Edge, MS63

#### The Only Collectible Variety

**5652** 1787 Immunis Columbia Copper, Eagle Reverse, Plain Edge, W-5680 MS63 Brown NGC. 131.4 grains. The obverse is similar to that of the Immune Columbia, but here it is dated 1787 rather than 1785, and the legend reads IMMUNIS instead of IMMUNE. The undated reverse displays a heraldic eagle with an olive branch to the viewer's left, and arrows to the right. Hints of faded red appear on the smooth chocolate-brown and olive surfaces of this lovely Mint State copper. The imperfect centering affects the date, with only the tops visible. E PLURIBUS UNUM is partly off the flan on the reverse. This is the only readily collectible variety among all the Confederatio, Immune Columbia, and Immunis Columbia issues.

Ex: F.C.C. Boyd; New Netherlands (59th Sale, 6/1967); Donald Groves Partrick. PCGS# 841

### 1787 Immunis Columbia Copper, XF40 Unique Ornamented Edge Variety

**5653** 1787 Immunis Columbia Copper, Eagle Reverse, Ornamented Edge, W-5685 XF40 NGC. Ex: Garrett. 144.7 grains. The obverse and reverse dies are the same as above. The ornamented edge consists of pellets within squares around the entire circumference of this piece. Most of the date and lettering remain on the planchet of this attractive Immunis Columbia copper. Rich olive-brown surfaces are smooth and pleasing. The cataloger for the Garrett Collection suggested that the ornamented edge was applied after the coin was struck, based on the numerous pressure ridges on both sides.

Ex: Henry Chapman (1/9/1925); John Work Garrett; Johns Hopkins University (Bowers and Ruddy, 11/1979), lot 604; Donald Groves Partrick. PCGS# 841

### 1783 Chalmers Threepence, W-1760, MS61 Important Condition Rarity Possibly Third-Finest Known

**5654 1783 Chalmers Threepence, Breen-1018, W-1760, R.5, MS61 NGC.** Ex: Craige. 13.9 grains. Annapolis, Maryland, silver- and goldsmith John Chalmers struck threepence, sixpence, and shillings, all dated 1783 and designed for local circulation — an aim that appears to have been fulfilled, given the extensive wear that many surviving pieces show. The Long Worm and Short Worm shillings are the most commonly seen Chalmers coins overall. The threepence are next in overall availability with respect to varieties.

The various reference guides are confusing, particularly in regard to the rarity of the four sixpence versus the others. The Long and Short Worm shillings are the most frequently seen (R.4 and High R.4, respectively), followed by the threepence (R.5), then the four sixpence die marriages (each R.6 to R.7), and finally the Rings shillings at High R.7. However, the threepence is the rarest Chalmers denomination in terms of the cumulative total of survivors.

Those rankings are also absolute, and a piece such as this Mint State NGC-certified threepence is a marvelous conditional rarity. Much luster appears on silver-gray surfaces with a bold strike, but the strike is a tad off-center and the blank was axially misaligned, creating strike softness above I.C on the obverse and PENCE on the reverse. This piece may rank third-finest certified behind one each in MS62 and MS63 at PCGS (11/14).

Ex: Robert A. Vlack; Ted L. Craige (3/25/1971); Donald Groves Partrick. PCGS# 592

**1783 Chalmers Sixpence, W-1765, XF40**  
**Rarest Sixpence Variety**  
**Period Between Large Date**  
**Third-Finest Known**

**5655** 1783 Chalmers Sixpence, Large Date, Breen-1013, W-1765, R.7, XF40 NGC. Ex: Craigie. 28.5 grains. Period Between Large Date. Of the four varieties of Chalmers sixpence, the Breen-1013 Large Date showing a period between 17 and 83 is almost certainly the rarest. As we pointed out in our recent offering of an AU55 NGC example in the Newman Collection Part V Signature (Heritage, 11/2014), the *Whitman Colonial Encyclopedia* suggests (with a question mark) a rarity of two to four pieces, but we believe the actual survival is more on the order of eight to 10 examples. We believe that the two Small Date sixpence variants (Breen-1015, Breen-1017) survive to the extent of a dozen to a dozen and a half each, while the Large Date, Period After Date (Breen-1014) survival is perhaps two dozen coins.

**Variety**

Large Date, with a period appearing between 17 and 83. The *Whitman Colonial Encyclopedia* notes that "the 'period' dividing the date is actually an ornament found on other dies as well, but in this instance intruding slightly into the date." Note the small T and S within the crescents ending the cross on the reverse, for Thomas Sparrow (1746-1784), engraver of the dies (perhaps for all the Chalmers coins). He also engraved the plates for Maryland paper currency and the so-called Sparrow Seal, which first appeared in 1765 on the title page of the Reverend Thomas Bacon's compilation of the Laws of Maryland. Sparrow was the ward and employee of Annapolis printer Jonas Green.

**The Present Example**

The strike is off-center toward 9 o'clock on the obverse, with the dentilation correspondingly boldest at 3 o'clock. The surfaces are nicely preserved overall, showing the expected light to moderate wear. The reverse displays some reeding and edge marks in the central area from contact with a second coin. A small fissure appears near the rim between 1 and 7 in the date. This piece is the third-finest known to us of this extremely rare variety, behind the Newman example and one XF45 PCGS piece. The Newman AU55 NGC-CAC coin brought \$88,125.

Ex: Ted L. Craigie (1/16/1971); Donald Groves Partrick. PCGS# 594

**1783 Chalmers Sixpence, Small Date, Fine 15 W-1780, Six-Pointed Star Reverse**

**5656** 1783 Chalmers Sixpence, Small Date, Six-Pointed Star, Breen-1017, W-1780, High R.6, Fine 15 NGC. CAC. Ex: Picker. 25.3 grains. This is, remarkably, a second example of the Chalmers sixpence in the present auction. (It can sometimes be a matter of years between offerings of Chalmers sixpence in the numismatic marketplace.) This Fine 15 NGC specimen represents the Breen-1017 Small Date variety, showing a six-pointed star after SIX in the peripheral legends. The Small Date Chalmers sixpence are markedly rarer in high grades than the Large Date pieces, although both varieties are notable rarities. This piece shows a few pinscratches in the center obverse, and the reverse shows a single small, round indent in the center, but mostly just extensive wear appears on the medium-gray surfaces, with the usual off-center obverse and well-centered reverse strike. This is apparently the sole Small Date sixpence certified at NGC in any grade; PCGS reports one each in VG10 and VG8 (11/14).

Ex: Richard Picker (3/17/1971); Donald Groves Partrick. PCGS# 593

**1783 Short Worm Chalmers Shilling, XF45 W-1785, Well Struck and Well Centered**

**5657** 1783 Chalmers Shilling, Short Worm, Breen-1011, W-1785, High R.4, XF45 NGC. Ex: Wild. 53.3 grains. The Short Worm and Long Worm Chalmers shillings are the most obtainable denomination overall, much more so than the elusive threepence and sixpence. The Short Worm (head of the worm facing downward) is marginally more difficult than the Long Worm (head of the worm facing up). This piece shows beautiful surfaces for the grade, with pinkish-gray centers complementing greenish-gold patina nearer the margins on each side. The planchet is well centered on each side and boldly struck throughout, despite the grade-consistent light wear. NGC reports two submissions in this grade, with three finer — one each in AU50, AU53, and MS63 (11/14).

Ex: Bill Wild (12/10/1968); Donald Groves Partrick. PCGS# 596

### 1783 Chalmers Shilling, Long Worm, MS62 Tied for Finest Graded of the Variety

**5658** 1783 Chalmers Shilling, Long Worm, Breen-1012, W-1790, R.4, MS62 NGC. CAC. Ex: New Netherlands. 49.6 grains. The Long Worm Chalmers shillings are the most obtainable pieces from this Maryland issuer, although they are still scarce overall, and seldom seen in so fine condition as this lovely MS62 NGC example. In all grades, no more than 250 examples are thought to survive today. The obverse of the Long Worm shillings shows the same kind of weakness or die failure, we believe, that also appears on the exceedingly rare Rings Reverse shillings, an example of which we are also privileged to offer in this auction.

John Chalmers issued his small silver coinage as a substitute for the fractional pieces made from Spanish milled dollars. A well-known gold- and silversmith, Chalmers was held in high regard by his fellow citizens, thus his coinage circulated easily in his community of Annapolis, Maryland.

The present coin shows alternating areas of silver-gray and greenish-gold patina with considerable luster remaining. The strike is bold save for the central obverse, as noted, and to a lesser extent the lower-right reverse area. Scattered dark flecks appear on each side but are not bothersome, given the remarkable high quality overall. This piece is the sole finest graded of the variety at NGC, and it is tied with one at PCGS (11/14).

Ex: *New Netherlands Coin Co. (9/9/1967); Donald Groves Partrick. PCGS# 595*

Lot 5659

## 1783 Chalmers Shilling, Rings Reverse, VF25 W-1795, Finest Known Fascinating Rotated, Double-Struck Reverse

**5659 1783 Chalmers Shilling, Rings, Breen-1010, W-1795, R.7, VF25 NGC.** Ex: Jenks. 54.2 grains. A great rarity in the Maryland Colonial series, the Rings shillings struck by John Chalmers are the rarest variety and denomination known from the Annapolis silversmith. This example is finer than the Mickley-Bushnell discovery coin, about which Michael Hodder wrote in the Ford Collection catalog, "How Crosby was ever able to read the central inscription from this piece is beyond this cataloguer."

That inscription is "Equal to One Shi" (for "shilling") as deciphered by Crosby (or perhaps by Joseph Mickley as told to Crosby), who wrote in the 1875 reference, at a time when the Mickley example was thought to be unique:

"The centre of the obverse is very indistinct, but faintly shows the inscription, in three lines, 'Equal to One Shi.' At the sale of the Mickley collection, (No. 2527,) it brought fifty dollars: as its present owner is unknown to us, no further particulars regarding it can be given."

The Chalmers shillings are the first American coins to feature an interlocked rings device, although not a simple 13 connected rings; rather, nine rings show a simple interlock, and three rings at the bottom reverse intertwine with a fourth larger ring, making 13 in all.

### The Present Example

The E and al in "Equal" are visible to this cataloger, and One Shi is plain, or at least legible, on the lowest line in the center; the remaining central legend is invisible, not due to wear but die failure. The marginal inscriptions on the obverse are clear, and some evidence of rotated double striking appears within CHALMERS, an errant L showing overlapping the right side of the A. *The reverse shows a remarkable, nearly complete off-center rotated double strike throughout, which we believe was caused by another Rings shilling being struck reverse-side-down against the reverse of this piece, while being rotated and off-center with respect to this coin.* The original strike shows as a thin silver-gray crescent from 9 o'clock to 1:30 at the top (with the pole and Liberty cap pointing straight upward), while the rotated, off-center second strike shows as an extensive area of bluish-green patina in the fields and silver-gray raised devices. Where the two interlocking ring devices overlap, there is a noticeable color change. A beautiful, exceedingly rare, and extremely interesting coin that should be of signal appeal to Colonial specialists

### Census of the Five Known Rings Shillings

**1. VF25 NGC.** Henry Chapman (discovered in March 1906); John Story Jenks (Henry Chapman, 12/1921), lot 5521; John Work Garrett; Garrett-Johns Hopkins University Part III (Bowers and Ruddy, 10/1980), lot 1313, brought \$75,000; John L. Roper II (Stack's, 12/1983), lot 175, \$24,200; Donald Groves Partrick. **The present example.**

**2. F-VF.** The discovery coin. Joseph J. Mickley Collection (W.E. Woodward, 10/1867), lot 2527, brought \$50; a bidder named "Stephens" (almost certainly the agent for Bushnell; see following trade); Charles Ira Bushnell Collection (Chapman Brothers, 6/1882), lot 997; Lorin G. Parmelee Collection (New York Coin & Stamp Co., 6/1890), lot 297; Robert C.W. Brock; University of Pennsylvania; P.H. Ward; Harry Forman; John J. Ford, Jr. (Stack's, 5/2004), lot 281, brought \$172,500.

**3. Unknown Grade.** Norweb Family (1983); Smithsonian Institution. This piece may be the example that appeared earlier in the Ulex Collection (Lyman Low, 7/1902), lot 103, described as "fairly rated as good."

**4. AG, holed.** Eric P. Newman Collection. This piece is possibly the example that first appeared at the 1919 ANA Convention. Newman Collection Part V (Heritage, 11/2014), lot 3007, brought \$44,063.

**5. Poor/VG, plugged.** S.W. Freeman (Richmond, Virginia, 1939); Loye Lauder (William Doyle Galleries), lot 177. PCGS# 597

## Finest Certified 1790 Standish Barry Threepence, MS64 Breen-1019, Ex: Brand, Ford

**5660** 1790 Standish Barry Threepence, Crosby Pl. X, 23, Breen-1019, R.6, MS64 NGC. CAC. Ex: Brand. 13.2 grains. This near-Gem NGC-certified piece is the finest available Standish Barry threepence, save for a Gem example in the collection of the Maryland Historical Society.

### Commentary

The Standish Barry threepence are curiosities that stand out as the only colonial American coins that bear a specific date, JULY 4 90 (for 1790). The JULY 4 90 date obviously leads to the conclusion that the Barry threepence may have commemorated Independence Day, but no specific documentation provides verification.

Standish Barry (1763-1844) was a maker of clocks and watches, and later on a silversmith. Born in Baltimore on November 4, 1763, Barry spent his early years as an apprentice to David Evans, a watchmaker and silversmith, according to Michael Hodder. He began his own business in 1784 and apparently prospered over many years. In addition to his business affairs he served in the military, rising to the rank of lieutenant colonel. According to Col. J. Thomas Scharf in *Chronicles of Baltimore* (Baltimore, 1874), Col. Standish Barry died on November 6, 1844, age 81. Another Col. Standish Barry, perhaps the son of the silversmith, served as Assistant U.S. Treasurer at Baltimore and died October 20, 1866, at age 70, according to Scharf. The elder Barry was married to Nancy Thompson, on October 11, 1788, so the timing is proper for a son born in 1796.

These threepence clearly served as store cards or merchant tokens, given the appearance of STANDISH BARRY around the reverse rim, with THREE / PENCE in the center. The obverse reads BALTIMORE TOWN and the date, with a left-facing portrait in the center. According to a Stack's offering of a VF30 PCGS example (Stack's 74th Anniversary Sale, 11/2009, lot 711), Max Spiegel "recently identified" the obverse portrait "as Baltimore Mayor James Calhoun," and the Guide Book has picked up that attribution, saying "the head on the obverse is probably that of James Calhoun, who was active in Baltimore politics in the 1790s."

According to a March 22, 1999, article written by Robert Barnes in *The Archivists' Bulldog*, the newsletter of the Maryland State Archives, James Calhoun (1743-1816) served as mayor of Baltimore from 1797-1804. Barnes writes:

"During the Revolution Calhoun took a patriotic American stand. He is said to have been a friend of Washington and served on committees identified with the prosecution of the Revolutionary War. As early as 1772 he was a member a Baltimore committee which, in common with representatives of other maritime cities, fought the commercial restrictions placed upon the colonies by England. Great Britain at that time had closed many American ports because of the opposition to tea tax, etc., and the committee, upon which Calhoun served, endeavored to conduct trade and commerce between American ports in the face of the blockade."

Barnes continues, regarding Calhoun:

"During 1776, Calhoun and seventeen others were authorized by Congress to sign bills of credit, and he also served on the Committee of Observation during 1775. About the same period, he was appointed deputy to the Commissary-General of Purchases for the Continental Army. In 1778, he held a commission in the Baltimore militia, and in 1779 was appointed a local magistrate. Calhoun was a member of the reception committee to General Washington while the latter was in command of the Armies of the United States, during his visit in Baltimore on September 8, 1781.

"Also in 1781, Calhoun contributed \$272.50 to the fund being raised for the Continental Army, then in dire financial straits. Subscriptions for the army were made during one of Lafayette's visits to Baltimore. Records show that Calhoun also served as foreman of the grand jury of Baltimore County in 1787, and was a justice of the Baltimore County Orphans Court in 1791. He soon became one of the city's leading merchants and was actively identified with Baltimore Town before being chosen mayor."

There can be little doubt that the prosperous Standish Barry and the merchant mayor of Baltimore knew each other — perhaps for decades — and Calhoun's involvement in Revolutionary War activities, if indeed it is his portrait, may serve as further explanation for the JULY 4 90 date on Standish Barry's threepence, although that is also speculative. Their mysterious origins as well as their crude design and workmanship are part and parcel of these coins. Many pieces are struck off-center or display lightly struck areas on one side or the other. A roster we published in our FUN 2009 Signature enumerated 17 pieces, most of them heavily circulated and/or plugged or with other damage.

### Variety

Breen-1019. Only a single die pair is known, and only the threepence denomination is known among silver coins. Several of the letters and numerals on each side show evidence of repunching.

### The Present Example

This example boasts an illustrious pedigree harkening back to Chicago beer brewer and collector extraordinaire Virgil Brand (1864-1924). This piece is notable for its bold strike on a planchet that is nicely rounded and well centered. NGC has certified this piece as MS64, placing it as second-finest after the Gem Uncirculated example in the Maryland Historical Society. More importantly, it is by far the finest available to the collecting public. This piece appears clearly finer than our 2009 FUN offering. The planchet looks perfectly round, and the strike is uniformly bold throughout the obverse and weak only on HR and EN in THREE and PENCE, respectively. Considerable original mint luster remains, appearing chiefly in the recesses of the devices and around the peripheries. The central portrait is boldly struck with a full eye, and clear legends run around the peripheries on each side. Large die cracks show on each side, on the obverse from R in BALTIMORE downward onto the hair, and on the reverse more prominent, from the rim above T in STANDISH down to the opposite between SH. A marvelously well-preserved and well-produced example of this classic late-Colonial Maryland rarity.

Another example in the Donald Groves Partrick Collection, graded MS62 NGC, ex: Eliasberg, is slated to appear in a future Partrick sale.

Ex: Virgil Brand; Virgil Brand Collection, inventory #20760, sold privately (11/8/1954); John J. Ford, Jr.; Ford Collection, Part II (Stack's, 5/2004), lot 282, realized \$86,250; Donald Groves Partrick. PCGS# 609

### Undated Bar Copper, MS65 Brown First Published in November 1785

**5661** (1785) Bar Copper, Breen-1145, W-8520, R.4, MS65 Brown NGC. CAC. 85.1 grains. Ex: Craige. Although no date appears on either side of the famous Bar copper, the coins were described in the *New Jersey Gazette* of November 12, 1785 as "A new and curious kind of copper." The date of that newspaper report is strong evidence to consider the original Bar coppers as productions of the same year. Details surrounding the production of these pieces remains sketchy at best, although they were probably manufactured by Thomas Wyon in Birmingham, England. Examples of this scarce colonial-era copper appear in the marketplace with some frequency, and most are in higher grades, although rarely are they as fine as this example from the Donald Groves Partrick Collection. This impressive Gem has lustrous light brown surfaces with reflective fields. An adequate strike is evident with full borders on both sides, although the reverse dentils are tight at 5 o'clock.

Ex: Richard Picker; Ted L. Craige (5/18/1971); Donald Groves Partrick. PCGS# 599

### Bar Silver Token Undated 19th Century Copy

**5662** Undated Bar Silver Token, Proof Uncertified. This mid-19th century silver copy of the Bar copper was produced by an unidentified maker. The dies differ from those of the John Adams Bolen copies that were produced in the 1860s. This piece almost certainly dates from the second half of the 19th century, and exhibits workmanship superior to the Bolen pieces. Donald G. Partrick notes on his envelope that only one other example is known from these dies; graded VG, it was in the John J. Ford, Jr. collection. This amazing proof, with delicate blue and iridescent toning, has exceptional eye appeal.

Ex: Ted Craige (5/18/1971); Donald Groves Partrick. PCGS# 599

**1787 Nova Eborac Copper, MS63 Brown  
Large Head, W-5750  
The Norweb Finest Known**

**5663** 1787 Nova Eborac Copper, Large Head, Breen-985, W-5750, R.6, MS63 Brown NGC. Ex: Norweb. Like so many other contemporary colonial issues, there is much speculation and little knowledge about these coppers. The obverse legend refers to New York, so that city is likely the mintage location. Breen attributed the engraving to John Bailey and Ephraim Brasher, although this cataloger believes the designs crude, and the dies probably engraved by one or more individuals of less talent than Bailey or Brasher; others may disagree.

This impressive piece has splendid olive-brown surfaces with full cartwheel luster. Both sides exhibit splashes of golden-tan, faded from original red. A few surface marks at the central obverse are likely original planchet marks that were not struck out. This example from the Norweb Collection is finer than any other Nova Eborac Large Head coppers that we have encountered, although one other comparable piece from New Netherland's 51st sale was mentioned in the Norweb catalog. We have handled just under a dozen of these in our past auctions, mostly in the Fine to XF range. The finest is an AU55 PCGS example that was formerly lot 296 in the Ford Sale, Part II. The Eric P. Newman Part IV coin that we sold in May 2014 was graded XF40 NGC. Here is an exceptional opportunity to acquire a high-grade and eye-appealing example of this important copper variety.

*Ex: New Netherlands (1/1956); Norweb Collection (Bowers and Merena, 3/1988), lot 2676; Marvin Browder; Ed Milas; Stack's; Jon Hanson (8/8/1998); Donald Groves Partrick. PCGS# 484*

**1787 Nova Eborac Copper, AU55  
Large Head, W-5750**

**5664 1787 Nova Eborac Copper, Large Head, Breen-985, W-5750, R.6, AU55 NGC. CAC.** At one time, this piece was considered the second finest known, although it was called the third or fourth finest known in the 1968 New Netherlands catalog, where the catalogers wrote:

"Whatever its Condition Census rating, this piece appears to be sharper than the Crosby Plate coin, and may even be better than the Earle-Clarke specimen, lot 778 in our 48th auction, Nov. 24, 1956."

This exceptional example exhibits lovely olive-brown surfaces with maroon patina on the reverse. The strike is a trifle off-center with the wide borders at the upper obverse and lower reverse, and with other peripheral details tight against the edge of the planchet.

*Ex: Dr. Angus C. Black (New Netherlands, 60th Sale, 12/1968), lot 418; Donald Groves Partrick. PCGS# 484*

**1787 Nova Eborac, MS65 Brown  
Normal Head, Reverse Figure Left  
The Finest Known W-5755 Copper**

**5665 1787 Nova Eborac Copper, Seated Figure Left, B-986, W-5755, R.3, MS65 Brown NGC.** *Ex: Norweb.* This variety is seen as frequently as the other three Nova Eborac varieties combined, although one or more examples of each Nova Eborac variety is offered in the present sale. We believe this impressive Gem is the finest known example of the W-5755 variety. Considerable golden-tan overtones are seen on pristine olive-brown surfaces. Full luster is apparent. This piece exhibits exceptional centering despite the absence of border dentils. NGC has certified five Mint State examples of this variety, including the present Gem and others graded MS64+ Red and Brown (Newman), MS64 Brown (offered below), MS62 Brown, and MS61 Brown (also offered below).

*Ex: New Netherlands Coin Company (privately, 9/23/1954); Norweb Collection (Bowers and Merena, 3/1988), lot 2677; Marvin Browder; Ed Milas; Stack's; Jon Hanson (8/8/1998); Donald Groves Partrick. PCGS# 478*

**1787 Nova Eborac, MS65 Brown  
Normal Head, Reverse Figure Left  
The Third Finest Known**

**5666 1787 Nova Eborac Copper, Seated Figure Left, B-986, W-5755, R.3, MS64 Brown NGC. CAC.** 124.8 grains. *Ex: Eliasberg.* This glossy and lustrous light brown example was graded MS63 Brown in the Eliasberg catalog, where it was called the Finest Known. At the time of that sale, nearly two decades ago, two finer pieces were unknown to the general numismatic community. One of those, the Norweb coin offered above, was graded well below its actual quality, while the other, from the Eric P. Newman Collection, appeared to the current generation of numismatists less than one year ago.

*Ex: Louis E. Eliasberg, Sr.; Eliasberg Estate (Bowers and Merena, 5/1996), lot 59; Donald Groves Partrick. PCGS# 478*

**1787 Nova Eborac, MS61 Brown  
Normal Head, Reverse Figure Left**

**5667** 1787 Nova Eborac Copper, Seated Figure Left, B-986, W-5755, R.3, MS61 Brown NGC. As incredible as it may seem, here is a third Mint State example of this Nova Eborac variety with the reverse figure facing to the left. This example has intermingled golden-brown and bluish-steel surfaces with minor roughness in places on each side, some apparently from the original planchet.

*Ex: Yale Collection (Stack's, 12/1971), lot 81; T. Henry Allen Sale (Stack's, 2/1977), lot 17; Donald Groves Partrick. PCGS# 478*

**1787 Nova Eborac, AU58  
Normal Head, Reverse Figure Left**

**5668** 1787 Nova Eborac Copper, Seated Figure Left, B-986, W-5755, R.3, AU58 NGC. *Ex: Craige.* A fourth example of this variety is offered, here just missing the Mint State grade level. This piece exhibits sharp central detail with indistinct peripheries, especially on the reverse. Rich bluish steel-brown surfaces exhibit splashes of golden-tan, faded from mint red. A trace of border dentilation is evident on the obverse from 3 to 5 o'clock. Although this piece ranks fourth finest of the four examples in the present sale, it is far finer than most examples appearing in the marketplace.

*Ex: Robert A. Vlack; Ted L. Craige (3/25/1971); Donald Groves Partrick. PCGS# 475*

**1787 Nova Eborac, MS65 Brown  
Normal Head, Reverse Figure Right  
The Finest Known**

**5669** 1787 Nova Eborac Copper, Seated Figure Right, Breen-987, W-5760, R.4, MS65 Brown NGC. *Ex: Roper.* This Normal or Medium Head obverse die appears with both reverse dies, having the Seated Figure facing left and right. Three distinct die states of this variety are offered here and in the next lot. This late die state piece has a large rim break at the lower right part of the reverse, from 3 o'clock to 5 o'clock. The late die state pieces are seen more frequently than the earlier state examples.

This Gem is finer than the Bushnell-Ford coin that is graded MS63 Brown PCGS, appearing in our January 2006 sale. It is clearly above the XF45 Eric P. Newman example, and outshines any others we have sold in the last 20 years. This piece is nicely centered with lovely olive-brown surfaces and light blue overtones. Both sides have full cartwheel luster and excellent eye appeal. This is the finer of just two Mint State pieces that NGC has certified, and the other follows in the next lot.

*Ex: John L. Roper, 2nd (Stack's, 12/1983), lot 268; Marvin Browder; Ed Milas; Stack's; Jon Hanson (8/8/1998); Donald Groves Partrick. PCGS# 475*

**1787 Nova Eborac, MS62 Brown  
Normal Head, Reverse Figure Right  
Condition Census**

**5670** 1787 Nova Eborac Copper, Seated Figure Right, Breen-987, W-5760, R.4, MS62 Brown NGC. CAC. This intermediate die state copper has a clash mark or die crack from the quatrefoil after ET LIB down to the seated figure's leg, limiting the rim break of the later die state. Don Partrick called this piece the finest known on his envelope, predating by a decade his acquisition of the Roper coin. The surfaces are exceptional, with gorgeous tan and golden-brown color. Unlike most examples, this piece exhibits some of the border detail, and it is finer than any of the six that appeared in the May 2004 Ford auction. NGC has only certified two Mint State examples of this variety, and both of those pieces are in the present sale.

*Ex: Central States Numismatic Society (RARCOA, 4/1972), lot 388; Donald Groves Partrick. PCGS# 475*

**1787 Nova Eborac Copper, XF40  
W-5765, Small Head Rarity  
The Finest Known**

**5671** 1787 Nova Eborac Copper, Small Head, Breen-988, W-5765, High R.6, XF40 NGC. *Ex: Roper.* Although the names of John Bailey and Ephraim Brasher are associated with the Nova Eborac coppers, to this cataloger it is doubtful that they engraved this obverse die, even if they prepared any of the others. The Small Head Nova has an appearance unlike the rest of the Nova Eborac coppers, and was probably engraved by a different artisan. The obverse has three six-pointed stars while the other varieties exhibits quatrefoils. That is just one of the several differences. All of the letter punches are different as well. This example has considerable border detail. The surfaces are minutely granular, with steel-blue and olive patina. Michael Hodder recorded just 10 examples in the Ford catalog. The Donald Groves Partrick piece is finer than all others on Hodder's list.

*Ex: John L. Roper, 2nd (Stack's, 12/1983), lot 270; Donald Groves Partrick. PCGS# 481*

Lot 5672

## 1776 Massachusetts Copper, VF35 The Famous 'Janus' Copper The Unique Garrett Piece

**5672** "1776" Massachusetts Janus Copper, Crosby Plate VII, 8, Breen-703, Whitman-8385, Unique, VF35 NGC. CAC. 81.2 grains. Known to the numismatic world since at least 1859 when it was recorded in Montroville W. Dickeson's *American Numismatical Manual*, this famous and unique copper has had just four owners of record since that time: Matthew Adams Stickney, Col. James W. Ellsworth, John Work Garrett, and Donald Groves Partrick, for an average of 39 years each. The implication is that this piece will not appear for sale again until the year 2054.

### The Design

The obverse has three conjoined heads, facing left, front, and right. The divided legend has STATE OF to the left, and MASSA: to the right, with the denomination, 1/2 D, below.

The reverse has a seated representation of Liberty, holding a pole in the right hand and an object in the left hand that has been described as either a Liberty cap, or Justice scales. A globe appears in the left field. The legend, GODDESS LIBERTY, follows the border, with the pole nearly reaching the border between the SS. A small animal appears right of Liberty's leg, and the date, 1776, is in exergue.

The small animal on the reverse of this halfpenny has traditionally been described as a dog, but it does not look like a dog. Crosby wrote: "at her feet sits a dog." In his *Complete Encyclopedia*, Walter Breen wrote: "at her feet sits a watchdog." In Will Nipper's *In Yankee Doodle's Pocket*, the author writes: "a dog sits at her feet, ears peaked."

To this cataloger, the small animal looks more like a cat than a dog. In *Liberty and Freedom* (Oxford University Press, 2005), David Hackett Fischer provides commentary that supports the appearance of a cat:

"Popular as Uncle Sam and Yankee Doodle may have been, the most appealing images of liberty and freedom have always been female. It is interesting to observe how these feminine figures have changed through time. They descended from the ancient goddess of liberty, a timeless figure who represented an idea that derived its authority from an aura of eternal truth. In the early American republic, they became something very different - a symbol of modernity, endlessly redefined by the whirl of contemporary fashion - and they gained new meaning from their relevance to the present.

"Let us begin with the goddess of liberty. Even before the American republic was born, she was more than two thousand years old. A Roman temple had been raised to her on the Aventine Hill as early as the third century before Christ. The Graachi renewed the Temple of Liberty in 13 B.C. Often she appeared on the coins of the Roman Republic, and later on those of the Roman Empire as well. Surviving images show her as a woman of maturity with the stylized features of Greco-Roman temple sculpture and an abundance of ancient gravitas. She was instantly recognizable as a figure of liberty by the symbols around her. At her feet were the broken chains of bondage, or a smashed pitcher that symbolized the end of servitude. Sometimes she was accompanied by a cat, the animal that acknowledged no master."

## Janus Misnomer

In his seminal 1859 work, Dickeson labeled this design the Janus copper. That misnomer has been attached to this unique copper since that time, or perhaps even earlier. Janus, the mythological god of beginnings and transitions, is historically represented with two heads facing in opposite directions. Dickeson wrote:

“Janus, the son of Apollo, went to Italy, where he planted a colony and founded a town, which he named Janiculum. He is represented, as is well known, with two faces, because, by the ancients, he was believed to be capable of relating all things of the past, and revealing everything in regard to the future. Hence, with the endowment of supernatural power, he was accepted by the Romans for a god, worshipped as such, and had a temple erected in his name, which was never closed except in a time of universal peace. History informs us, that it was closed but three times in a period of upwards of seven hundred years, during which time the Romans were engaged almost incessantly in war.”

It was not long after that others, including Sylvester S. Crosby, suggested the impropriety of that name. Crosby stated:

This piece which has been known as the “Janus Copper,” we think may more properly be called the Massachusetts Halfpenny. It has three heads combined, instead of two as in a Janus head. This device resembles the Brahma of Hindoo [sic] mythology, which represents the past, the present, and the future.

According to Dickeson, the owner at that time, Matthew A. Stickney, considered the opposing faces to represent the prevalent political factions in 1776, the Whigs and Tories. Breen suggested that the three faces suggested watchfulness in every direction, probably looking for British soldiers.

## Discovery and Provenance

According to the Dickeson and Crosby texts, Matthew Adams Stickney was the first owner of record, and likely the person who discovered this unique copper. Crosby explained:

“The only specimen known of this curious pattern is in the collection of Matthew A. Stickney, Esq., and was found with an engraved piece (see plate VII, No. 9,) and some proof impressions from plates for continental paper money engraved by Paul Revere; from this circumstance Mr. Stickney is inclined to the opinion that they were the work of that engraver. However, this may be, the Pine tree cent, and this Halfpenny sufficiently resemble each other in their workmanship, to be considered the work of the same artist. They were probably private enterprises, as no mention of them is found upon any records.”

A dealer in goods from West India, Salem, Massachusetts collector Matthew Adams Stickney was born in 1805 and died in 1894. He began collecting in his later teenage years, about 1823. Henry Chapman sold the Stickney Collection in 1907 for a total price of nearly \$38,000.

Col. James W. Ellsworth purchased the Janus Head copper at the Stickney sale for \$1,050, the fourth highest price in the sale behind a Brasher doubloon (\$6,200), an 1804 dollar (\$3,600), and an 1815 half eagle (\$2,000). At the Stickney sale, Ellsworth was known by the code name Hercules. He was a multi-millionaire coal mine operator who had other extensive business interests. Born in Ohio on October 13, 1849, Ellsworth died in Palmieri, Italy on June 2, 1925. His collection was sold to Wayte Raymond for \$100,000 in 1923. John Work Garrett put up half the money, and had first choice of the coins.

Garrett was the son of T. Harrison Garrett, and the brother of Robert Garrett. He was born in Baltimore on May 19, 1872, and died on June 26, 1942. His father was president of the Baltimore and Ohio Railroad. His brother earned two gold and two silver medals in the 1896 Olympics in Athens. John Work Garrett served in the diplomatic service. He donated his collection to Johns Hopkins University, and the University deaccessioned the collection in a series of sales, starting with Stack's in 1976 and then with Bowers and Ruddy in four sales from 1979 to 1981. Donald Groves Partrick purchased the Janus copper and many other numismatic delicacies from the Garrett sales.

## Origin

Some numismatic students consider the work to be that of the 18th century, contemporary with the date of the coin. The inscription, STATE OF MASSA, suggests that this piece was produced after July 4, 1776. In the Stickney catalog, Henry Chapman wrote:

“1776 Half penny, probably by Paul Revere ... Unique. Fine, though the front face is much worn and the coin appears to have been in circulation ... Mr. Crosby gives full credit to this being the only specimen known.”

Others consider this copper to be a 19th century fantasy, observing that the denomination, 1/2 D, is wrong, that the abbreviation for Massachusetts, MASSA, was not used in the 1770s, and nothing about the design suggests that it was the work of Revere. Some suggest that it is the work of C.W. Betts; however, since this piece was known prior to 1860, this is an unlikely scenario. Betts himself stated: “It was in 1860 that I made my first attempt at die-cutting.” (*Numisma*, March 1878.)

## The “1776 Massachusetts Three Head Halfpenny”

Aside from a grade of “Fine” in the Stickney catalog, and “Fine-12” in the Garrett catalog, no physical description of this piece has ever been written. Although showing signs of wear, the surfaces are pleasing with smooth high points and no imperfections aside from trivial handling marks. The surfaces range from tan to light brown. A tiny reverse rim nick at 12 o'clock serves as a pedigree marker. The label “choice” is truly appropriate for this beautiful and unique copper.

Ex: Matthew A. Stickney Collection; Stickney Estate (Henry Chapman, 6/1907), lot 113, \$1,050; Col. James W. Ellsworth; John Work Garrett; Johns Hopkins University (Bowers and Ruddy, 11/1979), lot 574, \$40,000; Donald Groves Partrick. PCGS# 661000

### Undated Engraved Copper Paul Revere Association

**5673** (1776) Unique Engraved Copper. Crosby Plate VII, No. 9. Fine. 86.6 grains. This unique copper piece was found with the Janus copper said to be engraved by Paul Revere. A perched eagle standing on a globe or crown has its head turned to the viewer's left, with five rosettes to the left and five more to the right. The reverse has 13 rosettes around a shield containing half of a fleur de lis to the right with two blank quadrants to the left. No more is known of this intriguing engraved copper than was known when Crosby published his reference in 1875. The provenance of this piece and the famous Janus copper are identical, which demonstrates they remained together since being found in the 1850s.

Ex: Matthew Adams Stickney; Col. James W. Ellsworth; John Work Garrett; Johns Hopkins University (Bowers and Ruddy, 11/1979), lot 573; Donald Groves Partrick. PCGS# 661000

### 1787 Massachusetts Half Cent, MS65 Brown Exceptional Ryder 2-A Example

**5675** 1787 Massachusetts Half Cent, Ryder 2-A, W-5910, R.3, MS65 Brown NGC. Ex: Weber. Ryder 2-A is the only use of this obverse die, but the well-made reverse was also employed for three other marriages. This variety is similar in availability to the 1-D die pairing, being difficult to obtain above the XF grade level. The present Gem is a truly remarkable piece, and is possibly the finest known. Tinges of reddish-brown and bronze-gold reside in the recesses amid deeper olive-brown and burgundy toning. Sharp definition on the central regions and a lack of noticeable die fatigue is evidence of this piece having been struck early in the dies' usage.

Ex: Weber; Jon Hanson (6/2008); Donald Groves Partrick. PCGS# 296

### 1787 Massachusetts Half Cent, Unc Details Bold Ryder 1-D Representative

**5674** 1787 Massachusetts Half Cent, Ryder 1-D, W-5900, R.4 — Burnished — NGC Details. Unc. Ryder 1-D is the only use of Ryder's obverse 1, though the reverse die proved harder and was also paired with obverses 4 and 6 on two other occasions. The typical Ryder 1-D half cent is well-circulated, and this variety is difficult to locate above the VF grade level. The present example is remarkably unworn, showing only light evidence of old burnishing. Glossy, cherry-brown coloration blankets each side, while the design elements are boldly brought up.

Ex: Public Auction Sale (Lester Merkin, 10/1972), lot 494; Donald Groves Partrick.

### 1787 Massachusetts Half Cent, MS64 Brown Likely Finest Known Ryder 3-A Example

**5676** 1787 Massachusetts Half Cent, Ryder 3-A, W-5920, Low R.5, MS64 Brown NGC. CAC. Ex: Hanson. Of the nine known die varieties of the 1787 Massachusetts half cent, Ryder 3-A is one of the scarcer. The typical representative grades no finer than XF, making the Choice Mint State example here offered a remarkable Condition Census rarity. The obverse is in a frequently seen late die state, as this is the only use of that die, but the reverse exhibits the bold sharpness that is characteristic of Ryder's reverse A. Blended reddish-brown and auburn hues complement smooth, luminous surfaces.

Ex: Jon Hanson (1/2001); Donald Groves Partrick. PCGS# 296

**1787 Massachusetts Half Cent, AU58  
Ryder 3-A, Glossy, Unimpaired Surfaces**

**5677** 1787 Massachusetts Half Cent, Ryder 3-A, W-5920, Low R.5, AU58 NGC. CAC. The Boston-based Massachusetts Mint is estimated to have struck between 61,500 and 79,500 half cents dated 1787. The number of those struck with Ryder's 3-A die pair is unknown, but it was undoubtedly a small percentage, as this variety is challenging in all grades and decidedly rare above the XF grade level. Glossy burgundy-brown color blankets each side of this near-Mint example. The obverse shows the usual die fatigue on the Indian, but the reverse devices are boldly brought up.

Ex: Anthony Terranova; Stack's; Jon Hanson (4/1988); Donald Groves Partrick. PCGS# 296

**1787 Massachusetts Half Cent, MS65 Brown  
Ryder 4-B, Ex: Eliasberg**

**5679** 1787 Massachusetts Half Cent, Ryder 4-B, W-5930, R.5, MS65 Brown NGC. CAC. Ex: Eliasberg. Another Gem Ryder 4-B example, this one traces its origin to the legendary Louis E. Eliasberg, Sr. Collection. The Partrick Collection contains three examples of this rare die variety, all of which are Condition Census-quality. The present piece exhibits a remarkably sharp central strike, with lustrous olive and autumn-brown coloration. Close examination reveals some fine die rust on the reverse, as this late-state die is seen here in its final use.

Ex: Louis E. Eliasberg, Sr. Collection (Bowers and Merena, 5/1996), lot 84; Jon Hanson; Donald Groves Partrick. PCGS# 296

**1787 Massachusetts Half Cent, MS65 Brown  
Ryder 4-B, Ex: Hanson**

**5678** 1787 Massachusetts Half Cent, Ryder 4-B, W-5930, R.5, MS65 Brown NGC. CAC. Ex: Hanson. The reverse die was used only for this marriage. It is the first of three appearances for the obverse die, as the small die break near the Indian's left (facing) foot is slightly more advanced on the later 4-C die pairing. Although difficult to find in the absolute sense, a number of Mint State examples of this variety are known. This Gem piece exhibits exceptional planchet and strike quality, even for the relatively well-made Massachusetts coppers, with smooth red-brown toning that reveals hints of olive when tilted in-hand.

Ex: Jon Hanson; Donald Groves Partrick. PCGS# 296

**1787 Massachusetts Half Cent, MS64 Brown  
Ryder 4-B, Ex: Norweb**

**5680** 1787 Massachusetts Half Cent, Ryder 4-B, W-5930, R.5, MS64 Brown NGC. CAC. Ex: Norweb. Partrick's third example of Ryder 4-B is the Norweb coin, listed in that catalog as being "among the finest known." This piece shows more of the usual central striking deficiency than the previous two examples of this elusive variety, but the superb surface preservation and planchet quality are nearly equal. The glossy surfaces display deep orange-brown and pale olive hues, with a few lovely areas of reddish coloration also seen on the obverse. The reverse shows an earlier die state than the Eliasberg coin, with no evidence of die rust.

Ex: Richard Picker (1959); Norweb Collection, Part II (Bowers and Merena, 3/1988), lot 2642; Jon Hanson; Donald Groves Partrick. PCGS# 296

**1787 Massachusetts Half Cent  
Ryder 4-C, Remarkable Gem Red and Brown  
Ex: Hanson, One of the Finest Known**

**5681** 1787 Massachusetts Half Cent, Ryder 4-C, W-5940, R.2, MS65 Red and Brown NGC. CAC. Ex: Hanson. The preparation of the dies for the 1787 Massachusetts half cents is attributed to Joseph Callender, a local Boston engraver. Callender prepared six obverse and four reverse dies for 1787 coinage, with which the Boston-based Massachusetts Mint produced a total of nine individual varieties. Ryder 4-C, arguably the most available, features the only use of this reverse die, though the obverse was employed for two other marriages, despite a break that developed early near the Indian's left (facing) foot. This remarkable Gem exhibits substantial mint-red luster, with subtle overtones of auburn and burgundy. Sharp definition on the central elements further increases the appeal, as these are frequently soft, even on the generally well-made Massachusetts coppers.

Ex: Jon Hanson (6/2002); Donald Groves Partrick. PCGS# 296

**1787 Massachusetts Half Cent, AU Sharpness  
Rare Ryder 6-A Die Pair  
Ex: Ryder, Ford**

**5683** 1787 Massachusetts Half Cent, Ryder 6-A, W-5970, Low R.6 — Obverse Scratched — NGC Details. AU. Ex: Ryder. Ryder 6-A is a rare die pairing, featuring the final use of this reverse and the first of two uses for this obverse. The marriage is unlisted in Sylvester Crosby's *The Early Coins of America*, and is difficult to acquire above the VF grade level; no true Mint State pieces are known. This sharply detailed example shows rich burgundy-brown and auburn toning. A couple of faint old scratches on the lower-right obverse are hardly discernable to the unaided eye. Possibly a Condition Census example for the variety.

Ex: Charles Steigerwalt (10/1908); Hillyer Ryder; F.C.C. Boyd; John J. Ford, Jr. Collection (Stack's, 10/2004), lot 78; Jon Hanson; Donald Groves Partrick.

**1787 Massachusetts Half Cent, MS65 Brown  
Ryder 4-C, Ex: Cleneay  
One of the Finest Known**

**5682** 1787 Massachusetts Half Cent, Ryder 4-C, W-5940, R.2, MS65 Brown NGC. CAC. Ex: Cleneay. Another exceptional Gem Ryder 4-C example, this one traces its origin to the Thomas Cleneay Collection, which was cataloged by the Chapman brothers in late 1890. The piece was important enough to be included in the plates in that catalog, and its significance has not waned. Deep reddish and olive-brown hues encompass each side, and the design elements are incredibly bold, particularly in the central regions. A few faint areas of deeper brown color serve as pedigree markers.

Ex: Collection of the Late Thomas Cleneay (Chapman Brothers, 12/1890), lot 327; Jon Hanson; Donald Groves Partrick. PCGS# 296

**1787 Massachusetts Half Cent, MS62 Brown  
Ryder 6-D, Ex: Ryder, Ford  
The Ryder Plate Coin**

**5684** 1787 Massachusetts Half Cent, Ryder 6-D, W-5980, Low R.6, MS62 Brown NGC. Ex: Ryder. The Ryder plate coin, in the Condition Census for this rare variety which is difficult to locate above the VF grade level. The central design elements are sharply brought up, though the left obverse and right reverse rims are not fully struck. Olive and reddish accents complement largely burgundy-brown toning over smooth surfaces. This is one of two uses for this obverse and one of three appearances for this reverse.

Ex: W.B. Guy Collection (Henry Chapman, 11/1911), lot 65; Hillyer Ryder; F.C.C. Boyd; John J. Ford, Jr. Collection (Stack's, 10/2004), lot 80; Jon Hanson; Donald Groves Partrick. PCGS# 296

**1787 Massachusetts Half Cent, MS61 Brown  
Ryder 6-D  
Ex: Norweb**

**5685** 1787 Massachusetts Half Cent, Ryder 6-D, W-5980, Low R.6, MS61 Brown NGC. Ex: Norweb. This rare variety was missing from both the Garrett and Picker collections. Although not quite as sharp in the centers as is the other 6-D representative in the Partrick Collection, the definition is still pleasing and the planchet quality is exceptional. Glossy burgundy-brown and deep olive coloration encompasses each side. A die crack from the rim near the E in WEALTH and a small die chip below the Indian's right (facing) foot are diagnostic of this obverse. Ex: Norweb Collection (*Bowers and Merena*, 3/1988), lot 2645; Jon Hanson; Donald Groves Partrick. PCGS# 296

**1788 Massachusetts Half Cent, MS63 Brown  
Ryder 1-A, Ex: Ford  
The Ryder Plate Coin**

**5686** 1788 Massachusetts Half Cent, Ryder 1-A, W-6000, High R.4, MS63 Brown NGC. Ex: Ryder plate coin, Condition Census for the variety. Ryder 1-A is by far the scarcer of the two 1788 half cent varieties, seldom seen in any grade above the XF level. This glossy Mint State coin exhibits even olive-brown color on the obverse and deeper burgundy on the reverse. Some slight softness is noted on the Indian and the extreme center shield, though the major design elements are clear and HALF CENT is complete.

Ex: Ralph R. Barker Collection (*Chapman Brothers*, 7/1904), lot 358; Hillyer Ryder; F.C.C. Boyd; John J. Ford, Jr. Collection (*Stack's*, 10/2004), lot 108; Jon Hanson; Donald Groves Partrick. PCGS# 308

**1788 Massachusetts Half Cent, MS66 Brown  
Ryder 1-B, Ex: Clapp, Eliasberg  
Possibly the Finest Known**

**5687** 1788 Massachusetts Half Cent, Ryder 1-B, W-6010, R.2, MS66 Brown NGC. CAC. Ex: Eliasberg. The Eliasberg coin, one of the finest known of this variety. This is the more often seen of the two 1788 half cent varieties, which feature a common obverse paired with two different reverses. These dies are attributed to Jacob Perkins, a young silversmith of Newburyport. Joseph Callender's charge of 24 shillings per die (or per die pair, depending on the reference) was thought to be too expensive for the Mint, so the die making contract was transferred to Perkins in 1788. The latter engraver prepared the necessary dies at a reduced cost of only about three shillings each. This remarkable coin shows lustrous olive-brown and auburn toning. The Indian and shield are boldly defined, and the preservation is exceptional.

Ex: Mills Collection (*Chapman Brothers*, 4/1904); J.M. Clapp; Clapp Estate (1942); Louis E. Eliasberg, Sr.; Louis E. Eliasberg, Sr. Collection (*Bowers and Merena*, 5/1996), lot 86; Jon Hanson; Donald Groves Partrick. PCGS# 308

**1788 Massachusetts Half Cent, MS65+ Brown  
Ryder 1-B, Ex: Hanson  
Possibly the Second-Finest Known**

**5688** 1788 Massachusetts Half Cent, Ryder 1-B, W-6010, R.2, MS65+ Brown NGC. CAC. Ex: Hanson. Possibly the second-finest known of the variety, just slightly behind the Eliasberg specimen offered in the previous lot. Another Ryder 1-B example, offered by Bowers and Ruddy in their November 1979 sale of the Garrett Collection, was cataloged as being in Gem condition, though the modern grade and whereabouts of that coin are not currently known. This piece is nearly identical to the Eliasberg coin in regards to aesthetic appeal, with original, luminous surfaces yielding a suggestion of luster beneath medium auburn-brown, olive, and coppery-bronze hues. The central devices are razor-sharp, and the preservation is simply superb.

Ex: Jon Hanson (6/2002); Donald Groves Partrick. PCGS# 308

**1787 Massachusetts Half Cent, MS63 Brown  
Ryder 1-B, Ex: New Netherlands**

**5689** 1788 Massachusetts Half Cent, Ryder 1-B, W-6010, R.2, MS63 Brown NGC. CAC. Ex: New Netherlands. A late die state example, with evidence of minor die fatigue on each side. Some light planchet irregularity is observed on the right-hand portion of the obverse, an interesting characteristic for a Massachusetts copper, as these were typically struck on high-quality flans. The glossy surfaces emit shades of olive, bronze-gold, and auburn-brown, giving this piece outstanding original appeal. The strike sharpness is little affected by the die wear, as most central elements are well detailed. The availability of this variety in comparison to Ryder 1-A suggests this die pair struck the majority of the 35,500 - 38,500 1788-dated half cents produced by the Massachusetts Mint.

Ex: Public Auction Sale (New Netherlands, 4/1972), lot 737; Donald Groves Partrick. PCGS# 308

**1787 Massachusetts Cent, XF40  
Extremely Rare Ryder 1-B Example  
Remarkable Clipped Planchet Mint Error  
Condition Census, Ex: Ryder, Ford**

**5690** 1787 Massachusetts Cent, Arrows in Left Talon - Clipped Planchet Mint Error - Ryder 1-B, W-6030, R.7, XF40 NGC. Ex: Ryder. The so-called "Aged Face" variety, believed to be a contemporary counterfeit attributed to Machin's Mills, is avidly collected along with the genuine pieces. Massachusetts coinage collector and researcher Mike Packard estimates only about 10 examples survive, the finest of which grade in the XF range. We believe this to be the second-finest known, surpassed by only the Norweb coin (an XF45 example, per that catalog). The present coin is struck on an exceptional clipped planchet, the clip appearing as a semicircle on the upper-right obverse, with much of the WE in WEALTH off the flan; this mint error is likely unique for this variety. The surfaces are smooth, with deep chocolate-brown color that exhibits tinges of auburn and olive. Slight wear leaves much detail remaining, with CENT virtually complete. An exceedingly rare and important coin.

Ex: Hillyer Ryder; F.C.C. Boyd; John J. Ford, Jr. Collection (Stack's 10/2004), lot 82; Jon Hanson; Donald Groves Partrick. PCGS# 302

**1787 Massachusetts Cent, VF30  
Third-Finest Ryder 1-B Example  
Ex: Newcomer, Green, Ford**

**5691** 1787 Massachusetts Cent, Arrows in Left Talon, Ryder 1-B, W-6030, R.7, VF30 NGC. Ex: Newcomer. A second example of this extremely rare contemporary counterfeit. This piece is struck on a smaller and slightly lighter planchet than the previous Ryder 1-B example, with the tops of COMMO partially or entirely off the flan on the obverse, and the tops of ASSACHUSET largely off the flan on the reverse. The surfaces are smooth and evenly toned in deep burgundy and chocolate-brown colors. Some minor wear is noted on the Indian and the shield, though much detail remains including most of CENT. This piece is, to the best of our knowledge, the third-finest known of the variety. The "Aged Face" moniker comes from the noticeably older-looking appearance of the Indian on this die pair, compared to the more proud and stout figure seen on original Massachusetts coppers.

Ex: Waldo Newcomer; "Col." E.H.R. Green; F.C.C. Boyd; John J. Ford, Jr. Collection (Stack's, 10/2004), lot 83; Jon Hanson; Donald Groves Partrick. PCGS# 302

**1787 Massachusetts Cent, MS66 Brown  
Ryder 2-A, The Popular 'Horned Eagle' Variety  
Ex: Hanson, the Finest Known**

**5692** 1787 Massachusetts Cent, Horned Eagle, Ryder 2-A, W-6040, R.3, MS66 Brown NGC. Ex: Hanson. The so-called "Horned Eagle" variety, also known as Ryder 2b-A, shows a heavy die break up from the top of the eagle's head. This is the only use of this reverse die, but one of five uses for this obverse. The variety is not prohibitively rare in the absolute sense, though its popularity is heightened by the diagnostic reverse die break. The present coin is believed to be the finest known. Subtle original luster resides on each side beneath blended burgundy, auburn, and lighter brown hues. The surfaces are beautifully preserved, and the central design elements are remarkably sharp, with almost all the shield lines well delineated. Some minor die fatigue is noted in the lower-right reverse recesses. This is an important condition rarity.

Ex: Jon Hanson (6/2002); Donald Groves Partrick. PCGS# 305

**1787 Massachusetts Cent, MS64 Brown  
Ryder 2-A, Some Mint Red Remaining**

**1787 Massachusetts Cent, MS63 Brown  
Ryder 2-E, Ex: Norweb, Finest Known**

**5693** 1787 Massachusetts Cent, Horned Eagle, Ryder 2-A, W-6040, R.3, MS64 Brown NGC. CAC. Ex: Eliasberg. Most examples of the Ryder 2-A variety (also known as Ryder 2b-A) grade only in the XF or lower range. This Choice Mint State example exhibits luminous burgundy toning with brighter coppery-red luster in the protected regions. This piece is from a slightly later die state than the previous Ryder 2-A coin in the Partrick Collection, with more pronounced die fatigue in the lower-right reverse recesses and slight weakness on the central design elements.

Ex: Louis E. Eliasberg, Sr. Collection (Bowers and Merena, 5/1996), lot 87; Jon Hanson; Donald Groves Partrick. PCGS# 305

**5695** 1787 Massachusetts Cent, Arrows in Left Talon, Ryder 2-E, W-6060, R.5, MS63 Brown NGC. Ex: Norweb. This is the only use of the reverse die, as it cracked early from the rim at 3 o'clock. This variety is similar in rarity to Ryder 2-C, being difficult to locate above the VF grade level. This example is believed to be the finest known. Glossy light brown surfaces reveal hints of olive and burgundy when tilted beneath a light. The extreme centers exhibit some of the usual striking softness, though the design elements are otherwise sharp.

Ex: Norweb Collection (Bowers and Merena, 3/1988), lot 2651; Jon Hanson; Donald Groves Partrick. PCGS# 302

**1787 Massachusetts Cent, MS62 Brown  
Ryder 2-C, Ex: Ford, Finest Known**

**1787 Massachusetts Cent, MS61 Brown  
Ryder 2-E, Believed Second-Finest Known**

**5694** 1787 Massachusetts Cent, Arrows in Left Talon, Ryder 2-C, W-6050, R.5, MS62 Brown NGC. Ex: Ryder plate coin for reverse C, likely unique in Mint State. Ryder 2-C is a rare die pairing, and most known examples grade no finer than VF. This glossy piece is deep burgundy in color, with tinges of brighter red seen when turned in hand; we believe it is the finest known. The reverse shows some mild die polishing in the recesses of the eagle's wings, though the shield is sharply delineated. The highest points of the Indian are slightly soft, as is normal for the issue.

Ex: Henry Chapman (10/1911); Hillyer Ryder; F.C.C. Boyd; John J. Ford, Jr. Collection (Stack's, 10/2004), lot 89; Jon Hanson; Donald Groves Partrick. PCGS# 302

**5696** 1787 Massachusetts Cent, Arrows in Left Talon, Ryder 2-E, W-6060, R.5, MS61 Brown NGC. To the best of our knowledge, the second-finest known of this elusive variety, and one of only two currently known in Mint State. This piece is from a mildly later die state than the Norweb coin offered in the previous lot, with the reverse die crack slightly more advanced. The central design elements are also a bit more softly struck, as is typical of this issue. Orange-brown and auburn hues encompass the glossy surfaces on both sides.

Ex: Jon Hanson (4/2008); Donald Groves Partrick. PCGS# 302

Lot 5697

**1787 Massachusetts Cent, MS65 Brown  
Ryder 2-F, Rare Transposed Arrows Variety  
Ex: Ford, the Finest Known**

**5697** 1787 Massachusetts Cent, Arrows in Right Talon, Ryder 2-F, W-6070, High R.6, MS65 Brown NGC. CAC. Ex: Ford. Ryder 2-F (also known as Ryder 2a-F) is arguably the single most famous and significant variety in the Massachusetts copper series, and is also one of the outright rarest. We consider this to be the finest known example. On the reverse, the eagle is seen clutching the arrows in its left (facing) claw, rather than its right, and CENT is struck on the shield in relief lettering, rather than incuse. These diagnostics set this die (seen here in its only use) apart from all other Massachusetts reverse dies, effectively creating a second type, commonly called the Transposed Arrows reverse. The obverse die was employed for four other die marriages.

Sylvester Crosby recorded just four examples of Ryder 2-F when writing *The Early Coins of America*, but Mike Packard knows of about 15 that exist today. Of these, the present coin is either the finest or is tied with one other for the finest known, and by a large margin. According to colonial connoisseur Bill Anton, this coin was one of two Gem examples of the variety that surfaced in Europe in 1975, passing through F.S. Werner to John J. Ford, Jr., and then to Donald Groves Partrick. The second coin located in Europe reportedly was purchased by Anton upon its discovery, but has not been seen publicly since. The current example then, if not the sole finest, is tied for finest known, and is assuredly the finest obtainable at this time. The dies are attributed to engraver Joseph Callender, as the S's on the reverse exhibit the more open loops that are considered to be diagnostic of his work. Callender is believed to have prepared all 1787-dated dies of both denominations for the Boston mint, as well as some of the 1788-dated cent dies, before the contract was given to Jacob Perkins who could produce them for a much smaller fee (three shillings per die, rather than 12 or 24 shillings per die). Reducing the cost of the dies was important to the Mint during this period, as production expenses were climbing, and the cost of having dies manufactured had been completely overlooked by the legislature when the prospect of "establishing a Mint for the coinage of Gold, Silver and Copper" was being discussed in 1786 and early 1787.

Callender produced five obverse and seven reverse cent dies for 1787-dated coinage, which were paired for 11 individual varieties (the three other known 1787 cent varieties are believed to be contemporary counterfeits made by Machin's Mills, which operated about the same time). Of these, Ryder 2-A and 3-G are relatively plentiful (these die pairs likely used for a significant portion of the 90,900 - 93,000 cents struck with that date), but Ryder 2-F, 2-G, 4-J, and 8-G are at the opposite end of the spectrum, being extremely rare, and in some cases, prohibitively so. In the case of the Ryder 2-F variety, the typical example (if indeed there is a "typical" representative of such a rare issue) grades only in the Fine or lower range. The present coin is simply remarkable in regard to both preservation and numismatic importance. Luminous auburn-brown and pale burgundy hues intermingle over satiny surfaces on each side, with traces of original red seen in the crevices. The obverse shows a touch of the usual softness on the right side of the Indian's tunic, but the design elements are otherwise remarkably sharp. On the reverse, the EN in CENT is weakly defined, but legible - this weakness was a product of the denomination being in relief, rather than incuse, which amplified the difficulty of fully impressing the central details and possibly had a deciding factor on the limited use of this Transposed Arrows die. The reverse rim is slightly beveled along the lower-left border, an effect of the planchet cutter that made the flan.

Whether one is an advanced specialist of Massachusetts copper or a collector of major colonial rarities, this remarkable Gem Ryder 2-F cent represents an incredibly important opportunity, and one that is unlikely to recur for many years.

Ex: *An unknown European source*; Scott Cordry and Freeman Craig, Jr. (2/1975); F.S. Werner (2/1975); John J. Ford, Jr. Collection (*Stack's*, 10/2004), lot 85; Jon Hanson; Donald Groves Partrick. PCGS# 299

**1787 Massachusetts Cent, AU Details**  
**Extremely Rare Ryder 2-F Die Pair**  
**Famous Transposed Arrows Variety**  
**Ex: Garrett**

**5698** 1787 Massachusetts Cent, Arrows in Right Talon, Ryder 2-F, W-6070, High R.6 — Environmental Damage — NGC Details. AU. Ex: Garrett. A second example of the rare Transposed Arrows variety, this one traces its pedigree to the famous Garrett Collection. The surfaces exhibit fine, even corrosion, with deep burgundy color. The strike is sharp, save for the extreme center of the reverse, which is not fully defined. Slight wear is noted on the highest points of the Indian's tunic. It has been suggested that the Transposed Arrows reverse was a pattern die, but no documentation is known to support this. This die, which is attributed to Joseph Callender, was used only for this variety. Ryder 2-F is not thought to be one of the 1787 contemporary counterfeits. Even though light environmental damage is present, this coin is among the most well-detailed examples of this important variety.

Ex: Parsons Collection; Edouard Frossard (4/1883); Garrett Collection (Bowers and Ruddy, 12/1979), lot 582; Donald Groves Partrick.

**1787 Massachusetts Cent, MS66 Brown**  
**Ryder 3-G, Tied for Finest Known**  
**Ex: Green, Hanson**

**5699** 1787 Massachusetts Cent, Arrows in Left Talon, Ryder 3-G, W-6090, R.3, MS66 Brown NGC. CAC. Ex: Hanson. The present example is tied with the Miller coin as the finest known of this variety. Ryder 3-G features the only use of this obverse, though the reverse die was employed for three other marriages. This is one of the more plentiful overall of the 14 known 1787 cent varieties (including three believed to be contemporary counterfeits), although Gem or finer examples remain the Massachusetts copper collector's delight. This luminous example shows glossy shades of auburn and burgundy patina, with a few tiny tinges of red observed in the crevices upon closer examination. Slight central weakness is noted, though CENT and most of the shield lines are clear. A beautiful, problem-free condition rarity.

Ex: "Colonel" E.H.R. Green; Jon Hanson (6/2002); Donald Groves Partrick. PCGS# 302

**1787 Massachusetts Cent, MS66 Brown  
Ryder 3-G, One of the Finest Known  
Ex: Miller**

**5700** 1787 Massachusetts Cent, Arrows in Left Talon, Ryder 3-G, W-6090, R.3, MS66 Brown NGC. Ex: H.C. Miller. This high Condition Census Ryder 3-G example was described in Thomas Elder's May 1920 sale of the Henry C. Miller collection as "One of the finest examples extant," an analysis that has not changed in the least. This example is slightly sharper in the centers than is the "Colonel" Green coin in the previous lot, with equally lustrous surfaces that reveal subtle tinges of red amid deeper auburn-brown toning. The planchet quality is superb, a characteristic of the Massachusetts coppers that is seldom shared by the copper coinage of Connecticut, Vermont, and New Jersey.

Ex: Henry C. Miller Collection (Thomas Elder, 5/1920), lot 1553; John L. Roper, II Collection (Stack's, 12/1983), lot 222; Donald Groves Partrick. PCGS# 302

**1787 Massachusetts Cent, MS65 Brown  
Ryder 3-G, Ex: Hanson  
Some Mint Red Remaining**

**5701** 1787 Massachusetts Cent, Arrows in Left Talon, Ryder 3-G, W-6090, R.3, MS65 Brown NGC. CAC. Ex: Hanson. The Partrick Collection contains four examples of the Ryder 3-G die pairing, all utterly remarkable condition rarities within this otherwise relatively plentiful variety. The present coin is slightly softer in the centers than the previous two examples, but the amount of original mint red in the protected regions of the fields is incredible for a copper piece from this period. Glossy burgundy toning graces the remainder of each side, and the eye appeal is exceptional. Ryder 3-G is perhaps the most plentiful 1787 cent variety in Mint State, though such pieces are still elusive at any grade level. Furthermore, any Massachusetts copper that retains noticeable mint red is a major rarity.

Ex: Jon Hanson (2/1999); Donald Groves Partrick. PCGS# 302

**1787 Massachusetts Cent, MS65 Brown  
Sharp Ryder 3-G Example, Ex: Oechsner**

**5702** 1787 Massachusetts Cent, Arrows in Left Talon, Ryder 3-G, W-6090, R.3, MS65 Brown NGC. Ex: Oechsner. Another Gem Ryder 3-G example, this one toned somewhat deeper than the previous pieces, but is arguably the most sharply struck of the group. Just a touch of softness is noted on the Indian's right (facing) leg, and the shield lines are well-delineated. Glossy, still-lustrous surfaces yield to deep olive and burgundy-brown toning, while a lack of abrasions or environmental damage confirms the lofty grade. The engraving of the Massachusetts Mint's coinage dies was largely superior to that of Connecticut, Vermont, and New Jersey, with much of the typically seen central weakness only a result of inadequate die pressure. This piece was undoubtedly struck with care.

Ex: Charles Foster; Herbert M. Oechsner Collection (*Stack's*, 9/1988), lot 1013; Jon Hanson; Donald Groves Partrick. PCGS# 302

**1787 Massachusetts Cent, MS65+ Brown  
Ryder 4-C, Ex: Norweb  
The Finest Known**

**5703** 1787 Massachusetts Cent, Arrows in Left Talon, Ryder 4-C, W-6100, Low R.4, MS65+ Brown NGC. CAC. Ex: Norweb. The Greco plate coin is believed to be the finest known of the Ryder 4-C variety and one of only two examples known in Mint State (the other being the Eric P. Newman MS64 coin). The dies are in a late state with die polishing seen in some of the recesses, but the devices are nonetheless razor-sharp in the centers. Original luster illuminates blended shades of olive, burgundy, and rich mahogany over glossy surfaces. This is one of just two uses for this reverse, though the undated obverse die was employed for three other marriages including the 17-I die pairing of the 1788 issue. Ryder 4-C is seldom seen in any grade, and is notably challenging finer than the XF level. This high-end Gem is a truly exceptional condition rarity.

Ex: Norweb Collection (*Bowers and Merena*, 3/1988), lot 2653; Jon Hanson; Donald Groves Partrick. PCGS# 302

**1787 Massachusetts Cent, MS64 Brown  
Ryder 4-D, Ex: Eliasberg  
The Finest Known**

**5704** 1787 Massachusetts Cent, Arrows in Left Talon, Ryder 4-D, W-6110, High R.3, MS64 Brown NGC. Ex: Eliasberg. We believe this to be the finest known of the variety. It exhibits deep olive, chocolate-brown, auburn, and burgundy hues. This piece is in a later die state than the other Ryder 4-D coin in the Partrick Collection, with evidence of mild die rust on the obverse and several light die cracks along the lower reverse. Ryder 4-D is moderately plentiful in the context of 1787 Massachusetts cents, but any example achieving a grade higher than XF is decidedly rare.

Ex: Louis E. Eliasberg, Sr. Collection (*Bowers and Merena*, 5/1996), lot 88; Donald Groves Partrick. PCGS# 302

**1787 Massachusetts Cent, XF40  
Attractive Ryder 4-D Representative  
Ex: Norweb**

**5705** 1787 Massachusetts Cent, Arrows in Left Talon, Ryder 4-D, W-6110, High R.3, XF40 NGC. CAC. Ex: Norweb. Glossy auburn-brown hues blanket much of each side, with brighter coppery-red accents seen in the protected areas. Light wear is evident over the high points, though a sharp strike ensures remarkably clear central details, including CENT, complete. The Ryder 4-D variety is difficult to locate above the XF level, and this example is remarkably appealing for the grade. Remnants of a painted die are observed in the left obverse field.

Ex: Richard Picker (1958); Norweb Collection (*Bowers and Merena*, 3/1988), lot 2654; Jon Hanson; Donald Groves Partrick. PCGS# 302

**1787 Massachusetts Cent, VF25  
Rare Ryder 4-J Die Pair  
Condition Census, Ex: Norweb**

**5706** 1787 Massachusetts Cent, Arrows in Left Talon, Ryder 4-J, W-6120, R.7, VF25 NGC. Ex: Norweb. The Greco plate coin for the reverse die. This extremely rare die pairing was unknown to Ryder, and was discovered by Q. David Bowers in mid-1958. This piece is not the discovery coin, but was actually found by Bowers following publication of the first piece. Mike Packard knows of only five examples in all conditions, with the present VF representative being Condition Census for the variety. The coin is likely the second-finest known, with the finest grading no finer than XF, per Bowers. Both sides display smooth chocolate-brown color, with an area of planchet irregularity on the rim at 9 o'clock. The devices are evenly worn, though CENT remains nearly complete.

Ex: *Empire Coin Company* (9/1958); Norweb Collection (*Bowers and Merena*, 3/1988), lot 2655; Jon Hanson; Donald Groves Partrick. PCGS# 302

**1787 Massachusetts Cent, MS62 Brown  
Ryder 6-G, 'Stout Indian'  
Finest Known, Ex: Terranova**

**1787 Massachusetts Cent, MS63 Brown  
Ryder 7-H, Rare Contemporary Counterfeit  
Ex: Mills, Tied for Finest Known**

**1787 Massachusetts Cent, MS63 Brown  
Ryder 7-H, Ex: Hanson, Condition Census**

**5707** 1787 Massachusetts Cent, Arrows in Left Talon, Ryder 6-G, W-6140, Low R.4, MS62 Brown NGC. Ex: Terranova. This is the only use of Ryder's obverse 6, which shows the Indian with a slightly heavier figure than is seen on other obverse dies attributed to Joseph Callender. The variety is rare above the XF grade level, and the present example is, in our opinion, the finest known. Both sides exhibit glossy orange-brown coloration, with a few deeper auburn accents over the relief elements. Some minor weakness is noted on the extreme centers, but CENT is clear.

Ex: Anthony Terranova (3/2001); Donald Groves Partrick. PCGS# 302

**5708** 1787 Massachusetts Cent, Arrows in Left Talon, Ryder 7-H, W-6150, High R.6, MS63 Brown NGC. CAC. Ex: Mills. An extremely rare contemporary counterfeit, attributed to Machin's Mills. The Indian is somewhat stout, similar to Ryder's obverse 6. Heavy die fatigue is evident on both sides, with the central devices also somewhat soft. Glossy orange-brown toning blankets both sides. Mike Packard knows of only about a dozen examples overall, some of which are remarkably in Mint State. We believe this piece is tied for finest known with the other numerically equal Ryder 7-H example in the amazing Partrick Collection.

Ex: John G. Mills Collection (Chapman Brothers, 4/1904), lot 198; George H. Earle, Jr. Collection (Henry Chapman, 6/1912), lot 2006; Jon Hanson (6/2002); Donald Groves Partrick. PCGS# 302

**5709** 1787 Massachusetts Cent, Arrows in Left Talon, Ryder 7-H, W-6150, High R.6, MS63 Brown NGC. CAC. Ex: Hanson. A second example of this rare contemporary counterfeit, attributed to Machin's Mills. The dies are poorly made in comparison to the state issues, with moderate die fatigue observed in the border recesses. Ryder 7-H is believed to have been made by the same maker that produced the Ryder 5-I contemporary counterfeits, per Walter Breen, a different maker than the unknown creator of the Ryder 1-B pieces. This glossy tan-brown example shows hints of reddish color. The piece is slightly sharper in the centers than is the previous example, with which it is tied numerically for the finest known of the variety. The beveling on the lower-right obverse rim is mint-made, a product of the planchet cutter that produced the flan.

Ex: Anthony Terranova; Stack's; Jon Hanson (4/1988); Donald Groves Partrick. PCGS# 302

**5710** 1787 Massachusetts Cent, Arrows in Left Talon, Ryder 8-G, W-6160, R.7 — Counterpunched — NGC Details. VF. Ex: Norweb. This extremely rare die pairing is about on par with the Transposed Arrows variety in terms of overall rarity. The cataloger of the Norweb Collection knew of only six or seven examples, though a few more have turned up since that writing, with Mike Packard aware of 13 pieces today; the finest of these grades just XF. The present coin is well detailed, with just light wear over the Indian and the reverse shield. Deep olive-brown color masks fine granularity in the recesses. The central obverse and upper reverse are counterstamped with a seven-lobed, rosette-like punch. This stamp is unlisted by Brunk and Rulau, nor was it present in the Byrnie sale, according to the Norweb catalog. The punch is possibly that of an iron maker, though the exact identification is not known.

Ex: Phil Greco (11/1960); Norweb Collection (Bowers and Merena, 3/1988), lot 2657; Jon Hanson; Donald Groves Partrick.

**5711** 1788 Massachusetts Cent, Period, Ryder 1-D, W-6190, R.3, MS66 Brown NGC. CAC. Ex: Norweb. The dies are attributed to Jacob Perkins. Mike Packard knows of several Mint State examples of this moderately available variety, two of which are in the Partrick Collection. If not the finest, this is certainly among the best examples known. Subtle luster shows beneath shades of auburn and medium brown toning. The central devices are remarkably sharp, particularly on the eagle's feathers and the vertical and horizontal stripes in the shield. The availability of Ryder 1-D in relation to many of the other die varieties in the Massachusetts copper series makes it ideal for inclusion in a high-end colonial type collection.

Ex: Norweb Collection (Bowers and Merena, 3/1988), lot 2658; Jon Hanson; Donald Groves Partrick. PCGS# 311

**5712** 1788 Massachusetts Cent, Period, Ryder 1-D, W-6190, R.3, MS63 Brown NGC. Ex: R.C. Davis. Ryder 1-D features the only use of both dies. This example is among the finer-known pieces, exhibiting sharp central definition and glossy surfaces that show shades of medium olive-brown and auburn. A little more of the usual planchet roughness appears in the border recesses than is seen on the Norweb coin offered in the previous lot, a characteristic to which this die variety seems unusually prone.

Ex: R. Coulton Davis Collection; Public Auction Sale (Lester Merkin, 10/1972), lot 493; Donald Groves Partrick. PCGS# 311

### 1787 Massachusetts Cent, VF Details Rare Ryder 8-G Die Pair, Ex: Norweb Counterpunched Both Sides

### 1788 Massachusetts Cent, MS66 Brown Ryder 1-D, Ex: Norweb One of the Finest Known

### 1788 Massachusetts Cent, MS63 Brown Sharp Ryder 1-D Example, Ex: R.C. Davis

**1788 Massachusetts Cent, MS64 Brown  
Ryder 2-B, Ex: Hanson  
One of the Finest Known**

**5713 1788 Massachusetts Cent, Period, Ryder 2-B, W-6200, R.4, MS64 Brown NGC.** Ex: Hanson. Ryder 2-B is a scarce variety and is rarely seen above the XF grade level. This Choice Mint State example is undeniably one of the top examples known, and quite possibly the finest. The shield and eagle's feathers are sharply impressed, though the Indian's right (facing) arm and the lower-left obverse border are a trifle soft. Glossy surfaces yield to medium chocolate-brown coloration. A small die crack is noted from the reverse rim near the second S in MASSACHUSETTS. The dies are attributed to Jacob Perkins, as the closed S punch used for the reverse is considered to be diagnostic of this later engraver's work. Ryder 2-B features the only use of both dies.  
Ex: Jon Hanson (6/2002); Donald Groves Partrick. PCGS# 311

**1788 Massachusetts Cent, AU58  
Ryder 3-A, Ex: Ryder, Ford  
High Condition Census**

**5714 1788 Massachusetts Cent, Period, Ryder 3-A, W-6210, Low R.4, AU58 NGC. CAC.** Ex: Ryder. Ryder 3-A is a scarce variety, and is decidedly rare above the XF grade level. We are not aware of any true Mint State pieces, with AU coins being considered Condition Census for the die pair. This example is well struck in the central regions, with smooth surfaces that exhibit ribbons of olive-brown, auburn, and burgundy color. A high-end example of the variety.  
Ex: Elmer S. Sears Collection (B. Max Mehl, 12/1918), lot 225; Hillyer Ryder; F.C.C. Boyd; John J. Ford, Jr. Collection (Stack's, 10/2004), lot 120; Jon Hanson; Donald Groves Partrick. PCGS# 311

**1788 Massachusetts Cent, Ryder 3-A, AU53  
Condition Census Representative**

**5715 1788 Massachusetts Cent, Period, Ryder 3-A, W-6210, Low R.4, AU53 NGC. CAC.** A second Condition Census example of this scarce die variety. This example shows a touch more wear over the high points of the design, with a little more even color in shades of olive and orange-brown. The strike is well executed and the surfaces are smooth and devoid of environmental impairments. This is the only use of this reverse die, though the obverse was also paired with Ryder's reverse E, an even scarcer variety than Ryder 3-A.  
Ex: Anthony Terranova; Stack's; Jon Hanson (4/1988); Donald Groves Partrick. PCGS# 311

**5716 1788 Massachusetts Cent, Period, Ryder 3-E, W-6220, R.4, MS64 Brown NGC.** Ex: Ryder. This high Condition Census example is believed to be the finest known. The strike is sharp throughout the centers, and the glossy surfaces exhibit rich hues of burgundy, auburn, and olive-brown. Ryder 3-E is seldom available in any grade, but is particularly rare above the VF level. Only about a dozen XF or AU pieces are currently known, and this example is possibly unique in Mint State.

Ex: Hillyer Ryder; F.C.C. Boyd; John J. Ford, Jr. Collection (Stack's, 10/2004), lot 122; Jon Hanson; Donald Groves Partrick. PCGS# 311

**5717 1788 Massachusetts, No Period, Ryder 6-N, W-6240, Low R.3, MS64 Brown NGC.** Ex: Oechsner. Ryder 6-N is one of only two 1788 cent varieties known without a period after MASSACHUSETTS, the other being Ryder 13-N. Both varieties share a common reverse, attributed to Joseph Callender. Ryder 6-N is difficult to obtain above XF, but a few Mint State pieces are known for the ambitious specialist. This glossy Choice example is believed to be the finest known, continuing an impressive trend of "finest knowns" in the Partrick Collection, which is by far the preeminent collection of Massachusetts coppers formed in recent times in regard to the number of varieties represented and the sheer quality of the coins. Both sides show luminous medium brown toning and sharply impressed central details, with significant luster in the recesses.

Ex: Charles Jay Collection (Stack's, 10/1967), lot 34; Herbert M. Oechsner Collection (Stack's, 9/1988), lot 1015; Marvin Browder; Ed Milas; Stack's; Jon Hanson (8/1998); Donald Groves Partrick. PCGS# 45419

**5718 1788 Massachusetts, No Period, Ryder 6-N, W-6240, Low R.3, MS63 Brown NGC.** Ex: Norweb. Another Condition Census example of this popular No Period variety. This piece is not quite as sharp in the centers as is the Oechsner coin, but the luminous, glossy surfaces and the rich auburn-brown coloration nonetheless deliver exceptional eye appeal. A couple of small areas of minor verdigris are noted above the eagle's wings. This is the only use of the obverse die, and one of two uses for the reverse.

Ex: Richard Picker (1959); Norweb Collection (Bowers and Merena, 3/1988), lot 2664; Jon Hanson; Donald Groves Partrick. PCGS# 45419

Ryder 6-N, Condition Census, Ex: Norweb**

### 1788 Massachusetts Cent, MS64 Brown Ryder 7-M, Finest Known, Ex: Eliasberg

**5719** 1788 Massachusetts Cent, Period, Ryder 7-M, W-6250, High R.4, MS64 Brown NGC. CAC. Ex: Eliasberg. Ryder 7-M is a scarce variety, rarely encountered above the XF grade level. This Choice Mint State example is high Condition Census for the variety, and we believe it is the finest known. Both sides exhibit a blend of medium olive and orange-brown toning, with sharp central devices and smooth, satiny surfaces. These dies are attributed to Joseph Callender; Callender prepared 10 obverse and seven reverse cent dies for 1788 coinage, which produced an estimated 109,500 coins. The other six obverse and seven reverse dies are attributed to Jacob Perkins, bringing the total of individual die combinations for the date to 25. An extremely rare 26th variety, Ryder 14-J, is believed to be a contemporary counterfeit.

Ex: Louis E. Eliasberg, Sr. Collection (*Bowers and Merena*, 5/1996), lot 89; Jon Hanson; Donald Groves Partrick. PCGS# 311

### 1788 Massachusetts Cent, MS63 Brown Ryder 7-M, Ex: H.C. Miller, Ford Condition Census

**5720** 1788 Massachusetts Cent, Period, Ryder 7-M, W-6250, High R.4, MS63 Brown NGC. Ex: H.C. Miller. One of the finest known of the variety, this Condition Census piece exhibits glossy olive-brown toning over each side, with subtle underlying mint luster. The extreme centers show a little of the usual weakness for the issue, though CENT is sharp and the Indian's tunic is mostly delineated. A visually and technically superb representative.

Ex: Henry C. Miller Collection (*Thomas Elder*, 5/1920), lot 1560; Hillyer Ryder; F.C.C. Boyd; John J. Ford, Jr. Collection (*Stack's*, 10/2004), lot 131; Jon Hanson; Donald Groves Partrick. PCGS# 311

### 1788 Massachusetts Cent, MS62 Brown Ryder 7-M, Condition Census, Ex: Ryder, Ford

**5721** 1788 Massachusetts Cent, Period, Ryder 7-M, W-6250, High R.4, MS62 Brown NGC. Ex: Ryder. This piece was misattributed as Ryder 9-M in the Ford catalog, although even as a Ryder 7-M example it remains in the Condition Census for its variety. The surfaces show glossy auburn coloration, with well-struck design elements. The obverse exhibits some diagonal marks (as made), likely from small remnants of debris being pressed into the flan during the rolling process.

Ex: Hillyer Ryder; F.C.C. Boyd; John J. Ford, Jr. Collection (*Stack's*, 10/2004), lot 135; Jon Hanson; Donald Groves Partrick. PCGS# 311

**1788 Massachusetts Cent, MS66 Brown**  
**Ryder 8-C, Ex: Hanson**  
**The Finest Known**

**5722** 1788 Massachusetts Cent, Period, Ryder 8-C, W-6260, R.3, MS66 Brown NGC. Ex: Hanson. A spectacular Premium Gem Ryder 8-C example, believed to be the finest known. Lustrous, glossy surfaces exhibit soft olive-brown toning, with subtle reddish hues throughout. The design elements are boldly impressed, with the central shield being of particular sharpness. These dies are attributed to Jacob Perkins, as evidenced by the closed S punch used for the reverse. Perkins was only 22-years-old when the Commonwealth contracted with him for coinage dies, in exchange for payment equal to one percent of all the coins struck using his dies. Over the life of the Mint, it is estimated that Perkins received just three pounds, 18 shillings in payment for his dies, this compared to an estimated 48 pounds, 12 shillings paid to Joseph Callender.

Ex: Jon Hanson (6/2002); Donald Groves Partrick. PCGS# 311

**1788 Massachusetts Cent, AU58**  
**Condition Census Ryder 8-C Example,**  
**Ex: Norweb**

**5723** 1788 Massachusetts Cent, Period, Ryder 8-C, W-6260, R.3, AU58 NGC. CAC. Ex: Norweb. An attractive Condition Census Ryder 8-C example, a variety that is rare above the XF grade level. This nearly Uncirculated coin displays a blend of burgundy and auburn-brown colors, with just a brush of friction over the sharply struck devices. The surfaces are glossy and smooth, with just one small edge bump seen at 10 o'clock on the reverse. This is the only use of this obverse die, and one of just two uses for this reverse. Massachusetts coppers were generally well-accepted by the public and circulated extensively, partly because they were coined in the federal standard of 100 cents to a Spanish milled dollar (the chief monetary unit of the states at the time) - slightly heavier than the Connecticut coppers, which counted 108 coins to a Spanish milled dollar.

Ex: Richard Picker (1959); Norweb Collection (Bowers and Merena, 3/1988), lot 2666; Jon Hanson; Donald Groves Partrick. PCGS# 311

**1788 Massachusetts Cent, MS65 Brown  
Ryder 10-L, Ex: Oechsner  
Finest Known**

**5724** 1788 Massachusetts Cent, Period, Ryder 10-L, W-6280, High R.2, MS65 Brown NGC. CAC. Ex: Oechsner. Ryder 10-L is by far the most plentiful 1788 Massachusetts cent variety, with several Mint State examples also known to Mike Packard. The present coin is, in our opinion, the finest known. Luminous, glossy surfaces yield rich orange-brown toning, with no discernable marks or abrasions. The extreme center shield and the lower-right portion of the Indian's tunic are slightly soft, though the strike is otherwise sharp. These dies are attributed to Joseph Callender. Massachusetts cents and half cents are the most well-made of all the state coppers issued from 1785 to 1788, and are avidly collected by die variety. However, for the colonial type collector, Ryder 10-L is an ideal candidate for Massachusetts cent type representation.

Ex: Richard Picker (5/1964); Herbert M. Oechsner Collection (Stack's, 9/1988), lot 1016; Marvin Browder; Ed Milas; Stack's; Jon Hanson (8/1998); Donald Groves Partrick. PCGS# 311

**1788 Massachusetts Cent, AU58  
Ryder 10-L, Ex: Hanson**

**5725** 1788 Massachusetts Cent, Period, Ryder 10-L, W-6280, High R.2, AU58 NGC. CAC. Ex: Hanson. Ryder 10-L features the only use of both dies. This near-Mint example is outside of the Condition Census, but it is still an attractive example of the variety. The central design elements are sharply brought up and the surfaces display smooth medium brown coloration. Only a brush of friction precludes a Mint State grade for this piece.

Ex: Anthony Terranova; Stack's; Jon Hanson (4/1988); Donald Groves Partrick. PCGS# 311

**1788 Massachusetts Cent, MS62 Brown  
Ryder 11-C, The Finest Known**

**5726** 1788 Massachusetts Cent, Period, Ryder 11-C, W-6290, R.5, MS62 Brown NGC. Ex: Elder. The Indian appears slightly lankier than on other obverses attributed to Jacob Perkins. This variety is rare in all grades, and is particularly difficult to find finer than VF. This high Condition Census coin, in our opinion the finest known, is unique in Mint State, and is an important opportunity for the advanced specialist. Both sides display smooth auburn-brown color, and pleasing central definition. Some minor rim imperfections are as struck.

Ex: Thomas Elder's 35th Sale (11/1909), lot 64; John J. Ford, Jr. Collection (Stack's, 10/2004), lot 141; Jon Hanson; Donald Groves Partrick. PCGS# 311

**1788 Massachusetts Cent, MS63 Brown  
Ryder 11-E, Ex: Ryder, Ford**

**5727** 1788 Massachusetts Cent, Period, Ryder 11-E, W-6300, Low R.4, MS63 Brown NGC. Ex: Ryder. Ryder 11-E is decidedly rare above the XF grade level, and this piece is believed to be the finest known. Glossy olive-brown color blankets each side, and the centers are sharply struck, particularly on CENT and the eagle's neck feathers. A few small areas of minor corrosion are observed on the reverse, but these are hardly obtrusive.

Ex: Henry Chapman (2/1909); Hillyer Ryder; F.C.C. Boyd; John J. Ford, Jr. Collection (Stack's, 10/2004), lot 142; Jon Hanson; Donald Groves Partrick. PCGS# 311

**1788 Massachusetts Cent, MS65+ Brown  
Ryder 11-F, Finest Known**

**5729** 1788 Massachusetts Cent, Period, Ryder 11-F, W-6310, Low R.5, MS65+ Brown NGC. Ryder 11-F is rare in all grades and is particularly difficult to locate finer than VF, though a few Mint State pieces are known. We believe this high-end Gem is the finest known, surpassing the Eric P. Newman coin by more than three grade points. Considerable luster remains beneath deep olive-brown toning, and the centers are sharply impressed. Other Mint State examples include the ANS and Taylor coins. This is the only use of this reverse die, and one of three uses for the obverse.

Ex: Anthony Terranova; Stack's; Jon Hanson (4/1988); Donald Groves Partrick. PCGS# 311

**1788 Massachusetts Cent, MS62 Brown  
Ryder 11-E, Condition Census, Ex: Norweb**

**5728** 1788 Massachusetts Cent, Period, Ryder 11-E, W-6300, Low R.4, MS62 Brown NGC. Ex: Norweb. This Norweb coin is believed to be the second-finest known, and one of only two known in Mint State. The central design elements are sharply brought up, and the glossy surfaces display light chocolate-brown coloration with a few deeper burgundy accents. Some minor planchet roughness (as made) is seen on the lower obverse border. This is one of three uses for this obverse die, and one of two uses for this reverse.

Ex: Richard Picker (1958); Norweb Collection (3/1988), lot 2670; Jon Hanson; Donald Groves Partrick. PCGS# 311

**1788 Massachusetts Cent, AU Details  
Ryder 12-I, Ex: Ryder, Ford**

**5730** 1788 Massachusetts Cent, Period, Ryder 12-I, W-6330, Low R.4 — Burnished — NGC Details. AU. Ex: Ryder. Lightly burnished, this coin shows glossy burgundy-brown coloration. The central design elements are not fully brought up, but CENT is complete and only a brush of wear is present over the high points. This piece is among the finer known examples of the variety, as nearly all known pieces grade no finer than VF, and none are currently known in Mint State.

Ex: John G. Mills Collection (Chapman Brothers, 4/1904), lot 212; Hillyer Ryder; F.C.C. Boyd; John J. Ford, Jr. Collection (Stack's, 10/2004), lot 144; Jon Hanson; Donald Groves Partrick.

**1788 Massachusetts Cent, MS61 Brown  
Ryder 12-K, Ex: Earle, Ford  
The Finest Known**

**1788 Massachusetts Cent, MS64 Brown  
Ryder 12-M, Ex: Ryder, Ford  
High Condition Census**

**1788 Massachusetts Cent, MS63 Brown  
Ryder 13-N, No Period, Ex: Hanson  
High Condition Census**

**5731 1788 Massachusetts Cent, Period, Ryder 12-K, W-6340, Low R.6, MS61 Brown NGC.** Ex: Earle. Ryder 12-K is a rare variety, and is particularly difficult to locate above the Fine grade level. This piece is believed to be not only the finest known, but also the sole Mint State example. Both sides exhibit a blend of medium olive and auburn-brown toning, with satiny underlying surfaces. A touch of striking weakness is noted in the centers, but CENT is bold and the Indian's tunic is well delineated.

Ex: George H. Earle, Jr. Collection (Henry Chapman, 6/1912), lot 2019; Hillyer Ryder; F.C.C. Boyd; John J. Ford, Jr. Collection (Stack's, 10/2004), lot 145; Jon Hanson; Donald Groves Partrick. PCGS# 311

**5732 1788 Massachusetts Cent, Period, Ryder 12-M, W-6350, Low R.4, MS64 Brown NGC.** Ex: Ryder. Ryder 12-M is scarce in all grades and decidedly rare above the XF grade level. This Choice Mint State example is one of the finest known, with glossy auburn-brown toning that yields remnants of reddish luster in the protected areas. The centers are a bit soft, not unusual for the issue, though CENT remains clear. A planchet crack (as made) extends on the obverse from the rim above the E in WEALTH to the butt of the arrow, and on the reverse from the rim near the final S to the tip of the lowest arrow. This obverse is the same die as Ryder's obverse 6 of the 1787 coinage, seen here in one of its five additional uses in 1788. This is one of six uses for the reverse die.

Ex: Judson P. Brenner Collection (U.S. Coin Company, 6/1916), lot 204; Hillyer Ryder; F.C.C. Boyd; John J. Ford, Jr. Collection (Stack's, 10/2004), lot 148; Jon Hanson; Donald Groves Partrick. PCGS# 311

**5733 1788 Massachusetts, No Period, Ryder 13-N, W-6380, High R.4, MS63 Brown NGC.** Ex: Hanson. Ryder 13-N is the second of only two No Period varieties in 1788 cent issue. Examples are scarce in all grades, but are genuinely rare finer than VF. This high Condition Census coin shows smooth auburn-brown surfaces. The centers exhibit slight weakness, as usual, though CENT is bold and most of the Indian's tunic is well delineated. A pleasing example of this elusive variety.

Ex: Public Auction Sale (Spink, 1975), lot 731; Jon Hanson (4/1999); Donald Groves Partrick. PCGS# 45419

**1788 Massachusetts Cent, MS62 Brown  
Ryder 14-J, Finest Known, Ex: Hanson  
Extremely Rare and Popular  
Contemporary Counterfeit**

**5734 1788 Massachusetts Cent, Period, Ryder 14-J, W-6395, High R.7, MS62 Brown NGC.** Ex: Hanson. An extremely rare contemporary counterfeit, attributed to Machin's Mills. Machin's Mills was a private coining establishment located on the shore of Orange Pond near Newburgh, New York, that operated about the same time as the Massachusetts Mint. The facility was founded by an agreement between six individuals who had interest in the prospect of profiting from a coinage enterprise, namely James F. and Samuel Atlee, David Brooks, James Grier, James Giles, and Thomas Machin (owner of the property), but it was largely managed by James F. Atlee and Machin. Machin's Mills is believed to have operated from early 1787 through late 1789, after which the project was apparently abandoned, likely in light of the adoption of the federal Constitution.

The business operated in secrecy, producing unofficial copies of many types of then-circulating copper coinage, including British halfpence and numerous state issues. Of these, the Massachusetts contemporary counterfeits are among the rarest and most intriguing.

Ryder 14-J is the only Machin's Mills Massachusetts counterfeit known with the 1788 date, and it is doubtful if more than a small quantity were ever actually struck; Mike Packard knows of only eight surviving pieces. We believe the present coin is the finest known — Bill Anton reported another Uncirculated piece that passed from Richard Picker to Robert Vlack, though it is unknown how that coin grades in comparison to the present piece, or whether they are in fact the same coin. This example is not fully struck, with mild weakness in the centers and around the reverse borders. Most of the copper coins attributed to Machin's Mills were struck with rather poorly engraved dies and on inferior planchets, as it was thought by the coiners that they would be more readily accepted into circulation if they were made with the appearance of having already been used. The surfaces of this piece are smooth with medium chocolate-brown color; a small planchet flaw is visible over the A in WEALTH. The eye appeal is excellent for the issue.

The contemporary counterfeits attributed to Machin's Mills are every bit as intriguing and collectible as are the genuine state issues, and are in many cases far more rare. Ryder 14-J is a prime example, being one of the rarest varieties of all the Massachusetts copper die combinations. Of 50 known die marriages, Ryder 14-J is tied for eighth rarest overall.

Ex: Jon Hanson (7/2007); Donald Groves Partrick. PCGS# 311

## 1785 Immune Columbia Vermont, VF35 RR-1, Exceptional Quality

**5735** 1785 Vermont Copper, Immune Columbia VF35 NGC. CAC. RR-1, Bressett 26-Z, W-2250, low R.6. Ex: Craige. Few coins stir the passions of Vermont collectors more than the RR-1 Immune Columbia copper. It stands alone as a type coin in the Vermont series. The fact that it was an official Machin's Mills issue, struck during the time Thomas Machin was authorized to produce Vermont copper, makes it an essential variety to own. Combined with the significance of the Immune Columbia reverse (any Immune Columbia colonial coinage has its own enthusiastic following), the RR-1 muling takes on transcendent appeal.

The Immune reverse has puzzled specialists for generations. While current feeling runs in favor of its purely American origin, the exact reason for its existence is unclear. How the design ended up on the back of a crudely made Vermont obverse is a conundrum.

Seemingly, the die was pressed into service hurriedly and for only a short duration. The obverse legend, in particular, is poorly executed, as are some other contemporary Machin's Mills obverses: for example, the RR-30 Vermont and the Vlack 15-85NY copper. Were discarded dies used willy-nilly as operations wound down at the Newburgh Mint? When the price of copper collapsed in 1788, minting coppers was no longer viable.

Numismatists have long felt the Vermont Immune Columbia pieces were backdated to 1785 and actually produced in 1787 or 1788, placing them in the strange category of "illogical mulings" along with other disparate, low-mintage issues that typified the final work of the coiners.

The issue was for the most part poorly produced on too-small, crude planchets. The placement of the obverse legend is almost comical in its weird spacing — positioned too close to the portrait on the left, and too distant and low on the right.

The present coin displays outstanding quality for an Immune Columbia Vermont. Although the reverse is too large for the small flan, a partial date is visible. Many examples lack the date entirely. The surfaces are glossy and appealing with attractive tan-brown color. Minor porosity appears at the centers where the strike is characteristically weak for the issue. It exceeds the Ford specimens as well as those from the Garrett, Norweb, and Taylor collections, and it is easily the finest-certified representative known at either service (11/14).

One can hardly find a more-desired colonial copper in any of the state series. This coin may be the finest Immune Columbia Vermont extant and, as such, it is sure to inspire tremendous interest when it crosses the block.

Ex: Ted L. Craige; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 536

**5736** 1785 Vermont Copper, Immune Columbia — Obverse Scratched — NGC Details. Fine. RR-1, Bressett 26-Z, W-2250, Low R.6. Ex: Norweb. One of the famous Vermont varieties and a particularly important Machin's Mills muling, with perhaps 30 pieces known — nearly all in low grades. This example offers a notable pedigree and attractive, smooth-brown surfaces disturbed by only a few small, mint-made flan fissures and a long, old scratch across the portrait. Numerous other light scratches are visible with a glass on the reverse. Current thought suggests this piece and others like it were struck in 1787 or 1788 as a legitimate Vermont issue from the Thomas Machin partnership. Ex: *B. Max Mehl (1/1937); The Norweb Collection II (3/1988); Ken Goldman (8/1988); Donald Groves Partrick.*

**5737** 1785 Vermont Copper, VERMONTS XF45 NGC. CAC. RR-2, Bressett 1-A, W-2005, R.3. Ex: Taylor. The sun's third ray points to the right of the period after RES, and the state is spelled VERMONTS. Struck on a thick, heavy planchet (132.1 grains) from a minimally cracked obverse die — just a hint of a crack below the 5 — early in the die state progression. A noticeable rim flaw beneath the dot between DECIMA and STELLA is the result of a beveled edge when the planchet was cut, and then struck with a high collar. Attractive, microtextured surfaces display iridescent hues over mahogany-brown coloration. Reddish-luster remains at the devices. A bold strike that shows little wear. Ex: *Frederick B. Taylor Collection (Bowers and Merena, 3/1987); Donald Groves Partrick.* PCGS# 539

**5738** 1785 Vermont Copper, VERMONTS VF35 NGC. RR-2, Bressett 1-A, W-2005, R.3. Ex: Craigie. Surfaces are pleasing medium, chocolate-brown color with dark amber accents appearing among the central motifs. A few planchet voids of Mint origin — primarily noticeable on the obverse — are the result of poor copper quality, with the often-seen natural flaws at the border near LIC and LA. The strike is bold and well centered on both sides of this early Vermont issue. Glossy surfaces appear smooth and attractive despite microscopic porosity. Ex: *Ted L. Craigie; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick.* PCGS# 539

**5739** 1785 Vermont Copper, VERMONTS VF35 NGC. RR-3, Bressett-2-B, W-2010, R.5. Ex: Craigie. Missing from several of the major Vermont collections including Norweb, Picker, and Roper, the RR-3 variety is the scarcest of the 1785 Landscape coppers. The sun's third ray points to the right of the period after RES, and the tail of the Q in QUARTA points between a star and ray. A comma-like mark after the A of DECIMA is diagnostic on most examples. Both Tony Carlotto and the Whitman reference note the prevalence of rough, odd planchets. This example is slightly out-of-round at the top and granular. Sharp details remain on the medium-brown surfaces with tan devices. Ex: *Ted L. Craigie; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick.* PCGS# 539

**1785 Immune Columbia Vermont, Fine Details  
RR-1 Machin's Mills Muling

**1785 RR-4 Landscape Copper, XF40**  
**Glossy, Attractive Brown Surfaces**  
**Scarce VERMONTIS Type**

**1785 Vermont Copper, VF30**  
**Rare RR-5, W-2270, Ex: Norweb**

**1785 Vermont Copper**  
**VERMONTIS, Cast, RR-5, W-2275**

**5740** 1785 Vermont Copper, VERMONTIS XF40 NGC. RR-4, Bressett 3-C, W-2015, High R.4. Ex: Craige. Both surface quality and color are issues for the RR-4 variety, with many darkly toned coins included in the scarce number of survivors. This medium-brown coin is glossy and attractive. The diagnostic, central die bulge is easily seen, with a pronounced convex rounding at the center of the obverse and a concave surface on the reverse. As a result, some of the rays and stars are lightly struck on the right side of the reverse. The legends are bold, though, and overall the coin shows few imperfections. A tiny planchet clip is noted above QUARTA.

Ex: Ted L. Craige; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 542

**5741** 1785 Vermont Copper, VERMONTIS VF30 NGC. RR-5, W-2270, R.7. Ex: Norweb/Donald Groves Partrick Collection. Weight 122.6 grains, diameter 28.2 mm. The obverse portrays the sun rising behind a ridge of wooded mountains, with the sun at the left and a plow and date 1785 below. VERMONTIS RES PUBLICA around. The reverse is clearly modeled after the Nova Constellatio design, but with a sun instead of the all-seeing eye at the center, with 13 single pointed rays of varying lengths and 13 stars, all surrounded by the legend STELLA QUARTA DECIMA.

Ryder 5 is a very rare issue, classed as a contemporary counterfeit by Ken Bressett and Tony Carlotto, seen in both struck (as here) and cast formats. This attractive piece is struck on a round planchet, with legible legends showing softness on some letters, especially UA in QUARTA. Census: 1 in 30, 2 finer (11/14).

Ex: Norweb Collection, Part I (Bowers and Merena, 10/1987), lot 1266; Jon Hanson; Donald Groves Partrick. PCGS# 542

**5742** 1785 Vermont Copper, VERMONTIS, Cast, Uncertified. RR-5, W-2275, High R.6. Weight 76.2 grains, diameter 27 mm. A pleasing example of this rare cast contemporary counterfeit, with medium golden-brown, slightly porous surfaces and legible legends and date.

Ex: Walter Breen; Richard Picker; purchased by the Norwebs in 1959; Norweb Collection, Part I (Bowers and Merena, 10/1987), lot 1267; Jon Hanson; Donald Groves Partrick. PCGS# 542

**5743 1785 Vermont Copper, VERMONTIS, Cast, Uncertified. RR-5, W-2275, High R.6.** Dr. Augustine Shurtleff discovered the cast copies of the Ryder-5 Connecticut copper, which was itself a contemporary counterfeit issue, in 1858. This well-worn specimen retains much more design detail on the reverse, where the rays, stars and much of the legend remain intact. On the obverse most of the central design is worn smooth, with 17 in the date and some of the surrounding legend still readable.

*Ex: Newton; Bowers and Merena; Jon Hanson; purchased by Donald Groves Partrick on 3/17/88. PCGS# 542*

**5744 1786 Vermont Copper 2-Sided Obverse Mule. Uncertified — Authenticity Unverifiable — NGC. RR-6.** *Ex: Norweb.* This coin is described in the Norweb Collection sale as:

“1786 Vermont copper. VG-8. Muling of the obverses of R-6 and R-8. Rarity 8. 93.5 grains. 27.9 mm. 350°. Dark golden brown, lightly porous. Both sides slightly off center.”

Actually, the same obverse appears on each side of the coin, which is a depiction of Ryder-6 with the diagnostic “jumping fourth tree.” Such pieces have been described in auction catalogs as early as 1865, and they are discussed in the Carlotto and Bressett references. Examples are rare, and many of these pieces are early electrotypes — as is this coin in our opinion, despite passing the ring test — but others may disagree. *Ex: Norweb Collection I (Bowers and Merena, 10/1987), lot 1270; Donald Groves Partrick.*

**5745 1786 Vermont Copper, VERMONTENSIVM AU58 NGC. CAC. RR-6, Bressett 4-D, W-2020, R.2.** *Ex: Oechsner.* A near-Mint Vermont copper, struck with the quality seldom seen for the RR-6 variety, let alone for the entire series. The obverse is slightly left at 8 o'clock, more of a pedigree marker than a distraction. A minimal clip is seen at TEN. The legends and pictorial motifs are wonderfully bold and unbothered. Described in the 1988 Oechsner sale as “chocolate brown toning with a hint of prooflike surface.” A lustrous and smooth coin. 129.6 grains. *Ex: Oechsner Sale (Stack's, 9/1988), lot 1329; Jon Hanson; Donald Groves Partrick. PCGS# 545*

### 1785 Cast Vermont Copper VERMONTIS, RR-5, W-2275

### 1786 RR-6 Vermont Copper, AU58 Exquisite VERMONTENSIVM Landscape

**1786 RR-6 Vermont Copper, VF35 NGC  
Seven Trees, Medal Turn, Nearly Full Date**

**5746** 1786 Vermont Copper, VERMONTENSIMUM VF35 NGC. CAC. RR-6, Bressett 4-D, W-2020, R.2. Ex: Hanson. Struck at the Reuben Harmon Mint with dies prepared by William Coley. The final "medal turn" variety of the series, RR-6 is known for the "jumping" fourth tree, with its trunk well above terra firma. Most of the date is on the flan, although lower portions of 86 angle off the edge due to planchet size. The surfaces are microporous but pleasing, with a glossy appearance and no notable marks. Bressett lists a Condition Census of MS60 to VF25, with this Choice VF well within the upper range.

Ex: Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 545

**1786 RR-7 Vermont Copper, AU55  
Second-Finest Known, Nice Luster Remains**

**5747** 1786 Vermont Copper, VERMONTENSIMUM AU55 NGC. RR-7, Bressett 5-E, W-2025, R.3. Ex: Craige. Fallow-brown color with lilac overtones covers the smooth surfaces of this Choice AU example. A glossy coin, this copper is unhindered by small, non-distracting flan flaws (as made) and the always-present obverse die bulge that helps identify the variety. One of the Harmon Rupert Mint strikings, it shows a well-centered reverse and a slight shift toward 8 o'clock on the obverse. This coin trails only the Newman coin as finest-known in the RR-7 Condition Census.

Ex: Ted L. Craige; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 545

**1786 RR-7 Vermont Copper, AU53  
High Condition Census Example**

**5748** 1786 Vermont Copper, VERMONTENSIMUM AU53 NGC. RR-7, Bressett 5-E, W-2025, R.3. Ex: Hanson. The reverse is rotated 90 degrees counter-clockwise. A hard, glossy planchet displays deep, olive-steel color and golden highlights. A few tiny areas of microporosity do not disturb the overall lustrous appeal. The usual die bulge shows only minor loss of detail on the obverse. A single Uncirculated piece is known of the variety (the Newman Collection coin) with this piece ranked third in the Condition Census. The legends and the date are bold and fully visible on the coin.

Ex: Walter Breen; Richard Picker; Norweb Collection I (Bowers and Merena, 8/1987), lot 1271; Jon Hanson (11/1987); Donald Groves Partrick. PCGS# 545

**1786 RR-7 Vermont Copper, XF45  
Full Date, Point of the Plow Above 1**

**5749** 1786 Vermont Copper, VERMONTENSIVM XF45 NGC. RR-7, Bressett 5-E, W-2025, R.3. Acquired by our consignor more than 40 years ago, this smooth and attractive Choice XF coin is the equal to all but the very finest-known RR-7, Bressett 5-E examples. The surfaces are remarkably smooth and attractive, with a few small planchet voids the only mentionable flaws. Otherwise, the copper quality far exceeds that of other issues in the series. The obverse die bulge corresponds to weakness in the right reverse devices, and an adjacent low spot on the obverse is lightly struck. Well-centered on both sides, this copper has a full, sharp date and nice chocolate-brown color.

Ex: H. Pullen (8/1973); Donald Groves Partrick. PCGS# 545

**1786 RR-8 Vermont Copper, XF45  
Exceptionally Sharp for the Variety**

**5750** 1786 Vermont Copper, VERMONTENSIVM XF45 NGC. RR-8, Bressett 6-E, W-2030, R.4. Ex: Craige. Glossy iridescence visits the deep, chocolate-brown surfaces of this boldly struck landscape copper. RR-8 is the scarcest die pair for the year; although just one notch rarer than RR-7, the pairing is much less available, especially in high grades. Perhaps fewer than 90 examples survive of the variety. Struck minimally off-center right at 3 o'clock and slightly moreso on the reverse, this example shows a full date, with the 1 boldly doubled and the 6 recut at the tail.

Ex: Ted L. Craige; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 545

**1786 Vermont Baby Head Copper, XF45  
RR-9, Strong Details, Full Date**

**5751** 1786 Vermont Copper, Baby Head XF45 NGC. Arguably the most popular Vermont copper variety of all, the Baby Head coppers were struck at the Harmon Mint in Rupert, Vermont. The dies were prepared by Coley and Van Voorhis in New York (possibly with assistance by James F. Atlee or Abel Buell). The variety is nearly always found in lower grades with fissured and corroded planchets, and weakly struck motifs. This example is far superior to most and a prize as such. Small planchet voids and minor granularity do not detract from the sharp details of this coin. Attractive tan color with scattered orange highlights adds to the glossy appeal.

Ex: Murray Altman (3/1976); Donald Groves Partrick. PCGS# 548

**1786 RR-9 Vermont Copper, XF45  
Condition Census Baby Head Variety  
Struck on a High-Quality Planchet**

**5752** 1786 Vermont Copper, Baby Head XF45 NGC. RR-9, Bressett 7-F, W-2040, R.3. While some have characterized the famous Vermont Baby Head portrait as either incompetent or amateurish, Tony Carlotto argues in *The Copper Coins of Vermont* that the design is anything but an amateur's work. Rather, he contends the Baby Head was purposefully designed to portray a young child, and it is representative of the fledgling Republic of Vermont.

No one can deny the design's charisma, and collectors are irresistibly drawn to the variety. Planchet problems are the norm for these pieces struck at the Rupert Mint; since copper quality was poor, high-grade flans are rare for this 1786 variety. The current coin is exceptional in that regard. There are no mentionable planchet issues seen on the coin. The obverse strike is bold on the portrait, with sharp remaining detail for the assigned grade. The reverse is weak at Liberty's head and shield, where the strike was not fully brought up. This copper was struck slightly off-center to 7 o'clock south, and the lower portion of the date is off the coin.

Smooth, medium-brown coloration shows deep-brown accents at the margins. This coin ranks high in the Condition Census for the variety. The Baby Head is virtually never seen so problem-free and eye-appealing — a coin for the most advanced Vermont copper collection. Ex: Ted L. Craig; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 548

**1786 RR-10 Vermont Copper, XF40  
Sharp Strike and Full Date**

**5753** 1786 Vermont Copper, Bust Left XF40 NGC. RR-10, Bressett 8-G, W-2045, R.4. Overall microporosity inhibits the grade, because the coin is boldly struck and unaffected by any other problems. The RR-10 variety is usually found with planchet issues related to quality of the copper, which was not smelted at the Rupert Mint, and was usually remelted from a conglomeration of sources. All motifs display excellent detail aside from a few rough spots on the portrait. Liberty's head is well struck, and the shield shows the outlined sheaf of wheat. Ebony color mixes with flashes of deep steel on the glossy surfaces.

Ex: Anthony Terranova (7/1994); Donald Groves Partrick. PCGS# 551

**1786 Vermont Copper, VF25  
RR-10, Scarce Rupert Mint Variety**

**5755** 1786 Vermont Copper, Bust Left VF25 NGC. RR-10, Bressett 8-G, W-2045, R.4. The dies for the Bust Left RR-10 design are attributed to Connecticut die maker Abel Buell, and the obverse portrait is believed to be a likeness of King George II. Liberty is shown on the reverse with a sheaf of wheat on the shield, which is seldom visible on circulated coins due to strike or wear. Like other pieces struck at Harmon's Rupert Mint, this example shows the oft-seen planchet problems: in this case, a void on the portrait and a few minor rough areas. None of the overt porosity typical of the issue is seen here. A pair of small rim cuts may be of post-mint origin. The coin retains light, chocolate-brown color and a full date, where the 1 resembles a J (seen elsewhere on Connecticut coppers).

Ex: R. August (7/1983); Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 551

**1786 Bust Left Vermont Copper  
Scarce RR-10 Variety, XF Sharpness**

**5754** 1786 Vermont Copper, Bust Left — Environmental Damage — NGC Details. XF. RR-10, Bressett 8-G, W-2045, R.4. Scattered porosity covers both sides of this otherwise tan-brown example with orange-red tones around the devices. Although the copper is well centered on both sides, the date is only partially visible at the lower reverse due to the planchet size. The coin is net-graded by NGC for Environmental Damage, yet it is quite sharp for the variety and the Rupert Mint, and the planchet issues appear to be as made.

Ex: James H. Coudge (3/1986); Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick.

**1786 RR-11 Vermont Copper, VF20  
Multiple Strikes on Both Sides**

**5756** 1786 Vermont Copper, Bust Left VF20 NGC. RR-11, Bressett 9-H, W-250, R.H. Ex: Robison. This is an attractive, medium-brown coin on an excellent planchet, with glossy and appealing surfaces. Definitely and broadly double-struck on both sides, this copper shows evidence of a third strike at the top of the obverse. Multiple impressions on colonials are exciting and form a popular subset for series and error collectors alike. This well-known coin from the Robison Collection (where it was called a double strike) is notable not only as a multiple strike Vermont copper, but as a high-grade example of the RR-11 variety, which is seldom seen in VF or finer condition.

Ex: Robison Collection (Stack's, 2/1982), lot 197; Donald Groves Partrick.

**1786 Bust Left Vermont Copper, VF20  
Scarce RR-11 Variety**

**5757** 1786 Vermont Copper, Bust Left VF20 NGC. RR-11, Bressett 9-H, W-2050, R.4. Ex: Craige. The planchet is a bit undersized — the centering is near-perfect, but the date and reverse legends are slightly off the coin. A lightly porous, deep-steel color blankets both sides, with the motifs a lighter tone than the deep ebony fields. Some streaky, heavier porosity crosses the reverse, but overall the coin is a solid VF20 example. Dark surfaces are the norm for the variety, which features a small C in AUCTORI and the V of VERMON closer to the bust than on RR-10.

Ex: Ted L. Craige; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 551

**1787 RR-12 Vermont Copper, AU50  
Nearly Top of the Census**

**5759** 1787 Vermont Copper, Bust Right, Nova Constellatio Overstrike, RR-12, Bressett 11-K, W-2110, High R.3, AU50 NGC. RR-12 shows a Mailed Bust facing right, positioned low and left on the flan, and paired with an unpunctuated legend. VERMON AUCTORI starts and ends farther from the bust than other varieties. This outstanding example is immediately recognizable as the Ezra Cole/Marvin P. Matlock piece. Overstruck on a large flan 1785 Nova Constellatio, the coin displays outstanding, glossy brown and tan surfaces. Struck a trifle low on the reverse, but otherwise just about perfect. This example is exceeded, perhaps, by only the Eliasberg and Ford coins in the Condition Census.

Ex: Ezra Cole Collection (Bowers and Merena, 1/1986), lot 1167; Marvin P. Matlock, M.D. Collection (Bowers and Merena, 3/1991), lot 1060; Jon Hanson; Donald Groves Partrick. PCGS# 560

**1786 Vermont Copper, VF Details  
RR-11, Full Date, Nice Sharpness**

**5758** 1786 Vermont Copper, Bust Left — Environmental Damage, Obverse Tooled — NGC Details. VF. RR-11, Bressett 9-H, W-2050, R.4. Both the RR-10 and RR-11 Bust Left varieties were an attempt by Reuben Harmon to furnish the Vermont coppers with a more “English” identity in hopes of increasing circulation beyond the local area. The effigy of King George II and the anglicized image of Liberty on the reverse were obvious attempts to gain acceptance with a suspicious public. This chestnut-brown example shows areas of porosity, some of which may have been minimized by tooling, yet the coin presents considerable appeal despite the assigned net-grade. This well-centered piece has a full date.

Ex: R. August (7/1983); Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick.

**1787 RR-12 Vermont Copper, AU Details  
Among the Finest Known Examples**

**5760** 1787 Vermont Copper, Mailed Bust Right, Nova Constellatio Overstrike, RR-12, Bressett 11-K, W-2110, High R.3 — Obverse Scratched — NGC Details. AU. Struck over a Crosby 5-E Nova Constellatio, 131.8 grains, which explains the wonderful, heavy planchet. The late die state shows two pronounced, radial die cracks from the left obverse edge to the head. Substantial luster remains on this smooth, copper-tan example. A series of light vertical scratches in the right obverse field account for the NGC grade, but they are of little importance considering the visual appeal and obvious quality of this high-grade coin. The shield and the date are sharp. Historically among the finest RR-12 examples known, confirmed by the Carlotto reference, where this specific coin is mentioned.

Ex: Public Auction (Stack's, 3/1994), lot 386; Jon Hanson; Donald Groves Partrick.

**1787 RR-12 Vermont Copper, XF45  
Notable Condition Census Example**

**5761** 1787 Vermont Copper, Bust Right, Nova Constellatio Overstrike, RR-12, Bressett 11-K, W-2110, High R.3, XF45 NGC. CAC. Ex: Merkin. This late die state coin is well-known to Vermont specialists. At the October, 1973 Lester Merkin sale, it was described as the third-finest known of the variety — an opinion seconded in the February, 1975 EAC Convention auction, where Walter Breen mentioned this coin among the top three known for the die pair. Struck over a 1785 Crosby 4-D Nova Constellatio, with bold details of the undertype evident including 85 of the 1785 date. Appealing reddish-chocolate color covers the glossy surfaces, with both sides nicely centered. An exceptionally Choice representative.

Ex: Public Auction Sale (Lester Merkin, 10/1973), lot 117; Jon Hanson; Donald Groves Partrick. PCGS# 560

**1787 Vermont Copper, XF45  
RR-12, Condition Census Candidate**

**5763** 1787 Vermont Copper, Bust Right, Nova Constellatio Overstrike, RR-12, Bressett 11-K, W-2110, High R.3, XF45 NGC. CAC. Ex: Angus Black. Perhaps 80% of the RR-12 Vermont coppers are struck over Nova Constellatio coins. Here, faint remnants of the host are seen at the centers, but otherwise there is no trace of the undertype. A Choice XF with smooth, medium-brown surfaces, the coin shows a middle state of the obverse die, with a strong crack from the edge through E of VERMON and into the portrait at the ribbon. A late-developing crack through M is barely visible. The reverse is sharp and unmarked except for a minor flat spot on the rim at 5 o'clock. A boldly struck copper with a full date.

Ex: Dr. Angus C. Black; Jon Hanson; The Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 560

**1787 RR-12 Vermont Copper, XF45  
Nova Constellatio Overstrike, Sharp Motifs**

**5762** 1787 Vermont Copper, Bust Right, Nova Constellatio Overstrike, RR-12, Bressett 11-K, W-2110, High R.3, XF45 NGC. CAC. Sharply overstruck on a Pointed Rays Nova Constellatio host coin, with the undertype clearly visible at the centers. The heavy planchet (138.0 grains) gave an assist to the strike, resulting in bold motifs for this high-grade RR-12 example. Glossy luster glances across the rich, medium-brown fields and at the margins. The obverse strike is slightly off-center southwest, although most of the denticles and complete legends remain on the coin. The well-centered reverse displays a full date. This attractive, problem-free coin is certainly within the Condition Census for the variety or very nearly so.

Ex: C-4 Convention Sale (McCawley-Grellman, 11/1987), lot 405; Donald Groves Partrick. PCGS# 560

**1787 RR-12 Vermont Copper, VF30  
Smooth, Glossy Overstrike**

**5764** 1787 Vermont Copper, Bust Right, Nova Constellatio Overstrike, RR-12, Bressett 11-K, W-2110, High R.3, VF30 NGC. CAC. Minor remnants of the Nova Constellatio undertype are visible at the portrait's neck and the margins. Struck approximately 5% off-center southwest on the obverse. The reverse is slightly misaligned south. The date is 60% full, lacking only the lower portions of the numerals. The coin is a perfect chocolate-brown color, smooth and unmarked by abrasions or planchet flaws. The motifs are sharp for the assigned grade, softened by light wear. This attractive copper offers nice quality and eye appeal with no relevant distractions.

Ex: Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 560

**1787 Vermont Copper, MS63 Brown  
RR-13, Britannia Reverse  
Tied for Finest Known**

**1787 Britannia Vermont Copper,  
MS63 Brown  
RR-13, None Certified Finer**

**1787 Double Struck Vermont Copper, VF35  
RR-13; Sharp, Dramatic Doubling**

**5765 1787 Vermont Copper, BRITANNIA MS63 Brown NGC. CAC. RR-13, Bressett 17-V, W-2255, R.1.** Early Die State. Abundant mint luster glows from the glossy, chocolate-brown coloration, where hints of faded mint color remain. The obverse is bold from edge-to-edge and well centered. Slight planchet roughness is noted under magnification, but the overall surfaces are pleasing and remarkable for the issue. The reverse is characteristically weak on BRITANNIA and at the date. Even so, this example is far sharper than normally seen. The variety is excessively rare in Select Uncirculated condition. Tied with one other example (also in this sale) as the finest-known RR-13 Vermont copper.  
*Ex: Phillip Bennedetti (9/1966); Donald Groves Partrick. PCGS# 554*

**5766 1787 Vermont Copper, BRITANNIA MS63 Brown NGC. RR-13, Bressett 17-V, W-2255, R.1.** *Ex: Craige.* A splendid Mint State example of the RR-13 dies — almost unheard of in this amazing condition. Medium-brown coloration shows glimpses of underlying mint red and tan shades. The right-facing bust of George III is rounded with a beaky nose, possibly the die work of James F. Atlee at Machin Mills, although debate continues about the origin of the obverse die. The reverse die was an adaptation of an imitation British halfpenny. As always, the reverse legend is only vaguely present, as is the date (with only the final 7 visible with a glass). Both sides are perfectly centered and lustrous, from an early state of the dies.  
*Ex: Ted L. Craige; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 554*

**5767 1787 Vermont Copper, Double Struck, BRITANNIA VF35 NGC. RR-13, Bressett 17-V, W-2255, R.1.** Double struck on both sides. Corrosion is limited to minor microgranularity over deep, olive-steel surfaces. The motifs are impressively doubled on the obverse, appearing as sequential images at the legend. The reverse is more askew, with multiple images broadly angled and off-center. Remarkably, the reverse is better detailed than often seen for the RR-13 variety, with NIA bold and partial letters for BRITAN and a partial date visible. A Choice VF error coin with appealing surfaces and lively violet highlights.  
*Ex: Tony Terranova (ANA Show, 3/2000); Donald Groves Partrick.*

**5768** 1787 Vermont Copper, Double Struck, BRITANNIA VF30 NGC. RR-13, Bressett 17-V, W-2255, R.1. Boldly impressed from two strikes, this copper shows reddish-steel and olive accents over deep brown surfaces; lightly porous, yet sharply detailed for the grade. A desirable mint error for collectors of Vermont coppers and colonial errors alike, it has a distinctly double-struck obverse and reverse. The Machin's Mills Mint was prone to foibles such as this, particularly when striking the RR-13 variety, for which there are several known examples of double strikes. A prize for the specialist.

Ex: R. August (7/1983); Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick.

**5769** 1787 Machin's Mills Halfpenny VF20 NGC. Vlack 18-87C, W-7930, R.4. The GEORGIVS. III. REX. obverse was paired with the same BRITANNIA reverse later used to coin the RR-13 Vermont coppers. This dark, smooth example shows minor granularity across the deep olive-brown surfaces. The BRITANNIA legend is bold. The strike on this planchet is well centered, with the 1787 date slightly off the flan at the bottom. A popular addition for collectors of the Vermont copper series.

Ex: R. August (7/1983); Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 469

**5770** (1787) Vermont Copper, Ineligible Type, BRITANNIA Uncertified. Ex: Garrett. 115.8 grains. At one time (prior to the Garrett Collection Part I sale) this fantasy piece was thought to be a new variety in the Vermont series. Similar to RR-13 because of its use of the BRITANNIA reverse, the coin passed from B. Max Mehl into Garrett's collection. In the Garrett sale, it was identified as "a whimsical issue of the 19th Century." Crafted from an imitation English halfpence, the legend reads AUCTORI VERMON rather than VERMON AUCTORI and the coin was enhanced through engraving, possibly by C. Wyllys Betts or another like-minded individual. An interesting curiosity of pre-1900 origin.

Ex: B. Max Mehl (1/1920); The Garrett Collection Part I (Bowers and Merena, 11/1979), lot 562; Donald Groves Partrick.

### 1787 Britannia Vermont Copper, VF30 RR-13, Broadly Double Struck

### 1787 Machin's Mills Georgivs Halfpenny, VF20 Vlack 18-87C; RR-13 'Britannia' Reverse

### (1787) Britannia Vermont Copper Fantasy Whimsical Vermont Cent 'RR-13a'

**1787 RR-14 Vermont Copper, AU50**  
**Seldom Available any Finer**

**5771 1787 Vermont Copper, Bust Right AU50 NGC. CAC. RR-14, Bressett 10-K, W-2105, R.3.** A golden-tan coin infused with deep-seated mint red undertones, notably attractive and ranked highly among the finest-known representatives of the RR-14 variety. Near-perfect centering on both sides displays the date and legends in their entirety. The coin shows the expected central incompleteness from a weak strike, seen primarily on Liberty's legs and at the neck area of George III. Struck from an early state of the dies, with no visible die cracks or other imperfections other than a diagnostic dot on the bridge of the nose.

*Ex: Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 560*

**1787 RR-14 Vermont, AU50**  
**Sharp and Attractive**

**5772 1787 Vermont Copper, Bust Right AU50 NGC. RR-14, Bressett 10-K, W-2105, R.3.** The dotted obverse legend VERMON• AUCTORI•, coupled with a dot at the bridge of the nose, identifies the obverse of this variety. Placement of the shield low and attached to the double lines above the date helps confirm the reverse die. Central weakness on the reverse and to a lesser extent on the obverse is seen on most examples of the RR-14 variety; otherwise, the coin is sharply detailed with a full date. Some shallow planchet laminations, localized surface roughness, and random lines are visible with a glass. The brown and tan surfaces are pleasing and attractive.

*Ex: Central States Convention Sale (Rarcoa, 4/1972), lot 387; Donald Groves Partrick. PCGS# 560*

**1787 RR-14 Bust Right Vermont, XF45**  
**Glossy, Brown and Tan Copper, Full Date**

**5773 1787 Vermont Copper, Bust Right XF45 NGC. CAC. RR-14, Bressett 10-K, W-2105, R.3.** Close to AU, the grade is limited only by diagnostic weakness of strike at the centers — often seen to one extent or another on RR-14 at George III's neck as well as Liberty's lap and legs, which display roughness from the raw planchet not fully brought-up. The peripheral motifs show full details and the date is full. A small planchet fissure between DE of INDE develops into a light crack to the branch. Copper quality was much improved for this variety, providing the attractive, tan coloration that Tony Carlotto describes in his reference. Glimpses of golden luster remain.

*Ex: Jon Hanson (11/1971); Donald Groves Partrick. PCGS# 560*

**1787 RR-14 Vermont Copper, VF35**  
**Ex: Norweb; Low Shield Variety**

**5774 1787 Vermont Copper, Bust Right VF35 NGC. CAC. RR-14, Bressett 10-K, W-2105, R.3.** *Ex: Norweb.* Dotted Obverse Legend. An attractive and choice coin, without any mentionable post-Mint distractions. Glossy, smooth-brown color enriches the fields and devices. This example is struck a bit off-center south on the reverse, where the lower portion of the date is off the coin. A light die crack above ET LIB approaches a heavy crack and cud above Liberty's head, confirming this coin was struck before RR-12, which shares the same reverse. Wonderful detail and quality exists throughout this important, mid-grade copper.

*Ex: Walter Breen Collection; Richard Picker (1959); Norweb Collection Part 1 (Bowers and Merena, 11/1987), lot 1280; Jon Hanson; Donald Groves Partrick. PCGS# 560*

### 1787 RR-15 Vermont Copper, VF Details The Rarest Vermont Type

**5775 1787 Vermont Copper, Bust Left — Environmental Damage**  
— NGC Details. VF. RR-15, Bressett 9-1, W-2060, R.6. Ex: Hanson. Connecticut's Abel Buell was probably the engraver of the Bust Left dies — at least for the central devices — while William Coley may have added the legends, as suggested by similar lettering on the Coley RR-9 Baby Head dies. Production must have been meager due to lack of good copper and the quick failure of the reverse die. Roy E. Bonjour compiled a list of surviving examples in 1985, which was updated by Bowers and Merena catalogers in 1987 and 1991, enumerating 18 coins. Most graded Fine or under, with a few VF coins plus one in XF; another described as AU topped the list. Since then, a few more coins (perhaps three or four) have been identified, including a nice XF example. In the Ford sale, it was estimated no more than one new coin per decade comes to light.

Moderate granularity and corrosion determine the grade of this example. Sharpness of the devices is among the half-dozen finest RR-15 examples known today. Even for “unimpaired” coins, planchets are often crude and rough. The current coin displays even, dark-brown toning with some light-brown glossiness on the high points. Incredibly, this is one of four RR-15 Bust Left representatives in the sale, and the one with the sharpest detail.

Ex: Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick.

### 1787 Vermont Copper, VF Details Rare RR-15 Variety, 25 to 35 Pieces Known

**5776** 1787 Vermont Copper, Bust Left — Planchet Flaw — NGC Details. VF. RR-15, Bressett 9-I, W-2060, R.6. Ex: Bonjour. Overstruck on an RR-4 1785 VERMONTIS Landscape. The undertype is confirmed by a remnant star that points to the left leg of the second A in QUARTA, still visible at the reverse margin. The partial undertype legend PUBLICA 1785 remains intact on the obverse. Notable planchet flaws include a flat edge at the bottom as if struck on an end-of-strip planchet, numerous small voids and roughness, and a heavy, bisecting obverse crack. The coin is dark, porous and lightly encrusted throughout. This classic RR-15 variety shows a diagnostic die break that covers the 1787 date at the bottom of the reverse. Exceedingly rare, even more so as an overstrike, it is mentioned specifically in the Tony Carlotto reference.

Ex: Roy E. Bonjour; Bowers & Ruddy Galleries (plated in *Rare Coin Review* No. 34); Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick.

### 1787 RR-15 Vermont Copper, Fine 15 Famous George II Mailed Bust Left Variety Rupert Mint Rarity

**5777** 1787 Vermont Copper, Bust Left, Fine 15 NGC. RR-15, Bressett 9-I, W-2060, R.6. Ex: Taylor. This coin is among the most recognizable representatives of this famous Rupert Mint variety, always in strong demand from Vermont copper specialists. The obverse is shared with RR-11, with the Mailed Bust Left, but it is paired with a new reverse known for the massive die crack that hides most of the 1787 date. It is the only Bust Left variety for the year, creating a unique type that has collectors vying for the few, often-abused survivors.

The grade on this example was limited by a diamond-shaped planchet fissure at the top of the reverse, which runs through the coin to below the portrait's neck on the obverse. Other small planchet voids visit the portrait as well, including roughness at the bust truncation. The top obverse rim is worn and shows a small, smooth depression. The balance of the surfaces are remarkably smooth for the variety. Reddish-tan color enriches the deep-olive surfaces. This exact coin is highly rated among the two dozen or so remaining examples available to collectors (perhaps as many as 30 pieces exist in total).

Ex: Frederick B. Taylor Collection (Bowers and Merena, 3/1987), lot 2071; Donald Groves Partrick. PCGS# 557

**5778 1787 Vermont Copper, Bust Left — Holed — NGC Details. VG. RR-15, Bressett 9-I, W-2060, R.6.** Ex: Canfield. Holed at 5 o'clock on the obverse, with a few small flan flaws up and down the center of both the obverse and reverse. The overall appeal of this smooth, evenly worn piece is undeniable. The signature die break at the date is more advanced than on other examples we've observed. Pleasing, chocolate-brown motifs contrast with silky, dark-chocolate fields. Struck on a small-diameter planchet; neither side is perfectly centered, although all of the important elements are sharp for the grade. A seldom-available opportunity for the enthusiast to own the rare RR-15 variety.

Ex: Canfield Collection (Parke-Bernet Galleries, 9/1969), lot 21; Donald Groves Partrick.

**5779 1788 Vermont Copper, Bust Right MS62 Brown NGC. RR-16, Bressett 15-S, W-2120, R.1.** Only a handful of Mint State Vermont coppers are known for the entire series, some of which are offered elsewhere in this sale (including the two RR-13 pieces NGC graded numerically finer than this example) but it is doubtful any Uncirculated Vermont is more impressive than this amazing coin. In all probability, it is the finest RR-16 extant, and it will certainly rival any other Vermont copper for eye appeal regardless of variety. Incredible iridescent shades emanate from the fully lustrous, nearly pristine surfaces. Magenta, violet, orange, and golden hues flash from the glossy fields and devices. It is the "poster coin" for the RR-16 variety, the embodiment of the quirky die and strike characteristics that typify the die pair. The dot above the head is bold. The central softness of strike is confirmed to be inescapable for the variety, as is the crumbling at the rims. The dotted breastplate is boldly defined. Above all, the transcendent color, smooth surfaces, and perfect centering are all unsurpassed by any other Vermont we know. This is a coin to be seen (in person if possible), studied for its characteristics, enjoyed for its charisma, and purchased for the finest Vermont collection.

Ex: Jon Hanson (1/1971); Donald Groves Partrick. PCGS# 563

**5780 1788 Vermont Copper, Bust Right AU58 NGC. CAC. RR-16, Bressett 15-S, W-2120, R.1.** Ex: Craige. Nearly full mint luster remains beneath the iridescent toning across the unblemished surfaces of this splendid Vermont copper. Coppery-orange and blue shades reflect from the microscopically granular fields and devices, which are glossy and vibrant. Sharply struck for the variety, the coin displays a bold dot above the head indicative of an early strike, and excellent centering on both sides. Few RR-16 examples can match the eye appeal and technical quality of this near-Mint copper.

Ex: Ted L. Craige (2/1971); Public Auction Sale (Stack's, 5/1975), lot 456; Jon Hanson; Donald Groves Partrick. PCGS# 563

### 1787 RR-15 Vermont, VG Details Smooth and Appealing, Holed

### 1788 RR-16 Vermont Copper, MS62 Brown Rare Mint State Example Amazing Eye Appeal

### 1788 Vermont Copper, AU58 RR-16, High-Quality Flan

**1788 Vermont Copper, AU55  
RR-16, Nicely Centered Both Sides**

**5781** 1788 Vermont Copper, Bust Right AU55 NGC. CAC. RR-16, Bressett 15-S, W-2120, R.1. Ex: Craige. Smooth-brown surfaces display golden highlights on the high points, and reddish hues glow from remaining mint luster. Well-struck for the RR-16 die pair, with some facial detail present as well as a bit of central detail on Liberty. Three or four scattered, small areas of soft carbon do not distract from the considerable appeal of this Choice AU coin. Both obverse and reverse show almost perfect centering with dentils intact. The usual dot above the head is missing, faded away due to a later strike.

Ex: Ted L. Craige; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 563

**1788 RR-17 Vermont Copper, AU53  
Scarce Variety, Condition Census Example**

**5783** 1788 Vermont Copper, Bust Right AU53 NGC. RR-17, Bressett 14-S, W-2125, High R.4. Ex: Hanson. In a review of the following collections and auctions, the highest-graded RR-17 copper was XF45: ANS Collection, Bowers, Eliasberg, Ford, Garrett, Eric P. Newman, Norweb, Picker, and Taylor. Although this is by no means a complete study of the RR-17, it does shed light on the scarcity of this AU53 coin. Deep-chocolate brown with reddish-tan accents, the coin is glossy and beautifully centered. Widely spaced sawtooth denticles distinguish the variety. Typical of many Machin's Mills issues, the strike is incomplete at the centers. A few rough spots exist where the strike is weak.

Ex: Jon Hanson (5/1988); Donald Groves Partrick. PCGS# 563

**1788 RR-16 Vermont Copper, AU53  
Dotted Breastplate, Single Dot Above Head**

**5782** 1788 Vermont Copper, Bust Right AU53 NGC. CAC. RR-16, Bressett 15-S, W-2120, R.1. Ex: Hanson. Although struck on above-average copper planchets, RR-16 is less distinguished in the sharpness of its strike. The deep relief of the die pair was beyond the capability of the coiners. As a result, all examples are weak in the facial area, ribbons, hair ends, and on the central portions of Liberty. This AU53 coin shows a mint-made depression at the ear but above-average detail elsewhere on the obverse. Liberty is abnormally bold at the head and shield. Tan surfaces flash iridescence over the nicely centered motifs.

Ex: Jon Hanson (3/2006); Donald Groves Partrick. PCGS# 563

**1788 RR-17 Vermont, VF30  
Bold for the Variety**

**5784** 1788 Vermont Copper, Bust Right VF30 NGC. CAC. RR-17, Bressett 14-S, W-2125, High R.4. Ex: Craige. Subtle reddish-tan accents appear at the margins on both sides of this well-produced, scarce RR-17 coin. The overall coloration is a rich, medium-brown. Struck from clashed dies, although only minor ghostly images of the reverse legend are visible beneath AUCTORI on the obverse. Three areas of porosity with minor encrustation are seen: one at the center of the portrait, where the strike is incomplete, and two others near the head. Otherwise, the surfaces are far above average for the issue. Liberty is bold for the die pair and the date is full.

Ex: Ted L. Craige; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 563

**1788 Vermont Copper, VF20  
Scarce RR-17 Variety, Smooth Surfaces**

**5785** 1788 Vermont Copper, Bust Right VF20 NGC. CAC. RR-17, Bressett 14-S, W-2125, High R.4. Ex: Hanson. The N of VERMON is very close to the head on this scarce variety. Vermont coppers in the Machin's Mills portrait issues are almost always weakly struck at the centers. This coin is particularly bold on the obverse, with smooth surfaces and only an occasional, minor planchet flaw. The reverse is equally smooth, or more so, except at the center of Liberty where a noticeable area of corrosion exists. The date and legends are strong. This pleasing Vermont copper is CAC-endorsed.

Ex: Jon Hanson (11/1970); Donald Groves Partrick. PCGS# 563

**1788 RR-18 Vermont, VF25  
ET LIB INDE, Rare Type**

**5787** 1788 Vermont Copper, ET LIB INDE VF25 NGC. RR-18, Bressett-19-X, W-2135, R.5. The "reversed" legend ET LIB INDE is punctuated by stars, a characteristic of Machin's Mills coppers, and it was probably one of the die cutters at that facility who transposed INDE ET LIB on RR-18, RR-35, and also on a few Connecticut coppers of the same period. Struck over an Irish halfpenny, this example is lightly porous yet attractive, with chocolate-brown color and a decent planchet. The diagnostic bisecting die break creates two levels of sharpness — strong details on the left (high) side, and weak where the die sinks on the right. The reverse is bold for the issue.

Ex: Tony Terranova (5/1983); Donald Groves Partrick. PCGS# 569

**1788 Vermont Copper, VF35  
RR-18, Important ET LIB INDE Reverse**

**5786** 1788 Vermont Copper, ET LIB INDE VF35 NGC. RR-18, Bressett 19-X, W-2135, R.5. Deep, ebony-brown toning covers both sides of this Choice VF copper. The distinctive obverse die crack is not as advanced as on some examples, allowing the raised dots on the breastplate and other details greater visibility. Overstruck on an English or Irish halfpenny, the flan is lightly granular with a few scattered areas of porosity. The reverse is well centered but uneven, with the date not brought up. Even so, the shield and the important reversed legend ET LIB INDE are bold. Few RR-18 representatives are any finer.

Ex: Tony Terranova (8/1979); Donald Groves Partrick. PCGS# 569

**1788 RR-18 Vermont Copper, Fine 15  
'ET LIB / INDE' Reverse**

**5788** 1788 Vermont Copper, ET LIB INDE Fine 15 NGC. RR-18, Bressett 19-X, W-2135, R.5. Ex: Craig. Only the RR-18 and RR-35 varieties display this transposed legend (all other reverses show INDE / ET LIB). A heavy, bisecting die crack characterizes the variety, running vertically through the portrait. All examples seen of RR-18 are overstruck, apparently on English or Irish halfpennies, although Tony Carlotto reports one on a Nova Constellatio. This is an attractive, problem-free example for the grade with chocolate-brown surfaces and a full date.

Ex: Ted L. Craig; Jon Hanson; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 569

**1788 Vermont Copper, XF Details  
Scarce RR-18; ET LIB INDE Reverse, Rare Type**

**1788 Vermont Copper, AU50  
RR-19, Rare Early Die State**

**1788 Vermont, XF40  
Challenging RR-19 Die Pair**

**1788 RR-19 Vermont, VF30  
Exceptional Eye Appeal, Scarce Variety**

**5789 1788 Vermont Copper, ET LIB INDE — Obverse Damage**  
— NGC Details. XF. RR-18, Bressett 19-X, W-2135, R.5. Ex: Ryder Plate. On this variety, the A of AUCTORI is distant from the head. Most examples show a dramatic, vertical die crack that splits the portrait. Often struck over English or Irish coppers; this example shows vague-but-inconclusive evidence of an undertype. The coin is remarkably well struck on the reverse, unlike most known examples. Deep, ebony-brown color displays a satinlike sheen with russet-red highlights. Almost perfectly centered on both sides. Two small digs in the right obverse field accounts for the net grade. This is one of two varieties with the ET LIB INDE reverse. The other variety, RR-35, is rare and seldom available. Ex: Bryant; Richard Picker; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick.

**5790 1788 Vermont Copper, Bust Right AU50 NGC. CAC. RR-19, Bressett 13-L, W-2185, R.5.** Ex: Norweb. 121.0 grains. Tony Carlotto was aware of just two coins without the obverse die break on full-sized, well-detailed flans; perhaps this coin was one of them. No evidence of the die crack is seen, although Carlotto mentions the coin elsewhere in his comments as one of the notable, high-grade RR-19 coins known. The variety was missing from the Garrett, Cole, Roper, and Picker collections. Beautifully centered, glossy, and enveloped in reddish-chocolate coloration, this exceptional coin displays tremendous eye appeal and technical quality.

Ex: New Netherlands Coin Company (8/1960); Norweb Collection (Bowers and Merena, 10/1987), lot 1285; Jon Hanson; Donald Groves Partrick. PCGS# 563

**5791 1788 Vermont Copper, Bust Right XF40 NGC. RR-19, Bressett 13-L, W-2185, R.5.** Ex: Craig. The usual variety-defining obverse die crack curves along the outside of (AUCTO)RI to beneath the right bust point, beyond the breastplate. Liberty shows little of the accustomed weakness at the center, with boldness at the pole, shield, and branch hand. This is an original and untouched coin, with some accumulated detritus and residual roughness around the devices. Dusky, microporous surfaces display deep brown and ebony colors, although surprising areas of reflectivity remain in the fields. Technically, the coin is perfectly centered on both sides and the motifs are sharp.

Ex: Ted L. Craig; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 563

**5792 1788 Vermont Copper, Bust Right VF30 NGC. CAC. RR-19, Bressett 13-L, W-2185, R.5.** A virtually flawless example for the grade, with a smooth planchet and excellent, glossy surfaces. Only moderate wear affects the devices, which remain sharp. Since the coin is struck on a slightly small planchet, the diagnostic, curved die break at the bottom of the obverse is almost completely missing, although a trace can be seen beneath the bust. Both sides are nicely centered and the date is full. The light tan-brown coloration is one factor in the CAC endorsement.

Ex: Kessler-Spangenberg Sale (NASCA, 4/1981), lot 2382; Donald Groves Partrick. PCGS# 563

**5793** 1788 Vermont Copper, Bust Right AU55 NGC. CAC. RR-20, Bressett 10-L, W-2150, R.4. Ex: Hanson. Periods after VERMON and AUCTORI. A bold strike is seen on both sides, with Mint-related planchet striations on the reverse. The light brown surfaces are extremely smooth for a Vermont copper, with considerable remaining mint luster over both the obverse and reverse, and little sign of wear from circulation. Reddish highlights peek out from the legends. Liberty's head shows facial detail and sharp hair strands. A candidate for the finest-known RR-20 and a sensational Vermont; finer than Newman, Norweb, Ford, Taylor, or Garrett.

Ex: Van Ormer et al (Bowers and Merena, 9/1985), lot 1802; Jon Hanson (3/1991); Donald Groves Partrick. PCGS# 563

**5794** 1788 Vermont Copper, Bust Right AU50 NGC. RR-20, Bressett 10-L, W-2150, R.4. Ex: Hanson. A smooth, chocolate-tan example with occasional glimpses of mint red at the margins. The glossy surfaces show only a few minor areas of incomplete strike with the associated planchet roughness — at the neck of the portrait, and at Liberty's left-facing shoulder, possibly related to die bulge. Several light die cracks on the reverse indicate a medium die state, with a crack through the date and another from the left edge to Liberty's head. This example is among the finest-known representatives of the RR-20 die pair.

Ex: Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 563

**5795** 1788 Vermont Copper, Bust Right VF35 NGC. RR-20, Bressett 10-L, W-2150, R.4. Ex: Bullowa. The sharpness exceeds the plate coins in both the Carlotto and Ryder references. Rich, deep-chocolate coloration features reddish-bronze highlights on the motifs for an attractive, two-toned appeal. Smooth and glossy surfaces display boldly struck devices. The die cracks and bulges that are often seen on later states of the RR-20 variety are nonexistent on this pleasing coin.

Ex: Bullowa; Jon Hanson (11/1970); Q. David Bowers Collection (3/1971); Donald Groves Partrick. PCGS# 563

**5796** 1788 Vermont Copper, Bust Right XF45 NGC. CAC. RR-21, Bressett 10-R, W-2155, R.5. Ex: Ryder. Reportedly one AU coin exists in the ANS cabinet, and perhaps three or four XF coins vie for the remaining top spots of the RR-21 Condition Census. This Choice XF coin (with CAC endorsement) is without doubt one of the two or three finest of the die pair, and it represents the final use of both the obverse and reverse dies. Steel and russet accents flash over the smooth, partially lustrous surfaces of this deep-chocolate coin. The motifs are bold except for the left edge of the shield, near the near-terminal die crack that runs through the date and across Liberty's legs.

Ex: Hillyer Ryder; F.C.C. Boyd; John J. Ford, Jr. (12/1982); Donald Groves Partrick. PCGS# 563

### 1788 RR-20 Vermont Outstanding, Choice About Uncirculated Example

### 1788 RR-20 Vermont Copper, AU50 High Condition Census Coin

### 1788 RR-20 Vermont, VF35 Choice Mid-Grade Example

### 1788 Vermont Copper, XF45 RR-21, Among the Finest Known Ex: Ryder, F.C.C. Boyd

**1788 Bust Right Vermont Copper, XF40  
RR-21, Rare Above Fine Condition**

**1788 Vermont Copper, XF45  
Top-of-the-Census, RR-22 Variety**

**1788 RR-22 Vermont, VF35  
Sharp Condition Rarity**

**5797 1788 Vermont Copper, Bust Right XF40 NGC. RR-21, Bressett 10-R, W-2155, R.5.** The same obverse as RR-20, paired with the one-time use of a previously unseen reverse. A cud-like die break near the portrait bust and long crack through the first 8 of the date and up into the field above Liberty's knee are diagnostic of the RR-21 die pair. The reverse is slightly granular, while the obverse shows a few small planchet voids on the shoulder, neck, and jawline. Pleasing medium-brown color covers both sides of the coin, with the obverse considerably nicer than the reverse. Despite the modest XF40 grade, this example is most likely in the Condition Census for the variety.

*Ex: Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 563*

**5798 1788 Vermont Copper, Bust Right XF45 NGC. CAC. RR-22, Bressett 10-Q, W-2165, R.5.** *Ex: Hanson.* Quite possibly, the two finest-known RR-22 Vermont coppers are in this sale. Although there is no definitive Condition Census for Vermont varieties, an examination of past auctions and known private transactions do not reveal any better examples of the die pair.

It would take an exceptional coin to exceed this Choice XF, RR-22 Vermont. The smooth brown surfaces display an iridescent glow over the well-struck motifs. The burgeoning die crack on the reverse does not disturb a sharp strike on Liberty and the surrounding legends. The date is full except for the "dropped 7," which is understandably tailing off the coin.

Curiously, the reverse is narrowly double-struck and possibly triple-struck, a characteristic not noted on the holder and not mentioned for the die pair in the literature. The other RR-22 in the sale (a VF35 NGC coin) is also multiply struck on the reverse. It is an interesting anomaly — one that adds intrigue to the coins, and a subject for future study. Planchet defects are limited to a few tiny voids on the reverse and one pinprick on the portrait hairline, which serve as useful markers but do not distract.

*Ex: Jon Hanson (2/1996); Donald Groves Partrick. PCGS# 563*

**5799 1788 Vermont Copper, Bust Right VF35 NGC. CAC. RR-22, Bressett 10-Q, W-2165, R.5.** Several of the earlier major collections did not have an example of RR-22, although Tony Carlotto points out that several representatives of the variety have surfaced in the past 30 years or so. Apparently all are in lower grades, and pieces any better than Fine are still rare; this coin is graded twenty points higher. It far exceeds the Norweb example, often cited as one of the finest of the variety. A lovely chocolate-and-steel color covers the smooth, unmarked surfaces of the present coin. It displays the diagnostic low 7 in the date and the dramatic, swelling die crack through the left reverse field. This coin is boldly double-struck on the reverse.

*Ex: Richard Picker; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 563*

**1788 Vermont, Memorable MS63 Brown  
Substantial Mint Red Highlights  
Amazing Condition Rarity**

**5800** 1788 Vermont Copper, Bust Right MS63 Brown NGC. RR-23, Bressett 10-O, W-2175, R.4. Ex: Newcomer. 131.5 grains. It nearly goes without saying that this is the finest RR-23 copper known. This Choice Uncirculated coin certainly ranks among the finest of all Vermont coppers, regardless of variety. The surface characteristics, glossiness, and bold strike are of superior quality. Substantial remaining mint red and exquisite, tan-brown coloration suggest no Vermont copper will easily exceed it. There are virtually no marks or planchet imperfections, and the motifs are beautifully centered on both sides.

Previous owners of this exceptional coin comprise an impressive roster of their own. This example carries a pedigree from Waldo C. Newcomer to Edgar H. Adams to John Work Garrett in the earlier years; James A. Stack, Jon Hanson, and Donald Groves Partrick were later guardians. Its new owner will join an illustrious list of numismatic elite, continuing to preserve this outstanding coin and its legacy among the finest Vermont coppers.

Ex: Newcomer; Adams; Garrett; Browder; Miles; Stack; John Hanson; Donald Groves Partrick. PCGS# 563

**1788 RR-23 Vermont Copper, MS62 Brown  
Splendid Mint State Coin  
Among the Finest Known**

**5801** 1788 Vermont Copper, Bust Right MS62 Brown NGC. RR-23, Bressett 10-O, W-2175, R.4. Ex: Taylor. The fact that there are two incredible, Mint State RR-23 Vermont coppers in this sale might suggest that Uncirculated examples of the variety are generally available, but copper specialists know better. Although the die pair can be obtained up to XF condition, any finer coins are tightly held and seldom available. This splendid MS62 piece is lustrous, glossy, and suffused with golden-tan color. Hints of mint red and purple highlights enhance the well-centered surfaces. Among the few high-end coppers that exist for the entire series, destined for the finest collection of Vermont rarities.

Ex: Richard Picker; Frederick B. Taylor Collection (Bowers and Merena, 3/1987); Donald Groves Partrick. PCGS# 563

**1788 RR-23 Vermont, VF30  
Attractive Mid-Grade Copper**

**1788 Vermont Copper, MS60  
RR-24, Just-Minted Appeal**

**1788 Vermont Copper, XF40  
RR-24, Pleasing Color**

**5802 1788 Vermont Copper, Bust Right VF30 NGC. RR-23, Bressett 10-O, W-2175, R.4.** Ex: Bryant. With exception of the ubiquitous die crack on the neck of the Bust Right portrait, the coin is struck from a near-perfect state of the dies. The descending die crack behind Liberty's head (described by Tony Carlotto in *Copper Coins of Vermont*) does not exist on this coin, putting it in the minority of survivors. Nicely centered with smooth surfaces except for some old abrasions on Liberty's legs. Reddish brown and steel color covers the attractive fields and devices.  
Ex: Bryant; Richard Picker; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 563

**5803 1788 Vermont Copper, Bust Right MS60 Brown NGC. RR-24, Bressett 16-S, W-2200, R.3.** Ex: Norweb. The only mentionable defects on this lustrous, glossy coin are Mint-related. Struck to resemble circulated coinage, any defects or strike weakness added credibility to the issue as normal "wear and tear." This example shows a cigar-shaped planchet void on the reverse at Liberty's knees. The obverse displays granular weakness on the neck, and the usual RR-24 diagnostic die breaks. The coin is clearly Uncirculated, with a beautifully centered obverse and reverse. Light golden-brown color complements the just-minted appeal.

Ex: Brand Collection; Walter Breen; Richard Picker (1959); Norweb Collection (Bowers and Merena, 10/1987), lot 1290; Jon Hanson (11/1987); Donald Groves Partrick. PCGS# 563

**5804 1788 Vermont Copper, Bust Right XF40 NGC. RR-24, Bressett 16-S, W-2200, R.3.** Ex: Bryant. The smooth, chocolate-brown surfaces are free of any planchet defects on the obverse other than the diagnostic low area above the effigy, and the equally distinctive "horn" die break at the lower neck. The reverse is better-struck than normal on Liberty's legs and adjacent shield, although an area of dark corrosion covers the shield bottom, margin, and the second 8 of the date. The surfaces are otherwise remarkably problem free and attractive. The obverse is struck minimally north and east.

Ex: Bryant; Richard Picker; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 563

**5805** 1788 Vermont Copper, Bust Right VF30 NGC. RR-24, Bressett 16-S, W-2200, R.3. A low area at the top of the bust head borders a bold die crack there, and the central portrait and figure of Liberty are diagnostically weak due to incomplete strike. A spear-shaped die break pierces the neck just above the chest — thus “the Horned Bust” nickname. Aged-brown coloration covers the smooth surfaces, disturbed by a few small digs between the nose and T of AUCTORI. A well-centered obverse pairs with a full-date reverse, which is slightly right on the planchet. Nice quality for the grade.

Ex: *Massachusetts Historical Society Sale (Stack's, 10/1970)*, lot 68; *Donald Groves Partrick*. PCGS# 563

**5806** 1788 Vermont Copper, Bust Right XF45 NGC. CAC. RR-25, Bressett 16-U, W-2195, R.3. Ex: *Craige*. The issue is often overstruck on English or Irish halfpennies, but this coin was minted on a virgin flan. The copper quality is unusually high for the RR-25 variety. The obverse diagnostics are present but unpretentious on this piece — sinking of the die above the head is less obvious, and the die anomaly at the upper breastplate is smaller and less overt than other examples. The engraving on George III appears more skilled, with sharp details on the hair and facial features. Some central weakness on Liberty is offset by a bold branch hand and strong peripheral elements.

Production of the variety was split between the Rupert Mint in Vermont and Machin's Mills in Newburgh, NY. This coin was likely one of the final Rupert Mint issues before all production was moved to New York. Exceptional surfaces are boldly struck, glossy, and unmarked from circulation. The coin is almost ideally centered on both sides, a deep-rich brown with remaining luster.

Ex: *Ted L. Craige*; *Q. David Bowers Collection*; *Jon Hanson (3/1988)*; *Donald Groves Partrick*. PCGS# 563

**5807** 1788 Vermont Copper, Bust Right VF30 NGC. CAC. RR-25, Bressett 16-U, W-2195, R.3. Ex: *Bryant*. The host coin, an Irish halfpenny, is slightly larger than the Vermont overtype, resulting in high wire rims around both sides of the coin. No doubt, they provided extra protection from wear as the coin circulated in the early colonies. The harp strings are visible on George III's portrait, as are occasional letters at the margins. The obverse RR-25 devices are extremely sharp on this coin for the assigned grade. The diagnostic die breaks are visible, as is the portrait hair detail and facial features. The reverse, as always, is a bit weaker, but still smooth and attractive.

Ex: *Bryant*; *Richard Picker*; *Q. David Bowers Collection*; *Jon Hanson (3/1988)*; *Donald Groves Partrick*. PCGS# 563

### 1788 RR-24 Vermont, VF30 Advanced Die State

### 1788 RR-25 Vermont, XF45 Exemplary Quality for the Variety

### 1788 RR-25 Vermont, VF30 Reddish-Tan Beauty, Overstruck

**1788 RR-25 Vermont Copper, Fine 15  
Overstruck, Rare With Nice Color**

**5808** 1788 Vermont Copper, Bust Right Fine 15 NGC. CAC. RR-25, Bressett 16-U, W-2195, R.3. The majority of overstruck Vermont coppers are on poor, dark planchets. This example shows exceptional, light tan-brown surfaces with considerable glossy appeal. The undertype is a 1782 Irish halfpenny, the date clearly visible on the reverse of the coin, intermingled with the Vermont RR-25 legend. The overstrike is nicely centered on both sides. Tony Carlotto notes, "The overstruck coins seem to be on dark or granular plans and are very scarce on nice brown planchets." This attractive copper is a lovely exception.

Ex: Jon Hanson (5/1971); Donald Groves Partrick. PCGS# 563

**1788 Vermont Copper, Fine 12  
RR-25, Overstruck on an Irish Host Coin**

**5809** 1788 Vermont Copper, Bust Right Fine 12 NGC. RR-25, Bressett 16-U, W-2195, R.3. The strings from an Irish harp are visible on the obverse portrait, the most discernible remnants of the undertype. Despite considerable wear, the Vermont motifs are sharply detailed and well centered on a decent host coin. Only isolated, minor granularity is seen, with the surfaces smooth and attractive. Deep-chocolate brown fields and devices are pleasing for the grade.

Ex: Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 563

**1788 RR-25 Vermont, Fine 12  
Overstruck, Possibly on an Irish Halfpence**

**5810** 1788 Vermont Copper, Bust Right Fine 12 NGC. RR-25, Bressett 16-U, W-2195, R.3. The remnants of the overstrike appears on the central obverse at the portrait neck — which is weakly struck, allowing the undertype to show — although the exact host coin is undetermined. The surfaces are uniformly granular with deep, ebony-brown color. A flat planchet clip at 12 o'clock may have existed on the host coin prior to the Vermont striking. The obverse is most easily confirmed by the crosses in the legends after N and I, while the reverse also shows crosses after the legend as INDE+ ET LIB+.

Ex: Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 563

**1788 Vermont, XF40  
Finest RR-26 Copper  
Ex: Ezra Cole**

**5811** 1788 Vermont Copper, Bust Right XF40 NGC. RR-26, Bressett 16-T, W-2190, High R.6. Ex: Ezra Cole. The Cole sale was notable for the two finest-known RR-26 Vermont pieces to be offered at auction. One was described as a Choice medium-brown XF example — this very coin — a coin that remains richly toned, glossy and appealing. A second coin from the Cole Collection was also described as XF, although with an area of encrusted oxidation in the right obverse field. Aside from the VF Ford Collection coin, all other known examples of this rare variety seem to be in Fine or lesser conditions. The Frontenac Sale coin was nicely VF on the obverse, but the reverse was rough and porous.

The present coin is impressively distinctive. Smooth, deep-brown fields contrast with steel-brown high points on the devices. The microgranular surfaces remain glossy and attractive. A tiny rim clip or imperfection serves as a marker at 5 o'clock on the reverse. The effigy is well struck and smoothly detailed, with bold facial detail and fully struck legends. The diagnostic reverse die crack is sharply defined but non-destructive at this point of its existence. Both sides show ideal centering. For the Vermont specialist, a coin of this quality and rarity is a rare occurrence and an opportunity not to be missed.

Ex: Ezra Cole Collection (*Bowers and Merena*, 1/1986), lot 1182; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 563

### 1788 RR-26 Vermont Copper, Fine 12 Rare Variety, Seldom Offered so Nice

**5812** 1788 Vermont Copper, Bust Right Fine 12 NGC. CAC. RR-26, Bressett 16-T, W-2190, High R.6. Ex: Taylor. 108.4 grains. On a par with some of the other classic rarities of the series, this gracefully aged example retains its considerable charisma and appeal. Last seen in the 1987 Frederick B. Taylor sale, it was described as “far and away the rarest of all Vermonts in the 20s in Ryder’s numbering system” — a fact that hasn’t changed over the intervening years.

The obverse is discernibly sharper than the reverse, a characteristic other examples share because of the badly broken reverse die, soon-retired after striking just this single variety. Pleasing tan-brown color remains, with a few deeper brown accents around the devices. Minor porosity surrounds the figure of Liberty. The diagnostic, horizontal die crack bends rim-to-rim beneath Liberty’s head. The obverse is smooth and attractive, with both sides of the coin well centered. CAC endorsed for eye appeal and technical merit.

Ex: Frederick B. Taylor Collection (Bowers and Merena, 3/1987), lot 2084; Donald Groves Partrick. PCGS# 563

### 1788 RR-27 Vermont Copper, MS63 Brown Finest Known Example

**5813** 1788 Vermont Copper, Bust Right MS63 Brown NGC. CAC. RR-27, Bressett 18-W, W-2205, R.2. The Select Uncirculated condition of this high-grade copper allows an unhindered look the unusual motifs that appear exclusively on the RR-27 variety. The “dome head” effigy of King George III looks more like a Roman head than an English one, while the figure of Liberty is draped in an elaborate flowing gown of greater detail than any other variety. The devices are boldly struck, and the legends are arranged more like Connecticut coppers than the normal Vermont configurations.

Planchet quality is always an issue for the variety. Areas of roughness on this coin are limited to the lower right obverse field and over the cheek and mouth; otherwise, the chestnut-gold surfaces are exceptional. Mint State Vermont coppers are exceedingly rare, and this coin appears to be the finest known. A terrific type coin, because it represents the sole use of the unusual die pair.

Ex: Ted L. Craig (2/1971); Donald Groves Partrick. PCGS# 563

**5814 1788 Vermont Copper, Bust Right AU55 NGC. RR-27, Bressett 18-W, W-2205, R.2** Ex: Craige. The RR-27 variety is one of the more available Vermont die pairs, but few examples exist on high quality planchets. This attractive AU coin was struck on better quality copper than most. Similar to several RR-27 representatives we've seen, the coin is struck marginally off-center right on both sides. A speckling of deep brown visits the overall red and chocolate-brown coloration, emphasizing the originality of this Choice, boldly struck example.

Ex: Ted L. Craige; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 563

**5815 1788 Vermont Copper, Bust Right VF25 NGC. CAC. RR-28, Bressett 21-U, W-2215, R.6.** The scarcity of the RR-28 Vermont is confirmed by the current VF25 coin, which ranks high in the Condition Census despite its modest grade. Importantly, the present coin is not struck over a previous coin, but rather on a fresh planchet. Glossy, deep-brown surfaces show the diagnostic obverse die cracks for the variety. The reverse is strong for the grade, with minor roughness and a few toned-over, old scratches at Liberty's center. The reverse is perfectly centered with the entire date on the coin. It would take a great deal of searching to find another RR-28 example as fine as this.

Ex: Bryant; Ted L. Craige; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 563

**5816 1788 Vermont Copper, Bust Right VG10 NGC. RR-28, Bressett 21-U, W-2215, R.6.** A scarce variety in any grade. This well-worn example is struck over a 1781 Irish halfpenny, which is possibly counterfeit. A heavy die break divides the coin at the effigy's neck, with the lower portion of the obverse sinking. The legends are positioned too close to the bust that sits low on the coin. The reverse is typically weak, where traces of the Irish halfpenny are seen at the margins (including the date of the host coin). Lightly porous surfaces display deep brown and steel coloration. This coin traces back to the Robert Vlack collection.

Ex: Vlack; Q. David Bowers Collection; Jon Hanson (3/1987); Donald Groves Partrick. PCGS# 563

### 1788 RR-27 Vermont Copper, AU55 Untroubled Planchet, Nice Originality

### 1788 Vermont, VF25 RR-28, High Condition Census

### 1788 RR-28 Vermont, VG10 Struck Over a 1781 Irish Halfpenny

**1788 Vermont Copper, MS61  
RR-29, Exceptional Mint State Coin  
One of the Two Finest Known**

**5817** 1788 Vermont Copper, Bust Right MS61 Brown NGC. RR-29, Bressett 22-U, W-2220, R.5. Ex: Hanson. The obverse die cracked early on, and this coin displays the diagnostic die break that stretches from near the left rim at 11 o'clock to the R of AUCTORI. Despite the major die crack, the obverse continued in service long enough to outlast the reverse die — an oft-used, stalwart die that finally shattered when minting this variety.

Both the Bressett reference and the Whitman *Encyclopedia* suggest that two striking periods were employed for the RR-29 variety. The first run produced coins with a slightly better strike, while the second mintage yielded coins with lesser definition on the motifs.

We believe the current coin was struck at Machin's Mills at the start of the second run, while the obverse die remained intact (albeit cracked) and the reverse die remained perfect.

According to the Carlotto reference, "The obverse die on this was cut shallow so the grading of this piece is even more difficult than on other Vermonts. Facial detail is non-existent on most pieces available today."

Strike weakness is clearly evident on this coin, where shallow dies were softly impressed at the centers. The peripheral legends and date are bold, with the exception of ET, which is opposite from the sunken area on the obverse caused by the heavy die break.

Later Machin's Mills issues are nearly always indistinctly engraved and indifferently struck. As a result, the portrait is incomplete at the head and neck on the present coin, although the facial features are somewhat visible at the profile. Liberty is complete (but not bold) on the reverse. Exceptionally smooth surfaces cover both sides of the coin, with only minor roughness on the neck. Mint luster shines beneath medium-brown surfaces, intermixed with tinges of red. The reverse is especially lustrous, hard, smooth, and well centered.

While the variety is somewhat available in lower grades, it is a real rarity in Mint State, with just two Uncirculated examples thought to be extant: this coin, and the former John Jay Ford, Jr. coin, last seen in the Ford Collection sale of May 2003.

Ex: Jon Hanson (10/2006); Donald Groves Partrick. PCGS# 563

### 1788 RR-29 Vermont, XF Details “Ski Jump” Die Break on Obverse

**5818 1788 Vermont Copper, Bust Right — Environmental Damage — NGC Details. XF. RR-29, Bressett 22-U, W-2220, R.5.** This late die state shows obvious sinking of the reverse die and the resultant lack of central detail where the die has failed, but it is bold at the margins. The reverse is rotated to just short of medal turn. Medium granularity primarily is seen on the obverse, with some light corrosion at the center of both sides of the coin. A severe downhill die break at the forehead follows the profile, then crosses the right obverse field to between OR of AUCTORI. The legend is punctuated fore and aft with stars.

Some facial detail remains on the coin, not always the case for this rare variety. There are no severe post-mint marks other than the Environmental factors indicated by NGC. Rich-brown coloration remains with deeper brown shades in the recesses. Given the scarcity of the issue, the problems with this RR-29 Vermont pale in comparison to the significant remaining appeal. This important piece clearly ranks in the Condition Census for the variety behind the better Ford example, and a few others. The Taylor and Norweb Collections had Very Fine examples; Ford's duplicate grades Fine; the Newman piece was certified Fine 12 NGC; and the ANS also has an example that approximates Fine condition.

*Ex: Ted L. Craig; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick.*

**1788 Vermont Copper, VF25**  
**Exceptional RR-30 'Backward C' Variety**  
**Ex: Norweb, Rare So Nice**

**5819** 1788 Vermont Copper, Backward C in AUCTORI VF25 NGC. RR-30, Bressett-23S, W-2225, R.6. Ex: Norweb. Tony Carlotto attributed the RR-30 variety to a "drunken die cutter," which seems harsh until the evidence is seen. Inexplicably, the legends are a jumble — VERMON is double cut on the V, and the other characters bounce up and down. E steps on R, and M collides with O. The N looks like it is trying to get away from the entire disaster. AUCTORI slides off the coin, its famous Backward C cut too high. The crude portrait lacks facial detail and appears fringed with spiky-rope piping. Bressett wrote the die was rejected, then pressed into service late in the series.

Importantly, the Backward C on this coin is nearly entirely visible. The reverse motifs are comparatively better made than those on the obverse, but are worn. Both sides of the coin are nicely centered, and at least half of the date is present despite the small planchet.

Many specialists claim the RR-30 Vermont as their favorite variety. As a result, this die pair is extremely rare both in absolute terms and from demand. Perhaps 30 pieces exist, although estimates range from 25 to 35 survivors. Historically, the updated Bonjour listing places the Norweb example (the present coin) in the top 12 examples. In our estimation, this coin deserves extra recognition, because so many examples are described as without the Backward C visible at all, or at best only minimally showing.

Smooth, deep brown surfaces contrast with golden-brown devices with all but the upper-most curve of the C on the coin. Less buckled than later die-state coins, this glossy copper is distinctly high-end and extremely desirable for its rarity, provenance, and considerable eye appeal. Another example in the Donald Groves Partrick Collection, graded VF30 NGC, but with the "backwards C" mostly off the planchet, is slated to appear in a future Partrick sale.

Ex: *Walter Breen Collection; Richard Picker (1959); Norweb Collection Part I (Bowers and Merena, 10/1987), lot 1299; Jon Hanson; Donald Groves Partrick. PCGS# 566*

### 1788 Georgivs III REX Vermont Copper, VF Details RR-31, Substantial Appeal for the Grade

**5820** 1788 Vermont Copper, GEORGIVS III REX — Reverse Scratched — NGC Details. VF. RR-31, Bressett 24-U, W-2260, High R.4. This late-series Machin's Mills muling was struck from a counterfeit halfpenny die to more closely imitate the better known and more accepted English inscription and portrait of King George III. Struck on an amazingly attractive, chocolate-brown planchet with boldly brought-up motifs and denticles on the obverse. Lustrous iridescence remains on both sides. The reverse is not as strongly rendered, but it is attractive nonetheless. The obverse appears at least 10 points finer than the reverse and is problem-free.

The RR-31 variety is also identified as the Vlack Machin's Mills halfpenny 22-88VT, and the obverse in some ways resembles the Vlack 15-85NY Immune Columbia as well as the 9-87NY Liber Natus Libertatum Defendo coppers. The reverse die was first used at the Rupert Mint and shows considerable die erosion at the rims. A series of old scratches at the lower left reverse are not too distracting and account for the assigned grade. This representative of a scarce and popular variety is sure to find a home in an advanced Vermont collection.

Ex: Ted L. Craig; Jon Hanson; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick.

### 1788 GEORGIVS III REX Vermont, VF Details Impressive Double-Strike Both Sides Date Shown Twice

**5821** 1788 Vermont Copper, Bust Right — Scratches — NGC Details. VF. RR-31, Bressett 24-U, Miller 100-I, W-2260, High R.4. Toothy, Atlee-style denticles separate the doubled obverse, with the twin sequential images upright and beautifully centered on a lovely tan and brown flan. The surfaces are microgranular yet appealing, and the visible portrait is a light, smooth-tan color. The reverse is likewise double-struck, rotated counterclockwise, and staggered so two dates show clearly, angled up from the bottom edge. The obverse displays considerably stronger details than the more weakly struck reverse (typical for the variety). Old, toned-over scratches, shallow from wear, account for the "details" grade.

The RR-31 variety is confirmed by the GEORGIVS III REX obverse legend, a late-series muling that is the same as Vlack 22-88VT. The formation of the letters is reminiscent of the Machin's-Atlee series. GEORGIVS is closely spaced, similar to the Immune and Liber Natus Libertatem Defendo issues. An impressive double-strike of an important and popular Vermont variety.

Ex: R. August (7/1983); Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick.

**1787 Vermont Copper, VF35  
RR-32, Excessively Rare  
Perhaps Five Coins Known in All Grades**

**5822** 1787 Vermont Copper, Bust Right VF35 NGC. CAC. RR-32, Bressett 12-K, W-2115, R.7. Ex: Ryder. Hillyer Ryder was unaware of this variety when his list of Vermont coppers was compiled, accounting for the assigned RR-32 position in the Ryder-Richardson sequence. In theory, the die pair would have been designated as RR-13 had the variety been known, and the rest of the numbers would have advanced one position. Struck from a unique obverse die and a reverse shared by RR-10 and RR-11, this variety is excessively rare. Perhaps five examples are known, two of which are in permanent collections (the Vermont Historical Society and the Bennington Museum), with just three coins remaining in private hands.

The obverse die for RR-32 broke almost immediately at 2 o'clock, but remained in service until it soon failed, accounting for the rarity of the die pair. Distinctively, the "I" of AUCTORI sits on the corner of the mailed bust — the only obverse in the series with AUCTORI in this position. The reverse is diagnostically broken above Liberty's head.

The current coin pedigrees to the Whipple Collection and was offered in the Thomas Elder sale on February 23, 1921. Later, it was part of the Ryder Collection and subsequently owned by John Jay Ford, Jr. before entering the Q. David Bowers Collection. It then passed to Jon Hanson in 1988 and soon thereafter to our consignor, Donald Groves Partrick.

The medium-brown fields and devices are smooth and attractive. Lighter, steely-tan color enhances the motifs, which are surprisingly bold for the assigned grade despite moderate wear. The obverse is centered on the flan, while the reverse is struck south by a small margin, with the date approximately half on the coin.

Historically, this coin is described in the references as an XF example, although the piece is currently certified VF35 NGC. All RR-32 examples are described in the literature as being overstruck on Nova Constellatio coins, yet the present example shows no evidence of an undertype and it is especially desirable for that reason.

Vermont specialists seldom see the variety, much less have an opportunity to own it. Many years may pass before another such occasion might arrive, and even then it is doubtful the quality of the coin can equal or exceed this amazing, rare Vermont piece.

Ex: Whipple Collection (Thomas Elder, 2/1921), lot 425; Hillyer Ryder; John Jay Ford, Jr. (5/1985); Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 563

### 1788 RR-33 Vermont Copper, VG8 Normally Unobtainable Only Three Confirmed Examples

**5823 1788 Vermont Copper, Bust Right VG8 NGC. RR-33, Bressett 21-Y. W-2210, High R.7.** Ex: Bowers. With one example in the Bennington Museum, perhaps only two examples are available to the growing number of Vermont series collectors. Appearances of the RR-33 variety are separated by decades, not months or years.

Both Tony Carlotto and the Bonjour census report three confirmed examples. The Whitman reference does not mention any others. The Bressett count was three to four coins, although this was an earlier estimate than either of those above. In any case, the variety is so rare that it is normally unobtainable.

All reported examples are overstruck on counterfeit Irish halfpennies. Unique punctuation at the legends uses stars after VERMON and before AUCTORI, framing the effigy's head. Stars are also seen on the reverse after INDE and before ETLIB. The reverse die is cracked below center, and bold remnants of the undertype make reading the legends nearly impossible. On the obverse, the bust is low and near the border.

The current example shows deep-brown coloration and smooth, even wear. Two rough patches — one on the obverse at the top of the breastplate and another area along the laureate — show a hint of verdigris, with some additional greenish encrustation at deep points on the reverse. Otherwise, the only distractions are attributable to the presence of the undertype and to a considerable amount of time in circulation.

As the Bowers coin, this rare copper is confirmed as one of two examples in collectors' hands. It is an extreme rarity in every regard — a "true Vermont" variety, not a muling or curiosity — and the desirability is almost unfathomable for the collector of an otherwise-complete set of Vermonts by variety.

Ex: Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 563

### 1787 RR-34 Vermont, VF25 Classic Series Rarity

**5824** 1787 Vermont Copper, Bust Right VF25 NGC. CAC. RR-34, Bressett 10-J, W-2100, R.7. Ex: Newman. Early on, Crosby Plate V of *The Early Coins of America* pictured an example of what today is known as the RR-34 Vermont copper, but no one paid much attention to it at the time. Hillyer Ryder did not notice the unique reverse paired with the long-used obverse (the obverse appears with nine different reverses in all) even though he must have studied the Crosby reference in great detail.

A key diagnostic of RR-34 is the position of the B in ETLIB, directly opposite and close to the central horizontal shield stripe. No other Vermont reverse shows the same exact position, although the 1788-dated RR-23 reverse is similar in many ways. Several advanced die cracks help confirm the reverse die.

Tony Carlotto was aware of just three coins, as was Kenneth Bressett. The Whitman (Bowers) reference is more current, noting the Bonjour census listed five coins, to which three more pieces were added for a total count of eight known examples. Of these, six coins are listed in very fine condition, one coin in fine to very fine, and a final coin in good condition.

The present example is certified VF25 NGC with CAC approval. In 1984 it passed from Eric P. Newman to the Q. David Bowers Collection, and in 1988 to our consignor via Jon Hanson. The reverse of this coin is pictured the 1976 Bressett plate section as Reverse J.

Several reverse die cracks are visible on the coin, providing important insight into the early failure of the die and the resultant rarity of the variety. A long, wavy crack travels from 1 o'clock on the shield to the T of ETLIB. A deep, second crack runs from the rim between ND of INDE, across the N, and into the field where it branches into two cracks, the longer one turning down across the leg of Liberty toward the date. Smaller cracks travel upward to the left of the date and between 1 and 7.

The surfaces of the coin are remarkably smooth, glossy, and attractive. The late die state on the reverse does not impair the sharpness of the devices, and the obverse appears entirely unbothered by post-mint marks or distractions. Both sides of the coin are reasonably well-centered, and the medium-brown color displays pleasing tan accents on the devices. A rare coin, certainly among the finest of the variety, and nearly impossible to improve upon.

Ex: Eric P. Newman (1/1984); Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 560

### 1788 Vermont Copper, VF Details Extremely Rare RR-35 ET LIB INDE

**5825 1788 Vermont Copper, ET LIB INDE — Environmental Damage — NGC Details. VF. RR-35, Bressett 20-X, W-2130, High R.6.** One of the rarities of the Vermont series, it is seldom offered in any condition. The Bonjour research could locate only about a dozen examples, nearly all in Fine or lesser conditions. This coin is desirable for its rarity as well as for the unexplained transposition of the reverse legend, with INDE and ET LIB switching sides around the figure of Liberty. Only the scarce RR-18 variety shares the same reverse to represent the type.

The obverse die is unique to RR-35, with a well-balanced appearance and a strong Machin's Mills rendering of George III, albeit not particularly shown to best advantage on this coin. All known examples of the variety appear to be overstruck on Irish halfpence. Despite roughness of the surfaces, the obverse retains considerable detail. Deep-brown color blends with an area of dark corrosion on the cheekbone. The reverse shows ET LIB INDE with reasonable definition. Areas of verdigris, detritus, and encrustation exist on the granular surfaces. Some deep red discoloration surrounds Liberty. Rarity trumps all, though, and without doubt this coin will generate much excitement among Vermont collectors, vying to fill the common hole that exists in most sets.

*Ex: Bennett; Faron; Jon Hanson; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick.*

**1788 Vermont Copper, VF25  
RR-36 High Condition Census  
Ex: Norweb Collection**

**5826** 1788 Vermont Copper, Bust Right VF25 NGC. RR-36, Bressett 10-P, W-2180, R.6. Ex: Norweb. 106.0 grains. Many years of searching have yielded no high-grade examples of this undeniably rare variety, although a few low-grade coins have come to light in the past 30 years. Armed with an impeccable pedigree, this sharply detailed coin survives despite a less-than-stellar flan, and holds steady near the top of the Condition Census. A jagged planchet flaw at 5 o'clock on the obverse is its most identifiable marker. A pair of voids on Liberty's center show minor roughness. The ebony-brown color retains reflectivity over the fields and dusky-olive overtones. A prize for the Vermont variety specialist.

Ex: Walter Breen; Richard Picker (1959); Norweb Collection (Bowers and Merena 10/1987), lot 1301; Jon Hanson (11/1987); Donald Groves Partrick. PCGS# 563

**1788 RR-36 Vermont Copper, Fine 15  
Notable Series Rarity**

**5827** 1788 Vermont Copper, Bust Right Fine 15 NGC. CAC. RR-36, Bressett 10-P, W-2180, R.6. Ex: Craig. Tony Carlotto estimated 20 to 25 coins are extant of this rare variety, with most examples in low grades, struck on poor planchets. A pair of VF coins top the Condition Census. This Fine 15 coin earned the CAC endorsement for quality and appeal based on its attractive, tan-brown coloration and strong obverse strike. The reverse is expectedly weaker than the obverse, but above average for the assigned grade in comparison to other survivors. The surfaces show light overall granularity, although noticeable glossiness on the portrait and on Liberty adds to the eye appeal. Destined for an advanced collection.

Ex: Ted L. Craig; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 563

## 1788 RR-37 Vermont, Fine 12 Few Confirmed Examples Exist

**5828** 1788 Vermont Copper, Bust Right Fine 12 NGC. RR-37, Bressett 10-M, W-2170, R.7. Ex: Craige. Although the variety was discovered more than 50 years ago, just five examples were confirmed when the 2009 edition of the Bowers *Encyclopedia of Colonial and Early American Coins* was published. Since then, a sixth coin may have been added to the roster, but to our knowledge there has been no great influx in the number of known coins.

Tony Carlotto was aware of just four examples when his reference was published in 1998, where he wrote: “The Ryder-37 is one of the super rarities of the Vermont series. It was discovered by Al Hoch in 1960 and announced in the first issue of *The Colonial Newsletter*. As with a few other Vermons, there is not much to say here because of the lack of specimens to make up data.”

The obverse die is punctuated by dots after VERMON and AUCTORI and the N touches (or nearly so) the hair. Several other usages of the obverse die occur in the series, all recognizable by a small, diagnostic dot on the bridge of the nose. The V of VERMON points between the two fillet ends.

The reverse is unique to RR-37 — the sole use of that die. It shows the legend as INDE ET LIB, without the usual spacing between ET and LIB, but with the individual letters each spaced widely apart. The 1 in the date is punched far left of 788, with double lines above the date shifted left on the flan. The diameter is a generous 27 mm on the present coin and on other known specimens.

Microporosity and occasional granularity do not detract from the glossy, light-brown surfaces. Steel accents accentuate the high points. Each side is nicely centered on the flan, and the devices are boldly detailed for the assigned grade.

Both the RR-37 and RR-38 Vermont varieties are extremely rare coins that aren’t mulings or peculiarities in the series. Both varieties are offered in this sale, an event that will make even the most-seasoned Vermont collector sit up and take note.

Ex: Ted L. Craige; Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick. PCGS# 563

### 1788 Vermont Copper, VG Details RR-38, Great Series Rarity

**5829** 1788 Vermont Copper, Bust Right — Environmental Damage — NGC Details. VG. RR-38, Bressett 10-N, W-2160, R.7. Ex: Bowers. In an absolute sense, this is the rarest Vermont copper of the series. It is a comparatively recent discovery (by Richard Picker in the mid-1960s), so perhaps more examples will be attributed as time passes. In more than 50 years, just seven pieces have been documented, many of which are in low grades or impaired. The obverse diagnostics include the V of VERMON pointing between the ribbons, the N touching the hair, and the period after AUCTORI equidistant between the I and the point of the bust. The reverse shows a strong straight line above the date, Liberty's branch hand pointing between the D and E of INDE, and the legend widely spaced. The 1 is low in the date. This dark and granular example confirms on all points despite the noted corrosion and crude condition. Needless to say, when ANY example comes to auction it is an event of note and is of the highest importance.

Ex: Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick.

### 1788 Connecticut-Vermont Copper, VF25 Highly Sought Crossover Muling RR-39, Miller 1-1

**5830** 1788 Vermont Copper, Bust Right VF25 NGC. RR-39, Bressett 25-U, W-2265, W-4400, High R.5. Scarce and highly valued by collectors of both the Vermont and Connecticut series, this strange muling was one of the late Machin's Mills issues apparently struck without much forethought for the die pair or regard for quality. Oddball planchets, the weak Vermont reverse (on its last legs), and a bulging obverse combine for a grader's nightmare.

This example shows much more detail than most survivors and displays attractive, chestnut-brown coloration. The reverse is considerably bolder than most RR-39 coins. A rough, small planchet (barely 25.0 mm) with numerous patches of corrosion and granularity account for the grade. The AUCTORI legend is partially off the coin, as is ET LIB. The date is missing — a result of the too-small planchet and a slightly off-center strike to the south. The reverse has a pronounced raised lip at the top from a defective die, as described by Tony Carlotto. Still, this coin is one of the finest known for the variety and ranks near the top of the Condition Census.

Ex: Richard August (11/1997); Donald Groves Partrick. PCGS# 563

**5831** 1788 Vermont Copper, Bust Right — Environmental Damage — NGC Details. VF. RR-39, Bressett 25-U, W-2265, High R.5. Ex: Bowers. Collected for both the Vermont and Connecticut series, this R.6 issue is by definition a rare find for either set. It was likely struck at Machin's Mills in Newburgh, NY, giving all three states claim to the muling. Struck on a very small planchet — just 25.2 mm with an irregular circumference — so the date and most of ET LIB are off the flan. Die buckling creates a diagnostic bulge on the obverse. Glossy chocolate-brown surfaces are smooth except for patches of russet granularity and porosity, accounting for the net grade. An obvious “demand rarity.”  
Ex: Q. David Bowers Collection; Jon Hanson (3/1988); Donald Groves Partrick.

**5832** 1788 Vermont Copper, Bust Right Fine 15 NGC. CAC. RR-39, Bressett 25-U, W-4400, High R.5. Ex: Hanson. In numismatic terms, it wasn't until recently that the RR-39 die pair was included as part of the Vermont series. The reverse was distinctly made for Vermont coinage, and was used for four previous Vermont varieties (RR-25, 28, 29, and 31). The obverse was just as obviously meant to be a Connecticut issue, with the legend AUCTORI / CONNECT and the Connecticut-style bust clearly for that series. The reason for the muling has never been explained, other than it was an illogical pairing by the Machin's Mills mint.

Struck on a slightly oblong, small-sized planchet (25.2 mm), this remarkable coin exudes eye appeal that is seldom seen for the variety. Where most known examples are rough and corroded, the current coin is smooth and attractive. Only scattered microporosity exists in the areas not fully brought up by the strike. Deep brown accents emphasize the overall glossy, tan-brown surfaces. As often seen for the variety when struck on small planchets, portions of the legends and the date are off the coin.

Ex: Stack's (privately); Jon Hanson (6/1998); Donald Groves Partrick. PCGS# 563

**5833** (1787) Vermont Fantasy Copper, Ineligible Type, Uncertified. V-87 Reverse. 82.0 grains. Despite its spurious origins, this fantasy Vermont copper has a long history in distinguished numismatic hands. The coin started out as a nice Vlack-87 imitation BRITTAN NIA halfpenny and retains the reverse in undisturbed condition. The obverse was planed off, and a Bust Right portrait was added with the AUCTORI VERMON legend. The resultant flan is thin, lightweight, and not very convincing because of the obvious difference in surfaces obverse-to-reverse. The obverse is rough and granular, while the reverse retains its original, reddish-brown color with smooth appeal. According to an old kraft envelope, this piece may have been a gift from Tom McAfee to Richard Picker. A companion piece to the “RR-13a” lot elsewhere in this sale.

Ex: The Richard Picker Collection (Stack's, 10/1984), lot 269; Boston C-4 Sale (McCawley-Grellman, 11/1997), lot 418; Donald Groves Partrick. PCGS# 661000

**Extremely Rare 1776 Continental Dollar  
Newman 1-A, Brass, MS63  
The First Continental Dollar  
The Finest of Three Known**

**5834** 1776 Continental Dollar, CURRENCY, Brass, Dotted Circles, Newman 1-A, Breen-1085, Hodder 1-A.1, W-8430, R.8. MS63 NGC. Die alignment: 45 degrees. 246.0 grains. 73% copper, 24% zinc, 3% lead. Ex: Brand. This early die state piece exhibits perfect obverse and reverse dies with no die cracks or other defects. A bold strike reveals a full face on the meridian sun on this nicely centered brass impression. Both sides exhibit rich olive surfaces with splashes of amber. Minor turquoise corrosion is evident on the reverse. The twin-leaf edge is sharp and complete. All design elements are bold, save for WE ARE ONE, which is weakly struck.

**How Many Varieties**

Each person who endeavors to complete a collection of Continental dollars will have to decide what constitutes a complete collection. Some will state that new varieties are only produced from new physical dies, regardless of the changes that took place to those dies. If only the most common composition is chosen, then a collection consists of four coins. Others will consider the changes to the first reverse and the last obverse as separate dies. Again, choosing the most available composition, a total of seven coins will complete a collection. Still others might decide that all of those changes are necessary, as well as each of the different compositions. Those collectors will seek a total of 10 different Continental dollars.

Walter Breen recorded 14 variations in his *Complete Encyclopedia*, including some minor compositional changes that likely do not exist. The *Whitman Colonial Encyclopedia* assigns 11 numbers, with one variety now believed unknown. The present offering includes all 10 known variations, with two additional pieces that will be discussed further in the following listings.

### Obverse and Reverse Dies

Obverse 1 shows a sundial, MIND YOUR BUSINESS, and sunrays inside the central ring. Roman numerals I through XII are clearly visible on the sundial, with a gap at the right between VI and VII. The numerals IX, XI, and XII are inverted when read alongside VII and VIII. Along the upper part of the sundial are seen I, II, III, IIII, V, and VI. Rotating the coin to follow the numerals below reveals VII, VIII, XI, X, IX, and IIX. Several of the Is are split, such as those in IIX (or XII), that actually appear to have four vertical strokes adjacent to the X. Michael Hodder compiled a brief article about the Roman numerals on the different obverse dies in the June 1988 issue of *The Colonial Newsletter*.

FUGIO and the meridian sun are located within the central band, and CONTINENTAL CURENCY and 1776 appear in the outer margin. The letters in CONTINENTAL become progressively closer, and the O has a crescent-shaped hook at its upper right curve. In CURENCY, RE are close and EN are distant. The serif of the G in FUGIO is boldly doubled. A short horizontal die line appears inside the U of YOUR on earlier die states of Obverse 1.

Reverse A has the legend WE ARE ONE at the center, inside a central band inscribed AMERICAN CONGRESS, with a comma below the small N in AMERICAN. The central band, in turn, is outlined by a glory of rays. Each of the 13 intertwined rings is made of dots and shading in the form of parallel lines, and each ring contains a state name, beginning with New Hampshire at 11:30. The abbreviated state names appear as: N HAMPS, CONNECT'T, R. ISLAND, N. YORKE, N. JERSEY, PENNSILV, DELAWARE, MARYLAND, VIRGINIA, N. CAROLIN, S. CAROLIN, GEORGIA, and MASSACHS. Many of the rays around the central band are solidly connected to individual dots in the various rings. A microscopic raised dot appears in the center of each ring, almost like a centering dot.

### The First Continental Dollar

The brass Continental pieces with dotted rings are undoubtedly the first Continental dollar coins produced. Since there were technically only two different reverse dies, the striking order is easily ascertained. The dotted rings of this first variety were soon reengraved into partial lines, and then complete lines, and it would be physically impossible to reverse that change to the dies. With complete rings appearing on the second reverse die, the order of striking is easily ascertained. Michael Hodder discussed the emission order:

"Given reverse A.x's subsequent re-cuttings, it [Hodder 1-A.1] was the earliest combination struck; the fact that the final appearance of this reverse, state A.3 (Newman-C), with dotted rings almost completely cut into lines, is identical in type (excepting only the repositioning of N.HAMPS and MASSACHS) to reverse B (Newman-D), it is likely that A.3 pre-dated B despite the lack of die links between the two. Newman was probably correct in supposing that his reverse A was the original design and was the first struck, since a progressive change from dotted to linear rings can be seen on the dies, and the former design was not utilized on reverse B."

### Census Details

This example is the finest of just three known and the second we have offered in two months. When we cataloged the Eric P. Newman example for our November 2014 sale, we listed the present piece as AU (per its grade in the 1984 Brand catalog), with the comment that "this example would likely grade Mint State today." And indeed it did, now appropriately certified MS63 by NGC.

Our Census of known examples is revised herein:

- 1. MS63 NGC.** Spink & Son, London (11/1910); Virgil M. Brand; Brand Estate (Bowers and Merena, 6/1984), lot 955; Donald Groves Partrick. 73% copper, 24% zinc, 3% lead. **The present specimen.**
- 2. AU50 NGC.** "Colonel" E.H.R. Green; Eric P. Newman; Eric P. Newman Numismatic Education Society (Heritage, 11/2014), lot 3036. 79% copper, 18% zinc, 1% lead.
- 3. VF.** Virgil M. Brand; Brand Estate (B. Max Mehl, 1/11/1937); Norweb Collection (Bowers and Merena, 3/1988), lot 2450. Illustrated in Michael Hodder's 1991 *ANA Centennial Anthology* article, "The Continental Currency Coinage of 1776."  
PCGS# 792

### Important 1776 Newman 1-B Dollar, AU55 Third Finest of 12 Known Thin Light-Weight Planchet

**5835 1776 Continental Dollar, CURRENCY, Thin Brass Planchet, Newman 1-B, Breen-1087, Hodder 1-A.2, W-8440, Low R.7. AU55 NGC. CAC.** Die alignment: 30 degrees. 199.9 grains. 78% copper, 19% zinc, 2% lead. Ex: Norweb. Attractive olive-brown toning appears on the bright yellow-brass surfaces of this Choice AU Continental dollar. Both dies are perfect with no signs of die cracks or other use. Slight softness of the design is noted at the center of the reverse. This piece is lighter in weight than any other of the variety, and the thin planchet certainly contributed to the strike weakness. Comparing this example to the next, the difference in planchet thickness is evident to the naked eye. Clearly, a case can be made for the listing of two separate varieties.

#### Changes to the Dies

The obverse is identical to that in the previous lot, with all of the same repunching and die lines, including the doubled-serif G in FUGIO, the hooked O in CONTINENTAL, and the die line inside the U in YOUR.

The reverse is the same die as above, although all of the dotted rings have been strengthened and now appear as unbroken lines, although many of the former dots are still visible in each ring. The rays around the central band are fully evident as before, with many solidly connected to the unbroken rings. The small N in AMERICAN is positioned over a comma, as before.

#### Denomination

Disagreement about the denomination of these pieces exists in the numismatic world today. Tradition has labeled these pieces as dollars, and they are offered here with the traditional label. The general gray appearance of the pewter examples, and their similarity in diameter to the Spanish dollars, certainly contributed to the dollar description. However, Walter Breen considered the brass pieces as “prototype pence” despite their significantly heavier weight, when compared to contemporary coppers that traded for one cent. It is our opinion that the brass examples are patterns for the fiat money Continental dollars struck in pewter.

#### Condition Census

A dozen examples of this variety are currently known, despite the URS-4 rating (five to eight known) in the Whitman *Colonial Encyclopedia*. Our Census of 12 known examples is updated from the November 2014 Eric P. Newman offering:

1. **MS63 NGC.** Charles Jay Collection (Stack's, 10/1967), lot 39; Laird Park (Stack's, 5/1976), lot 109; Herdman Collection (Bowers and Ruddy, 12/1977), lot 5039; Collection of a Patriotic American (Heritage, 7/31/2009), lot 1002.
2. **MS62 NGC.** Eric P. Newman Collection; Eric P. Newman Numismatic Education Society; Heritage (11/2014), lot 3037. 75% copper, 22% zinc, 1% lead.
3. **AU55 NGC.** B. Max Mehl (privately, 1/11/1937); Norweb Collection (Bowers and Merena, 3/1988), lot 2451; Partrick Collection. 78% copper, 19% zinc, 2% lead. **The present specimen.**
4. **AU55.** Taylor Collection (Bowers and Merena, 3/1987), lot 2047; Bowers and Merena (5/1992), lot 1010; Stack's (1/2007), lot 6439.
5. **AU or finer.** (Described as “Virtually Uncirculated” in the Carter catalog) B. Max Mehl (5/1950), lot 769; Amon Carter Collection (Stack's, 1/1984), lot 204.
6. **Choice XF.** Virgil Brand; F.C.C. Boyd; John J. Ford, Jr. (Stack's, 10/2003), lot 1.
7. **Choice XF.** Pine Tree “Promised Lands” Sale, lot 335; Gilbert Steinberg (Stack's, 10/1989), lot 63.
8. **XF45 PCGS.** 1999 ANA Sale (Heritage, 8/1999), lot 6465.
9. **XF.** Lermann Collection; Garrett Collection (Bowers and Ruddy, 10/1980), lot 1489. The Garrett catalog includes the following comment: “While the appearance of the present coin indicates that it is struck in copper, most specimens have been described as being in brass.”
10. **XF.** John L. Roper, 2nd (Stack's, 12/1983), lot 198; Stack's (9/2006), lot 112.
11. **AU Details NGC.** New Netherlands Coin Company (privately, 8/21/1955); Norweb Collection (Bowers and Merena, 3/1988), lot 2452; Partrick Collection. 89% copper, 8% zinc, 2% tin. **Offered below.**
12. **VF25 NGC.** Robison Collection (Stack's, 2/1982), lot 87; Donald Groves Partrick. Slated to appear in a future Partrick sale.

Ex: B. Max Mehl (privately, 1/11/1937); Norweb Collection (Bowers and Merena, 3/1988), lot 2451; Jon Hanson (3/25/1988); Donald Groves Partrick. Possibly earlier from the Brand Collection. PCGS# 792

### 1776 Newman 1-B Dollar, AU Details Thick Over-Weight Planchet

**5836** 1776 Continental Dollar, CURRENCY, Thick Brass Planchet, Newman 1-B, Breen-1087, Hodder 1-A.2, W-8440, Low R.7 — Mount Removed — NGC Details. AU. Die alignment: 10 degrees. 264.7 grains. 89% copper, 8% zinc, 2% tin. Ex: Norweb. The sharp strike of this piece is undoubtedly the result of the thick planchet. This piece is 65 grains heavier than the preceding lot. Rich chocolate-brown, chestnut, and tan surfaces are smooth and attractive, although rim and edge flaws remain at the top of the obverse and reverse from mount removal. All die lines and recutting remain as seen on the previous thin planchet piece. Small raised defects appear inside the New Hampshire ring that are not apparent on the other Newman 1-B coins in this sale.

#### Copper Composition

In his *Complete Encyclopedia*, Walter Breen recorded his variety 1088 as Newman 1-B in copper. His listing noted the Garrett coin, lot 1489, and suggested that it is unique in that composition. However, the Garrett catalog only said the coin had the appearance of copper and never claimed that as the actual composition:

"While the appearance of the present coin indicates that it is struck in copper, most specimens have been described as being brass."

Although the present piece from the Donald Groves Partrick Collection is nearly 90% copper, that information is insufficient to warrant a separate listing. Since the Garrett coin lacked metallurgical testing, the related comment is also insufficient to warrant a separate listing. It is our opinion that all of these pieces should be described as brass, and recorded as a single variety for their metallic content. However, as stated in the previous lot description, a strong case can be made for designating separate varieties classified as 1-B thin brass planchet, and 1-B thick brass planchet.

Ex: New Netherlands Coin Co. (privately, 8/21/1955); Norweb Collection (Bowers and Merena, 3/1988), lot 2452; Jon Hanson (3/25/1988); Donald Groves Partrick.

Lot 5837

### 1776 Continental Dollar, Newman 1-B, MS64 Finest Known in Pewter

**5837** 1776 Continental Dollar, CURRENCY, Pewter, Newman 1-B, Breen-1086, Hodder 1-A.2, W-8435, High R.7. MS64 NGC. CAC. Die alignment: 10 degrees. 270.0 grains. 87% tin, 9% lead, 2% antimony. Ex: Hanson. From the same dies as the preceding two lots, although offered here in pewter. Careful examination shows that this piece is the same die state as the thin planchet brass 1-B, above. The brass and pewter coins were struck concurrently. This Choice Mint State piece shows bright pewter-gray surfaces with hints of field reflectivity and delicate champagne toning. It is the finest of six known examples.

#### Newman 1-B vs. 1-C

Newman 1-B and early die states of Newman 1-C are easily confused. A heavy die crack through the tops of GI in FUGIO appears during the 1-C striking, and that crack later forms a die break over those letters. Pieces with that feature are immediately recognized as 1-C. However, early states before that die crack forms must be examined for reverse differences. Before the solid rings were strengthened, the reverse die was lapped. The comma underneath the N in AMERICAN appears as such on 1-B, and appears as a period on 1-C. A prominent die chip in the center of the Pennsylvania ring is present on some examples of 1-B, and absent on 1-C. The rays outside the center ring near RESS of CONGRESS are fully formed on 1-B and attenuated on 1-C, in some instances appearing as nothing more than points from the outer edge of that central ring.

#### Census Notes

The number of examples known has changed over the years. Pewter examples were unknown to Eric P. Newman in 1953. Two examples were recorded in Scott's *Comprehensive Catalog*, published in 1976, including one from the November 1968 Lester Merkin sale, and another with no further information available. The 1984 Picker catalog stated that the variety was unique in pewter, as the cataloger questioned the attribution of the 1968 Merkin specimen, that piece having been withdrawn prior to the sale. Breen recorded two examples in his 1988 *Complete Encyclopedia*, listing the Picker specimen and one other. Michael Hodder again said two known in his 1991 Anthology article. Q. David Bowers repeated the population of just two examples in his 2009 *Colonial Encyclopedia*, although by that time there were at least four examples actually known. Today, there are either six or seven pewter Newman 1-B dollars identified, depending on the status of the 1968 Merkin coin.

#### Census of Newman 1-B in Pewter

- 1. MS64 NGC.** Jon Hanson; Donald Partrick. **The present specimen.**
- 2. MS63 PCGS.** Collection of a Patriotic American (Heritage, 7/31/2009), lot 1001.
- 3. MS63 NGC.** Richard Picker (privately, 3/17/71 @ \$3,000); Donald G. Partrick. The discovery specimen. Slated to appear in a future Partrick sale.
- 4. Choice AU.** Richard Picker Collection (Stack's, 10/1984), lot 117; Eric P. Newman; Eric P. Newman Numismatic Education Society.
- 5. AU Details PCGS.** Americana Sale (Stack's, 1/2008), lot 5613; Coin Galleries (8/2009), lot 3019; Chicago Sale (Stack's-Bowers, 8/2011), lot 6140, where it was misattributed as Newman 1-C; Thaddeus Tatum.
- 6. VF.** Lester Merkin (11/1968), lot 100, withdrawn prior to the sale, its attribution in question.
- 7. Fine 12 PCGS.** Stack's (9/2006), lot 113.

Ex: Jon Hanson (10/1/2000); Donald Groves Partrick. PCGS# 791

**1776 Newman 1-C Continental Dollar, XF40**  
**America's First Silver Dollar**  
**Only Two Known in Silver**  
**The Earliest Known Silver Continental**

**5838** 1776 Continental Dollar, CURRENCY, Silver, Newman 1-C, Breen-1091, Hodder 1-A.3, W-8450, R.8. XF40 NGC. Die alignment: 10 degrees. 376.3 grains. 93% silver, 7% copper. Ex: Garrett. The 1776 Continental dollar is a coin of tremendous historic importance. It was America's first silver dollar, the first example of the basic unit our monetary system would be based on. The coin offered here occupies a unique place in the history of our coinage. From its first auction appearance in 1871 until the discovery of a silver example of Newman 3-D in 1886, this piece was the only Continental dollar that was known in silver. The absolute rarity and fascinating history of this remarkable specimen make this offering a numismatic milestone that will be long-remembered in the hobby.

This pleasing piece, matching the plate in the Parmelee catalog, has attractive surfaces showing delicate amber, sky-blue, and rose toning. Peripheral weakness appears near the right obverse border, and around much of the reverse. Most of the obverse border is well detailed, while the reverse shows minimal border beads. Aside from the obverse weakness that affects the N in CURRENCY (discussed below), the remaining details are sharp and bold, with a prominent date and strong central device. The peripheral reverse weakness affects some of the state names, while others are sharp and clear. A previous owner has suggested that this piece was struck over a Spanish-American 8 reales piece, although we can find no evidence of this.

#### Die State

An internal die break joins the tops of GI in FUGIO, from the top of the G to the right top of the I on this important Continental dollar. There are four readily recognized die states for the Newman 1-C dollars:

- A. Perfect obverse die
- B. Heavy crack through the tops of GI in FUGIO
- C. Internal die break at the tops of GI
- D. State C die break extends to the ON and TA of CONTINENTAL, with a second die break below TA.

Both of Donald Partrick's silver Newman 1-C Continental dollars (the only two known examples) are from Die State C. This example has radial weakness through the N in CURRENCY to the outer ring, while the other example, that will be offered in a future sale of the Partrick Collection, has that weakness extending through the sundial. The evidence suggests that the present piece was struck first, and is therefore America's *first* silver dollar.

#### Prior Discussion

This example appeared in William H. Strobridge's sale of the Dr. Charles Clay Collection in 1871. He wrote:

"Dollar of 1776. Obv. A sun dial, 'Continental Currency' (spelt with one r.) in a large circle, the sun moving within an inner circle, with the legend 'Fugio'; 'Mind Your Business,' in the Exergue; date below all. Rev. A large circle of rings linked together, each one bearing the name of one of the original States; 'American Congress' on a circle drawn within the circle of links; 'We Are One,' within all. Edge milled, rim dotted. Size 26. Has been considerably circulated as a coin, still in fine preservation. Extremely rare. Silver."

Strobridge commented briefly again about this piece in the descriptive catalog of the George F. Seavey Collection, where it appeared as the first entry under the heading of Pattern Pieces:

“A pattern from design made by Benj. Franklin, and familiar from impressions in tin, struck from the dies for distribution among the patriotic friends of the first Congress; the only one known in silver.”

Lorin G. Parmelee purchased the Seavey coins, and this example appeared 17 years later in the 1890 sale of the Parmelee Collection, where New York Coin & Stamp Co. (David Proskey and Harlan Page Smith), wrote:

“Continental Dollar, 1776: sun shining on dial: FUGIO at left: MIND YOUR | BUSINESS, in ex.: legend CONTINENTAL CURENCY (sic) | 1776. R. in radiant circle, AMERICAN CONGRESS : inner circle WE | ARE | ONE : all surrounded by circle of thirteen links, each inscribed with name of a State : has been circulated considerably : still in good condition : exceedingly rare; silver. (Crosby, pl. VIII, No. 15, page 305).

The buyer at the Parmelee sale was “Stone,” a pseudonym for John G. Mills. The Chapman Brothers offered the Mills catalog in 1904. The Philadelphia brothers provided a more detailed description than previous catalogers:

“1776 Dollar. CONTINENTAL CURENCY, 1776 surrounding double circle within which, sundial. Below it MIND YOUR BUSINESS; between inner and outer circle, FUGIO, and the sun, with rays shining towards the dial. Border of dots. Rev. 13 links interlinked, each bearing name of a State, enclosing in central space a double circle with rays radiating therefrom; between inner and outer circle AMERICAN CONGRESS and in the centre WE ARE ONE. Border of dots. Edge engrailed. Silver. Original. Only silver impression from these dies and but one other in silver from the die in which CURRENCY is spelled with two r's and signature of engraver E. G. FECIT. Very good and appears to have been in actual circulation. Though no records have been preserved of the authorization of this coinage yet the issuance of fractional paper notes bearing, on either side, the design of this coin would seem to show that the coinage was authorized and that the fractions of the unit were issued in paper. And the designs were used on the cents of 1787. The records of Congress and of the Government are so extremely meagre and omit mention of so much business that came before them that the omission of a record does not prove that such an issue was not authorized or intended.”

As the Chapman's pointed out, this coin actually circulated as money in the earliest days of our country's history. As one of only two known examples of the Newman 1-C, and one of only four 1776 Continental dollars of all die varieties in silver, this coin offers an irresistible combination of rarity and historic interest. It should appeal to collectors of all disciplines and we expect intense competition when this lot is called.

#### **Census of 1776 Newman 1-C in Silver**

**XF40 NGC.** Dr. Charles Clay (W.H. Strobridge, 12/1871), lot 867; George F. Seavey (W.H. Strobridge, 1873 Descriptive Catalog), lot 836; Lorin G. Parmelee (New York Coin & Stamp Co., 6/1890), lot 573; “Stone;” John G. Mills (Chapman Brothers, 4/1904), lot 110; Col. James W. Ellsworth; Knoedler Galleries; Wayte Raymond and John Work Garrett in 1923; John Work Garrett; Johns Hopkins University (Bowers and Ruddy, 10/1980), lot 1491; John J. Ford, Jr. (Stack's, 10/2003), lot 2; Jon Hanson; Donald Groves Partrick. **The present piece.**

**VF35 NGC.** Corrado Romano; Romano Estate; Romano Collection (Stack's, 6/1987), lot 24; John Jay Ford, Jr.; Ford Collection, Part VII (Stack's, 1/2005), lot 159; Donald Groves Partrick. Slated to appear in a future Partrick sale. PCGS# 793

Lot 5839

**1776 Newman 1-C Continental Dollar, MS65  
One R in CURRENCY  
Popular Type Issue**

**5839** 1776 Continental Dollar, CURRENCY, Pewter, Newman 1-C, Breen-1089, Hodder 1-A.3, W-8445, R.3. MS65 NGC. CAC. Die alignment: 10 degrees. 263.1 grains. 91% tin, 4% lead, 3% antimony. Ex: Craige. This is the usually seen Continental dollar variety. Pale champagne toning heightens the eye appeal of this Gem Mint State Continental dollar. Both sides exhibit bold details and extraordinary surfaces. A few dark toning spots are noted on each side.

**Intermediate Die State**

The obverse is the same as all earlier varieties, although here in an intermediate die state, with a heavy crack joining the tops of the G and I in FUGIO. That G has a sharply doubled serif as seen previously. The die line inside the U in YOUR is no longer visible. In later states, the obverse die has a full cud over GI, with a heavy extension of that crack to the base of the NT and top of the A. The reverse is the third iteration, with the beads almost entirely absent, now showing rings that consist of solid lines.

**Popular Type Issue**

There are three Continental dollar varieties that are each encountered more often than all other varieties, combined. While numerous Mint State examples of Newman 1-C exist, this piece from the Donald Groves Partrick collection is finer than any others that we have auctioned. Over the last 20 years, we have sold four different examples that are graded MS64, but never before have we offered an MS65-certified Gem. NGC has certified 32 Mint State examples of this variety, including two graded MS65 and one graded MS66. The Newman 1-C Continental dollar will appeal to type collectors who seek a single representative, as well as advanced specialists.

Ex: Ted L. Craige (5/18/1971); Donald Groves Partrick. PCGS# 791

## 1776 Continental Dollar, MS63 Unique Plain Edge Pewter Variant

**5840** 1776 Continental Dollar, CURRENCY, Pewter, Plain Edge, Newman 1-C, Breen-1090, Hodder 1-A.3, W-8445, Unique. MS63 NGC. CAC. Die alignment: 10 degrees. 293.1 grains. 92% tin, 3% antimony, 3% lead. Ex: Hanson. This is the Breen *Complete Encyclopedia* plate coin, struck on a "jumbo flan" that is greater in diameter than usual, with nearly complete outer margins around the border beads. The diameter is 42 millimeters, three to four mm. greater than other pewter examples in the present offering, and four to five mm. greater than the brass examples. The edge is plain, unlike any other Continental dollar. Expectedly, the weight is greater than usual for the pewter pieces. This large diameter plain edge piece is unique.

In the Whitman *Colonial Encyclopedia*, Q. David Bowers described one "on an overly large planchet." However, no mention appears there of the plain edge. This variety should be given a specific Whitman number, rather than a passing single sentence remark. The heavy crack through the tops of GI in FUGIO is now a full break from the top of the G to the left top of the I on this intermediate die state.

### Provenance

Breen recorded the early provenance as Pressman, Pine Tree Auctions, Joseph P. O'Hara, with no further details. This piece appeared as lot 332 in the Promised Lands Coin Auction conducted by Pine Tree Rare Coin Auctions on April 30 and May 1, 1974:

"Borderline Unc., considerable original brilliance, some gray tone, minor handling marks, none serious, struck on an exceptionally broad planchet so that blank areas show around full reverse border beads and (except for one small segment at right) around full obv. border beads. Plain edge. Planchet irregular as made, not round, and there is no evidence that it ever went through the Castaing machine (which imparted the twin-leaves edge found on all normal Continental Dollars). Evidently some kind of trial impression, not intended for regular circulation, as it would immediately have raised questions on the part of any recipient offered it as a regular coin. From one of the earliest die states known, showing only the very beginning of the usual break above GI, somewhat similar to the Guidebook illustration. The piece carries its own credentials, but for certainty and out of scientific curiosity it was tested about 1963 and found to be, like other Continental pewter dollars, in excess of 95% pure tin without any significant proportion of lead; its physical characteristics are obviously those of a struck coin, its die-identity certified to its genuineness. Beyond any possible doubt, unique. Ex Pressman coll."

Ex: J. Pressman Collection; Pine Tree Auctions (4/1974), lot 332; Pine Tree Auctions (4/1975), lot 676; Joseph P. O'Hara; Collections of Russell T. Logan and Gilbert G. Steinberg; Bowers and Merena (11/2002), lot 44; Jon Hanson (1/22/2003); Donald Groves Partrick. PCGS# 791

### 1776 Newman 2-C Continental Dollar Proper CURRENCY Spelling, MS63

**5841** 1776 Continental Dollar, CURRENCY, Pewter, Newman 2-C, Breen-1092, Hodder 2-A.3, W-8455, R.3. MS63 NGC. Die alignment: 45 degrees. 253.6 grains. 81% tin, 16% lead, 2% antimony. Ex: Craige. This Select Mint State Continental dollar exhibits reflective fields and lustrous light gray surfaces with impressive eye appeal. Delicate champagne toning appears at the upper left reverse. The strike is bold including strong facial details of the meridian sun. Although Newman 1-C and 2-C carry the same R.3 rarity rating, Newman 2-C is seen less frequently. NGC has certified 43 examples of 1-C with an average grade of 58, and 29 examples of 2-C that average 56.

#### New Obverse Die

While the basic design remains unchanged, this new obverse die has CURRENCY spelled correctly. The sundial is laid out as before with a time-slowng gap between the 6 o'clock and 7 o'clock hours. As on the previous die, the Roman numerals for 9 through 12 are inverted. While crude, all of the lettering is better formed, with only slight recutting. Several of the sun's rays begin in the field. The reverse is Newman's Reverse C, in a similar die state to that found with obverse 1, with none of the die rust that eventually forms in the Pennsylvania ring.

#### Emission Order

The possibility of an interrupted die marriage certainly exists, as Michael Hodder suggested in his *Anthology* article:

"The die is known in perfect condition, with faint traces of rust, noticeable traces, and heavy rust. Combination 1-A.3 [Newman 1-C] does not show this rusting, and it is clear that 2-A.3 followed the former in time. However, as A.3 is also known in a perfect state (although this state is rarer than the rusted state), it is possible that some 2-A.3 may have been struck before obverse 1 was finally retired."

#### Census Notes

NGC has certified 29 submissions of Newman 2-C (11/14). Among those, they have graded 20 examples as Mint State, including the Donald Groves Partrick piece and four others at the MS63 grade level, eight in MS64, and one certified as MS65. PCGS has certified 15 Mint State pieces, including six in MS63 and four in MS64. Those totals include both resubmissions and crossovers from one service to the other.

Ex: Ted L. Craige (5/18/1971); Donald Groves Partrick. PCGS# 794

Lot 5842

**1776 Silver Continental Dollar, MS62**  
**Newman 3-D, EG FECIT**  
**One of Two Known in Silver**  
**A 'Hard Money' Example**

**5842** 1776 Continental Dollar, CURRENCY, Silver, EG FECIT, Newman 3-D, Breen-1096, Hodder 3-B, W-8470, R.8. MS62 NGC. Die alignment: 45 degrees. 362.4 grains. 89% silver, 10% copper. Ex: Boyd. The 1776 Continental dollar is a fascinating subject for students of history, economics, and numismatics alike. It is the first representation of the basic unit of the United States coinage system, a unit that would come to have unrivaled importance in international trade, whose ups and downs affect the increasingly interlocked worldwide economy more than any other issue. The coin offered here served as a medium of exchange in the difficult early days of our country, when the success of that venture was very much in doubt. It deserves a prominent place in the finest collection in the land.

Although the pewter Continental dollars were often repudiated during the dark days of the Revolution, the importance of the dollar was recognized by the international community at an early date. In an article in the July 2014 issue of *The Numismatist*, researchers Eric P. Newman and Maureen Levine note that an illustration of the Continental dollar appeared as early as 1783 in Matthias Christian Sprengel's *Historisch-genealogischer Calender, oder Jahrbuch der merkwürdigsten neuen Welt-Begebenheiten, für 1784* (Historical and Genealogical Almanac, or Yearbook of the Most Remarkable New World Events for 1784). Two years later, Richard Watson published an analysis of a Pewter example of the Continental dollar in his better-known *Chemical Essays*. When the direct descendants of the Continental dollar (the Flowing Hair and Draped Bust types) began to appear in 1794, they were recognized and widely accepted in international trade. Today, silver examples of the 1776 Continental dollar are so rare that few numismatists have the opportunity to acquire one. Heritage Auctions has offered only one specimen of the 1776 Continental dollar in silver prior to this sale, that piece being the other silver example of the Newman 3-D variety, which realized \$1.4 million in the sale of the Eric P. Newman Collection, Part IV in May of 2014.

Faint surface reflectivity appears on the obverse of this attractive silver piece. Both sides exhibit pleasing silver-gray surfaces with lovely pale blue and rose toning. The strike is bold throughout, with the border details narrow in places, but complete except at the bottom of the reverse. Apparent rim imperfections are the result of the edge device affecting the strike of this lovely Continental dollar. The twin-leaf edge is visible around the entire circumference.

Stack's offered this piece in December 1947, writing:

"1776 Continental Dollar in Silver. Sundial in center with MIND YOUR BUSINESS below encircled by band bearing I.G. FECIT [sic] at bottom; two R's in CURRENCY. Reverse: Thirteen circles, each bearing a colony [sic] name, in chain form surrounds a double bordered central circle bearing AMERICAN CONGRESS around and WE ARE ONE in the center field. This is the Granberg specimen from the collection of the late Colonel Green. May be unique. In choice condition."

### Die Notes

The basic design is the same as the previous Continental dollar varieties, Newman 1-A through 2-C, although obverse 3 has the addition of the engraver's signature, EG FECIT, at the bottom of the central ring. The E in CONTINENTAL and the I in BUSINESS are both dramatically recut. Like obverse two, several of the rays are disconnected from the sun. The sundial has a gap at 3 o'clock, and the Roman numerals are illogical: I II III [IIII] V VI VII XII X IX IIX. The Roman numeral IIII, partially obscured on Newman 2-C, is not seen here as the gnomon occupies that position. That for 8 o'clock is represented by IIX, 9 o'clock is omitted, perhaps a representation of Benjamin Franklin's daylight savings time, and XI and XII are inverted in relation to the face of the sundial.

The reverse design is similar to the first reverse, although the geography is corrected, with the New Hampshire ring at 12 o'clock, left of the Massachusetts rings. The spelling is the same as before: N HAMPS, MASSACHS, CONNECT'T, R. ISLAND, N. YORKE, N. JERSEY, PENNSILV, DELAWARE, MARYLAND, VIRGINIA, N. CAROLIN, S. CAROLIN, and GEORGIA. The N in AMERICAN is the same size as the other letters. The glory of rays is prominent outside of CONGRESS, and attenuated outside of AMERICAN.

### Census of 1776 Newman 3-D in Silver

Two examples were recorded in the Green Collection appraisal, including this example that appears in the 1947 Theodore Grand sale, and the other that we sold in May 2014 as part of the Eric P. Newman Collection Part IV.

**MS63 NGC.** British auction sale, probably the Williams, Smith, Clark and Solly Collections (Sotheby's, 12/1886); two unknown intermediaries; S.H. & H. Chapman; consigned by the Chapman brothers to the Frank McCoye Collection (S.H. & H. Chapman, 5/1887), lot 238, withdrawn; George H. Earle Collection (Henry Chapman, 6/1912), lot 2132, realized \$2,200; Waldo Newcomer (Inventory number 2751), exhibited at the 1914 ANS Exhibition, described on page 21 and illustrated on Plate 13 of the catalog; sold to "Col." E.H.R. Green in 1933, via B. Max Mehl; Green Estate; Burdette G. Johnson in the early 1940s; Johnson Estate; Mary Cruzan; purchased by Eric P. Newman in May of 1956 for \$2,500; Eric P. Newman Numismatic Education Society (Heritage 11/2014) lot 30423. The discovery coin.

**MS62 NGC.** H.O. Granberg, purchased sometime before 1911, exhibited at the 1911 ANA Convention in Chicago; exhibited at the 1914 ANS Exhibition, described on page 19 of the catalog; "Col." E.H.R. Green; Theodore Grand Collection (Stack's, 12/1947), lot 10; F.C.C. Boyd; Boyd Estate; John Jay Ford, Jr.; Ford Collection, Part I (Stack's, 10/2003), lot 7; Jon Hanson; Donald Groves Partrick. **The present piece.** PCGS# 796

### 1776 Pewter Continental Dollar, MS63+ Newman 3-D, EG FECIT

**5843** 1776 Continental Dollar, CURRENCY, Pewter, EG FECIT, Newman 3-D, Breen-1095, Hodder 3-B, W-8460, Low R.4. MS63+ NGC. Die alignment: 160 degrees. 266.2 grains. 83% tin, 10% lead, 2% zinc. Ex: Kreisberg. This pewter-gray Continental dollar, featuring the signature EG FECIT, exhibits exceptional detail on both sides, with a portion of the facial details in the meridian sun. The centering is excellent and the pristine surfaces exhibit reflective luster. Clash marks appear in the margin outside of CURRENCY, and an obvious die crack crosses the lower interior of the New Hampshire ring. Additional cracks are evident in other rings.

#### Census Notes

NGC has certified 11 examples of Newman 3-D, and PCGS has certified 51 submissions of this variety (11/14). The population data includes pieces ranging from VF30 to MS67. Among those, NGC has graded two examples in MS63, three at the MS64 level, two in MS66, and one in MS67. As always, the various submissions to the two grading services include an unknown but likely substantial number of resubmissions and crossovers.

#### Personalities

Jerry Cohen and Abner Kreisberg operated a rare coin firm in Beverly Hills, California. Cohen (circa 1920-1990) began trading rare coins in 1949 and opened a coin store in Tucson, Arizona in 1955. He was member number 6 of the Professional Numismatists' Guild. Cohen conducted private sales and auctions in partnership with Abner Kreisberg from 1959 to 1984. Kreisberg was born in New York City in 1904. A classically trained violinist who trained at the Julliard School of Music, he was a partner with Abe Kosoff in Numismatic Galleries until 1954, and later with Cohen. He conducted annual auction sales in association with Hans M.F. Schulman from 1957 to 1967. Kreisberg died in Beverly Hills in 1997.

Ex: Jerry Cohen and Abner Kreisberg (privately, 4/15/1969); Donald Groves Partrick. PCGS# 795

## 1776 Continental Dollar, VF20 Newman 4-D, CURRENCEY

**5844** 1776 Continental Dollar, CURRENCEY, Pewter, Newman 4-D, Breen-1097, Hodder 4-B, W-8475, High R.7. VF20 NGC. Die alignment: 190 degrees. 257.4 grains. 86% tin, 10% lead, 2% antimony. Ex: Terranova. Deep steel patina in the fields is combined with lighter gray devices on this important rarity. The minor roughness of the surfaces identifies this example as the plate coin in Michael Hodder's 1991 *ANA Centennial Anthology* article, "The Continental Currency Coinage of 1776."

### Die Notes

The obverse carries the same basic design as the other Continental dollars, without the engraver's signature. The date appears in much smaller digits than on the other three obverse dies. The sundial has the same inverted Roman numerals as found on the other dies, and also has the wide gap at 3 o'clock, the numerals appearing as: I II III (IIII) V VI VI VII VIII XI X IX IIX, with 6 o'clock repeated. The legend appears as CONTINENTAL CURRENCEY. The legend is frequently described as a misspelling, although a better description might be an alternative spelling. Hodder writes:

"It is interesting to note, however, that the same 'misspelling' occurs on the February 17, 1776 paper currency issue, which have been thought to have been the prototype for the coinage's obverse design. It is clear from obverse 4's fate that its employers felt the additional E in CURRENCEY was unwanted."

The reverse is the same die that previously appeared on Newman 3-D, the EG FECIT variety. Die states seem to be intermingled with Newman 3-D, suggesting that both varieties were coined simultaneously.

### Census of Known Examples

This variety poses problems for the Census-taker, as a population of four examples has been recorded since Breen's *Complete Encyclopedia* was published in 1988:

"1) Newcomer, Green, Eric P. Newman, 285.5 grs. = 18.5 gms. 2) British coll., NN/Seaby 11/70: 429, Roper: 202, \$6,050, 277.3 grs. = 17.97 gms. 3) British coll., Anthony Terranova, 257.7 grs. = 16.7 gms; sp. gr. 7.27 +/- 0.01. 4) Pvt. coll."

The present piece from the Donald Groves Partrick Collection is number 3 in Breen's list, while number 4 remains unidentified. Until such time as that piece is identified, the number of examples known to us remains just three:

**MS63 NGC.** Waldo Newcomer; B. Max Mehl; "Colonel" E.H.R. Green; Green Estate; Partnership of Eric P. Newman / B.G. Johnson d.b.a. St. Louis Stamp & Coin Co.; Eric P. Newman @ \$400.00; Eric P. Newman Numismatic Education Society (Heritage, 11/2014), lot 3041 at \$381,875. Plated in the Breen *Complete Encyclopedia* and the Whitman *Encyclopedia of Colonial and Early American Coins*.

**Choice XF.** New Netherlands-Seaby's Joint Sale (11/1970), lot 429; John L. Roper, 2nd (Stack's, 12/1983), lot 202; John J. Ford, Jr. (Stack's, 10/2003), lot 9.

**VF20 NGC.** The present piece, per the provenance below.

**Unknown grade.** Breen's "private collection" coin with no further details.

Ex: London Coin Dealer; Anthony Terranova (9/7/1985); Donald Groves Partrick. PCGS# 797

### 1776 Continental Dollar, AU58 Newman 5-D, Floriated Cross

**5845** 1776 Continental Dollar, CURRENCY, Ornament, Pewter, Newman 5-D, Breen-1098, Hodder 4.1-B, W-8480, Low R.8. AU58 NGC. CAC. Die alignment: 180 degrees (coin turn). 302.0 grains. 88% tin, 7% lead, 2% antimony. Ex: Norweb. Don Partrick explains the bidding at the Norweb sale on his envelope: "Newman went to \$30,000; JJF underbidder. JJF had said 'I must have this to complete my set!'" John J. Ford, Jr. never acquired an example of the Floriated Cross variety, despite two more opportunities in the decade following the Norweb sale.

#### Die Notes

This is the same physical die as Newman's obverse 4, although here the incorrect spelling has been revised to the correct spelling of CURRENCY. An ornament sometimes called a Floriated Cross covers the final Y that was still present after the spelling correction.

#### Auction appearances

This is only the fifth auction appearance of any of the three known examples of Newman 5-D. The variety was unknown to Sylvester S. Crosby, and apparently first discovered in the early part of the 20th century. One example was part of the Waldo Newcomer collection.

#### Census of Newman 5-D

There are just three known examples, and this, the finest of the three, is the second example that we have sold in the last six years. This variety was thought to be unique until late 1990. Michael Hodder wrote of two pieces in the first paragraph of his Anthology article, then wrote that "only one specimen is known" in the next paragraph of that article.

**1. AU58 NGC.** B. Max Mehl (privately, 1/11/1937); Norweb Collection (Bowers and Merena, 3/1988), lot 2458; Jon Hanson (3/25/1988); Donald Groves Partrick. **The present specimen.**

**2. XF45 PCGS.** Christies (11/1990), lot 241; Collection of a Patriotic American (Heritage, 7/31/2009), lot 1006.

**3. VF30, estimated grade.** Waldo Newcomer; Col. E.H.R. Green; Burdette Johnson; Mary C. Cruzan Estate (Spink America, 6/1997), lot 19; Anthony Terranova; Joseph Lasser; Colonial Williamsburg. Graded Fine in the Spink America catalog, but clearly finer in our opinion.

PCGS# 798

### Elusive 1783 Betts-614 Pewter Medal, AU55 Treaty of Paris 'Continental Currency' Reverse

**5846** 1783 Treaty of Paris Medal. AU55 NGC. Crosby Page 370, Betts-614, High R.6. 358.6 grains. 93% tin, 2% antimony, 1% lead. Ex: Norweb. On the obverse, America (standing Indian) greets Britannia (seated figure). A dove of Peace flies above, carrying an olive branch. St. Paul's Cathedral in London appears to the left, with a monument and ship in the background. The legend, FELICITAS BRITANNIA ET AMERICA, translates to Britain's and America's Happiness. Dated September 4, 1783 in exergue, one day after the Treaty of Paris was signed.

The reverse of this medal resembles the Continental dollar reverse design, although there are clear differences. WE ARE ONE appears inside a central band that is inscribed AMERICAN CONGRESS with the N in AMERICAN the same size as the other letters. The two words are separated by a group of three dots before the C in CONGRESS, and a six-pointed star following that word. The glory of rays is replaced by 13 groups of three lines. The state names in the rings begin with Massachusetts at 11 o'clock and New Hampshire near 12 o'clock, meaning this reverse was patterned after Newman's reverse C.

Lovely medium gray color with full rims and considerable border detail that is lacking from 1 o'clock to 4 o'clock on the obverse, and from 12 o'clock to 5 o'clock on the reverse. There are none of the usual rim bruises that are typically found on these medals. The ornamented edge resembles the twin-leaves edge of the Continental dollars, although there are clear differences. Just over a dozen examples of the Treaty of Paris medal survive, and most of those are lower grade pieces.

Ex: Baldwin's (1961); Norweb Collection (Bowers and Merena, 3/1988), lot 2459; Donald Groves Partrick.

## BETTS MEDAL

## CONFEDERATE STATES OF AMERICA

# 1861 Original Confederate Half Dollar, PR30

## Four Examples Struck, Ex: CSA President Jefferson Davis

### Only Coin Actually Struck by the Confederacy

#### 5847 1861 ORIGINAL CONFEDERATE HALF DOLLAR, PR30 NGC.

Ex: Jefferson Davis/Donald G. Partrick Collection. Weight 189 grains, composition 93% silver, 6% copper, 1% trace elements. For absolute rarity, historic significance, and sheer romantic appeal, the 1861 Confederate half dollar is unsurpassed in the annals of American coinage. As coin collector L.L. Wilson wrote in 1915, this issue represents:

“The only Numismatic Record of a nation of nine million people who maintained a precarious existence for the space of nearly four years and a half. There are very few coins today that can be said to rank in interest with this half dollar with its authoritative U.S. obverse and distinctive Confederate States reverse design. Such a unique combination of the official devices of two great opposing powers probably has not another parallel in history.”

Only four examples were struck at the New Orleans Mint in April of 1861, after that facility was “taken into trust” by the Confederacy. The coins were dispersed to non-numismatic owners at the time of striking and all knowledge of the issue vanished for the ensuing 18 years. All four coins eventually resurfaced over an extensive period of 110 years, but they were subsequently held tightly in important collections and institutions, and the opportunity to acquire a specimen has been almost as rare as the coins themselves. Heritage Auctions is privileged to present this iconic numismatic treasure, which was once owned by CSA President Jefferson Davis himself, in just its second public offering.

#### COINS STRUCK AT THE NEW ORLEANS MINT IN 1861

Following usual mint procedure, dies for 1861 coinage were sent to New Orleans from the Philadelphia Mint late in 1860 and a considerable store of bullion was on hand to conduct business as usual when the new year started. As things turned out, the New Orleans Mint struck coins under the auspices of three different governments in 1861. From January 1 to January 26, the mint remained under federal control and a total of 330,000 Seated Liberty half dollars and 5,000 Liberty double eagles was coined. The State of Louisiana assumed control of the mint from January 26 through March 31, and a coinage of 1,240,000 half dollars and 9,750 double eagles was accomplished. Finally, the Confederacy officially took over the facility on April 1, and struck 962,633 half dollars and 2,991 double eagles before closing the mint on April 30, 1861. In addition, a program of Confederate coinage was briefly contemplated in April, and four specimens of the proposed half dollar, with a standard Seated Liberty obverse and a unique reverse design were struck to demonstrate the concept. These are the famous Original Confederate half dollars known to numismatists today.

An account of the striking of these historic coins was provided by Chief Coiner B.F. Taylor, of the New Orleans Mint, many years later, at the request of General Marcus J. Wright, who was compiling the Confederate Archives for the Adjutant General's Office:

“War Department,  
Adjutant-General's Office  
Washington, March 27, 1879.

“Dr. B.F. Taylor, New Orleans, La.:

“Dear Sir: The inclosed circulars will explain to you the nature of the duties upon which I am now engaged.

“I beg to refer you to my friends, Generals Beauregard and Hood, and Captain Pierce, of your city, for my service in the Confederate army. I would like to have from you for file with the Confederate archives, a letter stating when and where you were appointed chief coiner of the Confederate States Mint, instructions received, copies of any original papers, sketches, descriptions, etc., of all the coins made, etc. This will make a valuable addition to Confederate history, and I know no one but you can give it.

“Very truly yours,

“Marcus J. Wright”

Taylor replied:

"New Orleans, La., April 7, 1879.

"To Hon. Marcus J. Wright:

"Dear Sir: Your favor requesting a statement of the history of the New Orleans Mint, in reference to the coinage under the Confederate government, is received.

"That institution was turned over by the State of Louisiana the last of February, 1861, to the Confederate States of America, the old officers being retained and confirmed by the government, viz.: Wm. A. Elmore, Superintendent; A.J. Guirot, Treasurer; M.F. Bonzano, M.D., Melter and Refiner; and Howard Millsbaugh, Assayer.

"In the month of April orders were issued by Mr. Memminger, Secretary of the Treasury, to the effect that designs for half-dollar coins should be submitted to him for approval.

"Among several sent, the one approved bore on the obverse of the coin a representation of the Goddess of Liberty, surrounded by thirteen stars, denoting the thirteen States from whence the Confederacy sprung, and on the lower rim the figures 1861.

"On the reverse there is a shield with seven stars, representing the seceding States; above the shield is a liberty cap, and entwined around it stalks of sugar cane and cotton. The inscription is: 'CONFEDERATE STATES OF AMERICA.' The dies were engraved by A.H.M. Patterson, engraver and die sinker, who is now living in Commercial Place. They were prepared for the coining press by Conrad Schmidt, foreman of the coining room (who is still living), from which four pieces only were struck.

"About this period an order came from the Secretary suspending operations on account of the difficulty of obtaining bullion, and the Mint was closed April 30, 1861.

"Of the four pieces mentioned one was sent to the government; one presented to Prof. Biddle, of the University of Louisiana; one sent to Dr. E. Ames, of New Orleans, the remaining one being retained by myself. Upon diligent inquiry I am unable to find but one piece besides my own, that being in the possession of a Confederate Officer of this city, who transmits it to his son as a souvenir of his father's service in the Confederate cause.

"So soon as copies are made I will take pleasure in sending you a specimen for the archives you represent.

"Very respectfully, your obedient servant,

"B.F. Taylor, M.D.

"Formerly Chief Coiner C.S.A."

The above account is not accurate in some minor details. For example, the Confederacy did not officially take control of the mint until April 1, 1861, not the end of February as Taylor suggests. The engraver's name was Peterson, not Patterson, and Prof. Biddle is almost certainly a misnomer for John Leonard Riddell, who had worked extensively at the New Orleans Mint as melter and refiner and was the Postmaster of New Orleans during the Civil War. These inaccuracies can probably be attributed to Taylor's faulty memory after the intervening 18 years and mistakes in transcribing hand-written documents in the 19th century.

Although Taylor reported lack of bullion as the official reason for discontinuing the Confederate coinage, this seems unlikely. The remainder of the bullion fund was evacuated from New Orleans in April of 1862 on the steamer *Star of the West* under the care of A.J. Guirot, before the city was recaptured by Union forces. The bullion was valued at nearly \$1 million dollars, enough to continue coinage for some time. The real reason for stopping the coinage was a combination of factors, including Treasury Secretary Memminger's belief that the decline in trade that followed the opening of hostilities would reduce the need for coinage. Memminger also believed the considerable expense of running the mint, paying salaries, etc. should be avoided, and the money used for other purposes. In the case of the Confederate half dollar, the real problem was more immediate and decisive. In a situation reminiscent of the Saint-Gaudens Ultra High Relief double eagles struck almost 50 years later, the reverse design of the Confederate half dollar was engraved in such high relief that the design detail could not be brought up with one blow of the regular coin press. This detail was reported by M.F. Bonzano (melter and refiner at the New Orleans Mint) in a letter to Mint Director James Kimball on November 4, 1887:

"Under the auspices of the superintendent, treasurer, and coiner, who probably believed in the possibility of a peaceful secession, designs for a Confederate coin were made, and that of a half dollar by the coiner, accepted and executed by an engraver of this city, who produced a half dollar die of such high relief as rendered it impractical for use in a coining press. From this die four pieces were struck, by successive blows of a screw press."

The "successive blows of a screw press" gave the coins sharp definition and deeply reflective surfaces, and most numismatists classify them as proofs today. Of course, high-speed coinage was impossible under these circumstances. Neither B.F. Taylor, who drew up the design, nor A.H.M. Peterson, who engraved the die, had much experience in preparing dies for coinage, as these were normally supplied by the Philadelphia Mint every year. A critical Patterson DuBois commented in later years, "In this, as in other matters, the Confederacy got beyond its proper depth. They therefore were struck in a screw press, a slow process relegated in this fast age to medals and master-pieces." Evidently Taylor forgot, or was embarrassed to mention, this miscalculation when he reported on the striking of the coins in 1879. In any case, the plan for a distinctive Confederate coinage was abandoned in April of 1861, the Confederacy itself fell four years later, and the long gray shadow of the Lost Cause obscured the coin's existence for a generation.

### THE FIRST COIN SURFACES

On January 2, 1879 Pennsylvania coin dealer Ebenezer Locke Mason published an article titled *Craze for Coins* in the *Philadelphia Record*. Mason's emphasis on the high prices dealers were willing to pay for rare coins prompted a number of responses with offers to sell, or questions about, coins readers had acquired and hoped were worth a fortune, like the ones in Mason's article. One of the most unlikely contacts was Dr. B.F. Taylor, who was then the Secretary-Treasurer of the Louisiana State Board of Health. Taylor had carefully preserved his Confederate half dollar for the 18 years since its striking, never parting with it in hard times or publishing its existence for interested collectors. It may be that he was afraid of repercussions for his service with the Confederacy, or government seizure of the coin, if the circumstances of its striking became public. These fears were allayed in the more tolerant climate of the 1870s, by which time Philadelphia engraver Robert Lovett, Jr. had come forward about his role in making dies and striking the 1861 Confederate cents, under contract with the Confederate government. The cents were struck privately, unlike the Confederate half dollars, and Lovett apparently kept them well-hidden until 1873, for fear of federal charges if his part in their production became known. Captain John W. Haseltine successfully sold a number of these pieces and produced restrikes in various metals which he marketed widely. Lovett and Haseltine suffered no repercussions for their activities, and their financial success may have emboldened Taylor to reveal the existence of his coin.

Mason was initially skeptical about the existence of any Confederate coinage and asked him for more information and a rubbing of the coin, which Taylor soon provided. Mason was then convinced about the coin's authenticity and published another piece detailing this new discovery in the March 11, 1879 edition of the *Record*. The prestigious *American Journal of Numismatics* picked up the story from this second article and ran an edited version in their April 1879 edition, making the issue known to most of the important numismatists in the country. In the meantime, Taylor had received Marcus Wright's inquiry from the Confederate Archives on March 27, and answered him on April 7. He must have let the local press know about the inquiry, because the New Orleans *Picayune* published the correspondence between Wright and Taylor on April 9.

Amid this flurry of activity in the press, Mason took possession of both the Confederate half dollar and the reverse die used to strike it, which Taylor had also preserved over the years. Acting on Taylor's behalf, Mason embarked on an extensive advertising campaign, including a letter to the American Numismatic and Archaeological Society, which was read before the assembled members on May 20, 1879. Apparently, Taylor genuinely desired to place his coin with an institution that would preserve and promote it for its historic significance. Mason's letter offered to "dispose of a Confederate silver half dollar; also the reverse die for the same." Unfortunately, the Society responded with exactly the kind of reaction Taylor must have feared in the years after the war. The editor of the *AJN* urged:

"... this piece, having been struck in the New Orleans Mint by government officers, with government tools, and on silver stolen from the United States, should be restored to its true ownership, and that it be placed in the Mint Cabinet."

Rebuffed by the ANS, Mason took the Confederate half dollar on a whirlwind tour of the major coin dealers in New York and Boston. Traveling by rail, he visited such numismatic luminaries as Edward Cogan, Henry Chapman, H.G. Sampson, Charles Nichols, Lorin G. Parmelee, Henry Ahlborn, Henry Cook, W. Elliot Woodward, J.W. Scott, and the New England Historical Society. Mason's efforts resulted in a great deal of historical interest and admiration for the coin, but little in the way of financial reward.

Meanwhile, canny New York coin dealer John Walter Scott wrote to CSA President Jefferson Davis, who he believed had received the coin "sent to the government" in Taylor's account. Davis responded:

"Beauvoir P.O.

"Harrison County, Miss.

"May 10, 1879

"Sir:

"I had a Confederate coin. It was in my wife's trunk when it was rifled by the Federal officers sent on board the prison ship on which she was detained at Hampton Roads before and after my confinement in Fortress Monroe. The coin, some medals, and other valuables were stolen at the time. Whether the coin be the same which has been offered to you as a duplicate I cannot say. It is however, not true, as published, that it is now in my possession.

"Regretting that I cannot give you more exact information on the particular subject of your inquiry, I am,

"Respectfully,

"Jefferson Davis"

Convinced of the importance of the coin, Scott made Mason a "low-ball" offer for the piece. Mason, weary of the prolonged marketing campaign, finally sold both the coin and the Confederate reverse die to Scott for \$310. Mason published the story of the striking of the coins and reprinted the correspondence between Wright and Taylor in the June, 1879 edition of his house organ, *Mason's Coin Collector's Herald*, and detailed his efforts to place the coin, including the final sale to Scott.

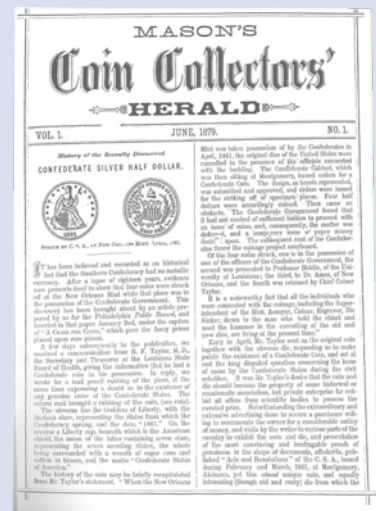

## JOHN WALTER SCOTT AND THE RESTRIKES

After his purchase of the discovery piece and the reverse die, John W. Scott's efforts to promote the Confederate half dollar were even more energetic than Mason's. He published an article about the Confederate cents and half dollar in the June 1879 edition of the *Coin Collector's Journal*, outlining Taylor's account of the striking and mentioning his purchase of the discovery coin. Perhaps inspired by Haseltine's successful offering of Confederate cent restrikes, he decided to sponsor a similar program of restrikes for the half dollar. Since he had only the reverse die for the half dollar (Taylor had not preserved the obverse), Scott conceived the ingenious idea of using regular-issue 1861-O Seated Liberty half dollars, with the reverse design "drilled off," for planchets. David Prosky assisted in the difficult task of rounding up 500 examples from the original issue and filing off the reverse design. Each of the now one-sided coins was placed in the anvil position of a screw press, with the obverse padded, and affixed in a collar with a blank edge, after which the now-blank reverse was struck with the Confederate half dollar die. Inevitably, the obverse design and edge reeding were slightly flattened in this process, but the Restrikes are still convincing facsimiles of the Original 1861 Confederate half dollars, and have often been mistaken for the very rare Originals. Because of the planed reverse, the weight of a typical Restrike is about 185 grains, noticeably lighter than the standard 192 grains for a Seated Liberty half dollar of that era. The Original 1861 Confederate half dollars were struck on standard planchets, so their weights are close to the 192-grain standard, a reliable way to distinguish between Restrikes and Originals.

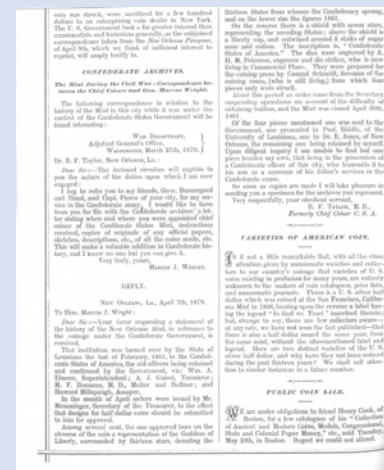

Because the rim was crumbling slightly above the ER in AMERICA, Scott was afraid that the old, somewhat rusty, Confederate die would break during the striking process. So he would have at least something to offer if the dies broke while coining the 500 Restrike half dollars, he first produced 500 tokens struck in white metal, which he believed would cause less wear on the die. These tokens featured the Confederate design on the reverse, with an obverse bearing the inscription "4 ORIGINALS STRUCK BY ORDER OF C.S.A. IN NEW ORLEANS 1861 \*\*\*\*\* REV. SAME AS U.S. (FROM ORIGINAL DIE, SCOTT).

CSA President Jefferson Davis

Mason's Coin Collectors' Herald  
June 1879

Mason's Coin Collectors' Herald  
Page 2

Scott began marketing the Restrikes through fliers in September of 1879, offering the coins at \$2.00 each and promising to deface the die after 500 pieces were struck. He also offered the Original Confederate half dollar for a price of \$1,000, but no takers were forthcoming. The tokens were offered at 50 cents per piece, and the cancelled die was offered for \$50. Scott reported that sales of the Restrikes were brisk and he ran out of coins before the demand could be met, but Proskey later revealed that Scott maintained a large supply on hand for many years. The coins were all dispersed by the early part of the 20th century, and have become steadily more popular over the years.

The Restrikes were often mistaken for Originals in later years, making pedigree tracking difficult because of all the spurious sightings in the literature. For example, coin collector L.L. Wilson wrote an account of his coin, which he believed to be an Original, in the August 1915 edition of the *Philatelic West*, with a halftone image of the coin and a provenance, making his case most convincing. Although the image of the obverse seems less flattened than the typical Restrike, careful comparison to the specimens known today reveals no match, and the rim above ER in AMERICA seems to show the crumbling seen on the Restrikes. In all likelihood, Wilson's coin was a better-than-average Restrike, which he mistook for an Original.

David Proskey

## FIRST AUCTION APPEARANCE

With his restriking program completed and no interest in the Original at his asking price of \$1,000, Scott decided to offer his coin in lot 163 of the John W. Scott Collection (Scott Stamp & Coin Co., 3/1882). The extensive lot description reprinted most of the earlier article from *The Coin Collector's Journal*, included a line drawing of the coin, and took up most of a page of text. P. Scott Rubin's priced copy of the catalog indicates a bid of \$870 was received for the coin, but Scott was apparently serious about his \$1,000 reserve, despite the fact that the offered amount represented a tremendous return on his investment. Scott retained his Confederate half dollar for many years, keeping it in a safe deposit box in New York City. He finally consigned the coin to Thomas Elder, who offered it in lot 552 of the William Lukens Collection (Elder, 3/1910).

Elder provided a preview of the coin in the February 1910 issue of *The Elder Magazine*:

"The beginning of the year 1910 will be well signalized in a numismatic way by the offering for sale next month in the Elder Auction Rooms of the only known specimen of the official metallic coinage of the Confederate States of America.

"Coming from its resting place in a safe deposit vault, where it has lain for 28 years, this unique half dollar promises to create one of the greatest sensations of the year in the numismatic world, and, on account of its unusual historical significance, may go even a step farther and become a sensation of the lay world, which usually takes but little interest in a coin purely as such, but which is always intensely alive to any souvenir or relic that is so closely associated with the Lost Cause as this solitary specimen of its coinage unquestionably is."

Elder's lot description in the Lukens sale comprised a page and a half of text, and he intended to provide a photographic image of the coin, but according to P. Scott Rubin's annotated catalog, the plate was never issued. Several newspapers covered the sale and the coin received a bid of \$3,750, a staggering price for any coin at the time, \$150 more than the Stickney 1804 dollar sold for in 1907. Unfortunately, once again, there was an unreasonably high reserve (reportedly \$4,000) placed on the coin which was not met. Thirty-one years had passed since the coin's discovery and, despite the best efforts of some of the most prominent coin dealers of the time, it had never successfully sold at auction. The coin changed hands in several private transactions in the following years and was exhibited at the 1914 ANS Exhibition by Edgar Adams. Toward the end of the decade David Proskey, who had supervised Scott's production of the Restrikes, sold the coin and the defaced die to J. Sanford Saltus for \$3,000. Saltus donated the coin to the ANS, where it remains today. He reportedly presented the die to the Louisiana Historical Society, but that institution has no record of receiving it and its whereabouts are currently unknown.

L. L. Wilson's Article from the *Philatelic West*, 8/1915

J.W. Scott auction description, 3/1882

## A SECOND COIN EMERGES

The publicity surrounding Elder's offering of the Taylor coin in March of 1910 must have worked to his advantage. Less than a month after the auction, Elder introduced a second Confederate half dollar to the numismatic community. This second piece was owned by Mr. Mark Jacobs, of Rondout, New York and, according to Elder's account in the April 1910 issue of *The Elder Magazine*, he had acquired it around 1880 in a roll of change from the bank. Elder purchased the coin from Jacobs two years later and sold it privately to prominent collector Henry Olsen Granberg. The coin later passed through the fabulous collections of Waldo Newcomer and "Colonel" E.H.R. Green, before being acquired by Eric P. Newman, via B.G. Johnson in the 1940s. The coin currently resides in the Eric P. Newman Numismatic Education Society collection. Experts believe the coin is the specimen presented to Dr. Ames after the 1861 striking, but the link is somewhat tenuous, and the coin's history between 1861 and circa 1880 (when it was found by Jacobs) remains unknown.

## DISCOVERY OF THE PRESENT COIN

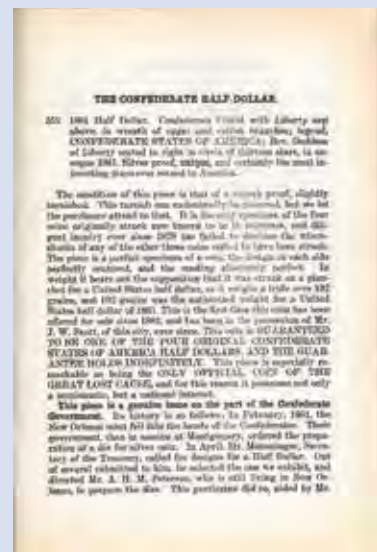

Anecdotal evidence suggests the present coin is the one presented to CSA President Jefferson Davis by his Secretary of the Treasury, Christopher Memminger, and later stolen from his wife's luggage by unruly Union soldiers. According to the minutes of the Washington Numismatic Society, a Confederate half dollar was exhibited by F. Mark Bream, of Cashtown, Pennsylvania at the September 12, 1936 meeting. Bream was an amateur historian of the Civil War and had written a paper on the Confederate half dollars, which he read to the membership. Reportedly, members examined the coin carefully and weighed it to establish its authenticity. Bream declared he had inherited the coin from his father, who said he purchased it from the Union soldier who appropriated it from Mrs. Davis after the war. Strangely, Harry X Boosel could not remember seeing the coin when asked about it many years later, although he was definitely in attendance at the meeting.

Since the pedigrees of two of the four Confederate half dollars were well established by 1936, and the fourth coin only reappeared in New Orleans in 1971, experts believe the specimen Bream exhibited is the present coin, which can be reliably traced to a Connecticut woman named Alice Clark, who sold it to New York coin dealer Ted Schnur in 1961. Schnur believed the coin was a restrike and offered it to famous coin dealer John Jay Ford at the 1961 New York Metropolitan Coin Convention. It was late at night and Ford had little interest in purchasing the coin, as he already had four Restrikes in stock. Schnur had dealt with Ford before, however, and the two men came to an agreement after some extended haggling.

What happened next is controversial. Some sources say Ford's friend, and sometimes business partner, Paul Franklin purchased the coin from Ford only minutes after he bought it. Franklin supposedly weighed the coin, and found it was too heavy to be a Restrike. He was persuaded to resell the coin to Ford a short time later for an immense profit, as Ford had been searching for an Original for a long time. Franklin engaged in many expensive hobby activities in the next few years, and researcher Karl Moulton (*John Jay Ford and the Franklin Hoard*) suggests the money he made from Ford may have financed his endeavors. Against this theory is Moulton's qualifier that Franklin's son told him, "This is not the version that Dad related to me!"

Ted Schnur certainly did not believe the story. When he learned the coin he sold to Ford was an Original he became convinced that Ford had taken advantage of him, unfairly using his numismatic knowledge to purchase the coin for a much lower price than it was worth. It is difficult to believe that Ford did not immediately check the piece, as he wanted an Original badly and had been persistently searching for an example. The perfect reeding and unflattened (albeit slightly worn) obverse devices should have been a dead giveaway. Schnur brought suit against Ford in the Supreme Court of the State of New York, and he was later joined by Alice Clark, who had sold the coin to him. The litigation lasted eight years and was finally settled when Ford paid the interested parties 25% of the agreed-upon value of the coin.

Ford retained this coin, which was one of his most prized possessions, until he sold his collection through Stack's in series of memorable auction sales beginning in 2003. Ford had an extensive collection of coins, patterns, and numismatic ephemera relating to the Confederacy. His Confederate half dollar was offered in lot 325 of the John J. Ford, Jr. Collection (Stack's, 10/2005), where it brought \$632,500. The result was an amazing total for the first time any Confederate half dollar had actually sold at auction and purchaser Donald Groves Partrick deserves great credit for having the vision and numismatic knowledge to properly appreciate this outstanding piece.

Thomas Elder's lot description,  
3/1910

Elder's Lot Description, page 2

## THE FINAL SPECIMEN REAPPEARS

The long-missing fourth example of the Confederate half dollar finally surfaced in New Orleans in 1971, a full 110 years after it was struck. New Orleans coin dealer James Cohen purchased the coin from an elderly man who brought it to his store. Cohen suspected the piece was an Original, so he showed it to Lester Merkin, a New York dealer. Merkin had the coin examined by Walter Breen, who pronounced it genuine. Merkin then purchased the coin from Cohen for an agreed-upon sum (one story relates that Merkin traded a full set of 1915-S Panama-Pacific coins, including both round and octagonal fifty dollar pieces in the original frame, for the Confederate half dollar). Merkin sold this fourth example to Henry P. Kendall, and it remains in his collection today. In the first account of the striking of the Confederate half dollars, B.F. Taylor mentioned that he knew of one coin "in the possession of a Confederate officer of this city" in 1879. That mysterious soldier was intent on passing the coin to his son, and it is possible that the family tradition continued for a few generations until it came to the elderly man who sold it to James Cohen in 1971. If the pedigrees for the other three coins are correct, and there is some room for doubt despite their wide acceptance, the Kendall coin must be the specimen given to John Leonard Riddell, the brilliant, but enigmatic, scientist and Postmaster of New Orleans.

## SIGNIFICANCE AND DESCRIPTION OF THE PRESENT COIN

The 1861 Confederate half dollar is the only coin officially authorized and struck for the Confederate States of America. Thomas Elder was correct when he wrote in 1910 that this coin has profound historical significance that extends far beyond the bounds of traditional numismatics. Historians, numismatists, and Civil War aficionados find this issue equally interesting. Among the four known examples, this coin claims the most illustrious history of them all. How many collectors have looked at their favorite coin and wondered if George Washington or Abraham Lincoln ever held it, or used it to buy a loaf of bread? The owner of this coin will know for certain that Jefferson Davis carried it as a keepsake for four years through all the turmoil of the Civil War. Its historical interest and charisma is unmatched by any other issue.

This attractive PR30 specimen displays delicate shades of lavender-gray, reddish-gold, and cerulean-blue toning on the obverse, with a silver-gray center on the reverse that yields to pinkish-gray and amber at the peripheries. The design elements are unevenly struck, with much sharper detail on the high relief reverse. On the obverse, the letters in LIBERTY remain bold and much interior detail in the shield and drapery remains intact. Liberty's hair and bodice show some wear. The famous die crack from Liberty's nose to the rim is evident. On the reverse, only light wear shows on the design elements, with the vertical stripes in the shield and the two stars on the lower left a little soft. The surfaces are lightly abraded and faintly reflective, and a minor rim bruise shows at 10 o'clock on the reverse. This coin is the only specimen that has ever been sold at public auction and its illustrious pedigree is unmatched. A chance to own such an important piece of history should not be missed. Thanks to Stuart Levine and P. Scott Rubin for their help in researching this description.

## ROSTER OF 1861 CONFEDERATE HALF DOLLARS

**1. PROOF.** Chief Coiner B.F. Taylor of the New Orleans Mint in April of 1861; Ebenezer Locke Mason; John Walter Scott; John W. Scott Collection (Scott Stamp & Coin Co., 3/1882), lot 163, unsold; William Lukens Collection (Thomas Elder, 3/1910), lot 552, unsold; Edgar H. Adams, exhibited at the 1914 ANS Exhibition; David Proskey in 1918; purchased by J. Sanford Saltus along with the die for \$3,000; presented to the American Numismatic Society on July 30, 1918.

**2. PR45.** Possibly Dr. E. Ames of New Orleans in April of 1861; unknown intermediaries; found in a roll of change by Mark Jacobs, of Rondout, New York, possibly as early as 1880, certainly by April of 1910; Thomas Elder in 1912; H.O. Granberg; Waldo Newcomer; "Colonel" E.H.R. Green, via B. Max Mehl in 1931; Burdette G. Johnson; Eric P. Newman; Eric P. Newman Numismatic Education Society.

**3. PR40 NGC.** Possibly John Leonard Riddell, Postmaster of the City of New Orleans in April of 1861; unknown intermediaries, including an unidentified elderly man in New Orleans; purchased by coin dealer James Cohen in 1970; Lester Merkin; sold to Henry P. Kendall on June 21, 1971. Photographs show an area of roughness left of the date.

**4. PR30 NGC.** Superintendent William A. Elmore, of the New Orleans Mint; CSA Secretary of the Treasury Christopher Memminger; CSA President Jefferson Davis, stolen in 1865; unknown intermediaries, including an unidentified Union soldier; possibly the Bream family of Cashtown, Pennsylvania, reportedly exhibited at the September 12, 1936 meeting of the Washington Numismatic Society; unknown intermediaries; Alice Clark; coin dealer Ted Schnur; purchased by John J. Ford, Jr. at the New York Metropolitan Coin Convention in 1961; John J. Ford, Jr. Collection, Part I (Stack's, 10/2003), lot 325, realized \$632,500; Jon Hanson; Donald Groves Partrick.

**The present coin.**

1861

## 1861 Confederate Restrike Half Dollar, MS62 One of Only 500 Pieces Made by J.W. Scott in 1879

**5848 1861 Scott Restrike MS62 NGC. CAC.** Ex: Hanson/Donald G. Partrick Collection. Breen-8002. 187.7 grains. 90% silver, 9% copper. The history of the Confederate half dollars and the subsequent restrikes is one of the best known in all of U.S. numismatics. Dr. B.F. Taylor, Chief Coiner of the New Orleans mint, retained the reverse die and one of the proof Confederate half dollars struck in 1861. In 1879 his ownership of the coin and the reverse die was published in the New Orleans *Picayune*. Taylor responded to an article by Ebenezer Locke Mason, coin dealer and publisher of *Mason's Coin Collector's Herald*, stating he owned a Confederate half dollar. Mason was doubtful, but after seeing a rubbing of Taylor's coin, he was convinced he did indeed own a Confederate half dollar. In the June 1879 issue of his publication, Mason reveals how ownership was transferred of Taylor's original half and the reverse die:

"It was Mr. Taylor's desire that the coin and die should become the property of some historical or numismatic association, but private enterprise far outbid all offers from scientific bodies to possess the coveted prize."

Thus Ebenezer Mason bought the original half dollar and reverse die from Dr. Taylor. Mason then quickly resold each to J.W. Scott, who then embarked on an ambitious plan to simulate the Original Confederate half dollars. He purchased 500 1861-dated half dollars (allegedly all O-mint coins but this is unprovable). David Proskye aided Scott in the restriking scheme by planing off the reverses of the 500 half dollars. When the planed-off reverses were struck with the CSA die with sufficient force to bring up the details from the dies, the result was flattening of the obverse devices. Another feature common to all restrikes is a uniformly lower weight. Restrikes vary from 185-188 grains. Standard half dollars weigh 192 grains. J.W. Scott claimed his restriking of the Confederate half dollar was oversubscribed, but David Proskye maintained Scott had specimens on hand for many years afterward.

This is a well-produced CSA Restrike half dollar. The all-important reverse is generally well defined, but there is an area of localized weakness at the top of the cap and the word STATES. This indicates the reverse die was slightly out of alignment at the time this piece was produced. The obverse shows flattened design elements, as noted above, from the strength of the blow required to strike up the reverse. Each side is problem-free with no impairments. Gray patina covers the surfaces with a slight undertone of rose present.

Ex: Jon Hanson (1/27/1974); Donald Groves Partrick. PCGS# 340402

**1861 Original Confederate Cent, PR63**  
**One of Only 14 Pieces Known**  
**Off the Market Since 1989**

**5849 1861 Original CSA Cent PR63 NGC.** Ex: Jon Hanson. 63.2 grains. 88% copper, 12% nickel. Breen-8005. The original Confederate cents are among the most sought-after coinage mementoes of the Lost Cause. They are second only in popularity and price to the extremely rare original Confederate half dollars. The most widely disseminated description of the origin of the Confederate cents arises from a talk delivered at the 1908 ANA Convention by John Haseltine that can best be considered apocryphal. Haseltine received an honorary life membership from the ANA that year, and was considered by Henry Chapman as belonging to "the old school of numismatics." Rather than repeat and refute Haseltine's yarns, it is more important to emphasize what we do know and strongly suspect about these coins.

Although documents confirm that the Confederate half dollars were struck in the New Orleans mint in 1861, no primary historic paper trail links the original CSA cents to having been struck in that year. However, there is strong circumstantial evidence, all of which is listed in the in-depth study of the original, restrike, and Bashlow restrikes of the Confederate cents in the 2006 work by Harold Levi and George Corell: *The Lovett Cent, a Confederate Story*. Among the most compelling reasons suggesting these pieces were struck in 1861, rather than when they first publicly appeared in 1873 are:

1. Robert Lovett had little or no motivation to create a Confederate cent in the early 1870s. He was not known to be a collector of coins, tokens, or banknotes.
2. There would likely have been no source for copper-nickel planchets, because that alloy had not been used for nine years.
3. Lovett's design for the CSA original cents included devices used on store cards ca 1860:
4. The French Liberty bust, and the six incuse stars (in a slight arch with the rightmost star nearly hidden by Liberty's hair near the back of the coronet) appeared on the Marshall House, Idler, Allebach, and Beirn store cards.
5. If Lovett actually had made the cents in 1873, there would have been no reason to involve John Haseltine and Edward Maris, as he surely could have sold many more than the 12 or 16 coins reported to have been struck.

Thus it is highly unlikely that Lovett would have had the inclination or material to strike coins in 1873 using motifs he designed shortly before 1861.

As we said when we sold the Noble Family Collection CSA Confederate cent: "The greatest concentration of truth about the original strikes of the Confederate cents seems to be clustered around the time of their discovery and the sale at auction of the discovery piece." In Haseltine's January 1874 sale, he apparently knew some of the facts, but appears to have not known how many pieces were struck. It appears that Haseltine believed the mintage was limited to the coins he had seen. This fact was later clarified by Dr. Maris, who actually owned the coins. Lot 665 in the 1874 sale states:

"The dies for the above piece were made by Mr. Lovett, of Philadelphia, in 1861. Mr. Lovett says that they were ordered in 1861, for the South, and that the dies were delivered. Previous to delivering the dies, he struck twelve pieces, but showed them to no one and kept the matter quiet, fearing that he might be arrested if it were known. It was not until about six months since Mr. Lovett parted with all he had (either ten or twelve) to Dr. E. Maris, of Philadelphia, from whom this one was obtained. Although it is evident that the Southern Confederacy did not adopt the piece, still it will always be considered interesting and valuable as the only coinage designed for the Southern Confederacy, and will no doubt bring a high price. I have been somewhat particular in giving the facts about this piece, as there are persons who always sneer at and doubt anything new and interesting that is discovered by other than themselves."

Dr. Maris expanded on the number struck in the catalog in the 1886 catalog of his collection, where he stated, "I believe only about sixteen were ever struck." Today we know of the existence of 14 individual coins, this number being an increase of one over the 13 pieces that were known when we sold the Noble Family Collection specimen last year.

This piece retains much of the light golden-tan color of the copper-nickel planchet in the centers. The obverse displays peripheral brown patina through CONFEDERATE STATES OF. The reverse shows more subtle coloration, yet is still slightly darker around the margin. The obverse has two identifying marks that positively identify this as the ex: Bowers inventory coin from 1989. A small planchet void is located near the obverse rim at 2 o'clock just above and to the left of the O in OF. A small cluster of shallow abrasions are seen just to the right of Liberty's hair between the hair and the A in AMERICA. The designer's initial L is strong on the right cotton bale, one of the diagnostics of originals vs. restrikes (where the L is noticeably weaker). Additionally, the coin has a medal turn, another diagnostic of original strikes; whereas Haseltine's restrikes have a coin turn.

Below is the updated roster for original Confederate cents. We based this on the roster in Levi and Corell's book on Lovett and the CSA cents, and then expanded it greatly when we sold the Noble Family Collection coin last year.

#### **Roster of 1861 Original Confederate Cents**

- 1. PR64 NGC.** Robert Lovett, Jr.; Dr. Edward Maris; unknown intermediaries, most likely including Captain John W. Haseltine; F.C.C. Boyd; Boyd estate; John J. Ford, Jr.; John J. Ford, Jr. Collection, Part X (Stack's, 5/2005), lot 4478.
- 2. PR63 PCGS.** Robert Lovett, Jr.; Dr. Edward Maris; unknown intermediaries, most likely including Captain John W. Haseltine; possibly John J. Ford, Jr.; Q. David Bowers; offered in Rare Coin Review numbers 19 and 20; purchased in April 1974 for the Noble Family Collection; FUN Signature (Heritage, 1/2013), lot 5139, where it brought \$211,500.
- 3. PR63 NGC.** Possibly a coin in the possession of John J. Ford, Jr. which he sold to Dr. Irving Schuster, reportedly later handled by Q. David Bowers; Rare Coin Review #72 (Bowers and Merena, Spring 1989); Jon Hanson; Donald G. Partrick. **The present coin.**
- 4. Choice Brilliant Proof.** Robert Lovett, Jr.; Dr. Edward Maris; unknown intermediaries, most likely including Captain John W. Haseltine; F.C.C. Boyd; Boyd estate; John J. Ford, Jr.; John J. Ford, Jr. Collection, Part X (Stack's, 5/2005), lot 4477; Q. David Bowers; 74th Anniversary Sale (Stack's, 11/2009), lot 794 (grade per Ford auction appearance).
- 5. PR62 NGC.** Robert Lovett, Jr.; Dr. Edward Maris; unknown intermediaries, most likely including Captain John W. Haseltine; Charles Steigerwalt; purchased by T. Harrison Garrett in late 1881; Robert Garrett; John Work Garrett; Garrett Collection, Part IV (Bowers and Ruddy, 3/1981), lot 1995; Jon Hanson; Donald Groves Partrick. This piece will be sold in a later Partrick Collection sale.
- 6. Choice Brilliant Uncirculated, Prooflike.** Robert Lovett, Jr.; Dr. Edward Maris; unknown intermediaries, most likely including Captain John W. Haseltine; F.C.C. Boyd; Boyd estate; John J. Ford, Jr.; John J. Ford, Jr. Collection, Part I (Stack's, 10/2003), lot 321 (grade per Ford auction appearance).
- 7. Choice Uncirculated.** Robert Lovett, Jr.; Dr. Edward Maris; unknown intermediaries, most likely including Captain John W. Haseltine; Kensington Collection (Bowers and Ruddy, 12/1975), lot 431 (grade per 1975 auction appearance).

- 8. MS62 NGC.** Robert Lovett, Jr.; Dr. Edward Maris; unknown intermediaries, most likely including Captain John W. Haseltine; Dodsden/Collier Collections (Bowers and Merena, 6/1984), lot 3421; New York City Auction (Spink Smythe, 11/2008), lot 475.
- 9. MS60.** Robert Lovett, Jr.; Dr. Edward Maris; unknown intermediaries, most likely including Captain John W. Haseltine; Lee F. Hewitt Collection (Bowers and Merena, 11/1984), lot 2799; Hoke S. Green Collection (Bowers and Merena, 6/1985), lot 498 (grade per last auction appearance).
- 10. AU58 PCGS.** Robert Lovett, Jr.; Dr. Edward Maris; unknown intermediaries, most likely including Captain John W. Haseltine; Aubrey and Adeline Bebee Collection (Bowers and Merena, 8/1987), lot 1545; West Coast collector, via Liz Coggan; William H. Labelle, Sr. Collection (American Numismatic Rarities, 7/2005), lot 26.
- 11. AU.** Robert Lovett, Jr.; Dr. Edward Maris; unknown intermediaries, most likely including Captain John W. Haseltine; Hain Family Collection (Stack's, 1/2002), lot 876 (grade per 2002 auction appearance).
- 12. Extremely Fine.** Robert Lovett, Jr.; Dr. Edward Maris; unknown intermediaries, most likely including Captain John W. Haseltine; F.C.C. Boyd; Boyd estate; John J. Ford, Jr.; John J. Ford, Jr. Collection, Part I (Stack's, 10/2003), lot 322 (grade per Ford auction appearance).
- 13.** A fifth specimen that was included in the John J. Ford, Jr. Collection at the time of its sale in 2003. Sold privately via Stack's and not described in any of the catalogs.
- 14.** A specimen in the Eric P. Newman Numismatic Education Society.

#### Other Appearances

- A.** Coin Sale (Captain John W. Haseltine, 1/1874), lot 665, the first auction appearance.
- B.** A coin in the possession of Dr. William Lee circa 1874, which he photographed and published in a book on Confederate notes.
- C.** Dr. Edward Maris Collection (Harlan Page Smith, 6/1886), lot 304.
- D.** Maris Collection (S.H. & H. Chapman, 11/1900), lot 850.
- E.** A specimen exhibited by Judson Brenner at the 1914 ANS Exhibition. This piece may have passed to Virgil Brand in 1919, when Brenner sold him the Confederate cent dies and many other coins.
- F.** George Earle Collection (Henry Chapman, 6/1912), lot 3823, based on toning patterns this coin resembles number 10 above, but the match is not definitive.
- G.** George M. Parsons Collection (Henry Chapman, 6/1914), lot 2707, toning patterns resemble the coin in number 5 above, but the match is not definitive.
- H.** John Story Jenks Collection (Henry Chapman, 12/1921), lot 6471, toning patterns resemble the coin in number 5 and letter G above, but the match is not definitive.
- I.** Fred E. Olsen Collection (B. Max Mehl, 11/1944), lot 1632, reportedly struck on a large planchet, possibly an off-center restrike according to John Ford.
- J.** Philpot/Zander Sale (B. Max Mehl, 11/1945), lot 2621, Extremely Fine.
- K.** Will Neil Collection (B. Max Mehl, 6/1947), lot 3071.
- L.** An eighth specimen owned by John Ford at one time according to Michael Hodder, no longer in the Ford Collection at the time of the 2003 sale.
- M.** A specimen in the ANS Collection, accession number 1908.181.2 listed as an Original by Harold Levi and George Corell in *The Lovett Cent a Confederate Story*, but the ANS website says this piece is a Haseltine Restrike in copper. PCGS# 521351

### 1861-Dated General Beauregard 'Dime,' AU Details The Only Piece Known With Loop Still Attached

**5850 1861-Dated General Beauregard Dime (Medal) — Mounted**  
— NGC Details. AU. Ex: New York Public Library/Partrick. 17.7 mm. Reeded Edge. 94% silver, 4% copper. The Beauregard, Jefferson Davis, and Stonewall Jackson “dimes” are actually small medals that feature the Heroes of the South. They are almost all struck in silver and similar in size to a dime — a federal dime is 17.9 mm — these pieces are only 0.2 mm smaller in diameter at 17.7 mm. One curious difference between these medallic souvenirs and almost all other medals is their reeded edge. This suggests that the designer may have intended for these pieces to be confused with coins for circulation. There is no reason to believe any of these pieces actually did circulate as a medium of exchange, even though they show obvious wear. All of these medals had a loop for suspension at one time, but this is the only one that still retains it. Undoubtedly, once the loop was removed from the other pieces they were carried as pocket pieces. This particular piece had the engraver's initials C.R. removed from the field below the bust. This medal has bright surfaces and significant deep gray patina with contrasting silver highlights over the devices. Walter Breen discounted these extremely rare pieces as trivial medals in his *Complete Encyclopedia*. However, in our opinion these are extremely important mementos of a challenging time in American history.

Ex: New York Public Library (Bowers and Ruddy, 10/1982), lot 2895; Donald Groves Partrick.

### 1861-Dated Beauregard 'Dime,' AU Details Ex: Garrett

**5851 1861-Dated General Beauregard Dime (Medal) — Mount Removed — NGC Details. AU.** Ex: Garrett / Partrick. 17.7 mm. Reeded Edge. 92% silver, 6% copper. Struck to commemorate one of the great generals and tacticians of the South, the Beauregard "dime" (actually a medal) features a profile of General P.G.T. Beauregard facing left. The obverse margin reads: G.T. BEAUREGARD. BRG. GEN. CS.A. Beauregard seldom went by his first name, Pierre, explaining the initials G.T. (Gustave Toutant) present on the coin. The A in CSA is actually an upside-down V. The center of the reverse commemorates his victory at the first Battle of Bull Run or Manassas. MANASSAS is sharply curved upward in the center of that side, followed by the date of the battle: 21 / JULY / 1861, surrounded by a laurel wreath. Again, as on the obverse, the letter A was formed from an upside-down V punch. The listing of Beauregard as Brigadier General on these pieces suggests an early striking date. He was promoted to full general on July 21, the same date as First Bull Run (Manassas). The engraver was either unaware of Beauregard's promotion at the time these pieces were struck, or he was looking backward in time to his rank at the time of the Battle of Manassas. The surfaces are richly toned in iridescent hues. Numerous small to medium-sized abrasions are scattered over each side, but the only one significant enough to use as a pedigree identifier is a linear strike-through between C and S in CSA.

Ex: Garrett IV (*Bowers and Ruddy*, 3/1981), lot 2002; Donald Groves Partrick.

## 1861-Dated Beauregard 'Dime,' XF Details 'The South's First Paladin'

**5852 1861-Dated General Beauregard Dime (Medal) — Mount Removed — NGC Details. XF.** Ex: Garrett/ Partrick. After two successive victories early in the War, the first at Fort Sumter and the second at Manassas, Pierre Gustave Toutant Beauregard was widely and extravagantly praised throughout the South. His biographer later stated: "He was the South's first paladin." These curious pieces commemorating the General have been known for more than a hundred years, but have been little researched. One question that remains unanswered (one might even say unasked) is: Who was the engraver, C.R.? The Beauregard pieces, whether showing those initials or not, obviously have a common engraver, C.R., and they were struck in Paris. Beyond that nothing is known for certain about the engraver or the circumstances of their manufacture. It seems obvious from the study of the pieces that they were made to imitate actual coins (dimes). All have a reeded edge, an almost unheard of edge treatment for a medal, and all were mounted at the time of manufacture. The mount on this piece was very skillfully removed, making it appear even more like a dime. Unlike the Garrett AU Details piece below, this example shows very little evidence of contact on either side. Its most distinguishing surface marks are several shallow planchet depressions on the obverse that were not filled in with metal at the time of production. The deep gray patina shows a significant underlying presence of rose and lilac. The strike details are just a bit weak on the reverse with some softness noted on MANASSAS and 21.

Ex: Garrett IV (Bowers and Ruddy, 3/1981), lot 2003; Donald Groves Partrick.

## 1861 Jefferson Davis 'Dime' in Gold, AU Details Ex: Jefferson Davis Estate

**5853 1861-Dated Gold Jefferson Davis Dime (Medal) — Mount Removed — NGC Details. AU.** Ex: Jefferson Davis/Partrick. 48.9 grains. Reeded Edge. 48% gold, 26% silver, 26% copper. This curiosity has been called a dime over the decades, even though it is struck in gold alloy and has been called a medal or medalet since first discovered in 1879. It is approximately the size of a dime. Mount removal is seen on the rim at 12 and 7 o'clock. The Jefferson Davis dime is related to the so-called General Beauregard dimes and Stonewall Jackson dime. Legends on the Jackson piece (not in this collection) are in French; those on the Beauregard and Davis pieces are in English. But all share a common engraver, the unidentified C.R., and all originated in France. Little more is known about the Davis dime; and in fact little has been added to our knowledge since it was first announced in Édouard Frossard's *Numisma* in May 1879:

"We lately saw at the office of Mr. Wm. P. Brown, in New York, a medalet of Jefferson Davis, the late president of the Confederacy. The owner of the piece, who had left it with Mr. Brown for sale at a very high price, affirmed that the token is unique, but could or would not give any details concerning its history, except that it had been in his possession for many years, and is an authentic piece."

The common theme of all three of these pieces is Heroes of the South. The reverse legend of this piece, CSA FIRST PRESIDENT, suggests it was struck as early as 1861 (or shortly afterward). The 48% gold alloy is also indicative of an early striking period. If the piece were indeed produced during the Civil War, it surely would have been early, as gold was more available than in later years. Walter Breen estimated a dozen examples were known of the Jefferson Davis dime. Most are silver, some are gilt, but this appears to be the only piece with a significant gold alloy.

This example has a singular importance not only because of its gold alloy, but also because it belonged to Jefferson Davis, President of the Confederacy. The first appearance of this piece was in the Charles Morris auction, conducted by the Chapman Brothers, April 19 and 20, 1905. Lot 1013 reads, in part:

"The only specimen known in this metal, excessively rare in the other known metal, silver. Extremely fine. Has had loop removed from edge. Milled edge. Accompanying it is a copy of a letter from Jeff. Davis's daughter, who states they were made in Paris."

The copy of the letter from Davis' daughter is now lost, but its one-time existence links this gold example to the President of the Confederacy, and testifies to its French manufacture. The surfaces are muted reddish-gold with brighter yellow high points. Only three as-made surface defects are noted. One is a small planchet void in the field near 12 o'clock on the obverse, the second is a shallow planchet depression down and to the left of the bottom of the wreath on the reverse, and the third is a deep planchet void at 6 o'clock on the reverse rim. This is an exceptionally rare medalet and it is unique in gold.

*Ex: Jefferson Davis; Jefferson Davis' daughter; Charles Morris; Charles Morris Collection (Chapman Brothers, 4/1905), lot 1013, where it brought \$110; Robert Garrett; Johns Hopkins; Garrett IV Collection (Bowers and Ruddy, 3/1980), lot 1999; Donald Groves Partrick.*

## 1861-Dated CSA — A United South — 'Half Dime,' AU55 Possibly the Only Unholed Example

**5854** 1861-Dated CSA — A United South Half Dime (Medal) — AU55 NGC. Ex: Donald G. Partrick Collection. Plain Edge. 13 mm. 86% silver, 13% copper. Information about the so-called Confederate half dime is surprisingly difficult to find. Modern research is especially lacking, as most of what is known today was discovered in the 19th century. News of various Confederate issues surfaced in the 1870s, and the existence of a half dime first appeared in numismatic publications in 1878, in the April issue of the *American Journal of Numismatics*, which reported:

"Mr. P.S. Jones of Memphis writes us, saying that he has in his possession a silver five-cent piece, which he got the day after the battle of Perryville, Ky., October 9, 1862, when he was commanding a company in the Kentucky cavalry service. ... We are informed that the latter piece was struck by A.O.P. Sehorn of Murfreesboro, Tenn., and that the dies were destroyed several years ago. Its size is 9, American scale. One of these tokens, for it is not a coin, was presented to the Boston Numismatic Society, at a recent meeting, by Gen. G.P. Thruston of Nashville, Tenn."

This account was apparently picked up by the *AJN* from *The Coin Collector's Journal* from the previous month. Both accounts are identical, except the *CCJ* identifies P.S. Jones as "P. Sid Jones of the Millburn Wagon Company."

No more than a dozen examples exist of the so-called CSA half dime. One Uncirculated piece is believed known, and all others show some degree of contact, indicating they may indeed have served as a circulating medium in the wartime South. This piece shows just the slightest trace of friction over the even, deep gray surfaces. No obvious abrasions are seen on either side. The devices are well detailed, the only exceptions being the center of the cotton branch and upper boll. Apparently all other Confederate half dimes are holed; some (such as the Garrett piece) have two holes. This example is intact, and may be the only one known as such. The only other such piece we have found was in the John Story Jenks Collection, but we are uncertain if this is the same example.

Ex: Donald Groves Partrick. PCGS# 661000

### Florida Expedition Medal, MS64 Brown '1817' Amelia Island Green Cross Medal

**5855 (1817) Florida Expedition Medal. BHM-957. MS64 Brown NGC.** This important medal is a rarity with only 15 to 20 examples known, and it holds the number 76 spot in *100 Greatest American Medals and Tokens*. Amelia Island, named for Princess Amelia, the daughter of King George II of Great Britain, is located near Jacksonville, Florida, and is one of the southernmost islands in the barrier chain that begins at the central South Carolina coast. At various times, this "Isle of Eight Flags" has been ruled by Spain, Great Britain, Mexico, the United States, and the Confederate States, and has also witnessed the Patriot and Green Cross flags.

In *British Historical Medals, 1760-1960*, Laurence Brown comments:

"The event commemorated by this medal is the attempt to liberate the Floridas in 1817. The expedition was fitted out by [Sir Gregor] MacGregor and he took possession of Amelia Island at the mouth of St. Mary's River. His occupation was relatively short-lived since he was turned out by naval and military forces sent by the President of the United States after some six months."

This remarkable olive-brown example exhibits faded original red color with excellent luster. The date of manufacture is unknown, although Thomas Cleneay inquired about the medal in 1869, when his letter appeared in the *American Journal of Numismatics*. Another example appeared in the 1882 Bushnell sale. In his 1980 reference, Brown rated this medal RRRR, meaning the highest degree of rarity. This is the first that we have handled.

## 1 Internet

Simply go to [www.pearsoncmg.com](http://www.pearsoncmg.com)

Simply go to [www.HA.com](http://www.HA.com), find the auction you are looking for and click "View Lots" or type your desired Lot # into the "Search" field. Every lot is listed with full descriptions and images. Enter your bid and click "Place Bid." Internet bids will be accepted until 10:00 PM CT the day before the live auction session takes place.

## 2 eMail

You can also

You can also email your bids to us at [Bid@HA.com](mailto:Bid@HA.com). List lot numbers and bids, and include your name, address, phone, and customer # (if known) as well as a statement of your acceptance of the Terms and Conditions of Sale. Email bids will be accepted up to 24 hours before the live auction.

### 3 Postal Mail

Simply complete the B

Simply complete the Bid Sheet on the reverse side of this page with your bids on the lots you want, sign it and mail it in. If yours is the high bid on any lot, we act as your representative at the auction and buy the lot as cheaply as competition permits.

## 4 In Person

Come to the auction and view the lots in person and bid live on the floor.

**5 FAX**  
Follow t

Follow the instructions for completing your mail bid, but this time FAX it to (214) 409-1425. FAX bids will be accepted until 12:00 PM CT the day prior to the auction date.

## 6 Live By Phone

Call 877-HERITAGE (437-482)

Call 877-HERITAGE (437-4824) Ext. 1150 and ask for phone bidding assistance at least 24 hours prior to the auction.

**7 Live using HERITAGE Live!®**  
Auctions designated as "Heritage Live Enabled" have

Auctions designated as "Heritage Live Enabled" have continuous bidding from the time the auction is posted on our site through the live event. When normal Internet bidding ends, visit [HA.com/Live](http://HA.com/Live) and continue to place Live Proxy bids. When the item hits the auction block, you can continue to bid live against the floor and other live bidders.

*Because of the many avenues by which bids may be submitted, there is the real possibility of a tie for the high bid. In the event of a tie, Internet bidders, within their credit limit, will win by default.*

## 7 Easy Ways to Bid

# Terms and Conditions of Auction

## Auctioneer and Auction:

1. This Auction is presented by Heritage Auctions, a d/b/a/ of Heritage Auctioneers & Galleries, Inc., or Heritage Auctions, Inc., or Heritage Numismatic Auctions, Inc., or Heritage Vintage Sports Auctions, Inc., or Currency Auctions of America, Inc., as identified with the applicable licensing information on the title page of the catalog or on the HA.com Internet site (the "Auctioneer"). The Auction is conducted under these Terms and Conditions of Auction and applicable state and local law. Announcements and corrections from the podium and those made through the Terms and Conditions of Auctions appearing on the Internet at HA.com supersede those in the printed catalog.

## Buyer's Premium:

2. All bids are subject to a Buyer's Premium which is in addition to the placed successful bid:
- Fifteen percent (15%) on Domain Names & Intellectual Property Auction lots;
- Seventeen and one-half percent (17.5%) on Currency, US Coin, and World & Ancient Coin Auction lots, except for Gallery Auction lots as noted below;
- Nineteen and one-half percent (19.5%) on Comic, Movie Poster, Sports Collectibles, and Gallery Auction (sealed bid auctions of mostly bulk numismatic material) lots;
- Twenty-two percent (22%) on Wine Auction lots;
- For lots in all other categories not listed above, the Buyer's Premium per lot is twenty-five percent (25%) on the first \$100,000 (minimum \$14), plus twenty percent (20%) of any amount between \$100,000 and \$1,000,000, plus twelve percent (12%) of any amount over \$1,000,000.

## Auction Venues:

3. The following Auctions are conducted solely on the Internet: Heritage Weekly Internet Auctions (Coin, Currency, Comics, Rare Books, Jewelry & Watches, Guitars & Musical Instruments, and Vintage Movie Posters); Heritage Monthly Internet Auctions (Sports, World Coins and Rare Wine). Signature® Auctions and Grand Format Auctions accept bids from the Internet, telephone, fax, or mail first, followed by a floor bidding session; HeritageLive! and real-time telephone bidding are available to registered clients during these auctions.

## Bidders:

4. Any person participating or registering for the Auction agrees to be bound by and accepts these Terms and Conditions of Auction ("Bidder(s)").
5. All Bidders must meet Auctioneer's qualifications to bid. Any Bidder who is not a client in good standing of the Auctioneer may be disqualified at Auctioneer's sole option and will not be awarded lots. Such determination may be made by Auctioneer in its sole and unlimited discretion, at any time prior to, during, or even after the close of the Auction. Auctioneer reserves the right to exclude any person from the auction.
6. If an entity places a bid, then the person executing the bid on behalf of the entity agrees to personally guarantee payment for any successful bid.

## Credit:

7. In order to place bids, Bidders who have not established credit with the Auctioneer must either furnish satisfactory credit information (including two collectibles-related business references) or supply valid credit card information along with a social security number, well in advance of the Auction. Bids placed through our Interactive Internet program will only be accepted from pre-registered Bidders. Bidders who are not members of HA.com or affiliates should preregister at least 48 hours before the start of the first session (exclusive of holidays or weekends) to allow adequate time to contact references. Credit will be granted at the discretion of Auctioneer. Additionally Bidders who have not previously established credit or who wish to bid in excess of their established credit history may be required to provide their social security number or the last four digits thereof so a credit check may be performed prior to Auctioneer's acceptance of a bid. Check writing privileges and immediate delivery of merchandise may also be determined by pre-approval of credit based on a combination of criteria: HA.com history, related industry references, bank verification, a credit bureau report and/or a personal guarantee for a corporate or partnership entity in advance of the auction venue.

## Bidding Options:

8. Bids in Signature, Auctions or Grand Format Auctions may be placed as set forth in the printed catalog section entitled "Choose your bidding method." For auctions held solely on the Internet, see the alternatives on HA.com. Review at <http://www.ha.com/c/ref/web-tips.zx#biddingTutorial>.
9. Presentment of Bids: Non-Internet bids (including but not limited to podium, fax, phone and mail bids) are treated similar to floor bids in that they must be on-increment or at a half increment (called a cut bid). Any podium, fax, phone, or mail bids that do not conform to a full or half increment will be rounded up or down to the nearest full or half increment and this revised amount will be considered your high bid.
10. Auctioneer's Execution of Certain Bids. Auctioneer cannot be responsible for your errors in bidding, so carefully check that every bid is entered correctly. When identical mail or FAX bids are submitted, preference is given to the first received. To ensure the greatest accuracy, your written bids should be entered on the standard printed bid sheet and be received at Auctioneer's place of business at least two business days before the Auction start. Auctioneer is not responsible for executing mail bids or FAX bids received on or after the day the first lot is sold, nor Internet bids submitted after the published closing time; nor is Auctioneer responsible for proper execution of bids submitted by telephone, mail, FAX, e-mail, Internet, or in person once the Auction begins. Bids placed electronically via the internet may not be withdrawn until your written request is received and acknowledged by Auctioneer (FAX: 214-409-1425); such requests must state the reason, and may constitute grounds for withdrawal of bidding privileges. Lots won by mail Bidders will not be delivered at the Auction unless prearranged.
11. Caveat as to Bid Increments. Bid increments (over the current bid level) determine the lowest amount you may bid on a particular lot. Bids greater than one increment over the current bid can be any whole dollar amount. It is possible under several circumstances for winning bids to be between increments, sometimes only \$1 above the previous increment. Please see: "How can I lose by less than an increment?" on our website. Bids will be accepted in whole dollar amounts only. No "buy" or "unlimited" bids will be accepted.

The following chart governs current bidding increments (see [HA.com/c/ref/web-tips.zx#guidelines-increments](http://HA.com/c/ref/web-tips.zx#guidelines-increments)).

Current Bid	Bid Increment
< \$10	\$1
\$10 - \$49	\$2
\$50 - \$99	\$5
\$100 - \$199	\$10
\$200 - \$499	\$20
\$500 - \$999	\$50
\$1,000 - \$1,999	\$100
\$2,000 - \$4,999	\$200
\$5,000 - \$9,999	\$500

Current Bid	Bid Increment
\$10,000 - \$19,999	\$1,000
\$20,000 - \$49,999	\$2,000
\$50,000 - \$99,999	\$5,000
\$100,000 - \$199,999	\$10,000
\$200,000 - \$499,999	\$20,000
\$500,000 - \$999,999	\$50,000
\$1,000,000 - \$4,999,999	\$100,000
\$5,000,000 - \$9,999,999	\$250,000
>= \$10,000,000	\$500,000

12. If Auctioneer calls for a full increment, a bidder may request Auctioneer to accept a bid at half of the increment ("Cut Bid") only once per lot. After offering a Cut Bid, bidders may continue to participate only at full increments. Off-increment bids may be accepted by the Auctioneer at Signature® Auctions and Grand Format Auctions. If the Auctioneer solicits bids other than the expected increment, these bids will not be considered Cut Bids.

## Conducting the Auction:

13. Notice of the consignor's liberty to place bids on his lots in the Auction is hereby made in accordance with Article 2 of the Texas Business and Commercial Code. A "Minimum Bid" is an amount below which the lot will not sell. THE CONSIGNOR OF PROPERTY MAY PLACE

WRITTEN "Minimum Bids" ON HIS LOTS IN ADVANCE OF THE AUCTION; ON SUCH LOTS, IF THE HAMMER PRICE DOES NOT MEET THE "Minimum Bid", THE CONSIGNOR MAY PAY A REDUCED COMMISSION ON THOSE LOTS. "Minimum Bids" are generally posted online several days prior to the Auction closing. For any successful bid placed by a consignor on his Property on the Auction floor, or by any means during the live session, or after the "Minimum Bid" for an Auction have been posted, we will require the consignor to pay full Buyer's Premium and Seller's Commissions on such lot.

14. The highest qualified Bidder recognized by the Auctioneer shall be the Buyer. In the event of a tie bid, the earliest bid received or recognized wins. In the event of any dispute between any Bidders at an Auction, Auctioneer may at his sole discretion reoffer the lot. Auctioneer's decision and declaration of the winning Bidder shall be final and binding upon all Bidders. Bids properly offered, whether by floor Bidder or other means of bidding, may on occasion be missed or go unrecognized; in such cases, the Auctioneer may declare the recognized bid accepted as the winning bid, regardless of whether a competing bid may have been higher. Auctioneer reserves the right after the hammer fall to accept bids and reopen bidding for bids placed through the Internet or otherwise.
15. Auctioneer reserves the right to refuse to honor any bid or to limit the amount of any bid, in its sole discretion. A bid is considered not made in "Good Faith" when made by an insolvent or irresponsible person, a person under the age of eighteen, or is not supported by satisfactory credit, collectibles references, or otherwise. Regardless of the disclosure of his identity, any bid by a consignor or his agent on a lot consigned by him is deemed to be made in "Good Faith." Any person apparently appearing on the OFAC list is not eligible to bid.
16. Nominal Bids. The Auctioneer in its sole discretion may reject nominal bids, small opening bids, or very nominal advances. If a lot bearing estimates fails to open for 40-60% of the low estimate, the Auctioneer may pass the item or may place a protective bid on behalf of the consignor.
17. Lots bearing bidding estimates shall open at Auctioneer's discretion (approximately 50%-60% of the low estimate). In the event that no bid meets or exceeds that opening amount, the lot shall pass as unsold.
18. All items are to be purchased per lot as numerically indicated and no lots will be broken. Auctioneer reserves the right to withdraw, prior to the close, any lots from the Auction.
19. Auctioneer reserves the right to rescind the sale in the event of nonpayment, breach of a warranty, disputed ownership, auctioneer's clerical error or omission in exercising bids and reserves, or for any other reason and in Auctioneer's sole discretion. In cases of nonpayment, Auctioneer's election to void a sale does not relieve the Bidder from their obligation to pay Auctioneer its fees (seller's and buyer's premium) and any other damages or expenses pertaining to the lot.
20. Auctioneer occasionally experiences Internet and/or Server service outages, and Auctioneer periodically schedules system downtime for maintenance and other purposes, during which Bidders cannot participate or place bids. If such outages occur, we may at our discretion extend bidding for the Auction. Bidders unable to place their Bids through the Internet are directed to contact Client Services at 877-HERITAGE (437-4824).
21. The Auctioneer, its affiliates, or their employees consign items to be sold in the Auction, and may bid on those lots or any other lots. Auctioneer or affiliates expressly reserve the right to modify any such bids at any time prior to the hammer based upon data made known to the Auctioneer or its affiliates. The Auctioneer may extend advances, guarantees, or loans to certain consignors.
22. The Auctioneer has the right to sell certain unsold items after the close of the Auction. Such lots shall be considered sold during the Auction and all these Terms and Conditions shall apply to such sales including but not limited to the Buyer's Premium, return rights, and disclaimers.

## Payment:

23. All sales are strictly for cash in United States dollars (including U.S. currency, bank wire, cashier checks, travelers checks, eChecks, and bank money orders, and are subject to all reporting requirements). All deliveries are subject to good funds; funds being received in Auctioneer's account before delivery of the Purchases; and all payments are subject to a clearing period. Auctioneer reserves the right to determine if a check constitutes "good funds": checks drawn on a U.S. bank are subject to a ten business day hold, and thirty days when drawn on an international bank. Clients with pre-arranged credit status may receive immediate credit for payments via eCheck, personal, or corporate checks. All others will be subject to a hold of 5 days, or more, for the funds to clear prior to releasing merchandise. (Ref. T&C item 7 Credit for additional information.) Payments can be made 24-48 hours post auction from the My Orders page of the HA.com website.
24. Payment is due upon closing of the Auction session, or upon presentment of an invoice. Auctioneer reserves the right to void an invoice if payment in full is not received within 7 days after the close of the Auction. In cases of nonpayment, Auctioneer's election to void a sale does not relieve the Bidder from their obligation to pay Auctioneer its fees (seller's and buyer's premium) on the lot and any other damages pertaining to the lot or Auctioneer, at its option, may charge a twenty (20%) restock fee on the amount of the purchase and offset the restock fee against any monies paid to the Auctioneer or against any of the purchaser's properties held by the Auctioneer.
25. Lots delivered to you, or your representative in the States of Texas, California, New York, or other states where the Auction may be held, are subject to all applicable state and local taxes, unless appropriate permits are on file with Auctioneer. (Note: Coins are only subject to sales tax in California on invoices under \$1,500, and there is no sales tax on coins in Texas.) Bidder agrees to pay Auctioneer the actual amount of tax due in the event that sales tax is not properly collected due to: 1) an expired, inaccurate, or inappropriate tax certificate or declaration, 2) an incorrect interpretation of the applicable statute, 3) or any other reason. The appropriate form or certificate must be on file at and verified by Auctioneer five days prior to Auction, or tax must be paid; only if such form or certificate is received by Auctioneer within 4 days after the Auction can a refund of tax paid be made. Lots from different Auctions may not be aggregated for sales tax purposes.
26. In the event that a Bidder's payment is dishonored upon presentment(s), Bidder shall pay the maximum statutory processing fee set by applicable state law. If you attempt to pay via eCheck and your financial institution denies this transfer from your bank account, or the payment cannot be completed using the selected funding source, you agree to complete payment using your credit card on file.
27. If any Auction invoice submitted by Auctioneer is not paid in full when due, the unpaid balance will bear interest at the highest rate permitted by law from the date of invoice until paid. Any invoice not paid when due will bear a three percent (3%) late fee on the invoice amount. If the Auctioneer refers any invoice to an attorney for collection, the buyer agrees to pay attorney's fees, court costs, and other collection costs incurred by Auctioneer. If Auctioneer assigns collection to its in-house legal staff, such attorney's time expended on the matter shall be compensated at a rate comparable to the hourly rate of independent attorneys.
28. In the event a successful Bidder fails to pay any amounts due, Auctioneer reserves the right to sell the lot(s) securing the invoice to any underbidders in the Auction that the lot(s) appeared, or at subsequent private or public sale, or relist the lot(s) in a future auction conducted by Auctioneer. A defaulting Bidder agrees to pay for the reasonable costs of resale (including a 15% seller's commission, if assigned to an auction conducted by Auctioneer). The defaulting Bidder is liable to pay any difference between his total original invoice for the lot(s), plus any applicable interest, and the net proceeds for the lot(s) if sold at private sale or the subsequent hammer price of the lot(s) less the 15% seller's commissions, if sold at an Auctioneer's auction.
29. Auctioneer reserves the right to require payment in full in good funds before delivery of the merchandise.

# Terms and Conditions of Auction

30. Auctioneer shall have a lien against the merchandise purchased by the buyer to secure payment of the Auction invoice. Auctioneer is further granted a lien and the right to retain possession of any other property of the buyer then held by the Auctioneer or its affiliates to secure payment of any Auction invoice or any other amounts due the Auctioneer or affiliates from the buyer. With respect to these lien rights, Auctioneer shall have all the rights of a secured creditor under Article 9 of the Texas Uniform Commercial Code, including but not limited to the right of sale (including a 15% seller's commission, if consigned to an auction conducted by Auctioneer). In addition, with respect to payment of the Auction invoice(s), the buyer waives any and all rights of offset he might otherwise have against the Auctioneer and the consignor of the merchandise included on the invoice. If a Bidder owes Auctioneer or its affiliates on any account, Auctioneer and its affiliates shall have the right to offset such unpaid account by any credit balance due Bidder, and it may secure by possessory lien any unpaid amount by any of the Bidder's property in their possession..

31. Title shall not pass to the successful Bidder until all invoices are paid in full. It is the responsibility of the buyer to provide adequate insurance coverage for the items once they have been delivered to a common carrier or third-party shipper.

## **Delivery; Shipping; and Handling Charges:**

32. Buyer is liable for shipping, handling, registration, and renewal fees, if any. Please refer to Auctioneer's website HA.com/c/shipping.zx for the latest charges or call Auctioneer. Auctioneer is unable to combine purchases from other auctions or affiliates into one package for shipping purposes. Lots won will be shipped in a commercially reasonable time after payment in good funds for the merchandise and the shipping fees is received or credit extended, except when third-party shipment occurs. Buyer agrees that Service and Handling charges related to shipping items which are not pre-paid may be charged to the credit card on file with Auctioneer.

33. Successful international Bidders shall provide written shipping instructions, including specified customs declarations, to the Auctioneer for any lots to be delivered outside of the United States. NOTE: Declaration value shall be the item(s) hammer price together with its buyer's premium and Auctioneer shall use the correct harmonized code for the lot. Domestic Buyers on lots designated for third-party shipment must designate the common carrier, accept risk of loss, and prepay shipping costs.

34. All shipping charges will be borne by the successful Bidder. On all domestic shipments, any risk of loss during shipment will be borne by Heritage until the shipping carrier's confirmation of delivery to the address of record in Auctioneer's file (carrier's confirmation is conclusive to prove delivery to Bidder; if the client has a Signature release on file with the carrier, the package is considered delivered without Signature) or delivery by Heritage to Bidder's selected third-party shipper. On all foreign shipments, any risk of loss during shipment will be borne by the Bidder following Auctioneer's delivery to the Bidder's designated common carrier or third-party shipper.

35. Due to the nature of some items sold, it shall be the responsibility for the successful Bidder to arrange pick-up and shipping through third-parties; as to such items Auctioneer shall have no liability. Failure to pick-up or arrange shipping in a timely fashion (within ten days) shall subject Lots to storage and moving charges, including a \$100 administration fee plus \$10 daily storage for larger items and \$5.00 daily for smaller items (storage fee per item) after 35 days. In the event the Lot is not removed within ninety days, the Lot may be offered for sale to recover any past due storage or moving fees, including a 10% Seller's Commission.

36A. The laws of various countries regulate the import or export of certain plant and animal properties, including (but not limited to) items made of (or including) ivory, whalebone, turtle shell, coral, crocodile, or other wildlife. Transport of such lots may require special licenses for export, import, or both. Bidder is responsible for: 1) obtaining all information on such restricted items for both export and import; 2) obtaining all such licenses and/or permits. Delay or failure to obtain any such license or permit does not relieve the buyer of timely compliance with standard payment terms. For further information, please contact Ron Brackemyre at 800- 872-6467 ext. 1312.

36B. California State law prohibits the importation of any product containing Python skin into the State of California, thus no lot containing Python skin will be shipped to or invoiced to a person or company in California.

36C. Auctioneer shall not be liable for any loss caused by or resulting from:

- a. Seizure or destruction under quarantine or Customs regulation, or confiscation by order of any Government or public authority, or risks of contraband or illegal transportation of trade, or
- b. Breakage of statuary, marble, glassware, bric-a-brac, porcelains, jewelry, and similar fragile articles

37. Any request for shipping verification for undelivered packages must be made within 30 days of shipment by Auctioneer.

## **Cataloging, Warranties and Disclaimers:**

38. NO WARRANTY, WHETHER EXPRESSED OR IMPLIED, IS MADE WITH RESPECT TO ANY DESCRIPTION CONTAINED IN THIS AUCTION OR ANY SECOND OPINE. Any description of the items or second opine contained in this Auction is for the sole purpose of identifying the items for those Bidders who do not have the opportunity to view the lots prior to bidding, and no description of items has been made part of the basis of the bargain or has created any express warranty that the goods would conform to any description made by Auctioneer. Color variations can be expected in any electronic or printed imaging, and are not grounds for the return of any lot. NOTE: Auctioneer, in specified auction venues, for example, Fine Art, may have express written warranties and you are referred to those specific terms and conditions. .

39. Auctioneer is selling only such right or title to the items being sold as Auctioneer may have by virtue of consignment agreements on the date of auction and disclaims any warranty of title to the Property. Auctioneer disclaims any warranty of merchantability or fitness for any particular purposes. All images, descriptions, sales data, and archival records are the exclusive property of Auctioneer, and may be used by Auctioneer for advertising, promotion, archival records, and any other uses deemed appropriate.

40. Translations of foreign language documents may be provided as a convenience to interested parties. Auctioneer makes no representation as to the accuracy of those translations and will not be held responsible for errors in bidding arising from inaccuracies in translation.

41. Auctioneer disclaims all liability for damages, consequential or otherwise, arising out of or in connection with the sale of any Property by Auctioneer to Bidder. No third party may rely on any benefit of these Terms and Conditions and any rights, if any, established hereunder are personal to the Bidder and may not be assigned. Any statement made by the Auctioneer is an opinion and does not constitute a warranty or representation. No employee of Auctioneer may alter these Terms and Conditions, and, unless signed by a principal of Auctioneer, any such alteration is null and void.

42. Auctioneer shall not be liable for breakage of glass or damage to frames (patent or latent); such defects, in any event, shall not be a basis for any claim for return or reduction in purchase price.

## **Release:**

43. In consideration of participation in the Auction and the placing of a bid, Bidder expressly releases Auctioneer, its officers, directors and employees, its affiliates, and its outside experts that provide second opines, from any and all claims, cause of action, those of action, whether at law or equity or any arbitration or mediation rights existing under the rules of any professional society or affiliation based upon the assigned description, or a derivative theory, breach of warranty express or implied, representation or other matter set forth within these Terms and Conditions of Auction or otherwise. In the event of a claim, Bidder agrees that such rights and privileges conferred therein are strictly construed as specifically declared herein; e.g., authenticity, typographical error, etc. and are the exclusive remedy. Bidder, by non-compliance to these express terms of a granted remedy, shall waive any claim against Auctioneer.

44. Notice: Some Property sold by Auctioneer are inherently dangerous e.g. firearms, cannons, and small items that may be swallowed or ingested or may have latent defects all of which may cause harm to a person. Purchaser accepts all risk of loss or damage from its purchase of these items and Auctioneer disclaims any liability whether under contract or tort for damages and losses, direct or inconsequential, and expressly disclaims any warranty as to safety or usage of any lot sold.

## **Dispute Resolution and Arbitration Provision:**

45. By placing a bid or otherwise participating in the auction, Bidder accepts these Terms and Conditions of Auction, and specifically agrees to the dispute resolution provided herein. Consumer disputes shall be resolved through court litigation which has an exclusive Dallas, Texas venue clause and jury waiver. Non-consumer dispute shall be determined in binding arbitration which arbitration replaces the right to go to court, including the right to a jury trial.

46. Auctioneer in no event shall be responsible for consequential damages, incidental damages, compensatory damages, or any other damages arising or claimed to be arising from the auction of any lot. In the event that Auctioneer cannot deliver the lot or subsequently it is established that the lot lacks title, or other transfer or condition issue is claimed, in such cases the sole remedy shall be limited to rescission of sale and refund of the amount paid by Bidder; in no case shall Auctioneer's maximum liability exceed the high bid on that lot, which bid shall be deemed for all purposes the value of the lot. After one year has elapsed, Auctioneer's maximum liability shall be limited to any commissions and fees Auctioneer earned on that lot.

47. In the event of an attribution error, Auctioneer may at its sole discretion, correct the error on the Internet, or, if discovered at a later date, to refund the buyer's purchase price without further obligation.

48. Exclusive Dispute Resolution Process: All claims, disputes, or controversies in connection with, relating to and/or arising out of your Participation in the Auction or purchase of any lot, any interpretation of the Terms and Conditions of Sale or any amendments thereto, any description of any lot or condition report, any damage to any lot, any alleged verbal modification of any term of sale or condition report or description and/or any purported settlement whether asserted in contract, tort, under Federal or State statute or regulation or any claim made by you of a lot or your Participation in the auction involving the auction or a specific lot involving a warranty or representation of a consignor or other person or entity including Auctioneer { which claim you consent to be made a party} (collectively, "Claim") shall be exclusively heard by, and the claimant (or respondent as the case may be) and Heritage each consent to the Claim being presented in a confidential binding arbitration before a single arbitrator administrated by and conducted under the rules of, the American Arbitration Association. The locale for all such arbitrations shall be Dallas, Texas. The arbitrator's award may be enforced in any court of competent jurisdiction. If a Claim involves a consumer, exclusive subject matter jurisdiction for the Claim is in the State District Courts of Dallas County, Texas and the consumer consents to subject matter and in personam jurisdiction; further CONSUMER EXPRESSLY WAIVES ANY RIGHT TO TRIAL BY JURY. A consumer may elect arbitration as specified above. Any claim involving the purchase or sale of numismatic or related items may be submitted through binding PNG arbitration. Any Claim must be brought within two (2) years of the alleged breach, default or misrepresentation or the Claim is waived. Exemplary or punitive damages are not permitted and are waived. A Claim is not subject to class certification. Nothing herein shall be construed to extend the time of return or conditions and restrictions for return. This Agreement and any Claim shall be determined and construed under Texas law. The prevailing party (a party that is awarded substantial and material relief on its damage claim based on damages sought vs. awarded or the successful defense of a Claim based on damages sought vs. awarded) may be awarded its reasonable attorneys' fees and costs.

49. No claims of any kind can be considered after the settlements have been made with the consignors. Any dispute after the settlement date is strictly between the Bidder and consignor without involvement or responsibility of the Auctioneer.

50. In consideration of their participation in or application for the Auction, a person or entity (whether the successful Bidder, a Bidder, a purchaser and/or other Auction participant or registrant) agrees that all disputes in any way relating to, arising under, connected with, or incidental to these Terms and Conditions and purchases, or default in payment thereof, shall be arbitrated pursuant to the arbitration provision. In the event that any matter including actions to compel arbitration, construe the agreement, actions in aid or arbitration or otherwise needs to be litigated, such litigation shall be exclusively in the Courts of the State of Texas, in Dallas County, Texas, and if necessary the corresponding appellate courts. For such actions, the successful Bidder, purchaser, or Auction participant also expressly submits himself to the personal jurisdiction of the State of Texas.

51. These Terms & Conditions provide specific remedies for occurrences in the auction and delivery process. Where such remedies are afforded, they shall be interpreted strictly. Bidder agrees that any claim shall utilize such remedies; Bidder making a claim in excess of those remedies provided in these Terms and Conditions agrees that in no case whatsoever shall Auctioneer's maximum liability exceed the high bid on that lot, which bid shall be deemed for all purposes the value of the lot.

## **Miscellaneous:**

52. Agreements between Bidders and consignors to effectuate a non-sale of an item at Auction, inhibit bidding on a consigned item to enter into a private sale agreement for said item, or to utilize the Auctioneer's Auction to obtain sales for non-selling consigned items subsequent to the Auction, are strictly prohibited. If a subsequent sale of a previously consigned item occurs in violation of this provision, Auctioneer reserves the right to charge Bidder the applicable Buyer's Premium and consignor a Seller's Commission as determined for each auction venue and by the terms of the seller's agreement.

53. Acceptance of these Terms and Conditions qualifies Bidder as a client who has consented to be contacted by Heritage in the future. In conformity with "do-not-call" regulations promulgated by the Federal or State regulatory agencies, participation by the Bidder is affirmative consent to being contacted at the phone number shown in his application and this consent shall remain in effect until it is revoked in writing. Heritage may from time to time contact Bidder concerning sale, purchase, and auction opportunities available through Heritage and its affiliates and subsidiaries.

54. Rules of Construction: Auctioneer presents properties in a number of collectible fields, and as such, specific venues have promulgated supplemental Terms and Conditions. Nothing herein shall be construed to waive the general Terms and Conditions of Auction by these additional rules and shall be construed to give force and effect to the rules in their entirety.

## **State Notices:**

Notice as to an Auction in California. Auctioneer has in compliance with Title 2.95 of the California Civil Code as amended October 11, 1993 Sec. 1812.600, posted with the California Secretary of State its bonds for it and its employees, and the auction is being conducted in compliance with Sec. 2338 of the Commercial Code and Sec. 535 of the Penal Code.

Notice as to an Auction in New York City. These Terms and Conditions of Sale are designed to conform to the applicable sections of the New York City Department of Consumer Affairs Rules and Regulations as Amended. This sale is a Public Auction Sale conducted by Heritage Auctioneers & Galleries, Inc. # 41513036. The New York City licensed auctioneers are: Sam Foose, #095260; Kathleen Guzman, #0762165; Nicholas Dawes, #1304724; Ed Beardsley, #1183220; Scott Peterson, #1306933; Andrea Voss, #1320558, who will conduct the Sale on behalf of itself and Heritage Numismatic Auctions, Inc. (for Coins) and Currency Auctions of America, Inc. (for currency). All lots are subject to: the consignor's rights to bid thereon in accord with these Terms and Conditions of Sale, consignor's option to receive advances on their consignments, and Auctioneer, in its sole discretion, may offer limited extended financing to registered bidders, in accord with Auctioneer's internal credit standards. A registered bidder may inquire whether a lot is subject to an advance or a reserve. Auctioneer has made advances to various consignors in this sale. On lots bearing an estimate, the term refers to a value range placed on an item by the Auctioneer in its sole opinion but the final price is determined by the bidders.

Notice as to an Auction in Texas. In compliance with TDLR rule 67.100(c)(1), notice is hereby provided that this auction is covered by a Recovery Fund administered by the Texas Department of Licensing and Regulation, P.O. Box 12157, Austin, Texas 78711 (512) 463-6599. Any complaints may be directed to the same address.

Notice as to an Auction in Ohio: Auction firm and Auctioneer are licensed by the Dept. of Agriculture, and either the licensee is bonded in favor of the state or an aggrieved person may initiate a claim against the auction recovery fund created in Section 4707.25 of the Revised Code as a result of the licensee's actions, whichever is applicable.

# Terms and Conditions of Auction

## Additional Terms & Conditions: COINS & CURRENCY

COINS and CURRENCY TERM A: Signature. Auctions are not on approval. No certified material may be returned because of possible differences of opinion with respect to the grade offered by any third-party organization, dealer, or service. No guarantee of grade is offered for uncertified Property sold and subsequently submitted to a third-party grading service. There are absolutely no exceptions to this policy. Under extremely limited circumstances, (e.g. gross cataloging error) a purchaser, who did not bid from the floor, may request Auctioneer to evaluate voiding a sale: such request must be made in writing detailing the alleged gross error; submission of the lot to the Auctioneer must be pre-approved by the Auctioneer; and bidder must notify Ron Brackemyre (1-800-872-6467 Ext. 1312) in writing of such request within three (3) days of the non-floor bidder's receipt of the lot. Any lot that is to be evaluated must be in our offices within 30 days after Auction. Grading or method of manufacture do not qualify for this evaluation process nor do such complaints constitute a basis to challenge the authenticity of a lot. AFTER THAT 30-DAY PERIOD, NO LOTS MAY BE RETURNED FOR REASONS OTHER THAN AUTHENTICITY. Lots returned must be housed intact in their original holder. No lots purchased by floor Bidders may be returned (including those Bidders acting as agents for others) except for authenticity. Late remittance for purchases may be considered just cause to revoke all return privileges.

COINS and CURRENCY TERM B: Auctions conducted solely on the Internet THREE (3) DAY RETURN POLICY: Certified Coin and Uncertified and Certified Currency lots paid for within seven days of the Auction closing are sold with a three (3) day return privilege unless otherwise noted in the description as "Sold As Is, No Return Lot". You may return lots under the following conditions: Within three days of receipt of the lot, you must first notify Auctioneer by contacting Client Service by phone (877-HERITAGE (437-4824)) or e-mail (Bid@HA.com), and immediately ship the lot(s) fully insured to the attention of Returns, Heritage, 3500 Maple Avenue, 17th Floor, Dallas TX 75219-3941. Lots must be housed intact in their original holder and condition. You are responsible for the insured, safe delivery of any lots. A non-negotiable return fee of 5% of the purchase price (\$10 per lot minimum) will be deducted from the refund for each returned lot or billed directly. Postage and handling fees are not refunded. After the three-day period (from receipt), no items may be returned for any reason. Late remittance for purchases revokes these Return privileges.

COINS and CURRENCY TERM C: Bidders who have inspected the lots prior to any Auction, or attended the Auction, or bid through an Agent, will not be granted any return privileges, except for reasons of authenticity.

COINS and CURRENCY TERM D: Coins sold referencing a third-party grading service are sold "as is" without any express or implied warranty, except for a guarantee by Auctioneer that they are genuine. Certain warranties may be available from the grading services and the Bidder is referred to them for further details: Numismatic Guaranty Corporation (NGC), P.O. Box 4776, Sarasota, FL 34230, <http://www.ngccoin.com/services/writtenguarantee.asp>; Professional Coin Grading Service (PCGS), PO Box 9458, Newport Beach, CA 92658, <http://www.pcg.com/guarantee.html>; ANACS, 6555 S. Kenton St. Ste. 303, Englewood, CO 80111; and Independent Coin Grading Co. (ICG), 7901 East Bellevue Ave., Suite 50, Englewood, CO 80111.

COINS and CURRENCY TERM E: Notes sold referencing a third-party grading service are sold "as is" without any express or implied warranty, except for guarantee by Auctioneer that they are genuine. Grading, condition or other attributes of any lot may have a material effect on its value, and the opinion of others, including third-party grading services such as PCGS Currency, PMG, and CGA may differ with that of Auctioneer. Auctioneer shall not be bound by any prior or subsequent opinion, determination, or certification by any grading service. Bidder specifically waives any claim to right of return of any item because of the opinion, determination, or certification, or lack thereof, by any grading service. Certain warranties may be available from the grading services and the Bidder is referred to them for further details: Paper Money Guaranty (PMG), PO Box 4711, Sarasota FL 34230; PCGS Currency, PO Box 9458, Newport Beach, CA 92658; Currency Grading & Authentication (CGA), PO Box 418, Three Bridges, NJ 08887. Third party graded notes are not returnable for any reason whatsoever.

COINS and CURRENCY TERM F: Since we cannot examine encapsulated coins or notes, they are sold "as is" without our grading opinion, and may not be returned for any reason. Auctioneer shall not be

liable for any patent or latent defect or controversy pertaining to or arising from any encapsulated collectible. In any such instance, purchaser's remedy, if any, shall be solely against the service certifying the collectible.

COINS and CURRENCY TERM G: Due to changing grading standards over time, differing interpretations, and to possible mishandling of items by subsequent owners, Auctioneer reserves the right to grade items differently than shown on certificates from any grading service that accompany the items. Auctioneer also reserves the right to grade items differently than the grades shown in the prior catalog should such items be reconsigned to any future auction.

COINS and CURRENCY TERM H: Although consensus grading is employed by most grading services, it should be noted as aforesaid that grading is not an exact science. In fact, it is entirely possible that if a lot is broken out of a plastic holder and resubmitted to another grading service or even to the same service, the lot could come back with a different grade assigned.

COINS and CURRENCY TERM I: Certification does not guarantee protection against the normal risks associated with potentially volatile markets. The degree of liquidity for certified coins and collectibles will vary according to general market conditions and the particular lot involved. For some lots there may be no active market at all at certain points in time.

COINS and CURRENCY TERM J: All non-certified coins and currency are guaranteed genuine, but are not guaranteed as to grade, since grading is a matter of opinion, an art and not a science, and therefore the opinion rendered by the Auctioneer or any third party grading service may not agree with the opinion of others (including trained experts), and the same expert may not grade the same item with the same grade at two different times. Auctioneer has graded the non-certified numismatic items, in the Auctioneer's opinion, to their current interpretation of the American Numismatic Association's standards as of the date the catalog was prepared. There is no guarantee or warranty implied or expressed that the grading standards utilized by the Auctioneer will meet the standards of any grading service at any time in the future.

COINS and CURRENCY TERM K: Storage of purchased coins and currency: Purchasers are advised that certain types of plastic may react with a coin's metal or transfer plasticizer to notes and may cause damage. Caution should be used to avoid storage in materials that are not inert.

COINS and CURRENCY TERM L: NOTE: Purchasers of rare coins or currency through Heritage have available the option of arbitration by the Professional Numismatists Guild (PNG); if an election is not made within ten (10) days of an unresolved dispute, Auctioneer may elect either PNG or A.A.A. Arbitration.

COINS and CURRENCY TERM M: For more information regarding Canadian lots attributed to the Charlton reference guides, please contact: Charlton International, PO Box 820, Station Willowdale B, North York, Ontario M2K 2R1 Canada.

COINS and CURRENCY TERM N: Some of the lots offered herein have been assigned to 1031 Services, Inc. for the purpose of consignor's tax deferred exchange.

COINS and CURRENCY TERM O: Financing. Auctioneer offers various extended payment options to qualified pre-approved persons and companies. The options include Extended Payment Programs (EPP) Flexible Payment Program (FPP) and Dealer Terms. Each program has its specific terms and conditions and such terms and conditions are strictly enforced. Each program has to be executed by the purchaser. Auctioneer reserves the right to alter or deny credit and in such case these auction terms shall control.

For wiring instructions call the Credit department at 877-HERITAGE (437-4824) or e-mail: CreditDept@HA.com

## New York State Auctions Only

Notice as to an Auction in New York City. These Terms and Conditions of Sale are designed to conform to the applicable sections of the New York City Department of Consumer Affairs Rules and Regulations as Amended. This sale is a Public Auction Sale conducted by Heritage Auctioneers & Galleries, Inc. #1364738. The New York City licensed auctioneers are: Samuel Foosse 0952360; Robert Korver 1096338; Kathleen Guzman 0762165; Michael J. Sadler 1304630; Scott Peterson 1306933; Andrea Voss 1320558; Nicholas Dawes 1304724; Ed Beardsley 1183220; Bob Merrill 1473403; Paul Minshull 2001161; Fiona Elias 2001163; Brian Nalley 2001162; Jennifer Marsh 2009623; Alissa Ford 2009565, who will conduct the Sale on behalf of itself and Heritage Auctioneers & Galleries, Inc. All lots are subject to: the consignor's rights to bid thereon in accord with these Terms and Conditions of Sale, consignor's option to receive advances on their consignments, and Auctioneer, in its sole discretion, may offer limited extended financing to registered bidders, in accord with Auctioneer's internal credit standards. A registered bidder may inquire whether a lot is subject to an advance or a reserve. Auctioneer has made advances to various consignors in this sale. On lots bearing an estimate, the term refers to a value range placed on an item by the Auctioneer in its sole opinion but the final price is determined by the bidders. Rev 10-6-2014

U.S. COIN AUCTION  
JANUARY 11-12, 2015 | DALLAS

# U.S. Coins

January 11-12, 2015 | Dallas

## Signature® Internet Sessions 8-9

(HERITAGE Live!®, Internet, Fax, & Mail only Session)

### Session 8

Sunday, January 11 • 1:00 PM CT • Lots 9001-10672

### Session 9

Monday, January 12 • 12:00 PM CT • Lots 10673-12644

Extended Payment Terms available. Email: [Credit@HA.com](mailto:Credit@HA.com)

Lots are sold at an approximate rate of 200 lots per hour, but it is not uncommon to sell 150 lots or 250 lots in any given hour.

**This auction is subject to a 17.5% Buyer's Premium.**

TX Auctioneer licenses: Samuel Foose 11727; Robert Korver 13754; Scott Peterson 13256; Bob Merrill 13408; Mike Sadler 16129; Kathleen Guzman 16142; Andrea Voss 16406; Jacob Walker 16413; Paul Minshull 16591; Chris Dykstra 16601; Edward Beardsley 16632; Alissa Ford 17104; Jennifer Marsh 17105; Shawn Schiller 17111; Mark Prendergast 17118; Brian Nalley 17134; Mike Provenzale 17157; Amelia Barber 17364; Nathan Schar 17365; Sarah Davies 17505; Anthony Singleton 17507; Helen Goblirsch 17508; Caroline Ervin 17509; David Boozer 17510; Marina Medina 17512; Holly Culbreath 17513; Gary Fournierat 17514.

### SPECIAL INTERNET BIDDING FEATURE

Online proxy bidding ends at HA.com two hours prior to the opening of the live auction. After proxy bidding closes, live bidding will take place through Heritage Live!®, that lets you bid live during the actual auction. (Important note: Due to software and Internet latency, bids placed through Live Internet Bidding may not register in time and those bids will not be recognized, so we advise placing your proxy bids in advance.)

## PRELIMINARY LOT VIEWING

By appointment only. Please contact Roy Porras at 214-409-1295 or [RoyP@HA.com](mailto:RoyP@HA.com) to schedule an appointment. (All times subject to change)

Heritage Auctions, Dallas  
3500 Maple Avenue • Dallas, TX 75219

Wednesday, December 17 – Tuesday, December 23  
9:00 AM – 6:00 PM CT

## LOT VIEWING

Orange County Convention Center  
West Concourse • Rooms 221 C, D, E  
9800 International Drive • Orlando, FL 32819

Monday, January 5 • 10:00 AM – 7:00 PM ET  
Tuesday, January 6 – Friday, January 9  
8:00 AM – 7:00 PM ET  
Saturday, January 10 • 8:00 AM – 12:00 PM ET

View lots & auction results online at [HA.com/1216](http://HA.com/1216)

## BIDDING METHODS:

### HERITAGE Live!® Bidding

Bid live on your computer or mobile, anywhere in the world, during the Auction using our HERITAGE Live!® program at [HA.com/Live](http://HA.com/Live)

### Internet Bidding

Internet absentee bidding ends at 10:00 PM CT the evening before each session. [HA.com/1216](http://HA.com/1216)

### Fax Bidding

Fax bids must be received on or before Friday, January 9, by 12:00 PM CT. Fax: 214-409-1425

### Mail Bidding

Mail bids must be received on or before Friday, January 9.

## BUST QUARTERS

**9987 1818 VF30 PCGS. CAC.** PCGS Population (52/316). NGC Census: (14/272). Mintage: 361,174. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF30: \$839. NGC ID# 23RH, PCGS# 5322

**9988 1821 VF30 PCGS.** PCGS Population (24/157). NGC Census: (9/165). Mintage: 216,851. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF30: \$885. NGC ID# 23RM, PCGS# 5331

**9989 1821 B-2, — Improperly Cleaned — AU50 NGC Details.** NGC Census: (0/0). PCGS Population (0/0). Mintage: 216,851.

**9990 1824/2 VG10 PCGS. CAC.** PCGS Population (11/105). NGC Census: (0/0). Mintage: 24,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VG10: \$1,395. NGC ID# 23RR, PCGS# 5335

**9991 1825/4/2 Browning 1, R.5, Fine 12 PCGS.** PCGS Population (3/13). NGC Census: (0/13). PCGS# 38974 Base PCGS# 5337

**9992 1828 VF35 NGC.** NGC Census: (0/0). PCGS Population (22/111). Mintage: 102,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF35: \$994. NGC ID# 23RV, PCGS# 5342

**9993 1834 AU55 NGC.** NGC Census: (37/211). PCGS Population (51/180). Mintage: 286,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: \$775. NGC ID# 23RZ, PCGS# 5353

**9994 1834 — Improperly Cleaned — NGC Details. Unc.** NGC Census: (2/150). PCGS Population (2/125). Mintage: 286,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: \$1,100.

**9995 1834 B-2, R.4, XF45 NGC.** NGC Census: (3/2). PCGS Population (0/0). Mintage: 286,000. PCGS# 38993 Base PCGS# 5353

**9996 1835 AU53 NGC.** NGC Census: (23/185). PCGS Population (29/152). Mintage: 1,952,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: \$665. NGC ID# 23S2, PCGS# 5354

**9997 1835 — Improperly Cleaned — NGC Details. Unc.** NGC Census: (1/76). PCGS Population (4/70). Mintage: 1,952,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: \$1,025.

**9998 1836 AU53 PCGS. CAC.** PCGS Population (8/55). NGC Census: (4/46). Mintage: 472,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: \$600. NGC ID# 23S3, PCGS# 5355

**9999 1838 Browning 1, R.1, AU53 PCGS.** PCGS Population (1/1). NGC Census: (12/118). Mintage: 366,000. PCGS# 39015 Base PCGS# 5357

## SEATED QUARTERS

**10000 1838 No Drapery AU50 PCGS.** PCGS Population (17/101). NGC Census: (5/121). Mintage: 466,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: \$550. NGC ID# 23SE, PCGS# 5391

**10001 1838 No Drapery AU53 NGC.** NGC Census: (7/114). PCGS Population (8/93). Mintage: 466,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: \$615. NGC ID# 23SE, PCGS# 5391

**10002 1839 No Drapery AU53 PCGS.** PCGS Population (6/77). NGC Census: (7/79). Mintage: 491,146. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: \$635. NGC ID# 23SF, PCGS# 5392

**10003 1848 AU55 PCGS.** PCGS Population (6/13). NGC Census: (5/15). Mintage: 146,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: \$675. NGC ID# 23SZ, PCGS# 5412

**10004 1849 MS63 NGC.** NGC Census: (9/8). PCGS Population (6/9). Mintage: 340,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: \$1,525. NGC ID# 23T2, PCGS# 5413

**10005 1851-O — Improperly Cleaned — NGC Details. VF.** NGC Census: (2/16). PCGS Population (6/33). Mintage: 88,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: \$900

**10006 1853 Arrows and Rays AU58 PCGS. CAC.** PCGS Population (102/379). NGC Census: (136/442). Mintage: 15,210,020. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: \$625. NGC ID# 23U4, PCGS# 5426

**10007 1853 Arrows and Rays MS61 PCGS.** PCGS Population (14/360). NGC Census: (50/385). Mintage: 15,210,020. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: \$875. NGC ID# 23U4, PCGS# 5426

**10008 1854 Arrows MS63 NGC.** NGC Census: (51/94). PCGS Population (56/84). Mintage: 12,380,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: \$1,050. NGC ID# 23U6, PCGS# 5432

**10009 1859-O AU55 NGC.** NGC Census: (6/20). PCGS Population (5/14). Mintage: 260,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: \$650. NGC ID# 23TM, PCGS# 5449

**10010 1861 MS63 NGC.** NGC Census: (89/136). PCGS Population (107/152). Mintage: 4,854,600. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: \$700. NGC ID# 23TT, PCGS# 5454

**10011 1861 MS64 PCGS.** PCGS Population (99/53). NGC Census: (93/43). Mintage: 4,854,600. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: \$1,025. NGC ID# 23TT, PCGS# 5454

**10012 1864-S Fine 15 PCGS.** PCGS Population (6/34). NGC Census: (0/26). Mintage: 20,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 15: \$1,423. NGC ID# 23TZ, PCGS# 5460

**10013 1876 MS62 Prooflike NGC. CAC.** NGC Census: (68/234). PCGS Population (81/307). Mintage: 17,817,150. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: \$395. NGC ID# 23V2, PCGS# 5501

**10014 1883 MS63 NGC.** NGC Census: (11/49). PCGS Population (12/50). Mintage: 14,400. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: \$675. NGC ID# 23VF, PCGS# 5515

**10015 1888-S MS64 PCGS.** PCGS Population (34/9). NGC Census: (37/20). Mintage: 1,216,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: \$1,175. NGC ID# 23VN, PCGS# 5521

**10016 1889 MS64 PCGS. CAC.** PCGS Population (39/113). NGC Census: (37/103). Mintage: 12,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: \$950. *From The College Collection.* NGC ID# 23VM, PCGS# 5522

**10017 1890 MS63 NGC.** NGC Census: (23/125). PCGS Population (20/121). Mintage: 80,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: \$575. NGC ID# 23VP, PCGS# 5523

**10018 1891 MS64 NGC.** NGC Census: (147/121). PCGS Population (155/95). Mintage: 3,920,600. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: \$800. NGC ID# 23VR, PCGS# 5524

## PROOF SEATED QUARTERS

**10019 1870 PR63 PCGS.** PCGS Population (38/50). NGC Census: (22/73). Mintage: 1,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR63: \$800. NGC ID# 23X3, PCGS# 5569

**10020 1870 PR64 NGC.** NGC Census: (46/27). PCGS Population (36/14). Mintage: 1,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: \$1,100. NGC ID# 23X3, PCGS# 5569

**10021 1872 PR64 Cameo PCGS.** PCGS Population (13/15). NGC Census: (9/20). PCGS# 85571

**10022 1873 No Arrows PR64 Cameo PCGS.** PCGS Population (14/6). NGC Census: (8/7). PCGS# 85572

**10023 1874 Arrows PR62 PCGS. CAC.** PCGS Population (36/196). NGC Census: (22/213). Mintage: 700. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR62: \$825. NGC ID# 23XS, PCGS# 5575

**10024 1876 PR64 PCGS.** PCGS Population (46/29). NGC Census: (49/52). Mintage: 1,150. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: \$1,025. NGC ID# 23X8, PCGS# 5577

**10025 1877 PR64 NGC.** NGC Census: (41/30). PCGS Population (37/25). Mintage: 510. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: \$1,075. NGC ID# 23X9, PCGS# 5578

**10026 1878 PR64 NGC.** NGC Census: (61/28). PCGS Population (45/23). Mintage: 800. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: \$1,050. NGC ID# 23XA, PCGS# 5579

**10027 1879 PR62 PCGS.** PCGS Population (59/215). NGC Census: (24/219). Mintage: 1,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR62: \$560. NGC ID# 23XB, PCGS# 5580

**10028 1882 PR62 NGC.** NGC Census: (29/208). PCGS Population (51/212). Mintage: 1,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR62: \$575. NGC ID# 23XE, PCGS# 5583

**10029 1882 PR64 Cameo PCGS.** PCGS Population (18/28). NGC Census: (9/30). PCGS# 85583

**10030 1884 PR64 Cameo NGC. CAC.** NGC Census: (5/31). PCGS Population (10/27). PCGS# 85585

## BARBER QUARTERS

**10031 1892 MS64 PCGS. CAC.** PCGS Population (334/274). NGC Census: (355/273). Mintage: 8,237,245. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: \$500. *From The College Collection.* NGC ID# 23XT, PCGS# 5601

**10032 1892 MS66 NGC.** NGC Census: (84/22). PCGS Population (112/28). Mintage: 8,237,245. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: \$1,475. NGC ID# 23XT, PCGS# 5601

**10033 1892 MS66 NGC.** NGC Census: (84/22). PCGS Population (112/28). Mintage: 8,237,245. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: \$1,475. NGC ID# 23XT, PCGS# 5601

**10034 1892-S AU53 PCGS.** PCGS Population (12/128). NGC Census: (1/85). Mintage: 964,079. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: \$325. NGC ID# 23XV, PCGS# 5603

**10035 1893 MS65 NGC.** NGC Census: (28/6). PCGS Population (26/11). Mintage: 5,444,815. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$1,150. NGC ID# 23XW, PCGS# 5604

**10036 1894-S MS64 PCGS.** PCGS Population (56/22). NGC Census: (58/14). Mintage: 2,648,821. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: \$1,025. NGC ID# 23Y3, PCGS# 5609

**10037 1894-S MS64 PCGS.** PCGS Population (56/22). NGC Census: (58/14). Mintage: 2,648,821. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: \$1,025. NGC ID# 23Y3, PCGS# 5609

**10038 1895-S AU58 NGC.** NGC Census: (14/56). PCGS Population (12/66). Mintage: 1,764,681. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: \$325. NGC ID# 23Y6, PCGS# 5612

**10039 1895-S MS62 NGC.** NGC Census: (11/42). PCGS Population (18/43). Mintage: 1,764,681. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: \$675. NGC ID# 23Y6, PCGS# 5612

**10040 1895-S MS62 PCGS.** PCGS Population (18/43). NGC Census: (10/42). Mintage: 1,764,681. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: \$675. NGC ID# 23Y6, PCGS# 5612

**10041 1896-O AU50 NGC.** NGC Census: (0/0). PCGS Population (10/75). Mintage: 1,484,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: \$650. NGC ID# 23Y8, PCGS# 5614

**10042 1896-O AU58 PCGS.** PCGS Population (14/37). NGC Census: (10/61). Mintage: 1,484,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: \$975. NGC ID# 23Y8, PCGS# 5614

**10043 1896-S Good 4 NGC. CAC.** NGC Census: (108/203). PCGS Population (211/534). Mintage: 188,039. Numismedia Wsl. Price for problem free NGC/PCGS coin in Good 4 : \$650. NGC ID# 23Y9, PCGS# 5615

**10044 1896-S VG10 PCGS.** PCGS Population (47/164). NGC Census: (8/86). Mintage: 188,039. Numismedia Wsl. Price for problem free NGC/PCGS coin in VG10: \$1,374. NGC ID# 23Y9, PCGS# 5615

**10045 1897-O AU55 PCGS. CAC.** PCGS Population (16/59). NGC Census: (3/48). Mintage: 1,414,800. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: \$725. NGC ID# 23YB, PCGS# 5617

**10046 1897-S VF25 PCGS.** PCGS Population (4/118). NGC Census: (0/0). Mintage: 542,229. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF25: \$355. NGC ID# 23YC, PCGS# 5618

**10047 1897-S XF45 NGC.** NGC Census: (0/0). PCGS Population (7/94). Mintage: 542,229. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: \$503. NGC ID# 23YC, PCGS# 5618

**10048 1897-S AU50 PCGS.** PCGS Population (6/88). NGC Census: (1/57). Mintage: 542,229. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: \$600. NGC ID# 23YC, PCGS# 5618

**10049 1897-S AU58+ NGC.** NGC Census: (5/45). PCGS Population (6/58). Mintage: 542,229. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: \$915. NGC ID# 23YC, PCGS# 5618

**10050 1898 MS65 NGC.** NGC Census: (25/26). PCGS Population (25/22). Mintage: 11,100,735. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$985. NGC ID# 23YD, PCGS# 5619

**10051 1898-O AU58 PCGS.** PCGS Population (22/50). NGC Census: (9/43). Mintage: 1,868,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: \$475. NGC ID# 23YE, PCGS# 5620

**10052 1898-O AU58 PCGS.** PCGS Population (22/50). NGC Census: (9/43). Mintage: 1,868,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: \$475. NGC ID# 23YE, PCGS# 5620

**10053 1898-S AU58 PCGS.** PCGS Population (12/32). NGC Census: (7/36). Mintage: 1,020,592. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: \$550. NGC ID# 23YF, PCGS# 5621

**10054 1899 MS65 NGC.** NGC Census: (20/8). PCGS Population (27/16). Mintage: 12,624,846. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$1,050. NGC ID# 23YG, PCGS# 5622

**10055 1899 MS66 PCGS.** PCGS Population (14/2). NGC Census: (7/1). Mintage: 12,624,846. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: \$1,575. NGC ID# 23YG, PCGS# 5622

**10056 1899-O AU58 PCGS.** PCGS Population (17/88). NGC Census: (11/63). Mintage: 2,644,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: \$390. NGC ID# 23YH, PCGS# 5623

**10057 1899-S AU58 PCGS.** PCGS Population (19/46). NGC Census: (10/30). Mintage: 708,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: \$450. NGC ID# 23YJ, PCGS# 5624

## EARLY DOLLARS

**10584 1795 Flowing Hair, Three Leaves, B-5, BB-27, R.1, — Holed and Plugged —** PCGS Genuine. VG Details.

**10585 1798 Large Eagle, Pointed 9 — Cleaning —** PCGS Genuine. VG Details. NGC Census: (19/1167). PCGS Population (37/1724). Mintage: 327,536. Numismedia Wsl. Price for problem free NGC/PCGS coin in VG8: \$1,000.

**10586 1798 Large Eagle, Pointed 9 VG10 ANACS.** NGC Census: (31/1133). PCGS Population (57/1667). Mintage: 327,536. Numismedia Wsl. Price for problem free NGC/PCGS coin in VG10: \$1,131. NGC ID# 24X6, PCGS# 6873

**10587 1798 Large Eagle, Pointed 9 — Obverse Scratched —** NGC Details. Fine. NGC Census: (48/1082). PCGS Population (94/1566). Mintage: 327,536. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: \$1,375.

**10588 1798 Large Eagle, Pointed 9 — Cleaning —** PCGS Genuine. Fine Details. NGC Census: (48/1088). PCGS Population (94/1573). Mintage: 327,536. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: \$1,375.

**10589** 1798 Large Eagle, Pointed 9, Large Date — Improperly Cleaned — NGC Details. VF Details. BB-112, B-15. NGC Census: (70/975). PCGS Population (175/1276). Mintage: 327,536. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: \$1,875.

**10590** 1798 Large Eagle, Pointed 9 — Cleaning — PCGS Genuine. VF Details. NGC Census: (70/977). PCGS Population (175/1277). Mintage: 327,536. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: \$1,875.

**10591** 1798 Large Eagle, Pointed 9 — Cleaning — PCGS Genuine. VF Details. NGC Census: (70/977). PCGS Population (175/1277). Mintage: 327,536. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: \$1,875.

**10592** 1798 Large Eagle, Pointed 9, Wide Date, B-12, BB-120, R.4, — Damage — PCGS Genuine. VF Details. NGC Census: (0/6). PCGS Population (0/4).

**10593** 1798 Large Eagle, Pointed 9, B-24, BB-124, R.2, VG10 PCGS. PCGS Population (1/7). NGC Census: (1/24). PCGS# 40041 Base PCGS# 6873

**10594** 1799 7x6 Stars — Cleaning — PCGS Genuine. VG Details. NGC Census: (48/1647). PCGS Population (72/2779). Mintage: 423,515. Numismedia Wsl. Price for problem free NGC/PCGS coin in VG8: \$1,025.

**10595** 1799 7x6 Stars — Damage — PCGS Genuine. VG Details. NGC Census: (48/1647). PCGS Population (72/2779). Mintage: 423,515. Numismedia Wsl. Price for problem free NGC/PCGS coin in VG8: \$1,025.

**10596** 1799 7x6 Stars — Scratches — NGC Details. VF Details. NGC Census: (95/1354). PCGS Population (257/2053). Mintage: 423,515. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: \$2,075.

**10597** 1799 7x6 Stars — Cleaning — PCGS Genuine. VF Details. NGC Census: (95/1361). PCGS Population (261/2061). Mintage: 423,515. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: \$2,075.

**10598** 1799 7x6 Stars — Cleaning — PCGS Genuine. VF Details. NGC Census: (95/1361). PCGS Population (261/2061). Mintage: 423,515. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: \$2,075.

**10599** 1799 7x6 Stars — Cleaning — PCGS Genuine. VF Details. NGC Census: (96/1361). PCGS Population (261/2061). Mintage: 423,515. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: \$2,075.

**10600** 1800 Dotted Date — Reverse Scratched — NCS. VF Details. BB-194. NGC Census: (43/614). PCGS Population (85/814). Mintage: 220,920. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: \$2,100

**10601** 1801 — Cleaning — PCGS Genuine. VG Details. NGC Census: (5/218). PCGS Population (18/477). Mintage: 54,454. Numismedia Wsl. Price for problem free NGC/PCGS coin in VG8: \$1,075.

**10602** 1803 Small 3 PCGS Genuine. The PCGS number ending in .98 suggests damage as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. Mintage: 85,634.

**10603** 1803 Large 3, B-6, BB-255, R.2, — Smoothed — PCGS Genuine. Fine Details. NGC Census: (2/54). PCGS Population (2/21).

## SEATED DOLLARS

**10604** 1840 VF25 PCGS. PCGS Population (9/311). NGC Census: (0/0). Mintage: 61,005. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF25: \$424. NGC ID# 24YA, PCGS# 6926

**10605** 1840 XF45 PCGS. PCGS Population (57/157). NGC Census: (30/181). Mintage: 61,005. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: \$865. NGC ID# 24YA, PCGS# 6926

**10606** 1841 AU53 PCGS. PCGS Population (25/130). NGC Census: (17/137). Mintage: 173,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: \$1,000. NGC ID# 24YB, PCGS# 6927

**10670 1877-S Chop Mark MS61 PCGS.** PCGS Population (13/37). NGC Census: (0/0). PCGS# 87046

**10671 1877-S MS61 NGC.** NGC Census: (188/508). PCGS Population (145/621). Mintage: 9,519,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: \$925. NGC ID# 253E, PCGS# 7046

**10672 1878-S MS62 ★ NGC.** NGC Census: (112/189). PCGS Population (105/260). Mintage: 4,162,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: \$1,075. NGC ID# 253G, PCGS# 7048

## End of Session Eight

# SESSION NINE

## SPECIAL INTERNET BIDDING FEATURE

Online proxy bidding ends at HA.com two hours prior to the opening of the live auction. After proxy bidding closes, live bidding will take place through Heritage Live!®, that lets you bid live during the actual auction. (Important note: Due to software and Internet latency, bids placed through Live Internet Bidding may not register in time and those bids will not be recognized, so we advise placing your proxy bids in advance.)

### MORGAN DOLLARS

**10673 1878 8TF MS65 PCGS.** PCGS Population (539/41). NGC Census: (374/19). Mintage: 699,300. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$1,300. NGC ID# 253H, PCGS# 7072

**10674 1878 8TF MS65 PCGS.** PCGS Population (538/42). NGC Census: (375/19). Mintage: 699,300. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$1,300. NGC ID# 253H, PCGS# 7072

**10675 1878 8TF MS65 PCGS.** PCGS Population (539/41). NGC Census: (374/19). Mintage: 699,300. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$1,300. NGC ID# 253H, PCGS# 7072

**10676 1878 8TF MS65 PCGS.** PCGS Population (538/41). NGC Census: (374/19). Mintage: 699,300. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$1,300. NGC ID# 253H, PCGS# 7072

**10677 1878 8TF MS65 PCGS.** PCGS Population (538/41). NGC Census: (0/0). Mintage: 699,300. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$1,300. NGC ID# 253H, PCGS# 7072

**10678 1878 8TF MS65 PCGS.** PCGS Population (542/42). NGC Census: (375/19). Mintage: 699,300. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$1,300. NGC ID# 253H, PCGS# 7072

**10679 1878 8TF MS62 Prooflike PCGS; 1882-CC MS63 Prooflike PCGS.** (Total: 2 coins)

**10680 1878 8TF First Die Pair, VAM-9, Top-100, AU50 PCGS.** PCGS Population (26/34). NGC Census: (8/16). PCGS# 133792 Base PCGS# 7072

**10681 1878 8TF VAM-23, Crazy Lips, Top-100 MS64 Prooflike ANACS.** NGC Census: (0/0). PCGS Population (0/0). PCGS# 133824 Base PCGS# 7072

**10682 1878 7TF Reverse of 1878 MS65 PCGS.** PCGS Population (538/34). NGC Census: (489/26). Mintage: 4,900,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$935. NGC ID# 253K, PCGS# 7074

**10683 1878 7TF Reverse of 1878 MS65 NGC.** NGC Census: (488/26). PCGS Population (539/34). Mintage: 4,900,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$935. NGC ID# 253K, PCGS# 7074

**10684 1878 7TF Reverse of 1878 MS65 PCGS.** PCGS Population (538/34). NGC Census: (489/26). Mintage: 4,900,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$935. NGC ID# 253K, PCGS# 7074

**10685 1878 7TF Reverse of 1878 MS65 PCGS.** PCGS Population (539/34). NGC Census: (488/26). Mintage: 4,900,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$935. NGC ID# 253K, PCGS# 7074

**10686 1878 7TF Reverse of 1878 MS65 NGC.** NGC Census: (488/26). PCGS Population (539/34). Mintage: 4,900,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$935. NGC ID# 253K, PCGS# 7074

**10687 1878 7TF Reverse of 1878 MS65 PCGS. CAC.** PCGS Population (538/34). NGC Census: (489/26). Mintage: 4,900,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$935. NGC ID# 253K, PCGS# 7074

**10688 1878 7TF Reverse of 1878 MS65 PCGS. CAC.** PCGS Population (539/34). NGC Census: (0/0). Mintage: 4,900,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$935. NGC ID# 253K, PCGS# 7074

**10689 1878-CC MS62 PCGS.** PCGS Population (4017/16919). NGC Census: (2958/11247). Mintage: 2,212,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: \$310. NGC ID# 253M, PCGS# 7080

**10690 1878-CC MS63 PCGS; 1883-CC MS64 PCGS.** (Total: 2 coins)

**10691 1878-CC MS64 NGC.** NGC Census: (4509/1479). PCGS Population (6411/2037). Mintage: 2,212,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: \$535. *From The Rawlin "Mac" McInelly Collection.* NGC ID# 253M, PCGS# 7080

**10692 1878-CC MS64 PCGS.** PCGS Population (6432/2048). NGC Census: (4517/1484). Mintage: 2,212,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: \$535. *From The College Collection.* NGC ID# 253M, PCGS# 7080

**10693 1878-CC MS64 PCGS.** PCGS Population (6432/2048). NGC Census: (4517/1484). Mintage: 2,212,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: \$535. NGC ID# 253M, PCGS# 7080

**10694 1878-CC MS64 PCGS.** PCGS Population (6433/2047). NGC Census: (4517/1484). Mintage: 2,212,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: \$535. NGC ID# 253M, PCGS# 7080

**10695 1878-CC MS64 PCGS. CAC.** PCGS Population (6392/2031). NGC Census: (4500/1481). Mintage: 2,212,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: \$535. NGC ID# 253M, PCGS# 7080

**10696 1878-CC MS64+ PCGS. CAC.** PCGS Population (6432/2048). NGC Census: (4517/1484). Mintage: 2,212,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: \$535. NGC ID# 253M, PCGS# 7080

**10697 1878-CC MS65 NGC.** NGC Census: (1269/212). PCGS Population (1793/238). Mintage: 2,212,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$1,600. NGC ID# 253M, PCGS# 7080

**10698 1878-CC MS65 PCGS.** PCGS Population (1807/241). NGC Census: (1271/213). Mintage: 2,212,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$1,600. NGC ID# 253M, PCGS# 7080

**10699 1878-CC MS65 PCGS.** PCGS Population (1806/241). NGC Census: (1271/213). Mintage: 2,212,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$1,600. NGC ID# 253M, PCGS# 7080

**10700 1878-CC MS65 PCGS.** PCGS Population (1806/241). NGC Census: (1271/213). Mintage: 2,212,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$1,600. NGC ID# 253M, PCGS# 7080

**10701 1878-CC MS64 Prooflike PCGS.** PCGS Population (464/127). NGC Census: (321/96). Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: \$865. NGC ID# 253M, PCGS# 7081

**10702 1878-S, 1879, (2)1880-S, 1882, 1884, 1904-O and 1921-D MS64 PCGS.** (Total: 8 coins)

**10703 1878-S MS65 PCGS.** PCGS Population (3890/668). NGC Census: (4080/525). Mintage: 9,774,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$300. NGC ID# 253R, PCGS# 7082

**10704 1878-S MS66 PCGS.** PCGS Population (644/28). NGC Census: (498/29). Mintage: 9,774,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: \$725. NGC ID# 253R, PCGS# 7082

**10705 1878-S MS66 PCGS.** PCGS Population (646/28). NGC Census: (498/29). Mintage: 9,774,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: \$725. NGC ID# 253R, PCGS# 7082

**10706 1878-S MS66 NGC. CAC.** NGC Census: (498/29). PCGS Population (644/28). Mintage: 9,774,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: \$725. NGC ID# 253R, PCGS# 7082

**10707 1878-S MS66 NGC. CAC.** NGC Census: (0/0). PCGS Population (645/28). Mintage: 9,774,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: \$725. NGC ID# 253R, PCGS# 7082

**10708 1878-S VAM-57, Long Nock Reverse AU53 NGC.** Top-100. NGC Census: (0/0). PCGS Population (10/12). PCGS# 133848 Base PCGS# 7082

**10709 1879 MS65 PCGS.** PCGS Population (1039/151). NGC Census: (679/98). Mintage: 14,807,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$760. NGC ID# 253S, PCGS# 7084

**10710 1879 MS65 PCGS.** PCGS Population (1039/151). NGC Census: (679/98). Mintage: 14,807,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$760. NGC ID# 253S, PCGS# 7084

**10711 1879 MS65 PCGS. CAC.** PCGS Population (1040/151). NGC Census: (679/98). Mintage: 14,807,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: \$760. NGC ID# 253S, PCGS# 7084

**10712 1879-CC XF40 PCGS.** PCGS Population (243/2788). NGC Census: (117/1561). Mintage: 756,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: \$700. NGC ID# 253T, PCGS# 7086

**10713 1879-CC XF45 PCGS.** PCGS Population (217/2572). NGC Census: (169/1396). Mintage: 756,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: \$1,059. NGC ID# 253T, PCGS# 7086

**10714 1879-CC — Improperly Cleaned — NGC Details. AU.** NGC Census: (63/1331). PCGS Population (83/2489). Mintage: 756,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: \$1,725.

**10715 1879-CC Capped Die XF45 PCGS.** PCGS Population (155/1648). NGC Census: (0/0). Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: \$983. NGC ID# 253T, PCGS# 7088

**10716 1879-CC Capped Die — Cleaning — PCGS Genuine. AU Details.** NGC Census: (0/0). PCGS Population (59/1589). Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: \$1,600.

**10717 1879-O, 1881-S and 1882-O Morgan Dollars MS62 PCGS; 1903 Morgan Dollar MS63 PCGS; 1921 and 1921-S Morgan Dollars MS62 PCGS; 1924 Peace Dollar MS63 PCGS.** (Total: 7 coins)

## S.S.C.A. RELIC GOLD MEDAL

**12388** (2002) "1857/0" Baldwin & Co. \$10 'Restrike' Deep Cameo Proof PCGS. The famous 1850 Baldwin "Horseman" Territorial ten dollar issue serves as the design inspiration for this 2002 restrike. An immaculate example with unimprovable cameo contrast. Dated 1857/0 on the obverse, and 2002 on the reverse. The source bullion came from a 906 Fine Justh & Hunter ingot recovered from the S.S. Central America shipwreck. Counterstamped JUSTH & HUNTER/No. 4050 on the reverse. PCGS# 10361

**12496** 1971 Eisenhower Dollar — Missing Clad Layer on Obverse (18.9 g) — MS63 NGC.

**12497** 1974-D Eisenhower Dollar — Missing Clad Layer on Reverse (18.3 g) — MS64 NGC.

**12498** 1979-P SBA Dollar — Struck on a 2g Outer Clad Layer, Split Off After Striking — AU58 PCGS.

**12499** No Date Sacagawea Dollar — Die Adjustment Strike — NGC.

**12500** 1932 Indian Eagle — Reverse Struck Thru — MS63 NGC.

**12501** 1924 Saint-Gaudens Double Eagle — Reverse Struck Thru — MS65 NGC.

## BETTS MEDAL

**12502** 1776 Benjamin Franklin, Lightning Averted — Environmental Damage — NGC Details. Unc. Betts-546, Julian CM-8, Greenslet SCH-GM-80, Fuld FR.M.UN.2.

## WASHINGTONIA

**12503** (1807) Sansom Medal MS61 NGC. Baker-71B. White metal, 41mm.

**12504** 1800 Hero of Freedom, Silver, VF25 PCGS. Baker-79.

**12505** (circa-1861) Lovett's Mount Vernon, Presidential Residences, MS63 NGC. Baker-113C. White metal, 35mm.

## U.S. PRESIDENTS & STATESMEN

**12506** 1860 Abraham Lincoln Campaign Medal AU58 NGC. King-35, DeWitt-AL-1860-38. White metal.

**12507** 1927 Lincoln Gold Token, T. Elder Issue — Improperly Cleaned — NGC Details. Unc. King-1043, DeLorey-48.

**12508** 1906 Dinner to Ambassador Rosen Medal, Bridgeport, Connecticut, Uncirculated Uncertified. Bronze, 63 mm. Baron Rosen was the leading Russian diplomat in the early 20th century. He was ambassador to Japan before the Russo-Japanese War, and later, ambassador to the U.S. Accompanied by the original presentation box, which has a black cardboard exterior and a purple velvet inset.

## U.S. MINT MEDALS

**12509** 1876 U.S. Centennial MS63 Brown NGC. Julian-CM-11, bronze, 58 mm; 1876 U.S. Centennial MS62 NGC, Julian-CM-11, white metal, 58 mm; (Total: 2 medals)

**12510** (1862-1863) Lt.-Col. William Washington MS63 Brown NGC. Julian-MI-8. Bronze, 46 mm.

**12511** 1836 First Steam Coinage, Mar. 23, Flat 3, MS62 Red and Brown NGC. Julian-MT-21. Bronze, 28 mm. An original striking with MAR 23 over FEB 22.

**12512** 1836 First Steam Coinage, MAR. 23, PR65 Brown NGC. Julian-MT-21. Bronze, 28 mm. An original striking with MAR 23 over FEB 22.

**12513** 1860 Mint Cabinet Medal MS64 Brown PCGS. Baker-326A, Julian MT-23b. Bronze, 59 mm.

**12514** 1976-D Colorado Centennial, U.S. Bicentennial, PR68 Ultra Cameo NGC. Gold, 33 mm. Struck at the Denver Mint.

## SO-CALLED DOLLARS

**12515** 1876 U.S. Centennial Exposition, Official Medal, MS62 Brown NGC. HK-21, Julian CM-10b, R.3. Bronze. Philadelphia, PA.

**12516** 1885 Washington Monument, Washington, D.C., AU58 NGC. HK-145, Baker N-322, R.6. White metal.

**12517** 1893 World's Columbian Exposition, 1892 Columbus Statue Dollar, MS62 NGC. HK-238a, Eglit-189, R.6. Aluminum. Chicago, IL.

**12518** 1901 Pan-American Exposition, Official Medal, MS66 NGC. HK-289, R.3. Brass. Buffalo, NY.

**12519** 1902 Wells Fargo & Co. Semicentennial AU50 NGC. HK-296, R.5. Silver. San Francisco, CA.

**12520** 1902 Wells Fargo & Co. Semicentennial MS62 NGC. HK-296, R.5. Silver. San Francisco, CA.

**12521** 1905 Lewis & Clark Exposition, Official Medal, XF45 NGC, HK-325, R.5, silver, Portland, OR; (1962) Continental Dollar, Bowers Restrike, MS65 Prooflike NGC, HK-854a, W-14630, R.3, white metal, 2.5 mm; 1886 Bartholdi, Statue of Liberty — Environmental Damage — NGC Details, AU, white metal, 38mm. (Total: 3 coins)

**12522** 1906 Southwest Expedition, Pikes Peak, PR58 NGC. HK-335, R.6. Silver, proof finish.

**12523** 1908 U.S. Navy World Voyage, Type III, MS61 NGC. HK-352a, R.6. Gilt brass.

**12524** 1915 Panama-Pacific Exposition, Maryland at P.P.I.E., MS62 NGC. HK-407, R.5. Bronze. San Francisco, CA.

**12525** 1915 Panama-Pacific Exposition, Octagonal Dollar, MS62 NGC. HK-424, R.6. Gilt bronze. San Francisco, CA.

**12526** 1920 Manila Mint Opening, Wilson Dollar, MS63 NGC. HK-449, R.4. Silver.

**12527** 1939 New York World's Fair, Lincoln Gold Dollar, MS64 NGC. HK-493, DeLorey-49, R.6. Gold, matte finish.

**12528** 1939 New York World's Fair, Lincoln Gold Dollar, MS64 NGC. HK-493, DeLorey-49, R.6. Gold, matte finish.

**12529** No lot.

**12530** 1933 Century of Progress Exposition, Montana Dollar, MS66 PCGS. HK-820, R.5. Silver.

**12531** 1933 Pedley-Ryan Dollar, Robbins on the Corner Below Pedley, MS62 NGC. HK-827a, R.7. Silver. Type VI. A rare Pedley-Ryan variety.

**12532** 1933 Century of Progress Exposition, Colorado Dollar, MS62 NGC. HK-870, R.3. Silver.

## EXPOSITIONS AND FAIRS

**12533** 1904 Louisiana Purchase Exposition, 1/2 Louisiana Gold, MS64 Prooflike NGC. Hendershott-61-330.

## COUNTERSTAMP

**12534** (Circa 1857) 1853 Liberty Round 50 Cents, BG-429, Low R.4, — Engraved, "A.R. Jackman, G.S.L. City, Dec.15." NCS Genuine.

## HARD TIMES TOKENS

**12535** 1837 Illustrious Predecessor MS64 Red NGC. Low-20, DeWitt-CE-1838-4, HT-34. Incorrectly designated by NGC as HT-33.

**12536** 1837 Feuchtwanger Cent MS63 NGC. Low-120, HT-268, Breen 6-G.

**12537** 1837 Smith's Clock, New York, NY, AU55 NGC. Low-135, HT-314.

## U.S. MERCHANT TOKENS (1845-1860)

**12538** (1853-1857) Baker & Moody, Chicago, IL, MS66 NGC. Miller-IL-7. Brass.

**12539** (1850s) Loder & Co., New York, NY, MS66 NGC. Miller-NY-466A. Brass. Presumably reeded edge, since M-NY-466 is plain edge.

**12540** (1850s) Malcolm & Gaul, New York, NY, MS66 NGC. Miller-NY-516. Brass.

**12541** (1860) Robbins, Royce & Hard, New York, NY, MS64 NGC. Miller-NY-694. Cupronickel.

**12542** (Circa-1850) A.C. Yates, New York, NY, MS64 Red NGC. Miller-NY-1029. Copper.

**12543** (circa-1860) William Idler, Coin Dealer, MS64 Red and Brown NGC. Miller-Pa-223 Obverse / 217 Reverse, Whitman-15660. Copper.

**12544** (circa-1853) W.H. Richardson MS66 Red and Brown NGC. Miller-Pa-419. Copper.

## CIVIL WAR MERCHANTS

**12545** 1863 Yankee Robinson, Peoria, IL, MS63 Brown NGC, Fuld-692A-3a; 1863 C.M. Brewer, Dry Goods, Marshall, MI, MS64 Brown NGC, Fuld-610B-3a; 1863 Hussey's Message Post, New York City, NY, MS64 Brown NGC, Fuld-630AK-1a. (Total: 3 tokens)

**12546** Undated Jas. Brennan, New York City, NY, MS64 Red and Brown NGC, Fuld-NY630I-2a; 1863 H.D. Gerdtts, New York City, NY, MS65 Red and Brown NGC, Fuld-NY630AD-2a. (Total: 2 coins)

**12547** 1863 Nye & Youmans, Fond Du Lac, WI, MS64 Red and Brown NGC. Fuld-WI220H-1a. Fuld Plate Coin. Ex: *World Exonomia Mail Bid Sale* (Rich Hartzog, 9/1991), lot 371.

## CIVIL WAR PATRIOTICS

**12548** 1863 Army & Navy MS66 Red NGC. Fuld-15/319a.

**12549** 1863 Army & Navy MS66 Red NGC. Fuld-15/319a.

**12550** 1863 Army & Navy MS66 Red NGC. Fuld-15/319a.

**12551** 1863 Army & Navy MS66 Red NGC. Fuld-15/319a.

**12552** 1863 Army & Navy MS66 Red NGC. Fuld-15/319a.

**12553** 1863 Army & Navy MS66 Red NGC. Fuld-15/319a.

**12554** 1863 Army & Navy MS66 Red NGC. Fuld-15/319a.

**12555** 1863 Army & Navy MS66 Red NGC. Fuld-15/319a.

**12556** 1863 Army & Navy MS66 Red NGC. Fuld-15/319a.

**12557** 1863 Army & Navy MS66 Red NGC. Fuld-15/319a.

**12558** 1863 Army & Navy MS66 Red NGC. Fuld-15/319a.

**12559** 1863 Army & Navy MS67 Red NGC. Fuld-15/319a.

**12560** Undated Our Army MS65 Red NGC. Fuld-51/334a.

**12561** Undated Our Army MS65 Red NGC. Fuld-51/334a.

**12562** Undated Our Army MS65 Red NGC. Fuld-51/334a.

**12563** 1863 Not One Cent — Off Center — MS65 Brown NGC. Fuld-63/366a.

**12564** 1863 Not One Cent MS65 Red NGC. Fuld-86/357a.

**12565** 1863 George Washington MS64 Red and Brown NGC. Fuld-119/398a.

**12566** Undated Cannons - Shield MS66 Red and Brown NGC. Fuld-163/352a.

## CONFEDERATE STATES OF AMERICA

**12567** (1947) C. Smith Confederate Seal So-Called Half Dollar MS67 NGC.

## ALASKA TOKENS

**12568** 1897 Alaska Indian Round One Pinch, Head Right, MS65 NGC. Gould-Bressett 109. Hart's Coins of the West.

**12569** 1899 Alaska Indian Round 1/2 Pinch, Head Right, MS67 NGC. Gould-Bressett 121. Hart's Coins of the West.

**12570** 1901 Alaska Indian Round 1/4 Pinch, Head Left, MS66 NGC. Gould-Bressett 130. Hart's Coins of the West.

**12571** 1898 Alaska Indian Octagonal One Pinch, Head Right, MS66 NGC. Gould-Bressett 135. Hart's Coins of the West.

**12572** 1900 Alaska Indian Octagonal 1/2 Pinch, Head Left, MS65 NGC. Gould-Bressett 130. Hart's Coins of the West.

**12573** 1902 Alaska Indian Octagonal 1/4 Pinch, Head Left, MS66 NGC. Gould-Bressett 151. Hart's Coins of the West.

**12574** 1902 Alaska Indian Octagonal 1/4 Pinch, Head Left, MS67 NGC. Gould-Bressett 151. Hart's Coins of the West.

**12575** 1909 Alaska-Yukon-Pacific Exposition 1 DWT, MS65 NGC. Gould-Bressett 152. Hart's Coins of the West.

**12576** 1909 Alaska-Yukon-Pacific Exposition 1/2 DWT, MS66 NGC. Gould-Bressett 164. Hart's Coins of the West.

**12577** 1909 Alaska-Yukon-Pacific Exposition 1/4 DWT, MS67 NGC. Gould-Bressett 168. Hart's Coins of the West.

## GOLD CHARMS

**12578** 1914 Idaho Gold One MS64 NGC. Hart's Coins of the West.

**12579** 1914 Idaho Gold One MS66 NGC. Hart's Coins of the West.

**12580** 1914 Idaho Gold 1/2 MS67 NGC. Hart's Coins of the West.

**12581** 1914 Idaho Gold 1/4 MS67 NGC. Hart's Coins of the West.

**12582** 1914 Oregon Gold One MS66 NGC. Hart's Coins of the West.

**12583** 1914 Oregon Gold 1/2 MS66 NGC. Hart's Coins of the West.

**12584** 1914 Oregon Gold 1/4 MS67 NGC. Hart's Coins of the West.

**12585** 1914 Washington Gold One MS66 NGC. Hart's Coins of the West.

**12586** 1914 Washington Gold 1/2 MS65 NGC. Hart's Coins of the West.

**12587** 1914 Washington Gold 1/4 MS67 NGC. Hart's Coins of the West.

## CALIFORNIA GOLD CHARMS

**12588** 1849 Round California Gold Token, Indian, Bear, MS65 NGC. 0.43gm. 12.95mm.

**12589** 1849 California Indian, Bear, Round One, MS66 NGC. Hart's Coins of the West.

**12590** 1849 California Indian, Bear, Round 1/2, MS66 NGC. Hart's Coins of the West.

☐ IF NECESSARY, PLEASE INCREASE MY BIDS BY ☐ 1 ☐ 2 ☐ 3 INCREMENT(S)*Lots will be purchased as much below top bids as possible.*☐ I WANT TO LIMIT MY BIDDING TO A TOTAL OF \$

at the hammer amount for all lots listed on this bid sheet. I am aware that by utilizing the Budget Bidding feature, all bids on this sheet will be affected. If I intend to have regular bidding on other lots I will need to use a separate bid sheet.

Do you want to receive an email, text message, or fax confirming receipt of your bids?

☐ Email ☐ Cell Phone Text ☐ Fax

Payment by check may result in your property not being released until purchase funds clear our bank. Checks must be drawn on a U.S. bank. All bids are subject to the applicable Buyer's Premium. See HA.com for details.

I have read and agree to all of the Terms and Conditions of Auction: inclusive of paying interest at the lesser of 1.5% per month (18% per annum) or the maximum contract interest rate under applicable state law from the date of auction.

REFERENCES: New bidders who are unknown to us must furnish satisfactory industry references or a valid credit card in advance of the auction date.

**(Signature required)** Please make a copy of this bid sheet for your records.☐ I HAVE PREVIOUSLY BOUGHT FROM HERITAGE AUCTIONS☐ I HAVE A RESALE PERMIT – please contact 877-HERITAGE (437-4824)

Non-Internet bids (including but not limited to, podium, fax, phone and mail bids) may be submitted at any time and are treated similar to floor bids. These types of bids must be on-increment or at a half increment (called a cut bid). Any podium, fax, phone or mail bids that do not conform to a full or half increment will be rounded up or down to the nearest full or half increment and will be considered your high bid.

# Terms and Conditions of Auction

## Auctioneer and Auction:

1. This Auction is presented by Heritage Auctions, a d/b/a/ of Heritage Auctioneers & Galleries, Inc., or Heritage Auctions, Inc., or Heritage Numismatic Auctions, Inc., or Heritage Vintage Sports Auctions, Inc., or Currency Auctions of America, Inc., as identified with the applicable licensing information on the title page of the catalog or on the HA.com Internet site (the "Auctioneer"). The Auction is conducted under these Terms and Conditions of Auction and applicable state and local law. Announcements and corrections from the podium and those made through the Terms and Conditions of Auctions appearing on the Internet at HA.com supersede those in the printed catalog.

## Buyer's Premium:

2. All bids are subject to a Buyer's Premium which is in addition to the placed successful bid:
- Fifteen percent (15%) on Domain Names & Intellectual Property Auction lots;
- Seventeen and one-half percent (17.5%) on Currency, US Coin, and World & Ancient Coin Auction lots, except for Gallery Auction lots as noted below;
- Nineteen and one-half percent (19.5%) on Comic, Movie Poster, Sports Collectibles, and Gallery Auction (sealed bid auctions of mostly bulk numismatic material) lots;
- Twenty-two percent (22%) on Wine Auction lots;
- For lots in all other categories not listed above, the Buyer's Premium per lot is twenty-five percent (25%) on the first \$100,000 (minimum \$14), plus twenty percent (20%) of any amount between \$100,000 and \$1,000,000, plus twelve percent (12%) of any amount over \$1,000,000.

## Auction Venues:

3. The following Auctions are conducted solely on the Internet: Heritage Weekly Internet Auctions (Coin, Currency, Comics, Rare Books, Jewelry & Watches, Guitars & Musical Instruments, and Vintage Movie Posters); Heritage Monthly Internet Auctions (Sports, World Coins and Rare Wine). Signature® Auctions and Grand Format Auctions accept bids from the Internet, telephone, fax, or mail first, followed by a floor bidding session; HeritageLive! and real-time telephone bidding are available to registered clients during these auctions.

## Bidders:

4. Any person participating or registering for the Auction agrees to be bound by and accepts these Terms and Conditions of Auction ("Bidder(s)").
5. All Bidders must meet Auctioneer's qualifications to bid. Any Bidder who is not a client in good standing of the Auctioneer may be disqualified at Auctioneer's sole option and will not be awarded lots. Such determination may be made by Auctioneer in its sole and unlimited discretion, at any time prior to, during, or even after the close of the Auction. Auctioneer reserves the right to exclude any person from the auction.
6. If an entity places a bid, then the person executing the bid on behalf of the entity agrees to personally guarantee payment for any successful bid.

## Credit:

7. In order to place bids, Bidders who have not established credit with the Auctioneer must either furnish satisfactory credit information (including two collectibles-related business references) or supply valid credit card information along with a social security number, well in advance of the Auction. Bids placed through our Interactive Internet program will only be accepted from pre-registered Bidders. Bidders who are not members of HA.com or affiliates should preregister at least 48 hours before the start of the first session (exclusive of holidays or weekends) to allow adequate time to contact references. Credit will be granted at the discretion of Auctioneer. Additionally Bidders who have not previously established credit or who wish to bid in excess of their established credit history may be required to provide their social security number or the last four digits thereof so a credit check may be performed prior to Auctioneer's acceptance of a bid. Check writing privileges and immediate delivery of merchandise may also be determined by pre-approval of credit based on a combination of criteria: HA.com history, related industry references, bank verification, a credit bureau report and/or a personal guarantee for a corporate or partnership entity in advance of the auction venue.

## Bidding Options:

8. Bids in Signature, Auctions or Grand Format Auctions may be placed as set forth in the printed catalog section entitled "Choose your bidding method." For auctions held solely on the Internet, see the alternatives on HA.com. Review at <http://www.ha.com/c/ref/web-tips.zx#biddingTutorial>.
9. Presentment of Bids: Non-Internet bids (including but not limited to podium, fax, phone and mail bids) are treated similar to floor bids in that they must be on-increment or at a half increment (called a cut bid). Any podium, fax, phone, or mail bids that do not conform to a full or half increment will be rounded up or down to the nearest full or half increment and this revised amount will be considered your high bid.
10. Auctioneer's Execution of Certain Bids. Auctioneer cannot be responsible for your errors in bidding, so carefully check that every bid is entered correctly. When identical mail or FAX bids are submitted, preference is given to the first received. To ensure the greatest accuracy, your written bids should be entered on the standard printed bid sheet and be received at Auctioneer's place of business at least two business days before the Auction start. Auctioneer is not responsible for executing mail bids or FAX bids received on or after the day the first lot is sold, nor Internet bids submitted after the published closing time; nor is Auctioneer responsible for proper execution of bids submitted by telephone, mail, FAX, e-mail, Internet, or in person once the Auction begins. Bids placed electronically via the internet may not be withdrawn until your written request is received and acknowledged by Auctioneer (FAX: 214-409-1425); such requests must state the reason, and may constitute grounds for withdrawal of bidding privileges. Lots won by mail Bidders will not be delivered at the Auction unless prearranged.
11. Caveat as to Bid Increments. Bid increments (over the current bid level) determine the lowest amount you may bid on a particular lot. Bids greater than one increment over the current bid can be any whole dollar amount. It is possible under several circumstances for winning bids to be between increments, sometimes only \$1 above the previous increment. Please see: "How can I lose by less than an increment?" on our website. Bids will be accepted in whole dollar amounts only. No "buy" or "unlimited" bids will be accepted.

The following chart governs current bidding increments  
(see [HA.com/c/ref/web-tips.zx#guidelines-increments](http://HA.com/c/ref/web-tips.zx#guidelines-increments)).

Current Bid .....	Bid Increment
< \$10 .....	\$1
\$10 - \$49 .....	\$2
\$50 - \$99 .....	\$5
\$100 - \$199 .....	\$10
\$200 - \$499 .....	\$20
\$500 - \$999 .....	\$50
\$1,000 - \$1,999 .....	\$100
\$2,000 - \$4,999 .....	\$200
\$5,000 - \$9,999 .....	\$500

Current Bid .....	Bid Increment
\$10,000 - \$19,999 .....	\$1,000
\$20,000 - \$49,999 .....	\$2,000
\$50,000 - \$99,999 .....	\$5,000
\$100,000 - \$199,999 .....	\$10,000
\$200,000 - \$499,999 .....	\$20,000
\$500,000 - \$999,999 .....	\$50,000
\$1,000,000 - \$4,999,999 ....	\$100,000
\$5,000,000 - \$9,999,999 ....	\$250,000
>= \$10,000,000 .....	\$500,000

12. If Auctioneer calls for a full increment, a bidder may request Auctioneer to accept a bid at half of the increment ("Cut Bid") only once per lot. After offering a Cut Bid, bidders may continue to participate only at full increments. Off-increment bids may be accepted by the Auctioneer at Signature® Auctions and Grand Format Auctions. If the Auctioneer solicits bids other than the expected increment, these bids will not be considered Cut Bids.

## Conducting the Auction:

13. Notice of the consignor's liberty to place bids on his lots in the Auction is hereby made in accordance with Article 2 of the Texas Business and Commercial Code. A "Minimum Bid" is an amount below which the lot will not sell. THE CONSIGNOR OF PROPERTY MAY PLACE

WRITTEN "Minimum Bids" ON HIS LOTS IN ADVANCE OF THE AUCTION; ON SUCH LOTS, IF THE HAMMER PRICE DOES NOT MEET THE "Minimum Bid", THE CONSIGNOR MAY PAY A REDUCED COMMISSION ON THOSE LOTS. "Minimum Bids" are generally posted online several days prior to the Auction closing. For any successful bid placed by a consignor on his Property on the Auction floor, or by any means during the live session, or after the "Minimum Bid" for an Auction have been posted, we will require the consignor to pay full Buyer's Premium and Seller's Commissions on such lot.

14. The highest qualified Bidder recognized by the Auctioneer shall be the Buyer. In the event of a tie bid, the earliest bid received or recognized wins. In the event of any dispute between any Bidders at an Auction, Auctioneer may at his sole discretion reoffer the lot. Auctioneer's decision and declaration of the winning Bidder shall be final and binding upon all Bidders. Bids properly offered, whether by floor Bidder or other means of bidding, may on occasion be missed or go unrecognized; in such cases, the Auctioneer may declare the recognized bid accepted as the winning bid, regardless of whether a competing bid may have been higher. Auctioneer reserves the right after the hammer fall to accept bids and reopen bidding for bids placed through the Internet or otherwise.
15. Auctioneer reserves the right to refuse to honor any bid or to limit the amount of any bid, in its sole discretion. A bid is considered not made in "Good Faith" when made by an insolvent or irresponsible person, a person under the age of eighteen, or is not supported by satisfactory credit, collectibles references, or otherwise. Regardless of the disclosure of his identity, any bid by a consignor or his agent on a lot consigned by him is deemed to be made in "Good Faith." Any person apparently appearing on the OFAC list is not eligible to bid.
16. Nominal Bids. The Auctioneer in its sole discretion may reject nominal bids, small opening bids, or very nominal advances. If a lot bearing estimates fails to open for 40-60% of the low estimate, the Auctioneer may pass the item or may place a protective bid on behalf of the consignor.
17. Lots bearing bidding estimates shall open at Auctioneer's discretion (approximately 50%-60% of the low estimate). In the event that no bid meets or exceeds that opening amount, the lot shall pass as unsold.
18. All items are to be purchased per lot as numerically indicated and no lots will be broken. Auctioneer reserves the right to withdraw, prior to the close, any lots from the Auction.
19. Auctioneer reserves the right to rescind the sale in the event of nonpayment, breach of a warranty, disputed ownership, auctioneer's clerical error or omission in exercising bids and reserves, or for any other reason and in Auctioneer's sole discretion. In cases of nonpayment, Auctioneer's election to void a sale does not relieve the Bidder from their obligation to pay Auctioneer its fees (seller's and buyer's premium) and any other damages or expenses pertaining to the lot.
20. Auctioneer occasionally experiences Internet and/or Server service outages, and Auctioneer periodically schedules system downtime for maintenance and other purposes, during which Bidders cannot participate or place bids. If such outages occur, we may at our discretion extend bidding for the Auction. Bidders unable to place their Bids through the Internet are directed to contact Client Services at 877-HERITAGE (437-4824).
21. The Auctioneer, its affiliates, or their employees consign items to be sold in the Auction, and may bid on those lots or any other lots. Auctioneer or affiliates expressly reserve the right to modify any such bids at any time prior to the hammer based upon data made known to the Auctioneer or its affiliates. The Auctioneer may extend advances, guarantees, or loans to certain consignors.
22. The Auctioneer has the right to sell certain unsold items after the close of the Auction. Such lots shall be considered sold during the Auction and all these Terms and Conditions shall apply to such sales including but not limited to the Buyer's Premium, return rights, and disclaimers.

## Payment:

23. All sales are strictly for cash in United States dollars (including U.S. currency, bank wire, cashier checks, travelers checks, eChecks, and bank money orders, and are subject to all reporting requirements). All deliveries are subject to good funds; funds being received in Auctioneer's account before delivery of the Purchases; and all payments are subject to a clearing period. Auctioneer reserves the right to determine if a check constitutes "good funds": checks drawn on a U.S. bank are subject to a ten business day hold, and thirty days when drawn on an international bank. Clients with pre-arranged credit status may receive immediate credit for payments via eCheck, personal, or corporate checks. All others will be subject to a hold of 5 days, or more, for the funds to clear prior to releasing merchandise. (Ref. T&C item 7 Credit for additional information.) Payments can be made 24-48 hours post auction from the My Orders page of the HA.com website.
24. Payment is due upon closing of the Auction session, or upon presentment of an invoice. Auctioneer reserves the right to void an invoice if payment in full is not received within 7 days after the close of the Auction. In cases of nonpayment, Auctioneer's election to void a sale does not relieve the Bidder from their obligation to pay Auctioneer its fees (seller's and buyer's premium) on the lot and any other damages pertaining to the lot or Auctioneer, at its option, may charge a twenty (20%) restock fee on the amount of the purchase and offset the restock fee against any monies paid to the Auctioneer or against any of the purchaser's properties held by the Auctioneer.
25. Lots delivered to you, or your representative in the States of Texas, California, New York, or other states where the Auction may be held, are subject to all applicable state and local taxes, unless appropriate permits are on file with Auctioneer. (Note: Coins are only subject to sales tax in California on invoices under \$1,500, and there is no sales tax on coins in Texas.) Bidder agrees to pay Auctioneer the actual amount of tax due in the event that sales tax is not properly collected due to: 1) an expired, inaccurate, or inappropriate tax certificate or declaration, 2) an incorrect interpretation of the applicable statute, 3) or any other reason. The appropriate form or certificate must be on file at and verified by Auctioneer five days prior to Auction, or tax must be paid; only if such form or certificate is received by Auctioneer within 4 days after the Auction can a refund of tax paid be made. Lots from different Auctions may not be aggregated for sales tax purposes.
26. In the event that a Bidder's payment is dishonored upon presentment(s), Bidder shall pay the maximum statutory processing fee set by applicable state law. If you attempt to pay via eCheck and your financial institution denies this transfer from your bank account, or the payment cannot be completed using the selected funding source, you agree to complete payment using your credit card on file.
27. If any Auction invoice submitted by Auctioneer is not paid in full when due, the unpaid balance will bear interest at the highest rate permitted by law from the date of invoice until paid. Any invoice not paid when due will bear a three percent (3%) late fee on the invoice amount. If the Auctioneer refers any invoice to an attorney for collection, the buyer agrees to pay attorney's fees, court costs, and other collection costs incurred by Auctioneer. If Auctioneer assigns collection to its in-house legal staff, such attorney's time expended on the matter shall be compensated at a rate comparable to the hourly rate of independent attorneys.
28. In the event a successful Bidder fails to pay any amounts due, Auctioneer reserves the right to sell the lot(s) securing the invoice to any underbidders in the Auction that the lot(s) appeared, or at subsequent private or public sale, or relist the lot(s) in a future auction conducted by Auctioneer. A defaulting Bidder agrees to pay for the reasonable costs of resale (including a 15% seller's commission, if assigned to an auction conducted by Auctioneer). The defaulting Bidder is liable to pay any difference between his total original invoice for the lot(s), plus any applicable interest, and the net proceeds for the lot(s) if sold at private sale or the subsequent hammer price of the lot(s) less the 15% seller's commissions, if sold at an Auctioneer's auction.
29. Auctioneer reserves the right to require payment in full in good funds before delivery of the merchandise.

# Terms and Conditions of Auction

30. Auctioneer shall have a lien against the merchandise purchased by the buyer to secure payment of the Auction invoice. Auctioneer is further granted a lien and the right to retain possession of any other property of the buyer then held by the Auctioneer or its affiliates to secure payment of any Auction invoice or any other amounts due the Auctioneer or affiliates from the buyer. With respect to these lien rights, Auctioneer shall have all the rights of a secured creditor under Article 9 of the Texas Uniform Commercial Code, including but not limited to the right of sale (including a 15% seller's commission, if consigned to an auction conducted by Auctioneer). In addition, with respect to payment of the Auction invoice(s), the buyer waives any and all rights of offset he might otherwise have against the Auctioneer and the consignor of the merchandise included on the invoice. If a Bidder owes Auctioneer or its affiliates on any account, Auctioneer and its affiliates shall have the right to offset such unpaid account by any credit balance due Bidder, and it may secure by possessory lien any unpaid amount by any of the Bidder's property in their possession..

31. Title shall not pass to the successful Bidder until all invoices are paid in full. It is the responsibility of the buyer to provide adequate insurance coverage for the items once they have been delivered to a common carrier or third-party shipper.

## **Delivery; Shipping; and Handling Charges:**

32. Buyer is liable for shipping, handling, registration, and renewal fees, if any. Please refer to Auctioneer's website HA.com/c/shipping.zx for the latest charges or call Auctioneer. Auctioneer is unable to combine purchases from other auctions or affiliates into one package for shipping purposes. Lots won will be shipped in a commercially reasonable time after payment in good funds for the merchandise and the shipping fees is received or credit extended, except when third-party shipment occurs. Buyer agrees that Service and Handling charges related to shipping items which are not pre-paid may be charged to the credit card on file with Auctioneer.

33. Successful international Bidders shall provide written shipping instructions, including specified customs declarations, to the Auctioneer for any lots to be delivered outside of the United States. NOTE: Declaration value shall be the item(s) hammer price together with its buyer's premium and Auctioneer shall use the correct harmonized code for the lot. Domestic Buyers on lots designated for third-party shipment must designate the common carrier, accept risk of loss, and prepay shipping costs.

34. All shipping charges will be borne by the successful Bidder. On all domestic shipments, any risk of loss during shipment will be borne by Heritage until the shipping carrier's confirmation of delivery to the address of record in Auctioneer's file (carrier's confirmation is conclusive to prove delivery to Bidder; if the client has a Signature release on file with the carrier, the package is considered delivered without Signature) or delivery by Heritage to Bidder's selected third-party shipper. On all foreign shipments, any risk of loss during shipment will be borne by the Bidder following Auctioneer's delivery to the Bidder's designated common carrier or third-party shipper.

35. Due to the nature of some items sold, it shall be the responsibility for the successful Bidder to arrange pick-up and shipping through third-parties; as to such items Auctioneer shall have no liability. Failure to pick-up or arrange shipping in a timely fashion (within ten days) shall subject Lots to storage and moving charges, including a \$100 administration fee plus \$10 daily storage for larger items and \$5.00 daily for smaller items (storage fee per item) after 35 days. In the event the Lot is not removed within ninety days, the Lot may be offered for sale to recover any past due storage or moving fees, including a 10% Seller's Commission.

36A. The laws of various countries regulate the import or export of certain plant and animal properties, including (but not limited to) items made of (or including) ivory, whalebone, turtle shell, coral, crocodile, or other wildlife. Transport of such lots may require special licenses for export, import, or both. Bidder is responsible for: 1) obtaining all information on such restricted items for both export and import; 2) obtaining all such licenses and/or permits. Delay or failure to obtain any such license or permit does not relieve the buyer of timely compliance with standard payment terms. For further information, please contact Ron Brackemyre at 800- 872-6467 ext. 1312.

36B. California State law prohibits the importation of any product containing Python skin into the State of California, thus no lot containing Python skin will be shipped to or invoiced to a person or company in California.

36C. Auctioneer shall not be liable for any loss caused by or resulting from:

- a. Seizure or destruction under quarantine or Customs regulation, or confiscation by order of any Government or public authority, or risks of contraband or illegal transportation of trade, or
- b. Breakage of statuary, marble, glassware, bric-a-brac, porcelains, jewelry, and similar fragile articles

37. Any request for shipping verification for undelivered packages must be made within 30 days of shipment by Auctioneer.

## **Cataloging, Warranties and Disclaimers:**

38. NO WARRANTY, WHETHER EXPRESSED OR IMPLIED, IS MADE WITH RESPECT TO ANY DESCRIPTION CONTAINED IN THIS AUCTION OR ANY SECOND OPINE. Any description of the items or second opine contained in this Auction is for the sole purpose of identifying the items for those Bidders who do not have the opportunity to view the lots prior to bidding, and no description of items has been made part of the basis of the bargain or has created any express warranty that the goods would conform to any description made by Auctioneer. Color variations can be expected in any electronic or printed imaging, and are not grounds for the return of any lot. NOTE: Auctioneer, in specified auction venues, for example, Fine Art, may have express written warranties and you are referred to those specific terms and conditions. .

39. Auctioneer is selling only such right or title to the items being sold as Auctioneer may have by virtue of consignment agreements on the date of auction and disclaims any warranty of title to the Property. Auctioneer disclaims any warranty of merchantability or fitness for any particular purposes. All images, descriptions, sales data, and archival records are the exclusive property of Auctioneer, and may be used by Auctioneer for advertising, promotion, archival records, and any other uses deemed appropriate.

40. Translations of foreign language documents may be provided as a convenience to interested parties. Auctioneer makes no representation as to the accuracy of those translations and will not be held responsible for errors in bidding arising from inaccuracies in translation.

41. Auctioneer disclaims all liability for damages, consequential or otherwise, arising out of or in connection with the sale of any Property by Auctioneer to Bidder. No third party may rely on any benefit of these Terms and Conditions and any rights, if any, established hereunder are personal to the Bidder and may not be assigned. Any statement made by the Auctioneer is an opinion and does not constitute a warranty or representation. No employee of Auctioneer may alter these Terms and Conditions, and, unless signed by a principal of Auctioneer, any such alteration is null and void.

42. Auctioneer shall not be liable for breakage of glass or damage to frames (patent or latent); such defects, in any event, shall not be a basis for any claim for return or reduction in purchase price.

## **Release:**

43. In consideration of participation in the Auction and the placing of a bid, Bidder expressly releases Auctioneer, its officers, directors and employees, its affiliates, and its outside experts that provide second opines, from any and all claims, cause of action, those of action, whether at law or equity or any arbitration or mediation rights existing under the rules of any professional society or affiliation based upon the assigned description, or a derivative theory, breach of warranty express or implied, representation or other matter set forth within these Terms and Conditions of Auction or otherwise. In the event of a claim, Bidder agrees that such rights and privileges conferred therein are strictly construed as specifically declared herein; e.g., authenticity, typographical error, etc. and are the exclusive remedy. Bidder, by non-compliance to these express terms of a granted remedy, shall waive any claim against Auctioneer.

44. Notice: Some Property sold by Auctioneer are inherently dangerous e.g. firearms, cannons, and small items that may be swallowed or ingested or may have latent defects all of which may cause harm to a person. Purchaser accepts all risk of loss or damage from its purchase of these items and Auctioneer disclaims any liability whether under contract or tort for damages and losses, direct or inconsequential, and expressly disclaims any warranty as to safety or usage of any lot sold.

## **Dispute Resolution and Arbitration Provision:**

45. By placing a bid or otherwise participating in the auction, Bidder accepts these Terms and Conditions of Auction, and specifically agrees to the dispute resolution provided herein. Consumer disputes shall be resolved through court litigation which has an exclusive Dallas, Texas venue clause and jury waiver. Non-consumer dispute shall be determined in binding arbitration which arbitration replaces the right to go to court, including the right to a jury trial.

46. Auctioneer in no event shall be responsible for consequential damages, incidental damages, compensatory damages, or any other damages arising or claimed to be arising from the auction of any lot. In the event that Auctioneer cannot deliver the lot or subsequently it is established that the lot lacks title, or other transfer or condition issue is claimed, in such cases the sole remedy shall be limited to rescission of sale and refund of the amount paid by Bidder; in no case shall Auctioneer's maximum liability exceed the high bid on that lot, which bid shall be deemed for all purposes the value of the lot. After one year has elapsed, Auctioneer's maximum liability shall be limited to any commissions and fees Auctioneer earned on that lot.

47. In the event of an attribution error, Auctioneer may at its sole discretion, correct the error on the Internet, or, if discovered at a later date, to refund the buyer's purchase price without further obligation.

48. Exclusive Dispute Resolution Process: All claims, disputes, or controversies in connection with, relating to and/or arising out of your Participation in the Auction or purchase of any lot, any interpretation of the Terms and Conditions of Sale or any amendments thereto, any description of any lot or condition report, any damage to any lot, any alleged verbal modification of any term of sale or condition report or description and/or any purported settlement whether asserted in contract, tort, under Federal or State statute or regulation or any claim made by you of a lot or your Participation in the auction involving the auction or a specific lot involving a warranty or representation of a consignor or other person or entity including Auctioneer { which claim you consent to be made a party} (collectively, "Claim") shall be exclusively heard by, and the claimant (or respondent as the case may be) and Heritage each consent to the Claim being presented in a confidential binding arbitration before a single arbitrator administrated by and conducted under the rules of, the American Arbitration Association. The locale for all such arbitrations shall be Dallas, Texas. The arbitrator's award may be enforced in any court of competent jurisdiction. If a Claim involves a consumer, exclusive subject matter jurisdiction for the Claim is in the State District Courts of Dallas County, Texas and the consumer consents to subject matter and in personam jurisdiction; further CONSUMER EXPRESSLY WAIVES ANY RIGHT TO TRIAL BY JURY. A consumer may elect arbitration as specified above. Any claim involving the purchase or sale of numismatic or related items may be submitted through binding PNG arbitration. Any Claim must be brought within two (2) years of the alleged breach, default or misrepresentation or the Claim is waived. Exemplary or punitive damages are not permitted and are waived. A Claim is not subject to class certification. Nothing herein shall be construed to extend the time of return or conditions and restrictions for return. This Agreement and any Claim shall be determined and construed under Texas law. The prevailing party (a party that is awarded substantial and material relief on its damage claim based on damages sought vs. awarded or the successful defense of a Claim based on damages sought vs. awarded) may be awarded its reasonable attorneys' fees and costs.

49. No claims of any kind can be considered after the settlements have been made with the consignors. Any dispute after the settlement date is strictly between the Bidder and consignor without involvement or responsibility of the Auctioneer.

50. In consideration of their participation in or application for the Auction, a person or entity (whether the successful Bidder, a Bidder, a purchaser and/or other Auction participant or registrant) agrees that all disputes in any way relating to, arising under, connected with, or incidental to these Terms and Conditions and purchases, or default in payment thereof, shall be arbitrated pursuant to the arbitration provision. In the event that any matter including actions to compel arbitration, construe the agreement, actions in aid or arbitration or otherwise needs to be litigated, such litigation shall be exclusively in the Courts of the State of Texas, in Dallas County, Texas, and if necessary the corresponding appellate courts. For such actions, the successful Bidder, purchaser, or Auction participant also expressly submits himself to the personal jurisdiction of the State of Texas.

51. These Terms & Conditions provide specific remedies for occurrences in the auction and delivery process. Where such remedies are afforded, they shall be interpreted strictly. Bidder agrees that any claim shall utilize such remedies; Bidder making a claim in excess of those remedies provided in these Terms and Conditions agrees that in no case whatsoever shall Auctioneer's maximum liability exceed the high bid on that lot, which bid shall be deemed for all purposes the value of the lot.

## **Miscellaneous:**

52. Agreements between Bidders and consignors to effectuate a non-sale of an item at Auction, inhibit bidding on a consigned item to enter into a private sale agreement for said item, or to utilize the Auctioneer's Auction to obtain sales for non-selling consigned items subsequent to the Auction, are strictly prohibited. If a subsequent sale of a previously consigned item occurs in violation of this provision, Auctioneer reserves the right to charge Bidder the applicable Buyer's Premium and consignor a Seller's Commission as determined for each auction venue and by the terms of the seller's agreement.

53. Acceptance of these Terms and Conditions qualifies Bidder as a client who has consented to be contacted by Heritage in the future. In conformity with "do-not-call" regulations promulgated by the Federal or State regulatory agencies, participation by the Bidder is affirmative consent to being contacted at the phone number shown in his application and this consent shall remain in effect until it is revoked in writing. Heritage may from time to time contact Bidder concerning sale, purchase, and auction opportunities available through Heritage and its affiliates and subsidiaries.

54. Rules of Construction: Auctioneer presents properties in a number of collectible fields, and as such, specific venues have promulgated supplemental Terms and Conditions. Nothing herein shall be construed to waive the general Terms and Conditions of Auction by these additional rules and shall be construed to give force and effect to the rules in their entirety.

## **State Notices:**

Notice as to an Auction in California. Auctioneer has in compliance with Title 2.95 of the California Civil Code as amended October 11, 1993 Sec. 1812.600, posted with the California Secretary of State its bonds for it and its employees, and the auction is being conducted in compliance with Sec. 2338 of the Commercial Code and Sec. 535 of the Penal Code.

Notice as to an Auction in New York City. These Terms and Conditions of Sale are designed to conform to the applicable sections of the New York City Department of Consumer Affairs Rules and Regulations as Amended. This sale is a Public Auction Sale conducted by Heritage Auctioneers & Galleries, Inc. # 41513036. The New York City licensed auctioneers are: Sam Foose, #095260; Kathleen Guzman, #0762165; Nicholas Dawes, #1304724; Ed Beardsley, #1183220; Scott Peterson, #1306933; Andrea Voss, #1320558, who will conduct the Sale on behalf of itself and Heritage Numismatic Auctions, Inc. (for Coins) and Currency Auctions of America, Inc. (for currency). All lots are subject to: the consignor's rights to bid thereon in accord with these Terms and Conditions of Sale, consignor's option to receive advances on their consignments, and Auctioneer, in its sole discretion, may offer limited extended financing to registered bidders, in accord with Auctioneer's internal credit standards. A registered bidder may inquire whether a lot is subject to an advance or a reserve. Auctioneer has made advances to various consignors in this sale. On lots bearing an estimate, the term refers to a value range placed on an item by the Auctioneer in its sole opinion but the final price is determined by the bidders.

Notice as to an Auction in Texas. In compliance with TDLR rule 67.100(c)(1), notice is hereby provided that this auction is covered by a Recovery Fund administered by the Texas Department of Licensing and Regulation, P.O. Box 12157, Austin, Texas 78711 (512) 463-6599. Any complaints may be directed to the same address.

Notice as to an Auction in Ohio: Auction firm and Auctioneer are licensed by the Dept. of Agriculture, and either the licensee is bonded in favor of the state or an aggrieved person may initiate a claim against the auction recovery fund created in Section 4707.25 of the Revised Code as a result of the licensee's actions, whichever is applicable.

# Terms and Conditions of Auction

## Additional Terms & Conditions:

### COINS & CURRENCY

COINS and CURRENCY TERM A: Signature. Auctions are not on approval. No certified material may be returned because of possible differences of opinion with respect to the grade offered by any third-party organization, dealer, or service. No guarantee of grade is offered for uncertified Property sold and subsequently submitted to a third-party grading service. There are absolutely no exceptions to this policy. Under extremely limited circumstances, (e.g. gross cataloging error) a purchaser, who did not bid from the floor, may request Auctioneer to evaluate voiding a sale: such request must be made in writing detailing the alleged gross error; submission of the lot to the Auctioneer must be pre-approved by the Auctioneer; and bidder must notify Ron Brackemyre (1-800-872-6467 Ext. 1312) in writing of such request within three (3) days of the non-floor bidder's receipt of the lot. Any lot that is to be evaluated must be in our offices within 30 days after Auction. Grading or method of manufacture do not qualify for this evaluation process nor do such complaints constitute a basis to challenge the authenticity of a lot. AFTER THAT 30-DAY PERIOD, NO LOTS MAY BE RETURNED FOR REASONS OTHER THAN AUTHENTICITY. Lots returned must be housed intact in their original holder. No lots purchased by floor Bidders may be returned (including those Bidders acting as agents for others) except for authenticity. Late remittance for purchases may be considered just cause to revoke all return privileges.

COINS and CURRENCY TERM B: Auctions conducted solely on the Internet THREE (3) DAY RETURN POLICY: Certified Coin and Uncertified and Certified Currency lots paid for within seven days of the Auction closing are sold with a three (3) day return privilege unless otherwise noted in the description as "Sold As Is, No Return Lot". You may return lots under the following conditions: Within three days of receipt of the lot, you must first notify Auctioneer by contacting Client Service by phone (877-HERITAGE (437-4824)) or e-mail (Bid@HA.com), and immediately ship the lot(s) fully insured to the attention of Returns, Heritage, 3500 Maple Avenue, 17th Floor, Dallas TX 75219-3941. Lots must be housed intact in their original holder and condition. You are responsible for the insured, safe delivery of any lots. A non-negotiable return fee of 5% of the purchase price (\$10 per lot minimum) will be deducted from the refund for each returned lot or billed directly. Postage and handling fees are not refunded. After the three-day period (from receipt), no items may be returned for any reason. Late remittance for purchases revokes these Return privileges.

COINS and CURRENCY TERM C: Bidders who have inspected the lots prior to any Auction, or attended the Auction, or bid through an Agent, will not be granted any return privileges, except for reasons of authenticity.

COINS and CURRENCY TERM D: Coins sold referencing a third-party grading service are sold "as is" without any express or implied warranty, except for a guarantee by Auctioneer that they are genuine. Certain warranties may be available from the grading services and the Bidder is referred to them for further details: Numismatic Guaranty Corporation (NGC), P.O. Box 4776, Sarasota, FL 34230, <http://www.ngccoin.com/services/writtenguarantee.asp>; Professional Coin Grading Service (PCGS), PO Box 9458, Newport Beach, CA 92658, <http://www.pcg.com/guarantee.html>; ANACS, 6555 S. Kenton St. Ste. 303, Englewood, CO 80111; and Independent Coin Grading Co. (ICG), 7901 East Bellevue Ave., Suite 50, Englewood, CO 80111.

COINS and CURRENCY TERM E: Notes sold referencing a third-party grading service are sold "as is" without any express or implied warranty, except for guarantee by Auctioneer that they are genuine. Grading, condition or other attributes of any lot may have a material effect on its value, and the opinion of others, including third-party grading services such as PCGS Currency, PMG, and CGA may differ with that of Auctioneer. Auctioneer shall not be bound by any prior or subsequent opinion, determination, or certification by any grading service. Bidder specifically waives any claim to right of return of any item because of the opinion, determination, or certification, or lack thereof, by any grading service. Certain warranties may be available from the grading services and the Bidder is referred to them for further details: Paper Money Guaranty (PMG), PO Box 4711, Sarasota FL 34230; PCGS Currency, PO Box 9458, Newport Beach, CA 92658; Currency Grading & Authentication (CGA), PO Box 418, Three Bridges, NJ 08887. Third party graded notes are not returnable for any reason whatsoever.

COINS and CURRENCY TERM F: Since we cannot examine encapsulated coins or notes, they are sold "as is" without our grading opinion, and may not be returned for any reason. Auctioneer shall not be

liable for any patent or latent defect or controversy pertaining to or arising from any encapsulated collectible. In any such instance, purchaser's remedy, if any, shall be solely against the service certifying the collectible.

COINS and CURRENCY TERM G: Due to changing grading standards over time, differing interpretations, and to possible mishandling of items by subsequent owners, Auctioneer reserves the right to grade items differently than shown on certificates from any grading service that accompany the items. Auctioneer also reserves the right to grade items differently than the grades shown in the prior catalog should such items be reconsigned to any future auction.

COINS and CURRENCY TERM H: Although consensus grading is employed by most grading services, it should be noted as aforesaid that grading is not an exact science. In fact, it is entirely possible that if a lot is broken out of a plastic holder and resubmitted to another grading service or even to the same service, the lot could come back with a different grade assigned.

COINS and CURRENCY TERM I: Certification does not guarantee protection against the normal risks associated with potentially volatile markets. The degree of liquidity for certified coins and collectibles will vary according to general market conditions and the particular lot involved. For some lots there may be no active market at all at certain points in time.

COINS and CURRENCY TERM J: All non-certified coins and currency are guaranteed genuine, but are not guaranteed as to grade, since grading is a matter of opinion, an art and not a science, and therefore the opinion rendered by the Auctioneer or any third party grading service may not agree with the opinion of others (including trained experts), and the same expert may not grade the same item with the same grade at two different times. Auctioneer has graded the non-certified numismatic items, in the Auctioneer's opinion, to their current interpretation of the American Numismatic Association's standards as of the date the catalog was prepared. There is no guarantee or warranty implied or expressed that the grading standards utilized by the Auctioneer will meet the standards of any grading service at any time in the future.

COINS and CURRENCY TERM K: Storage of purchased coins and currency: Purchasers are advised that certain types of plastic may react with a coin's metal or transfer plasticizer to notes and may cause damage. Caution should be used to avoid storage in materials that are not inert.

COINS and CURRENCY TERM L: NOTE: Purchasers of rare coins or currency through Heritage have available the option of arbitration by the Professional Numismatists Guild (PNG); if an election is not made within ten (10) days of an unresolved dispute, Auctioneer may elect either PNG or A.A.A. Arbitration.

COINS and CURRENCY TERM M: For more information regarding Canadian lots attributed to the Charlton reference guides, please contact: Charlton International, PO Box 820, Station Willowdale B, North York, Ontario M2K 2R1 Canada.

COINS and CURRENCY TERM N: Some of the lots offered herein have been assigned to 1031 Services, Inc. for the purpose of consignor's tax deferred exchange.

COINS and CURRENCY TERM O: Financing. Auctioneer offers various extended payment options to qualified pre-approved persons and companies. The options include Extended Payment Programs (EPP) Flexible Payment Program (FPP) and Dealer Terms. Each program has its specific terms and conditions and such terms and conditions are strictly enforced. Each program has to be executed by the purchaser. Auctioneer reserves the right to alter or deny credit and in such case these auction terms shall control.

For wiring instructions call the Credit department at 877-HERITAGE (437-4824) or e-mail: CreditDept@HA.com

## New York State Auctions Only

Notice as to an Auction in New York City. These Terms and Conditions of Sale are designed to conform to the applicable sections of the New York City Department of Consumer Affairs Rules and Regulations as Amended. This sale is a Public Auction Sale conducted by Heritage Auctioneers & Galleries, Inc. #1364738. The New York City licensed auctioneers are: Samuel Foosse 0952360; Robert Korver 1096338; Kathleen Guzman 0762165; Michael J. Sadler 1304630; Scott Peterson 1306933; Andrea Voss 1320558; Nicholas Dawes 1304724; Ed Beardsley 1183220; Bob Merrill 1473403; Paul Minshull 2001161; Fiona Elias 2001163; Brian Nalley 2001162; Jennifer Marsh 2009623; Alissa Ford 2009565, who will conduct the Sale on behalf of itself and Heritage Auctioneers & Galleries, Inc. All lots are subject to: the consignor's rights to bid thereon in accord with these Terms and Conditions of Sale, consignor's option to receive advances on their consignments, and Auctioneer, in its sole discretion, may offer limited extended financing to registered bidders, in accord with Auctioneer's internal credit standards. A registered bidder may inquire whether a lot is subject to an advance or a reserve. Auctioneer has made advances to various consignors in this sale. On lots bearing an estimate, the term refers to a value range placed on an item by the Auctioneer in its sole opinion but the final price is determined by the bidders. Rev 10-6-2014
